

Disadvantage's

Big Data DA Northwestern

Strategy

This da is pretty cool. So it works like this: big data is used now, plan creates a legal precedent where big data is protected by privacy rights, that means gov/private companies can't use big data, that's bad cause impacts.

In the 1nc you should read one of the two uniqueness cards and then if you have to, blow it up in the block. You also should read a link and an impact module.

This da should mesh well with advantage cps or counterplans that don't deal with privacy rights/surveillance

The internal link stuff might not have to be read, if the aff team presses you on it, it might be good to read one or two

Use of big data is high now and applies across the spectrum of subjects

Jonathan **Shaw**, Managing Editor at Harvard Magazine, **2014**, "Why 'Big Data' is a Big Deal", <http://harvardmagazine.com/2014/03/why-big-data-is-a-big-deal>

DATA NOW STREAM from daily life: from phones and credit cards and televisions and computers; from the infrastructure of cities; from sensor-equipped buildings, trains, buses, planes, bridges, and factories. The data flow so fast that the total accumulation of the past two years—a zettabyte—dwarfs the prior record of human civilization. **"There is a big data revolution,"** says Weatherhead University Professor Gary King. But it is not the quantity of data that is revolutionary. **"The big data revolution is that now we can do something with the data."** The revolution lies in improved statistical and computational methods, not in the exponential growth of storage or even computational capacity, King explains. The doubling of computing power every 18 months (Moore's Law) "is nothing compared to a big algorithm"—a set of rules that can be used to solve a problem a thousand times faster than conventional computational methods could. One colleague, faced with a mountain of data, figured out that he would need a \$2-million computer to analyze it. Instead, King and his graduate students came up with an algorithm within two hours that would do the same thing in 20 minutes—on a laptop: a simple example, but illustrative. New ways of linking datasets have played a large role in generating new insights. And **creative approaches to visualizing data—humans are far better than computers at seeing patterns—frequently prove integral to the process of creating knowledge. Many of the tools now being developed can be used across disciplines as seemingly disparate as astronomy and medicine.** Among students, there is a huge appetite for the new field.

Big Data presence increasing now.

Jeffrey **Mackie-Mason**, American economist specializing in information, incentive-centered design and public policy, "Can we afford privacy from surveillance?", **2014**, <http://www.computer.org/cms/Computer.org/Computer.org/ComputingNow/issues/2014/11/msp2014050086.pdf>

The phenomenon we call **"big data"** also **favors revelation**. Although the mathematics of encryption is a win for secret keepers, the mathematics of data mining is a win for secret harvesters. We (or at least some government agencies) once cheerfully thought that stripping names and SSNs in a dataset was enough to guarantee privacy. But **information about us forms a network of relationships, and a sufficiently dense network creates unique identifiers.** Think of fingerprints: a single line is insufficient to identify me by my fingerprint. But provide about 15 points and I'm no longer anonymous. Improving IT is proliferating the number of things we measure and record about people (more "points"). Simultaneously, **the decreasing costs of computing and networking are unleashing more powerful ways to mine data for patterns, including reidentification**—that is, digital fingerprints. For example, Alessandro Acquisti and his colleagues showed that, with just a subset of public personal data (for instance, from Facebook) and cheap facial-recognition software, they could reidentify anonymous Match.com dating profiles—or identify people in public places—and infer their SSNs.⁶ The number of points from which to construct reidentifying digital fingerprints is growing explosively. **Sensing, monitoring, measuring, and recording are becoming effectively free. Low-cost, networked sensors are becoming ubiquitous,** with a smartphone containing a GPS, accelerometer, microphone, and camera in everyone's pocket. There were approximately 5 million public CCTV surveillance cameras in the UK as of July 2013.⁸ Twenty years ago, getting drunk and acting foolish, maybe dancing topless, at a party with friends was a selective revelation. Friends might talk about it, but no one else got to see your drunken face, breasts, or vomit. But now your friends all have HD video cameras, and photos or videos might be on the Internet before you wake up the next afternoon. **Business Insider calculates that there are approximately 5.6 billion networked devices today, and that current growth trends will lead to 18 billion by 2018,**⁸ of which 9 billion will be Internet of Things (not computers, smartphones, or tablets). Our private information will be sensed and transmitted via networked IT from health and fitness monitors; sensors

recording each appUance's energy and water use in the home; safety and security monitoring devices for babies and those in assisted living, smoke detectors, and sensor-equipped drawers and safes; and home alarm systems. In short, improving IT is increasing the sensing and digitization of personal data, data aggregation, and federation as well as the development of inexpensive data mining tools to extract patterns, which together create reidentifiable networks of connections.

2NC Flood

All our internal links are uniqueness claims- Big Data gets used extensively in the squo- there is a data revolution that is being jumped on by everybody and anybody, that's Shaw

Today's tech innovation and drop in prices means that data is more easily analyzed and collected than ever before plus devices are proliferating. Data will only increase in the squo- that's Mackie-Mason

Big Data is critical to the modern economy- Data is certainly used now

Manyika 12 (July-August 2012. James Manyika works for McKinsey Global Institute, a research contracting firm, As the director of McKinsey Global Institute and a former leader within technology companies where he focused on innovation, growth, and strategy. Michael Chui also assisted in leading the research. Chui is a partner of McKinsey Global Institute where he specializes in research on the impact of information tech and innovation on businesses, the econ, and society. "Why Big Data is The New Competitive Advantage" Ivey Business Journal. <http://iveybusinessjournal.com/publication/why-big-data-is-the-new-competitive-advantage/> //HS)

Data are now woven into every sector and function in the global economy, and, like other essential factors of production such as hard assets and human capital, **much of modern economic activity simply could not take place without them**. The use of Big Data — large pools of data that can be brought together and analyzed to discern patterns and make better decisions — will become the basis of competition and growth for individual firms, enhancing productivity and creating significant value for the world economy by reducing waste and increasing the quality of products and services. **Until now, the torrent of data flooding our world has been a phenomenon that probably only excited a few data geeks. But we are now at an inflection point**. According to research from the McKinsey Global Institute (MGI) and McKinsey & Company's Business Technology Office, **the sheer volume of data generated, stored, and mined for insights has become economically relevant to businesses, government, and consumers**. The history of previous trends in IT investment and innovation and its impact on competitiveness and productivity strongly suggest that Big Data can have a similar power, namely the ability to transform our lives. **The same preconditions that allowed previous waves of IT-enabled innovation to power productivity, i.e., technology innovations followed by the adoption of complementary management innovations, are in place for Big Data**, and we expect suppliers of Big Data technology and advanced analytic capabilities to have at least as much ongoing impact on productivity as suppliers of other kinds of technology. **All companies need to take Big Data and its potential to create value seriously if they want to compete**. For example, some retailers embracing big data see the potential to increase their operating margins by 60 per cent. Big Data: A new competitive advantage The use of **Big Data is becoming a crucial way for leading companies to outperform their peers**. In most industries, established competitors and new entrants alike **will leverage data-driven strategies to innovate, compete, and capture value**. Indeed, we found early examples of such use of data in every sector we examined. In healthcare, data pioneers are analyzing the health outcomes of pharmaceuticals when they were widely prescribed, and discovering benefits and risks that were not evident during necessarily more limited clinical trials. Other early adopters of Big Data are using data from sensors embedded in products from children's toys to industrial goods to determine how these products are actually used in the real world. Such knowledge then informs the creation of new service offerings and the design of future products **Big Data will help to create new growth opportunities and entirely new categories of companies**, such as those that aggregate and analyse industry data. Many of these will be companies that sit in the middle of large information flows where data about products and services, buyers and suppliers, consumer preferences and

intent can be captured and analysed. Forward-thinking leaders across sectors should begin aggressively to build their organisations' Big Data capabilities. In addition to the sheer scale of Big Data, the real-time and high-frequency nature of the data are also important. For example, 'now casting,' the ability to estimate metrics such as consumer confidence, immediately, something which previously could only be done retrospectively, is becoming more extensively used, adding considerable power to prediction. Similarly, the high frequency of data allows users to test theories in near real-time and to a level never before possible.

Big Data is used in the squo- retail and campaigns

Marr 13 (Nov. 13, 13. Bernard Marr is an author, speaker, and leading business and data expert. "The Awesome Ways Big Data is Used to Change Our World" *Linkedin* [//HS](https://www.linkedin.com/pulse/20131113065157-64875646-the-awesome-ways-big-data-is-used-today-to-change-our-world))

The term 'Big Data' is a massive buzzword at the moment and many say big data is all talk and no action. This couldn't be further from the truth. With this post, I want to show how big data is used today to add real value. Eventually, every aspect of our lives will be affected by big data. However, there are some areas where big data is already making a real difference today. I have categorized the application of big data into 10 areas where I see the most widespread use as well as the highest benefits [For those of you who would like to take a step back here and understand, in simple terms, what big data is, check out the posts in my Big Data Guru column]. 1. Understanding and Targeting Customers This is one of the biggest and most publicized areas of big data use today. Here, big data is used to better understand customers and their behaviors and preferences. Companies are keen to expand their traditional data sets with social media data, browser logs as well as text analytics and sensor data to get a more complete picture of their customers. The big objective, in many cases, is to create predictive models. You might remember the example of U.S. retailer Target, who is now able to very accurately predict when one of their customers will expect a baby. Using big data, Telecom companies can now better predict customer churn; Wal-Mart can predict what products will sell, and car insurance companies understand how well their customers actually drive. Even government election campaigns can be optimized using big data analytics. Some believe, Obama's win after the 2012 presidential election campaign was due to his team's superior ability to use big data analytics.

Big Data is being used to streamline business practices

Marr 13 (Nov. 13, 13. Bernard Marr is an author, speaker, and leading business and data expert. "The Awesome Ways Big Data is Used to Change Our World" *Linkedin* [//HS](https://www.linkedin.com/pulse/20131113065157-64875646-the-awesome-ways-big-data-is-used-today-to-change-our-world))

2. Understanding and Optimizing Business Processes Big data is also increasingly used to optimize business processes. Retailers are able to optimize their stock based on predictions generated from social media data, web search trends and weather forecasts. One particular business process that is seeing a lot of big data analytics is supply chain or delivery route optimization. Here, geographic positioning and radio frequency identification sensors are used to track goods or delivery vehicles and optimize routes by integrating live traffic data, etc. HR business processes are also being improved using big data analytics. This includes the optimization of talent acquisition – Moneyball style, as well as the measurement of company culture and staff engagement using big data tools.

Individuals use big data now- new tech proves

Marr 13 (Nov. 13, 13. Bernard Marr is an author, speaker, and leading business and data expert. "The Awesome Ways Big Data is Used to Change Our World" *Linkedin* [//HS](https://www.linkedin.com/pulse/20131113065157-64875646-the-awesome-ways-big-data-is-used-today-to-change-our-world))

3. **Personal Quantification and Performance Optimization** **Big data is** not just for companies and governments but **also for** all of **us individually. We can** now **benefit from** the **data generated** from **wearable devices** such as smart watches or smart bracelets. Take the Up band from Jawbone as an example: the armband collects data on our calorie consumption, activity levels, and our sleep patterns. **While it gives individuals rich insights, the real value is in** analyzing **the collective data**. In Jawbone's case, the company now collects 60 years worth of sleep data every night. **Analyzing such volumes of data will bring entirely new insights** that it can feed back to individual users. The other area where we benefit from big data analytics is finding love - online this is. Most online dating sites apply big data tools and algorithms to find us the most appropriate matches.

Big Data already mitigates adverse health impacts

Marr 13 (Nov. 13, 13. Bernard Marr is an author, speaker, and leading business and data expert. "The Awesome Ways Big Data is Used to Change Our World" *Linkedin* [//HS](https://www.linkedin.com/pulse/20131113065157-64875646-the-awesome-ways-big-data-is-used-today-to-change-our-world))

4. **Improving Healthcare and Public Health** **The computing power of big data analytics enables us to decode entire DNA strings in minutes and will allow us to find new cures and better understand and predict disease patterns**. Just think of what happens when all the individual data from smart watches and wearable devices can be used to apply it to millions of people and their various diseases. The **clinical trials of the future won't be limited by small sample sizes but could potentially include everyone! Big data techniques are already being used to monitor babies in a specialist premature and sick baby unit**. By recording and analyzing every heart beat and breathing pattern of every baby, **the unit was able to develop algorithms that can now predict infections 24 hours before any physical symptoms appear**. That way, **the team can intervene early and save** fragile **babies** in an environment where every hour counts. What's more, big **data analytics allow us to monitor and predict the developments of epidemics and disease outbreaks**. **Integrating data** from medical records with social media **analytics enables us to monitor flu outbreaks in real-time**, simply by listening to what people are saying, i.e. "Feeling rubbish today - in bed with a cold".

Big Data catalyzes important science and technological innovations

Marr 13 (Nov. 13, 13. Bernard Marr is an author, speaker, and leading business and data expert. "The Awesome Ways Big Data is Used to Change Our World" *Linkedin* [//HS](https://www.linkedin.com/pulse/20131113065157-64875646-the-awesome-ways-big-data-is-used-today-to-change-our-world))

6. **Improving Science and Research Science** and **research is currently being transformed by the new possibilities big data brings**. Take, for example, CERN, the Swiss nuclear physics lab with its Large Hadron Collider, the world's largest and most powerful particle accelerator. **Experiments to unlock the secrets of our universe** - how it started and works - **generate huge amounts of data**. The **CERN** data center has 65,000 processors to analyze its 30 petabytes of **data**. However, it **uses the computing powers of thousands of computers** distributed across 150 data centers worldwide **to analyze the data**. **Such computing powers can be leveraged to transform so many other areas of science and research**. 7. **Optimizing Machine and Device Performance** **Big data analytics help machines and devices become smarter and more autonomous**. For example, **big data** tools **are used to operate Google's self-driving car**. The Toyota Prius is fitted with cameras, GPS as well as powerful computers and sensors to safely drive on the road without the intervention of human beings. **Big data tools are also used to optimize energy grids** using data from smart meters. **We can even use big data tools to optimize the performance of computers and data warehouses**.

Big Data is used to prevent cyber terror attacks- turns case- the aff can't effectively solve their impacts without big data

Marr 13 (Nov. 13, 13. Bernard Marr is an author, speaker, and leading business and data expert. "The Awesome Ways Big Data is Used to Change Our World" *Linkedin* [//HS](https://www.linkedin.com/pulse/20131113065157-64875646-the-awesome-ways-big-data-is-used-today-to-change-our-world))

8. **Improving Security and Law Enforcement. Big data is applied heavily in improving security and enabling law enforcement.** I am sure you are aware of the revelations that **the** National Security Agency (**NSA**) in the U.S. **uses big data analytics to foil terrorist plots** (and maybe spy on us). **Others use big data techniques to detect and prevent cyber attacks.** Police forces use big data tools to catch criminals and even predict criminal activity **and credit card companies use big data use it to detect fraudulent transactions.**

Financial Trading Utilizes Big Data now

Marr 13 (Nov. 13, 13. Bernard Marr is an author, speaker, and leading business and data expert. "The Awesome Ways Big Data is Used to Change Our World" *Linkedin* [//HS](https://www.linkedin.com/pulse/20131113065157-64875646-the-awesome-ways-big-data-is-used-today-to-change-our-world))

10. Financial Trading My **final category of big data application comes from financial trading. High-Frequency Trading (HFT) is an area where big data finds a lot of use today. Here, big data algorithms are used to make trading decisions.** Today, the **majority of equity trading now takes place via data algorithms that** increasingly take into account signals from social media **networks and news websites to make, buy and sell decisions in split seconds.** For me, the 10 categories I have outlined here represent the areas in which big data is applied the most. Of course **there are so many other applications of big data and there will be many new categories as the tools become more widespread.**

Generic

Government agencies and industries utilize big data

Rajan 12 (November 2012. Sreeranga is a computer security and reliability, distributed computing, data mining expert with Fujitisa. "Top Ten Big Data Security and Privacy Challenges" http://www.isaca.org/groups/professional-english/big-data/groupdocuments/big_data_top_ten_v1.pdf //HS)

Most industries and government (agencies) will benefit from real - time security analytics, although the use cases may differ. There are use cases which are common, like, "Who is accessing which data from which resource at what time"; "Are we under attack?" or "Do we have a breach of compliance standard C because of action A?" These are not really new, but the difference is that we have more data at our disposal to make faster and better decisions (e.g., less false positives) in that regard. However, new use cases can be defined or we can redefine existing use cases in lieu of big data. For example, the health industry largely benefits from big data technologies, potentially saving billions to the tax - payer, becoming more accurate with the payment of claims and reducing the fraud r elated to claims. However, at the same time, the records stored may be extremely sensitive and have to be compliant with HIPAA or regional /local regulations, which call for careful protection of that same data. Detecting in real - time the anomalous retrieval of personal information, intentional or unintentional, allows the health care provider to timely repair the damage created and to prevent further misuse.

Sox/Dual Use

Big Data is the Key to future markets and business regulations

Bhushan 14 (October 2014. Pritisesh Bhushan is a senior manager of consulting with Cognizant, an information technology consulting company, where he has extensive experience with technology consulting in compliance and trade surveillance. "Trade Surveillance with Big Data" Cognizant. <http://www.cognizant.com/InsightsWhitepapers/Trade-Surveillance-with-Big-Data-codex1096.pdf> //HS)

Electronic trading has come a long way since the NASDAQ's debut in 1971. **Today's** fragmented electronic **market venues** (the result of non-traditional exchanges competing for trades with traditional exchanges) **have created** so-called "**dark pools of liquidity**." Simultaneously, **automated and algorithmic trading has become more sophisticated** — now **enabling individuals and institutions to engage in high-frequency trading** (HFT). **1** As a result, the number of trades has increased tenfold in the last decade, from 37 million trades in NYSE listed issues in February 2004 to 358 million in February 2014. **2** **Traders at capital market firms have been at the forefront of these advancements — pushing the envelope along the way. How has this impacted trade surveillance and compliance teams? The rise of algorithmic trading, where split-second execution decisions are made by high-performance computers,** plus the explosion of trading venues and the exponential growth of structured and unstructured data, **are challenging regulatory and compliance teams to rethink their surveillance techniques.** Those that depend on individual alerts can no longer meet most firms' requirements. We believe that **capital markets firms require a radically new and holistic surveillance approach.** This paper highlights some of the key issues faced by regulators and compliance teams. We will also describe how new **"big data" solutions can help manage them.**

Modern trading regulations require analysis of Big Data

Bhushan 14 (October 2014. Pritisesh Bhushan is a senior manager of consulting with Cognizant, an information technology consulting company, where he has extensive experience with technology consulting in compliance and trade surveillance. "Trade Surveillance with Big Data" Cognizant. <http://www.cognizant.com/InsightsWhitepapers/Trade-Surveillance-with-Big-Data-codex1096.pdf> //HS)

The explosive **growth of data over the last few years is taxing the IT infrastructure of many capital markets firms.** Fortunately, there are **emerging technologies that can help these companies better manage and leverage ever-bigger data pools.** These tools can enable trading firms to end data triage and retain useful historical information. **By building a big-data architecture, IT organizations can keep both structured and unstructured data in the same repository, and process substantial bits and bytes within acceptable timeframes.** This can help them uncover previously inaccessible "pearls" in today's ever-expanding ocean of data. Big data analytics involves collecting, classifying and analyzing huge volumes of data to derive useful information, which becomes the platform for making logical business decisions (see figure below). **Relational database techniques have proven to be inadequate for processing large quantities of data,** and hence cannot be applied to big data sets. **9** For today's capital markets firms, big data sets can reach multiple petabytes (one petabyte is one quadrillion bits of data). A Big Data Analytics Reference Architecture Front Office Consolidated Order Book Prop Orders Client Orders Market Data a Real-Time Market Data Reference Data a Securities Data Corporate Actions Client Data a Employee Data Unstructured Data a Macroeconomic News Phone Calls E-mails Corporate News Instant Msg. Twitter Different Asset Class & All Relevant Venues Traders Data a Intelligence Alerts Compliance Dashboard BI Reports Users Regulators Risk Managers. Data Platform Several Petabytes of Data (Real-Time Query & Updates) Real-Time Analytic Engine Compliance Team Executive Board Sales Reps & Traders Quality Metrics Historical Market Data Historical Action Data Near-Term & Real-Time Actions cognizant 20-20 insights **4** **To keep processing times tolerable, many organizations facing big-data challenges are counting on new open-source technologies** such as NoSQL (not only SQL) and **data stores** such as Apache Hadoop, Cassandra and Accumulo. The figure

on the previous page depicts a representative big-data architecture appropriate for modern-day trade surveillance. A highly scalable in-memory data grid (e.g., SAP's HANA) can be used to store data feeds and events of interest. Real-time surveillance can thus be enabled through exceptionally fast 10 open-source analytic tools such as complex event processing (CEP). CEP technologies like Apache Spark, Shark and Mesos put big data to good use by analyzing it in real time, along with other incidents. Meaningful events can also be recognized and flagged in real time.

Big Data is improving trade surveillance

Kumar 15 (2015. Sunil Kumar is a senior business consultant with Tata Consultancy Service's consulting group where he has a long history of working on trade surveillance and IT consulting. "The Changing Face of Trade Surveillance and the Role of Analytics" Global Consulting Practice <http://www.tcs.com/SiteCollectionDocuments/White%20Papers/Changing-face-trade-surveillance-role-analytics-0315-1.pdf> //HS)

Big Data is playing a key role in improving the effectiveness of surveillance. Trade surveillance is experiencing increased regulatory scrutiny and complexities due to the prevalence of multiple communication platforms, making it difficult for regulators to perform market oversight functions. Big Data technology will play a more important role in monitoring market participants' trading activity both at participants' and regulators' ends. This is done by ingesting enormous volumes of various types of data originating from different channels (such as social media messages, blogs, emails, phone call logs, bank statements) and consolidating this structured and unstructured data into a usable database that will allow advanced pattern-matching analytics to spot any anomalous behavior. Capital market entities are also increasingly using Big Data for enhanced business intelligence gathering. They employ techniques such as Complex Event Processing (CEP), business rule-based text mining, machine learning, and predictive analytics to perform market sentiment analysis, anomalous trading behavior detection, and advanced trading analytics. However, there are still several challenges to the widespread adoption of Big Data in capital markets surveillance. These include the lack of enhanced tools and techniques for visualization and successful deployment by regulators and infrastructure entities, and gaps in the skillsets (especially data scientists) needed to administer Big Data analytics solutions etc. As capital market-specific usage of Big Data become more widespread, firms will not only have a better business case to adopt it, but will also become technically more equipped to leverage it.

SOX

Might want to use a generic link in the 1nc and read this in the block

SOX requires data compliance which is key to quality big data

DeVera 12 (Aug. 10, 2012. Dwight DeVera is the senior vice president of Arcplan, a company specializing in Business Intelligence. "Invest in Good Data Before Big Data" Arcplan. <http://www.arcplan.com/en/blog/2012/08/invest-in-good-data-before-big-data/#more> //HS)

Big data is without a doubt 1 of the top 5 BI trends of 2012. **The hype around big data has driven many companies to hoard massive amounts of structured and unstructured information** in the hope of unearthing useful insight that will help them gain competitive advantage. Admittedly, **there is significant value to be extracted from your company's growing vault of data**; however it is data quality – not necessarily quantity – that is your company's biggest asset. So here are 3 reasons why you should devote more of your IT budget to data quality: 1) **Because good data quality sets the stage for sound business decisions.** Sensible business decisions should be based on accurate, timely information coupled with the necessary analysis. **Decision-makers need to be equipped with facts in order to plan strategically and stay ahead of the competition** – and **facts are entirely based on having correct data**. Though it's not as "sexy" as big data, mobile BI, or cloud, **data quality should be the foundation of all of these other initiatives**. Admittedly, **achieving data quality is tough**. Gartner analyst Bill Hostmann says, "Regardless of big data, old data, new data, little data, probably **the biggest challenge in BI is data quality.**" **It crosses department lines** (both IT and business users must take responsibility), **and processes that have multiple levels of responsibility often suffer from the "everyone and no one is responsible" conundrum**. It's also a complex process that requires laying out common definitions (what is a customer, what are our conventions for company names – Inc. or no Inc. – for example), performing an initial data cleanse, and then keeping things tidy through ongoing data monitoring, ETL, and other technologies. But **ensuring that your data is timely, accurate, consistent, and complete means users will trust the data**, and ultimately, that's the goal of the entire exercise if you see this first reason as the most important. **Trusting the data means being able to trust the decisions that are based on the data**. Clean up the data you have in place, then you can move on to a strategy that incorporates additional sources of big data. 2) Because you have to. So maybe reason #1 wasn't enough to convince you that come budget time, you should put a little extra in the data quality column. **What about the fact that poor data quality may be leaving you out of compliance with the law?** Sarbanes-Oxley (SOX) mainly affects public companies, but those that may undergo a future merger, acquisition or IPO should plan to comply. **SOX requires that organizations maintain accurate information and prove it in regular audits by independent agents**. Seen from this perspective, **poor data will cause a company to be out of compliance and can result in fines, lawsuits, and worse**.

Compliance requirements for SOX force extensive big data storage

Carroll 13 (Nov. 26, 2013. Alex Carroll is the co-owner of Lifeline Data Centers. There he does extensive work managing data centers and has years of experience in IT infrastructure. "How Sarbanes-Oxley Act (SOX) Impacts Data Centers" <http://www.lifelinedatacenters.com/data-center/sarbanes-oxley-act-sox-impacts-data-centers/> //HS)

Regulatory compliance has a big say in how businesses design and develop their systems. A major **compliance requirement** for many businesses is the Sarbanes-Oxley Act of 2002 (**SOX**). How Sarbanes-Oxley Act (SOX) Impacts Data Centers **On the face of it, the focus of SOX is to prevent financial frauds, and, for this purpose, it mandates companies to maintain tight controls over their financial disclosures.** **These controls assume the form** of regulating and tracking the flow **of financial data**, along with regular audits aimed at identifying and remediating potential risks. However, **the implications of SOX for**

data centers go much beyond that. SOX mandates strict data storage requirements and equally stringent retention policies and procedures. Although SOX does not give any specific size or methodology for data storage or policies, there are many guidelines data centers need to follow: The Public Committee Accounting Overseas Board (PCAOB) oversees and guides SOX auditors and sets standards that specify the elements required for successful compliance. The Committee of Sponsoring Organizations (COSO) has developed a control framework that offers a comprehensive set of guidelines to create and implement internal controls. Though not mandatory, this offers the optimal benchmark. The Control Objectives for Information and Related Technology (COBIT) framework, the handiwork of Information Systems Audit and Control Association (ISACA), offers specific guidance for IT controls. COBIT addresses 34 IT processes, grouped in four domains of Planning and Organization, Acquisition and Implementation, Delivery and Support, and Monitoring. **SOX also binds publically traded companies and accounting or audit firms to retain audit documents for a minimum of seven years** after the completion of an audit, **and also have provisions in place for retrieval of data quickly.** Here again, **the methodology of how to do so is left to the companies.** Data centers need to adopt solutions such as a **write-once, read-many** (WORM) approach to data, **which allows easy retrieval at anytime but no modifications,** to facilitate their client's compliance with the provisions of SOX. Apart from this, SOX compliant data centers also need to have strong security measures in place, including access and authentication systems, user account management, encryption, and other network security deployments, besides constant monitoring and audits. SOX violations can be costly. **The act imposes a fine of up to \$10 million and 20 years in prison for violators.** In addition, there is a promise of "stiff penalties" for companies that knowingly destroy, or even alter, records to cover their tracks or thwart investigations

SOX requires data collection- mandated in the law

Vormetric no date (No date. Vormetric is a company that creates data security products. "Sarbanes Oxley Act and Compliance Requirements for Protecting Data-at-Rest" [//HS](http://www.vormetric.com/compliance/sarbanes-oxley))

The Sarbanes-Oxley Act of 2002 (SOX), is a United States federal law enacted on 30 July 2002, which sets standards for all US public company boards, management and public accounting firms. **The primary sections of the SOX act that concern protecting data** are sections 302 and 404. Data protection requirements in both SOX Act sections 302 and 404 **are most concerned with the accuracy and content of required financial reports.** Sarbanes-Oxley Act section 404 has two major points: **Management is accountable for establishing and maintaining internal controls and procedures that enable accurate financial reporting, and assessing this posture every fiscal year in an internal control report.** Public accounting firms that prepare or issue yearly audits must attest to, and report on, this yearly assessment by management. Sarbanes-Oxley Act section 302 expands this with compliance requirements to: **List all deficiencies in internal controls and information, as well as report any fraud involving internal employees.** Detail significant changes in internal controls, or factors that could have a negative impact on internal controls. But **what does this mean in terms of compliance requirements to protect data for public companies?** **Any financial information needs to be safeguarded, and its integrity assured.** Specific internal security controls need to be identified that protect this data, auditing must take place, and this security posture re-assessed every year – including any changes or deficiencies as a result of changing conditions.

SOX demands data collection

Eitenbichler 9 (Oct. 13. 2009. Patrick Eitenbichler is the worldwide director of product marketing at HP. "Sarbanes-Oxley: 7 Years of Shaping Compliance and Technology" *Database: Trends and Applications*. [//HS](http://www.dbta.com/Editorial/Trends-and-Applications/Sarbanes-Oxley-7-Years-of-Shaping-Compliance-and-Technology-56608.aspx))

Today, **companies have a high-level of concern regarding data management and compliance.** This hasn't always been the case. **U.S. companies, in the wake of SOX passing 7 years ago, were left struggling to determine which types of data needed to be archived in order to comply with the**

new regulations. In an effort to comply with SOX, most companies adopted a “store everything” approach—leading to increased storage costs and unmanaged records. Storing all data that flowed through the company proved to be an unsuccessful way to manage company records and comply with increasing regulations. Companies today are under close scrutiny and pressure to comply with SOX, resulting in a complete transformation of their data storage processes and a switch to more efficient and secure methods. **Complying with the act requires that companies produce, on request, authentic and reliable records in a timely fashion.** In today’s stormy economic climate, companies need to understand how to avoid unnecessary costs and make the most out of the IT investments by using data management systems that not only meet compliance needs but provide a competitive advantage. Leading companies are using their compliance efforts to strengthen corporate governance, expand internal accountability, increase oversight into their corporate practices, and increase the independence of their external auditors. Companies that plan and strive for long-term sustained compliance will ultimately increase efficiency, improve business and IT alignment and reduce associated IT costs. Through this alignment, and effective risk management, companies can begin to move toward true IT governance.

Status quo skepticism would be magnified in the world of the plan- affirming privacy rights sparks concern for consumer privacy

Bracy 13 (Jun. 14, 2013 Jedidiah Bracy is the editor of Privacy Perspectives and Privacy Tech and writes in the fields of data protection and privacy law. "FISA Rulings Put Tech Biz Between Rock and Hard Place; Revelations Continue" *IAPP*
<https://privacyassociation.org/news/a/fisa-rulings-put-tech-biz-between-rock-and-hard-place-revelations-continue> //HS)

The Washington Post reports on how the increased public awareness of the NSA tracking programs also draws attention to consumer data tracking.

On Twitter, journalist Dan Sinker wrote, "When I go to The Washington Post to learn about gov data tracking, I'm hit by *fifty* commercial data trackers." However, the report points out there are differences between government data tracking and consumer data tracking: The private industry is subject to market pressures, while the government is not. A new Allstate/National JournalHeartland Monitor poll reveals that "most Americans exhibit a healthy amount of skepticism and resignation about data collection and surveillance and show varying degrees of trust in institutions to responsibly use their personal information." The poll was conducted days before the NSA disclosures

*****The EU's tough privacy laws are hampering development and innovation with big data- aff creates the same situation in the US**

EU Reporter 14 (Mar. 26, 2014. EU Reporter is News organization focusing on the European Union. "Privacy and Competitiveness in the Age of Big Data" EUReporter.
<http://www.eureporter.co/magazine/2014/03/26/privacy-and-competitiveness-in-the-age-of-big-data/> //HS)

The collection and control of massive amounts of personal data are a source of market power for the biggest players in the global market for internet services,

said the European Data Protection Supervisor (EDPS) today. Personal information has become a form of currency to pay for so-called 'free' online services and is a valuable intangible asset for an increasing number of companies doing business in the EU. This requires closer interaction between different regulators. EDPS Peter Hustinx said: "The evolution of big data has exposed gaps in EU competition, consumer protection and data protection policies that do not seem to have kept up with this development. Smarter interaction across these partially overlapping policy areas will support growth and innovation and minimise the potential harm to consumers. The EDPS is pleased to be facilitating discussions between regulators and experts in these fields." In his preliminary Opinion on privacy and competitiveness in the age of big data: The interplay between data protection, competition law and consumer protection, published today, the EDPS notes that the EU rules in these policy areas have much in common: each aims to promote growth and innovation and to promote the welfare of individual consumers. However, there is currently little dialogue between policymakers and experts in these fields. Sectors of the economy ranging from transport to health, banking to energy, are seeking to exploit the potential of big data, which includes vast volumes of personal data. It is essential that synergies in the enforcement of rules controlling anti-competitive practices, mergers, the marketing of so-called 'free' on-line services and the legitimacy of data processing are explored. This will help to enforce competition and consumer rules more effectively and also stimulate the market for privacy-enhancing services. To this end, the EDPS will facilitate discussions among experts and practitioners from the EU and the US, including a workshop in Brussels on 2 June 2014. The EDPS preliminary Opinion examines some of the convergences and tensions in these areas of EU law against the evolution of big data. In particular, he notes: The need for a fuller understanding of the massive growth in services that are marketed as free but in effect require payment in the form of the personal information of their customers; the need for a definition of

consumer harm in the enforcement of competition rules, in markets where powerful players may refuse access to personal information and may apply confusing privacy policies, and; how closer dialogue between regulators and experts on the rules and policies in data protection, competition and consumer protection could help promote consumer choice, diversity of services which safeguard privacy and greater control for consumers over their personal information. Background Privacy and data protection are fundamental rights in the EU. Data protection is a fundamental right, protected by European law and enshrined in Article 8 of the Charter of Fundamental Rights of the European Union. More specifically, the rules for data protection in the EU – as well as the duties of the EDPS – are set out in Regulation (EC) No 45/2001. One of the duties of the EDPS is to advise the European Commission, the European Parliament and the Council on proposals for new legislation and a wide range of other issues that have an impact on data protection. Furthermore, EU institutions and bodies processing personal data presenting specific risks to the rights and freedoms of individuals ('data subjects') are subject to prior-checking by the EDPS. Personal information or data: Any information relating to an identified or identifiable natural (living) person. Examples include names, dates of birth, photographs, video footage, email addresses and telephone numbers. Other details such as IP addresses and communications content – related to or provided by end-users of communications services – are also considered as personal data. Privacy: the right of an individual to be left alone and in control of information about his or herself. The right to privacy or private life is enshrined in the Universal Declaration of Human Rights (Article 12), the European Convention of Human Rights (Article 8) and the European Charter of Fundamental Rights (Article 7). The Charter also contains an explicit right to the protection of personal data (Article 8). Processing of personal data: According to Article 2(b) of Regulation (EC) No 45/2001, processing of personal data refers to “any operation or set of operations which is performed upon personal data, whether or not by automatic means, such as collection, recording, organisation, storage, adaptation or alteration, retrieval, consultation, use, disclosure by transmission, dissemination or otherwise making available, alignment or combination, blocking, erasure or destruction”. See the glossary on the EDPS website.

Surveillance and big data are symbiotic

David **Lyon**, Professor of Sociology, **2014**, “Surveillance, Snowden, and Big Data: Capacities, consequences, and critique”,

<http://bds.sagepub.com/content/spbds/1/2/2053951714541861.full.pdf>

The Snowden revelations about National Security Agency surveillance, starting in 2013, along with the ambiguous complicity of internet companies and the international controversies that followed provide a perfect segue into contemporary conundrums of surveillance and Big Data. Attention has shifted from late C20th information technologies and networks to a C21st focus on data, currently crystallized in “Big Data.” Big Data intensifies certain surveillance trends associated with information technology and networks, and is thus implicated in fresh but fluid configurations. This is considered in three main ways: One, the capacities of Big Data (including metadata) intensify surveillance by expanding interconnected datasets and analytical tools. Existing dynamics of influence, risk-management, and control increase their speed and scope through new techniques, especially predictive analytics. Two, while Big Data appears to be about size, qualitative change in surveillance practices is also perceptible, accenting consequences. Important trends persist – the control motif, faith in technology, public-private synergies, and user-involvement – but the future-orientation increasingly severs surveillance from history and memory and the quest for pattern-discovery is used to justify unprecedented access to data. Three, the ethical turn becomes more urgent as a mode of critique. Modernity’s predilection for certain definitions of privacy betrays the subjects of surveillance who, so far from conforming to the abstract, disembodied image of both computing and legal practices, are engaged and embodied users-in-relation whose activities both fuel and foreclose surveillance.

Gov data=priv. data

CT programs translate into valuable programs for the private sector

Jesse 15 (Mar. 24, 2015. Jay Jesse is the CEO of Intelligent Software solutions, a company specializing in Big Data. “Three Ways DOD Technology May Light the Way to Actionable Big Data in the Private Sector” Jobber Tech Talk. <http://www.jobbertechtalk.com/three-ways-dod-technology-may-light-the-way-to-actionable-big-data-in-the-private-sector-jay-jesse/> //HS)

Defense sector programs and research—from the Internet itself to applications like Apple’s Siri—often manifest in paradigm-changing innovation. In the Big Data arena, military applications are high stakes: for example, the urgency of harnessing massive amounts of data—in different formats and from wildly different sources—to model and pinpoint terrorist and criminal activity across the globe. From this arena, new applications and best practices are emerging that will result in gains far beyond their military and intelligence community origins. Here are three ways that military initiatives will show the private sector how to get more out of Big Data programs. Threat Analysis Becomes Opportunity
Analysis Public safety and antiterrorism agencies need clear and succinct pictures of the crime and security environment: What is happening, where is it happening, and why? To gain this view, they leverage massive amounts of high-quality, synthesized, actionable information for applications such as proactive policing of urban trouble spots (civilian) or using collection and analysis to find and neutralize makers of IEDs (military). Defense sector vendors have led the way in enabling analysts to rapidly perform complex searches across any data source—structured and unstructured databases, spreadsheets, mobile data, RSS feeds and documents—and quickly make visual sense of them in both space and time with geospatial displays, hotspot maps and timelines, just to name a few. “Actionable intelligence” is a high-stakes deliverable in the police and military arenas. But it is not that difficult to make the leap from “suspect” to “customer” to see how understanding future behavior in multiple dimensions will help product makers and marketers see and spot opportunities, rather than threats. Being able to spot trends, draw links and make connections between demographic groups, behavior patterns and actual geographic markets from what was previously a pile of disconnected and disorganized data sources has huge potential. This potential is already being leveraged in consumer contexts. Especially when we consider the importance of visualization and location in determining how, where and why consumer enterprises must marshal their production, distribution, marketing and sales resources against sophisticated competitors. While the stakes aren’t as high as they are in comparison to the global counterterrorism theater, they’re high enough to justify pinpointing where resources are most needed, enabling decision makers to deliver the greatest operational impact, reducing inefficiency and waste and optimizing limited resources. This is where DoD leads the way. Mobile Command Makes the 21st Century’s Ultimate “Street Team” An incident such as a bombing throws an urban area into pandemonium as public safety commanders, analysts and field operators scramble to assess damage, help survivors and search for clues about the perpetrators. Today’s field command technology must provide these vital personnel with relevant data while en route and at the scene, viewing the information they need on the move and uploading scene information back to command control—all securely shared via Wi-Fi, cellular data or satellite—using a wide variety of devices and media. The expanding real-time operational picture they create together drives faster, better decision making, speeding the time from a state of chaos to a state of control and setting the stage for investigations that lead to justice as pictures, videos and other evidence from the scene flood into the hands of analysts. Critical incident response management systems developed for the DoD will set the global baseline for private sector applications where anybody from large-scale event producers to experiential marketers find

they can gain a competitive edge from the ability to seamlessly and securely report, collect, store and retrieve operational intel. Team members can capture, relay and organize event data with sophistication never before seen, quickly associating all incoming media in a master analysis engine. The public safety crisis solution of today sets the stage for the sophisticated, real-time event logistics and marketing mobile apps of tomorrow. **Enterprise Search Finds Better Needles in Bigger Haystacks** From finding opportunities in sales data that helps craft better strategy to loss prevention initiatives, Big Data is undergoing rapid evolution and delivering more exciting results in both the private and defense sectors. The defense sector can speed gains in the area of data acquisition and enterprise search—the gateway enablers to the fruits of big data. By accounting for volume, variety and velocity, we equip business analysts and leaders to “shrink the haystack,” establishing a data processing ecosystem that can process, enable search and allow users to interact with the data in fruitful ways, rather than being overwhelmed and in the dark. The end result is better and precise decision-making through superior insight by revealing threats and opportunities that had previously been invisible in a mass of data. The first stage of enabling these gains is to pull all information into a common environment so that it can be pushed through an analysis pipeline. DoD vendors contending with massive amounts of data have led the way in fashioning connector architecture, normalizing and staging data, and compartmentalizing it into usable subsets. Defense sector solution providers then developed customized search and discovery systems that empowered analysts to thin the haystack in search of the valuable data needles they sought. NLP (natural language processing)-driven semantic enrichment represents a further refining and enhancement of the search experience, setting the stage for deeper analytics. Search and NLP are the one-two punch that fuses what the analyst knows with what he or she doesn't know, allowing users to constantly tune and refine smaller subsets of data for key factors. The system “learns” as the user refines their searches to better target their data domain, constantly improving search effectiveness. It began with counterterrorism experts looking for a particular piece of equipment involved in bomb-making, but has equal power for financial analysts trying to isolate a particular kind of transaction and yield profitable insight for their companies. **The data integration and enterprise search achievements of defense sector vendors are paving the way for more fruitful Big Data results across the world.** These are just three areas where defense sector technology gains translated into benefits for the private sector. I'll explore more of this landscape in the future.

Big Data is key to future efficiency of government and corporations

Pentland 13 (October. Alex Pentland is a computer science pioneer, MIT Professor, and oft cited author of computer science writings. He created the MIT Media lab and has been called by Forbes one of the “7 most powerful data scientists in the world.” “The Data-Driven Society” ebsco host //HS)

USING BIG DATA to diagnose problems and predict successes is one thing. **What is even more exciting is that we can use big data to design organizations, cities and governments that work better than the ones we have today.** The potential is easiest to see within corporations. **By measuring idea flow, it is usually possible to find simple changes that improve productivity and creative output.** For instance, the advertising department of a German bank had experienced serious problems launching successful new product campaigns, and they wanted to know what they were doing wrong. **When we studied the problem** with sociometric ID badges, we found that while groups within the organization were exchanging lots of e-mails, almost no one talked to the employees in customer service. **The reason was simple: customer service was on another floor.** This configuration caused huge problems. Inevitably, the advertising department would end up designing ad campaigns that customer service was unable to support. **When management saw the diagram we produced depicting this broken flow of information, they**

immediately realized they should move customer service to the same floor as the rest of the groups. Problem solved. Increasing engagement is not a magic bullet. In fact, increasing engagement without increasing exploration can cause problems. For instance, when postdoctoral student Yaniv Altshuler and I measured information flow within the eToro social network of financial traders, we found that at a certain point people become so interconnected that the flow of ideas is dominated by feedback loops. Sure, everyone is trading ideas -- but they are the same ideas over and over. As a result, the traders work in an echo chamber. And when feedback loops dominate within a group of traders, financial bubbles happen. This is exactly how otherwise intelligent people all became convinced that Pets.com was the stock of the century. Fortunately, we have found that we can manage the flow of ideas between people by providing small incentives, or nudges, to individuals. Some incentives can nudge isolated people to engage more with others; still others can encourage people mired in groupthink to explore outside their current contacts. In an experiment with 2.7 million small-time individual eToro investors, we "tuned" the network by giving traders discount coupons that encouraged them to explore the ideas of a more diverse set of other traders. As a result, the entire network remained in the healthy wisdom-of-the-crowd region. What was more remarkable is that although we applied the nudges only to a small number of traders, we were able to increase the profitability of all social traders by more than 6 percent. Designing idea flows can also help solve the tragedy of the commons, in which a few people behave in such a way that everyone suffers, yet the cost to any one person is so small there is little motivation to fix the problem. An excellent example can be found in the health insurance industry. People who fail to take medicine they need, or exercise, or eat sensibly have higher health care costs, driving up the price of health insurance for everyone. Another example is when tax collection is too centralized: local authorities have little incentive to ensure that everyone pays taxes, and as a result, tax cheating becomes common. The usual solution is to find the offenders and offer incentives or levy penalties designed to get them to behave better. This approach is expensive and rarely works. Yet graduate student Ankur Mani and I have shown that promoting increased engagement between people can minimize these situations. The key is to provide small cash incentives to those who have the most interaction with the offenders, rewarding them rather than the offender for improved behavior. In real-world situations -- with initiatives to encourage healthy behavior, for example, or to prompt people to save energy -- we have found that this social-pressure-based approach is up to four times as efficient as traditional methods. This same approach can be used for social mobilization -- in emergencies, say, or any time a special, coordinated effort is needed to achieve some common goal. In 2009, for example, the Defense Advanced Research Projects Agency designed an experiment to celebrate the 40th anniversary of the Internet. The idea was to show how social media and the Internet could enable emergency mobilization across the U.S. DARPA offered a \$40,000 prize for the team that could most quickly find 10 red balloons placed across the continental U.S. Some 4,000 teams signed up for the contest, and almost all took the simplest approach -- offering a reward to anyone who reported seeing a balloon. My research group took a different tack. We split the reward money among those who used their social networks to recruit a person who later saw a balloon and those who saw a balloon themselves. This scheme, which is conceptually the same as the social-pressure approach to solving tragedies of the commons, encouraged people to use their social networks as much as possible. We won the contest by locating all 10 balloons in only nine hours.

All Data Key

Preserving the collection of all big data is key to effectiveness

Einav and Levin 2014 (Liran Einav is a professor of economics at Stanford and a writer for the National Bureau of Economics. Jonathan Levin is Professor of economics at Stanford and a writer for the National Bureau of Economics. "The Data Revolution and Economic Analysis" National Bureau of Economics. <http://web.stanford.edu/~jdlevin/Papers/BigData.pdf> //HS)

****Heterogeneity-** Distinct characteristics between things (sorta I guess in this context it's the difference based on their data statistics or something of that sort, more research needed)

The studies described in the prior section make use of big data, but the conceptual approaches and statistical methods are familiar ones. In particular, the object being studied is the relationship between a particular treatment (having a better teacher, getting health insurance, being charged sales tax) and an outcome variable (adult earnings, health utilization, purchasing). Many, if not most, studies in empirical micro- economics have this structure, where the goal is to study a particular bivariate relationship—often, but not always, a causal one—holding “all else equal,” where the “all else equal” part is often implemented by controlling for other predictive variables. In contrast, the predictive modeling approaches described in section III are inherently multivariate. The focus is not on how a single variable affects a given outcome measure, but on how the outcome varies with a large number of potential predictors, and the analyst may or may not use prior theory as to which predictors are relevant. This conceptual difference raises the question of whether big data techniques common in statistics will turn out to be useful in economic research. We think the answer is likely to be affirmative. One application that already has been explored (Belloni et al. 2012; Belloni, Chernozhukov, and Hansen 2012) is to use machine- learning techniques to improve the efficiency of treatment effects studies when a research has either a large number of potentially confounding variables, or alternatively, a large number of potential instruments. Here the goal is still to estimate a particular bivariate relationship, but to use penalized regressions either to identify an optimal set of controls, or an optimal set of instruments given a large potential number. Another potential use of predictive modeling is to incorporate heterogeneity into econometric models and analyses. In our own research on credit and insurance markets (Bundorf, Levin, and Mahoney 2012; Einav, Jenkins, and Levin 2012; Einav, Finkelstein et al. 2013), we have used “off- the- shelf” credit and health- risk scores to account for the default propensities or likely health expenditures of individual consumers. For example, in Einav, Jenkins, and Levin (2012) we were interested in understanding consumer borrowing behavior and how lenders should set loan prices and credit limits for different segments of borrowers as stratified by their default risk. Predictive modeling provides a natural way to achieve this stratification, although the particular choice of predictive model was made by statisticians whose predictive scores derived from credit bureau records that were used as data. Similarly, in theoretical models of insurance markets, it is common to associate individuals with a “risk type” that summarizes their probability of accident or loss. Recent empirical work that looks at consumer choice of insurance or health plans (Bundorf, Levin, and Mahoney 2012; Einav, Finkelstein et al. 2013) has used predictive health- risk scores to summarize individual heterogeneity in a parsimonious way. The scores provide a useful way of assessing, for instance, whether riskier individuals systematically choose more generous insurance coverage, and whether prices in a market accurately adjust for the likely cost of different individuals to insurers that underwrite them. In these examples, economic differences researchers are consumers of machine- learning models, but not the producers of them. However, it is easy to imagine future applications where economists will be interested in characterizing the heterogeneity of individuals or products or firms in order to analyze in decisions or treatment effects. In such cases, machine- learning techniques can provide a useful way to obtain a one- dimensional statistic that summarizes a large amount of information about the entities being studied, just as a consumer’s credit score summarizes a rich unstructured history of borrowing and repayments into a scalar summary of default risk. A related point is that predictive scores can be interesting objects to study in and of themselves. For instance, health- risk scores provide a mapping from an individual’s demographics and past health care utilization into a one- dimensional prediction of future health care utilization. An interesting question may be whether these relationships are stable when there are changes in the environment. For example, if insurers begin to manage utilization or charge higher copayments, the prior relationships between demographics and past utilization and current utilization may not hold. This suggests that one key issue in applying predictive modeling techniques, which will need to be assessed on a case- by- case basis, will be to understand the limits in terms of how far out- of- sample predicted relationships are valid, and when policy changes might upset these relationships.

A2: Aff ILink Turn

Even though big data raises privacy concerns- the best way to solve them is through more data- it's a "sword and shield"

Armerding 14 (Dec. 8, 2014. Taylor Armerding is a journalist who focuses on technology news and issues. "The 5 worst Big Data privacy risks (and how to guard against them)" *CSO Online* <http://www.csoonline.com/article/2855641/big-data-security/the-5-worst-big-data-privacy-risks-and-how-to-guard-against-them.html> //HS)

The collection and manipulation of Big Data, as its proponents have been saying for several years now, can result in real-world benefits: Advertisements focused on what you actually want to buy; smart cars that can call for an ambulance if you're in an accident; wearable or implantable devices that can monitor your health and notify your doctor if something is going wrong. **But, it can also lead to big privacy problems.** By now it is glaringly obvious that when people generate thousands of data points every day – where they go, who they communicate with, what they read and write, what they buy, what they eat, what they watch, how much they exercise, how much they sleep and more – they are vulnerable to exposure in ways unimaginable a generation ago. [Securing big data off to slow start] MORE ON CSO: 6 products that will protect your privacy It is just as obvious that such detailed information, in the hands of marketers, financial institutions, employers and government, can affect everything from relationships to getting a job, qualifying for a loan or even getting on a plane. And so far, while **there have been multiple expressions of concern from privacy advocates and government, there has been little to update privacy protections in the online** always connected world. It has been almost three years since the Obama administration published what it termed a Consumer Privacy Bill of Rights (CPBR), in February 2012. That document declared that, "the consumer privacy data framework in the U.S. is, in fact, strong ... (but it) lacks two elements: a clear statement of basic privacy principles that apply to the commercial world, and a sustained commitment of all stakeholders to address consumer data privacy issues as they arise from advances in technologies and business models." And, as Susan Grant, director of consumer privacy at the Consumer Federation of America (CFA), puts it, the CPBR is, "not a bill. It has never been a piece of legislation. We need to have something offered, to talk about – at least somewhere to start." **Meanwhile, organizations** like the CFA and Electronic Privacy Information Center (EPIC), **and individual advocates** like Rebecca Herold, CEO of The Privacy Professor, **have enumerated multiple ways that Big Data analytics can invade the personal privacy of individuals.** They **include: 1. Discrimination** According to EPIC, in comments last April to the U.S. Office of Science and Technology Policy, "The use of predictive analytics by the public and private sector ... can now be used by the government and companies to make determinations about our ability to fly, to obtain a job, a clearance, or a credit card. The use of our associations in predictive analytics to make decisions that have a negative impact on individuals directly inhibits freedom of association." Herold, in a post on SecureWorld, noted that while overt discrimination has been illegal for decades, **big Data analytics can make it essentially "automated," and therefore more difficult to detect or prove.** In an interview, Herold said current discrimination law is, "vague, narrowly defined, and from the applications of it I've seen, depends upon very explicit and obvious evidence. **Big Data analytics provides the ability for discriminatory decisions to be made without the need for that explicit and obvious evidence.**" she said. That can affect everything from employment to promotions to fair housing and more. Edward McNicholas, global co-leader of the Privacy, Data Security, and Information Law Practice at Sidley Austin LLP, said he thinks some of the potential risks of Big Data are overstated, but believes, "**the most significant risk is that it is used to conceal discrimination based on illicit criteria, and to justify the disparate impact of decisions on vulnerable populations.**" 2. **An embarrassment of breaches** By now, **after catastrophic data breaches** at multiple retailers like Target and Home Depot, restaurant chains like P.F. Chang's, online marketplaces like eBay, government agencies, universities, online media corporations like AOL and the recent hack of Sony that not only put unreleased movies on the web but exposed the personal information of thousands of employees, **public awareness about credit card fraud and identity theft is probably**

at an all-time high. But in addition to that, there are numerous reports of Big Data analytics being used to expose personal details, such as beginning to market products to a pregnant woman before she had told others in her family. The same can be true of things like sexual orientation or an illness like cancer. 3. **Goodbye anonymity** Herold argues that without rules for anonymized data files, it is possible that combining data sets, “without first determining if any other data items should be removed prior to combining to protect anonymity, it is possible individuals could be re-identified.” She adds that if data masking is not done effectively, “big data analysis could easily reveal the actual individuals who data has been masked.” 4. **Government exemptions** According to EPIC, “Americans are in more government databases than ever,” including that of the FBI, which collects Personally Identifiable Information (PII) including name, any aliases, race, sex, date and place of birth, Social Security number, passport and driver’s license numbers, address, telephone numbers, photographs, fingerprints, financial information like bank accounts, employment and business information and more. Yet, “incredibly, the agency has exempted itself from Privacy Act (of 1974) requirements that the FBI maintain only, ‘accurate, relevant, timely and complete’ personal records,” along with other safeguards of that information required by the Privacy Act, EPIC said. 5. **Your data gets brokered** Numerous companies collect and sell, “consumer profiles that are not clearly protected under current legal frameworks,” EPIC said. There is also little or no accountability or even guarantees that the information is accurate. “The data files used for big data analysis can often contain inaccurate data about individuals, use data models that are incorrect as they relate to particular individuals, or simply be flawed algorithms,” Herold said. *** **Those are not the only risks, and there is no way to eliminate them. But there are ways to limit them.** One, according to Joseph Jerome, policy counsel at the Future of Privacy Forum (FPF), is to use Big Data analytics for good – to expose problems. “In many respects, Big Data is helping us make better, fairer decisions,” he said, noting that an FPF report with the Anti-Defamation League showed that, “Big Data can be a powerful tool to empower users and to fight discrimination. It can be used as a sword or a shield. More data can be used to show where something is being done in a discriminatory way. Traditionally, one of the biggest problems in uncovering discrimination is a lack of data,” he said.

Impact Modules

Generic Econ 1NC

This is not the best scenario we have

Utilizing big data will strengthen the economy

Kennedy 14 (Dec. 3, 2014. President of Kennedy Research LLC and senior fellow at the Information Technology and Innovation Foundation. "Big Data's Economic Impact" Committee for Economic Development. [//HS](https://www.ced.org/blog/entry/big-datas-economic-impact))

Big Data is beginning to have a significant impact on our knowledge of the world. This is important because increases in human knowledge have always played a large role in increasing economic activity and living standards. Continued improvements in the price and capacity of tools for collecting, transmitting, storing, analyzing and acting upon data will make it easier to gather more information and to turn it into actionable knowledge of how systems work. Big Data is best understood as an untapped resource that technology finally allows us to exploit. For instance, data on weather, insects, and crop plantings has always existed. But it is now possible to cost-effectively collect those data and use them in an informed manner. We can keep a record of every plant's history, including sprays and rainfall. When we drive a combine over the field, equipment can identify every plant as either crop or weed and selectively apply herbicide to just the weeds. Such new use of data has the capacity to transform every industry in similar ways. A recent OECD report listed some of the ways that more and better data will affect the economy:

- Producing new goods and services, such as the Nest home thermometer or mass customized shoes;
- Optimizing business processes;
- More-targeted marketing that injects customer feedback into product design;
- Better organizational management; and
- Faster innovation through a shorter research and development cycle.

A report from McKinsey Global Institute estimates that Big Data could generate an additional \$3 trillion in value every year in just seven industries. Of this, \$1.3 trillion would benefit the United States. The report also estimated that over half of this value would go to customers in forms such as fewer traffic jams, easier price comparisons, and better matching between educational institutions and students. Note that some of these benefits do not affect GDP or personal income as we measure them. They do, however, imply a better quality of life. The impact affects more than consumers, however. Erik Brynjolfsson of MIT found that companies that adopt data-driven decision making achieve 5 to 6 percent higher productivity and output growth than their peers, even after controlling for other investments and the use of information technology. Similar differences were found in asset utilization, return on equity, and market value. The Omidyar Network recently released a study of the impact of Open Data policies on government. The report concluded that implementation of these policies could boost annual income within the G20 by between \$700 billion and \$950 billion. The benefits include reduced corruption, better workplace conditions, increased energy efficiency, and improved foreign trade. Even the advertising industry, whose use of data is sometimes viewed with suspicion, delivers large benefits. A study by the Direct Marketers Association found that better use of data made marketing more efficient both by allowing companies to avoid sending solicitations to individuals who are unlikely to buy their product and by matching customers with offers that better meet their individual needs and interests. Big data also reduced barriers to entry by making it easier for small companies to get useful market data. Finally, another McKinsey study concluded that free Internet services underwritten by Internet advertising delivered significant benefits to Internet users. It estimated the social surplus from these services at 120 billion euros, 80 percent of which went to consumers. This trend in data also has an impact on workers. Data analysis has been called "the sexiest job of the 21st century." The United States already has an estimated 500,000 Big Data jobs. But McKinsey estimates that there is a shortage of between 140,000 and 190,000 workers with advanced degrees in statistics, computer engineering and other applied fields. Perhaps more important is the shortage of 1.5 million managers and analysts who hold traditional jobs but are capable of integrating Big Data into their decision making. The need to understand and act on improved data is likely to increase worker productivity and pay. Thanks to continued technological improvements, data will become even easier to collect, transmit, store, and analyze. Together with related advances in material sciences,

biotechnology, information technology, and nanotechnology, it will enable a vast range of new products and services. As with any resource, the main constraint will be the ability to imagine new uses for this resource and to build a viable business model around these uses that delivers valuable products and services to consumers.

Financial Crisis have long lasting adverse effects on the structures of economies- empirics

Reinhart 9 (Jan. 26 2009. Carmen Reinhart is a professor teaching about the international financial system at Harvard's Kennedy School. "The Economic and Fiscal Consequences of Financial Crises" Vox <http://www.voxeu.org/article/economic-and-fiscal-consequences-financial-crises> //HS)

Financial crises are historically associated with the "4 deadly D's": Sharp economic downturns follow banking crises; with government revenues dragged down, fiscal deficits worsen; deficits lead to debt; as debt piles up rating downgrades follow. For the most fortunate countries, the crisis does not lead to the deadliest D: default, but for many it has. A Even a cursory reading of the global financial press in the past few months would lead one to despair that the world economy is moving through dark and uncharted waters. But, in fact, there is precedent. In a recent paper, Kenneth Rogoff and I examined the international experience with episodes of severe banking crises. The depth, duration and characteristics of the economic slump following the crises traced out a few empirical regularities. Our main findings in that paper can be summarized as follows: Financial crises are protracted affairs. Asset market collapses are deep and prolonged. Real housing price declines average 35% stretched out over six years. Equity price collapses average 55% over a downturn of about three and a half years. There are profound declines in output and employment. The unemployment rate rises an average of 7 percentage points over the down phase of the cycle, which lasts on average over four years. Real GDP per capita falls (from peak to trough) an average of over 9%, the duration of the downturn averages roughly two years. There are significant adverse consequences of the financial crisis on government finances. Tax revenues shrink as the economic conditions deteriorate, the fiscal deficit worsens markedly, and the real value of government debt tends to explode, rising an average of 86% in the major post-World War II episodes. In the remainder of this note, I elaborate on these points. I follow up with a sketch of how the crisis, deteriorating economic conditions, and more precarious fiscal fundamentals impact sovereign risk in the aftermath of the crises episodes. Downturn It is now beyond contention that the present US financial crisis is severe by any metric. As a result, we focus on systemic financial crises. The "big five" advanced economy crises include episodes in Spain (1977), Norway (1987), Finland (1991), Sweden (1991), and Japan (1992). Famous emerging market episodes in our study include the 1997-1998 Asian crisis (Hong Kong, Indonesia, Korea, Malaysia, the Philippines, and Thailand), Colombia (1998), and Argentina (2001). Central to the analysis is historical housing price data, which can be difficult to obtain and are critical for assessing the present episode. We therefore include two earlier historical cases for which housing prices are available, Norway in 1899 and the US in 1929. Figure 1 looks at the bust phase in housing price cycles surrounding banking crises, including the current episode in the US and a number of other countries now experiencing banking crises; Austria, Hungary, Iceland, Ireland, Spain, and the UK. Ongoing crises are in dark shading, and past crises are in light shading. The cumulative decline in real housing prices from peak to trough averages 35.5%.¹ Figure 1. Past and ongoing real house price cycles and banking crises: peak-to-trough price declines (left panel) and years duration of downturn (right panel) Source: Reinhart and Rogoff (2009a). The most severe real housing price declines were experienced by Finland, the Philippines, Colombia and Hong Kong. Their crashes were 50 to 60%, measured from peak to trough. The housing price decline experienced by the US to date during the current episode (almost 28% according to the Case-Shiller index) is already more than twice that registered in the US during the Great Depression. The duration of housing price declines is quite long-lived, averaging roughly six years. Even excluding the extraordinary experience of Japan, the average remains over five years. As illustrated in Reinhart and Rogoff (2009a), the equity price declines that accompany banking crises are far steeper than are housing price declines, if somewhat shorter lived. The average historical decline in equity prices is 55.9%, with the downturn phase of the cycle lasting 3.4 years. Notably, during the current cycle, Iceland and Austria have already experienced peak-to-trough equity price declines far exceeding the average of the historical comparison group. On average, unemployment rises for almost five years, with an increase in the unemployment rate of about 7 percentage points. While none of the postwar episodes rivals the rise in unemployment of over 20 percentage points experienced by the US during the Great Depression, the employment consequences of financial crises are large in many cases. Figure 2 looks at increases in

unemployment rates across the historical episodes. Figure 2. Past unemployment cycles and banking crises: Trough-to-peak percent increase in the unemployment rate (left panel) and years duration of downturn (right panel) Sources: Reinhart and Rogoff (2009a). The emerging markets, particularly those in Asia, do better in terms of unemployment than do the advanced economies (Figure 2). There are well-known data issues in comparing unemployment rates across countries, as widespread “underemployment” in many emerging markets and the vast informal sector are not captured in the official unemployment statistics. As to real per capita GDP around banking crises, the average magnitude of the decline is 9.3%. The declines in real GDP are smaller for advanced economies than for emerging market economies. A probable explanation for the more severe contractions in emerging market economies is that they are prone to abrupt reversals in the availability of foreign credit. **When foreign capital comes to a “sudden stop,”** to use the phrase coined by Guillermo Calvo (2006), **economic activity heads into a tailspin.** The cycle from peak to trough in GDP is much shorter, only two years. Deficits Declining revenues and higher expenditures owing to a combination of bailout costs and higher transfer payments and debt servicing costs lead to a rapid and marked worsening in the fiscal balance. The episodes of Finland and Sweden stand out in this regard, as the latter went from a pre-crisis surplus of nearly 4% of GDP to a whopping 15% deficit-to-GDP ratio. Debt Figure 3 shows the rise in real government debt in the three years following a banking crisis. **The deterioration in government finances is striking, with an average debt rise of over 86%.** We look at percentage increase in debt, rather than debt-to-GDP, because sometimes steep output drops would complicate interpretation of debt-GDP ratios. As Reinhart and Rogoff (2009b) note, the characteristic huge buildups in government debt are driven mainly by sharp falloffs in tax revenue. **The much publicized bank bailout costs are typically second order.** Figure 3. Cumulative increase in real public debt in the three years following the banking crisis Sources: Reinhart and Rogoff (2008b) and sources cited therein. Downgrades (and sometimes default) Figure 4. Institutional Investor sovereign ratings cycles and banking crises: Peak-to-trough index declines (left panel) and years duration of downturn (right panel) Conclusions (not delusions) **An examination of the aftermath of severe financial crises shows deep and lasting effects on asset prices, output and employment. Unemployment rises and housing price declines extend out for five and six years, respectively. Even recessions sparked by financial crises do eventually end, albeit almost invariably accompanied by massive increases in government debt.** The crises, more often than not, **adversely impact sovereign creditworthiness,** as reflected in a higher risk premia. The effects, however, do not appear to be “permanent.” **The global nature of the present crisis will make it far more difficult for many countries to grow their way out through higher exports.** The growth slowdown is amplified in world commodity markets, as many emerging markets face steep declines in their terms of trade. If historical patterns hold, **the current lull in sovereign defaults or restructurings in emerging markets will likely to come to an end,** particularly if the recovery process in the world’s largest economies is delayed. Ecuador has already defaulted and others are teetering on the brink.

An Economic crisis would cause global tension and war

Burrows and Harris 9 (April 2009. Matthew Burrows is a counselor at the National Intelligence Council, an agency that supplies long term predictions of global events to the Director of National Intelligence, and is the lead writer of the report *Global Trends 2025: A Transformed World*. Jennifer Harris is a member of the National Intelligence Council who specializes in long range analysis. “Revisiting the Future: Geopolitical Effects of the Financial Crisis” *The Washington Quarterly* <http://csis.org/files/publication/twq09aprilburrows.pdf>)

Of course, the report encompasses more than economics and indeed believes the future is likely to be the result of a number of intersecting and interlocking forces. With so many possible permutations of outcomes, each with ample Hostility toward the U.S. as the source of the crisis may have received too little credence. **Revisiting the Future opportunity for unintended consequences, there is a growing sense of insecurity.** Even so, history may be more instructive than ever. **While** we continue to believe that **the Great Depression is not likely to be repeated, the lessons to be drawn from that period [the Great Depression] include the harmful effects on fledgling democracies and multiethnic societies** (think Central Europe in 1920s and 1930s) **and on the sustainability of multilateral institutions** (think League of Nations in the same period). **There is no reason to think that this would not be true in the twenty first as much as in the twentieth century. For that reason, the ways in which the potential for greater conflict could grow would seem to be even more apt in a constantly volatile economic environment** as they would be if change would be steadier. In surveying those risks, the report stressed the likelihood that **terrorism and nonproliferation will remain priorities even**

as resource issues move up on the international agenda. Terrorism's appeal will decline if economic growth continues in the Middle East and youth unemployment is reduced. For those terrorist groups that remain active in 2025, however, the diffusion of technologies and scientific knowledge will place some of the world's most dangerous capabilities within their reach. Terrorist groups in 2025 will likely be a combination of descendants of long established groups — inheriting organizational structures, command and control processes, and training procedures necessary to conduct sophisticated attacks — and newly emergent collections of the angry and disenfranchised that become self-radicalized, particularly in the absence of economic outlets that would become narrower in an economic downturn. The most dangerous casualty of any economically-induced drawdown of U.S. military presence would almost certainly be the Middle East. Although Iran's acquisition of nuclear weapons is not inevitable, worries about a nuclear-armed Iran could lead states in the region to develop new security arrangements with external powers, acquire additional weapons, and consider pursuing their own nuclear ambitions. It is not clear that the type of stable deterrent relationship that existed between the great powers for most of the Cold War would emerge naturally in the Middle East with a nuclear Iran. Episodes of low intensity conflict and terrorism taking place under a nuclear umbrella could lead to an unintended escalation and broader conflict if clear red lines between those states involved are not well established. The close proximity of potential nuclear rivals combined with underdeveloped surveillance capabilities and mobile dual-capable Iranian missile systems also will produce inherent difficulties in achieving reliable indications and warning of an impending nuclear attack. The lack of strategic depth in neighboring states like Israel, short warning and missile flight times, and uncertainty of Iranian intentions may place more focus on preemption rather than defense, potentially leading to escalating crises. Types of conflict that the world continues to experience, such as over resources, could reemerge, particularly if protectionism grows and there is a resort to neo-mercantilist practices. Perceptions of renewed energy scarcity will drive countries to take actions to assure their future access to energy supplies. In the worst case, this could result in interstate conflicts if government leaders deem assured access to energy resources, for example, to be essential for maintaining domestic stability and the survival of their regime. Even actions short of war, however, will have important geopolitical implications. Maritime security concerns are providing a rationale for naval buildups and modernization efforts, such as China's and India's development of blue water naval capabilities. If the fiscal stimulus focus for these countries indeed turns inward, one of the most obvious funding targets may be military. Buildup of regional naval capabilities could lead to increased tensions, rivalries, and counterbalancing moves, but it also will create opportunities for multinational cooperation in protecting critical sea lanes. With water also becoming scarcer in Asia and the Middle East, cooperation to manage changing water resources is likely to be increasingly difficult both within and between states in a more dog-eat-dog world.

Retail 1NC

Big Data creates new competitive advantages and revenue for retailers

Manyika et al 11 (May 2011. McKinsey Global Institute is a research contracting firm. This project was led by James Manyika, the director of McKinsey Global Institute and a former leader within technology companies where he focused on innovation, growth, and strategy. Michael Chui also assisted in leading the research. Chui is a partner of McKinsey Global Institute where he specializes in research on the impact of information tech and innovation on businesses, the econ, and society. "Big Data: The Next Frontier for Innovation, Competition, and Productivity" McKinsey Global Institute.
[//HS\)](http://www.mckinsey.com/insights/business_technology/big_data_the_next_frontier_for_innovation)

While **big data** linked to new technology does squeeze the industry in some ways, it also **offers significant new opportunities for creating value.** **Sector retailers and their competitors are in a constant race to identify and implement those big data levers that will give them an edge in the market.** **The volume of data is growing inexorably as retailers not only record every customer transaction and operation but also keep track of emerging data sources** such as radio-frequency identification (RFID) chips that track products, and online customer behavior and sentiment. In fact, US retail has been leveraging information technology for decades. Point-of-sale transactional data, primarily obtained from the use of bar codes, first appeared in the 1970s. Since the 1990s, many leading retailers have been using store-level and supply chain data to optimize distribution and logistics, sharpen merchandise planning and management, and upgrade store operations. In previous MGI research on the acceleration of productivity in general merchandise retail in the 1990s, we found that Wal-Mart directly and indirectly caused the bulk of the productivity acceleration through ongoing managerial innovation (e.g., big-box formats, everyday low price) that increased competitive intensity and drove the diffusion of managerial and technological best practices. Wal-Mart pioneered the expansion of an electronic data interchange system to connect its supply chain electronically. WalMart also developed "Retail Link," a tool that gives its suppliers a view of demand in its stores so that they know when stores should be restocked rather than waiting for an order from Wal-Mart. This "vendor-managed inventory" was a revolutionary concept when it was introduced in the late 1980s. Both of these initiatives improved the retailer's capital and labor productivity and cost position. **When other retailers moved in the 1990s to emulate what Wal-Mart had pioneered in order to remain competitive, productivity surged across the industry.** **Today, leading players are mining customer data to inform decisions they make about managing their supply chain to merchandising and pricing.** **Wal-Mart's detailed and cost-efficient customer tracking gives the retailer the ability to mine** petabytes of **data on customer preferences and buying behavior, and thereby win important pricing and distribution concessions from consumer product goods companies.** Retailers across the industry are becoming more sophisticated in slicing and dicing big data they collect from multiple sales channels, catalogs, stores, and online interactions. The widespread use of increasingly granular customer data can enable retailers to improve the effectiveness of their marketing and merchandising. Big data levers applied to operations and supply chains will continue to reduce costs and increasingly create new competitive advantages and strategies for growing retailers' revenue.

The retail sector is a litmus test for economic strength

Manyika et al 11 (May 2011. McKinsey Global Institute is a research contracting firm. This project was led by James Manyika, the director of McKinsey Global Institute and a former leader within technology companies where he focused on innovation, growth, and strategy. Michael Chui also assisted in leading the research. Chui is a partner of McKinsey Global Institute where he specializes in research on the impact of information tech and innovation on businesses, the econ, and society. "Big Data: The Next Frontier for Innovation, Competition, and Productivity" McKinsey Global Institute.
[//HS\)](http://www.mckinsey.com/insights/business_technology/big_data_the_next_frontier_for_innovation)

Retail makes up a sizable part of the US economy. In 2009, that share was an estimated 6 percent of the economy, down a percentage point from 2000. Industry forecasts point to only **modest growth** over the next five years as the sector steadily, but slowly, recovers from recession. **Historical trends have demonstrated that there is a close relationship between growth in retail and that of developed market economies as a whole.** As a matter of reference, the International Monetary Fund (IMF) is predicting annual US GDP growth of 2.7 percent through 2015. **Retail's share of overall consumer spending has been in decline, falling from 50 percent in 1990 to 42 percent in 2009.** And the sector's **profitability is under intense pressure, squeezed both by suppliers**, who have been capturing an increasing amount of surplus, **and by customers**, who are putting pressure on prices. **For every \$1.00 of operating profit on consumer goods in 2008, retailers collected** approximately **\$0.31, down from \$0.60 in 1999**, while suppliers, packagers, and others below retail on the value chain received \$0.69 (Exhibit 20).

An Economic crisis would cause global tension and war

Burrows and Harris 9 (April 2009. Matthew Burrows is a counselor at the National Intelligence Council, an agency that supplies long term predictions of global events to the Director of National Intelligence, and is the lead writer of the report *Global Trends 2025: A Transformed World*. With water also becoming scarcer in Asia and the Middle East, cooperation to manage changing water resources is likely to be increasingly difficult both within and between states in a more dog - eat - dog world.

Manufacturing 1NC

Empirics prove Big Data can help the manufacturing sector- only a question of utilizing new data

Manyika et al 11 (May 2011. McKinsey Global Institute is a research contracting firm. This project was led by James Manyika, the director of McKinsey Global Institute and a former leader within technology companies where he focused on innovation, growth, and strategy. Michael Chui also assisted in leading the research. Chui is a partner of McKinsey Global Institute where he specializes in research on the impact of information tech and innovation on businesses, the econ, and society. "Big Data: The Next Frontier for Innovation, Competition, and Productivity" McKinsey Global Institute. http://www.mckinsey.com/insights/business_technology/big_data_the_next_frontier_for_innovation //HS)

The manufacturing sector has been the backbone of many developed economies and remains an important driver of GDP and employment there. However, **with the rise of production capacity and capability in** China and other **low-cost nations, manufacturing has become an increasingly global activity,** featuring extended supply chains made possible by advances in information and communications technology. **While globalization is not a recent phenomenon, the explosion in information and communication technology,** along with reduced international freight costs **and lower entry barriers to markets worldwide, has hugely accelerated the industrial development path and created increasingly complex webs of value chains spanning the world.** **Increasingly global and fragmented manufacturing value chains create new challenges that manufacturers must overcome** to sustain productivity growth. In many cases, **technological change and globalization have allowed countries to specialize in specific stages of the production process.** As a result, manufacturers have assembled global production and supply chain networks to achieve cost advantages. For example, a typical global consumer electronics manufacturer has production facilities on almost every continent, weighing logistics costs against manufacturing costs to optimize the footprint of their facilities. Advanced manufacturers also often have a large number of suppliers, specialized in producing specific types of components where they have sustainable advantages both in cost and quality. It is typical for a large automobile original equipment manufacturer (OEM) assembly plant to be supplied by up to 4,000 outside vendors. **To continue achieving high levels of productivity growth, manufacturers will need to leverage large datasets to drive efficiency across the extended enterprise** and to design and market higher-quality products. The "raw material" is readily available; **manufacturers already have a significant amount of digital data with which to work. Manufacturing stores more data than any other sector**—close to 2 exabytes of new data stored in 2010. This sector generates data from a multitude of sources, from instrumented production machinery (process control), to supply chain management systems, to systems that monitor the performance of products that have already been sold (e.g., during a single cross-country flight, a Boeing 737 generates 240 terabytes of data). And the amount of data generated will continue to grow exponentially. The number of RFID tags sold globally is projected to rise from 12 million in 2011 to 209 billion in 2021. IT systems installed along the value chain to monitor the extended enterprise are creating additional stores of increasingly complex data, which currently tends to reside only in the IT system where it is generated. Manufacturers will also begin to combine data from different systems including, for example, computer-aided design, computer-aided engineering, computer-aided manufacturing, collaborative product development management, and digital manufacturing, and across organizational boundaries in, for instance, end-to-end supply chain data.

Manufacturing UQ- need a boost now

The Economist 15 (Mar. 25, 2015. The Economist is a publication focusing on economic issues and news. "Worrying Signs" The Economist. <http://www.economist.com/blogs/freexchange/2015/03/american-manufacturing-0> //HS)

IN RECENT years there has been much talk of a "renaissance" in American manufacturing. A few things seemed to be on the side of the makers. For instance, until recently the dollar was weak. American wages were stagnant, but those in China were booming. Cheap shale oil and gas gave factories a boost. But as we argued recently, **talk of a renaissance is overblown.** And **new figures,** released today, **add to the mounting pile of evidence saying that manufacturing growth is starting to slow.** We argued before that **although there has been a recovery in**

American manufacturing in recent years, it is not a sustainable one. Employment in the sector is still lower than before the crash. So is one important measure of output: real value added (see first set of charts). In short, America has not got better at producing stuff. Also, much of the recovery in American manufacturing seems to be based on a cyclical boom in “durable” goods—things that you expect to last a long time, like cars and fridges. During the recession, orders for durable goods plunged (see second chart). That’s because it is quite easy to put off such purchases. By contrast, it is more difficult to put off purchases of non-durable goods, like medicines, because people tend to consume them more frequently. After the recession, production of durable goods soared. Cheap credit, for instance, spurred demand for new motors and rapid growth in carmaking. That sector accounted for over a third of durables growth from 2009 to 2013. Yet a recovery based on a few durables industries is unsustainable. This is because when pent-up demand is satisfied, a few big industries will suffer. Overall output is likely to stall. New data confirm this prediction. Orders for durable goods fell by 1.4% in February. Motor-vehicle orders fell by 0.5%. It is possible that the recent bad weather has had an effect here. But it may be a sign of something more troubling. As economists at Capital Economics, a consultancy, argue, “the more general malaise started back in the autumn of last year. Indeed, core orders have now fallen in every month since last October.” In recent months non-durable goods have also fallen quite rapidly. What explains all this? The obvious culprit is the strong dollar, because it makes manufacturing exports (which account for roughly half of America’s total) more expensive. Alternatively, it may be because consumers are starting to pull back on spending. In January, consumer credit grew at the slowest pace in over a year, according to recent data from the Federal Reserve. In recent months consumer confidence has dropped a bit. And companies may not be so confident either, and are thus not in the mood to add to capital stock, says Steven Ricchiuto of Mizuho Securities, an investment bank. This does not bode well for American manufacturing or, indeed, for economic growth overall.

****Econ Scenario****

An Economic crisis would cause global tension and war

Burrows and Harris 9 (April 2009. Matthew Burrows is a counselor at the National Intelligence Council, an agency that supplies long term predictions of global events to the Director of National Intelligence, and is the lead writer of the report *Global Trends 2025: A Transformed World*. Jennifer Harris is a member of the National Intelligence Council who specializes in long range analysis. “Revisiting the Future: Geopolitical Effects of the Financial Crisis” *The Washington Quarterly* <http://csis.org/files/publication/twq09aprilburrows.pdf>)

Of course, the report encompasses more than economics and indeed believes the future is likely to be the result of a number of intersecting and interlocking forces. With so many possible permutations of outcomes, each with ample hostility toward the U.S. as the source of the crisis may have received too little credence. Revisiting the Future opportunity for unintended consequences, there is a growing sense of insecurity. Even so, history may be more instructive than ever. While we continue to believe that the Great Depression is not likely to be repeated, the lessons to be drawn from that period [the Great Depression] include the harmful effects on fledgling democracies and multiethnic societies (think Central Europe in 1920s and 1930s) and on the sustainability of multilateral institutions (think League of Nations in the same period). There is no reason to think that this would not be true in the twenty first as much as in the twentieth century. For that reason, the ways in which the potential for greater conflict could grow would seem to be even more apt in a constantly volatile economic environment as they would be if change would be steadier. In surveying those risks, the report stressed the likelihood that terrorism and nonproliferation will remain priorities even as resource issues move up on the international agenda. Terrorism’s appeal will decline if economic growth continues in the Middle East and youth unemployment is reduced. For those terrorist groups that remain active in 2025, however, the diffusion of technologies and scientific knowledge will place some of the world’s most dangerous capabilities within their reach. Terrorist

groups in 2025 will likely be a combination of descendants of long established groups ————— inheriting organizational structures, command and control processes, and training procedures necessary to conduct sophisticated attacks ————— and newly emergent collections of the angry and disenfranchised that become self - radicalized, particularly in the absence of economic outlets that would become narrower in an economic downturn. **The most dangerous casualty of any economically - induced drawdown of U.S. military presence would almost certainly be the Middle East.** Although Iran's acquisition of nuclear weapons is not inevitable, **worries about a nuclear - armed Iran could lead states in the region to develop new security arrangements with external powers, acquire additional weapons, and consider pursuing their own nuclear ambitions.** It is not clear that the type of stable deterrent relationship that existed between the great powers for most of the Cold War would emerge naturally in the Middle East with a nuclear Iran. **Episodes of low intensity conflict and terrorism taking place under a nuclear umbrella could lead to an unintended escalation and broader conflict** if clear red lines between those states involved are not well established. **The close proximity of potential nuclear rivals combined with underdeveloped surveillance capabilities and mobile dual - capable Iranian missile systems also will produce inherent difficulties in achieving reliable indications and warning of an impending nuclear attack.** The lack of strategic depth in neighboring states like Israel, short warning and missile flight times, and uncertainty of Iranian intentions may place more focus on preemption rather than defense, potentially leading to escalating crises. **Types of conflict that the world continues to experience, such as over resources, could reemerge, particularly if protectionism grows** and there is a resort to neo - mercantilist practices. Perceptions of renewed energy scarcity will drive countries to take actions to assure their future access to energy supplies. In the worst case, this could result in interstate conflicts if government leaders deem assured access to energy resources, for example, to be essential for maintaining domestic stability and the survival of their regime. Even actions short of war, however, will have important geopolitical implications. Maritime security concerns are providing a rationale for naval buildups and modernization efforts, such as China's and India's development of blue water naval capabilities. If the fiscal stimulus focus for these countries indeed turns inward, one of the most obvious funding targets may be military. Buildup of regional naval capabilities could lead to increased tensions, rivalries, and counterbalancing moves, but it also will create opportunities for multinational cooperation in protecting critical sea lanes. With water also becoming scarcer in Asia and the Middle East, cooperation to manage changing water resources is likely to be increasingly difficult both within and between states in a more dog - eat - dog world.

****[]****

Aerospace

Big data will be a pillar of the aerospace industry

Groh 15 (Mar 26, 2015. Rainer Groh is a Ph. D student at the University of Bristol where he is studying aerospace engineering. He is an award winning research paper writer and has been published in several academic journals. "Big Data in Aerospace" Aerospaceengineeringblog.com <http://aerospaceengineeringblog.com/big-data-in-aerospace/> //HS)

"Big data" is all abuzz in the media these days. **As more and more people are connected to the internet and sensors become ubiquitous parts of daily hardware an unprecedented amount of information is being produced.** Some analysts project 40% growth in data over the next decade, which means that in a decade 30 times the amount of data will be produced than today. **Given this trend, what are the implications for the aerospace industry?** Big data: According to Google a "buzzword to describe a massive volume of both structured and unstructured data that is so large that it's difficult to process using traditional database and software techniques." Fundamentally, **big data is nothing new for the aerospace industry. Sensors have been collecting data on aircraft for years ranging from binary data such as speed, altitude and stability of the aircraft during flight, to damage and crack growth progression at service intervals.** The authorities and parties involved have done an incredible job at using routine data and data gathered from failures to raise safety standards. What exactly does "big data" mean? Big data is characterised by a data stream that is high in volume, high velocity and coming from multiple sources and in a variety of forms. **This combination of factors makes analysing and interpreting data via a live stream incredibly difficult, but such a capability is exactly what is needed in the aerospace environment.** For example, structural health monitoring has received a lot of attention within research institutes because an internal sensory system that provides information about the real stresses and strains within a structure could improve prognostics about the "health" of a part and indicate when service intervals and replacements are needed. Such a system could look at the usage data of an aircraft and predict when a component needs replacing. For example, the likelihood that a part will fail could be translating into an associated repair that is the best compromise in terms of safety and cost. Furthermore, the information can be fed back to the structural engineers to improve the design for future aircraft. **Ideally you want to replicate the way the nervous system uses pain to signal damage within the body and then trigger a remedy. Even though structural health monitoring systems are feasible today, analysing the data stream in real time and providing diagnostics and prognostics remains a challenge.** Other areas within aerospace that will greatly benefit from insights gleaned from **data streams are cyber security, understanding automation and the human-machine interaction, aircraft under different weather and traffic situations and supply chain management.** Big data could also serve as the underlying structure that establishes autonomous aircraft on a wide scale. Finally, **big data opens the door for a new type of adaptive design** in which data from sensors are used to describe the characteristics of a specific outcome, and a design is then iterated until the desired and actual data match. **This is very much an evolutionary, trial-and-error approach that will be invaluable for highly complex systems where cause and effect are not easily correlated** and deterministic approaches are not possible. For example, a research team may define some general, not well defined hypothesis about a future design or system they are trying to understand, and then use data analytics to explore the available solutions and come up with initial insights into the governing factors of a system. In this case it is imperative to fail quickly and find out what works and what does not. The algorithm can then be refined iteratively by using the expertise of an engineer to point the computer in the right direction. Thus, **the main goal is to turn data into useful, actionable knowledge.** For example in the 1990's very limited data existed in terms of understanding the airport taxi-way structure. Today we have the opposite situation in that we have more data than we can actually use. **Furthermore, not only the quantity but also quality of data is increasing rapidly such that computer scientists are able to design more detailed models to describe the underlying**

physics of complex systems. When converting data to actionable information one challenge is how to account for as much of the data as possible before reaching a conclusion. Thus, a high velocity, high volume and diverse data stream may not be the most important characteristic for data analytics. Rather it is more important that the data be relevant, complete and measurable. Therefore good insights can also be gleaned from smaller data if the data analytics is powerful. While aerospace is neither search nor social media, big data is incredibly important because the underlying stream from distributed data systems on aircraft or weather data systems can be aggregated and analysed in consonance to create new insights for safety. Thus, in the aerospace industry the major value drivers will be data analytics and data science, which will allow engineers and scientists to combine datasets in new ways and gain insights from complex systems that are hard to analyse deterministically. The major challenge is how to upscale the current systems into a new era where the information system is the foundation of the entire aerospace environment. In this manner data science will transform into a fundamental pillar of aerospace engineering, alongside the classical foundations such as propulsion, structures, control and aerodynamics.

Aerospace is strong now but facing competition- its key to respond to non-traditional threats

Albaugh 11 (Apr. 27, 2011. Jim Albaugh is the former president and CEO of Boeing Commercial Airplanes. "Keeping America's Lead in Aerospace" http://www.aia-aerospace.org/assets/speech_042711_albaugh.pdf //HS)

I believe we're at a crossroads. No one is ahead of America in aerospace, at least not yet. The U.S. is the undisputed leader. We build the most efficient and capable commercial airplanes in the world. The weapons systems we produce are unmatched, Our commercial and military satellites are phenomenal in what they can do. And our orbital manned space program – a program the United States will walk away from this year – is second to none. But our leadership is being threatened by other countries intent on replacing the U.S. as the world's leader in aerospace. Today, we're not trying to reclaim our lead. We're trying to keep it. The question is: Will we take the steps required to maintain our leadership? Or will we allow aerospace and aviation to join the list of industries that America used to lead? **Aerospace Makes America Strong**

To understand why that's so important, we have to look at what aerospace has done for our country. I was fortunate enough to join this industry in the final quarter of a remarkable century. To me, American aerospace defined the 20th Century. It helped win World War II. It brought the world closer together with commercial air travel. It changed the way we communicate with commercial satellites. And, of course, it changed forever how we look at the world around us when man first walked on the Moon. I am also convinced that aerospace will define the 21st century. The question is, will it be U.S. aerospace that does it? That's a critical question because what we do helps keep America strong. No industry has a bigger impact on exports. It tips the balance of trade in our favor by about \$53 billion. President Obama has set the goal of doubling U.S. exports in five years. Aerospace will be essential to help us reach that goal. When you look at direct and secondary impacts, it's been estimated that U.S. civil aviation alone is responsible for 12 million jobs and contributes to more than 5 1/2 percent of the US GDP. The State of Aerospace So what does our commercial marketplace look like today? It's vibrant, growing, challenging and rapidly changing. A Recovering Market The commercial aviation market has been roaring back the last 15 months, despite the impact of the worst recession since the Great Depression. At Boeing, we have a 7-year, \$263 billion commercial airplane backlog. With air traffic increasing at a rate 1.5 times world GDP, the future looks good. Looking forward, we expect world GDP to grow at about 4 percent between 2011 and 2015. While not discounting events in Northern Africa, and the potential impact on the price of oil, the future looks good from a macro standpoint. Over the next 20 years, we see a need for 31,000 new airplanes. That's a \$3.6 trillion dollar market. It's a market many countries and companies covet. That outlook is being shaped by many factors. I'd like to talk about a few of them: globalization, competition, and shifting demographics. Globalization Let's talk first about globalization. The world is more interconnected, yet more complicated because of that

interconnection. What happens in other areas of the world matters everywhere. We saw that with the earthquake in Japan. Despite the fact that our factories in Washington state are more than 4,000 miles from the epicenter, we felt the impact of that disaster. Tom Friedman was right; the world is flat. Globalization means our partners and customers are not just in the U.S.; they are around the world. And of course, globalization drives air traffic. In 1990, 72 percent of passenger traffic was in Europe and the Americas. By 2030, that number will be only 45 percent. Soon, over half of the world's GDP will be coming from emerging countries. Increased Competition **We're also seeing increased competition.** The traditional duopoly between Boeing and Airbus is over. Other countries and companies are attracted by the \$3.6 trillion market I mentioned earlier... countries like China with Comac, Russia with Sukhoi, Canada with Bombardier and Brazil with Embraer. Not all the new entrants will be successful, but some of them will. We've got to assume our competitors will do what they say they're going to do. They have the financial and intellectual resources necessary. Let me give you an example. The Chinese have made commercial aviation a national priority. They spent \$5 billion on a regional jet. It didn't meet market expectations. They are now developing the C-919, a narrow-body airplane to compete with the 737. It will be competitive in China. Eventually, Chinese airplanes will compete around the world. China is investing \$30 billion in this industry. They're one of only three countries to put a man into space and once they make something a national priority, they make it happen. At the same time, China is the largest market outside the United States for many companies – including Boeing. And the desire for market access has convinced many American executives to share technologies that may one day help Chinese companies compete around the world for the same business. We have to be very mindful in balancing those risks and potential rewards, not only in China, but around the globe. It's interesting that China has moved from customer/supplier to customer/competitor in four short decades representing both opportunity and challenge. This should not scare us. It should focus us. Changing Military Threats Meanwhile, military threats have also evolved. During the Cold War, we knew who our enemies were, and we trusted them not to use weapons of mass destruction. **Today we often don't know who they are, but we know that if given the chance to use deadly weapons they will.** **As a result of this shifting dynamic, the needs of our military have evolved. Our armed forces must prepare for nontraditional threats, and that's changing the mix of platforms and priorities the DoD is seeking.**

[insert terror impact here]

Laundry List

Integrating big data into society revolutionizes it and solves Economic crashes, disease spread, and resource efficiency

Pentland 13 (October. Alex Pentland is a computer science pioneer, MIT Professor, and oft cited author of computer science writings. He created the MIT Media lab and has been called by Forbes one of the "7 most powerful data scientists in the world." "The Data-Driven Society" ebSCO host //HS)

FOR THE FIRST TIME in history, we can see enough about ourselves to build social systems that work better than the ones we have always had. **Big data promises to lead to a transition on par with the invention of writing or the Internet.** Of course, moving to a data-driven society will be a challenge. In a world of unlimited data, even the scientific method as we typically use it no longer works: there are so many potential connections that our standard statistical tools often generate nonsense results. The standard scientific approach gives us good results when the hypothesis is clear and the data are designed to answer the question. But **in the messy complexity of large-scale social systems, there are often thousands of reasonable hypotheses;** it is impossible to tune the data to all of them at once. So in this new era, we will need to manage our society in a new way. We have to begin testing connections in the real world far earlier and more frequently than we ever have before. **We need to construct "living labs" in which we can test our ideas for building data-driven societies. One example of a living lab is** the open-data city we just launched in Trento, Italy, with cooperation from the city government, Telecom Italia, Telefonica, the research university Fondazione Bruno Kessler and the Institute for Data Driven Design. **The goal of this project is to promote greater idea flow within Trento. Software tools** such as our openPDS (Personal Data Store) system, which **implements the New Deal on Data,** makes it safe for individuals to share personal data (such as health details or facts about their children) by controlling where their information goes and what is done with it. For example, one openPDS application encourages the sharing of best practices among families with young children. How do other families spend their money? How much do they get out and socialize? Which preschools or doctors do people stay with for the longest time? once the individual gives permission, such data can be collected, anonymized and shared with other young families via openPDS safely and automatically. We believe that **experiments like the one we are carrying out in Trento will show that the potential rewards of a data-driven society are worth the effort** -- and the risk. Imagine: **we could predict and mitigate financial crashes, detect and prevent infectious disease, use our natural resources wisely and encourage creativity to flourish. This fantasy could quickly become a reality** -- our reality, if we navigate the pitfalls carefully.

Financial Crisis have long lasting adverse effects on the structures of economies- empirics

Reinhart 9 (Jan. 26 2009. Carmen Reinhart is a professor teaching about the international financial system at Harvard's Kennedy School. "The Economic and Fiscal Consequences of Financial Crises" Vox <http://www.voxeu.org/article/economic-and-fiscal-consequences-financial-crises> //HS)

Financial crises are historically associated with the "4 deadly D's": Sharp economic downturns follow banking crises; with government revenues dragged down, **fiscal deficits worsen;** deficits lead to debt; as **debt piles up rating downgrades follow.** **For** the most **fortunate countries,** the **crisis does not lead to the deadliest D: default, but for many it has.** ^a Even a cursory reading of the global financial press in the past few months would lead one to despair that the world economy is moving through dark and uncharted waters. But, in fact, there is precedent. In a recent paper, Kenneth Rogoff and **examined the international experience with** episodes of **severe banking crises.** **The depth, duration and characteristics of**

the economic slump following the crises traced out a few empirical regularities. Our main findings in that paper can be summarized as follows: **Financial crises are protracted affairs. Asset market collapses are deep and prolonged. Real housing price declines** average 35% stretched out over six years. **Equity price collapses** average 55% over a downturn of about three and a half years. **There are profound declines in output and employment. The unemployment rate rises** an average of 7 percentage points over the down phase of the cycle, which lasts on average over four years. **Real GDP per capita falls** (from peak to trough) an average of over 9%, **the duration of the downturn averages roughly two years. There are significant adverse consequences of the financial crisis on government finances. Tax revenues shrink as the economic conditions deteriorate, the fiscal deficit worsens** markedly, **and the real value of government debt tends to explode**, rising an average of 86% in the major post-World War II episodes. In the remainder of this note, I elaborate on these points. I follow up with a sketch of how **the crisis, deteriorating economic conditions, and more precarious fiscal fundamentals impact sovereign risk** in the aftermath of the crises episodes. Downturn It is now beyond contention that the present US financial crisis is severe by any metric. As a result, we focus on systemic financial crises. The “big five” advanced economy crises include episodes in Spain (1977), Norway (1987), Finland (1991), Sweden (1991), and Japan (1992). Famous emerging market episodes in our study include the 1997–1998 Asian crisis (Hong Kong, Indonesia, Korea, Malaysia, the Philippines, and Thailand), Colombia (1998), and Argentina (2001). Central to the analysis is historical housing price data, which can be difficult to obtain and are critical for assessing the present episode. We therefore include two earlier historical cases for which housing prices are available, Norway in 1899 and the US in 1929. Figure 1 looks at the bust phase in housing price cycles surrounding banking crises, including the current episode in the US and a number of other countries now experiencing banking crises; Austria, Hungary, Iceland, Ireland, Spain, and the UK. Ongoing crises are in dark shading, and past crises are in light shading. The cumulative decline in real housing prices from peak to trough averages 35.5%.¹ Figure 1. Past and ongoing real house price cycles and banking crises: peak-to-trough price declines (left panel) and years duration of downturn (right panel) Source: Reinhart and Rogoff (2009a). The most severe real housing price declines were experienced by Finland, the Philippines, Colombia and Hong Kong. Their crashes were 50 to 60%, measured from peak to trough. The housing price decline experienced by the US to date during the current episode (almost 28% according to the Case–Shiller index) is already more than twice that registered in the US during the Great Depression. The duration of housing price declines is quite long-lived, averaging roughly six years. Even excluding the extraordinary experience of Japan, the average remains over five years. As illustrated in Reinhart and Rogoff (2009a), the **equity price declines that accompany banking crises are far steeper than are housing price declines, if somewhat shorter lived.** The average historical decline in equity prices is 55.9%, with the downturn phase of the cycle lasting 3.4 years. Notably, during the current cycle, Iceland and Austria have already experienced peak-to-trough equity price declines far exceeding the average of the historical comparison group. On average, **unemployment rises for almost five years**, with an increase in the unemployment rate of about 7 percentage points. While none of the postwar episodes rivals the rise in unemployment of over 20 percentage points experienced by the US during the Great Depression, the employment consequences of financial crises are large in many cases. Figure 2 looks at increases in unemployment rates across the historical episodes. Figure 2. Past unemployment cycles and banking crises: Trough-to-peak percent increase in the unemployment rate (left panel) and years duration of downturn (right panel) Sources: Reinhart and Rogoff (2009a). The emerging markets, particularly those in Asia, do better in terms of unemployment than do the advanced economies (Figure 2). There are well-known data issues in comparing unemployment rates across countries, as widespread “underemployment” in many emerging markets and the vast informal sector are not captured in the official unemployment statistics. As to real per capita GDP around banking crises, the average magnitude of the decline is 9.3%. The declines in real GDP are smaller for advanced economies than for emerging market economies. A probable explanation for the more severe contractions in emerging market economies is that they are prone to abrupt reversals in the availability of foreign credit. **When foreign capital comes to a “sudden stop,”** to use the phrase coined by Guillermo Calvo (2006), **economic activity heads into a tailspin.** The cycle from peak to trough in GDP is much shorter, only two years. Deficits Declining revenues and higher expenditures owing to a combination of bailout costs and higher transfer payments and debt servicing costs lead to a rapid and marked worsening in the fiscal balance. The episodes of Finland and Sweden stand out in this regard, as the latter went from a pre-crisis surplus of nearly 4% of GDP to a whopping 15% deficit-to-GDP ratio. Debt Figure 3 shows the rise in real government debt in the three years following a banking crisis. **The deterioration in government finances is striking, with an average debt rise of over 86%.** We look at percentage increase in debt, rather than debt-to-GDP, because sometimes steep output drops would complicate interpretation of debt–GDP ratios. As Reinhart and Rogoff (2009b) note, the characteristic huge buildups in government debt are driven mainly by sharp falloffs in tax revenue. **The much publicized bank bailout costs are typically second order.** Figure 3. Cumulative increase in real public debt in the three years following the banking crisis Sources: Reinhart and Rogoff (2008b) and sources cited therein. Downgrades (and sometimes default) Figure 4. Institutional Investor sovereign ratings cycles and

banking crises: Peak-to-trough index declines (left panel) and years duration of downturn (right panel) Conclusions (not delusions)

An examination of the aftermath of severe financial crises shows deep and lasting effects on asset prices, output and employment. Unemployment rises and housing price declines extend out for five and six years, respectively. Even recessions sparked by financial crises do eventually end, albeit almost invariably accompanied by massive increases in government debt. The crises, more often than not, adversely impact sovereign creditworthiness, as reflected in a higher risk premia. The effects, however, do not appear to be “permanent.” The global nature of the present crisis will make it far more difficult for many countries to grow their way out through higher exports. The growth slowdown is amplified in world commodity markets, as many emerging markets face steep declines in their terms of trade. If historical patterns hold, the current lull in sovereign defaults or restructurings in emerging markets will likely to come to an end, particularly if the recovery process in the world’s largest economies is delayed. Ecuador has already defaulted and others are teetering on the brink.

2NC Extensions

2nc gov data key

Government collected data can guide policy and improve the efficiency of government operations

Einav and Levin 2014 (Liran Einav is a professor of economics at Stanford and a writer for the National Bureau of Economics. Jonathan Levin is Professor of economics at Stanford and a writer for the National Bureau of Economics. "The Data Revolution and Economic Analysis" National Bureau of Economics. <http://web.stanford.edu/~jdlevin/Papers/BigData.pdf> //HS)

One of the big changes in modern business is that debates and decisions are routinely informed by large amounts of data analytics, and in at least some companies, by extensive experimentation (Varian 2010).

Many government agencies are increasingly smart about using data analytics to improve their operations and services. However, most agencies almost surely lag behind the best private sector firms, and face challenges of both infrastructure and personnel needs. For example, the Data Revolution and Economic Analysis 11 2008 report by the JASON study group described some of these challenges in the context of how the military must try to process and analyze the vast quantities of sensor data that have become available, such as from drone flights and communications monitoring. ⁶ In some cases, **the government collects a great deal of data that would be useful for guiding policy decisions but has not been utilized very effectively.** For example, the Center for Medicare and Medicaid Services has a record of every Medicare health claim over the last few decades, and eventually will have enormous amounts of clinical information from electronic health records. It also is routinely criticized for spending money ineffectively. **The data it collects almost certainly would allow for detailed cost benefit analyses of different treatments and procedures, but it is proscribed from using this data- intensive approach by Congress.** One opportunity that **some government agencies seem to be exploring is to make data sets accessible and hope that researchers or other individuals will utilize these data sets in ways that end up improving agency functions.** New York City now provides a huge catalog of data sets available for download at NYC OpenData. The repository includes geolocation data on schools, subways, wifi hotspots, information on metropolitan transit and electricity consumption, crime statistics, and hundreds of other types of data. Ho (2012) has used this source to analyze restaurant health inspections and document that the restaurant hygiene grades in New York have very little consistency across inspection and little year-to-year correlation, suggesting serious problems with the grading process. The federal government has undertaken a similar exercise with the website Data.Gov that has made available several hundreds of thousands of government data sets, and FRED is a similar service made available by the Federal Reserve. One goal appears to be to encourage not just researchers but software developers to develop tools or applications that would be built on the underlying data, although it does not appear that many have been built so far.

The government provides critical data to private companies- [improving economic decision-making]

Parekh 15 (Jan. 2, 2015. Deven Parekh is a writer for TechCrunch. "How Big Data will Transform our Economy and Our Lives in 2015" <http://techcrunch.com/2015/01/02/the-year-of-big-data-is-upon-us/> //HS)

The creation of all of this data isn't as interesting as the possible uses of it. I think **2015 may well be the year we start to see the true potential (and real risks) of how big data can transform our economy and our lives.** Big Data Terrorism **The recent Sony hacking case is notable because it appears to potentially be the first state-sponsored act of cyber-terrorism where a company has been successfully threatened** under the glare of the national media. I'll leave it to the pundits to argue whether Sony's decision to postpone releasing an inane farce was prudent or cowardly. **What's interesting is that the cyber terrorists caused real fear to Sony by publicly releasing internal enterprise data** — including salaries, email conversations and information about actual movies. **Every Fortune 2000 management team is now thinking: Is my data safe? What could happen if my**

company's data is made public and how could my data be used against me? And of course, security software companies are investing in big data analytics to help companies better protect against future attacks. Big Data Becomes a Civil Liberties Issue Data-driven decision tools are not only the domain of businesses but are now helping Americans make better decisions about the school, doctor or employer that is best for them. Similarly, companies are using data-driven software to find and hire the best employees or choose which customers to focus on. But what happens when algorithms encroach on people's privacy, their lifestyle choices and their health, and get used to make decisions based on their race, gender or age — even inadvertently? Our schools, companies and public institutions all have rules about privacy, fairness and anti-discrimination, with government enforcement as the backstop. Will privacy and consumer protection keep up with the fast-moving world of big data's reach, especially as people become more aware of the potential encroachment on their privacy and civil liberties?

Open Government Data Expect the government to continue to make government data more "liquid" and useful — and for companies to put the data to creative use. The public sector is an important source of data that private companies use in their products and services. Take Climate Corporation, for instance. Open access to weather data powers the company's insurance products and Internet software, which helps farmers manage risk and optimize their fields. Or take Zillow as another example. The successful real estate media site uses federal and local government data, including satellite photography, tax assessment data and economic statistics to provide potential buyers a more dynamic and informed view of the housing market.

2NC Turns Case

Using big data is the only way to solve the modern impacts- turns the case

Pentland 13 (October. Alex Pentland is a computer science pioneer, MIT Professor, and oft cited author of computer science writings. He created the MIT Media lab and has been called by Forbes one of the "7 most powerful data scientists in the world." "The Data-Driven Society" ebSCO host //HS)

By the middle of the 19th century, rapid urban growth spurred by the industrial revolution had created urgent social and environmental problems. Cities responded by building centralized networks to deliver clean water, energy and safe food; to enable commerce, facilitate transportation and maintain order; and to provide access to health care and energy. Today these century-plus-old solutions are increasingly inadequate. Many of our cities are jammed with traffic. Our political institutions are deadlocked. In addition, we face a host of new challenges -- most notably, feeding and housing a population set to grow by two billion people while simultaneously preventing the worst impacts of global warming. Such uniquely 21st-century problems demand 21st-century thinking. Yet many economists and social scientists still think about social systems using Enlightenment-era concepts such as markets and classes -- simplified models that reduce societal interactions to rules or algorithms while ignoring the behavior of individual human beings. We need to go deeper, to take into account the fine-grained details of societal interactions. The tool known as big data gives us the means to do that. Digital technology enables us to study billions of individual exchanges in which people trade ideas, money, goods or gossip. My research laboratory at the Massachusetts Institute of Technology is using computers to look at mathematical patterns among those exchanges. We are already finding that we can begin to explain phenomena -- financial crashes, political upsets, flu pandemics -- that were previously mysterious. Data analytics can give us stable financial systems, functioning governments, efficient and affordable health care, and more. But first we need to fully appreciate the power of big data and build a framework for its proper use. The ability to track, predict and even control the behavior of individuals and groups of people is a classic example of Promethean fire: it can be used for good or ill.

Generic Econ

Data is the future for economic analysis

Einav and Levin 2014 (Liran Einav is a professor of economics at Stanford and a writer for the National Bureau of Economics. Jonathan Levin is Professor of economics at Stanford and a writer for the National Bureau of Economics. "The Data Revolution and Economic Analysis" National Bureau of Economics. <http://web.stanford.edu/~jdlevin/Papers/BigData.pdf> //HS)

We now take up the question of how the **data revolution might affect economic research, in terms of the scope and quality of the results, the methods used, and the training of empirical economists.** The first, and most obvious, effect will be to allow better measurements of economic effects and outcomes. More granular and comprehensive **data can help to pose new sorts of questions and enable novel research designs that can inform us about the consequences of different economic policies and events.** We will provide some examples below that illustrate this potential. A less obvious possibility is that new **data may end up changing the way economists approach empirical questions and the tools they use to answer them.** As one example, we consider whether economists might embrace some of the statistical data- mining techniques described earlier. Why is this less obvious? To begin, it would mean something of a shift away from the single covariate causal effects framework that has dominated much of empirical research over the last few decades. More generally, many economists see a sharp distinction between predictive modeling and causal inference, and as a result, statistical learning approaches have little to contribute. Our view is that the distinction is not always so sharp, and we think that **this type of work will be increasingly used in economics as big data sets become available for researchers and as empirical economists gain greater familiarity and comfort with machine- learning statistical tools.**

Big Data has clear benefits for economics- the only question is how big it can grow in the future

Taylor, Schroeder, and Meyer 2014 (July-December 2014. Linnet Taylor is a research fellow at the University of Amsterdam's International Development Center. She focuses on the use of new internet data and the surrounding public policy. Ralph Schroeder is a Program Director and Senior Research Fellow at the Oxford Internet Institute. He focuses virtual reality technology and e-science. Eric Meyer is a web designer who has been working with the internet since 1993. He is most known for being the pioneer of CSS, a viewing method for HTML formats. "Emerging Practices and Perspectives on Big Data Analysis in Economics: Bigger and Better or more of the Same?" Big Data and Society. <http://bds.sagepub.com/content/spbds/1/2/2053951714536877.full.pdf> //HS)

The lack of a clear adoption of terminology is not surprising in a new and still emerging area, even if various **characteristics of Big Data clearly make it an important resource for economics.** Einav and Levin (2013) have pointed out three of these main characteristics. **First, that Big Data sources are frequently available in real-time, which can offer an advantage in terms of 'nowcasting', or identifying economic trends as they are occurring.** **The second relates to the scale of the data: the large size of the datasets becoming available resolves the statistical problem of limited observations and makes analysis more powerful and potentially more accurate,** while their granularity (a characteristic Michael Zhang, Assistant Professor at Hong Kong University of Science and Technology, terms 'nano- data', following Erik Brynjolfsson (M. Zhang, interviewed 10 May 2013)) increases their power in terms of understanding individual actions. **Third, such data often involve aspects of human behaviour which have previously been difficult to observe,** for example personal connections (such as those within Facebook) or geolocation (such as the place from which a 'tweet' was sent via Twitter). However, Einav and Levin (2013) also point out some drawbacks which may have led to economists' comparative reluctance to adopt Big Data so far. The main one is the unstructured nature of such data and the complexity of the linkages often contained within it, which upset the usual econometric assumption that data points are not interdependent, or at least are interdependent in certain defined ways. As Einav and Levin point out, this complexity presents an econometric challenge in terms of untangling this dependence structure and understanding the data. Besides the characteristics of sources of Big Data which make them suitable for economists, there are also certain ways in which economists are well suited to being users of Big Data. Big Data analysis demands technical skills in terms of statistics and coding

which are part of the standard training for most economists. The econometric challenge of working with Big Data using statistical techniques appropriate for entire populations is part of a continuum of such challenges faced by economists as data sources have become larger and more complex over time, and the rewards of solving such problems, in terms of advancing the discipline, are potentially significant. Perhaps most importantly, there is a considerable amount of Big Data found within the traditional territory of economics: financial transactions of all kinds, including increasingly granular sources such as loyalty card data and online purchases, labour market data, and detailed population data. **All these concerns suggest that Big Data is a potential goldmine for economists and that there may be a demonstrable opportunity cost for many economists in not engaging with this type of research.** Yet, as we shall see, there are also limits to the uses of Big Data in economics, and these shed interesting light on its role among the social sciences and beyond

Retail Module

****Need retail key to overall economy?***

****Probably need some answers to alt causes**

Big Data will have a massive growth impact on retail and in turn the rest of the US economy.

Manyika et al 11 (May 2011. McKinsey Global Institute is a research contracting firm. This project was led by James Manyika, the director of McKinsey Global Institute and a former leader within technology companies where he focused on innovation, growth, and strategy. Michael Chui also assisted in leading the research. Chui is a partner of McKinsey Global Institute where he specializes in research on the impact of information tech and innovation on businesses, the econ, and society. "Big Data: The Next Frontier for Innovation, Competition, and Productivity" McKinsey Global Institute. [//HS](http://www.mckinsey.com/insights/business_technology/big_data_the_next_frontier_for_innovation))

We have estimated the potential impact of each of the 16 **big data levers** we have described, using a combination of our own case studies, academic and industry research, and interviews with experts; for more on our methodology, see the appendix. **While we estimate the total potential value that big data can enable, we do not predict what value the sector will actually capture because this largely depends on actions taken by retailers to overcome a number of barriers, including obstacles related to technology, talent, and culture, as well as external factors such as whether consumers are receptive to having their behavior data mined and the ability of suppliers to leverage some of the same levers in negotiations.** Marketing levers can affect 10 to 30 percent of operating margin; merchandising levers can affect 10 to 40 percent; and supply chain levers can have a 5 to 35 percent impact (Exhibit 23). In contrast, price transparency levers will tend to cut prices and squeeze margins. The total potential impact of individual big data levers varies significantly across retail subsectors (Exhibit 24). Some subsectors will have already pulled big data levers more than others, partly explaining this variation. While individual players can use big data levers to grow their top lines and operating margins, these gains will largely shift value within the industry rather than increasing its total size. Firms that are relatively better at deploying big data levers will experience significant gains at the expense of those that do not execute as well. The overall winners should be consumers, who will benefit from receiving goods better suited to their needs. We also estimated **potential productivity gains at the industry level, opting to take a conservative approach** to such estimates by applying only the effects of levers in operations and supply chains that reduce costs (see the appendix for detail on our methodology). If we look solely at efficiency, **we estimate that big data levers have the potential to create an annual 0.5 percent acceleration in productivity through 2020.** To put that in context, academic research has estimated that IT investments in the entire US economy, including retail, **through the high-growth 1990s added 1 to 2 percent to the compound annual growth rate of US productivity.** This estimate does not take into account the fact that the **use of big data will be a boon to consumers** through the economic surplus that they will capture **and is therefore conservative.** For instance, **even if retail consumers do not spend more money overall, many of the** marketing and merchandising levers we have **described will improve their shopping experience.** Consumers will find better products to match their needs (e.g., consumers that choose to opt-in to marketing programs that use big data to better target offers) and spend less time looking for those products at the right price (e.g., because they can obtain information about the availability of inventory before visiting a store, or use price comparison services). **This should increase the real value added of the retail sector,** even if estimating the value of this consumer surplus is difficult. **We believe that the use of large datasets will continue to transform the face of retail.** In recent decades, **IT and data that was used to optimize supply chains helped create** the category of **big-box retailers** that sell large volumes of a wide range of products at low prices. In recent years, online retailers such as Amazon, eBay, and Groupon are **redefining what retail can mean.** Instead of receiving information about goods and services from sales teams or advertisements, consumers find the information they need from their fellow shoppers and find what they want to buy via electronic marketplaces.

Government choices over big data spill over to the private sector

Manyika et al 11 (May 2011. McKinsey Global Institute is a research contracting firm. This project was led by James Manyika, the director of McKinsey Global Institute and a former leader within technology companies where he focused on innovation, growth, and strategy. Michael Chui also assisted in leading the research. Chui is a partner of McKinsey Global Institute where he specializes in research on the impact of information tech and innovation on businesses, the econ, and society. “Big Data: The Next Frontier for Innovation, Competition, and Productivity” McKinsey Global Institute.
[//HS\)](http://www.mckinsey.com/insights/business_technology/big_data_the_next_frontier_for_innovation)

If the retail industry is to realize the potential value from the use of big data, both the industry and government will have to deal with a number of important barriers. Policy makers will make choices about how to regulate the industry's use of information about consumers—policy choices that will have profound implications for many other industries

that, in common with retail, will draw increasingly pronounced concerns about privacy and security in the era of big data. It is certainly the case that consumer attitudes toward the use of their personal information, especially personal location data and electronic data generated by their use of the Internet, are changing rapidly. But many people remain uninformed about how, where, and to what extent this information is used in targeted advertising and other marketing strategies. Across the globe, we observe the emergence of different concepts of electronic privacy. Germany, for instance, has limited the use of the Street View function of Google maps. Depending on the jurisdiction and purpose, there are different definitions of personally identifiable information (PII)—what counts legally as information that identifies a person for a variety of purposes. Some definitions are more general than others, and large players would benefit from having a single country or industry standard.

Manufacturing

The manufacturing sector has already seen some benefits of big data but potential for growth is still strong

Manyika et al 11 (May 2011. McKinsey Global Institute is a research contracting firm. This project was led by James Manyika, the director of McKinsey Global Institute and a former leader within technology companies where he focused on innovation, growth, and strategy. Michael Chui also assisted in leading the research. Chui is a partner of McKinsey Global Institute where he specializes in research on the impact of information tech and innovation on businesses, the econ, and society. "Big Data: The Next Frontier for Innovation, Competition, and Productivity" McKinsey Global Institute.
[//HS\)](http://www.mckinsey.com/insights/business_technology/big_data_the_next_frontier_for_innovation)

The manufacturing sector was an early and intensive user of data to drive quality and efficiency, adopting information technology and automation to design, build, and distribute products since the dawn of the computer era. In the 1990s, **manufacturing companies racked up** impressive **annual productivity gains because of both operational improvements that increased the efficiency of their manufacturing processes and improvements in the quality of products they manufactured**. For example, advanced manufactured products such as computers became much more powerful. Manufacturers also optimized their global footprints by placing sites in, or outsourcing production to, low-cost regions. **But despite such advances, manufacturing**, arguably more than most other sectors, **faces the challenge of generating significant productivity improvement in industries that have already become relatively efficient**. We believe that **big data can underpin another substantial wave of gains**. These gains will come **from improved efficiency in design and production, further improvements in product quality, and better meeting customer needs** through more precisely targeted products and effective promotion and distribution. For example, big data can help manufacturers reduce product development time by 20 to 50 percent and eliminate defects prior to production through simulation and testing. Using realtime data, companies can also manage demand planning across extended enterprises and global supply chains, while reducing defects and rework within production plants. Overall, big data provides a means to achieve dramatic improvements in the management of the complex, global, extended value chains that are becoming prevalent in manufacturing and to meet customers' needs in innovative and more precise ways, such as through collaborative product development based on customer data. We base these conclusions on an examination of multiple manufacturing subsectors encompassing both discrete and process manufacturing, from basic manufacturing subsectors such as consumer goods and food, to advanced manufacturing subsectors such as automotive and aerospace. We drew upon global best practice examples of the use of big data to identify seven levers of value creation, describe the range of potential impact, and the barriers that have to be overcome to capture that value.

Big data could explode the economic value of the manufacturing sector

Manyika et al 11 (May 2011. McKinsey Global Institute is a research contracting firm. This project was led by James Manyika, the director of McKinsey Global Institute and a former leader within technology companies where he focused on innovation, growth, and strategy. Michael Chui also assisted in leading the research. Chui is a partner of McKinsey Global Institute where he specializes in research on the impact of information tech and innovation on businesses, the econ, and society. "Big Data: The Next Frontier for Innovation, Competition, and Productivity" McKinsey Global Institute.
[//HS\)](http://www.mckinsey.com/insights/business_technology/big_data_the_next_frontier_for_innovation)

For manufacturers, **opportunities enabled by big data can drive productivity gains**, both **through improving efficiency and the quality of products** (Exhibit 26). Efficiency gains arise across the value chain, from reducing unnecessary iterations in product development cycles to optimizing the assembly process. **The real output value of products is increased by improving their quality and making products that better match customers' needs**. Beyond pushing productivity, **big data enables innovative services and even new business models in manufacturing**. Sensor data have made possible

innovative aftersales services. For example, BMW's ConnectedDrive offers drivers directions based on real-time traffic information, automatically calling for help when sensors indicate trouble, alerts drivers of maintenance needs based on the actual condition of the car, and feeds operation data directly to service centers. The ability to track the use of products at a micro-level has also made possible monetization models that are based not on the purchase of a product but on services priced by their usage, as we have described. The ability to exchange data across the extended enterprise has also enabled production to be unbundled radically into highly distributed networks. For example, Li and Fung, a supplier to apparel retailers, orchestrates a network of more than 7,500 suppliers, each of which focuses on delivering a very specific part of the supply chain. Some of the most powerful impacts of big data apply across entire manufacturing ecosystems. As we have documented, big data plays a pivotal role in ensuring that these ecosystem webs function well and continue to evolve. Indeed, new data intermediaries or data businesses could begin to emerge. They could, for example, capitalize on the economic value of data that describes the flow of goods around the world.

The manufacturing sector is critical to economic power

Rynn 11 (May 23, 2011. Jon Rynn has a Ph. D in political science and is the author of *Manufacturing Green Prosperity: The Power to Rebuild the American Middle Class*. "Six Reasons Manufacturing is Central to the Economy" The Roosevelt Institute. <http://www.rooseveltinstitute.org/new-roosevelt/six-reasons-manufacturing-central-economy> //HS)

Without a robust revival in the manufacturing sector, we can kiss our status as a great economic power goodbye. Paul Krugman recently argued that "manufacturing is one of the bright spots of a generally disappointing recovery, and there are signs — preliminary, but hopeful, nonetheless — that a sustained comeback may be under way." He points out that the gap between what we sell and what we buy has been improving. This must be set against a background of a manufacturing decline in the United States of historic dimensions; even without adjusting for inflation, the trade deficit in goods for the United States between 2000 and 2010 was 7 trillion dollars. A turnaround in the attention of more perceptive economists and a turnaround in manufacturing may be in the works. But before that, the crucial question is: Why is manufacturing so important? 1. Manufacturing has been the path to development It has been the strategic achievement of rich nations over the last several hundred years to create a high-quality manufacturing sector in order to develop national wealth and power, as Erik Reinert shows in his book "How Rich Countries Got Rich...and Why Poor Countries Stay Poor." From the rise of England in the 19th century, to the rise of the US, Germany, Japan and the USSR in the 20th, to the newly industrializing countries like Korea, Taiwan, and now China, manufacturing has been the key to prosperity. 2. Manufacturing is the foundation of global "Great Power" The most powerful nations in the world — the "Great Powers" — are those that control the bulk of the global production of manufacturing technology. That is, it isn't enough simply to have factories and produce more goods, you have to know how to make the machinery that makes the goods. The key to power, then, is to make the "means of production." As the machinery industries go, so goes Great Power. My own research shows that about 80% of the world's production of factory machinery has been controlled by what we would consider the "Great Powers." Until the 1950s, the US had produced about 50%; we now produce less than China's 16%. 3. Manufacturing is the most important cause of economic growth The growth of manufacturing machinery output, and technological improvements in that machinery, are the main drivers of economic growth. No machinery industries, no sustained, long-term economic growth. Just consider the explosion of the Internet, iPhones, and the like — all made possible by a small subset of production machinery called semiconductor-making equipment (SME), which itself is dependent on other forms of production machinery, such as the machine tools that grind the lenses they use or the alloys of metal the metal-making industries output. These technologies reproduce themselves, as when an SME makes the semiconductors that then go to make more SMEs, or when a machine tool makes the metal components that not only go into other pieces of machinery, such as cars, but are used to produce yet more machine tools. The technological and productive potential of machine tools and SMEs affect each other as well, leading to the explosive economic growth of the last two hundred years. 4. Global trade is based on goods, not services A country can't trade services for most of its goods. According to the WTO, 80% of world trade among regions is merchandise trade — that is, only 20% of world trade is in services. This closely matches the trade percentages that even the US, allegedly becoming "post-industrial," achieves. If in the extreme case an economy was composed only of services, then it would

be very poor, because it couldn't trade for goods; its currency would be worth very little. The dollar is also vulnerable in the long-term. A "post-industrial" economy is really a pre-industrial economy — that is, poor. **5. Services are dependent on manufactured goods** Services are mostly the act of using manufactured goods. You can't export the experience of using something. Retail and wholesale, which make up about 11% of the economy, are the act of buying and selling manufactured goods. The same goes for real estate, another 13%, which is the act of buying and selling a "real" or physical asset, a building. Even health, which makes up about 8% of the economy, is the act of using medical equipment and drugs (all figures from 2010, value-added). Finance involves the redirection of surplus resources that the nonfinancial sector of the economy produces, which means that indirectly, even finance is dependent on manufacturing. The cycle of rise and decline usually runs like this: some clever society figures out how to take advantage of the current technologies of production, thus generating huge surpluses, which either the financial forces, the very wealthy, or the military then appropriate for their own wealth and power; they kill the goose that is laying the golden eggs. To sum up: **the health of the economy is critically dependent on the health of the manufacturing sector.** **6. Manufacturing creates jobs** Most jobs, directly or indirectly, depend on manufacturing — and reviving the sector could provide tens of millions of new jobs, eradicating the Great Recession. In 2005, the Japanese manufacturing sector was 20.2% of its economy, in Germany it was 23.2%, and in the US manufacturing accounted for 13.4%, according to the the OECD. Using 2005 figures, if the US had the same percentage as Japan, we would have 7 million more high-quality, long-term, well paying jobs. If we were equal with Germany, we would have 10 million more. And according to the Economic Policy Institute, each manufacturing job supports almost three other jobs in the economy. That makes sense, considering the other five reasons that manufacturing is central to the economy. Thus, there are six solid reasons that we need to rebuild the manufacturing sector of the United States. It's time for the United States to wake up before it's too late and rebuild the foundation of a strong, prosperous, middle class economy.

Manufacturing has the greatest effect on the economy out of any sector

The Manufacturing Institute 2014 (April 2014. The Manufacturing Institute is a global group seeking the development of manufacturing talent. "Manufacturing's Multiplier Effect is Stronger than Other Sectors" The Manufacturing Institute. <http://www.themanufacturinginstitute.org/Research/Facts-About-Manufacturing/Economy-and-Jobs/Multiplier/Multiplier.aspx>)

Manufacturing is complex and its production processes increase the demand for raw materials, energy, construction, and services from a broad array of supplying industries. Additionally, many functions previously completed within manufacturing companies—from back-office operations and accounting to some types of logistics—are now contracted to other service providers and hence not counted as part of the manufacturing sector. **A measure of the breadth of the supply chain is the backward linkage in the input-output structure of the economy. For an industry with a larger backward linkage, growth in its output induces more production**—both directly and indirectly—from other sectors. A mapping of relationships in the economy reveals that **manufacturing has the highest backward linkage among the major sectors. As the demand for manufacturing grows, it in turn spurs the creation of jobs, investments, and innovations elsewhere.** The backward linkage (or multiplier effect) shows how much additional output is generated by a dollar's worth of final demand for each industry. Every dollar in final sales of manufactured products supports \$1.33 in output from other sectors—this is the largest multiplier of any sector. Manufacturing plants, therefore, have a powerful and positive impact on economic development.

Personal data

Personal data has enormous economic potential

Manyika et al 11 (May 2011. McKinsey Global Institute is a research contracting firm. This project was led by James Manyika, the director of McKinsey Global Institute and a former leader within technology companies where he focused on innovation, growth, and strategy. Michael Chui also assisted in leading the research. Chui is a partner of McKinsey Global Institute where he specializes in research on the impact of information tech and innovation on businesses, the econ, and society. "Big Data: The Next Frontier for Innovation, Competition, and Productivity" McKinsey Global Institute. http://www.mckinsey.com/insights/business_technology/big_data_the_next_frontier_for_innovation //HS)

Our **detailed analysis of the major applications of personal location data today and in the near future finds that, in ten years' time, these applications have the potential to create value of \$100 billion or more for service providers alone.** This additional value is likely to come primarily from sales of navigation hardware and revenue from LBS, mobile LBS premiums, and geo-targeted advertising. **Entrepreneurs will develop many of these services and applications,** given the fact that the application store model for mobile devices is already providing ready sales and marketing channels, greatly lowering the barriers to entry for innovative new players. **The likely value that will accrue to providers will be dwarfed by the benefits that customers—both individuals and businesses—will enjoy because of proliferating location-based applications.** We believe that **by 2020, personal location applications will create as much as \$700 billion in value for users** (Exhibit 31). **Of this, more than 70 percent will be the consumer surplus obtained from time and fuel saved by using GPS navigation systems** (including those with real-time traffic information) and the use of mobile LBS applications (difference between willingness to pay and the cost of applications). The remaining 30 percent of the total accruing to customers will be additional value obtained by businesses that make use of location data-enabled levers such as marketers' return on geo-targeted mobile advertising. **We believe that our estimates of the potential surplus that will accrue to customers are conservative because they do not include additional sources of utility such as improvements in user convenience, transparency, and entertainment.** Personal location data-enabled services such as user ranking applications (e.g., Yelp) offer users all of these benefits. Unfamiliar travelers, for instance, can quickly find shops and eateries they might favor. Familiar residents can locate friends, the evening's most popular nightspots, and the shortest driving route. Furthermore, our estimates size the potential impact of only a few applications; we expect innovative new uses of personal location data and business models to continue to emerge. **Creativity and innovation will shift the value potential upward from our present estimates,** and a long tail of specialized applications will combine to offer substantial total additional value. Individuals and organizations around the world will share in the potential value of personal location data—nowhere more dramatically than in emerging markets where the already very large number of mobile phones generating such data is increasing so rapidly..

Aerospace

Big data already has an astounding effect on the aerospace industry

CBR 14 (Jul. 18, 14. CBR is the Computer Business Review, a European publication aiming toward the elite of Business Technology. "Aerospace Manufacturer Uses IBM Big Data Tech to Improve Aircraft Engine Performance" *Computer Business Review*. [//HS](http://www.cbronline.com/news/big-data/analytics/aerospace-manufacturer-uses-ibm-big-data-tech-to-improve-aircraft-engine-performance-4321454))

Accenture has partnered with GE Aviation to offer the airline company charts of fuel –efficient paths. Aerospace manufacturer Pratt & Whitney is teaming up with IBM to use its Big Data technology to analyse data from more than 4,000 commercial aircraft engines in order to predict the problems before they arise. IBM's solution will be used to analyse the huge amount of data generated from aircraft engines, helping to predict any discrepancies. The insight will help Pratt & Whitney customers with asset maintenance alerts, and deliver better insight into flight operational data. Pratt & Whitney's president of Aftermarket, Matthew Bromberg, said: "By incorporating learnings from our military engines programmes where we are pushing the envelope in terms of monitoring capabilities, and teaming with IBM to integrate component and system health information, we will strengthen our commercial engine health analytics offering for customers." "This will enable us to accurately and proactively monitor the health of our customers' engines and give us further visibility to plan ahead for optimised fleet operations while reducing customers' costs." IBM GM of business analytics Alistair Rennie said: "By applying real time analytics to structured and unstructured data streams generated by aircraft engines, we can find insights and enable proactive communication and guidance to Pratt & Whitney's services network and customers." IBM's technology will help Pratt & Whitney broaden its current performance monitoring capabilities of more than 4,000 operational commercial engines. Pratt & Whitney expects to increase its product's engine life by up to six years by using IBM's data analytics. It will also help the company reduce its maintenance costs by 20%.

Solves cyber-war and military power

NAW 10 [National Aerospace Week was established by the Aerospace Industries Association in 2010 as an opportunity for the aerospace and defense industry and its supporters. 2010, "Aerospace and Defense: Second to None" [//jweideman](http://nationalaerospaceweek.org/wp-content/uploads/2010/04/whitepaper.pdf)]

However, we remain concerned about the fragility of the supplier base. With another round of acquisitions and consolidations imminent along with a projected decline in defense spending, the supplier base remains particularly vulnerable. These small businesses are critical to the primes and to the government. They face multiple challenges overcoming barriers to federal contracting and once they leave the contracting base, they and their unique skills cannot be recovered. Along with our concern about the industrial base is the long-term issue of modernizing our military hardware. The 1980s defense build-up is now 25 years old, and systems acquired then are in need of replacement. The decade of 2010-2019 is the crucial time to reset, recapitalize and modernize our military forces. Not only are many of our systems reaching the end of their designed lives, but America's military forces are using their equipment at many times the programmed rates in the harsh conditions of combat, wearing out equipment prematurely. Delaying modernization will make it even harder to identify and effectively address global threats in the future. The Aerospace Industries Association released a report in May 2011 that takes a historical look at spending in the investment accounts and the ebb and flow of spending since the 1970s. It concludes that

our nation and its military members pay a large price when we decrease spending on procurement and research and development. The report, *Defense Investment: Finding the Right Balance*, also recommends 35 percent of the budget be devoted to modernization as a prudent and affordable level for supporting the force of today and the future. The requirements identified in the 2010 QDR — for the United States to overmatch potential adversaries and to execute long-duration campaigns in coming years against increasingly capable potential opponents — will require complex and expensive aerospace capabilities. This is a concern that the Defense Department recognizes. Since the end of the Cold War, the Pentagon has reduced the number of weapons systems it has bought and there are fewer new-start programs further and further apart. In 2010, for the first time in 100 years, the United States had no manned military aircraft in design. Forty-nine military aircraft programs were underway in the 1950s, seven in the 1980s, and three in the 1990s. Today, looking beyond the F-35, there are none—with the possible exception of a long-range bomber that is not yet approved for development. Defense modernization is not optional. While the fiscal 2012 budget request is a reasonable target that takes into account funding needed to fight two wars, the pressure on the procurement and research and development budget is sure to increase in the future. At the same time, America must adapt its defenses to new kinds of threats. A large-scale attack on information networks could pose a serious economic threat, impeding or preventing commerce conducted electronically. This would affect not only 2011 Aerospace Industries Association of America, Inc. 5 ATM transactions, but commercial and governmental fund transfers and the just-in-time orders on which the manufacturing sector depends. It could even pose threats to American lives, interrupting the transfer of medical data, disrupting power grids, even disabling emergency communications links. In partnership with the government, our industry is on the forefront of securing these networks and combating cyber attack. The American people also demand better security for the U.S. homeland, from gaining control of our borders to more effective law enforcement and disaster response. The aerospace industry provides the tools that help different forces and jurisdictions communicate with each other; monitor critical facilities and unpatrolled borders, and give advance warning of natural disasters, among other capabilities. In many cases, government is the only market for these technologies. Therefore, sound government policy is essential not only to maintain current capabilities, but to ensure that a technology and manufacturing base exists to develop new ones.

Science

Big data can cure and prevent disease

Katina **Michael**, et al., Associate professor in the School of Information Systems and Technology at the University of Wollongong, New South Wales, Australia, **2013**, “Big Data: New Opportunities and New Challenges”

<http://ieeexplore.ieee.org/stamp/stamp.jsp?arnumber=6527259>

Since the Internet’s introduction, we’ve been steadily moving from text-based communications to richer data that include images, videos, and interactive maps as well as associated metadata such as geolocation information and time and date stamps. Twenty years ago, ISDN lines couldn’t handle much more than basic graphics, but **today’s high-speed communication networks enable the transmission of storage-intensive data types**. For instance, smartphone users can take high-quality photographs and videos and upload them directly to social networking sites via Wi-Fi and 3G or 4G cellular networks. We’ve also been steadily increasing the amount of data captured in bidirectional interactions, both people-to-machine and machine-to-machine, by using telematics and telemetry devices in systems of systems. Of even greater importance are e-health networks that allow for data merging and sharing of high-resolution images in the form of patient x-rays, CT scans, and MRIs between stakeholders. **Advances in data storage and mining technologies make it possible to preserve increasing amounts of data generated directly or indirectly by users and analyze it to yield valuable new insights**. For example, companies can study consumer purchasing trends to better target marketing. In addition, near-real-time data from mobile phones could provide detailed characteristics about shoppers that help reveal their complex decision-making processes as they walk through malls.¹ Big data can expose people’s hidden behavioral patterns and even shed light on their intentions.² More precisely, **it can bridge the gap between what people want to do and what they actually do as well as how they interact with others and their environment**.³ This information is useful to government agencies as well as private companies **to support decision making in areas ranging from law enforcement to social services to homeland security**. It’s particularly of interest to applied areas of situational awareness and the anticipatory approaches required for near-real-time discovery. In the scientific domain, **secondary uses of patient data could lead to the discovery of cures for a wide range of devastating diseases and the prevention of others**.⁴ **By revealing the genetic origin of illnesses, such as mutations related to cancer, the Human Genome Project, completed in 2003, is one project that’s a testament to the promises of big data**. Consequently, researchers are now embarking on two major efforts, the Human Brain Project (EU; www.humanbrainproject.eu/vision.html) and the US BRAIN Initiative (www.whitehouse.gov/the-press-office/2013/04/02/fact-sheet-brain-initiative), in a quest to construct a supercomputer simulation of the brain’s inner workings, in addition to mapping the activity of about 100 billion neurons in the hope of unlocking answers to Alzheimer’s and Parkinson’s. Other types of big data can be studied to help solve scientific problems in areas ranging from climatology to geophysics to nanotechnology.

Along with spurring other benefits, science research boosts the economy.

Jeff **Grabmeier**, Senior Director of Research and Innovation Communications, “Study documents economic impact of federal research spending at universities”, April **2014**, <http://oncampus.osu.edu/economic-impact-of-research/>

The scientific research conducted at Ohio State and other universities isn't often viewed as a short-term economic stimulus program – but it does fulfill that role along with its many long-term benefits, according to new research co-authored by an Ohio State economist. In a study published this week in the journal Science, **researchers used a new data set to examine the short-term economic impact of federally funded research spending in 2012**. Specifically, they examined spending at nine of the 15 universities that compose the Committee on Institutional Cooperation, including Ohio State. The results suggest that **federal funding of research has a wide impact on the local and national economy, said Bruce Weinberg, co-author of the study and professor of economics at Ohio State**. In 2012, the nine CIC institutions spent almost \$1 billion of research expenditures on goods and services from U.S. companies both large and small, the study found. “Science is productive work. It employs people who conduct the research and people who produce the equipment and materials that science uses,” Weinberg said. Caroline Whitacre, vice president for research at Ohio State, said the results provide additional proof of the value of federally funded research at universities. **“We’re all familiar with how science has improved our lives over time through better health, new technology and many other benefits,”** Whitacre said. **“But this study offers proof of how science funding helps us here and now by boosting our economy.”**

Healthcare

Big Data is revolutionizing effective medicare

Parekh 15 (Jan. 2, 2015. Deven Parekh is a writer for TechCrunch. “How Big Data will Transform our Economy and Our Lives in 2015” <http://techcrunch.com/2015/01/02/the-year-of-big-data-is-upon-us/> //HS)

Personalized Medicine Even as we engage in a vibrant discussion about the need for personal privacy, “big data” pushes the boundaries of what is possible in health care. Whether we label it “precision medicine” or “personalized medicine,” these two aligned trends — the digitization of the health care system and the introduction of wearable devices — are quietly revolutionizing health and wellness. In the not-too-distant future, doctors will be able to create customized drugs and treatments tailored for your genome, your activity level, and your actual health. After all, how the average patient reacts to a particular treatment regime generically isn’t that relevant; I want the single best course of treatment (and outcome) for me. Health IT is already a booming space for investment, but clinical decisions are still mostly based on guidelines, not on hard data. Big data analytics has the potential to disrupt the way we practice health care and change the way we think about our wellness. Digital Learning, Everywhere With over \$1.2 trillion spent annually on public K-12 and higher education, and with student performance failing to meet the expectations of policy makers, educators and employers are still debating how to fix American education. Some reformers hope to apply market-based models, with an emphasis on testing, accountability and performance; others hope to elevate the teaching profession and trigger a renewed investment in schools and resources. Both sides recognize that digital learning, inside and outside the classroom, is an unavoidable trend. From Massive Open Online Courses (MOOCs) to adaptive learning technologies that personalize the delivery of instructional material to the individual student, educational technology thrives on data. From names that you grew up with (McGraw Hill, Houghton Mifflin, Pearson) to some you didn’t (Cengage, Amplify), companies are making bold investments in digital products that do more than just push content online; they’re touting products that fundamentally change how and when students learn and how instructors evaluate individual student progress and aid their development. Expect more from this sector in 2015. Now that we’ve moved past mere adoption to implementation and utilization, 2015 will undoubtedly be big data’s break-out year.

Natural Resource depletion

Natural resource depletion is devastating the planet- a shift to efficient usage is key to long term human survival

Larson, Olsen, and Emanouilov. 12 (2012. Esben Larson, Karsten Olsen, and Victor Emanouilov are environmental activists who run the website theworldcounts.com- a site dedicated to bringing up to date facts on the Earth and the critical challenges that go along with it. "Consequences of Depletion of Natural Resources"
[//HS](http://www.theworldcounts.com/stories/consequences_of_depletion_of_natural_resources))

Are we using up more than what is available? Our current global population is 7.2 billion and growing. (1) **Earth's total resources are only good for 2 billion people at the current demand.** Let's do the math, and it is obvious that the result is a negative. **The way we're living, we are already using 2 to 3 times more of the Earth's natural resources than what is sustainable.** If we do not act now, we will see the consequences of depletion of natural resources – and it's not going to be pretty. A desolate, dry Earth is not a fun place to live. Our Natural Resources are running out What are the top 3 natural resources being depleted and what are the consequences? 1. Water **What will we drink without water? Only 2.5% of the world's total water volume is fresh water. Of that 2.5%, 70% is frozen** (2). The depletion of our water resources is more serious than the current oil depletion. There are substitutes for oil but **nothing can replace our drinking water.** 70% of the available fresh water that remains is used in agriculture, 20% in industry and only 10% is being used for human consumption. (3) Causes: Increased irrigation, increased use in agriculture, roads and infrastructure prevent water seepage in the soil, rising temperatures
Consequences: Drinking water shortage. Food Shortage. Famine. 2. Oil **Nothing can be moved, manufactured, transported, built, planted, mined or harvested without the liquid fuels that we get from petroleum.** Oil reserves are a non-renewable resource **Oil accounts for 40% of all energy we use** (4) EIA's International Energy Outlook 2013 shows that we have enough Oil to last for 25 years. Efforts are underway to develop cheaper and more sustainable energy such as solar power, wind power and other forms of renewable energy that can replace oil and fossil fuel. Causes: Industrial boom. Increased population. Wastage. **Consequences: Less Transportation. Smaller economies. Higher prices.** Possibly help push the transition to green energy with reduced CO2 emissions and pollution! 3. Forests **Imagine a world without trees.** An estimated 18 million acres of forests are destroyed each year. Half of the world's forest has been cleared. Deforestation contributes 12 to 17% of global greenhouse gas emissions annually. (5) **Trees absorb greenhouse gases and carbon dioxide.** They produce the oxygen we breathe. Forests are the habitats of millions of species. Causes: Urbanization, Illegal logging, Agriculture, Subsistence Farming. **Consequences: Soil erosion, Global Warming caused by the rise of greenhouse gases- Extinction of species and loss of biodiversity. Flooding and drought.**

Pandemics

A pandemic would be devastating to the human race

Vince 13 (Jul. 11, 2013. Gaia Vince is a journalist who specializes in environmental and science issues. She has traveled around the world learning about different impacts of the Anthropocene and has written for several respectable outlets including BBC, The Guardian, and Australian Geographic. "Global Transformers: What if a Pandemic Strikes" BBC <http://www.bbc.com/future/story/20130711-what-if-a-pandemic-strikes> //HS)

Over the past century, **humans have been transforming the planet so profoundly** that we are pushing it into a new geological era, the Anthropocene (the Age of Man). **But how will the Anthropocene unfold? Will we continue on a path** of global climate change, land-use change, resource depletion, biodiversity loss and population expansion? Or **will something happen to push us off this trajectory** – perhaps **back into Holocene-like conditions?** As I mentioned before, over the next few columns I'll be looking at technologies or events that have the potential to radically alter our planet. The first one is a pessimistic one for humans: **what if our species were hit by a global pandemic?** In the Anthropocene **we are encroaching on wild lands**, bringing us closer to monkeys and apes, for example, which are traded internationally for bushmeat and pets. **We are also living in close proximity to domestic creatures** like pigs, chickens and ducks. It means that **diseases that infect animals have an unprecedented chance to jump across species to us**. Humans are so genetically alike that **pathogens easily spread between individuals and across populations**. And because we are living in greater numbers and densities than ever before, **and because so many of us travel internationally – and so much faster – there's a greater opportunity for pathogens to spread**. **If a virus can infect someone in one part of the world, it is unlikely to be contained**. Few places are truly remote in the Anthropocene. Epidemics are certainly not new or unpredictable. **A new strain of influenza virus occurs every 1-2 years**, for example. But the sudden global explosion of an epidemic that infects a large number of the population – a pandemic – is harder to predict. **We know a pandemic has occurred every 10-50 years for the past few centuries, and the last one was in 1968, so we're overdue one**. **Epidemiologists do not talk of whether there will be a new pandemic, but of when it will occur**. **Pandemics, which kill a significant proportion of the population have acute and lasting effects on society**. **The Black Death**, a bubonic plague during the Middle Ages caused by the bacterium *Yersinia pestis*, killed 30%-60% of Europeans (80% of people in the south of France and Spain) and **reduced global population from 450 million to around 350 million**. In a single province of China, more than 4 million people died (90% of the population) in 1334 alone. Such a toll was socially transformative. **Entire cities were depopulated, world trade declined**, but so did wars. In **some countries witch hunts rooting out the unknown cause of the plague resulted in minority groups being massacred, including lepers and Jews**. For plague survivors life generally improved, especially for those at the bottom of the ladder. Peasants benefited from the scarcity of labour to gain better wages (often through revolt), and their crops and cattle spread into unoccupied land giving most people a richer diet. **The Black Death also had an environmental impact** – loss of agricultural activity allowed **forests to regrow, and their photosynthetic activity sucked so much carbon from the air it contributed to the regional cooling event known as the Little Ice Age**. Economic slump **More recently, the Spanish Flu of 1918 killed one in five of those infected** some 40-50 million people worldwide, which was **more than the guns of World War I**. The impacts of this pandemic should have been especially severe because **unusually, more than half of those who died were young working-age adults, aged 20-40 (most flu outbreaks kill the very old and young first)**. However, the global economic slump that resulted from incapacitation or deaths among the **workforce melded into the dramatic effects of the war**. The HIV/Aids epidemic, which also disproportionately effects young, working age men and women, can give some idea of economic impact – in hard-hit sub-Saharan African countries the economies were estimated to be on average 22% smaller in 2010, due to the virus's effects. So **what would be the result**

of a global pandemic in the 21st Century? The world's population in the Middle Ages was just a few hundred million; in 1918, it was 1.8 billion – now it is more than 7 billion. The numbers of people infected and killed could run into the hundreds of millions. **Industry, food production, and the trappings of our modern world economy would all suffer**, but this could be to the benefit of the environment. Poverty in HIV-hit southern Africa means it has the lowest per capita greenhouse gas emissions on the planet. During the global financial crisis that began in 2008, annual emissions from the energy sector fell from 29.3GT to 29GT. Fewer people would mean less production of everything from food to plastics. That could mean fewer industrial emissions, agricultural and residential land reverting back to forest perhaps, few polluting journeys, and less freshwater extractions. **But what if the pandemic was really severe – killing 80%-90% of our species?** Aside from a few people with immunity, **densely populated cities would be worst hit** – small remote islands may be spared through quarantine. **It could mean an end to our advanced human civilization for a time**, at least. **Our species impact on the planet would diminish substantially as a result of our few numbers and global capability.**

Financial Crises

Financial Crisis have long lasting adverse effects on the structures of economies- empirics

Reinhart 9 (Jan. 26 2009. Carmen Reinhart is a professor teaching about the international financial system at Harvard's Kennedy School. "The Economic and Fiscal Consequences of Financial Crises" Vox <http://www.voxeu.org/article/economic-and-fiscal-consequences-financial-crises> //HS)

Financial crises are historically associated with the "4 deadly D's": Sharp economic downturns follow banking crises; with government revenues dragged down, fiscal deficits worsen; deficits lead to debt; as debt piles up rating downgrades follow. For the most fortunate countries, the crisis does not lead to the deadliest D: default, but for many it has. A Even a cursory reading of the global financial press in the past few months would lead one to despair that the world economy is moving through dark and uncharted waters. But, in fact, there is precedent. In a recent paper, Kenneth Rogoff and I examined the international experience with episodes of severe banking crises. The depth, duration and characteristics of the economic slump following the crises traced out a few empirical regularities. Our main findings in that paper can be summarized as follows: Financial crises are protracted affairs. Asset market collapses are deep and prolonged. Real housing price declines average 35% stretched out over six years. Equity price collapses average 55% over a downturn of about three and a half years. There are profound declines in output and employment. The unemployment rate rises an average of 7 percentage points over the down phase of the cycle, which lasts on average over four years. Real GDP per capita falls (from peak to trough) an average of over 9%, the duration of the downturn averages roughly two years. There are significant adverse consequences of the financial crisis on government finances. Tax revenues shrink as the economic conditions deteriorate, the fiscal deficit worsens markedly, and the real value of government debt tends to explode, rising an average of 86% in the major post-World War II episodes. In the remainder of this note, I elaborate on these points. I follow up with a sketch of how the crisis, deteriorating economic conditions, and more precarious fiscal fundamentals impact sovereign risk in the aftermath of the crises episodes. Downturn It is now beyond contention that the present US financial crisis is severe by any metric. As a result, we focus on systemic financial crises. The "big five" advanced economy crises include episodes in Spain (1977), Norway (1987), Finland (1991), Sweden (1991), and Japan (1992). Famous emerging market episodes in our study include the 1997-1998 Asian crisis (Hong Kong, Indonesia, Korea, Malaysia, the Philippines, and Thailand), Colombia (1998), and Argentina (2001). Central to the analysis is historical housing price data, which can be difficult to obtain and are critical for assessing the present episode. We therefore include two earlier historical cases for which housing prices are available, Norway in 1899 and the US in 1929. Figure 1 looks at the bust phase in housing price cycles surrounding banking crises, including the current episode in the US and a number of other countries now experiencing banking crises; Austria, Hungary, Iceland, Ireland, Spain, and the UK. Ongoing crises are in dark shading, and past crises are in light shading. The cumulative decline in real housing prices from peak to trough averages 35.5%.¹ Figure 1. Past and ongoing real house price cycles and banking crises: peak-to-trough price declines (left panel) and years duration of downturn (right panel) Source: Reinhart and Rogoff (2009a). The most severe real housing price declines were experienced by Finland, the Philippines, Colombia and Hong Kong. Their crashes were 50 to 60%, measured from peak to trough. The housing price decline experienced by the US to date during the current episode (almost 28% according to the Case-Shiller index) is already more than twice that registered in the US during the Great Depression. The duration of housing price declines is quite long-lived, averaging roughly six years. Even excluding the extraordinary experience of Japan, the average remains over five years. As illustrated in Reinhart and Rogoff (2009a), the equity price declines that accompany banking crises are far steeper than are housing price declines, if somewhat shorter lived. The average historical decline in equity prices is 55.9%, with the downturn phase of the cycle lasting 3.4 years. Notably, during the current cycle, Iceland and Austria have already experienced peak-to-trough equity price declines far exceeding the average of the historical comparison group. On average, unemployment rises for almost five years, with an increase in the unemployment rate of about 7 percentage points. While none of the postwar episodes rivals the rise in unemployment of over 20 percentage points experienced by the US during the Great Depression, the employment consequences of financial crises are large in many cases. Figure 2 looks at increases in unemployment rates across the historical episodes. Figure 2. Past unemployment cycles and banking crises: Trough-to-peak percent increase in the unemployment rate (left panel) and years duration of downturn (right panel) Sources: Reinhart and Rogoff (2009a).

The emerging markets, particularly those in Asia, do better in terms of unemployment than do the advanced economies (Figure 2). There are well-known data issues in comparing unemployment rates across countries, as widespread “underemployment” in many emerging markets and the vast informal sector are not captured in the official unemployment statistics. As to real per capita GDP around banking crises, the average magnitude of the decline is 9.3%. The declines in real GDP are smaller for advanced economies than for emerging market economies. A probable explanation for the more severe contractions in emerging market economies is that they are prone to abrupt reversals in the availability of foreign credit. **When foreign capital comes to a “sudden stop.”** to use the phrase coined by Guillermo Calvo (2006), **economic activity heads into a tailspin**. The cycle from peak to trough in GDP is much shorter, only two years. Deficits Declining revenues and higher expenditures owing to a combination of bailout costs and higher transfer payments and debt servicing costs lead to a rapid and marked worsening in the fiscal balance. The episodes of Finland and Sweden stand out in this regard, as the latter went from a pre-crisis surplus of nearly 4% of GDP to a whopping 15% deficit-to-GDP ratio. Debt Figure 3 shows the rise in real government debt in the three years following a banking crisis. **The deterioration in government finances is striking, with an average debt rise of over 86%.** We look at percentage increase in debt, rather than debt-to-GDP, because sometimes steep output drops would complicate interpretation of debt–GDP ratios. As Reinhart and Rogoff (2009b) note, the characteristic huge buildups in government debt are driven mainly by sharp falloffs in tax revenue. **The much publicized bank bailout costs are typically second order.** Figure 3. Cumulative increase in real public debt in the three years following the banking crisis Sources: Reinhart and Rogoff (2008b) and sources cited therein. Downgrades (and sometimes default) Figure 4. Institutional Investor sovereign ratings cycles and banking crises: Peak-to-trough index declines (left panel) and years duration of downturn (right panel) Conclusions (not delusions) **An examination of the aftermath of severe financial crises shows deep and lasting effects on asset prices, output and employment. Unemployment rises and housing price declines extend out for five and six years, respectively. Even recessions sparked by financial crises do eventually end, albeit almost invariably accompanied by massive increases in government debt. The crises, more often than not, adversely impact sovereign creditworthiness,** as reflected in a higher risk premia. The effects, however, do not appear to be “permanent.” **The global nature of the present crisis will make it far more difficult for many countries to grow their way out** through higher exports. The growth slowdown is amplified in world commodity markets, as many emerging markets face steep declines in their terms of trade. If historical patterns hold, **the current lull in sovereign defaults or restructurings in emerging markets will likely to come to an end,** particularly if the recovery process in the world’s largest economies is delayed. **Ecuador has already defaulted and others are teetering on the brink.**

Border Surveillance Michigan 7

Brought you by Michael Cerny and Gauri Binoy

1NC

Drones provide effective surveillance of the borders

Spagat 2014 (Elliot; Drones replacing officers in Mexican border surveillance; Nov 13; www.dailynews.com/social-affairs/20141113/drones-replacing-officers-in-mexican-border-surveillance; kdf)

The U.S. government now patrols nearly half the Mexican border by drones alone in a largely unheralded shift to control desolate stretches where there are no agents, camera towers, ground sensors or fences, and it plans to expand the strategy to the Canadian border. It represents a significant departure from a decades-old approach that emphasizes boots on the ground and fences. Since 2000, the number of Border Patrol agents on the 1,954-mile border more than doubled — to surpass 18,000 — and fencing multiplied nine times to 700 miles. Under the new approach, Predator B aerial drones, used in the fight against insurgents in Afghanistan, sweep remote mountains, canyons and rivers with a high-resolution video camera and return within three days for another video in the same spot, two officials with direct knowledge of the effort said on condition of anonymity because details have not been made public. The two videos are then overlaid for analysts, who use sophisticated software to identify tiny changes — perhaps the tracks of a farmer or cows, perhaps those of immigrants who entered the country illegally or perhaps a drug-laden Hummer, they said. About 92 percent of drone missions have shown no change in terrain, while the others raised enough questions to dispatch agents to determine if someone got away, sometimes by helicopter because the area is so remote. The agents look for any sign of human activity — footprints, broken twigs, trash. About 4 percent of missions have been false alarms, like tracks of livestock or farmers, and about 2 percent are inconclusive. The remaining 2 percent offer evidence of illegal crossings from Mexico, which typically results in ground sensors being planted for closer monitoring. The government has operated about 10,000 drone flights under the strategy, known internally as “change detection,” since it began in March 2013. The flights currently cover about 900 miles, much of it in Texas, and are expected to expand to the Canadian border by the end of 2015. The purpose is to assign agents where illegal activity is highest, said R. Gil Kerlikowske, commissioner of Customs and Border Protection, the Border Patrol’s parent agency, which operates nine unmanned aircraft across the country. “You have finite resources,” he said in an interview. “If you can look at some very rugged terrain (and) you can see there’s not traffic, whether it’s tire tracks or clothing being abandoned or anything else, you want to deploy your resources to where you have a greater risk, a greater threat.” If the video shows the terrain unchanged, Border Patrol Chief Michael Fisher calls it “proving the negative” — showing there isn’t anything illegal happening there and therefore no need for agents and fences. The strategy was launched without fanfare and is being expanded as President Barack Obama prepares to issue an executive order by the end of this year to reduce deportations and enhance border security. Rep. Michael McCaul, a Texas Republican who chairs the House Homeland Security Committee, applauded the approach while noting surveillance gaps still remain. “We can no longer focus only on static defenses such as fences and fixed (camera) towers,” he said. Sen. Bob Corker, a Tennessee Republican who coauthored legislation last year to add 20,000 Border Patrol agents and 350 miles of fencing to the southwest border, said, “If there are better ways of ensuring the border is secure, I am certainly open to considering those options.” Border missions fly out of Sierra Vista, home of the U.S. Army Intelligence Center at Fort Huachuca, or Corpus Christi, Texas. They patrol at altitudes between 19,000 at 28,000 feet and from between 25 and 60 miles of the border. The first step is for Border Patrol sector chiefs to identify areas least likely to attract smugglers, typically those far from towns and roads. Analysts scour the drone videos at operations centers in Riverside; Grand Forks, North Dakota; and Sierra Vista. After an initial survey, the drones return within a week for another sweep. Privacy advocates have raised concerns about drones since Customs and Border Protection introduced them in 2006, saying there is potential to monitor innocent people under no suspicion. Lothar Eckardt, the agency’s executive director of national air security operations, said law-abiding people shouldn’t worry and that cameras are unable to capture details like license plate numbers and faces on the ground. He looked on one September morning as a drone taxied down a runway in Sierra Vista, lifted off with a muffled buzz and disappeared over a rocky mountain range into a blue Arizona sky. About a dozen computer screens line the wall of their trailer, showing the weather, maps and real-time images of the ground below. Eckardt said there is “no silver bullet” for addressing border security but that using drones in highly remote areas is part of the overall effort. If there’s nothing there, he said, “let’s not waste the manpower here. Let’s focus our efforts someplace else, where they’re needed.”

Cartel violence causes Mexican collapse and US military response

Metz 14 - Defense Analyst and author of "Iraq and the Evolution of American Strategy"

(Stephen, "Strategic Horizons: All Options Bad If Mexico's Drug Violence Expands to U.S.," February 19, www.worldpoliticsreview.com/articles/13576/strategic-horizons-all-options-bad-if-mexico-s-drug-violence-expands-to-u-s)

Over the past few decades, violence in Mexico has reached horrific levels, claiming the lives of 70,000 as criminal organizations fight each other for control of the drug trade and wage war on the Mexican police, military, government officials and anyone else unlucky enough to get caught in the crossfire. The chaos has spread southward, engulfing Guatemala, Honduras and Belize. Americans must face the possibility that the conflict may also expand northward, with intergang warfare, assassinations of government officials and outright terrorism in the United States. If so, this will force Americans to undertake a fundamental reassessment of the threat, possibly redefining it as a security issue. demanding the use of U.S. military power. One way that large-scale drug violence might move to the United States is if the cartels miscalculate and think they can intimidate the U.S. government or strike at American targets safely from a Mexican sanctuary. The most likely candidate would be the group known as the Zetas. They were created when elite government anti-drug commandos switched sides in the drug war, first serving as mercenaries for the Gulf Cartel and then becoming a powerful cartel in their own right. The Zetas used to recruit mostly ex-military and ex-law enforcement members in large part to maintain discipline and control. But the pool of soldiers and policemen willing to join the narco-traffickers was inadequate to fuel the group's ambition. Now the Zetas are tapping a very different, much larger, but less disciplined pool of recruits in U.S. prisons and street gangs. This is an ominous turn of events. Since intimidation through extreme violence is a trademark of the Zetas, its spread to the United States raises the possibility of large-scale violence on American soil. As George Grayson of the College of William and Mary put it, The Zetas are determined to gain the reputation of being the most sadistic, cruel and beastly organization that ever existed." And without concern for extradition, which helped break the back of the Colombian drug cartels, the Zetas show little fear of the United States government, already having ordered direct violence against American law enforcement. Like the Zetas, most of the other Mexican cartels are expanding their operations inside the United States. Only a handful of U.S. states are free of them today. So far the cartels don't appear directly responsible for large numbers of killings in the United States, but as expansion and reliance on undisciplined recruits looking to make a name for themselves through ferocity continue, the chances of miscalculation or violent freelancing by a cartel affiliate mount. This could potentially move beyond intergang warfare to the killing of U.S. officials or outright terrorism like the car bombs that drug cartels used in Mexico and Colombia. In an assessment for the U.S. Army War College Strategic Studies Institute, Robert Bunker and John Sullivan considered narco-trafficker car bombs inside the United States to be unlikely but not impossible. A second way that Mexico's violence could spread north, is via the partnership between the narco-traffickers and ideologically motivated terrorist groups. The Zetas already have a substantial connection to Hezbollah, based on collaborative narco-trafficking and arms smuggling. Hezbollah has relied on terrorism since its founding and has few qualms about conducting attacks far from its home turf in southern Lebanon. Since Hezbollah is a close ally or proxy of Iran, it might some day attempt to strike the United States in retribution for American action against Tehran. If so, it would likely attempt to exploit its connection with the Zetas, pulling the narco-traffickers into a transnational proxy war. The foundation for this scenario is already in place: Security analysts like Douglas Farah have warned of a "tier-one security threat for the United States" from an "improbable alliance" between narco-traffickers and anti-American states like Iran and the "Bolivarian" regime in Venezuela. The longer this relationship continues and the more it expands, the greater the chances of dangerous miscalculation. No matter how violence from the Mexican cartels came to the United States, the key issue would be Washington's response. If the Zetas, a rather Mexican cartel or someone acting in their stead launched a campaign of assassinations or bombings in the United States or helped Hezbollah or some other transnational terrorist organization with a mass casualty attack, and the Mexican the United States would have to consider military action. ¶ While the United States has deep cultural and economic ties to Mexico and works closely with Mexican law enforcement on the narco-trafficking problem, the security relationship between the two has always been difficult—understandably so given the long history of U.S. military intervention in Mexico. Mexico would be unlikely to allow the U.S. military or other government agencies free rein to strike at narco-trafficking cartels in its territory. even if those organizations were tied to assassinations, bombings or terrorism in the United States. But any U.S. president

would face immense political pressure to strike at America's enemies if the Mexican government could not or would not do so itself. Failing to act firmly and decisively would weaken the president and encourage the Mexican cartels to believe that they could attack U.S. targets with impunity. After all, the primary lesson from Sept. 11 was that playing only defense and allowing groups that attack the United States undisturbed foreign sanctuary does not work. But using the U.S. military against the cartels on Mexican soil could weaken the Mexican government or even cause its collapse, end further security cooperation between Mexico and the U.S. and damage one of the most important and intimate bilateral economic relationships in the world. Quite simply, every available strategic option would be disastrous.

That undermines US power projection

Haddick 10 – Managing Editor of the Small Wars Journal

(Robert, This Week at War: If Mexico Is at War, Does America Have to Win It?, Sept 10, http://www.foreignpolicy.com/articles/2010/09/10/this_week_at_war_if_mexico_is_at_war_does_america_have_to_win_it)

While answering a question on Mexico this week at the Council on Foreign Relations, U.S. Secretary of State Hillary Clinton said, "We face an increasing threat from a well-organized network, drug-trafficking threat that is, in some cases, morphing into, or making common cause with, what we would consider an insurgency." Mexico's foreign minister Patricia Espinosa was quick to dispute this characterization, arguing that Mexico's drug cartels have no political agenda. But as I have previously discussed, the cartels, evidenced by their attacks on both the government and the media, are gradually becoming political insurgents as a means of defending their turf.¶ I note that Clinton used the phrase "We [the United States] face an increasing threat ...," not "they [Mexico]." The cartels are transnational shipping businesses, with consumers in the United States as their dominant market. The clashes over shipping routes and distribution power -- which over the past four years have killed 28,000 and thoroughly corrupted Mexico's police and judiciary -- could just as well occur inside the United States. Indeed, growing anxiety that southern Arizona is in danger of becoming a "no-go zone" controlled by drug and human traffickers contributed to the passage of Arizona's controversial immigration enforcement statute earlier this year.¶ Both Clinton and Mexican officials have discussed Colombia's struggle against extreme drug violence and corruption, revealing concerns about how dreadful the situation in Mexico might yet become and also as a model for how to recover from disaster. Colombia's long climb from the abyss, aided by the U.S. government's Plan Colombia assistance, should certainly give hope to Mexico's counterinsurgents. But if the United States and Mexico are to achieve similar success, both will have to resolve political dilemmas that would prevent effective action. Clinton herself acknowledged as much when she remarked that Plan Colombia was "controversial ... there were problems and there were mistakes. But it worked."¶ Isolating Mexico's cartel insurgents from their enormous American revenue base -- a crucial step in a counterinsurgency campaign -- may require a much more severe border crackdown, an action that would be highly controversial in both the United States and Mexico. Plan Colombia was a success partly because of the long-term presence of U.S. Special Forces advisers, intelligence experts, and other military specialists inside Colombia, a presence which would not please most Mexicans. And Colombia's long counterattack against its insurgents resulted in actions that boiled the blood of many human rights observers.¶ Most significantly, a strengthening Mexican insurgency would very likely affect America's role in the rest of the world. An increasingly chaotic American side of the border, marked by bloody cartel wars, corrupted government and media, and a breakdown in security, would likely cause many in the United States to question the importance of military and foreign policy ventures elsewhere in the world.¶ Should the southern border become a U.S. president's primary national security concern, nervous allies and opportunistic adversaries elsewhere in the world would no doubt adjust to a distracted and inward-looking America, with potentially disruptive arms races the result. Secretary Clinton has looked south and now sees an insurgency. Let's hope that the United States can apply what it has recently learned about insurgencies to stop this one from getting out of control.

Heg prevents great-power war

Keck 14 – the Assistant Editor at The Diplomat, a researcher at the Middle East Desk at Wikistrat, and an M.A. candidate in the Department of Public and International Affairs at George Mason University. Former Deputy Editor at e-International Relations; a foreign policy reporter at the Washington, D.C. edition of Examiner.com, a Joseph S. Nye, Jr. National Security Research Intern at the Center for a New American Security, a Research Assistant at the Center for Research, Regional Education and Outreach,

(Zach, “America’s Relative Decline: Should We Panic? The end of the unipolar era will create new dangers that the world mustn’t overlook,” 1-24-14,
<http://thediplomat.com/2014/01/americas-relative-decline-should-we-panic/>)

Still, China’s relative rise and the United States’ relative decline carries significant risks, for the rest of the world probably more so than for Americans. Odds are, the world will be worse off if China and especially others reach parity with the U.S. in the coming years. This isn’t to say America is necessarily as benign a hegemon as some in the U.S. claim it to be. In the post-Cold War era, the U.S. has undoubtedly at times disregarded international laws or international opinions it disagreed with. It has also used military force with a frequency that would have been unthinkable during the Cold War or a multipolar era. Often this has been for humanitarian reasons, but even in some of these instances military action didn’t help. Most egregiously, the U.S. overrode the rest of the world’s veto in invading Iraq, only for its prewar claims to be proven false. Compounding the matter, it showed complete and utter negligence in planning for Iraq’s future, which allowed chaos to engulf the nation. Still, on balance, the U.S. has been a positive force in the world, especially for a unipolar power. Certainly, it’s hard to imagine many other countries acting as benignly if they possessed the amount of relative power America had at the end of the Cold War. Indeed, the British were not nearly as powerful as the U.S. in the 19th Century and they incorporated most of the globe in their colonial empire. Even when it had to contend with another superpower, Russia occupied half a continent by brutally suppressing its populace. Had the U.S. collapsed and the Soviet Union emerged as the Cold War victor, Western Europe would likely be speaking Russian by now. It’s difficult to imagine China defending a rule-based, open international order if it were a unipolar power, much less making an effort to uphold a minimum level of human rights in the world. Regardless of your opinion on U.S. global leadership over the last two decades, however, there is good reason to fear its relative decline compared with China and other emerging nations. To begin with, hegemonic transition periods have historically been the most destabilizing eras in history. This is not only because of the malign intentions of the rising and established power(s). Even if all the parties have benign, peaceful intentions, the rise of new global powers necessitates revisions to the “rules of the road.” This is nearly impossible to do in any organized fashion given the anarchic nature of the international system, where there is no central authority that can govern interactions between states. We are already starting to see the potential dangers of hegemonic transition periods in the Asia-Pacific (and arguably the Middle East). As China grows more economically and militarily powerful, it has unsurprisingly sought to expand its influence in East Asia. This necessarily has to come at the expense of other powers, which so far has primarily meant the U.S., Japan, Vietnam and the Philippines. Naturally, these powers have sought to resist Chinese encroachments on their territory and influence, and the situation grows more

tense with each passing day. Should China eventually emerge as a global power, or should nations in other regions enjoy a similar rise as Kenny suggests, this situation will play itself out elsewhere in the years and decades ahead. All of this highlights some of the advantages of a unipolar system. Namely, although the U.S. has asserted military force quite frequently in the post-Cold War era, it has only fought weak powers and thus its wars have been fairly limited in terms of the number of casualties involved. At the same time, America's preponderance of power has prevented a great power war, and even restrained major regional powers from coming to blows. For instance, the past 25 years haven't seen any conflicts on par with the Israeli-Arab or Iran-Iraq wars of the Cold War. As the unipolar era comes to a close, the possibility of great power conflict and especially major regional wars rises dramatically. The world will also have to contend with conventionally inferior powers like Japan acquiring nuclear weapons to protect their interests against their newly empowered rivals. But even if the transitions caused by China's and potentially other nations' rises are managed successfully, there are still likely to be significant negative effects on international relations. In today's "globalized" world, it is commonly asserted that many of the defining challenges of our era can only be solved through multilateral cooperation. Examples of this include climate change, health pandemics, organized crime and terrorism, global financial crises, and the proliferation of weapons of mass destruction, among many others. A unipolar system, for all its limitations, is uniquely suited for organizing effective global action on these transnational issues. This is because there is a clear global leader who can take the initiative and, to some degree, compel others to fall in line. In addition, the unipole's preponderance of power lessens the intensity of competition among the global players involved. Thus, while there are no shortages of complaints about the limitations of global governance today, there is no question that global governance has been many times more effective in the last 25 years than it was during the Cold War. The rise of China and potentially other powers will create a new bipolar or multipolar order. This, in turn, will make solving these transnational issues much more difficult. Despite the optimistic rhetoric that emanates from official U.S.-China meetings, the reality is that Sino-American competition is likely to overshadow an increasing number of global issues in the years ahead. If other countries like India, Turkey, and Brazil also become significant global powers, this will only further dampen the prospects for effective global governance.

Uniqueness

UQ—Border Drones Increasing

The federal government is ramping up its use of border drones

Barry '15 (Tom; January 21, 2015; Dysfunctional Drones Underscore Mission Mess at Homeland Security; Tom Barry is a senior policy analyst at the Center for International Policy, where he directs the TransBorder project. Barry specializes in immigration policy, homeland security, border security and the outsourcing of national security; www.truth-out.org/news/item/28645-dysfunctional-drones-underscore-mission-mess-at-homeland-security; 7-7-15; mbc)

President Obama and Homeland Security Secretary Jeh Johnson are committed to more drone surveillance of US borders. Over the past year, the president has called for emergency supplemental funding for DHS to fund a "sustained border security surge," including new funding for border drones. Johnson specified that deployment of Predator drones over the Southwest border is key to his new "border security initiative, which he calls the Southern Border and Approaches Campaign. Before joining DHS last year, Johnson served successively as general counsel for the Air Force and Department of Defense (2009-2013). As the chief DOD legal counsel, Johnson formulated the legal justification for President Obama's use of Predator drones in targeted killings overseas. Support by the White House and DHS for the use of military-grade drones persists even as criticism of the program mounts. Since the first deployment in 2005 of Predator drones by Customs and Border Protection (CBP) - the most generously funded DHS agency - the program has come under critical review from the Congressional Research Service, Government Accountability Office (GAO), and the DHS Office of the Inspector General (OIG). The OIG report hammers the CBP and the Office of Air and Marine for the continuing failure to institute performance measures and to meet planned flight-time objectives. More than a dozen reports have lambasted the drone program for its failure to meet stated goals, absence of performance measures, and failure to formulate operational plans and strategic directions. Office of Air and Marine (OAM), which DHS created at the same time that CBP launched the drone program, has overseen the expansion of its drone fleet from one Predator to eight Predators and two Predator marine-surveillance variants known as Guardians. As part of its strategic plan, CBP/OAM plans to increase the drone fleet to two-dozen Predators and Guardians - a plan that allows CBP/OAM to respond to emergencies and threats anywhere within the United States in three hours or less. CBP has been largely dismissive of governmental evaluations of its border drone program. In 2012, the DHS inspector general produced a report that added to the growing library of critical evaluations of the border drones, taking CBP/OAM to task for its lack of performance measures and for keeping the Predators grounded on military bases rather than flying surveillance missions. This scathing evaluation didn't undermine White House or DHS support for the costly drone program. And CBP/OAM essentially shrugged off the OIG's critiques and recommendations - as is evident in a new OIG evaluation

UQ – Border Drones Now – Secure Our Borders Act

The SOBA will expand border drones within 100 miles of the border

Kayyali 2015 (Nadia; Secure Our Borders First Act Would Ensure Proliferation of Drones at the Border; Feb 3; <https://www.eff.org/deeplinks/2015/02/secure-our-borders-first-act-would-ensure-proliferation-drones-border>; kdf)

Secure Our Borders First Act Would Ensure Proliferation of Drones at the Border Security shouldn't be a synonym for giving up civil liberties. But bills like HR 399 show that lawmakers think it is. The Secure Our Borders First Act is an ugly piece of legislation that's clearly intended to strongarm the Department of Homeland Security into dealing with the border in a very particular way—with drones and other

surveillance technology. The bill appears to have stalled in the House—it was on the calendar for last week but wasn't voted on, and it's not on the schedule for this week. But it's not dead yet. And even if it does die, this isn't the first time Congress has tried to increase the use of drones at the border. In 2013, the Senate passed S.744, the Border Security, Economic Opportunity, and Immigration Modernization Act. The bill called for the use of drones "24 hours per day and for 7 days per week." The House of Representatives did not pass the legislation, but the drone mandate in HR 399 is eerily similar—and it demonstrates that the idea that drones should be used at the border is persistent. The 72-page piece of legislation, authored by Rep. Michael McCaul from Texas, gives the Department of Homeland Security (DHS) an incredibly specific mandate. It requires DHS to gain "operational control" of high traffic areas within 2 years, and the entire southern border within 5 years. Operational control means "the prevention of all unlawful entries into the United States." It prescribes exactly how that should be done, and even includes penalties for failure to do so, including pay freezes for government officials. The bill also prescribes how operational control should be obtained. It does this by prescribing what equipment 11 specific border points should use. At several of the points, that equipment includes drones. Additionally, the bill includes the following mandate: The Office of Air and Marine of U.S. Customs and Border Protection [CBP] shall operate unmanned aerial systems not less than 16 hours per day, seven days per week. As the ACLU notes, it's a little shocking that the bill includes such mandates only "weeks after a damning DHS Inspector General (DHS IG) report titled 'CBP Drones are Dubious Achievers.'" And that's just the most recent report. In June of 2012, EFF called attention to another DHS IG report that faulted the DHS for wasting time, money, and resources using drones that were ineffective and lacked oversight. To put it in perspective, Predator drones cost \$3,000 per hour to fly. That's certainly part of the reason that HR 399 authorizes \$1 billion in appropriations. Of course, the waste of money in this bill pales in comparison to its potential negative impact on civil liberties.

Drones pose a multitude of privacy concerns. Drones can be equipped with, among other capabilities, facial recognition technology, live-feed video cameras, thermal imaging, fake cell phone towers to intercept phone calls, texts and GPS locations, as well as backend software tools like license plate recognition, GPS tracking, and facial recognition. They are capable of highly advanced and near-constant surveillance, and can amass large amounts of data on private citizens, which can then be linked to data collected by the government and private companies in other contexts. Lest it seem that this will only affect communities directly adjacent to the border, or individuals being investigated or pursued by CBP, it's important to note that the government considers the border to extend 100 miles in, and CBP has certain powers to conduct activities like searches that would be unconstitutional elsewhere. Furthermore, according to documents obtained by the EFF as part of a Freedom of Information Act lawsuit against the agency, CBP appears to be flying drones well within the Southern and Northern US borders for a wide variety of non-border patrol reasons. In fact, the documents showed that between 2010-2012, the number of missions CBP flew for state, local and non-CBP federal agencies increased eight-fold. The silver lining? The legislation hasn't passed yet. There's still time to contact your elected representatives and tell them to vote no.

UQ – Border Drones Effective

Border drones effectively and efficiently monitor the border

RussiaTimes '14 (November 13, 2014; <http://rt.com/usa/205343-cpb-mexico-border-drone-patrols/>; 7-3-15; mbc)

Predator drones are silently patrolling almost half of the United States' border with Mexico, looking for illegal immigrants, human traffickers and drug cartels in desolated areas the government agents can't realistically patrol. The unmanned aircraft fly over about 900 miles of rural areas where there are no US Customs and Border Patrol (CPB) agents, camera towers, ground sensors or fences along the 1,954-mile border, according to a new report by the Associated Press. The Predator Bs use a high-resolution video camera and then return within three days for another video in the same spot, two officials told the wire service. The two videos are then overlaid for analysts who use sophisticated software to identify tiny changes. There are changes in terrain in only eight percent of the drone missions under the current strategy – known internally as “change detection” – since it began in March 2013. Of those flagged missions, about four percent were false alarms, like tracks from livestock or farmers, and about two percent are inconclusive to the agents dispatched to the area to investigate. The remaining 2 percent offer evidence – like footprints, broken twigs, trash – of illegal crossings from Mexico, which typically results in ground sensors being planted for closer monitoring. In the last year and a half, CPB has operated about 10,000 drone flights, with much of their missions over Texas. Border missions fly out of Sierra Vista, home of the U.S. Army Intelligence Center at Fort Huachuca, or Corpus Christi, Texas. They patrol at altitudes between 19,000 at 28,000 feet and between 25 and 60 miles of the border. The program is expected to expand the the Canadian border by the end of 2015. The purpose is to assign agents where illegal activity is highest, R. Gil Kerlikowske, commissioner of Customs and Border Protection, the Border Patrol's parent agency, which operates nine unmanned aircraft across the country, told AP. “You have finite resources,” he said in an interview. “If you can look at some very rugged terrain (and) you can see there's not traffic, whether it's tire tracks or clothing being abandoned or anything else, you want to deploy your resources to where you have a greater risk, a greater threat.” Gregory McNeal, a law professor and drone expert at Pepperdine University, told NBC News in July that the money spent on drones is worth it. “This is a better way to patrol the border than helicopters,” he said. “It’s not a comprehensive immigration solution or border security solution, but more surveillance time in the air will help plug gaps in the border.” A typical Predator drone can fly for 12 hours before landing, compared to three for a standard helicopter. But the cost is much higher: Predator drones require a crew of between five to eight people – plus maintenance staff – to operate, coming out to about \$3,000 an hour to fly. And each one has an \$18 million price tag, NBC News reported. CPB began rolling out Predators in 2005, but rapidly expanded the unmanned aerial reconnaissance operation along the US-Mexico border at the beginning of this decade, the Washington Post reported in 2011. Michael Kostelnik, a retired Air Force general and former test pilot who is the assistant commissioner of CPB's Office of Air and Marine, told the Post then that he had yet to be challenged in Congress about the appropriate use of domestic drones. “Instead, the question is: Why can't we have more of them in my district?” Kostelnik said. In July, President Barack Obama requested \$39.4 million for aerial surveillance, including troops, along the US-Mexican border. The emergency funding was for 16,526 additional drone and manned aircraft flight hours for border surveillance, and 16 additional drone crews to better detect and stop illegal activity, according to administration officials. The request was in response to the humanitarian crisis after tens of thousands of unaccompanied children and families illegally entered the country in the first half of the year. “Border Patrol wants the money and it wants the drones,” McNeal said. “This is the kind of crisis where, if you are Border Patrol, you seize the opportunity to get more funding from Congress.” The agency’s “unmanned and manned aircraft can continue to support ongoing border security operations, specifically regarding the tracking of illegal cross-border smuggling operations,” a CBP official told Nextgov. The

president's request was part of a larger funding appeal of \$3.7 billion to deal with the illegal immigrants and border security problems. In January, CPB was forced to ground its entire fleet of drones after a mechanical function forced a crew to crash an unmanned aircraft valued at \$12 million. The mishap lowered the number of agency drones to only nine.

UQ – Yes Human Smuggling

Profits from human smuggling outweigh drugs

Gilroy 14 – Colby College Honors Thesis, Latin American Studies

(Chloe, "BORDERLINE DEPRAVITY: THE IMPACT OF U.S. IMMIGRATION POLICY ON HUMAN SMUGGLING AT THE MEXICAN BORDER,"

<http://digitalcommons.colby.edu/cgi/viewcontent.cgi?article=1740&context=honorsthesis>//BB

Furthermore, there is an added economic advantage that the cartels gain over other operators by entering into the market for human smuggling in certain areas. Unlike a load of cocaine being smuggled across the border that, when lost, cannot be recouped, a person who fails crossing the first time may hire the same coyote multiple times in order to complete the journey successfully. In his interviews completed with returned migrants as part of the Mexican Migrant Project, Cornelius A. Wayne found that 92% of migrants "eventually succeeded on the same trip to the border, without returning to their place of origin".⁹⁶ So even when a first time crossing proves to be unsuccessful, smugglers still stand to make a future profit if the migrants they failed to bring over decide to make the trip again. Agent Ramiro Cordero goes into why, in certain areas of the border region, **human smuggling has an economic and legal advantage over other activities** that traditionally lie within cartel domain: It is the cargo that you carry really. We have to backtrack a little here. Years back I caught you coming across, slap you on the hand, process you, and send you back. I never really lose you. You keep on trying and trying. I guarantee you three tries, you pay me and you never lose me. If I catch a load of dope, they lost it. They aren't going to make anything out of it. It is a little more lucrative, in some areas, to do migrant smuggling than narcotic smuggling. It also is less penalized. Alien smuggling, a couple of years, but drug smuggling that's five to ten years. It [alien smuggling] is a little bit more profitable maybe, a little more difficult though.⁹⁷ This comparative advantage is just one of the benefits that cartels had upon deciding to enter into the market as service providers as opposed to just toll collectors.

AT: Cartels weak/marijuana legalization

Recent legalization fails

Tama 15

Jason, a federal executive fellow at The Brookings Institution, "Opinion: Global illicit drug economy is adapting to pot legalization", The Cannabist, March 13 2015, www.thecannabist.co/2015/03/13/opinion-global-illicit-drug-economy-adapting-pot-legalization/28764/

With multiple state marijuana initiatives winning voter approval in the 2014 midterm elections, legalization proponents are already hard at work in states like California, where passage of a comprehensive initiative in 2016 could provide the policy "legitimacy" reformers are seeking. However, states should proceed cautiously as **it is too soon to fully assess the complex economic and public health and safety implications of state-by-state legalization**. More broadly for the nation, **it is also important to address what the legalization debate has thus far either ignored or oversimplified: the effects on international illicit drug markets**, transnational organized crime and American foreign policy. The illicit drug economy is a complex system run by resilient criminal networks. **Despite the move toward legalization, the destabilizing influence of illicit economies and transnational crime will endure**, and a sustained national effort will still be needed to address this evolving threat. **Assuming state-by-state commercial legalization continues, illicit marijuana markets will persist until legal and black market prices converge and interstate arbitrage opportunities disappear**. Neither of these outcomes is likely in the near-term. States face the very difficult task of managing consumption levels via unique regulatory regimes that promote scarcity, while simultaneously trying to price out illicit suppliers. Further, **with no regulatory harmonization among states — and no credible movement to legalize federally — interstate arbitrage opportunities persist and are ripe for exploitation by illicit traffickers**. This is not necessarily an argument against experimenting with legalization, but rather an acknowledgement of market dynamics and the agility of modern criminal networks. The good news is marijuana traffickers should face shrinking profit margins in commercially regulated states that progress toward competitive pricing.

Link

Link: Drones Protect the Border

Drones are necessary to protect the border

Ingram 2013 (David; How drones are used for domestic surveillance; Jun 19;

www.csmonitor.com/USA/Latest-News-Wires/2013/0619/How-drones-are-used-for-domestic-surveillance; kdf)

The U.S. government has made no secret of its use of drones to monitor the United States border with Mexico. The Obama administration has been defending its surveillance tactics since former National Security Agency contractor Edward Snowden released secret documents revealing a massive database of daily telephone records, as well as coordination between the NSA and social media companies. The programs are designed to target militants outside the United States who are suspected of planning attacks, but they inevitably gather some data on Americans, U.S. officials said. In a May speech, Obama defended the use of armed drones abroad but said the United States should never deploy armed drones over U.S. soil. The Justice Department had disclosed that two domestic law enforcement agencies use unmanned aircraft systems, according to a department statement sent to the Judiciary Committee and released on Wednesday by Grassley's office. The two are the Drug Enforcement Administration and the Bureau of Alcohol, Tobacco, Firearms and Explosives. Grassley sent a letter to Attorney General Eric Holder on Wednesday asking why the Justice Department did not earlier mention the FBI's use of drones. At Wednesday's hearing, Democratic Senator Dianne Feinstein of California said she was concerned about the privacy implications of drone surveillance. "The greatest threat to the privacy of Americans is the drone and the use of the drone, and the very few regulations that are on it today," Feinstein said. Mueller reiterated that drone use is rare. "It is very narrowly focused on particularized cases and particularized needs," he said. Mueller is due to retire when his term expires in September.

Link: Drones Surveil Cartels

The plan grounds drones that monitor cartels

Hastings 2015 (Deborah; Texas border-patrol drones could have been helping feds 'spy' on Mexico: Report; Apr 15; www.nydailynews.com/news/national/texas-border-drones-spying-mexico-report-article-1.2184932; kdf)

Drones used to patrol the U.S.-Mexico border in the Lone Star State allegedly trained their sites inside Mexico, gathering intelligence that included the coordinates of a noted drug cartel, the Virginia-based contractor reportedly wrote in its 2010 report. The contractor, hired by the state's Department of Public Safety, raised questions about the legality of drone surveillance along the Mexican border, the newspaper reported. "Need to be careful here as we are admitting to spying on Mexico," the report said. The document, prepared by Abrams Learning and Information Systems, described the contractor's work in helping to design the state's border program, which included using drones to track the movements of members of the deadly Los Zetas drug cartel. The drones "monitor suspected Zeta points of interest and pass this information on to Immigration and Customs Enforcement (ICE)," the document reads. "Using this information, ICE can work in conjunction with Mexican Military forces to target (L)os Zetas both north and south of the border to disrupt cartel trafficking operations." Texas Department of Public Safety officials distanced themselves from the report, the paper said. "This document was developed by an outside vendor, and it is imperative to make clear that the department unequivocally rejects the reference to 'spying,'" said spokesman Tom Vinger in an email. "This characterization does not reflect the department's position, nor was this ever used as a talking point," the email to the newspaper said. At issue is whether the drones captured intelligence from the interior of Mexico — surveillance that usually requires federal approval.

AT: Warrants =/= border drones

If the plan doesn't impact border drones, it proves our circumvention arguments because it means that law enforcement will shift to other agencies to carry out their surveillance

And – the plan grounds border drones

Bomboy 2014 (Scott; A legal victory for drones warrants a Fourth Amendment discussion; Feb 7; blog.constitutioncenter.org/2014/02/a-court-victory-for-drones-warrants-a-fourth-amendment-discussion/; kdf)

The Brossart case was a first in the American legal system, since drone surveillance played a part in the proceedings, but it won't likely be the last. Last month, the Electronic Frontier Foundation said it has obtained records that showed Customs and Border Patrol drones were lent to other national and local agencies, and were used 700 times between 2010 and 2012 for domestic surveillance. In his 2012 arguments, attorney Quick cited the Supreme Court case of *Kyllo v. the United States* as supporting his contention that the Predator-B drone's use without a warrant violated the Fourth Amendment. The Fourth Amendment affirms "the right of the people to be secure in their persons, houses, papers, and effects, against unreasonable searches and seizures, shall not be violated, and no Warrants shall issue, but upon probable cause, supported by Oath or affirmation, and particularly describing the place to be searched, and the persons or things to be seized." In the *Kyllo* case from 2001, the Supreme Court decided that the use of infrared detection, as a form of surveillance, to identify marijuana cultivation inside a suspect's house violated the Fourth Amendment. The Supreme Court has yet to consider drone surveillance and the Fourth Amendment, but *Kyllo* isn't the only case that could come into play. In *California v. Ciraolo* (1986), the Supreme Court ruled that an individual's private property is not protected by the Fourth Amendment as long as an aircraft is in navigable airspace; in this case, the altitude was 1,000 feet. "The Fourth Amendment simply does not require the police traveling in the public airways at this altitude to obtain a warrant in order to observe what is visible to the naked eye," the Court said. For now, there doesn't seem to be a clear-cut answer, despite the Fourth Amendment's message, partly because of the technology wrapped up inside higher-tech surveillance drones. Some drones can not only see clearly into your backyard, but can also theoretically listen (in some circumstances) and take thermal-sensitive pictures. More sophisticated drones can intercept electronic communications, track GPS information, and use facial recognition technology. "While individuals can expect substantial protections against warrantless government intrusions into their homes, the Fourth Amendment offers less robust restrictions upon government surveillance occurring in public places including areas immediately outside the home, such as in driveways or backyards," said Richard M. Thompson II, an attorney for the Congressional Research Service, in a 2013 study. "Concomitantly, as technology advances, the contours of what is reasonable under the Fourth Amendment may adjust as people's expectations of privacy evolve." Groups like the American Civil Liberties Union and the Electronic Privacy Information Center are pushing hard for privacy-law reforms that would require law enforcement to strictly follow the Fourth Amendment when it comes to drone surveillance.

AT: 25 Mile Exception

The plan doesn't mention the 25 mile exception, proves that no-link argument is a 2AC replan—this is a unique reason to vote negative because it means that they can no link all of our DAs in the 2AC.

Patrols within 100 miles are key

Stanley 2014 (Jay; Up to 20% of Border Patrol Drone Flights Are Inside the United States; Oct 2; <https://www.aclu.org/blog/20-border-patrol-drone-flights-are-inside-united-states>; kdf)

So what were the Predators doing inside these border and coastal areas? According to the GAO report, some of that flight time might have involved pilot training, or moving from one base to another—but also listed as a principal source of CBP Predator operations is “support for law enforcement activities and investigations” run by other federal agencies such as the FBI, ICE, and various “multi-agency task forces.” The GAO does not specify an exact percentage but writes that “over 80 percent” of flight hours were within border and coastal areas. Let's note that it's not clear what the GAO means by “border and coastal areas”—those responsible for border security within the U.S. government assert that the “border region” includes any area within 100 miles of any U.S. “external boundary.” So it's possible that far more than 80% of the Predator miles flown what an ordinary person would consider “inside the United States.” After all, a flight between, say, Boston and Washington, DC would certainly be within the government's so-called 100-mile zone, and probably also within a more narrowly defined “coastal area”—but that would still be well outside the area most people think the Predators are being used.

AT: Fill-in tech = effective

Drones are the most effective way to monitor the border

BBC 2014 (US-Mexico border 'patrolled by drones'; Nov 13; www.bbc.com/news/world-us-canada-30044702; kdf)

The US government is using drones to patrol half of its border with Mexico, a report by the Associated Press says. The strategy means that the US is increasingly able to move away from using large numbers of border patrol agents along the entire frontier. **The drones allow border control agents to focus on areas of "greater threat"**, says the report. The US border immigration system is under pressure in the face of a worsening border crisis. According to an investigation by the news agency, there have been about 10,000 drone flights since the new border control strategy began in March 2013. The unmanned drones are being deployed in an effort to control 900 miles (1,450 km) of remote areas, allowing border patrol agents to focus their resources elsewhere, AP says. Richard Gil Kerlikowske, the commissioner of the Border Patrol's parent agency, Customs and Border Protection, said his agency only had "finite resources". "You want to deploy your resources to where you have a greater risk, a greater threat." The drones focus on detecting small changes in the landscape such as footprints, broken twigs and tyre tracks. A border control agent is only sent to the area if the drone has picked up signs of human disturbance, said AP. Drone patrols are expected to expand to the Canadian border in 2015, the news agency added. Michael McCaul, a Texas Republican who chairs the House Homeland Security Committee, praised the approach but said that surveillance gaps still remain. "We can no longer focus only on static defences such as fences and fixed [camera] towers," he said.

Mexican collapse is comparatively the greatest geopolitical threat to hegemony

Kaplan 12 - Senior Fellow at the Center for a New American Security in Washington, D.C., and has been a foreign correspondent and contributing editor at The Atlantic, where his work has appeared for three decades. In 2009, he was appointed to the Pentagon's Defense Policy Board, which advised former U.S. Secretary of Defense Robert Gates on key issues. Mr. Kaplan served on the board through 2011. From 2006 to 2008, he was the Class of 1960 Distinguished Visiting Professor in National Security at the U.S. Naval Academy.

(Robert, "With the Focus on Syria, Mexico Burns," [//BB](https://www.stratfor.com/weekly/focus-syria-mexico-burns#axzz3D9QzKYlq)

While the foreign policy elite in Washington focuses on the 8,000 deaths in a conflict in Syria — half a world away from the United States — more than 47,000 people have died in drug-related violence since 2006 in Mexico. A deeply troubled state as well as a demographic and economic giant on the United States' southern border, Mexico will affect America's destiny in coming decades more than any state or combination of states in the Middle East. Indeed, Mexico may constitute the world's seventh-largest economy in the near future.^a Certainly, while the Mexican violence is largely criminal, Syria is a more clear-cut moral issue, enhanced by its own strategic consequences. A calcified authoritarian regime in Damascus is stamping out dissent with guns and artillery barrages. Moreover, regime change in Syria, which the rebels demand, could deliver a pivotal blow to Iranian influence in the Middle East, an event that would be the best news to U.S. interests in the region in years or even decades.^a Nevertheless, the Syrian rebels are divided and hold no territory, and the toppling of pro-Iranian dictator Bashar al Assad might conceivably bring to power an austere Sunni regime equally averse to U.S. interests — if not lead to sectarian chaos. In other words, all military intervention scenarios in Syria are fraught with extreme risk. Precisely for that reason, that the U.S. foreign policy elite has continued for months to feverishly debate Syria, and in many cases advocate armed intervention, while utterly ignoring the vaster panorama of violence next door in Mexico, speaks volumes about Washington's own obsessions and interests, which are not always aligned with the country's geopolitical interests.^a Syria matters and matters momentarily to U.S. interests, but Mexico ultimately matters more, so one would think that there would be at least some degree of parity in the amount written on these subjects. I am not demanding a switch in news coverage from one country to the other, just a bit more balance. Of course, it is easy for pundits to have a fervently interventionist view on Syria precisely because it is so far away, whereas miscalculation in Mexico on America's part would carry far greater consequences. For example, what if the Mexican drug cartels took revenge on San Diego? Thus, one might even argue that the very noise in the media about Syria, coupled with the relative silence about Mexico, is proof that it is the latter issue that actually is too sensitive for loose talk.^a It may also be that cartel-racked Mexico — at some rude subconscious level — connotes for East Coast elites a south of the border, 7-Eleven store culture, reminiscent of the crime movie "Traffic," that holds no allure to people focused on ancient civilizations across the ocean. The concerns of Europe and the Middle East certainly seem closer to New York and Washington than does the southwestern United States. Indeed, Latin American bureaus and studies departments simply lack the cachet

of Middle East and Asian ones in government and universities. Yet, the fate of Mexico is the hinge on which the United States' cultural and demographic future rests.^a U.S. foreign policy emanates from the domestic condition of its society, and nothing will affect its society more than the dramatic movement of Latin history northward. By 2050, as much as a third of the American population could be Hispanic. Mexico and Central America constitute a growing demographic and economic powerhouse with which the United States has an inextricable relationship. In recent years Mexico's economic growth has outpaced that of its northern neighbor. Mexico's population of 111 million plus Central America's of more than 40 million equates to half the population of the United States.^a Because of the North American Free Trade Agreement, 85 percent of Mexico's exports go to the United States, even as half of Central America's trade is with the United States. While the median age of Americans is nearly 37, demonstrating the aging tendency of the U.S. population, the median age in Mexico is 25, and in Central America it is much lower (20 in Guatemala and Honduras, for example). In part because of young workers moving northward, the destiny of the United States could be north-south, rather than the east-west, sea-to-shining-sea of continental and patriotic myth. (This will be amplified by the scheduled 2014 widening of the Panama Canal, which will open the Greater Caribbean Basin to megaships from East Asia, leading to the further development of Gulf of Mexico port cities in the United States, from Texas to Florida.)^b Since 1940, Mexico's population has increased more than five-fold. Between 1970 and 1995 it nearly doubled. Between 1985 and 2000 it rose by more than a third. Mexico's population is now more than a third that of the United States and growing at a faster rate. And it is northern Mexico that is crucial. That most of the drug-related homicides in this current wave of violence that so much dwarfs Syria's have occurred in only six of Mexico's 32 states, mostly in the north, is a key indicator of how northern Mexico is being distinguished from the rest of the country (though the violence in the city of Veracruz and the regions of Michoacan and Guerrero is also notable). If the military-led offensive to crush the drug cartels launched by conservative President Felipe Calderon falters, as it seems to be doing, and Mexico City goes back to cutting deals with the cartels, then the capital may in a functional sense lose even further control of the north, with concrete implications for the southwestern United States.^a One might argue that with massive border controls, a functional and vibrantly nationalist United States can coexist with a dysfunctional and somewhat chaotic northern Mexico. But that is mainly true in the short run. Looking deeper into the 21st century, as Arnold Toynbee notes in *A Study of History* (1946), a border between a highly developed society and a less highly developed one will not attain an equilibrium but will advance in the more backward society's favor. Thus, helping to stabilize Mexico — as limited as the United States' options may be, given the complexity and sensitivity of the relationship — is a more **urgent** national interest than stabilizing societies in the Greater Middle East. If Mexico ever does reach coherent First World status, then it will become less of a threat, and the healthy melding of the two societies will quicken to the benefit of both.^a Today, helping to thwart drug cartels in rugged and remote terrain in the vicinity of the Mexican frontier and reaching southward from Ciudad Juarez (across the border from El Paso, Texas) means a limited role for the U.S. military and other agencies — working, of course, in full cooperation with the Mexican authorities. (Predator and Global Hawk drones fly deep over Mexico searching for drug production facilities.) But the legal framework for cooperation with Mexico remains problematic in some cases because of strict interpretation of 19th century posse comitatus laws on the U.S.

side. While the United States has spent hundreds of billions of dollars to affect historical outcomes in Eurasia, its leaders and foreign policy mandarins are somewhat passive about what is happening to a country with which the United States shares a long land border, that verges on partial chaos in some of its northern sections, and whose population is close to double that of Iraq and Afghanistan combined. Mexico, in addition to the obvious challenge of China as a rising great power, will help write the American story in the 21st century. Mexico will partly determine what kind of society America will become, and what exactly will be its demographic and geographic character, especially in the Southwest. The U.S. relationship with China will matter more than any other individual bilateral relationship in terms of determining the United States' place in the world, especially in the economically crucial Pacific. If policymakers in Washington calculate U.S. interests properly regarding those two critical countries, then the United States will have power to spare so that its elites can continue to focus on serious moral questions in places that matter less.

Mexican violence takes down hegemony

Stratfor 8

("Geopolitical Diary: High Stakes South of the Border," [//BB">https://www.stratfor.com/geopolitical-diary/geopolitical-diary-high-stakes-south-border](https://www.stratfor.com/geopolitical-diary/geopolitical-diary-high-stakes-south-border))//BB

The Mexican government has arrested five individuals involved in the killing of Edgar Millan Gomez, Mexico's highest-ranking federal law enforcement official. The five men allegedly operated on the orders of the Sinaloa Cartel. The death of Millan Gomez at his home in Mexico City is the latest example of the escalation of violence in the ongoing war between the Mexican federal government and the cartels that control large swaths of Mexican territory. The assassination of such a high-level target clearly puts increased pressure on the government. ^a Mexican President Felipe Calderon's boldest initiative upon taking office 18 months ago was the deployment of thousands of troops to combat Mexican drug cartels. In doing so, he brought the fight to the doorstep of organized crime. ^a Calderon's efforts in combating the cartels have been notable, as he is the first Mexican president to challenge cartel control of Mexican territory in a serious way. But his resources are limited. To tackle the threats and challenges facing the government, Calderon has shifted troops from one place to another. But any fundamental ramping up of dedicated troops would strain Mexico's resources. ^a The shift of cartel violence into the interior of Mexico, and particularly into Mexico City itself, has been a gradual trend that STRATFOR has observed over the past year. Cartel involvement — particularly by the Sinaloa cartel — in the capital appears to have increased noticeably since a failed attack with an improvised explosive device in February. Millan Gomez's assassination is the latest example of this trend. ^a Mexico's continued descent into chaos could have enormous implications for the United States, with the potential to shift considerable U.S. attention to the Western Hemisphere. ^a The economic importance of Mexico to the United States is difficult to overstate. The potential disruption of trade between the two countries — particularly relevant at a point when the United States is staring down the maw of a recession — would be a massive liability for the United States. U.S.-Mexican trade totaled about \$350 billion worth of goods in 2007, making Mexico one of the United States' largest trading partners. ^a Now, there is a real danger that Mexico's crime situation could spin out of control. The cartels need stable supply routes to

the United States to secure their drug shipments, while the government is seeking to stem the tide of violence that has wracked Mexico for decades. The law of unintended consequences is in play here, and there is a distinct danger that violence could further spill over into the United States — disrupting trade flows and border security.^a Although the United States may be moving forward with policies like the Merida initiative, which will lend aid to Mexico's war on the cartels, the current efforts are limited. U.S. forces are largely preoccupied in Iraq and Afghanistan. While it would take a great deal to tip the scale toward a U.S. military intervention in Mexico, we may now be at a point where that has to be considered given what is at stake.^a The last time the United States meaningfully asserted control over a deteriorating situation in Mexico was in the early 20th century during the Mexican Revolution, when the United States occupied Veracruz for six months to protect U.S. business interests. If violence on the border started hurting the bottom line, the cost of not doing anything would start to approach the cost of military action. The potential for an escalation of violence between the cartels and the government spiraling out of control could tip that balance.^a It is unclear what the threshold for U.S. action in Mexico would be. But **the stakes are high**. If the United States sees trade flows threatened, and the security situation deteriorating, Washington might see fit to intervene. And just because it hasn't done so in a century doesn't mean it will not choose to do so in the future.

Distracts the US from other pressing international threats

Krepinevich 13 – PhD @ Harvard, President of the Center for Strategic and Budgetary Assessments, which he joined following a 21- year career in the U.S. Army

(Andrew, “HEMISPHERIC DEFENSE IN THE 21ST CENTURY,” Scholar)//BB

Vigilantism and rioting are becoming more widespread. Military and police are struggling to control the chaos, but their forces are plagued by poor morale, insubordination, and increasing problems with corruption. The growing disorder threatens to produce a humanitarian crisis as essential services begin to break down in parts of the country. Several hundred thousand Mexicans have become refugees in the past month alone. Most are moving north in the hope of receiving humanitarian assistance and asylum in the United States. Some Mexicans are working through official channels; however, the U.S. Immigration and Naturalization Service is completely overwhelmed. Thousands of others are attempting to cross the border illegally each day. Law enforcement officials and National Guardsmen are struggling to control the flow, sometimes helped but more often hindered by armed, self-proclaimed U.S. “border rangers” operating in Arizona, New Mexico, and Texas.^a Summary^a Though clearly a “dark” scenario, the hypothetical events outlined above draw on current trends and events to demonstrate how—as has happened repeatedly throughout U.S. history—Latin America can be transformed from a strategic back-water into a significant threat when U.S. strategy for that region amounts to little more than benign neglect. In particular, the scenario illustrates how powers external to the region could plausibly exploit local instability to generate a major threat to U.S. interests in the Western Hemisphere. With this scenario serving as a cautionary tale, the following chapter outlines a U.S. strategy whose objective is to preserve regional security while enabling Washington to avoid becoming overly involved in the affairs of its neighbors or distracted from its pressing global responsibilities.

Hege – Impact

Heg decreases violence among multiple indicators

Drezner 13 - Professor of International Politics @ Tufts University's Fletcher School

(Dan, "The Year of Living Hegemonically," 12-27-13,

http://www.foreignpolicy.com/articles/2013/12/27/the_year_of_living_hegemonically)

These sorts of trends tend to give U.S. strategists the heebie-jeebies. A staple of international relations thinking for decades has been that U.S. hegemony is the mainstay of global order. According to this "theory of hegemonic stability," peace and prosperity are only likely to persist when a liberal superpower is prepared to act to keep markets open and stamp out brewing conflict. If Mead or Robert Kagan are correct, then a United States that is both unwilling and unable to stabilize the rest of the world really should be a source of concern. Here's the thing, though: at the same time that commentators were bemoaning U.S. decline, the world was looking up. I suspect that ThinkProgress and Britain's Spectator magazine would agree on very little in politics, but this month they both ran features pointing out something important: 2013 was "the best year in human history." Their data is incontrovertible. If you look at human development indicators, all of the key metrics -- infant mortality, infectious diseases, per capital income -- are trending in the right direction. By the end of 2013, the smallest fraction of the world's population will be living in poverty. Both traditional and human security measures reveal the same trend. Whether it's violent crime, discrimination, civil or interstate war, the aggregate data shows a more peaceable world. Or, as the Spectator put it: "Every day in every way, the world grows richer, safer and smarter." If you don't believe political partisans, then buy Angus Deaton's *The Great Escape* and you'll discover the same message. Despite the post-2008 trend of predicting that the global order is crumbling and the world is going to hell, the opposite is transpiring. How and why can this be happening when American power is on the wane? Those fearful of disorder have made two fundamental errors in judgment. First, they assume that China, Iran, and others want to rewrite the global rules of the game. Not so. To be sure, these countries want to preserve their sovereignty and expand their sphere of influence -- and on these issues, they will clash with the United States. On the other hand, contra Mead, they will also clash with each other as well. Furthermore, Beijing, Moscow, and Tehran very much want to participate in the global economy. Indeed, the reason Rouhani is trying to negotiate a nuclear deal is to get Iran out from under the dead weight of crippling economic sanctions. And contra what everyone expected in the wake of the 2008 financial crisis, emerging markets are not eager to topple the existing global order. Indeed, the recent trade deal in Bali suggests that, if anything, they want to reinforce the existing rules of the game. The bigger error, however, has come from analysts confusing a U.S. reluctance to use military force in the Middle East with a decline in American power and influence. The truth is that the United States still wields considerable power, which is one reason why 2013 turned out to be such a good year. Whether one looks at global capital flows or the use of the dollar as a reserve currency, the data point in the same direction: the resilience of American economic power. And even as the sequester hits, the United States also continues to possess an unparalleled edge in military capabilities. It is true that Syria continues to hemorrhage lives and livelihoods. Even there, however, it was the threat of American force that triggered an agreement to remove Syria's chemical weapons. U.S. military power has also helped to tamp down conflict in the Central African Republic, as well as deliver massive humanitarian relief to the Philippines. Indeed, given the depths of its domestic political dysfunction, one can only imagine what America's rivals must think. In 2013 alone, the federal government couldn't evade a stupid, counterproductive budget sequester, a government shutdown, and brinksmanship with the debt ceiling. There was no agreement on immigration reform, much less on policies such as climate change, education, or infrastructure. Despite mounting gridlock and policy own goals, however, the United States ends 2013 with a rapidly declining federal budget deficit, a surging energy sector, and accelerating growth in the economy and employment. President Obama was justified in noting that 2014 could be a breakthrough year for the United States. The most brilliant strategists living in Moscow, Beijing, or Tehran can't displace the structural strengths of the United States. Which means that for those capitals, 2014 will prove to be a very frustrating year. Daniel W. Drezner is professor of international politics at Tufts University's Fletcher School and a contributing editor to *Foreign Policy*.

Hege – AT: No Border instability

Cartels intensify instability

Partlow 15 (Journalist, Joshua Partlow, July 7th 2015, "Six killed in helicopter shootout on border as trump slams Mexican government", <http://www.smh.com.au/world/six-killed-in-helicopter-shootout-on-border-as-trump-slams-mexican-government-20150707-gi6rrz.html>)

After coming under fire, Mexican navy personnel in a Black Hawk helicopter shot back and killed six American people near the US border, authorities said on Monday. The shooting broke out on Sunday in a rural area near Falcon Lake, a border-straddling reservoir on the Rio Grande, amid cattle ranches and tiny fishing towns. This stretch of border is where two drug cartels, the Jalisco New Generation and the Zetas, have reportedly been fighting. The violence came as US tycoon Donald Trump, who is running for the Republican presidential nomination, said that he blamed the Mexican government, not the "fabulous" Mexican people, for sending criminals across the border. A worker hangs a pinata depicting US Republican presidential candidate Donald Trump at a workshop in Reynosa, Mexico.

A worker hangs a pinata depicting US Republican presidential candidate Donald Trump at a workshop in Reynosa, Mexico. The shootout took place about 30 kilometres from the US border. Officials in Nuevo Laredo, the closest major city, as well as in the Tamaulipas state government and prosecutor's office, said they had no further information about the incident. Such silence is common in border towns where drug gangs are strong. The most prominent newspaper in Nuevo Laredo, El Manana, did not cover the helicopter shooting. An editor said the paper does not write about such news anymore, given the threats and killings by cartel members that have muzzled many publications in dangerous parts of Mexico. US Border Patrol agents help minors from El Salvador after they crossed the Rio Grande illegally into the United States in July 2014 in Mission, Texas. US Border Patrol agents help minors from El Salvador after they crossed the Rio Grande illegally into the United States in July 2014 in Mission, Texas. Two months ago, suspected cartel members shot down a Mexican military helicopter in the western state of Jalisco with a rocket-propelled grenade. Six members of the military were killed in the May 1 attack. Authorities blamed the New Generation cartel, which has grown into one of the country's most powerful drug gangs. The Jalisco state prosecutor, Luis Gutierrez, stepped down from his post on Monday amid deteriorating security in the state. Mexican President Enrique Pena Nieto's administration has purchased at least 25 UH-60 Black Hawk helicopters, worth about \$US775 million, through the US government's foreign military sales program. Some critics have expressed concerns that the military buildup - which includes thousands of Humvee trucks - will intensify the drug war, while officials say the sales have replaced old, outdated equipment.

Hege – AT: No US Violence

Cartels on the border cause major escalation in violence

Loew 15 (Morgan Leow, "Mexican border town sees spike in drug violence", February 2nd 2015, <http://www.kpho.com/story/24624896/mexican-border-town-sees-spike-in-drug-violence>)

The Mexican border town of Agua Prieta, Sonora, is normally a quiet community. Directly across the border from Douglas, AZ, it was originally a crossing location for minerals from the mines located to the south. But during the past month, the dusty streets have seen something they hadn't seen in years: drug violence and the sounds of gunfire and bombs. "Nobody's going out at night. The restaurants are closed and so are the discos," said Juan Carlos Olvera, a journalist who has worked the town's streets for 15 years. Olvera said the recent spike in violence is the result of an internal power struggle within the Sinaloa Drug Cartel, which controls the entire smuggling corridor along the Arizona and Sonora border. "They're readjusting the power base," said Olvera. In the past year, Olvera said Agua Prieta had 16 murders. The town had eight murders in just three days in January. They've been carried out in spectacular fashion, with the killers spraying buildings and trucks with hundreds of bullets. One attack involved a bomb. Mexican police have beefed up patrols and appear to be pulling over vehicles at random, looking for guns. Along the border, the fear is that this power struggle may spread to other border towns along the cartel's smuggling corridor.

****2NC Impact Mods**

Impact – Turns Systemic Violence

Extend Spigot, drones take boots off of the ground—which is good because border guards commit heinous acts

Burnett 2014 (John; U.S. Border Patrol's Response To Violence In Question; May 15; www.npr.org/2014/05/15/312573512/u-s-border-patrols-response-to-violence-in-question; kdf)

Picnickers in a riverside park in Nuevo Laredo, Mexico, react in horror as a man in a yellow baseball cap named Guillermo Arevalo lies on the bank of the Rio Grande, bleeding to death. It's a warm Monday evening in September 2012. He has just been shot by an agent on a U.S. Border Patrol airboat on the river. The Border Patrol says the agent shot at rock throwers and that the incident is under investigation. Witnesses say Arevalo was not throwing rocks. A woman, unseen in a jerky cellphone video, begins to scream before she's drowned out by the boat's deafening engine. "That's against the law!" she shrieks, repeatedly. This is exactly the controversy confronting the Border Patrol these days as a chorus of critics asks: Are federal officers who guard the territorial borders of the United States above the law? Many agents risk their lives securing the border, but they also face uncomfortable questions about their use of force. Suing The Government Bob Hilliard didn't become an attorney to take on civil rights cases. He's a big-time personal injury trial lawyer in Corpus Christi, Texas, who sues companies like GM and Coca-Cola. His nickname is "The Bulldog." Today, Hilliard represents families in three Border Patrol shootings where the agent was in the U.S. and the victim was in Mexico. Photos from the "Borderland" series: 12 short stories about life on the U.S.-Mexico border "I also realize their job is difficult, but it doesn't give them license to shoot and kill innocent Mexican nationals," he says. He has filed civil wrongful-death lawsuits against the officers and the federal government in the case of Arevalo, the man shot on the banks of the Rio Grande, and in two other cases. "There's an undercurrent of prejudice that is really just palpable to me, that you can taste, that this isn't a valuable life: 'This is just a Mexican who got shot — why the uproar?'" Hilliard says. The law says a foreign national cannot sue the U.S. government for an injury or death that happens outside the United States, even if it's only a few feet across the border. A federal judge in El Paso threw out one of Hilliard's lawsuits on these grounds; it's now before the 5th U.S. Circuit Court of Appeals. What Are The Consequences? So, for now, civil trials will not hold the government responsible for federal agents who kill Mexicans in Mexico. And two recent reports reveal that the Border Patrol seldom holds its agents accountable, either. Last December, The Arizona Republic published the results of a yearlong investigation: It examined 42 deadly shootings by border agents and found that in none of the cases did the officer face administrative penalties. Investigative reporter Bob Ortega says two things struck him: that use of lethal force is rare, but that for those agents who kill someone on the job, there is no public accountability. "The degree to which no action is taken, the degree to which it's opaque and impossible to find out what happens when an agent uses deadly force under questionable circumstances, to me is something that is a matter of great concern," he says. And it's not only issues of deadly force. Last week the American Immigration Council, an immigrant advocacy group, released a report that compiled the results of 809 complaints of excessive force and physical abuse. In the cases that were resolved, 97 percent led to "no action." Counseling was the discipline in most of the others, says Guillermo Cantor, senior policy analyst with the council.

However, effective methods of keeping cartels out of the US are key to prevent violence from spreading

Dinan 15 (Journalist for the Washington Times, Stephan Jinan, June 7th 2015, "Worried lawmakers assess border security after Mexican drug cartel attack", <http://www.washingtontimes.com/news/2015/jun/7/jason-chaffetz-blake-farenthold-assess-mexico-bord/?page=all>)

Two top members of Congress headed to the border Sunday to investigate a drug cartel attack on a U.S. Customs and Border Protection helicopter, which raised more concerns about escalating violence spilling north. Rep. Jason Chaffetz, Utah Republican and chairman of the House Oversight and Government Reform Committee, and Rep. Blake Farenthold, Texas Republican, were planning to get a firsthand look at the situation

in Laredo, Texas, after the helicopter was forced to make an emergency landing Friday. No injuries were reported, but the incident happened just days after Mr. Chaffetz and Rep. Filemon Vela of Texas, the ranking Democrat on the oversight subcommittee on border security, sent a letter questioning whether the State Department was taking the cartel violence seriously enough. In particular, they wondered why the department was poised to cut the danger pay for its diplomatic personnel in Nuevo Laredo and Matamoros as authorities in northern Mexico were being attacked with stunning frequency in the drug war. "In light of the widespread violence in northern Mexico, and the crime-fueled unrest in Matamoros, Nuevo Laredo and Guadalajara, we urge you to take all steps possible to reduce the level of violence, and to protect the lives of Americans working there," the congressmen wrote last week to Secretary of State John F. Kerry. The State Department declined to say anything specific about the move to cut pay, which Mr. Chaffetz was told about during a personal investigation into the situation. "We regularly review all of our allowances to evaluate whether they're appropriate," department spokeswoman Marie Harf told reporters Friday. Ms. Harf said the department would respond to the congressmen, who posed a number of questions and demanded a briefing on the security situation. Employees in Matamoros, just south of Brownsville, Texas, collect a 15 percent danger pay allowance, while those in Nuevo Laredo, on the other side of the Mexican state of Tamaulipas, receive a 20 percent bump. The State Department's traveler alert warns Americans visiting that region about "significant safety risks, including explosions of violence between rival criminal gangs or the gangs and the Mexican military." The department warned that "no highway routes through Tamaulipas are considered safe" and that the number of kidnappings and abductions of Americans spiked last year. Twice in February, the U.S. Consulate in Matamoros warned Americans about rolling gunbattles between competing cartels and issued specific warnings to State Department employees to stay indoors to avoid cartel gunmen. "Families must live, work and educate their children in the shadow of this threat. Further, even if U.S. personnel in these posts are not directly targeted, they run the risk of being in the wrong place at the wrong time when violence occurs," the two lawmakers wrote. The Obama administration has said the drug cartel violence in northern Mexico is troubling but has been quick to insist that the bloodshed has remained chiefly south of the border and hasn't will spread into the U.S. The bigger cities along the border are among the safest of their kind, the administration said. "We take the security situation very seriously no matter where," Ms. Harf said. "That certainly includes Mexico. We take every threat seriously, certainly. We constantly assess our security needs. We've also said that multiple times. But we think it's important to have a diplomatic representation in these places and locations. And that's why we do." She said millions of U.S. citizens visit Mexico safely each year, which is why the State Department has to keep diplomatic posts open.

Impact – Hezbollah

Hezbollah-Cartel cooperation allows access of WMD's into United States

YucatanTimes '15 (The Yucatan Times; March 30, 2015; Terrorist group Hezbollah is working with Mexican cartels (U.S Homeland Security)); www.theyucatanimes.com/2015/03/terrorist-group-hezbollah-is-working-with-mexican-cartels-u-s-homeland-security/; 7-7-15; mbc)

The Lebanese terrorist group Hezbollah is working with Mexican cartels, said Lieutenant General Kenneth E. Tovo, deputy commander of the U.S. Southern Command before the 114th. Congress Committee on Homeland Security and Governmental Affairs. During a hearing by the Senate Homeland Security & Government Affairs Committee, Tovo explained that Hezbollah, “which has long viewed the region as a potential attack venue against Israeli or other Western targets, has supporters and sympathizers in Lebanese diaspora communities in Latin America, some of whom are involved in lucrative illicit activities like money laundering and trafficking in counterfeit goods and drugs.” “I think it is fair to say that there is a good amount of profit that Lebanese Hezbollah makes off of illegal trafficking,” Tovo added. In the general’s opinion, “the relative ease with which human smugglers moved tens of thousands of people to our nation’s doorstep also serves as another warning sign: these smuggling routes are a potential vulnerability to our homeland. As I stated last year, terrorist organizations could seek to leverage those same smuggling routes to move operatives with intent to cause grave harm to our citizens or even bring weapons of mass destruction into the United States.” In May 2011 an Iranian-American car seller who lived in Corpus Christi, Texas, identified as Manssor Arbabsiar, met a man that he believed was a member of the Mexican cartel Los Zetas and offered him US\$1.5 million to murder the Saudi ambassador to the United States. Over the next four months in 2011, Arbabsiar, a spy for the Royal Forces, a special operations unit of the Islamic Revolutionary Guards of Iran, and another person posing as his “cousin” met in Mexico with the man they thought was a member of Los Zetas, who was actually an undercover agent of the U.S. Drug Enforcement Agency (DEA). Lt. Gen. Kenneth Tovo said that “it is fair to say that there is a good amount of profit that Lebanese Hezbollah makes off of illegal trafficking”. (Photo: eluniversal.com.mx) Lt. Gen. Kenneth Tovo said that “it is fair to say that there is a good amount of profit that Lebanese Hezbollah makes off of illegal trafficking”. (Photo: eluniversal.com.mx) The DEA agent requested that the money was deposited in a bank controlled by the Federal Bureau of Investigation (FBI). Soon after, in September 2011, Arbabsiar was captured with the help of Mexican authorities, accused of trying to assassinate a diplomat based in Washington, DC. About the relationship of Hezbollah with drug trafficking, U.S. Marine General John Kelly, commander of the Southern Command, said in a speech delivered to an audience at the National Defense University in Washington in October 2014 that “we know that some of the [cocaine] money that comes out of the United States is laundered into the coffers of Hezbollah.” Lieutenant General Kenneth E. Tovo, deputy commander of the U.S. Southern Command, said that the extremist group has supporters and sympathizers in Lebanese diaspora communities in Latin America, some of whom are involved in lucrative illicit activities like money laundering and trafficking in counterfeit goods and drugs.

Terrorist attacks escalate – killing billions

Myhrvold 2014 (Nathan P [chief executive and founder of Intellectual Ventures and a former chief technology officer at Microsoft]; Strategic Terrorism: A Call to Action; cco.dodlive.mil/files/2014/04/Strategic_Terrorism_corrected_II.pdf; kdf)

Technology contains no inherent moral directive—it empowers people, whatever their intent, good or evil. This has always been true: when bronze implements supplanted those made of stone, the ancient world got scythes and awls, but also swords and battle-axes. The novelty of our present situation is that modern technology can provide small groups of people with much greater lethality than ever before. We now have to worry that private parties might gain access to weapons that are as destructive as—or possibly even more destructive than— those held by any nation-state. A handful of people, perhaps even a single individual, could have the ability to kill millions or even billions. Indeed, it is possible, from a technological standpoint, to kill every man, woman, and child on earth. The gravity of the situation is so extreme that getting the concept across without seeming silly or alarmist is challenging. Just thinking about the subject with any degree of seriousness numbs the mind. The goal of this essay is to present the case for making the needed changes before such a catastrophe occurs. The issues described here are too important to ignore. Failing nation-states—like North Korea—which possess nuclear weapons potentially pose a nuclear threat. Each new entrant to the nuclear club increases the possibility this will happen, but this problem is an old one, and one that existing diplomatic and military structures aim to manage. The newer and less understood danger arises from the increasing likelihood that stateless groups, bent on terrorism, will gain access to nuclear weapons, most likely by theft from a nation-state. Should this happen, the danger we now perceive to be coming from rogue states will pale in comparison. The ultimate response to a nuclear attack is a nuclear counterattack. Nation states have an address, and they know that we will retaliate in kind. Stateless groups are much more difficult to find which makes a nuclear counterattack virtually impossible. As a result, they can strike without fear of overwhelming retaliation, and thus they wield much more effective destructive power. Indeed, in many cases the fundamental equation of retaliation has become reversed. Terrorists often hope to provoke reprisal attacks on their own people, swaying popular opinion in their favor. The aftermath of 9/11 is a case in point. While it seems likely that Osama bin Laden and his henchmen hoped for a massive overreaction from the United States, it is unlikely his Taliban hosts anticipated the U.S. would go so far as to invade Afghanistan. Yes, al-Qaeda lost its host state and some personnel. The damage slowed the organization down but did not destroy it. Instead, the stateless al-Qaeda survived and adapted. The United States can claim some success against al-Qaeda in the years since 9/11, but it has hardly delivered a deathblow. Eventually, the world will recognize that stateless groups are more powerful than nation-states because terrorists can wield weapons and mount assaults that no nationstate would dare to attempt. So far, they have limited themselves to dramatic tactical terrorism: events such as 9/11, the butchering of Russian schoolchildren, decapitations broadcast over the internet, and bombings in major cities. Strategic objectives cannot be far behind.

xt – Hezbollah works with cartels

Cartels are cooperating with Hezbollah to infiltrate the US

Levitt 13 Matthew Levitt is the Director of the Stein Program on Counterterrorism and Intelligence, Spring 2013, “South of the Border, a Threat from Hezbollah”, <http://www.washingtoninstitute.org/uploads/Documents/opeds/Levitt20130515-JISA.pdf>

Hezbollah’s expanding criminal networks have led to closer cooperation with organized crime networks, especially Mexican drug cartels. In a March 2012 speech at the Washington Institute for Near East Policy, Michael Braun, former DEA chief of operations, detailed Hezbollah’s skill in identifying and exploiting existing smuggling and organized crime infrastructure in the region. Braun and other officials have noted that the terrain along the southern U.S. border, especially around San Diego, is similar to that on the Lebanese-Israeli border. Intelligence officials believe drug cartels, in an effort to improve their tunnels, have enlisted the help of Hezbollah, which is notorious for its tunnel construction along the Israeli border. In the relationship, both groups benefit, with the drug cartels receiving Hezbollah’s expertise and Hezbollah making money from its efforts.²⁰ In 2008, the Mexican newspaper El Universal published a story detailing how the Sinaloa drug cartel sent its members to Iran for weapons and explosives training. The article reported that the Sinaloa members traveled to Iran via Venezuela, that they used Venezuelan travel documents, and that some members of Arab extremist groups were marrying local Mexican and Venezuelan citizens in order to adopt Latino-sounding surnames and more easily enter the United States.²¹

AT: No Cartel Coop

Global surveillance proves links

Rosenthal '13 (Terence; July 10, 2013; Los Zetas and Hezbollah, a Deadly Alliance of Terror and Vice; Mr. Rosenthal writes for politicaltraders.com about foreign policy and other topics. His articles have been published in The Americas Report, and the Center for Security Policy: www.centerforsecuritypolicy.org/2013/07/10/los-zetas-and-hezbollah-a-deadly-alliance-of-terror-and-vice/; 7-7-15; mbc)

When Americans think about the illegal drug trade and black markets in Mexico, it is probable that they do not associate them with terrorism, or Islamic fundamentalism. One would think that drug cartels like Los Zetas, the most sophisticated and second most powerful drug cartel in Mexico would have enough allies and connections not to need the assistance of an organization like Hezbollah based half way across the world in Lebanon. However, there is proof that Hezbollah, as well as elements of the Iranian Quds force are functioning with cartels like Los Zetas, the most sophisticated drug cartel in Mexico. The combination of power hungry cartels like Los Zetas, and terrorist organizations like Hezbollah who want a presence in North America, in or near the United States inhibit U.S. companies from wanting to conduct business in Mexico, and should not remain unnoticed. The question is, how did this deadly alliance come into existence? For decades, immigrants, legal and illegal, have been arriving in Mexico from Lebanon. This population has been growing steadily, and has a certain level of favorability with Hezbollah. One of the creations of Hezbollah in Mexico is that of well-connected global drug dealers, like Ayman Joumaa. Joumaa, indicted in 2011 is of Lebanese heritage, and has been linked to Hezbollah, and Mexico's Los Zetas cartel. With the help of the Los Zetas, and companies like The Lebanese Canadian Bank, Ayman Joumaa has laundered between \$850 and \$900 million. Joumaa is known among Israeli intelligence as being in contact with Hezbollah elite forces, and was connected to senior operatives handling Hezbollah drug operations. He has received bulk payments of U.S. dollars in Mexico City after coordinating drug shipments from South America to the Los Zetas cartel, receiving a cut for laundering and camouflaging funds. Drug and contraband profits were disguised through the trading and selling of used cars through an exchange in Africa with the help of Beirut exchange houses. Eventually, similar fraud rings connected to Joumaa were discovered throughout North and South America, and the Middle East. Various methods of investment fraud are typically used by drug dealers to cover their tracks. Many fraud rings use creative investment tactics that can pass as legal activity if not scrutinized. One such operation involved the selling of thorough-bred horses to cover up the trade of millions of dollars in fraudulent drug money. Since 2005, Iran and Hezbollah have developed a presence in Latin America, opening 17 cultural centers, and forming relations with the Mexican drug cartels. 200,000 immigrants from Lebanon and Syria, many of whom are illegal residents, live in Mexico, and have established residence with the help of drug cartels like Los Zetas, the most technically advanced of Mexico's drug cartels. Those who are sympathetic to Islamic extremist movements make perfect recruits for the drug trade because they understand how illegal activity in the Americas empowers whoever wishes to weaken the power of U.S. sovereignty. As shown by the increase of Islamic missionaries in Mexico, as well as the growing influence of Hezbollah and Iran, it is clear that Islamists are trying to win the hearts and minds of the Mexican people. However, beneath these seemingly peaceful developments lie the fact that

Iran's Islamic Revolutionary Guard and Quds forces are partnering with major Mexican drug cartels. They are learning Mexican culture, as well as Spanish, and are starting to blend in with native-born Mexicans. Hezbollah has training bases and sleeper cells in Mexico and South America. They also assist drug cartels with skills in bomb-making and explosives. Hezbollah has also created tunnels on the American border that are extremely similar to those dividing Gaza and Egypt. These tunnels are perfect for the transport of illegal conventional and biological weapons to contacts in the United States. Weaponry created by Hezbollah is capable of killing hundreds of thousands of people in major U.S. cities. Former Assistant Secretary of State for Western Hemisphere Affairs, Roger Noriega believes that an attack on U.S. personnel installations by Hezbollah is possible. It is known that they have expanded from their operations in Paraguay, Brazil and Argentina, and are gaining ground in Central America and Mexico. The relationship between Hezbollah and Los Zetas has almost touched down on American soil. Los Zetas was to be paid to bomb the Israeli Embassy in Washington, and the Saudi and Israeli embassy in Argentina.

Impact – ISIS

ISIS will team up with the Cartels to cross the border

West 2014 (Allen [Senior Fellow at the London Center for Policy Research]; Nightmare on the border: ISIS and Mexican cartels teaming up; Aug 22; allenbwest.com/2014/08/nightmare-border-isis-mexican-cartels-teaming/; kdf)

As reported by Breitbart, "Former CIA covert operations officer Mike Baker said that he believes there is "a lot of communication" between ISIS and Mexican drug cartels given past efforts by al-Qaida to do likewise on Thursday's "Laura Ingraham Show." "We've had good intel over the years about al-Qaida, about their efforts to coordinate with, as an example, Mexican cartels...in an effort to try to exploit our southern border" he reported, adding that a terrorist group like ISIS "absolutely" knows about the lack of security on the border." This is nothing new, as we've already have some instances of terrorists being aided and abetted by Mexican drug cartels — which Governor Rick Perry more aptly described as "narco-terrorists." Don't forget that two planned attacks were foiled targeting our nation's capital — one against the ambassadors of Saudi Arabia and Israel, the other a Capitol Hill terrorist attack. In both cases, terrorists aligned with al-Qaida or Iran received support from the narco-terrorists. ISIS has a large financing stream with assets reportedly nearly \$2 billion. The narco-terrorists will provide safe passage for anyone across our porous border for a price. This is another reason why the GOP needs to — no, MUST win the majority in the Senate so current Majority Leader Harry Reid can be dismissed. After all, it was Reid who openly stated that our southern border is secure — a statement so absurd it demonstrates the man has lost his touch with reality. Both Reid and Obama are turning a blind eye toward a dedicated existential threat to our sovereignty and security all for cheap political gain. Earlier this week, according to Breitbart, Rep. Ted Poe (R-Tx), a member of the House Judiciary Committee on Crime, Terrorism and Homeland Security, was asked if there is any current interaction between ISIS and Mexican drug cartels. He said "In my opinion, yes there seems to be a talking to each other" He added, "The drug cartels use the same operational plan as terrorist groups do ... They kill their opponents, they behead their opponents, they brag about it and they have operational control of many portions of the southern border of the United States. They're vicious as some of these other terrorist organizations." And meanwhile, our president plays golf. A prudent Commander-in-Chief would be assessing the most dangerous course of action for ISIS. A prudent leader would have walked the border and assessed the gaps where our Republic is most vulnerable and allocated the proper security assets to protect our nation. A "JV team" doesn't possess the global reach ISIS has, and a "JV team" wouldn't have the chutzpah to behead an American and post the video on YouTube for the world to see. This is not a "criminal investigation," it is deliberate and open aggression. It is war, as determined by our enemy. We either accept it, or continue as the Obama administration does — to dismiss, deny and disregard this threat — all to the detriment of our country.

ISIS will pull off a nuclear 9/11

Budowsky 2014 (Brent [aide to former Sen. Lloyd Bentsen and Bill Alexander, then chief deputy majority whip of the House. He holds an LL.M. degree in international financial law from the London School of Economics]; Budowsky: ISIS poses nuclear 9/11 threat; Aug 20; thehill.com/opinion/brent-budowsky/215603-brent-budowsky-isis-poses-9-11-scope-threat; kdf)

After the latest grotesque atrocity by the Islamic State in Iraq and Syria (ISIS), the beheading of an American journalist, American and European policymakers must clearly understand the near certainty that unless it is defeated and destroyed, ISIS will launch a major terror attack on American or European soil. Analysts estimate that ISIS has amassed a cash hoard of between \$400 million and \$2 billion. It is highly probable that ISIS will attempt to use some of this money to obtain nuclear, chemical, biological or other weapons of mass death on the international

black market or from corrupt officials in nations such as Russia, China, Pakistan or North Korea to use in attacks against New York, Washington, London, Paris, Berlin, Rome, Brussels or other nations it considers infidel enemies. This danger is magnified by the fact that ISIS has recruited nationals of the United States and Europe, who possess American and European passports and are physically indistinguishable from local populations in America and Europe. It is extraordinary that the mass murdering butchery of ISIS is so demented than even al Qaeda is offended. It is alarming that the CIA, which launched intelligence operations even against the United States Senate, and the NSA, which launched massive and unprecedented eavesdropping operations, and intelligence services of leading European nations were blind to the magnitude of the ISIS threat until the most barbaric terrorists in modern history had taken over almost a third of Iraq and are on the brink of creating a terrorist super-state that dwarfs al Qaeda's efforts prior to 9/11. I vehemently opposed the misguided Iraq War from the moment it was proposed by former President George W. Bush and have never been a neoconservative, warmonger or super-hawk. But aggressive action against ISIS is urgently needed. ISIS has stated its intention to attack the United States and Europe to advance its evil, messianic and genocidal ideology and ambitions. ISIS has the money to purchase the most deadly weapons in the world, and has recruited American and European traitors with above-average capability to execute an attack. The odds that ISIS can obtain nuclear, chemical, biological or other forms of mass destruction weapons are impossible to ascertain but in a world of vast illegal arms trafficking, with so many corrupt officials in nations possessing arsenals of destruction, the danger is real. The fact that WMD scares prior to the Iraq War ranged from mistaken to deceitful does not mean that the WMD danger does not exist today. It does. I applaud the recent actions taken by President Obama. Obama's airstrikes saved tens of thousands of Yazidis from genocide, took back the Mosul Dam from ISIS and saved countless Iraqis, Kurds and Syrians from slaughter. The airstrikes inflicted material damage to ISIS. The diplomacy of Obama and Secretary of State John Kerry contributed mightily to the replacement of a disastrous Iraqi government by a government can unite Iraqi Sunnis, Shiites and Kurds. The Obama-Kerry initiatives will lead to the creation of a stable Afghan government and avoid the collapse that was possible after the recent controversial Afghan elections. These are real successes. In the current political climate, Obama seems to get credit for nothing, but he deserves great credit for some important successes in recent weeks. And yet the danger of ISIS pulling off a nuclear, chemical, biological or other mass death 9/11-style attack in a major American or European city is real. Even with dirty or primitive WMD weapons, the casualty totals could be catastrophic.

--xt: DTOs Key

Cartel strength leads to WMD attacks on US soil

Pease 11 – MA in Int'l Studies @ U Denver, former intelligence analyst

(Shadd, "Instability in the South: The Implications of Mexican State Failure on U.S. National Security," Proquest Dissertations)//BB

As the instability in Mexico increases due to the ongoing battle with the DTOs, more instances where American law enforcement officers are threatened with bodily harm will most likely occur. In addition, the wanton disregard for the safety of law enforcement officers, those who protect and serve the public, is also a clear indication into how the various drug trafficking organizations would treat those citizens who do not work in a law enforcement capacity. Furthermore, the increasing instability in the state of Mexico could lead to swaths of areas throughout Mexico that would become lawless and ungovernable; these areas could possibly be used as training grounds for the various drug trafficking organizations as well as areas to produce additional quantities of illicit drugs. Furthermore, as Peter Brookes of The Heritage Foundation points out, if the cartels were to seize tracts of Mexican territory, it could lead to the establishment of lawless, ungoverned spaces, which are favored by bad actors such as terrorists... Terrorists could certainly exploit successful drug smuggling routes to bring people and explosives or even weapons of mass destruction across the border into the U.S.⁵⁵ The main thrust of the violence occurring in the state of Mexico is focused on the vast northern border. "The most violent conflict [between competing drug trafficking organizations] is concentrated in, but not limited to, the Juarez Plaza."⁵⁶ This area could possibly become increasingly volatile if the state is unable to provide adequate security for the people of Mexico. The members of the various drug trafficking organizations could use these areas to promote their illicit activities and violate the sovereignty of the United States. Moreover, these areas could be used by foreign terrorist organizations in conjunction with the DTOs. This would provide an additional security threat to the people of the United States as individuals linked to terrorist organizations could smuggle people and weapons across the border easily.

AT: Drones Hurt US-Mexico Rx

Calderon and Obama agreed on the surveillance

Ackerman 2011 (Spencer; US Drones are now sniffing Mexican drugs; Mar 16;
www.wired.com/2011/03/u-s-drones-are-now-sniffing-mexican-drugs/; kdf)

But now the drones are taking on a new mission: hunting drug gangs in Mexico. According to a previously undisclosed agreement between President Barack Obama and his Mexican counterpart, Felipe Calderon, the Pentagon is authorized to fly unmanned surveillance flights over Mexico, a big expansion of U.S.-Mexico information-sharing on counternarcotics. One of the drones used for the mission is the Air Force's Global Hawk, reports The New York Times. The drone soars at up to 60,000 feet with a multitude of sensors. (Calm down, it's unarmed.)

AT: Drone use racist

Drones are an efficient and humanitarian way to conduct border patrols

Sternstein '14 (Aliya; July 9, 2014; Obama Requests Drone Surge for U.S.-Mexico Border; reports on cybersecurity and homeland security systems. She's covered technology for more than a decade at such publications as National Journal's Technology Daily, Federal Computer Week and Forbes. Before joining Government Executive; www.defenseone.com/threats/2014/07/obama-requests-drone-surge-us-mexico-border/88303/; 7-7-15; mbc)

President Barack Obama today requested \$39 million for aerial surveillance, including unmanned aircraft operations, as part of an effort to systemically take care of what he called an urgent humanitarian situation. The emergency funding would go toward 16,526 additional drone and manned aircraft flight hours for border surveillance, and 16 additional drone crews to better detect and stop illegal activity, according to administration officials. There currently is a flood of unaccompanied children, and adults with children, illegally crossing the border to escape violence and poverty in Central American communities. The remotely-piloted jets would not be deployed to look for these migrants, who are out in the open and turning themselves in. Rather, the drones would try to detect drug smugglers, human traffickers and others attempting to evade the law. The agency's "unmanned and manned aircraft can continue to support ongoing border security operations, specifically regarding the tracking of illegal cross-border smuggling operations," a CBP official told Nextgov on Tuesday. Obama is asking for \$3.7 billion total to deal with migrants and border security problems. "This funding would support a sustained border security surge through enhanced domestic enforcement, including air surveillance," Obama wrote Tuesday in a letter to House Speaker Rep. John Boehner. The money also would help cover the cost of returning migrants, speeding immigration court cases and addressing the root causes of migration. CBP in the past has struggled to maintain and fly its fleet of 10 drones. In January, an unmanned jet went down off the California coast after experiencing a mechanical failure. A crew brought it down, after determining there was no way to return the drone to its launch point in Sierra Vista, Arizona. The agency then decided to ground the entire fleet as a precaution. A Department of Homeland Security inspector general in 2012 reprimanded CBP for letting drones sit idle 63 percent of the time they should have been airborne. The fleet of then-seven drones flew 3,909 hours annually, but should have been up at least 10,662 hours yearly, according to the IG's calculations. With three additional vehicles, the fleet put in 5,100 hours during fiscal 2013, officials said in January. CBP spent \$55.3 million for aircraft operations and maintenance between 2006 and 2011.

AT: Only at the border

Cartels will spread throughout the US

O'Reily 14 (Andrew O'Reily, "Mexican Drug Cartel Violence Spreading To Rural U.S. As Police Crack Down In Big Cities", August 12th 2014, <http://latino.foxnews.com/latino/news/2014/08/12/mexican-drug-cartel-violence-spreading-to-rural-us-as-police-crackdown-in-major/>)

A bloody, bullet-riddled body slumped inside of an SUV on a lonely stretch of road. Five people shot execution-style inside a sparsely furnished apartment. Drug disputes turning into violent kidnappings and brutal deaths. These stories have become commonplace in Nuevo León, Michoacán, Sinaloa and other Mexican states, but they're not from Mexico. They're from quiet areas in Minnesota, Oregon, South Carolina and across rest of the U.S. as Mexican drug cartels – and groups affiliated with them – move deeper into the country and bring with them their violent tactics. A few years ago law enforcement didn't see this as a problem for somewhere other than the border. **What happens at the border doesn't stay at the border.** It makes its way to my county pretty soon.- Rockingham County Sheriff Sam Page. While most law enforcement agencies want to make clear that the level of violent crime currently embroiling Mexico is not likely to spread to the U.S. anytime soon, officials from both local and federal organizations say that the reach of that country's feared drug cartels has spread north and with it, at least to some degree, so has the violence. "In recent years the DTO's [drug trafficking organizations] have changed their tactics and become bolder," Lt. Gerry Adcock of Oregon's Marion County Sheriff's Office told Fox News Latino. "The men and women involved in today's [drug trafficking] kill or make other drug traffickers disappear without fear of consequence. I have personally investigated homicides and violent incidents directly related to DTO's and have seen the destruction they have caused to families in our community." One such case was the murder of Rogelio Hernández-Davalos, who was killed at point-blank range in the front seat of his Ford Expedition in January of 2012. The Marion County Sheriff's Office investigation found that Hernández-Davalos, a native of Sinaloa, Mexico, was purportedly moving about 30 pounds of heroin every two weeks and is believed to have been executed by a Mexican cartel for either stealing from his bosses or attempting to branch off on his own. In the last few years, Oregon has become a hotspot for drug trafficking and cartel-related violence as traffickers use the Interstate-5 corridor to run drugs from California up to Washington State and even into Vancouver. Just like on the East Coast with the Interstate-95 corridor, these drug organizations are finding it easier to operate in more rural and suburban areas as law enforcement officials in major cities crack down on organized crime groups. "The main reason for moving to these areas is that the police in cities and along the border have become much more sophisticated in fighting the cartels," George W. Grayson, an expert on Mexico's drug war and a politics professor at the College of William and Mary told FNL. "When you don't deal with that type of crime day in and day out you're not going to have the expertise in combatting the cartels." Officials at the Drug Enforcement Administration said that the incursion of Mexican cartels and their proxy groups in the U.S. is nothing new. A Justice Department report from 2011 found that Mexican-based cartels were operating in more than 1,000 U.S. cities between 2009 and 2010 and have expanded from marijuana and cocaine trafficking to heroin and methamphetamine as well as taking part in human smuggling operations. Mexico's Sinaloa cartel, the country's largest and headed by the now incarcerated Joaquín "El Chapo" Guzmán, operates in every region of the U.S., according to statistics compiled by the National Drug Intelligence Center. "Mexican drug trafficking organizations have been in control of every major drug market in the U.S. for a long time," DEA spokesman Rusty Payne told FNL. Payne added that the cartels try to keep the violence in the U.S. to a minimum to detract from any unwanted attention from law enforcement authorities. "The Mexican drug war has not spilled into the U.S.," Payne said. "They're not here to cause havoc. They know it's bad for business and that they have to be well-behaved." Well-behaved for cartels and gangs, however, is a relative term and for regions of the country not used to violent crime, a brazen act of gangland violence can send shockwaves through smaller communities and regions not traditionally thought of as strongholds of cartel activity. The Sinaloa Cartel allegedly hired members of the MS-13 street gang to carry out torture operations in Minnesota and a series of murders in Virginia have been attributed to drug cartel feuds. Authorities in rural Rockingham County, North Carolina said that 15 drug cartel associates have been arrested there in the last three years, including the arrest of two alleged cartel associates whose home was filled with 1,060 pounds of marijuana, more than \$600,000 in cash and an AR-15 assault rifle. "A few years ago law enforcement didn't see this as a problem for somewhere other than the border," Rockingham County Sheriff Sam Page told FNL. **What happens at the border doesn't stay at the border. It**

makes its way to my county pretty soon.” Violent crime related to the cartels may occur in the U.S., but most law enforcement officials and experts agree that the main worry for Americans is the drugs – not the violence – that the cartels bring with them. Still, many say that is something to be concerned about. **“Every American needs to be concerned about drug trafficking organizations being in the U.S.,”** Payne said, “and where they are and where the money goes.”

AT: Perception of privacy outweighs

Cartels deeply impact the emotional and physical well being of communities on the border

Treviso 15 (Perla Treviso, “Border violence spikes due to drug cartel infighting”, June 15th 2015, http://azdailysun.com/news/local/border-violence-spikes-due-to-drug-cartel-infighting/article_612bbd60-31a1-55e5-ab75-cc668aa7ba1f.html)

Anabel Cortez is afraid to leave her children home alone anymore. After deadly gun battles between rival organized crime groups started on April 30, Cortez took her children and fled her rural community outside this border town. She is back home now that the violence has subsided, but not by choice. “Where else am I going to go?” asks the mom of three elementary and middle school students. Sonoyta and the rural communities to the east, all part of the municipality of Plutarco Elias Calles, have been the battleground for rival cartel factions vying to control valuable territory for moving people and drugs into the United States. Sonoyta borders Lukeville, a crossing frequently used by Arizona travelers on their way to the beach town of Puerto Peñasco, commonly known as Rocky Point. Cortez, 34, was among hundreds of people who fled Desierto de Sonora, less than 10 miles east of Sonoyta, after violence erupted last month. By some accounts, 28 gunmen and two innocent civilians were killed in the Sonoyta area from April 30 to May 5. The Sonora investigative state police reported six people killed on May 1 and another five on May 4. Residents said the criminals themselves started to warn people of upcoming shootouts and asked them to leave. The fighting nearly paralyzed the town. Many parents stopped sending their kids to school. The city cancelled all cultural and sports activities, including the traditional Fiesta de las Flores, an annual fair that is one of Sonoyta's main events. “We didn’t want to put citizens in danger in case of a violent incident, that we would be caught in the crossfire,” said Carlos Arvizu, Sonoyta’s city manager. “It was a preventive measure.” The mayor, Julio Cesar Ramírez Vásquez, is no longer giving interviews, his office said, after one of the groups threatened him for speaking out. So far this year, the Sonora state police has reported 38 homicides just in the Sonoyta area — with a population of about 18,000 — with another five wounded. May was the deadliest month, with 15 dead and another one injured, Sonora police data analyzed by the Arizona Daily Star show. And those are just the officially reported numbers. By other accounts, it was 22 dead — including six burned bodies — and at least a handful of others injured. There have also been gun battles between the Sonora state police and gunmen that have resulted in at least another 14 dead. Local residents talk of many others who are missing and unaccounted for. Another 14 people have died in neighboring Caborca, plus 11 injured — including four state police officers. Most recently, more than a dozen Central American immigrants were rescued near a ranch on the town's outskirts, close to the U.S. border. State police reported three dead, including two men found inside torched vehicles and a woman with gunshot wounds. “From what we can tell, migrants were using one of the drug routes,” said Erica Curry, a Phoenix spokeswoman with the Drug Enforcement Administration. “We believe they were attacked because drug traffickers don’t want that kind of attention.” The recent violence across the border is due to fighting between cells of the Sinaloa cartel known as “Los Memos” and “Los Salazar.” Violence in the Sonoyta area began to spike in January over Los Memos' attempt to take control over the Sonoyta plaza and all drug smuggling routes. It's the most intense fighting since early 2009, when 12 dismembered bodies were found in an abandoned vehicle along the Caborca-Sonoyta highway, with a narco message saying the Sinaloa Cartel was taking over the plaza. The latest round started in March, Curry said. The Sonora state police reported 10 deaths in the Sonoyta area that month, including a soldier who was patrolling a rural area when he and his partner — who survived — came under attack. The Sinaloa cartel has decentralized over the past few years, leading to sporadic, violent power struggles between plaza bosses in northern Sonora, said Tristan Reed, a security analyst for the Austin-based global intelligence firm Stratfor. Also, several top leaders of the cartel were arrested, creating a power vacuum. On Sept. 6, 2012, Mexican police arrested Adelmo Niebla González, the suspected leader of “Los Memos” and presumed to be in charge of bringing weapons into the US and transporting marijuana, meth and cocaine from Sonora to Maricopa County. “El Memo” came to power with help from Joaquín “El Chapo” Guzmán, the head of the Sinaloa cartel who was arrested in February 2014. He and his two bodyguards escaped a Sinaloa prison in 2014 through a tunnel that was dug into the prison from the outside. A few months after that arrest, in November 2012, Mexican soldiers arrested Jesús Alfredo Salazar Ramírez, the leader of “Los Salazar,” in the state of Mexico. Salazar, who came to power after his father was arrested in 2011, was said to be responsible for cultivating, transporting and smuggling marijuana through Sonora and a western sliver of Chihuahua into the United States. He was also an important lieutenant of El Chapo Guzmán. In 2013, Puerto Peñasco was the scene of an hours-long battle between drug cartel gunmen and the Mexican federal police, who allegedly killed Gonzalo Inzunza, also known as El Macho Prieto and a top lieutenant of the Sinaloa cartel. The body was never recovered. “Macho Prieto was involved in one of the first signs of Sinaloa infighting we are still seeing going on,” Reed said. Sonora has always been a key place for traffickers. To the south and east, in neighboring Sinaloa and Chihuahua — and somewhat within Sonora, too — is significant drug production including opium poppies, marijuana and meth. To the north, the border is more porous than in other places and far more desolate. Across the border from Sonoyta is Organ Pipe Cactus National Monument, 330,000 acres of public land, and further east is the Tohono O’odham Nation, a reservation about the size of

Connecticut. "There's nothing but desert for miles and miles," said the DEA's Curry. "It's, unfortunately, one of our biggest vulnerabilities for drug trafficking." On the Mexican side, it's all agriculture, cattle ranching and sparsely populated rural communities. Most drug shipments are believed to arrive in Puerto Peñasco. From there they go east to Agua Prieta, Sonoyta, San Luis Río Colorado, Nogales or are shipped by foot north through the desert, where there is less law enforcement, Stratfor has reported. The western corridor of the Border Patrol's Tucson sector has been the busiest for some years now. More than 60 percent of the marijuana seized in the sector is in this area. Mexican federal authorities have destroyed and seized thousands of pounds of marijuana and had several major seizures of meth, primarily found inside tractor trailers headed to Tijuana and Mexicali. For a drug trafficker, it's almost impossible to avoid Sonora, Reed said, whether it is to cross drugs directly into the United States or to transport them further west to Baja California. "Drugs and people are transported from Mexico to the United States while weapons and money come from the United States to Mexico," said Sonora State Attorney Carlos Navarro Sugich, who oversees the state's investigative police. The complexities of the area make it essentially a paradise for the cartels, Sugich said. But the violence in Sonoyta is not representative of what's happening in the rest of the state. Sonoyta has seen nearly twice as many homicides since last year — 38 so far in 2015 versus 16 for the same period in 2014, he said. The state's overall number of homicides fell during the same period, from 275 to 200. The three levels of government are working together to bring peace back to the region. Sonoyta only has about 20 police officers, but with all levels of government included, more than 100 law enforcement personnel patrol the area. "I don't care if the criminal groups get along or not," Navarro said, "no one has a reason to be killing each other." At the scene, officials have found AK-47s and AR-15 rifles, shotguns and ammunition. Some of the dead were found wearing camouflage clothing and tactical vests. Those identified have been from Sonora and from neighboring states including Sinaloa and Chihuahua. One day in May, a fight broke out, and Cortez, the mother of three, told her kids to get on the floor. They grabbed at her legs and pleaded with her to lie down with them, but she kept watch. "Don't get up," she demanded as she peeked through the bedroom window. "I have to make sure they're not coming this way." As soon as the fighting was over, she grabbed a change of clothes for each child and fled to her sister's home in Sonoyta. She was there for almost two weeks. She didn't want to overstay her welcome, she said, but she doesn't want to live in Desierto de Sonora anymore. If she has to leave the house and can't take the children with her, she tells them to lock themselves in and not open the door to anyone. Her son Joel, 13, said only a handful of children have gone back to school. Many fled to other cities, even other states. Joel likes his home, he said, but only when bad things don't happen. He knows sicarios, people who kill each other, are in the area "There was a killing over there, and over there," he says pointing to different locations. His mother is still afraid. "Every little sound wakes me up at night," she said. Juan Ortega, 65, was at home when shooting broke out on his street. He and his wife, María Hernández, ran inside and hid under their bed, he said. The bullets sounded like hail hitting the tin roof. The couple worked in the nearby cotton and asparagus fields until they could no longer do so because of their age. Now they run a small snack stand outside their home, where neighborhood children go for their daily treat of potato chips, juices and Mexican candy. The day of the shootout, they packed a suitcase, grabbed their pit bull, Rocky, and headed to Sonoyta, where they stayed a few days with a relative. "We were last ones to leave and first ones to come back," Ortega said. Desierto de Sonora has been their home for 42 years. We didn't want to leave our little house," he said. "This is all we have." Desierto de Sonora is an ejido, communal land owned by the people. Many came decades ago from other states to work in the fields and never left. They had children and their children had children. With about 200 hundred houses, it is home to 1,200 people. This is a place where people look out for each other. It's a place where kids can roam free. "If someone gets

sick, everyone pitches in to help," said Dionisia Gutierrez, who has lived here for 22 years. But even though the gun battles have stopped and even as people return home, **violence so close**

to home has taken a major toll on residents' financial and emotional well-being. "

AT: Probability

Leading report, the most significant threat to the US is the cartels crossing over

Ortiz 15 (Ildefonso Ortiz, "Mexican drug cartels are Texas most significant threat", February 28th 2015, <http://www.breitbart.com/texas/2015/02/28/dps-report-mexican-drug-cartels-are-texas-most-significant-threat/>)

A Department of Public Safety (DPS) report states that Mexican drug cartels are among the "most significant" threats facing Texas and the United States. Mexican drug cartels continue to operate throughout Texas carrying out violent attacks throughout the state as well as controlling the flow of illegal aliens and drug trafficking, the report states. Texas' top law enforcement agency places the spread of Mexican drug cartel operations across the state as one of the top current security threats.

The meteoric rise to power of Mexican cartels is attributed to a porous border as well as the unending demand for drugs, commercial sex and forced labor, the agency wrote. The stern warning came in a leaked report from DPS to state lawmakers requesting additional funding for the current border surge where hundreds of state troopers patrol the Rio Grande Valley. The request comes in response to an unprecedented spike in human smuggling and drug trafficking activity along the border. The report was first published by the Houston Chronicle. As previously reported by Breitbart Texas, the report addresses the operational presence of cartels throughout the state. It also addresses the issue of illegal aliens with ties to terrorist organizations who have made their way into the country and are working to smuggle in other potential terrorists. "There is ample and compelling evidence that the Texas-Mexico border is not secure, and this lack of security undermines public safety and homeland security in every region of the state," the report states. "Mexican cartels constitute the greatest organized crime threat to Texas ...

Mexican cartels control virtually all illegal smuggling activities through the U.S.-Mexico border and continue to supply most of the illicit drugs in the U.S. market." Some of the many violent acts carried out by drug cartels include multiple kidnappings across the nation where the criminal organization targets the relatives of individuals believed to have either stolen or lost a drug load, the report revealed. Other criminal acts by cartel members in Texas that raise red flags for law enforcement include: A May 2013 murder in Southlake where three cartel hitmen spent two years preparing the execution of a Mexican lawyer who represented members of the Gulf Cartel. To carry out the murder, the hitmen, two of whom were former Mexican, cops spent a long time tailing the individual and setting up a complex surveillance network of video cameras to track his movements. Breitbart Texas previously reported on the arrest of these cartel hitmen. In July 2014, two Edinburg police officers were injured in a fierce firefight with a member of the Texas Syndicate. These gang members were working for the Gulf Cartel in the border town of La Joya. The officers had been trying to arrest the man in connection with the execution of a 19-year-old in relation to a drug deal gone bad. The teen had been shot in the back of the head. In addition to the report, Breitbart Texas also reported on that shootout. In November 2013, members of the Gulf Cartel wearing vests with insignia from the U.S. Drug Enforcement Administration (DEA) and the Hidalgo County Sheriff's Office carried out a series of home invasions in Las Milpas. The cartel members passed themselves off as law enforcement as they burst in through the door holding residents at gunpoint and demanding cash and drugs. The gunmen made off with at least \$100,000 in cash in one of those raids. In June 2013, La Joya police rescued five illegal immigrants who had been kidnapped by a man claiming to be a cartel member. The man had been holding them for ransom. Mexican cartel members have also taken advantage of the recent increase of illegal aliens trying to get to America who have arrived in their territory. In addition to making a profit by getting them into the country, cartel members are using them to tie up law enforcement by sending them as bait while drug smugglers are able to move narcotics with little problem, the report revealed.

Border

Border surveillance is necessary to prevent terrorism

Wilson 2/26 (Reid Wilson, covers national politics and Congress for The Washington Post and author of Read In, The Post's morning tip sheet on politics. He's a former editor in chief of The Hotline, the premier tip sheet on campaigns and elections and a graduate of The George Washington University, "Texas officials warn of immigrants with terrorist ties crossing southern border", February 26 2015, <http://www.washingtonpost.com/blogs/govbeat/wp/2015/02/26/texas-officials-warn-of-immigrants-with-terrorist-ties-crossing-southern-border/>)

A top Texas law enforcement agency says border security organizations have apprehended several members of known Islamist terrorist organizations crossing the southern border in recent years, and while a surge of officers to the border has slowed the flow of drugs and undocumented immigrants, it's costing the state tens of millions of dollars. In a report to Texas elected officials, the state Department of Public Safety says border security agencies have arrested several Somali immigrants crossing the southern border who are known members of al-Shabab, the terrorist group that launched a deadly attack on the Westgate shopping mall in Nairobi, Kenya, and Al-Itihaad al-Islamiya, another Somalia-based group once funded by Osama bin Laden. Another undocumented immigrant arrested crossing the border was on multiple U.S. terrorism watch lists, the report says. According to the report, one member of al-Shabab, apprehended in June 2014, told authorities he had been trained for an April 2014 suicide attack in Mogadishu. He said he escaped and reported the planned attack to African Union troops, who were able to stop the attack. The FBI believed another undocumented immigrant was an al-Shabab member who helped smuggle several potentially dangerous terrorists into the U.S. [Drone strike kills senior al-Shabab official in Somalia] Authorities also apprehended immigrants who said they were members of terrorist organizations in Sri Lanka and Bangladesh. The Department of Public Safety said the report, first published by the Houston Chronicle, was not meant for public distribution. "[T]hat report was inappropriately obtained and [the Chronicle was] not authorized to possess or post the law enforcement sensitive document," department press secretary Tom Vinger said in an e-mail. U.S. Customs and Border Protection did not respond to requests for comment. The department said it had come into contact in recent years with "special interest aliens," who come from countries with known ties to terrorists or where terrorist groups thrive. Those arrested include Afghans, Iranians, Iraqis, Syrians, Libyans and Pakistanis. In all, immigrants from 35 countries in Asia and the Middle East have been arrested over the past few years in the Rio Grande Valley. The department says there is no known intelligence that specifically links undocumented immigrants to terrorism plots, but the authors warn it's almost certain that foreign terrorist organizations know of the porous border between the U.S. and Mexico. "It is important to note that an unsecure border is a vulnerability that can be exploited by criminals of all kinds," Vinger said. "And it would be naive to rule out the possibility that any criminal organizations around the world, including terrorists, would not look for opportunities to take advantage of security gaps along our country's international border."

Border surveillance is k2 preventing terrorism

Smarick et al. 12 (Kathleen Smarick and Gary D. LaFree of the National Consortium for the Study of Terrorism and Responses to Terrorism at the University of Maryland. 11/12 "Border Crossings and Terrorist Attacks in the United States: Lessons for Protecting against Dangerous Entrants" START, http://www.start.umd.edu/sites/default/files/files/publications/START_BorderCrossingsTerroristAttacks.pdf CCC)

An essential step in this project was determining the frequency and dynamics of **border crossings by individuals who conducted or who wanted to conduct terrorism-related activities in the United States**. Towards that goal, the project built upon the existing holdings of the American Terrorism Study (ATS) in this effort. The ATS, housed at the University of Arkansas, catalogs and systematically codes information on more than 300 Federal court cases involving Federal terrorist charges since 1980 and, following a review of other possible resources, proved to be the most useful starting point for compiling open-source, quantitative data on terrorist border crossings. Since 1989, the American Terrorism Study (ATS) has received lists of court cases and associated indictees that resulted from an official FBI terrorism investigation spanning 1980 through 2004. Housed at the University of Arkansas' Terrorism Research Center in Fulbright College (TRC), the ATS now includes almost 400 cases from the FBI lists. Of these, approximately 75% of cases have complete court documentation, and almost all of those collected have been coded into the ATS database, while the ATS team continues to track new cases by collecting, reviewing, and coding new and additional court documentation. The ATS includes **terrorism incidents and attacks, thwarted or planned terrorism incidents sometimes referred to as preventions, material support cases for terrorism, general terrorism conspiracies,** and in some cases, immigration fraud; the common denominator among all ATS events is that the FBI investigated these events as terrorism-related incidents. During preliminary research for this project, court records from 378 terrorism cases found in the ATS dataset were reviewed for information on potential border crossing events related to terrorism cases. The documents for each court case were manually reviewed by researchers to determine whether the collected records reported that one of the defendants or accomplices in a case crossed a U.S. border at some point. Thirty-eight percent of the reviewed cases—145 cases—from 1980 through 2004 were found to either have: • **direct mention of a border crossing in the court documents, or • a link to a terrorism incident that involved a known border crossing, either before or after an incident.** After compiling this list of court cases for inclusion, **each identified court case was then linked to a criminal incident involving terrorism charges. Initial reviews revealed a connection to a border-crossing event in a total of 58 successful terrorist attacks, 51 prevented or thwarted attacks,** 26 material support cases, 33 immigration fraud incidents, **and 4 general terrorism conspiracies**. Additional reviews of relevant information on indictees and their activities resulted in a reduction in the number of successful terrorist attacks associated with these individuals to a total of 43. Appendix 2 provides more details on the data collection process and how a reliable collection methodology was established to create the U.S. Terrorist Border Crossing Dataset (USTBC), using the ATS as a starting point. National Consortium for the Study of Terrorism and Responses to Terrorism A Department of Homeland Security Science and Technology Center of Excellence Border Crossings and Terrorist Attacks in the United States 12 Systematic evaluation by the research team revealed that the American Terrorism Study is a reliable and useful resource for identifying individuals associated with terrorist attacks or terrorist criminal cases (such as conspiracies) and

for determining which of these individuals crossed U.S. borders in advance of or in the wake of their terrorism-related behavior. This is largely because the ATS is based on court documents, which among sources of data on terrorism are the most likely to reference relevant border crossing activity. The Global Terrorism Database, which is based primarily on media sources, can serve a supporting role in this research, but the ATS is the primary source allowing for construction of a new, relational database on U.S. Terrorist Border Crossings (USTBCs). That being said, it is important to recognize that the ATS is not a perfect data source. As noted above, its contents are limited to individuals and information related to court cases in which one or more defendant was charged with Federal terrorism charges. As such, the contents of ATS clearly represent a subset of all terrorists or attempted terrorists in the United States, as it systematically omits those who: • were never arrested or faced any charges, • were charged with offenses not directly related to terrorism, • were charged at the non-Federal level, or • were engaged in dangerous activity that does not meet the FBI's definition of a terrorism case. Throughout this project, the research team was careful to respect the limitations of this data collection and to draw conclusions that recognize that the border crossing events included in this project likely represent a non-representative subset of all border crossing attempts by terrorists or intended terrorists. Despite these limitations, though, the data that was built upon the baseline of ATS provides important insights into the nexus between border crossings and terrorism. The U.S. Terrorism Border Crossing Dataset The final versions of the codebooks used to develop the U.S. Terrorist Border Crossing (USTBC) data collection are presented in Appendix 3. Based upon knowledge gained from pilot efforts (as discussed above and in Appendix 2), the project resulted in two codebooks—one focused on dynamics of a bordercrossing event involving someone associated with a Federal terrorism court case, and another focused on the characteristics of the individuals associated with Federal charges who were involved in the bordercrossing event. Data collection for the USTBC lasted for approximately one year and was primarily conducted by research assistants at the Terrorism Research Center at the University of Arkansas.³ The resultant data that comprise the USTBC are available in Appendix 4. Table 4 provides a snapshot summary of these data, which include detailed information on the location of an attempted crossing, the timing of a crossing relative to attempted or actual terrorist activity, the origin or destination of an attempted crossing, and more. The data also include specific information on border crossers, including their citizenship status, their criminal history, and key demographics (including level of education, marital status, etc.) Appendix 5 provides descriptive statistics from the border-crossing and border-crosser data. ³ Special thanks to Kim Murray and Summer Jackson of the Terrorism Research Center for their efforts in combing through the courtcase material and assembling these data for the USTBC. National Consortium for the Study of Terrorism and Responses to Terrorism A Department of Homeland Security Science and Technology Center of Excellence Border Crossings and Terrorist Attacks in the United States 13 Border Crossings Identified in USTBC Attempts to Enter the United States Of the 221 border crossings identified in this project as involving individuals who were indicted by the U.S. government in terrorism-related cases, the majority (129 crossings) involved an individual attempting to enter the United States, while the remainder (92 crossings) involved an individual attempting to exit the United States. Eighty-seven percent of the attempted border crossings were successful, rather than being thwarted by law enforcement or foiled by some other events or developments. Additional discussion on the nature of successful crossings

versus those who were apprehended at the border is presented below. **Among those attempts**

to enter the United States, the most frequent origin for these crossing efforts was Canada.⁴

But, as Figure 2 illustrates, such attempted entries originated from all corners of the world.

US Border Patrol proves that surveillance is key to anti-terror efforts

Stamey 14 (Barclay; DOMESTIC AERIAL SURVEILLANCE AND HOMELAND SECURITY: SHOULD AMERICANS FEAR THE EYE IN THE SKY; March 2014)

The leading national agency currently using drones to combat a wide range of domestic threats is U.S. Customs and Border Protection. With its fleet of seven MQ-1 Predators and three MQ-1 Guardians—Predators modified for marine surveillance—CBP is at the forefront of large-scale drone operations. With an annual budget exceeding \$11 billion, CBP is well equipped for protecting our national security while combating potential terrorist threats.⁵⁵ But how efficiently are those funds being used, and what is meant by effectiveness? According to Merriam-Webster, effectiveness is “producing a decided, decisive, or desired effect or result.”⁵⁶ Ultimately, that desired result is safe international borders. Accomplishing this result involves the apprehension of illegal immigrants, interdiction of illicit drugs, and prevention of terrorist infiltration, which CBP does quite well, but with respect to UAS, effectiveness must be viewed on a much broader scale. This section takes into account the size of CBP, its operational budget, and couples it with published results. According to CBP, the primary mission of drone use is “anti-terrorism by helping to identify and intercept potential terrorists and illegal cross-border activity.”⁵⁷ CBP uses its Predators and Reapers to accomplish this goal through human detection and tracking, surface asset coordination, and threat detection through IR sensors in multiple scenarios. Previously mentioned sensor suites allow the Predator to detect movement along the border, identify actual personnel numbers, and track the location of threats all while being unobserved to the individuals on the ground. With their long loiter times, Predators allow officials to monitor gaps along the border while maximizing the efforts of ground personnel in actual interdiction missions. After witnessing the functionality of actual Predator operations in Afghanistan, this author realizes the value in having high definition video sensors overhead during dangerous operations. This type of technology certainly has a place in homeland security missions, and future capabilities will provide a clear advantage to U.S. personnel in combating border security. This force multiplier mindset is one CBP has adopted and publicizes regularly to justify the success of its drone program. Long loiter times, remote area access, and flexibility during National Special Security Events are common claims.

Border security stops terrorism

Zuckerman, Bucci, Carafano, no date

(Jessica Zuckerman, Steven P. Bucci, Ph.D. Director, Douglas and Sarah Allison Center for Foreign and National Security Policy and James Jay Carafano, Ph.D. Vice President for the Kathryn and Shelby Cullom Davis Institute for National Security and Foreign Policy, and the E. W. Richardson Fellow, 13, 7-22-2013, "60 Terrorist Plots Since 9/11: Continued Lessons in Domestic Counterterrorism," Heritage Foundation, <http://www.heritage.org/research/reports/2013/07/60-terrorist-plots-since-911-continued-lessons-in-domestic-counterterrorism> CCC)

Chiheb Esseghaier and Raed Jaser—April 2013. **Chiheb Esseghaier and Raed Jaser were**

arrested in April 2013 for attempting to carry out an attack on a Via Railway train travelling

from Canada to the U.S.

The attack, authorities claimed, was supported by an al-Qaeda element in Iran, although there is currently no evidence that it was state-sponsored.[205] The

exact route of the targeted train has not been identified, and Iranian authorities vehemently deny that al-Qaeda is operating within Iranian borders.

Esseghaier and Jaser have been charged in Canada with conspiracy to commit murder for the benefit of a terrorist group, participating in a terrorist group, and conspiring to interfere with transportation facilities for the benefit of a terrorist group. Esseghaier has also been charged with participating in a terrorist group, and both men face up to life in prison.[206] The two men are awaiting trial. Chiheb Esseghaier wants to represent himself, basing his defense on the Quran instead of on the Canadian criminal code, which has caused delays in the proceedings.[207]

Continued use of border surveillance technology is crucial to the detection of and response to threats on the border

Haddal 10, Specialist in Immigration Policy, 8/11/10 (Chad C. Haddal, Congressional Research Service report, August 11, 2010, "Border Security: The Role of the U.S. Border Patrol" <https://www.fas.org/sgp/crs/homsec/RL32562.pdf>, accessed 7/15/15 JH @ DDI)

Perhaps the most important technology used by the Border Patrol are the surveillance assets currently in place at the border. The program has gone through several iterations and name changes. Originally known as the Integrated Surveillance Information System (ISIS), the program's name was changed to the America's Shield Initiative (ASI) in FY2005. DHS subsequently folded ASI into the Secure Border Initiative (SBI) and renamed the program SBI Technology (SBI Technology). Once it is beyond the pilot phase, SBI Technology will, according to DHS, develop and install "new integrated technology solutions to provide enhanced detection, tracking, response, and situational awareness capabilities."¹⁹ The other program under SBI is the SBI Tactical Infrastructure program, which, according to DHS, "develops and installs physical components designed to consistently slow, delay, and be an obstacle to illegal cross-border activity."²⁰ In the late 1990s, the Border Patrol began deploying a network of Remote Video Surveillance (RVS) systems (i.e., camera systems), underground sensors, and the Integrated Computer Assisted Detection (ICAD) database into a multi-faceted network designed to detect illegal entries in a wide range of climate conditions. This Integrated Surveillance Intelligence System (ISIS) attempted to ensure seamless coverage of the border by combining the feeds from multiple color, thermal, and infrared cameras mounted on different structures into one remote-controlled system with information generated by sensors (including seismic, magnetic, and thermal detectors). When a sensor is tripped, an alarm is sent to a central communications control room at a USBP station or sector headquarters. USBP personnel monitoring the control room screens use the ICAD system to re-position RVS cameras towards the location where the sensor alarm was tripped (although some camera positions are fixed and cannot be panned). Control room personnel then alert field agents to the intrusion and coordinate the response.

Information gathered from surveillance activities is key to any effective response to terrorist threats along the border

Fisher 12, U.S. Customs and Border Protection Office of Border Patrol Chief, 5/8/12 (Michael, Department of Homeland Security, "Written testimony of U.S. Customs and Border Protection Office of Border Patrol Chief Michael Fisher for a House Committee on Homeland Security, Subcommittee on Border and Maritime Security hearing titled "Measuring Border Security: U.S. Border Patrol's New Strategic Plan and the Path Forward."" <http://www.dhs.gov/news/2012/05/08/written-testimony-us-customs-and-border-protection-house-homeland-security>; accessed 7/15/15 JH@ DDI)

Information gathered from reconnaissance, community engagement, sign-cutting and technology together provide situational awareness and intelligence and helps us to best understand and assess the threats we face along our borders. Information and intelligence will empower Border Patrol leadership and front line agents to get ahead of the threat, be predictive and proactive. Integration denotes CBP corporate planning and execution of border security operations, while leveraging partnerships with other federal, state, local, tribal, and international organizations. Integration of effort with these organizations will ensure we bring all available capabilities and tools to bear in addressing threats. Lastly, through rapid response, we will deploy capabilities efficiently and effectively to meet and mitigate the risks we confront. Put simply, rapid response means the Border Patrol and its partners can quickly and appropriately respond to changing threats. Goal 1: Secure America's Borders The 2012 Strategic Plan has two interrelated and interdependent goals. In the first goal, the Border Patrol will work with its federal, state, local, tribal, and international partners to secure America's borders using information, integration and rapid response in a risk-based manner. There are five objectives within this goal: Prevent Terrorists and Terrorist Weapons from Entering the United States Manage Risk Disrupt and Degrade Transnational Criminal Organizations (TCOs) Whole-of-Government Approach Increase Community Engagement I. Prevent Terrorists and Terrorist Weapons from Entering the United States The current risk environment is characterized by constantly evolving threats that are both complex and varying, and the Border Patrol must strategically apply intelligence to ensure that operations are focused and targeted against the greatest threats. The Border Patrol's ability to prevent and disrupt such threats is enhanced through increased information sharing and operational integration, planning, and execution with our domestic and foreign law enforcement partners. Integration with our federal, state, local, tribal, and international partners' intelligence and enforcement capabilities into the planning and execution of CBP operations is critical to our ability to secure our nation's borders.

The use of necessary surveillance technology is key to the identification and prevention of terrorist threats on the border

Office of Border Patrol 4, September 2004 (THE OFFICE OF BORDER PATROL AND THE OFFICE OF POLICY AND PLANNING, US CUSTOMS & BORDER PROTECTION, "National Border Patrol Strategy" http://www.au.af.mil/au/awc/awcgate/dhs/national_bp_strategy.pdf, accessed 7/15/15 JH @ DDI)

The Border Patrol currently uses a mix of agents, information, and technology to control the border. The Border Patrol's ability to establish situational awareness, monitor, detect, respond to, and identify potential terrorists, instruments of terrorism, and criminals relies heavily on interdiction and deterrence-based technology. Having the necessary technology to support the Border Patrol priority and traditional missions cannot be overstated. In the future, there must be continued assessment, development, and deployment of the appropriate mix of personnel, technology, and information to gain, maintain, and expand coverage of the border and ensure that resources are deployed in a cost-effective, efficient fashion. Technology which enhances operational awareness and effectiveness includes camera systems for day/ night/infrared work, biometric systems such as IDENT/IAFIS, processing systems like ENFORCE, sensing platforms, large-scale gamma X-rays, and aerial platforms, and other systems. Technologies requiring modernization include wireless and tactical communications and computer processing capabilities. Coordination between Border Patrol and inspectional personnel at the ports of entry ensures the most efficient use of trained personnel and technology. In the future, the Border Patrol will take advantage of the targeting and selectivity tools made available in the Automated Commercial Environment (ACE) and the National Targeting Center. The continued testing, evaluation, acquisition, and deployment of appropriate border enforcement technologies will be pursued vigorously so that the maximum force-multiplier effect is achieved in support of both the priority and traditional missions.

Any gap in security on the border allows international terror groups to come into the United States

Wilson 15 [Reid Wilson, 2/26/15, covers national politics for the Washington Post, "Texas officials warn of immigrants with terrorist ties crossing southern border," Washington Post, <http://www.washingtonpost.com/blogs/govbeat/wp/2015/02/26/texas-officials-warn-of-immigrants-with-terrorist-ties-crossing-southern-border/>] jf]

A top Texas law enforcement agency says **border security organizations have apprehended several members of known Islamist terrorist organizations crossing the southern border** in recent years, and while a surge of officers to the border has slowed the flow of drugs and undocumented immigrants, it's costing the state tens of millions of dollars. In a report to Texas elected officials, the state Department of Public Safety says **border security agencies have arrested several Somali immigrants crossing the southern border who are known members of al-Shabab**, the terrorist group that launched a deadly attack on the Westgate shopping mall in Nairobi, Kenya, and Al-Itihaad al-Islamiya, another Somalia-based group once funded by Osama bin Laden. **Another undocumented immigrant arrested crossing the border was on multiple U.S. terrorism watch lists**, the report says. According to the report, **one member of al-Shabab, apprehended in June 2014**, told authorities he **had been trained for an April 2014 suicide attack in Mogadishu**. He said he escaped and reported the planned attack to African Union troops, who were able to stop the attack. The FBI believed another undocumented immigrant was an al-Shabab member who helped smuggle several potentially dangerous terrorists into the U.S. Authorities also apprehended immigrants who said they were members of terrorist organizations in Sri Lanka and Bangladesh. The Department of Public Safety said the report, first published by the Houston Chronicle, was not meant for public distribution. "[T]hat report was inappropriately obtained and [the Chronicle was] not authorized to possess or post the law enforcement sensitive document," department press secretary Tom Vinger said in an e-mail. U.S. Customs and Border Protection did not respond to requests for comment. **The department said it had come into contact in recent years with "special interest aliens," who come from countries with known ties to terrorists or where terrorist groups thrive.** Those arrested include Afghans, Iranians, Iraqis, Syrians, Libyans and Pakistanis. In all, immigrants from 35 countries in Asia and the Middle East have been arrested over the past few years in the Rio Grande Valley. The department says there is no known intelligence that specifically links undocumented immigrants to terrorism plots, but the authors warn it's almost certain that foreign terrorist organizations know of the porous border between the U.S. and Mexico. **"It is important to note that an unsecure border is a vulnerability that can be exploited by criminals of all kinds," Vinger said. "And it would be naive to rule out the possibility that any criminal organizations around the world, including terrorists, would not look for opportunities to take advantage of security gaps along our country's international border."**

Maximized surveillance on the border is key to stopping terrorism

Willis et al 10 [Henry H. Willis, 2010, director of the RAND Homeland Security and Defense Center, with Joel B. Predd, Paul K. Davis and Wayne P. Brown, RAND.org,

"Measuring the Effectiveness of Border Security Between Ports-of-Entry", http://www.rand.org/content/dam/rand/pubs/technical_reports/2010/RAND_TR837.pdf, jf]

One of the unexpected results of our study was recognition of the importance of networked intelligence in elaborating objectives for and measuring effectiveness of border security.¹¹ This came about for many reasons. First, all of the focus missions are best understood in national terms: **Border security contributes significantly to several high-level national objectives**, but results depend sensitively on interactions with and the performance of other federal and local agencies, as well as economic and demographic conditions outside of DHS's control. Second, **national-level effectiveness depends not just on individual component or agency effectiveness but also on components' ability to share information** and work collaboratively, i.e., to network. **This is perhaps most obvious with respect to**

preventing terrorism, in that individuals might enter the country who are vaguely suspicious but who cannot reasonably be arrested at the border. Responsibility for follow-up then transfers to, e.g., the Federal Bureau of Investigation (FBI). However, **the FBI's ability to follow up**—either immediately or when further information emerges—**might depend critically on information collected** and effectively transferred **by border agencies** to the FBI. The word “effectively” is key because all agencies are deluged with data. The 9/11 Commission’s report dramatized the consequences of ineffectiveness: It is not that information for apprehending the perpetrators did not exist, but rather that the dots were not connected and the relevant agencies did not cooperate well (National Commission on Terrorist Attacks upon the United States, 2004). Third, national-level law enforcement also depends on the effectiveness of the justice system, including the ability to convict and punish. That, in turn, often depends on authorities being able to construct an extensive, fact-based story of criminal behavior from which, cumulatively, guilt can reasonably be inferred by a jury. Fourth, the **nature and quality of information collected by border-security components, the consistency with which it is collected**, and the effectiveness with which the data are both transferred to national databases and—where appropriate—highlighted in cross-agency actions, are leverage points for improved national-level effectiveness, especially in relation to terrorism- or drug-related functions. Border-security efforts sometimes will query detected travelers against data sets of known or suspected terrorists or criminals. This is especially relevant at ports of entry, ports of egress in some modes, and in cases in which border enforcement detains an illegal crosser. In other settings, **border-enforcement agencies collect as much information as possible on individuals, their conveyances, license plates, accounts, and other records of persons detained for crossing illegally but for whom no prior records exist.** The same is true in the maritime regions when individuals are arrested for illegal drug smuggling or illegal migrant smuggling. **The collected information can become future tactical intelligence** (and used in prosecutions) **if the detained person becomes involved in criminal or terrorist functions at a later date.** Discussions with component agencies indicate that this is an important capability to measure. Technologically, **it is even possible to tag individuals so that subsequent surveillance within the United States** (or another country) is possible.¹²

Border surveillance prevents terrorist groups from attempting attacks

Willis et al 10 [Henry H. Willis, 2010, director of the RAND Homeland Security and Defense Center, with Joel B. Predd, Paul K. Davis and Wayne P. Brown, RAND.org,

“Measuring the Effectiveness of Border Security Between Ports-of-Entry”, http://www.rand.org/content/dam/rand/pubs/technical_reports/2010/RAND_TR837.pdf, pg 19, jf]

The principal contributions that **border security** makes to counterterrorism relate to **preventing** certain kinds of **terrorist attacks dependent on flows into the country** of people or materials. These contributions can be illustrated by considering what opportunities exist to disrupt terrorist attacks while they are being planned and orchestrated. Through a number of planning efforts, **DHS and its components have developed detailed planning scenarios of terrorist events** (DHS, 2006). **Each of these scenarios has been deconstructed into attack trees that are useful for considering how DHS border-security programs contribute to terrorism security efforts.** In their most generic form, these attack trees specify dimensions of attack scenarios with respect to building the terrorist team, identifying a target, and acquiring a weapon (see Figure 4.1). This decomposition of attack planning provides a structure around which to consider how interdiction, deterrence, and networked intelligence contribute to preventing terrorist attacks and, thus, why it is relevant to measure these functions. **DHS border-security efforts focus on interdiction of terrorist team members and weapons or weapon components when they cross U.S. borders.** Examples of initiatives that are intended to enhance these capabilities include the Secure Border Initiative, the acquisition of Advanced Spectroscopic Portals for nuclear detection, the Secure Communities Initiative, and US-VISIT. In addition, it is often pointed out that, **when border-security measures are perceived to be effective, terrorists groups may be deterred from attacking in particular ways, or possibly from attacking at all.** This could result from awareness of what type of surveillance is occurring or the capability of interdiction systems. In either case, **deterrence refers to the judgment of terrorists that they will not be successful,** leading them to choose another

course of action. Finally, many **border-security initiatives also contribute information to the national networked-intelligence picture**. For example, the Secure Communities Initiative has implemented new capabilities to allow a single submission of fingerprints as part of the normal criminal arrest and booking process to be queried against both the FBI and DHS immigration and terrorism databases. This effort makes it easier for federal and local law enforcement to share actionable intelligence and makes it more difficult for terrorists to evade border-security efforts.

Drones

Drones are critical to combat bio- and chemical-terror

Koerner 2015 (Matthew R, Duke University School of Law, J.D. expected 2015, "DRONES AND THE FOURTH AMENDMENT: REDEFINING EXPECTATIONS OF PRIVACY", 64 Duke L.J. 1129)

Senator Dianne Feinstein, a staunch advocate of governmental surveillance n1 and Chairman of the 113th Congress's Senate Intelligence Committee, n2 recently found herself, rather ironically, as the target of surveillance. n3 One day at her home, Senator Feinstein walked to the window to check on a protest that was taking place outside. n4 Much to her surprise, a small drone n5 hovered on the other side of the window, only inches away, spying on her. n6 The drone immediately flew away. n7 Senator Feinstein's experience is just one example of drones being used for surveillance within the United States. But her story and others like it n8 have sparked significant controversy over the use of drones for domestic surveillance, which falls within a broader debate [*1131] on privacy and governmental surveillance programs. n9 Advocates of robust federal surveillance policies champion governmental surveillance as the only way to prevent terrorist and cyber attacks against the United States. n10 President Barack Obama defended these surveillance programs as ""modest encroachments on privacy"" that "strike the "right balance" between national security and civil liberties." n11 In comparison, privacy advocates envision these surveillance programs leading to a dystopian, totalitarian government watching over its citizenry - undetected but omnipresent. n12 References to George Orwell's Nineteen Eighty-Four n13 abound. n14 [*1132] Apart from the surrounding privacy-concerns debate, drones currently provide many practical benefits and their projected applications seem limitless. n15 Based on their obvious advantage of being unmanned, drones have the capability to conduct missions previously considered too risky, dangerous, or impracticable. These applications are also provided at continuously decreasing costs and with the latest technological sophistication, such as the capability to see through physical obstructions, to detect various chemical and biological agents in the air, to recognize human faces and license plates, and to fly in strategic, coordinated formations. n16

Drones provide effective surveillance of the borders

Spagat 2014 (Elliot, "Drones replacing officers in Mexican border surveillance", Nov 13; www.dailynews.com/social-affairs/20141113/drones-replacing-officers-in-mexican-border-surveillance)

The U.S. government now patrols nearly half the Mexican border by drones alone in a largely unheralded shift to control desolate stretches where there are no agents, camera towers, ground sensors or fences, and it plans to expand the strategy to the Canadian border. It represents a significant departure from a decades-old approach that emphasizes boots on the ground and fences. Since 2000, the number of Border Patrol agents on the 1,954-mile border more than doubled — to surpass 18,000 — and fencing multiplied nine times to 700 miles. Under the new approach, Predator B aerial drones, used in the fight against insurgents in Afghanistan, sweep remote mountains, canyons and rivers with a high-resolution video camera and return within three days for another video in the same spot, two officials with direct knowledge of the effort said on condition of anonymity because details have not been made public. The two videos are then overlaid for analysts, who use sophisticated software to identify tiny changes — perhaps the tracks of a farmer or cows, perhaps those of immigrants who entered the country illegally or perhaps a drug-laden Hummer, they said. About 92 percent of drone missions have shown no change in terrain, while the others raised enough questions to dispatch agents to determine if someone got away, sometimes by helicopter because the area is so remote. The agents look for any sign of human activity — footprints, broken twigs, trash. About 4 percent of missions have been false alarms, like tracks of livestock or farmers, and about 2 percent are inconclusive. The remaining 2 percent offer evidence of illegal crossings from Mexico, which typically results in ground sensors being planted for closer monitoring. The government has operated about 10,000 drone flights under the strategy, known internally as "change detection," since it began in March 2013. The flights currently cover about 900 miles, much of it in Texas, and are expected to expand to the Canadian border by the end of 2015. The purpose is to assign agents where illegal activity is highest, said R. Gil Kerlikowske, commissioner of Customs and Border Protection, the Border Patrol's parent agency, which operates nine unmanned aircraft across the country. "You have finite resources," he said in an interview. "If you can look at some very rugged terrain (and) you can see

there's not traffic, whether it's tire tracks or clothing being abandoned or anything else, you want to deploy your resources to where you have a greater risk, a greater threat." If the video shows the terrain unchanged, Border Patrol Chief Michael Fisher calls it "proving the negative" — showing there isn't anything illegal happening there and therefore no need for agents and fences. The strategy was launched without fanfare and is being expanded as President Barack Obama prepares to issue an executive order by the end of this year to reduce deportations and enhance border security. Rep. Michael McCaul, a Texas Republican who chairs the House Homeland Security Committee, applauded the approach while noting surveillance gaps still remain. "We can no longer focus only on static defenses such as fences and fixed (camera) towers," he said. Sen. Bob Corker, a Tennessee Republican who coauthored legislation last year to add 20,000 Border Patrol agents and 350 miles of fencing to the southwest border, said, "If there are better ways of ensuring the border is secure, I am certainly open to considering those options." Border missions fly out of Sierra Vista, home of the U.S. Army Intelligence Center at Fort Huachuca, or Corpus Christi, Texas. They patrol at altitudes between 19,000 at 28,000 feet and from between 25 and 60 miles of the border. The first step is for Border Patrol sector chiefs to identify areas least likely to attract smugglers, typically those far from towns and roads. Analysts scour the drone videos at operations centers in Riverside; Grand Forks, North Dakota; and Sierra Vista. After an initial survey, the drones return within a week for another sweep. Privacy advocates have raised concerns about drones since Customs and Border Protection introduced them in 2006, saying there is potential to monitor innocent people under no suspicion. Lothar Eckardt, the agency's executive director of national air security operations, said law-abiding people shouldn't worry and that cameras are unable to capture details like license plate numbers and faces on the ground. He looked on one September morning as a drone taxied down a runway in Sierra Vista, lifted off with a muffled buzz and disappeared over a rocky mountain range into a blue Arizona sky. About a dozen computer screens line the wall of their trailer, showing the weather, maps and real-time images of the ground below. Eckardt said there is "no silver bullet" for addressing border security but that using drones in highly remote areas is part of the overall effort. If there's nothing there, he said, "let's not waste the manpower here. Let's focus our efforts someplace else, where they're needed."

Drones are necessary to protect the border

Ingram 2013 (David, How drones are used for domestic surveillance, Jun 19, www.csmonitor.com/USA/Latest-News-Wires/2013/0619/How-drones-are-used-for-domestic-surveillance)

The U.S. government has made no secret of its use of drones to monitor the United States border with Mexico. The Obama administration has been defending its surveillance tactics since former National Security Agency contractor Edward Snowden released secret documents revealing a massive database of daily telephone records, as well as coordination between the NSA and social media companies. The programs are designed to target militants outside the United States who are suspected of planning attacks, but they inevitably gather some data on Americans, U.S. officials said. In a May speech, Obama defended the use of armed drones abroad but said the United States should never deploy armed drones over U.S. soil. The Justice Department had disclosed that two domestic law enforcement agencies use unmanned aircraft systems, according to a department statement sent to the Judiciary Committee and released on Wednesday by Grassley's office. The two are the Drug Enforcement Administration and the Bureau of Alcohol, Tobacco, Firearms and Explosives. Grassley sent a letter to Attorney General Eric Holder on Wednesday asking why the Justice Department did not earlier mention the FBI's use of drones. At Wednesday's hearing, Democratic Senator Dianne Feinstein of California said she was concerned about the privacy implications of drone surveillance. "The greatest threat to the privacy of Americans is the drone and the use of the drone, and the very few regulations that are on it today," Feinstein said. Mueller reiterated that drone use is rare. "It is very narrowly focused on particularized cases and particularized needs," he said. Mueller is due to retire when his term expires in September.

Border drones effectively and efficiently monitor the border

RussiaTimes '14 (November 13, 2014, <http://rt.com/usa/205343-cpb-mexico-border-drone-patrols/>, 7-3-15)

Predator drones are silently patrolling almost half of the United States' border with Mexico, looking for illegal immigrants, human traffickers and drug cartels in desolated areas the

government agents can't realistically patrol. The unmanned aircraft fly over about 900 miles of rural areas where there are no US Customs and Border Patrol (CPB) agents, camera towers, ground sensors or fences along the 1,954-mile border, according to a new report by the Associated Press. The Predator Bs use a high-resolution video camera and then return within three days for another video in the same spot, two officials told the wire service. The two videos are then overlaid for analysts who use sophisticated software to identify tiny changes. There are changes in terrain in only eight percent of the drone missions under the current strategy – known internally as “change detection” – since it began in March 2013. Of those flagged missions, about four percent were false alarms, like tracks from livestock or farmers, and about two percent are inconclusive to the agents dispatched to the area to investigate. The remaining 2 percent offer evidence – like footprints, broken twigs, trash – of illegal crossings from Mexico, which typically results in ground sensors being planted for closer monitoring. In the last year and a half, CPB has operated about 10,000 drone flights, with much of their missions over Texas. Border missions fly out of Sierra Vista, home of the U.S. Army Intelligence Center at Fort Huachuca, or Corpus Christi, Texas. They patrol at altitudes between 19,000 at 28,000 feet and between 25 and 60 miles of the border. The program is expected to expand the the Canadian border by the end of 2015. The purpose is to assign agents where illegal activity is highest, R. Gil Kerlikowske, commissioner of Customs and Border Protection, the Border Patrol's parent agency, which operates nine unmanned aircraft across the country, told AP. “You have finite resources,” he said in an interview. “If you can look at some very rugged terrain (and) you can see there's not traffic, whether it's tire tracks or clothing being abandoned or anything else, you want to deploy your resources to where you have a greater risk, a greater threat.” Gregory McNeal, a law professor and drone expert at Pepperdine University, told NBC News in July that the money spent on drones is worth it. “This is a better way to patrol the border than helicopters,” he said. “It’s not a comprehensive immigration solution or border security solution, but more surveillance time in the air will help plug gaps in the border.” A typical Predator drone can fly for 12 hours before landing, compared to three for a standard helicopter. But the cost is much higher: Predator drones require a crew of between five to eight people – plus maintenance staff – to operate, coming out to about \$3,000 an hour to fly. And each one has an \$18 million price tag, NBC News reported. CPB began rolling out Predators in 2005, but rapidly expanded the unmanned aerial reconnaissance operation along the US-Mexico border at the beginning of this decade, the Washington Post reported in 2011. Michael Kostelnik, a retired Air Force general and former test pilot who is the assistant commissioner of CPB's Office of Air and Marine, told the Post then that he had yet to be challenged in Congress about the appropriate use of domestic drones. “Instead, the question is: Why can't we have more of them in my district?” Kostelnik said. In July, President Barack Obama requested \$39.4 million for aerial surveillance, including troops, along the US-Mexican border. The emergency funding was for 16,526 additional drone and manned aircraft flight hours for border surveillance, and 16 additional drone crews to better detect and stop illegal activity, according to administration officials. The request was in response to the humanitarian crisis after tens of thousands of unaccompanied children and families illegally entered the country in the first half of the year. “Border Patrol wants the money and it wants the drones,” McNeal said. “This is the kind of crisis where, if you are Border Patrol, you seize the opportunity to get more funding from Congress.” The agency’s “unmanned and manned aircraft can continue to support ongoing border security operations, specifically regarding the tracking of illegal cross-border smuggling operations,” a CBP official told Nextgov. The president’s request was part of a larger funding appeal of \$3.7 billion to deal with the illegal immigrants and border security problems. In January, CPB was forced to ground its entire fleet of drones after a mechanical function forced a crew to crash an unmanned aircraft valued at \$12 million. The mishap lowered the number of agency drones to only nine.

Domestic drones k2 solve for terrorism

Bauer 13 (Max Bauer, of ACLU of Massachusetts 9-11-2013, "Domestic Drone Surveillance Usage: Threats and Opportunities for Regulation," https://privacysos.org/domestic_drones CCC)

Unmanned aerial vehicles, commonly known as drones, are an emerging and rapidly-expanding development in domestic surveillance technology. [4] On Valentine's Day 2012, President Barack Obama signed the FAA Modernization and Reform Act of 2012, legislation authorizing the Federal Aviation Administration (FAA) to develop regulations to facilitate the growing usage of drones in domestic airspace. [5] Drones are best known for their use in military operations [6] including the use of weaponized drones for targeted killing. But drones have been used for domestic surveillance purposes for years [7] and their usage is expected to grow exponentially. [8] The FAA has issued 1,428 drone operator permits since 2007 (as of mid-February) and predicts there will be 10,000 drones deployed within the next five years. [9] A public information request by the Electronic Frontier Foundation showed that numerous universities and law enforcement agencies have been approved to use drones by the FAA. [10] Of course, the widespread use of drones for domestic surveillance raises serious privacy concerns. [11] Drones can be outfitted with high definition [12] and infrared cameras, [13] and even license plate readers. [14] Drones "present unique threats to privacy," in the words of one privacy advocate. [15] Why? They are smaller – potentially insect-sized, [16] can fly longer – perhaps soon in perpetuity, [17] and are not bound by the historical, practical check on law enforcement excesses we've had as a result of limited police resources. [18] In a seminal 1890 law review article aptly-titled The Right to Privacy, future Supreme Court Justice Louis Brandeis recognized that "instantaneous photographs... have invaded the secret precincts of private and domestic life...Of the desirability – indeed of the necessity – of some such protection there can, it is believed, be no doubt." [19] Brandeis and his co-author Samuel Warren were ahead of their time when they wrote that article but even they couldn't foresee anything like the domestic surveillance schemes that have arisen over a century later. Drones Used in Massachusetts and Response to Boston Marathon Bombings. Late in 2012, the Boston Globe reported that a SWAT team in Massachusetts had filed an application with the FAA for a drone. [20] As of April 2013, there were no police drones yet in Massachusetts but Waltham-based defense contractor Raytheon was flying many of them in testing capacities. [21] Surveillance and war contracting companies hope to expand their market from military to domestic law enforcement. [22] Following the explosion of two bombs at the 2013 Boston Marathon, parts of the city shut down as the search for a suspect continued, prompting Ron Paul to write: "This unprecedented move should frighten us as much or more than the attack itself." [23] **Boston Police Commissioner Ed Davis told the public shortly afterward that he seeks more surveillance cameras (there are already hundreds) in downtown Boston.** [24] **And further, he said, he wants to have drone surveillance for next year's marathon.** [25]

Drones K2 stop terrorism

Byman, 13 (Daniel L. Byman, Director of research at Center for Middle East Policy, 8/2013, <http://www.brookings.edu/research/articles/2013/06/17-drones-obama-weapon-choice-us-counterterrorism-byman> CCC)

The Obama administration relies on drones for one simple reason: they work. According to data compiled by the New America Foundation, since Obama has been in the White House, U.S. drones have killed an estimated 3,300 al Qaeda, Taliban, and other jihadist operatives in Pakistan and Yemen. That number includes over 50 senior leaders of al Qaeda and the Taliban—top figures who are not easily replaced. In 2010, Osama bin Laden warned his chief aide, Atiyah Abd al-Rahman, who was later killed by a drone strike in the Waziristan region of Pakistan in 2011, that when experienced leaders are eliminated, the result is "the rise of lower leaders who are not as experienced as the former leaders" and who are prone to errors and miscalculations. And drones also hurt terrorist organizations when they eliminate operatives who are lower down on the food chain but who boast special skills: passport forgers, bomb makers, recruiters, and fundraisers. Drones have also undercut terrorists' ability to communicate and to train new recruits. In order to avoid attracting drones, al Qaeda and Taliban operatives try to avoid using electronic devices or

gathering in large numbers. A tip sheet found among jihadists in Mali advised militants to “maintain complete silence of all wireless contacts” and “avoid gathering in open areas.” Leaders, however, cannot give orders when they are incommunicado, and training on a large scale is nearly impossible when a drone strike could wipe out an entire group of new recruits. Drones have turned al Qaeda’s command and training structures into a liability, forcing the group to choose between having no leaders and risking dead leaders

Drones take out terrorist leaders

Al-Haj, 15 (Ahmed Al-Haj, writer for the Stars & Stripes and AP the big story, 7/10/2015, <http://www.stripes.com/news/middle-east/us-drone-strike-kills-4-al-qaida-fighters-in-yemen-1.357473> CCC)

Yemeni security and military officials say a suspected U.S. drone strike killed four al-Qaida members travelling by car in the coastal city of Mukalla. The officials say the airstrike took place on Friday night in Mukalla, the capital of Yemen's sprawling eastern Hadramawt province. The explosion was heard in some parts of the city. Al-Qaida's Yemen branch, considered to be the most dangerous offshoot of the terror network, has made gains in the province and captured Mukalla earlier this year. The officials say at least five other militants were wounded in the airstrike. The officials spoke on condition of anonymity because they are not authorized to talk to reporters. Al-Qaida has profited from the turmoil that has engulfed Yemen, and U.S. drones have continued to target top al-Qaida leaders there.

AT Retaliation

AT: Retaliation

Ayson flips neg- terrorism is not an existential risk

Ayson 10 (Robert, Professor of Strategic Studies and Director of the Centre for Strategic Studies: New Zealand at the Victoria University of Wellington, "After a Terrorist Nuclear Attack: Envisaging Catalytic Effects," Studies in Conflict & Terrorism, 33.7, Francis & Taylor)

A terrorist nuclear attack, and even the use of nuclear weapons in response by the country attacked in the first place, would not necessarily represent the worst of the nuclear worlds imaginable. Indeed, there are reasons to wonder whether nuclear terrorism should ever be regarded as belonging in the category of truly existential threats. A contrast can be drawn here with the global catastrophe that would come from a massive nuclear exchange between two or more of the sovereign states that possess these weapons in significant numbers. Even the worst terrorism that the twenty-first century might bring would fade into insignificance alongside considerations of what a general nuclear war would have wrought in the Cold War period. And it must be admitted that as long as the major nuclear weapons states have hundreds and even thousands of nuclear weapons at their disposal, there is always the possibility of a truly awful nuclear exchange taking place precipitated entirely by state possessors themselves.

No US nuclear retaliation

Neely 13 (Meggaen Neely, The George Washington University Master of Arts (M.A.), Security Policy Studies 2012—2014 (expected) Baylor University Master of Arts (M.A.), Public Policy and Administration 2010—2012, Richard D. Huff Distinguished Masters Student in Political Science (2012) Baylor University Bachelor of Arts (B.A.), Political Science and Government, Research Assistant, Elliott School at George Washington University, Research Intern, Project on Nuclear Issues (PONI) at Center for Strategic and International Studies (CSIS) Communications Intern at Federation of American Scientists Graduate Assistant at Department of Political Science, Baylor University, "Doubting Deterrence of Nuclear Terrorism", March 21, 2013, <http://csis.org/blog/doubting-deterrence-nuclear-terrorism>)

Because of the difficulty of deterring transnational actors, many deterrence advocates shift the focus to deterring state sponsors of nuclear terrorism. The argument applies whether or not the state intended to assist nuclear terrorists. If terrorists obtain a nuclear weapon or fissile materials from a state, the theory goes, then the United States will track the weapon's country of origin using nuclear forensics, and retaliate against that country. If this is U.S. policy, advocates predict that states will be deterred from assisting terrorists with their nuclear ambitions. Yet, let's think about the series of events that would play out if a terrorist organization detonated a weapon in the United States. Let's assume forensics confirmed the weapon's origin, and let's assume, for argument's sake, that country was Pakistan. Would the United States then retaliate with a nuclear strike? If a nuclear attack occurs within the next four years (a reasonable length of time for such predictions concerning current international and domestic politics), it seems unlikely. Why? First, there's the problem of time. Though nuclear forensics is useful, it takes time to analyze the data and determine the country of origin. Any justified response upon a state sponsor would not be swift. Second, even if the United States proved the country of origin, it would then be difficult to determine that Pakistan willingly and intentionally sponsored nuclear terrorism. If Pakistan did, then nuclear retaliation might be justified. However, if Pakistan did not, nuclear retaliation over unsecured nuclear materials would be a disproportionate response and potentially further detrimental. Should the United States launch a nuclear strike at Pakistan, Islamabad could see this as an initial hostility by the United States, and respond adversely. An obvious choice, given current tensions in South Asia, is for Pakistan to retaliate against a U.S. nuclear launch on its territory by initiating conflict with India, which could turn nuclear and increase the exchanges of nuclear

weapons. Hence, it seems more likely that, after the international outrage at a terrorist group's nuclear detonation, the United States would attempt to stop the bleeding without a nuclear strike. Instead, some choices might include deploying forces to track down those that supported the suicide terrorists that detonated the weapon, pressuring Pakistan to exert its sovereignty over fringe regions such as the Federally Administered Tribal Areas, and increasing the number of drone strikes in Waziristan. Given the initial attack, such measures might understandably seem more of a concession than the retaliation called for by deterrence models, even more so by the American public. This is not an argument against those technologies associated with nuclear forensics. The United States and International Atomic Energy Agency (IAEA) should continue their development and distribution. Instead, I question the presumed American response that is promulgated by deterrence advocates. By looking at possibilities for a U.S. response to nuclear terrorism, a situation in which we assume that deterrence has failed, we cast doubt on the likelihood of a U.S. retaliatory nuclear strike and hence cast doubt on the credibility of a U.S. retaliatory nuclear strike as a deterrent. Would the United States launch a nuclear weapon now unless it was sure of another state's intentional sponsorship of nuclear terrorism? Any reasonable doubt of sponsorship might stay the United States' nuclear hand. Given the opaqueness of countries' intentions, reasonable doubt over sponsorship is inevitable to some degree. Other countries are probably aware of U.S. hesitance in response to terrorists' use of nuclear weapons. If this thought experiment is true, then the communication required for credible retaliatory strikes under deterrence of nuclear terrorism is missing.

The threat of a nuclear retaliation is exaggerated – even stolen material can be easily traced

Lieber and Press 13 (*Keir A. Lieber and **Daryl G. Press, *Received his M.A. and Ph.D. in Political Science from the University of Chicago, Associate Professor in the Edmund A. Walsh School of Foreign Service and the Department of Government, **Associate Professor in the Department of Government, Dartmouth College. He received a Ph.D. in Political Science from the Massachusetts Institute of Technology, "Why States Won't Give Nuclear Weapons to Terrorists", Summer 2013, International Security, Vol. 38, No. 1, Pages 80-104)

This gloomy picture overstates the difficulty of determining the source of stolen material after a nuclear terrorist attack. In the wake of a detonation, the possibility of stolen fissile material complicates the task of attribution—but only marginally. At the end of the Cold War, several countries—particularly in the former Soviet Union—confronted major nuclear security problems, but great progress has been made since then.⁴⁰ Although no country has perfect nuclear security, today the greatest concerns surround just five countries: Belarus, Japan, Pakistan, Russia, and South Africa.⁴¹ In addition, not all of those states are equally worrisome as potential sources of nuclear theft. Substantial concerns exist about the security of fissile materials in Pakistan and Russia (the latter if simply because of the large size of its stockpile), but Belarus, Japan, and South Africa would likely be quickly and easily ruled out as the source of stolen fissile material. Belarus has a relatively small stockpile of fissile material—approximately 100 kilograms of HEU42—so in the wake of a nuclear terrorist attack, it would be easy for Belarus to show that its stockpile remained intact.⁴³ Similarly, Japan (one of the United States' closest allies) and South Africa would be keen to allow the United States to verify the integrity of their full stocks of materials. (In the wake of a nuclear terror attack, a lack of full cooperation in showing all materials accounted for would be highly revealing.) Iran is not believed to have any weapons-usable nuclear material to steal,⁴⁴ although that could change. In short, a nuclear handoff strategy disguised as a loose nukes problem would be very precarious.⁴⁵

No retaliation – international cooperation and limited suspects solve

Lieber and Press 13 (*Keir A. Lieber and **Daryl G. Press, *Received his M.A. and Ph.D. in Political Science from the University of Chicago, Associate Professor in the Edmund A. Walsh

School of Foreign Service and the Department of Government, **Associate Professor in the Department of Government, Dartmouth College. He received a Ph.D. in Political Science from the Massachusetts Institute of Technology, “Why States Won’t Give Nuclear Weapons to Terrorists”, Summer 2013, *International Security*, Vol. 38, No. 1, Pages 80-104)

There are at least five reasons, however, to expect that attributing a nuclear terrorist attack would be easier than attributing a conventional terrorist attack. First, no terrorism investigation in history has had the resources that would be deployed to investigating the source of a nuclear terror attack— particularly one against the United States or a U.S. ally. Rapidly attributing the attack would be critical, not merely as a first step toward satisfying the rage of the victims but, more importantly, to determine whether additional nuclear attacks were imminent. The victim would use every resource at its disposal— money, threats, and force—to rapidly identify the source of the attack.⁴⁷ If necessary, any investigation would go on for a long time; it would never “blow over” from the victim’s standpoint. The second reason why attributing a nuclear terror attack would be easier than attributing a conventional terrorist attack is the level of international assistance the victim would likely receive from allies, neutrals, and even adversaries. An attack on the United States, for example, would likely trigger unprecedented intelligence cooperation from its allies, if for no other reason than the fear that subsequent attacks might target them. Perhaps more important, even adversaries of the United States—particularly those with access to fissile materials—would have enormous incentives to quickly demonstrate their innocence. To avoid being accused of sponsoring or supporting the attack, and thus to avoid the wrath of the United States, these countries would likely go to great lengths to demonstrate that their weapons were accounted for, that their fissile materials had different isotopic properties than the type used in the attack, and that they were sharing any information they had on the attack. The cooperation that the United States received from Iran and Pakistan in the wake of the September 11 attacks illustrates how potential adversaries may be motivated to help in the aftermath of an attack and stay off the target list for retaliation.⁴⁸ The pressure to cooperate after an anonymous nuclear detonation on U.S. soil would be many times greater.⁴⁹ Third, the strong positive relationship between the number of fatalities stemming from an attack and the rate of attribution (as depicted in figures 1 to 3 above) suggests that the probability of attribution after a nuclear attack— with its enormous casualties—should be even higher. The 97 percent attribution rate for attacks that killed ten or more people on U.S. soil or that of its allies is based on a set of attacks that were pinpricks compared to nuclear terrorism. The data in those figures suggest that our conclusions understate the actual likelihood of nuclear attribution. Fourth, the challenge of attribution after a terrorist nuclear attack should be easier than after a conventional terrorist attack, because the investigation would begin with a highly restricted suspect list. In the case of a conventional terror attack against the United States or an ally, one might begin the investigation at the broadest level with the U.S. Department of State’s list of fifty-one foreign terrorist organizations. In the case of a nuclear terror attack, only fifteen of these FTOs have state sponsors—and only one sponsor (Pakistan) has either nuclear weapons or fissile materials. (If Iran acquires nuclear weapons, that number will grow to two, but there is no overlap between the terror groups that Pakistan supports and those that Iran assists.) Finally, any operation to detonate a nuclear weapon would involve complex planning and coordination—securing the weapon, learning to use it, planning the time and location of detonation, moving the weapon to the target, and conducting the attack. Even if only a small cadre of operatives knew the nuclear nature of the attack, the planning of a spectacular operation would be hard to keep secret.⁵⁰ For example, six months prior to the September 11 attacks, Western intelligence detected numerous indications that al-Qaida was planning a major attack. The intelligence was not specific enough—or the agencies were not nimble enough—to prevent the operation, but the indicators were “blinking red” for months, directing U.S. attention to al-Qaida as soon as the attacks began.⁵¹

Turns Case

Terrorism is used as a justification for increased surveillance – empirics prove and turns case

Haggerty and Gazso 2005 (Kevin, Professor of Criminology and Sociology at the University of Alberta; Amber, Associate Professor in the Department of Sociology at York University, The Canadian Journal of Sociology / Cahiers canadiens de sociologie, Vol. 30, No. 2 (Spring, 2005), pp. 169-187 “Seeing beyond the Ruins: Surveillance as a Response to Terrorist Threats” JSTOR; accessed 7/17/15 JH @ DDI)

A climate of fear and anxiety helped ease the passage of such laws (Davis, 2001). However, a great deal of organizational opportunism was also at work. Many of the surveillance proposals adopted in the days after the attack were recycled from earlier legislative efforts. In previous incarnations these proposals had often been legitimated as essential for the international "war on drugs" or to address other crimes, such as money laundering. The September 11 th attacks gave the authorities a new and apparently unassailable legitimation for long-standing legislative ambitions. Before the dust had settled on Manhattan, the security establishment had mobilized to expand and intensify their surveillance capabilities, justifying existing proposals as necessary tools to fight the new war against terrorism. Ultimately, the police, military and security establishment reaped an unanticipated windfall of increased funding, new technology and loosened legislative constraints by strategically invoking fears of future attacks. There are several examples of such opportunism. Since at least 1999, when Congress initially turned down their request, the U.S. Justice Department has lobbied for the development of new "secret search" provisions. Likewise, prior to the attacks, the FBI and the National Telecommunications and Information Systems Security Committee had a lengthy shopping list of desired surveillance-related measures including legal enhancements to their wiretapping capabilities, legal constraints on the public use of cryptography, and provisions for governmental agents to compel Internet service providers to provide information on their customers (Burnham, 1997). All of these proposals were recycled and implemented after the September 11th attacks now justified as integral tools in the "war on terrorism." New provisions requiring banks to exercise "due diligence" in relation to their large depositors were originally justified by the authorities as a means to counter the "war on drugs." The opportunism of many of these efforts was inadvertently revealed by an RCMP Sergeant when, during a discussion about new official antiterrorism powers to monitor financial transactions, he noted that: "We've been asking for something like this for four years. It's really our best weapon against biker gangs" [emphasis added] (Corcan, 2001). In Canada, the Federal Privacy Commissioner was particularly alarmed by the development of what he referred to as a "Big Brother database." This amounts to a detailed computerized record of information about Canadian travelers. Although justified as a means to counter terrorism, the data will be made available to other government departments for any purpose they deem appropriate. Such provisions raise the specter of informational "fishing expeditions." Indeed, the Canadian government has already indicated that this ostensible anti-terrorist database will be used to help monitor tax evaders and catch domestic criminals. It will also be used to scrutinize an individual's travel history and destinations, in an effort to try and determine whether they might be a pedophile or money launderer (Radwanski, 2002). While these are laudable goals, they also reveal how a host of other surveillance agendas have been furthered by capitalizing on the new anti-terrorism discourse.

Lone wolf terror attacks are used to justify disproportionate increases in surveillance and military operations abroad

Lennard, Senior News Analyst for Vice News, 10/27/14 (Natasha Lennard, Brooklyn-based Senior News Analyst for Vice News, VICE News, October 27, 2014, "'Lone Wolf' Terrorist Acts Will Be Used to Justify the Surveillance State" <https://news.vice.com/article/lone-wolf-terrorist-acts-will-be-used-to-justify-the-surveillance-state>, accessed 7/17/15 JH @ DDI)

The phenomenon of individuals committing violent and murderous acts in the name of an ideology is nothing new in the US. The FBI's Operation Lone Wolf investigated white supremacists encouraging autonomous violent acts in the 1990s. Why, then, are we seeing pundits and politicians newly focus on the "lone wolf" category? There's no simple answer, but we can at the very least see that the old binary, distinguishing terror as the act of networked groups versus lone madman mass killings — a distinction that has tacitly undergirded post-9/11 conceptions of terrorism — doesn't serve the latest iteration of the war on terror. California Senator Dianne Feinstein, speaking on CNN's State of the Union on Sunday, suggested that "the Internet, as well as certain specific Muslim extremists, are really firing up this lone-wolf phenomenon." Whether intentionally or not, the Senate Intelligence Committee chair performed a lot of political work with that one comment. Crystallizing "lone wolves" as a key threat domestically helps legitimize the US's current military operation against the Islamic State in Iraq and Syria. With or without established connections, the Islamic State's far-reaching tentacles of online influence encouraging individuals worldwide cement the group as a threat to the homeland — which is always useful for politicians struggling to legally justify another protracted war. In this way, attributing attacks to homegrown "lone wolves" is more useful for current US political interests than attributing them to madness alone. The assumption that terror acts were always borne of connected networks problematically buoyed domestic counter-terror efforts that saw entire communities profiled as potential threats. Which is not to say that "lone wolf terrorist" is a flawed designation for attacks by ideologically motivated individuals. In many ways it seems apt, and any challenge is welcome to the all too basic distinction that imbues group terror with motive while dismissing individual acts as madness. The "lone wolf" straddles the ill-conceived gap between madman and terrorist node. It's an intersection all too complicated for the inexpert punditry of Fox News: "They are terrorist acts, to be sure," Megyn Kelly said about Canadian gunman Michael Zehaf-Bibeau, adding "but this guy was also a nutcase." Furthermore, the assumption that terror acts were always borne of connected networks problematically buoyed domestic counter-terror efforts that saw entire communities profiled as potential threats. Under the premise that terror networks ran like arteries through US Muslim communities enabled an era of profile-driven preemptive policing that has been nothing short of racist. Entire mosques in New York were designated terrorist organizations to enable police surveillance. The NSA's meta-data collections claim justifiability on the premise that terror was locatable by tracing networks of communication. The "lone wolf" phenomenon should at least prompt the questioning of the sort of profile-based counter-terror efforts that assumed terror lurked in any network of Muslims, and that the mass hoarding of communications data was vital to national security. However, the rhetoric surrounding this type of domestic threat already bodes ill for civil liberties. If the hunt for terrorist networks has been plagued by ethnic profiling and overreaching spycraft, an established threat of "lone wolf" attacks gives a defensive imprimatur for unbounded NSA-style surveillance — anyone can wield a hatchet with ideological ire. As Chairman of the House Homeland Security Committee Michael McCaul said on This Week, finding such lone actors in advance of attacks is like "finding a needle in a haystack." And as Feinstein said the same day, "You have to be able to watch it, and you have to be able to disrupt them." As such, the era of the "lone wolf" terrorist does not only spell the end of the bunk distinction between motivated group and deranged individual. It ushers in the dawn of a new era of justification for our totalized state of surveillance and national security paranoia.

Surveillance would increase after a terrorist attack

Feaver 1/13/15

(Peter D., 1/13/15, Foreign Policy, "10 Lessons to Remember After a Terrorist Attack," Peter is a professor of political science and public policy and Bass Fellow @ Duke University, and director of the Triangle Institute for Security Studies and the Duke Program in American Grand Strategy, <http://foreignpolicy.com/2015/01/13/ten-lessons-to-remember-after-a-terrorist-attack/>, 7/16/15, SM)

In particular, it is striking how some of the things that were "obvious" in the days and weeks after 9/11, but then were gradually forgotten, have become obvious again:^a Terrorists succeed when they are abetted by intelligence failures. Or, put another way, terrorists only need to get lucky once to "succeed," whereas counterterrorism has to be lucky all the time to "succeed."^a Even robust intelligence and law enforcement may not guarantee 100 percent safety and security. By global

standards — certainly by the standards of Western democracies — France has a particularly formidable counterterrorist structure. But it failed in this instance.^a When terrorists succeed in an attack, citizens demand that the government do more to protect them — even if they have already been doing a lot. And **steps that would have seemed heavy handed before the attack, say aggressive surveillance of suspected terrorists** or visible demonstrations of presence by the security forces, **are deemed not just tolerable but necessary.** Moreover, savvy political leaders will understand that one of the benefits of a stronger official response is that it is a hedge both against dangerously stronger vigilantism and also against additional pressure from some segments of the public to do more than is wise.

Terrorism leads to crackdowns

History.com, *Reaction to 9/11*, <http://www.history.com/topics/reaction-to-9-11>, 2010

“Today,” the French newspaper Le Monde announced on September 12, 2001, “we are all Americans.” People around the world agreed: The terrorist attacks of the previous day had felt like attacks on everyone, everywhere. They provoked an unprecedented expression of shock, horror, solidarity and sympathy for the victims and their families. Citizens of 78 countries died in New York, Washington, D.C., and Pennsylvania on September 11, and people around the world mourned lost friends and neighbors. They held candlelight vigils. They donated money and goods to the Red Cross and other rescue and relief organizations. Flowers piled up in front of American embassies. Cities and countries commemorated the attacks in a variety of ways: The Queen Mother sang the American national anthem at Buckingham Palace’s Changing of the Guard, while in Brazil, Rio de Janeiro put up huge billboards that showed the city’s famous Christ the Redeemer statue embracing the New York City skyline. Meanwhile, statesmen and women rushed to condemn the attacks and to offer whatever aid they could to the United States. Russian president Vladimir Putin called the strikes “a blatant challenge to humanity,” while German chancellor Gerhard Schroeder declared that the events were “not only attacks on the people in the United States, our friends in America, but also against the entire civilized world, against our own freedom, against our own values, values which we share with the American people.” He added, “We will not let these values be destroyed.” Canadian Prime Minister Jean Chretien denounced the “cowardly and depraved assault.” He tightened security along the border and arranged for hundreds of grounded airplanes to land at Canadian airports. Even leaders of countries that did not tend to get along terribly well with the American government expressed their sorrow and dismay. The Cuban foreign minister offered airspace and airports to American planes. Chinese and Iranian officials sent their condolences. And the Palestinian leader Yasser Arafat, visibly dismayed, told reporters in Gaza that the attacks were “unbelievable, unbelievable, unbelievable.” “We completely condemn this very dangerous attack,” he said, “and I convey my condolences to the American people, to the American president and to the American administration.” But public reaction was mixed. The leader of the Islamic militant group Hamas announced that “no doubt this is a result of the injustice the U.S. practices against the weak in the world.” Likewise, people in many different countries believed that the attacks were a consequence of America’s cultural hegemony, political meddling in the Middle East and interventionism in world affairs. The Rio billboards hadn’t been up for long before someone defaced them with the slogan “The U.S. is the enemy of peace.” Some, especially in Arab countries, openly celebrated the attacks. But most people, even those who believed that the United States was partially or entirely responsible for its own misfortune, still expressed sorrow and anger at the deaths of innocent people. On September 12, the 19 ambassadors of the North Atlantic Treaty Organization (NATO) declared that the attack on the United States was an attack on all of the member nations. This statement of solidarity was mostly symbolic—NATO did not authorize any specific military action—but it was still unprecedented. It was the first time that the organization had ever invoked the mutual defense section of its charter (intended to protect vulnerable European nations from Soviet invasion during the Cold War). NATO eventually sent five airplanes to help keep an eye on American airspace. Likewise, on September 12 the United Nations Security Council called on all nations to “redouble their efforts” to thwart and prosecute terrorists. Two weeks later, it passed another resolution that urged states to “suppress the financing of terrorism” and to aid in any anti-terrorism campaigns. But these

declarations of support and solidarity didn't mean that other countries gave the United States a free hand to retaliate however, and against whomever, it pleased. Allies and adversaries alike urged caution, warning that an indiscriminate or disproportionate reaction could alienate Muslims around the world. In the end, almost 30 nations pledged military support to the United States, and many more offered other kinds of cooperation. Most agreed with George Bush that, after September 11, the fight against terrorism was "the world's fight."

Terrorists Hate US

Al Qaeda

Al Qaeda is expanding and plotting attacks against the West

Hubbard 6/9/2015 (Ben, Al Qaeda Tries a New Tactic to Keep Power: Sharing It, www.nytimes.com/2015/06/10/world/middleeast/qaeda-yemen-syria-houthis.html)

BEIRUT, Lebanon — After they routed the army in southern Yemen, fighters from Al Qaeda stormed into the city of Al Mukalla, seizing government buildings, releasing jihadists from prison and stealing millions of dollars from the central bank. Then they surprised everyone. Instead of raising their flags and imposing Islamic law, they passed control to a civilian council and gave it a budget to pay salaries, import fuel and hire teams to clean up garbage. The fighters receded into the background, maintaining only a single police station to arbitrate disputes. Al Qaeda's takeover of Yemen's fifth-largest city in April was the most direct indication yet that the group's most potent regional affiliates are evolving after years of American drone strikes killing their leaders and changing to meet the challenge posed by the Islamic State's competing and land-grabbing model of jihad. While the image of Al Qaeda has long been one of shadowy operatives plotting international attacks from remote hide-outs, its branches in Yemen and Syria are now increasingly making common cause with local groups on the battlefield. In doing so, they are distancing themselves from one of Osama bin Laden's central precepts: That fighters should focus on the "far enemy" in the West and not get bogged down in local insurgencies. In recent weeks, the Qaeda affiliate in Yemen has allied with armed tribes to fight Iranian-backed Houthi rebels, putting that alliance on the same side of the country's civil war as the United States and Saudi Arabia. In Syria, Qaeda-allied fighters are important members of a rebel coalition against President Bashar al-Assad that includes groups supported by the West. This strategy has clear benefits for a group that has long been near the top of the United States's list of enemies by allowing it to build local support while providing some cover against the threat of foreign military action. But despite Al Qaeda's increased involvement in local battles, American officials say the group remains committed to attacking the West, a goal that could be easier to plot from sanctuaries where it enjoys local support. Cooperating with others could also give Al Qaeda a long-term advantage in its competition with the extremists of the Islamic State, analysts said. Since its public break with Al Qaeda last year, the Islamic State, also known as ISIS or ISIL, has stolen the jihadist limelight by seizing cities in Syria and Iraq and declaring a caliphate in the territory it controls. This has won it the allegiances of other militant cells from Libya to Afghanistan. The Islamic State has insisted that other groups join it or be considered enemies, a tactic that has alienated many in areas it controls. And its public celebration of violence, including the beheading of Western hostages, helped spur the formation of a United States-led military coalition that is bombing the group. Al Qaeda's branches in Syria and Yemen have taken a different route, building ties with local groups and refraining from the strict application of Shariah, the legal code of Islam, when faced with local resistance, according to residents of areas where Al Qaeda holds sway. When Al Qaeda took over Al Mukalla in April, it seized government buildings and used trucks to cart off more than \$120 million from the central bank, according to the bank's director, Abdul-Qader Foulihan. That sum could not be independently verified. But it soon passed control to a civilian council, giving it a budget of more than \$4 million to provide services, an arrangement that made sense to local officials seeking to serve their people during wartime. "We are not Qaeda stooges," said Abdul-Hakeem bin Mahfood, the council's secretary general, in a telephone interview. "We formed the council to avoid the destruction of the city." While the council pays salaries and distributes fuel, Al Qaeda maintains a police station to settle disputes, residents said. It has so far made no effort to ban smoking or regulate how women dress. Nor has it called itself Al Qaeda, instead using the name the Sons of Hadhramaut to emphasize its ties to the surrounding province. One self-described Qaeda member said that the choice of name was deliberate, recalling that after the group seized territory in southern Yemen in 2011, the country's military had mobilized to push it out with support from the United States. "We were in control for a year and six months, we applied God's law, we created a small state and the whole world saw it, but they did not leave us alone," the man said in an interview with a Yemeni television station. "So we came here with the name the Sons of Hadhramaut, but the people here know who we are." American officials have long considered the terrorist group's Yemeni branch, known as Al Qaeda in the Arabian Peninsula, the most dangerous to the West. It has sought to carry out attacks against the United States, and it retains sophisticated bomb-making expertise. Now, Yemen's civil war has given the group an opportunity to expand, analysts said.

Can't deter Al-Qaeda

Ignatieff '4

(Michael Ignatieff, Canadian author, academic and former politician. has held senior academic posts at the universities of Cambridge, Oxford, Harvard and Toronto, 2004, Princeton University Press, “the lesser Evil: Political Ethics in an Age of Terror”)

The third type of terrorist who might prove undeterrable were they to acquire these weapons is Al Qaeda itself. Unlike terrorists who serve the liberation claims of a particular group of people, Al Qaeda does not depend for its support on a particular population who could be subjected to revenge or retribution following an attack. Thus the attackers on Afghan soil. Once Afghanistan had served its function as a base, it was dispensable as far as Al Qaeda was concerned. Since their goal is not the acquisition of power itself but the punishment of the United States and its strategic allies, they cannot be stopped by political negotiation, concession, or appeasement. Nor are they susceptible to the incentives that make some armed groups conform to the laws of war in order to achieve international recognition or legitimacy. This indifference to incentives and sanctions applies not merely to Al Qaeda but to any cult with charismatic psychopaths at its head. It is hard to see what political action a state could have taken to deter the Japanese cult group Aum Shinrikyo before it released toxic agents in the Tokyo subway system. Unlike political groups seeking liberation or national territory, these cults cannot be engaged politically, and since they are closed and conspiratorial, they are difficult to infiltrate and neutralize. The logic of deterrence that once kept state violence in some kind of check has no traction with loners and the cult leaders of global terrorism. Since they promise their followers eternal life, they create a cadre of undeterrables.

Standard rationality doesn't apply to Al-Qaeda – they cannot be deterred Ignatieff '4

(Michael Ignatieff, Canadian author, academic and former politician. has held senior academic posts at the universities of Cambridge, Oxford, Harvard and Toronto, 2004, Princeton University Press, “the lesser Evil: Political Ethics in an Age of Terror”)

In the examples considered so far, it has become clear that where armed groups have a real prospect of obtaining recognition and statehood, they may be persuaded to abstain from terrorism. Where their success in this struggle depends on retaining the support of local populations, they may also conclude that restraint pays better than atrocity. But these incentives and restraining factors do not apply to all terrorist groups. No such factors discipline the conduct of Al Qaeda. They have no aspirations to statehood and therefore no incentive to play by any known rules. They do not serve a determinate population and are therefore unconstrained either by their supporters' moral code or by their vulnerability to reprisal. They even appear indifferent to casualties inflicted on Muslim populations who live or work in proximity to their targets. This is what makes them so dangerous. This is also why they cannot be engaged politically and must instead be defeated militarily. Al Qaeda is therefore a distinctive kind of terrorism, no longer in the service of a people's freedom or in the name of the overthrow of a given state. The apocalyptic nihilists who attacked the United States on September 11 did not leave behind justifications, noble or otherwise, for their actions. They directed their propaganda and their justifications not at a specific state denying a claim to self-determination, but at the United States as the hated imperial capital of a materialistic, secular, and alien civilization. The so-called martyrs defended their actions in the language of Islamic eschatology, not in the language of rights. ³³ Moreover, their intentions were apocalyptic, not political: to humiliate the archenemy of Islam and secure martyrdom in the process. It is difficult to see, in principle, how acts unaccompanied by demands can be accommodated politically. If the goal of terrorism is neither territory nor freedom, if its purpose is to strike a blow that asserts the dignity of Muslim believers while inflicting horror and death upon their enemies, then it is difficult to envisage a political response of any kind. Such an attack cannot be met by politics but only by war.

Generic

Biological realism explains terrorism – means it's impossible to stop it Thayer and Hudson '11

(Brad and Valerie, Thayer is a Professor of Political Science at Baylor, Hudson is the Professor of Political Science at Brigham Young. "Sex and the Shaheed: Insights from the Life Sciences on Islamic Suicide Terrorism" International Security, Vol 34 No 4. 2011)

Yet, even if al-Qaida is diminished, Islamic fundamentalist suicide attacks will continue to be executed by al-Qaida-inspired groups, Palestinian terrorist groups such as Hamas and Hezbollah, and the Taliban because they are an effective asymmetric tactic against some of the world's most hardened security forces. Islamic fundamentalist suicide terrorists have penetrated British, French, Israeli, and U.S. defenses, among others. Moreover, only suicide terrorists could have executed the September 11 attacks or penetrated the Israeli security corridor bordering the Palestinian Authority, because they alone could navigate the countless security obstacles and be capable of self-destructing at a precise location and time while causing the greatest damage. As Mustafa Alani puts it, "It's what we call a thinking, walking bomb. He watches the whole scene [and] chooses the best time and best location."**4 Suicide terrorism is the ultimate smart bomb, demonstrating unparalleled political commitment and personal resoluteness**. Scholars have examined Islamic fundamentalist suicide terrorism primarily through the lens of international politics, economics, and cultural studies, and each offers important insights into the motivation and recruitment policies of groups that practice it. There is, however, another discipline that can make a useful contribution—the life sciences. we argue that the application of concepts and approaches from the life sciences yields new insights into (1) the causal context of Islamic fundamentalist suicide terrorism, (2) the motivation of suicide terrorists, and (3) policy approaches to subvert this form of terrorism. A consilient approach, incorporating ideas from the life sciences and the social sciences, can aid social scientists and policy analysts in addressing the problem of Islamic suicide terrorism.⁵ The life sciences can be a source of new analogies and examples that might help scholars and analysts to approach the problem in fresh ways and derive effective policies.⁶ Our argument is important for three reasons. First, understanding the motivations of Islamic fundamentalist terrorists is critical for creating policies to stop them, ideally before they become terrorists. Second, our approach helps to illuminate why few Islamic fundamentalist terrorists defect and how policies may be crafted to promote defections. Finally, it advances the goal of consilience—that is, using insights from human evolution and ecology, as well as from the social sciences, to create a more comprehensive and detailed understanding of human behavior. In essence, consilient approaches bridge the gap between the life sciences and the social sciences. For the advancement of knowledge concerning human behavior, there may be no more important task than removing the barriers between the life sciences and the social sciences, which we believe will revolutionize both fields of study.⁷

The evolutionary structure of terrorist organizations makes them impossible to deter

Thayer and Hudson '11

(Brad and Valerie, Thayer is a Professor of Political Science at Baylor, Hudson is the Professor of Political Science at Brigham Young. "Sex and the Shaheed: Insights from the Life Sciences on Islamic Suicide Terrorism" International Security, Vol 34 No 4. 2011)

Alpha males try to resolve this inevitable tension through male bonding. By persuading non-alpha males that they are all “family,” alpha males may be able to dampen intragroup tensions. Evolutionary psychology also helps to explain why this strategy will be effective. Humans evolved in small-group dominance hierarchies—principally the family and extended family hunter groups. Accordingly, the human mind is well suited for comprehending and bonding with small groups of dozens or, at most, 100 or 150 people.²⁴ To be sure, humans may bond with larger units (e.g., a country), but that requires an extensive effort by the state (e.g., years of nationalistic education). In mimicking the family bond, male-bonded groups often assume the task of educating young males, providing another family-like service. Young people often embrace indoctrination into a belief system through a religion or an educational system, or the combination of the two, such as in madrassas.²⁵ Emulating the family also makes the male-bonded group more resilient—harder to penetrate and to destroy—similar to the family or the mafia and suggests they must be targeted in unique ways. The dynamics described above are found among all societies, not only those of the Islamic world. Alpha males will seek to co-opt non-alpha males into male-bonded societies in which violence is controlled by alphas and guided toward out-groups, not in-groups (and especially not targeted toward the alphas). In this study, however, we limit ourselves to examining factors that we argue contribute to Islamic fundamentalist suicide terrorism. Of course, even within the Islamic world, individuals will possess other motivations to conduct suicide attacks. For example, there is evidence that at least some Iraqi male teenagers have been forced to train as suicide bombers under fear of reprisals against their families.

Terrorism’s engrained in Islamic societies – it’s the only way for non-Alpha males to achieve status

Thayer and Hudson ‘11

(Brad and Valerie, Thayer is a Professor of Political Science at Baylor, Hudson is the Professor of Political Science at Brigham Young. “Sex and the Shaheed: Insights from the Life Sciences on Islamic Suicide Terrorism” International Security, Vol 34 No 4. 2011)

Baldly put, polygyny means mates for some men and none for others. And who will not obtain mates? It will not be those with advantages, but rather those who lack them. Non-alpha males will be the reproductive losers, and this gives them great motivation to use force, the sole area in which they possibly hold a reproductively relevant advantage over alpha males. Alpha males and non-alpha males understand the ramifications of polygyny for their relations: polygyny will heighten in-group violence against alpha males by non-alpha males absent a mechanism that directs this violence to an out-group. From the perspective of alpha males, suicide terrorism offers some interesting possibilities. A non-alpha male in a polygynous society with high levels of gender differentiation wants to find a way to project power, preferably through violence. In this way, he hopes to obtain greater social status and thus greater reproductive success. An alpha male in the same society wants to find a way to channel that violence to out-groups without allowing the nonalpha male to achieve social status through violence, which ultimately could threaten the interests of the alpha males. **Suicide terrorism, sanctioned and applauded by religious belief, represents an attractive strategy in this context.** if alpha males can persuade non-alpha males that (1) their violence should be directed to out-groups, (2) that thereby these non-alpha males will greatly increase their social status and make their families proud, but (3) they will have to die and experience their reproductive success vicariously through their kin, or in the afterlife, then the threat of in-group violence can be decreased. For some non-alpha males, becoming a shaheed is the most effective response to the human evolutionary conundrum produced by male dominance hierarchies, high levels of gender differentiation, and the scarcity of females resulting from polygyny.⁴⁰ In 2003 Robert Pape found that among Islamic suicide terrorists, 97 percent were single and 84 percent were male. If one excludes the Kurdistan Workers’ Party, which promotes gender equality, the gender ratio rises to 91 percent.⁴¹ these young men come

predominantly from lower socio-economic strata of society than those involved in nonsuicide terrorism, despite the somewhat anomalous case of the September 11 attacks. Evolutionary psychology would predict that this subpopulation would be most susceptible to the lure of suicide terrorism. Islamic religious texts promise the shaheed seventy-two virgins in the afterlife. ⁴² Miller and Kanazawa note, “It is the combination of polygyny and the promise of a large harem of virgins in heaven that motivate many young Muslim men to commit suicide bombings. Consistent with this explanation, all studies of suicide bombers indicate that they are significantly younger than not only the Muslim population in general but other (nonsuicidal) members of their own extreme political organizations like Hamas and Hezbollah. And nearly all suicide bombers are single.”⁴³ Failed suicide bombers may not admit to this temptation as motivation for their action, perhaps considering it too vulgar or impious. Nevertheless, it can be a key draw for a male contemplating poor reproductive prospects in this life. In March 2004, Husam Abdu (also Abdo), a sixteen-year-old failed suicide bomber captured at an Israeli checkpoint in Gaza, explained to Israeli intelligence officials that his dwarfism made him the object of ridicule at school, and he had been tempted by the promise of sexual relations with virgins in paradise. ⁴⁴ Another captured would-be suicide terrorist, a Moroccan man, aged twenty-six, suffered from facial disfigurement.⁴⁵ A study of suicide bombers in Iraq conducted by the U.S. military found that they were almost always single males from eighteen to thirty, with a mean age of twenty-two and no children. ⁴⁶ The study concluded that most are “alienated young men from large families who are desperate to stand out from the crowd and make their mark.”⁴⁷

Business Confidence DA JDI

1NC

Companies innovating now due to hands off federal approach.

Haraldsson 13 – Social liberal with leanings toward centrist politics has degrees in history and philosophy (Hrafnkell, <http://www.politicususa.com/2013/07/08/big-box-retailers-grab-big-data-shop.html>, **Big Box Retailers Grab Big Data – What You Need to Know When You Shop, July 8th 2013) NAR**

The Federal Trade Commission (FTC) sought public feedback on the subject of facial recognition software as far back as 2011 (Federal Trade Commission, 2011) and a letter from several members of congress to the FTC in January 2012, expressed concerns that some companies were already employing it unbeknownst to consumers (Barton et al, 2012). In their report, the Federal Trade Commission (2012) concluded that while the potential for abuse is very real, the relative newness of the technology offers the opportunity to ensure that as the industry grows it does so in a way that benefits both business and consumer (p. 21).

Uncertain regulatory environments tank the economy

Galston 13 [William Galston holds the Ezra K. Zilkha Chair in Governance Studies and senior fellow at the Brookings Institution. Sept 24 13, "Policy Uncertainty Paralyzes the Economy" <http://online.wsj.com/news/articles/SB10001424052702303759604579093803870508872> //jweideman]

Endless strife over public policy increases uncertainty, and greater uncertainty slows growth.

Beyond all the damage that political hyperpolarization inflicts on public trust, it undermines what the American people want most—jobs for themselves and expanded opportunity for their children. A growing body of economic research supports this linkage between policy-based uncertainty and the real economy. Over the past few years, Stanford-based economists Scott Baker and Nicholas Bloom teamed up with the University of Chicago's Steven Davis to develop a measure of economic policy uncertainty and to explore the effects of changing levels of uncertainty on the economy. Between 1985 and 2007, they found, uncertainty varied within a narrow and mostly predictable range, moving up in response to presidential elections and international conflicts and then subsiding. Since then, however, policy uncertainty has risen to historically elevated levels, with the peaks—corresponding to events such as the collapse of Lehman Brothers and the initial defeat of the TARP legislation—surging above that after the 9/11 terror attacks. In a finding that today's policy makers would do well to ponder, the highest level of policy uncertainty ever recorded—in mid-2011 as Washington struggled with the debt ceiling and narrowly averted default—stood at two-and-a-half times the average of the past quarter century. Since 2007, policy-induced uncertainty has become a larger and larger share of overall economic uncertainty. Policy uncertainty directly affects economic activity. Messrs. Baker, Bloom and Davis summarize their case: "When businesses are uncertain about taxes, health-care costs, and regulatory initiatives, they adopt a cautious stance. Because it is costly to make a hiring or investment mistake, many businesses naturally wait for calmer times to expand. If too many businesses wait to expand, the recovery never takes off." The evidence also suggests that policy uncertainty increasing affects the performance of the stock market. This story makes intuitive sense. But how much of a difference does uncertainty make in the real economy? To answer this question, Messrs. Baker, Bloom and Davis make use of a statistical technique for which Christopher Sims won a 2011 Nobel Prize in economics. They find that restoring 2006 levels of policy uncertainty could increase industrial production by 4% and employment by 2.3 million jobs over current baseline estimates—enough to bring unemployment down by about 1.5 percentage points. It's easy to dismiss a single innovative study: Every index is controversial, as is every model and statistical technique. But in July 2013, Sylvain Leduc and Zheng Liu, two researchers at the Federal Reserve Bank of San Francisco, published a paper that took a different route to a very similar result. Their point of departure was a historical relationship known as the Beveridge curve: As job openings increase, the unemployment rate tends to fall. The Great Recession has disrupted the terms of this relationship, however. The unemployment rate has fallen much less than the rise in job openings suggests that it should have, and there are more jobless workers per job opening than in previous recoveries. The San Francisco Fed researchers find that heightened policy uncertainty has become increasingly important in the job market. It turns out that as uncertainty rises, the intensity of businesses' recruitment activities wanes, lowering the rate at which firms fill jobs. By the end of 2012, the researchers calculate, heightened policy uncertainty accounted for about two-thirds of the shift in the Beveridge curve. Their bottom line: "[I]f there had been no policy uncertainty shocks, the unemployment rate would have been close to 6.5% instead of the reported 7.8%"—a result that aligns remarkably well with the Stanford/Chicago team's conclusion.

Low confidence plunges economy into depression

Duffy 13 (Philip, Rom Economics, Aug. 26 2013) <http://www.romeconomics.com/what-caused-the-great-depression/> SH

A traditional view is that the depression was caused by a sharp fall in 'consumer confidence' at the beginning of the 1930s. Behavioral hypotheses in economics posit that we are more willing to buy goods and services if we expect to have a stable income in the future, rising wealth and job security. In 1929, the Wall Street Crash shifted expectations, firstly in the US, and then across the world as huge proportions of people's wealth were lost due to plummeting stock prices. This meant that the average person began saving higher proportions of their income as a pre-cautionary measure against future uncertainty and thus reducing current spending/consumption. This caused a fall in consumption, coupled with a fall in housing investments due to a collapse in house prices. These shocks to the economy were amplified through feedback mechanisms, such as banking collapses.

Growth prevents nuclear warfare – history proves

Walter Russell Mead 9, the Henry A. Kissinger Senior Fellow in U.S. Foreign Policy at the Council on Foreign Relations, 2-4, "Only Makes You Stronger," The New Republic, <http://www.tnr.com/politics/story.html?id=571cbbb9-2887-4d81-8542-92e83915f5f8&p=2>

If current market turmoil seriously damaged the performance and prospects of India and China, the current crisis could join the Great Depression in the list of economic events that changed history, even if the recessions in the West are relatively short and mild. The United States should stand ready to assist Chinese and Indian financial authorities on an emergency basis--and work very hard to help both countries escape or at least weather any economic downturn. It may test the political will of the Obama administration, but the United States must avoid a protectionist response to the economic slowdown. U.S. moves to limit market access for Chinese and Indian producers could poison relations for years. For billions of people in nuclear-armed countries to emerge from this crisis believing either that the United States was indifferent to their well-being or that it had profited from their distress could damage U.S. foreign policy far more severely than any mistake made by George W. Bush. It's not just the great powers whose trajectories have been affected by the crash. Lesser powers like Saudi Arabia and Iran also face new constraints. The crisis has strengthened the U.S. position in the Middle East as falling oil prices reduce Iranian influence and increase the dependence of the oil sheikdoms on U.S. protection. Success in Iraq--however late, however undeserved, however limited--had already improved the Obama administration's prospects for addressing regional crises. Now, the collapse in oil prices has put the Iranian regime on the defensive. The annual inflation rate rose above 29 percent last September, up from about 17 percent in 2007, according to Iran's Bank Markazi. Economists forecast that Iran's real GDP growth will drop markedly in the coming months as stagnating oil revenues and the continued global economic downturn force the government to rein in its expansionary fiscal policy. All this has weakened Ahmadinejad at home and Iran abroad. Iranian officials must balance the relative merits of support for allies like Hamas, Hezbollah, and Syria against domestic needs, while international sanctions and other diplomatic sticks have been made more painful and Western carrots (like trade opportunities) have become more attractive. Meanwhile, Saudi Arabia and other oil states have become more dependent on the United States for protection against Iran, and they have fewer resources to fund religious extremism as they use diminished oil revenues to support basic domestic spending and development goals. None of this makes the Middle East an easy target for U.S. diplomacy, but thanks in part to the economic crisis, the incoming administration has the chance to try some new ideas and to enter negotiations with Iran (and Syria) from a position of enhanced strength. Every crisis is different, but there seem to be reasons why, over time, financial crises on balance reinforce rather than undermine the world position of the leading capitalist countries. Since capitalism first emerged in early modern Europe, the ability to exploit the advantages of rapid economic development has been a key factor in international competition. Countries that can encourage--or at least allow and sustain--the change, dislocation, upheaval, and pain that capitalism often involves, while providing their tumultuous market societies with appropriate regulatory and legal frameworks, grow swiftly. They produce cutting-edge technologies that translate into military and economic power. They are able to invest in education, making their workforces ever more productive. They typically develop liberal political institutions and cultural norms that value, or at least tolerate, dissent and that allow people of different political and religious viewpoints to collaborate on a vast social project of modernization--and to maintain political stability in the face of accelerating social and economic change. The vast productive capacity of leading capitalist powers gives them the ability to project influence around the world and, to some degree, to remake the world to suit their own interests and preferences. This is what the United Kingdom and the United States have done in past centuries, and what other capitalist powers like France, Germany, and Japan have done to a lesser extent. In these countries, the social forces that support the idea of a competitive market economy within an appropriately liberal legal and political framework are relatively strong. But, in many other countries where capitalism rubs people the wrong way, this is not the case. On either side of the Atlantic, for example, the Latin world is often drawn to anti-capitalist movements and rulers on both the right and the left. Russia, too, has never really taken to capitalism and liberal society--whether during the time of the czars, the commissars, or the post-cold war leaders who so signally failed to build a stable, open system of liberal democratic capitalism even as many former Warsaw Pact nations were making rapid transitions. Partly as a result of these internal cultural pressures, and partly because, in much of the world, capitalism has appeared as an unwelcome interloper, imposed by foreign forces and shaped to fit foreign rather than domestic interests and preferences, many countries are only half-heartedly capitalist. When crisis strikes, they are quick to decide that capitalism is a failure and look for alternatives. So far, such half-hearted experiments not only have failed to work; they have left the societies that have tried them in a progressively worse position, farther behind the front-runners as time goes by. Argentina has lost ground to Chile; Russian development has fallen farther behind that of the Baltic states and Central Europe. Frequently, the crisis has weakened the power of the merchants, industrialists, financiers, and professionals who want to develop a liberal capitalist society integrated into the world. Crisis can also strengthen the hand of religious extremists, populist radicals, or authoritarian traditionalists who are determined to resist liberal capitalist society for a variety of reasons. Meanwhile, the companies and banks based in these societies are often less established and more vulnerable to the consequences of a financial crisis than more established firms in wealthier societies. As a result, developing countries and countries where capitalism has relatively recent and shallow roots tend to suffer greater economic and political damage when crisis strikes--as, inevitably, it does. And, consequently, financial crises often reinforce rather than challenge the global distribution of power and wealth. This may be happening yet again. None of which means that we can just sit back and enjoy the recession. History may suggest that financial crises actually help capitalist great powers maintain their leads--but it has other, less reassuring messages as well. If financial crises have been a normal part of life during the 300-year rise of the liberal capitalist system under the Anglophone powers, so has war. The wars of the League of Augsburg and the Spanish Succession; the Seven Years War; the American Revolution; the Napoleonic Wars; the two World Wars; the cold war: The list of wars is almost as long as the list of financial crises. Bad economic times can breed

wars Europe was a pretty peaceful place in 1928, but the Depression poisoned German public opinion and helped bring Adolf Hitler to power. If the current crisis turns into a depression, what rough beasts might start slouching toward Moscow, Karachi, Beijing, or New Delhi to be born? The United States may not, yet, decline, but, if we can't get the world economy back on track, we may still have to fight. **America cannot turn inward**, the Obama of 2008 said in Berlin. The Obama of 2014 is now responding: "Yes we can."

Biometrics growth increasing

Lee 15

Justin, June 19, 2015, biometric update, "Analyst reports project significant growth in the global biometrics market" <http://www.biometricupdate.com/201506/analyst-reports-project-significant-growth-in-the-global-biometrics-market>

A blog post by Ploughshare Innovations offers a summary of recent analyst reports addressing the significant growth of the global biometrics market over the next decade.

MarketsandMarkets recently published a new report entitled 'Next Generation Biometrics Market', which projects that the biometrics market will undergo a CAGR of 17.9 percent between 2015 and 2020. This figure exceeds recent predictions made by TechSci Research, which forecasted the global biometrics market to increase by 14 percent year-on-year between now and 2020, before eventually reaching a value of \$21 billion. Additionally, Telstra recently released a survey of over 4,000 Generation X and Y consumers from Australia, Singapore, Malaysia, Indonesia, Hong Kong, the US and the UK, in which it found that the majority of mobile banking app users prefer biometrics over passwords as an account authentication method. The same study found they these app users would even be willing to share their DNA with their banks if it meant that it would increase the level of security and ease of access. Consumers also said they would be willing to pay for the added security, with the respondents saying they would pay £11 a year, on average, if it helped protect them from the risk of a cyber-attack. This continuous shift in attitudes towards biometric technologies has laid down the foundation for growth in the market, lowering the barriers to governments and companies adopting these authentication methods. This, in turn, has led to increased investment in the market.

Facebook and other big businesses rely on facial recognition

Roberts 6/17 (Jeff John, Fortune Magazine, 2015.) <https://fortune.com/2015/06/17/facebook-moments-privacy-facial-recognition/>

What a bad week for privacy. Consumer watchdogs gave up on government talks over facial recognition software after industry groups appeared to reject even basic restrictions on face-scanning. Meanwhile, Facebook rolled out a new service called “Moments” that expands the use of the company’s powerful “faceprint” technology. This doesn’t mean the privacy apocalypse is upon us; for now least, the Facebook “Moments” tool is just one more creepy-but-useful social media innovation. But if loss of liberty happens gradually, June of 2015 could be a watershed we look back on with regret. It marks a time when we took new steps towards accepting the use of our very faces as a universal ID card – without deciding on the rules for using it. Facebook’s powerful, dangerous faceprint tool Your face is like your fingerprint: It’s a set of identifying markers that are distinct to you and, short of major surgery, can’t be erased. In recent years, the FBI and others have amassed mass databases of “faceprints,” but Facebook has the biggest, and is best at using them. (“Faceprint” is a generic term, but one that has been adopted by online dictionaries and major media outlets).

Companies investing and experimenting in biometric systems now driven by government applications.

Jain et. al. 2k – University Distinguished Professor in the Department of Computer Science & Engineering at Michigan State University, specializing in Biometrics (Anil Jain, Lin Hong, and Sharath Pankanti) COMMUNICATIONS OF THE ACM February 2000/Vol. 43, No. 2 9, BIOMETRIC IDENTIFICATION, <http://citeseerx.ist.psu.edu/viewdoc/download?doi=10.1.1.447.4573&rep=rep1&type=pdf>) **NAR**

Biometrics is a rapidly evolving technology that has been widely used in forensics, such as criminal identification and prison security. Biometric identification is also under serious consideration for adoption in a broad range of civilian applications. E-commerce and e-banking are two of the most important application areas due to the rapid progress in electronic transactions. These applications include electronic fund transfers, ATM security, check cashing, credit card security, smartcards security, and online transactions. There are currently several large biometric security projects in these areas under development, including credit card security (MasterCard) and smartcard security (IBM and American Express). A variety of biometric technologies are now competing to demonstrate their efficacy in these areas. The market of physical access control is currently dominated by token-based technology. However, it is predicted that, with the progress in biometric technology, market share will increasingly shift to biometric techniques. Information system and computer-network security, such as user authentication and access to databases via remote login is another potential application area. It is expected that more and more information systems and computer-networks will be secured with biometrics with the rapid expansion of Internet and intranet. With the introduction of biometrics, government benefits distribution programs such as welfare disbursements will experience substantial savings in deterring multiple claimants. In addition, customs and

immigration initiatives such as INS Passenger Accelerated Service System (INSPASS), which permits faster processing of passengers at immigration checkpoints based on hand geometry, will greatly increase the operational efficiency. A biometric-based national identification system provides a unique ID to the citizens and integrates different government services. Biometrics-based voter registration prevents voter fraud; and biometrics-based driver registration enforces issuing only a single driver license to a person; and biometrics-based time/attendance monitoring systems prevent abuses of the current token-based manual systems. Biometric Technologies There are a multitude of biometric techniques either widely used or under investigation. These include, facial imaging (both optical and infrared), hand and finger geometry, eye-based methods (iris and retina), signature, voice, vein geometry, keystroke, and finger- and palm-print imaging. Some of these methods are indicated in Figure 4.

Large increase in Biometrics – globally.

Willis 08 (Paul Willis, August 11 2008, CNN, “Fully biometric airports becoming a reality”, Multi Media Journalist for CNN, <http://www.cnn.com/2008/BUSINESS/08/06/biometrics.airports/>)

Though some of the technology might seem like the stuff of science fiction fantasy (or nightmare, if you take the view of many civil liberty campaigners), the economics are very real. According to a recent study by market research firm ABI, investment in biometrics will drive global spending in the field to \$7.3 billion by 2013, up from around \$3 billion this year. The use of biometrics (broadly defined as technologies that identify people via physiological characteristics) has expanded rapidly in recent years. Almost every major hub airport has either begun using the technology, is trialling it or else has plans to do so. Biometric passports are fast becoming the norm with some countries like Germany storing fingerprint scans in chips on all new ones issued. In Britain, iris scanners have been introduced at a number of airports, including all five Heathrow Terminals to allow travellers to bypass normal border controls. Meanwhile, the U.S. Department of Homeland Security plans to extend a program to fingerprint all foreign nationals entering the country. They are trialling it at Washington's Dulles airport and plan to roll it out to all international hubs by the end of the year. The concept of biometrics has existed for some time - the first commercial application of a fingerprint reader dates back to 1984. So why the sudden interest? It has been due in part to security concerns prompted by terrorist atrocities like the September 11 attacks in New York, and in part because of major advances in technology.

UQ – Business Confidence High

Business confidence is at a post-recession high

Newsire 6/19 (IT Business Net, 2015). <http://www.itbusinessnet.com/article/Survey:-US-CFOs-Confidence-in-Business-Reaches-Post-Recession-High-3945021> **SH**

The "CFO Quarterly Outlook Survey," which polls U.S. CFOs of public and private businesses on their economic and business confidence and expectations, found that CFOs remain confident in the outlook for their own companies, with the optimism index for their companies reaching 74.01 this survey, the highest reported since 2006. The survey also revealed an increase in CFOs' optimism towards the global economy, which climbed to 57.69 (levels not seen since the second quarter 2011, and up from 53.19 in February 2015) on the survey's index. Respondents revealed a small decline in their optimism towards the U.S. economy to 68.14 (from 70.71 in February), but this score still remains almost four points higher than where it stood this time last year (64.17). Additionally, several other positive predictions made by CFOs support the overall conclusion that the U.S. business environment is improving, including anticipated increases in net earnings (10.47%) and revenue (9.15%) over the next 12 months.

--Ext – Business Confidence High

Business confidence is at a peak

Mutikani 6/9 (Lucia, Reuters, 2015). <http://www.reuters.com/article/2015/06/09/us-usa-economy-optimism-idUSKBN0OP0X420150609> SH

U.S. small business confidence increased to a five-month high in May with owners expecting a solid improvement in profits, which bodes well for the economy's prospects in the months ahead. The National Federation of Independent Business said on Tuesday its Small Business Optimism Index rose 1.4 points to 98.3, the highest reading since December. About 616 businesses took part in the survey. The upbeat confidence survey added to robust May employment and automobile sales reports that have suggested the economy was gaining momentum after a slow start to the second quarter.

5 month high in American business confidence

Udland 6/9 (Myles, Business Insider, 2015). <http://www.businessinsider.com/nfib-small-business-outlook-june-9-2015-6> SH

The labor market is rolling. On Tuesday, the National Federation of Independent Business, a conservative lobby group, released its latest small business report, which showed that its small business optimism index rose to 98.3 in May. But the really positive part of the report isn't the headline reading — though this did rise to a 5-month high — but the incredibly bullish commentary on the labor market.

Business Confidence high now (NV)

Reuters Editorial 15, 6-9-2015, "U.S. small business confidence rises to five-month high ," Reuters, <http://www.reuters.com/article/2015/06/09/us-usa-economy-optimism-idUSKBN0OP0X420150609>

U.S. small business confidence increased to a five-month high in May with owners expecting a solid improvement in profits, which bodes well for the economy's prospects in the months ahead. The National Federation of Independent Business said on Tuesday its Small Business Optimism Index rose 1.4 points to 98.3, the highest reading since December. About 616 businesses took part in the survey. The upbeat confidence survey added to robust May employment and automobile sales reports that have suggested the economy was gaining momentum after a slow start to the second quarter. Gross domestic product contracted in the first quarter. "It appears that the small business sector has finally attained a normal level of activity which will hopefully keep the economy moving forward," the NFIB said in a statement.

US business confidence increasing now-

AP, 6/9/15. "Number of US job openings jumped to 15-year high in April." <http://www.foxnews.com/us/2015/06/09/sign-business-confidence-number-us-job-openings-jumped-to-15-year-high-in-april/>

U.S. employers advertised the most open jobs in April than at any time in the 15 years that the government has tracked the data, a sign that this year's steady hiring will likely continue. The Labor

Department says the number of open jobs at the end of April jumped 5.2 percent to 5.4 million. The figure suggests that employers anticipate stronger customer demand in the

months ahead. **The job market has remained healthy even as the economy faltered at the start of 2015.** The steady hiring shows that businesses see the economic slump as having resulted mainly from temporary factors such as a harsh winter. On Friday, the government said **employers added a robust 280,000 jobs in May after a healthy gain in April.** Average hourly wages also ticked up.

Business confidence growing-

Mutikani, 6/9. Lucia, Yahoo News, 2015. "U.S. job openings hit record high; small businesses upbeat."

<http://news.yahoo.com/u-wholesale-inventories-rise-petroleum-prices-stabilize-140544329--business.html>

U.S. job openings surged to a record high in April and small business confidence perked up in May, suggesting the economy was regaining speed after stumbling at the start of the year. The

economy's stronger tone was reinforced by other data on Tuesday showing a solid rise in wholesale inventories in April, in part as oil prices stabilized. "This is more confirmation that the economy is indeed emerging from that soft patch in the first quarter and can still pick up even faster in the next few months," said Chris Rupkey,

chief financial economist at MUFG Union Bank in New York. Job openings, **a measure of labor demand**, rose 5.2 percent to a seasonally adjusted 5.4 million in April, the highest level since the series began in December 2000, the Labor Department said in its monthly Job Openings and Labor Turnover Survey (JOLTS). Hiring slipped to 5.0 million from 5.1 million in March. Economists say the lag in hiring suggests that employers cannot find qualified workers for the open positions. The number of unemployed job seekers per open job, a measure of labor market slack, fell to 1.6 in April, the lowest since 2007 and down from 1.7 in March. "On balance, we read the April JOLTS data as suggesting labor market momentum remains intact in the second quarter and labor market slack continues to diminish," said Jesse Hurwitz, an economist at Barclays in New York. The JOLTS report is one of the indicators being closely watched by Federal Reserve policymakers as they contemplate raising interest rates this year. The U.S. central bank has kept the short-term lending rate near zero since December 2008. Shelves are stacked with merchandise at a Wal-Mart Stores Inc company distribution center in Bentonv ... Tightening labor market

conditions were corroborated by a separate report from the National Federation of Independent Business that showed confidence among small businesses rising to a five-month high in May. **The share of businesses saying they could not fill open positions also increased to 29 percent last month.**

matching February's reading, **which was the highest since April 2006.** The economy contracted at a 0.7 percent annual pace in the first quarter and growth got off to a slow start in the second quarter, in part because of the lingering effects of a strong dollar and spending cuts in the energy sector. But a surge in job growth and automobile sales as well as gains in May factory activity suggest the economy is strengthening. Prices for U.S. government debt fell, while U.S. stock indexes edged up. The dollar slipped against a basket of currencies. In a third report, the Commerce Department said wholesale inventories increased 0.4 percent in April after rising 0.2 percent in March. Inventories are a key component of gross domestic product changes. The component of wholesale inventories that goes into the calculation of GDP - wholesale stocks excluding autos - rose 0.2 percent, prompting economists at Barclays to bump up their second-quarter growth estimate by one-tenth of a percentage point to a 2.9 percent annualized rate. Sales at wholesalers surged 1.6 percent in April, the largest rise since March of last year. Sales had been weak since last August, in part due to the negative impact of lower oil prices on the value of petroleum goods sales. That had led to an accumulation of inventory, leaving wholesalers with little appetite to buy more merchandise. Petroleum sales jumped 4.9 percent in April. At April's sales pace it would take 1.29 months to clear shelves, down from 1.30 months in March. An inventory-to-sales ratio that high usually means an unwanted inventory buildup, which would require businesses to liquidate stocks. That would weigh on manufacturing and economic growth. Economists, however, caution against reading too much into the elevated inventory-to-sales ratio, given the role that oil prices have played in depressing the value of petroleum goods sales. Still, they expect an inventory drawdown in the quarters ahead, which is one of the reasons for less robust second-quarter GDP growth estimates. Inventories added a third of a percentage point to first-quarter GDP.

Link- Uncertainty

Capital investment means regulatory uncertainty hurts the economy

Yglesias 11 [Matthew Yglesias is an American economics journalist. SEPTEMBER 8, 2011. "Where Is The Evidence That 'Regulatory Uncertainty' Has Increased? What Would Decrease It?" <http://thinkprogress.org/yglesias/2011/09/08/314950/where-is-the-evidence-that-regulatory-uncertainty-has-increased-what-would-decrease-it/> //jweideman]

I think this is the wrong way of conceding what's correct about the uncertainty talking point, and then once you understand what's correct about it you'll see why it's totally wrong as an explanation of slow economic growth. Here's the punchline, though—**uncertainty about the future course of regulation is a huge drag on economic growth. It would be substantially easier to invest capital in productive enterprises if the state of future regulations was perfectly predictable.** By the same token, if there were no tax uncertainty it would be easier to invest capital in productive enterprises. But both of these points are subsidiary to the larger point that if the future were completely predictable we'd have a lot more economic growth. Remember in Back To The Future II when Biff uses his knowledge of the past to get rich? This works on a social level. **Ignorance about what the future will look like is inefficient.**

Link- NSA

Corporate industry in bed with the government to steal data mine for capital gain-

David Price 7/1/14 - <http://monthlyreview.org/2014/07/01/the-new-surveillance-normal/>

“The New Surveillance Normal” (senior reporter for the monthly review) // kbuck

The National Security Agency (NSA) document cache released by Edward Snowden reveals a need to re-theorize the role of state and corporate surveillance systems in an age of neoliberal global capitalism. While much remains unknowable to us, we now are in a world where private communications are legible in previously inconceivable ways, ideologies of surveillance are undergoing rapid transformations, and the commodification of metadata (and other surveillance intelligence) transforms privacy. In light of this, we need to consider how the NSA and corporate metadata mining converge to support the interests of capital. This is an age of converging state and corporate surveillance. Like other features of the political economy, these shifts develop with apparent independence of institutional motivations, yet corporate and spy agencies' practices share common appetites for metadata. Snowden's revelations of the NSA's global surveillance programs raises the possibility that the state intelligence apparatus is used for industrial espionage in ways that could unite governmental intelligence and corporate interests—for which there appears to be historical precedent. The convergence of the interests, incentives, and methods of U.S. intelligence agencies, and the corporate powers they serve, raise questions about the ways that the NSA and CIA fulfill their roles, which have been described by former CIA agent Philip Agee as: “the secret police of U.S. capitalism, plugging up leaks in the political dam night and day so that shareholders of U.S. companies operating in poor countries can continue enjoying the rip-off.”¹ There is a long history in the United States of overwhelming public opposition to new forms of electronic surveillance. Police, prosecutors, and spy agencies have recurrently used public crises—ranging from the Lindbergh baby kidnapping, wars, claimed threats of organized crime and terror attacks, to marshal expanded state surveillance powers.² During the two decades preceding the 9/11 terror attacks, Congress periodically considered developing legislation establishing rights of privacy, but even in the pre-Internet age, corporate interests scoffed at the need for any such protections. Pre-2001 critiques of electronic-surveillance focused on privacy rights and threats to boundaries between individuals, corporations, and the state; what would later be known as metadata collection were then broadly understood as violating shared notions of privacy, and as exposing the scaffolding of a police state or a corporate panopticon inhabited by consumers living in a George Tooker painting. The rapid shifts in U.S. attitudes favoring expanded domestic intelligence powers following 9/11 were significant. In the summer of 2001, distrust of the FBI and other surveillance agencies had reached one of its highest historical levels. Decades of longitudinal survey data collected by the Justice Department establish longstanding U.S. opposition to wiretaps; disapproval levels fluctuated between 70–80 percent during the thirty years preceding 2001.3 But a December 2001 New York Times poll suddenly found only 44 percent of respondents believed widespread governmental wiretaps “would violate American’s rights.”⁴ Public fears in the post-9/11 period reduced concerns of historical abuses by law enforcement and intelligence agencies; and the rapid adoption of the PATRIOT Act precluded public considerations of why the Pike and Church congressional committee findings had ever established limits on intelligence agencies’ abilities to spy on Americans. Concurrent with post-9/11 surveillance expansions was the growth of the Internet’s ability to track users, collecting metadata in ways that seductively helped socialize all to the normalcy of the loss of privacy. The depth of this shift in U.S. attitudes away from resisting data collection can be seen in the public’s response in the early 1990s to news stories reporting the Lotus Corporation’s plans to sell a comprehensive CD-ROM database compiled by Equifax, consisting of Americans’ addresses and phone numbers. This news led to broad-based protests by Americans across the country angry about invasions of privacy—protests that led to the cancellation of the product which produced results less intrusive than a quick Google search would provide today. Similarly, a broad resistance arose in 2003 when Americans learned of the Bush administration’s secretive Total Information Awareness (TIA) program. Under the directorship of Admiral John Poindexter, TIA planned to collect metadata on millions of Americans, tracking movements, emails, and economic transactions for use in predictive modeling software with hopes of anticipating terror attacks, and other illegal acts, before they occurred. Congress and the public were outraged at the prospect of such invasive surveillance without warrants or meaningful judicial oversight. These concerns led to TIA’s termination, though as the Snowden NSA documents clarify, the NSA now routinely engages in the very activities envisioned by TIA. Four decades ago broad public outrage followed revelations of Pentagon, FBI, and CIA domestic surveillance campaigns, as news of COMINTPRO, CHAOS, and a host of illegal operations were disclosed by investigative journalists and later the Pike and Church Committees. Today, few Americans appear to care about Senator Dianne Feinstein’s recent accusations that the CIA hacked her office’s computers in order to remove documents her staff was using in investigations of CIA wrongdoing.⁵ Americans now increasingly accept invasive electronic monitoring of their personal lives. Ideologies of surveillance are internalized as shifts in consciousness embedded within political economic formations converge with corporate and state surveillance desires. The rapid expansion of U.S. electronic surveillance programs like Carnivore, NarusInsight, or PRISM is usually understood primarily as an outgrowth of the post-9/11 terror wars. But while post-9/11 security campaigns were a catalyst for these expansions, this growth should also be understood within the context of global capital formations seeking increased legibility of potential consumers, resources, resistance, and competitors.⁶ Convergence of State and Corporate Metadata Dreams The past two decades brought an accelerated independent growth of corporate and governmental electronic surveillance programs tracking metadata and compiling electronic dossiers. The NSA, FBI, Department of Defense, and CIA’s metadata programs developed independently from, and with differing goals from, the consumer surveillance systems that used cookies and consumer discount cards, sniffing Gmail content, compiling consumer profiles, and other means of tracking individual Internet behaviors for marketing purposes. Public acceptance of electronic monitoring and metadata collection transpired incrementally, with increasing acceptance of corporate-based consumer monitoring programs, and reduced resistance to governmental surveillance. These two surveillance tracks developed with separate motivations, one for security and the other for commerce, but both desire to make individuals and groups legible for reasons of anticipation and control. The collection and use of this metadata finds a synchronic convergence of intrusions, as consumer capitalism and a U.S. national security state leaves Americans vulnerable, and a world open to the probing and control by agents of commerce and security. As Bruce Schneier recently observed, “surveillance is still the business model of the Internet, and every one of those companies wants to access your communications and your metadata.”⁷ But this convergence carries its own contradictions. Public trust in (and the economic value of) cloud servers, telecommunications providers, email, and search engine services suffered following revelations that the public statements of Verizon, Google, and others had been less than forthcoming in declaring their claims of not knowing about the NSA monitoring their customers. A March 2014 survey found 38 percent of respondents believed the NSA violates their privacy, with distrust of Facebook (26 percent) surpassing even the IRS (18 percent) or Google (12 percent)—the significance of these results is that the Snowden NSA revelations damaged the reputations and financial standing of a broad range of technology-based industries.⁸ With the assistance of private ISPs, various corporations, and the NSA, our metadata is accessed under a shell game of four distinct sets of legal authorizations. These allow spokespersons from corporate ISPs and the NSA to make misleading statements to the press about not conducting surveillance operations under a particular program such as FISA, when one of the other authorizations is being used.⁹ Snowden’s revelations reveal a world where the NSA is dependent on private corporate services for the outsourced collection of data, and where the NSA is increasingly reliant on corporate owned data farms where the storage and analysis of the data occurs. In the neoliberal United States, Amazon and other private firms lease massive cloud server space to the CIA, under an arrangement where it becomes a share cropper on these scattered data farms. These arrangements present nebulous security relationships raising questions of role confusion in shifting patron—client relationships; and whatever resistance corporations like Amazon might have had to assisting NSA, CIA, or intelligence agencies is further compromised by relations of commerce. This creates relationships of culpability, as Norman Solomon suggests, with Amazon’s \$600 million CIA data farm contract: “If Obama orders the CIA to kill a U.S. Citizen, Amazon will be a partner in assassination.”¹⁰ Such arrangements diffuse complicity in ways seldom considered by consumers focused on Amazon Prime’s ability to speedily deliver a My Little Pony play set for a bronny nephew’s birthday party, not on the company’s links to drone attacks on Pakistani wedding parties. The Internet developed first as a military-communication system; only later did it evolve the commercial and recreational uses distant from the initial intent of its Pentagon landlords. Snowden’s revelations reveal how the Internet’s architecture, a compromised judiciary, and duped desires of capitalism and the national security state are today converging to track our purchases, queries, movements, associations, allegiances, and desires. The rise of e-commerce, and the soft addictive allure of social media, rapidly transforms U.S. economic and social formations. Shifts in the base are followed by shifts in the superstructure, and new generations of e-consumers are socialized to accept phones that track movements, and game systems that bring cameras into the formerly private refuges of our homes, as part of a “new surveillance normal.”¹¹ We need to develop critical frameworks considering how NSA and CIA surveillance programs articulate not only with the United States’ domestic and international security apparatus, but with current international capital formations. While secrecy shrouds our understanding of these relationships, CIA history provides examples of some ways that intelligence operations have supported and informed past U.S. economic ventures. When these historical patterns are combined with details from Snowden’s disclosures we find continuities of means, motive, and opportunity for neoliberal abuses of state intelligence for private gains. The NSA and the Promise of Industrial Espionage Following Snowden’s NSA revelations, several foreign leaders expressed outrage and displeasure upon learning that the NSA had spied on their governments and corporations, yet there has been little consideration of the meaning of the NSA’s industrial spying. The NSA is not the only government-based international hacking unit spying on global competitors. In China, the Shanghai Chinese People’s Liberation Army’s Unit 61398 purportedly targets U.S. corporate and government computers, with hacking campaigns supposedly seeking data providing economic or strategic advantage to the Chinese government or private businesses. Israel’s Cyber Intelligence Unit (known as NSU, or Unit 8200) has been linked to several political and economic hacking operations, including the Stuxnet worm and a recent attack on the Elysee Palace. While many Western analysts take for granted that such economic espionage networks exist elsewhere, there is little analysis of the possibility that the NSA’s surveillance will be used by rogue individuals or agencies seeking economic advantages. Yet the leveraging of such information is a fundamental feature of market capitalism. Last January, Snowden told the German ARD television network that there is “no question that the U.S. is engaged in economic spying.” He explained that, for example, “if there is information at Siemens that they think would be beneficial to the national interests, not the national security, of the United States, they will go after that information and they’ll take it.”¹² Snowden did not elaborate on what is done with such economic intelligence. Snowden has released documents establishing that the NSA targeted French “politicians, business people and members of the administration under a programme codenamed US-9850” with French political and financial interests being

Corporate Metadata Dreams **The past two decades brought an accelerated independent growth of corporate and governmental electronic surveillance programs tracking metadata and compiling electronic dossiers. The NSA, FBI, Department of Defense, and CIA’s metadata programs** independently from, and with differing goals from, the consumer surveillance systems that **used cookies and consumer discount cards, sniffing Gmail content, compiling consumer profiles, and other means of tracking individual Internet behaviors for marketing purposes.** Public acceptance of electronic monitoring and metadata collection transpired incrementally, with increasing acceptance of corporate-based consumer monitoring programs, and reduced resistance

to governmental surveillance. These two surveillance tracks developed with separate motivations, one for security and the other for commerce, but both desire to make individuals and groups legible for reasons of anticipation and control. **The collection and use of this metadata finds a synchronic convergence of intrusions, as consumer capitalism and a U.S. national security state leaves** Americans vulnerable, and **a world open to** the probing and control by agents of **commerce and security.** As Bruce Schneier recently observed, **“surveillance is still the business model of the Internet, and every one of those companies wants to access your communications and your metadata.”**⁷ But this convergence carries its own

contradictions. Public trust in (and the economic value of) cloud servers, telecommunications providers, email, and search engine services suffered following revelations that the public statements of Verizon, Google, and others had been less than forthcoming in declaring their claims of not knowing about the NSA monitoring their customers. A March 2014 survey found 38 percent of respondents believed the NSA violates their privacy, with distrust of Facebook (26 percent) surpassing even the IRS (18 percent) or Google (12 percent)—the significance of these results is that the Snowden NSA revelations damaged the reputations and financial standing of a broad range of technology-based industries.⁸ With the assistance of private ISPs, various corporations, and the NSA, our metadata is accessed under a shell game of four distinct sets of legal authorizations. While many Western analysts take for granted that such economic espionage networks exist elsewhere, there is little analysis of the possibility that the NSA’s surveillance will be used by rogue individuals or agencies seeking economic advantages. Yet the leveraging of such information is a fundamental feature of market capitalism. Last January, Snowden told the German ARD television network that there is “no question that the U.S. is engaged in economic spying.” He explained that, for example, “if there is information at Siemens that they think would be beneficial to the national interests, not the national security, of the United States, they will go after that information and they’ll take it.”¹² Snowden did not elaborate on what is done with such economic intelligence. Snowden has released documents establishing that the NSA targeted French “politicians, business people and members of the administration under a programme codenamed US-9850” with French political and financial interests being

"targeted on a daily basis."¹³ Other NSA documents show the agency spying on Mexican and Brazilian politicians, and the White House authorized an NSA list of surveillance priorities including "international trade relations" designated as a higher priority than counterespionage investigations.¹⁴ Leaked NSA documents include materials from a May 2012 top secret presentation "used by the NSA to train new agents step-by-step how to access and spy upon private computer networks—the internal networks of companies, governments, financial institutions—networks designed precisely to protect information."¹⁵ One leaked NSA PowerPoint slide mentions the US\$120 billion a year giant Brazilian petroleum company Petrobras with a caption that "many targets use private networks," and as the Brazilian press analysis pointed out "Petrobras computers contain information ranging from details on upcoming commercial bidding operations—which if infiltrated would give a definite advantage to anyone backing a rival bidder—to datasets with details on technological developments, exploration information."¹⁶ In response to Snowden's disclosures, Director of National Intelligence James Clapper admitted the NSA collects financial intelligence, but claimed it was limited to searches for terrorist financial networks and "early warning of international financial crises which could negatively impact the global economy."¹⁷ In March 2013 Clapper lied to Congress, claiming that the NSA was not collecting "data on millions or hundreds of millions of Americans."¹⁸ He has more recently claimed the NSA does not "use our foreign intelligence capabilities to steal the trade secrets of foreign companies on behalf of—or give intelligence we collect to—US companies to enhance their international competitiveness or increase their bottom line."¹⁹ Over the course of several years, the NSA's Operation Shotgun hacked into the servers of Chinese telecommunications giant Huawei. Shotgun initially sought to learn about the People's Liberation Army's ability to monitor Huawei's client's communications, but the NSA later installed hidden "back doors" in Huawei's routers and digital switches—the exact activities that the U.S. government had long warned U.S. businesses that Huawei had done.²⁰ Such operations raise the possibility of the NSA gaining knowledge to be used for economic gain by the CIA, NSA employees, or U.S. corporations. When pressed on these issues, a White House spokesperson claimed "we do not give intelligence we collect to U.S. companies to enhance their international competitiveness or increase their bottom line. Many countries cannot say the same." After this NSA operation was revealed, Huawei senior executive William Plummer noted that "the irony is that exactly what they are doing to us is what they have always charged that the Chinese are doing through us."²¹ There are many historical examples of intelligence personnel using information acquired through the course of their work for personal gain, such as selling intelligence information to another power. But what we need to focus upon is a qualitatively different phenomenon: the use of such information for corporate profit or market speculation. In 1972, while investigating Nixon's presidential campaign finance irregularities, the Senate Foreign Relations subcommittee discovered documents indicating that Northrop had made a \$450,000 bribe to Saudi Arabian air force generals to help secure a \$700 million Northrop F-4E jet contract. Retired CIA agent Kim Roosevelt (then running a multinational consulting firm operating in Saudi Arabia) denied any involvement in these bribes, but the investigation uncovered documents establishing that Roosevelt used his CIA connections for financial gain. The Senate subcommittee examined correspondence from Kim Roosevelt and Northrop officials, finding "repeated references to 'my friends in the CIA' who were keeping him posted about the moves of commercial rivals."²² After the subcommittee focused its attentions on other more significant instances of CIA illegal activities, Roosevelt faced no legal consequences for these activities. The most rigorous study to date documenting intelligence data being used for economic gains in stock market trading was recently published by economists Arindrajit Dube, Ethan Kaplan, and Suresh Naidu. The authors developed empirical measures to determine whether classified knowledge of impending CIA operations has historically been used to generate profits in this manner.²³ Dube, Kaplan, and Naidu recognized that most regimes historically overthrown by CIA coups had nationalized industries that were once privately held by international corporations; post-coup these industries returned to the previous corporate owners. Therefore, foreknowledge of upcoming coups had a significant financial value in the stock market. The authors developed a series of measures to detect whether, during past CIA coups, there were detectable patterns of stock trading taking advantage of classified intelligence directives, which were known only to the CIA and President. Their study selected only CIA coups with now declassified planning documents, which attempted to install new regimes, and in which the targeted pre-coup governments had nationalized once-private multinational industries. They sampled five of twenty-four identified covert CIA coups meeting these three criteria: Iran (1953), Guatemala (1954), Congo (1960–1961), Cuba (fabled Bay of Pigs coup, 1961), and Chile (1973). Daily stock returns of companies that had been nationalized by CIA coups were used to compare financial returns before presidential coup authorizations and after the coups. Dube, Kaplan, and Naidu found that four days after the authorization of coups their sample of stocks rapidly rose (before public awareness of these coming secret coups). For Congo there was a 16.7 percent increase on the day of the authorization, and a 22.7 percent return from the baseline four days later. The Guatemala stocks showed a 4.9 percent increase upon coup authorization, a 16.1 percent increase four days later, and 20.5 percent seven days later; the Iranian stocks rose 7.4 percent four days after authorization, 10.3 percent seven days later, and 20.2 percent sixteen days later. They found evidence of significant economic gains occurring in the stock market, with "the relative percentage benefit of the coup attributable to ex ante authorization events, which amount to 55.0% in Chile, 66.1% in Guatemala, 72.4% in Congo, and 86.9% in Iran."²⁴ Dube, Kaplan, and Naidu concluded that "private information regarding coup authorizations and planning increased the stock prices of export-oriented multinationals that stood to benefit from regime change. The presence of these abnormal returns suggests that there were leaks of classified information to asset traders."²⁵ By focusing on trading occurring at the point of the top secret presidential authorizations, they found that gains made from stock buys at the time of authorizations "were three times larger in magnitude than price changes from the coups themselves."²⁶ It remains unknown whether those profiting were lone individuals (either CIA employees or their proxies), or whether these investments were conducted by the CIA to generate funds for its black ops. We do not know how such past measures of intelligence-insider profiteering do or do not relate to the NSA's present global surveillance operations. While Snowden released documents (and stated that more will be forthcoming) indicating NSA surveillance of corporations around the world, we do not understand how the NSA puts to use the intelligence they collect. Even with these leaks the NSA largely remains a black box, and our knowledge of its specific activities are limited. Yet, the ease with which a middle-level functionary like Snowden accessed a wealth of valuable intelligence data necessarily raises questions about how the NSA's massive data collections may be used for self-serving economic interests. Dube, Kaplan, and Naidu establish past insider exploitations of intelligence data, and with the growth of insider-cheater capitalism of the type documented in Michael Lewis's Flash Boys, and expensive private inside-the-beltway newsletters, there are tangible markets for the industrial espionage collected and analyzed by the NSA and CIA under these programs. Snowden, after all, was just one of tens of thousands of people with access to the sort of data with extraordinary value on floor of global capitalism's casinos. Theorizing Capitalism's Pervasive Surveillance Culture Notions of privacy and surveillance are always culturally constructed and are embedded within economic and social formations of the larger society. Some centralized state-socialist systems, such as the USSR or East Germany, developed intrusive surveillance systems, an incessant and effective theme of anti-Soviet propaganda. The democratic-socialist formations, such as those of contemporary northern Europe, have laws that significantly limit the forms of electronic surveillance and the collection of metadata, compared to Anglo-U.S. practice. Despite the significant limitations hindering analysis of the intentionally secret activities of intelligence agencies operating outside of public accountability and systems of legal accountability, the documents made available by whistleblowers like Snowden and WikiLeaks, and knowledge of past intelligence agencies' activities, provide information that can help us develop a useful framework for considering the uses to which these new invasive electronic surveillance technologies can be put. We need a theory of surveillance that incorporates the political economy of the U.S. national security state and the corporate interests which it serves and protects. Such analysis needs an economic foundation and a view that looks beyond cultural categories separating commerce and state security systems designed to protect capital. The metadata, valuable private corporate data, and fruits of industrial espionage gathered under PRISM and other NSA programs all produce information of such a high value that it seems likely some of it will be used in a context of global capital. It matters little what legal restrictions are in place; in a global, high-tech, capitalist economy such information is invariably commodified. It is likely to be used to: facilitate industrial or corporate sabotage operations of the sort inflicted by the Stuxnet worm; steal either corporate secrets for NSA use, or foreign corporate secrets for U.S. corporate use; make investments by intelligence agencies financing their own operations; or secure personal financial gain by individuals working in the intelligence sector. The rise of new invasive technologies coincides with the decline of ideological resistance to surveillance and the compilation of metadata. The speed of America's adoption of ideologies embracing previously unthinkable levels of corporate and state surveillance suggests a continued public acceptance of a new surveillance normal will continue to develop with little resistance. In a world where the CIA can hack the computers of Senator Feinstein—a leader of the one of the three branches of government—with impunity or lack of public outcry, it is difficult to anticipate a deceleration in the pace at which NSA and CIA expand their surveillance reach. To live a well-adjusted life in contemporary U.S. society requires the development of rapid memory adjustments and shifting acceptance of corporate and state intrusions into what were once protective spheres of private life. Like all things in our society, we can expect these intrusions will themselves be increasingly stratified, as electronic privacy, or illegibility, will increasingly become a commodity available only to elites. Today, expensive technologies like GeeksPhone's Blackphone with enhanced PGP encryption, or Boeing's self-destructing Black Phone, afford special levels of privacy for those who can pay. While the United States' current state of surveillance acceptance offers little immediate hope of a social movement limiting corporate or government spying, there are enough historical instances of post-crisis limits being imposed on government surveillance to offer some hope. Following the Second World War, many European nations reconfigured long-distance billing systems to not record specific numbers called, instead only recording billing zones—because the Nazis used phone billing records as metadata useful for identifying members of resistance movements. Following the Arab Spring, Tunisia now reconfigures its Internet with a new info-packet system known as mesh networks that hinder government monitoring—though USAID support for this system.²⁷ Following the Church and Pike committees' congressional investigations of CIA and FBI wrongdoing in the 1970s, the Hughes-Ryan Act brought significant oversight and limits on these groups, limits which decayed over time and whose remaining restraints were undone with the USA PATRIOT Act. Some future crisis may well provide similar opportunities to regain now lost contours of privacy. Yet hope for immediate change remains limited. It will be difficult for social reform movements striving to protect individual privacy to limit state and corporate surveillance. Today's surveillance complex aligned with an economic base entrenched with the prospects of metadata appear too strong for meaningful reforms without significant shifts in larger economic formations. Whatever inherent contradictions exist within the present surveillance system, and regardless of the objections of privacy advocates of the liberal left and libertarian right, meaningful restrictions appear presently unlikely with surveillance formations so closely tied to the current trajectory of global capitalism.

Anti-NSA policy undermines the tech industry and economic growth.

Christopher Zara, Senior Writer for the International Business Times, 8/23/13, Privacy, "Security And The Economy: Why The US Government Cares More About Spying On Your Email Than Getting You A Job", International Business Times, <http://www.ibtimes.com/privacy-security-economy-why-us-government-cares-more-about-spying-your-email-getting-you-job>, 6/23/15 //DJR

Earlier this month, Castro released a report showing that **the U.S. cloud-computing industry stands to lose \$22 billion** to \$35 billion during the next few years — **all as a result of the National Security Agency's surveillance and the negative press** associated with it. Cloud computing is no niche segment, by the way. According to the technology research firm Gartner Inc. (NYSE:IT), **the industry is expected to grow 18.5 percent to \$131 billion this year. By 2016, consumers will spend \$677 billion on cloud services worldwide.** Clearly, a sizable chunk of the tech industry is heading into the clouds, which includes everything from third-party email such as Yahoo Mail and Gmail to free software applications like Google Docs. It's the next frontier in technology, and it's one that American companies currently dominate. But that could change on a dime, Castro warns. Bad press about U.S. tech giants complying with the NSA's **Prism program could scare consumers into going elsewhere to spend that \$677 billion. To visualize the domino effect that could have,** Castro **advises to imagine if privacy concerns had tainted Microsoft Corp. (NASDAQ:MSFT) just as Windows was taking off as the dominant operating system. "Instead of having Microsoft as one of these leaders, there'd be a French company there, or German or Japanese company,"** he said. **"It would just be a loss to the economy and a loss to all the types of product development and innovation we've seen overall."** But **just the possibility that the U.S. could lose its cloud-computing dominance should concern lawmakers far more than it seems to be,** Castro said. One reason he released the ITIF report on the potential economic effects of Prism was to spark a conversation that he believed not enough people are having. (He said President Obama fell short during a recent speech in which he vowed surveillance reform.) Sure, we've heard plenty about privacy, our civil rights and debates over the Fourth Amendment. But to echo James Carville's famous dictum, "It's the economy, stupid." **The problem is, few people realize the extent to which snooping and the economy are**

[linked](#), which is a blind spot evident in the much-publicized NSA slides that Snowden leaked to [the Washington Post](#). According to one of those slides, operating costs for the Prism program are just \$20 million a year.

Enhanced privacy erodes business confidence-

Shahid Shah January 26, 2014 [Shahid Shah is an award-winning Government 2.0, Health IT, Bio IT & digital Medical Device Inventor & CTO with over 25 years of technology strategy, architecture, engineering, entrepreneurship, speaking, and writing experience, "The causes of digital patient privacy loss in EHRs and other health IT systems", <http://www.healthcareguy.com/2014/01/26/the-causes-of-digital-patient-privacy-loss-in-ehrs-and-other-health-it-systems/>] **NRH**

While we are all somewhat disturbed by the slow erosion of privacy in all aspects of our digital lives, the rather rapid loss of patient privacy around health data is especially unnerving because healthcare is so near and dear to us all. In order to make sure we provided some actionable intelligence during the PPR discussion, I started the talk off giving some of the reasons why we're losing patient privacy in the hopes that it might foster innovators to think about ways of slowing down inevitable losses. Business models that favor privacy loss tend to be more profitable. Data aggregation and homogenization, resale, secondary use, and related business models tend to be quite profitable. The only way they will remain profitable is to have easy and unfettered (low friction) ways of sharing and aggregating data. Because **enhanced privacy through opt-in processes, disclosures, and notifications would end up reducing data sharing and potentially reducing revenues and profit**, we see that privacy loss is going to happen with inevitable rise of EHRs. The only way to improve privacy across the digital spectrum is to realize that **health providers need to conduct business in a tricky intermediary-driven health system with sometimes conflicting business goals** like reduction of medical errors or lower cost (which can only come with more data sharing, not less). Digital patient **privacy is important but there are many valid reasons why privacy is either hard or impossible** to achieve in today's environment. Unless we intelligently and honestly understand why we lose patient privacy we can't really create novel and unique solutions to help curb the loss.

Link- Drones

Despite “bans” on commercial investment- drone industry flourishing without enforced airspace regulations.

Wilson, '14. Tim, Forbes, 10/8. “Drone Technology Investments: Place Your Bets...”

<http://www.forbes.com/sites/artimanmanagement/2014/10/08/drone-technology-investments-place-your-bets/>

Early Bets Are On The **Table The drone industry start-up and emergent technology bets will shake out** into three areas. In the analogy of a good old-fashioned game of poker, here are the hands currently in play: Bet #1: Package and cargo delivery: Royal Flush—for the house. Bet #2: Aerial observation and imaging: Pair of eights Bet #3: Enabling technologies: Possible inside straight—interesting to Artiman. Bet #1: Drone Package Delivery **The freight delivery majors** (Amazon Google, UPS, and FedEx) **are developing package delivery services using drones.** Amazon's quadcopters are inexpensive to purchase, simple to operate, and can land on rooftops. These physical efficiencies bring limitations: package payload weights and delivery ranges are limited. The technology-sophisticated Predator drones are based upon fixed-wing designs. These styles of drones can fly across long distances, remain aloft for extended periods of time, and carry heavy payloads. These flight efficiencies create issues of cost and complexity. Predators are expensive to build/maintain and require runways from which to take off and land. Not very practical for landing on a rooftop. **Google is investing in the development of drones that can fly in both helicopter and fixed-wing modes** Will they make it work? Of course. Will it matter they made it work for package delivery? That is a bet. **The scary words currently buzzing around the freight-delivery majors: “airspace regulation”** There is, however, an interesting way to bypass the inconvenience of U.S. airspace regulations, avoid the FAA. Matternet—a start-up in quadcopter-based package delivery—is building their competitive advantages through the choices of airspace in which their drones fly. They are also developing a distributed to extend the distance and payload capacity of their quadcopters. In this site, Matternet lists their drone flight trial locations (two of which are in Papua New Guinea and Bhutan). These locations bring the market benefits of under-developed transportation infrastructure and unrestricted airspace regulation. Core issue: airspace regulation. So, how will the package delivery hand play out? In the U.S., **the answer mainly depends on the decisions made by the FAA.** For long-distance package delivery, the current thought is to propose the designation of “safe landing zones”. An interesting question then emerges: will FedEx, et.al, find themselves negotiating rooftop landing rights above their stores (so employees can retrieve packages flown in by quadcopter/fixed-wing hybrid drones)? Artiman's call: Royal Flush—for the house. Amazon, Google, FedEx, and UPS will find a way to get airspace for drone-enabled package movement. Drones, however, are just one element of a broader logistics business. The odds on this hand are stacked in the house's favor and against startups succeeding. Bet #2: Aerial Observation and Imaging **The FAA currently bans the commercial operation of drones in U.S. airspace. This ban has had about the same effect as requiring a NYC cab driver to have a “medallion” so as to operate a commercial taxi service legally.** Given the unstoppable proliferation of drones, I project line-of-sight flight regulations will be the first hand the FAA folds on. When this occurs, the imaging market can develop without legally inconvenient restrictions. Now, how to make money in aerial observation and imaging? Start-ups can provide imaging services, but given the low cost of line-of-sight drones such as those manufactured in China—so can everyone else. The orbital micro-satellites are also packing aerial observation capabilities. Within three to four years, satellites from Skybox, Planet Labs, and a myriad of other firms will have the technical capabilities to take pictures of anywhere on Earth virtually every day. Given the low economic barriers to entry and the competition from above, I question the operating margins of companies that use drones for imaging services. Yet, market niches will develop for drones specifically designed to take “selfies”, private aerial images of properties, and personal events (weddings, for example). Artiman's call: Pair of eights. An un-impressive hand is developing in the general line-of-site imaging market. There is a start-up venture working to improve the odds already flying: PrecisionHawk. This Raleigh, North Carolina-based start-up manufactures fixed-wing drones that collect and analyze ground image data. They have specifically targeted the agriculture and emergency response industries. PrecisionHawk has raised approximately \$10 million in Series B funding. Millennium Technology Value Partners led the round and was joined by two return backers (the Innovate Indiana Fund and RedHat co-founder Bob Young). Bet #3: Drone enabling technologies Artiman's call: Possible inside straight. The innovators in enablement technologies may have a straight line to start-up success. Let's play this hand out in our next article: Drone Industry Investment: Bet On The Picks and Shovels.

Investment flourishing now due to lack of government regulation-

Business Insider, 5/27/15. “THE DRONES REPORT: Market forecasts, regulatory barriers, top vendors, and leading commercial applications.”

<http://www.businessinsider.com/uav-or-commercial-drone-market-forecast-2015-2>

The fast-growing global drone industry has not sat back waiting for government policy to be hammered out before pouring investment and effort into opening up this all-new hardware and computing market. **A growing ecosystem of drone software and hardware vendors is already catering to a long list of clients** in agriculture, land management, energy, and construction. **Many of the vendors are smallish private companies and startups — although large defense-focused companies and industrial conglomerates are beginning to invest in drone technology, too.** In the most recent report from BI Intelligence, we take a deep dive into the various levels of the growing global industry for commercial drones, or unmanned aerial vehicles (UAVs). This 32-page report provides forecasts for the business opportunity in commercial drone technology, looks at advances and persistent barriers, highlights the top business-to-business markets in terms of applications and end users, and provides an exclusive list of dozens of notable companies already active in the space. Finally, it digs into the current state of US regulation of commercial drones, recently updated by the issuing of the Federal Aviation Administration's draft rules for commercial drone flights. Few people know that many companies are already authorized to fly small drones commercially under a US government “exemption” program.

Business investment flourishing now for drones-
OLIVITO 2013

(Jonathan Olivito, JD candidate Ohio State Univ. Moritz College of Law, December 8, 2013
"Beyond the Fourth Amendment: Limiting Drone Surveillance Through the Constitutional Right
to Informational Privacy" <http://moritzlaw.osu.edu/students/groups/oslj/files/2013/12/8-Olivito.pdf>)

In conjunction with the recent proliferation of drones operating domestically, commentators have begun to recognize the serious potential for privacy invasions posed by widespread drone use.⁴¹ To illuminate why drones pose such a grave danger to privacy in the United States, the following sections explore the physical capabilities, current uses, and potential uses of drones. A. Physical Capabilities of Drones

Government **Agencies and businesses of all varieties envision using drones for a multitude of purposes**

Drones can serve in such a broad range of functions precisely because of the diversity of drone sizes and designs.⁴² **Complementing the diversity of drone designs are the myriad sensors, cameras, and other surveillance equipment that operators can install on drone.**

Drones vary in size from the miniature to the gargantuan. Measuring 6.5 inches and weighing in at nineteen grams, AeroVironment's Nano Hummingbird might be the most diminutive drone at present.⁴³ More typically, however, small drones have wingspans of ten feet or less and weigh between four and twenty pounds.⁴⁴ Operating at speeds of less than 100 knots and at altitudes below 500 feet, small drones often run on batteries and can stay airborne for as long as two hours.⁴⁵ Large drones have wingspans of up to 150 feet and can weigh over 30,000 pounds.⁴⁶ These systems can operate at altitudes of up to 65,000 feet, cruise at speeds of up to 320 knots, and remain airborne without refueling for anywhere from thirty-five hours to four days.⁴⁷ Small drones enjoy stealth and

maneuverability, making them ideal for urban surveillance operations.⁴⁸ Because many small drones operate on electricity, they produce very little noise.⁴⁹ Additionally, **the relatively slow cruising speeds of small drones permit them to loiter over a surveillance target for extended periods of time.**⁵⁰ Some drones do not even need to loiter, **as certain drone designs permit the aircraft to both hover and fly normally.**⁵¹ In order to extend flight time, **other drones engage in "perch-and-stare" surveillance.**⁵² **Most pertinent to privacy concerns, drones can be equipped with a wide variety of surveillance equipment.**⁵³

Civilian operators can easily install cameras and recorders with high-powered zoom lenses on drones. Certain cameras have been developed specifically for civilian UAS use. The gimbal camera, for example, automatically remains focused on a single object even as the drone continues on its flight path.⁵⁴ More worrisome to privacy advocates, drones can be equipped with infrared and ultraviolet imaging devices,⁵⁵ seethrough imaging (radar technology),⁵⁶ and distributed video systems.⁵⁷ Drones engaged in perch-and-stare surveillance might also utilize acoustical eavesdropping devices, such as conventional microphones or laser optical microphones.⁵⁸ In terms of software, drones operating in the near future will likely utilize video processing systems, including face and body recognition technology.⁵⁹ Finally, civilian drones, like their military counterparts, can carry weaponry. Although lethal weapons are almost certainly out of the question, law enforcement drones might soon pack rubber bullets and tear gas.⁶⁰ Taking full advantage of drone capabilities, domestic users have already put drones to work in a variety of capacities. Although domestic drones have numerous beneficial applications, they also carry the potential for abuse. Exacerbating this concern, government agencies and private operators intend to employ drones for so many purposes that drones will someday form a ubiquitous part of life. Even in the immediate future, however, targeted and inadvertent UAS surveillance poses a threat to privacy.

Investment is driven by perception of increased interest in biometric technology – plan stifles that.

Kreag 15 – Visiting Assistant Professor, University of Arizona James E. Rogers College of Law (Jason, GOING LOCAL: THE FRAGMENTATION OF GENETIC SURVEILLANCE Boston University Law Review (Forthcoming October 2015), p. 16-7) NAR

Private firms have quickly recognized business opportunities in law enforcement’s increased use of local databases. These opportunities are driven by the potential for an **increased demand for DNA processing**, as law enforcement agencies seek to use DNA to investigate high-volume property crimes, and the possibility of selling database infrastructure to these agencies. As discussed below, this private sector development is a **necessary ingredient to the continued expansion of local DNA databases**. For example, Palm Bay’s and Bensalem’s programs could not exist without partnerships with private DNA laboratories, because each locality lacks its own DNA laboratory. And, while the Arizona Department of Public Safety operates the state’s crime laboratory, its private, non-CODIS database is powered by SmallPond’s software and Rapid DNA processors from IntegenX. The interest in the local database market from Orchid Cellmark and Bode Technology, two of the largest private DNA laboratories, is an indication of the size of the market. Bode’s Vice President for Sales and Marketing characterized the market as “enormous.”⁷⁴ He explained that Bode has identified up to 1,000 law enforcement agencies in localities that do not have their own law enforcement crime laboratories yet are large enough to justify building their own local databases.⁷⁵ Dr. Laura Gahn, the laboratory director for Cellmark Forensics, also sees the business opportunity, emphasizing that the creation of local databases will drive the demand for Cellmark’s forensic DNA processing services.⁷⁶ As she explained, even ten years ago it was not economically feasible for most law enforcement agencies to use DNA analysis to investigate routine property crimes, but that is no longer the case.⁷⁷ She added that, given the rate of property crime in the United States—including an estimated 19.6 million property crimes in 2012⁷⁸—Cellmark’s ability to offer local database services can serve as an entry point to the market for forensic DNA processing for property crimes.⁷⁹

Businesses need facial recognition software as is, won’t agree to the plan.

Eggerton 6/15 John, Broadcasting Cable, 2015. “Consumer Groups Opt Out of Facial Recognition Talks”. <http://www.broadcastingcable.com/news/washington/consumer-groups-opt-out-facial-recognition-talks/141768> SH

Consumer groups are pulling out of an NTIA-led multistakeholder process to come up with a voluntary code of conduct on facial recognition technology, saying they don't see a way that the process will result in adequate protections. The groups are particularly concerned with what they see as an inability of the industry stakeholders to agree to any variation on an opt-in model, but also say their withdrawal should be taken as a signal to reevaluate the effectiveness of the multistakeholder process in general. According to a letter to NTIA being sent Tuesday, the groups spelled out their disaffection with the meetings.

Facial recognition is key for business innovation, Facebook’s Moments proves
Constine 6/15 (Josh, Tech Crunch, 2015.) <http://techcrunch.com/2015/06/15/facial-recogbook/> SH

Frustrated with friends who take photos of you, say they’ll pass them on, but never do?
Facebook’s newest companion app Moments could retrieve your memories trapped on other

people's phones through facial recognition. Moments scans your Camera Roll for the all the photos featuring a friend's face, and bundles them up for one-tap private sharing with that friend. They can contribute to the collaborative private album too, so all your pals from the party or vacation can get each other's pics. Moments launches today in the US as a companion app to Facebook and Messenger on iOS and Android (those links will be live soon if not already). If it goes viral, it could be the end of everyone insisting to take that big group photo on their phone too.

Regulating facial recognition collapses market growth-

Chayka, '14. Kyle, Newsweek, 4/25. "Biometric Surveillance Means Someone Is Always Watching." JJZ

<http://www.newsweek.com/2014/04/25/biometric-surveillance-means-someone-always-watching-248161.html>

In the private sector, efforts are being made to ensure face recognition isn't abused, but standards are similarly vague. A 2012 Federal Trade Commission report recommends that companies should obtain "affirmative express consent before collecting or using biometric data from facial images." Facebook collects face-prints by default, but users can opt out of having their face-prints collected. Technology entrepreneurs argue that passing strict laws before face recognition technology matures will hamper its growth. "What I'm worried about is policies being made inappropriately before their time," Animetrics's Schuepp says. "I don't think it's face recognition we want to pick on." He suggests that the technology itself is not the problem; rather, it's how the biometrics data are controlled. Yet precedents for biometric surveillance must be set early in order to control its application. "I would like to see regulation of this before it goes too far," Lynch says. "There should be laws to prevent misuse of biometric data by the government and by private companies. We should decide whether we want to be able to track people through society or not."

Regulations can positively impact biometrics, but the plan takes it a step in the wrong direction.

Jain et. al. 2k – University Distinguished Professor in the Department of Computer Science & Engineering at Michigan State University, specializing in Biometrics (Anil Jain, Lin Hong, and Sharath Pankanti) COMMUNICATIONS OF THE ACM February 2000/Vol. 43, No. 2 9, BIOMETRIC IDENTIFICATION,

<http://citeseerx.ist.psu.edu/viewdoc/download?doi=10.1.1.447.4573&rep=rep1&type=pdf>) NAR

The human factors issue is also important to the success of a biometric-based identification. How easy and comfortable is it to acquire a given biometric? For example, biometric measurements that do not involve touching an individual, such as face, voice, or iris, may be perceived as more user-friendly. Additionally, biometric technologies requiring very little cooperation/participation from the users (such as face and thermograms) may be perceived as more convenient to users. A related issue is public acceptance. There may be a prevalent perception that biometrics are a threat to the privacy of an individual. In this regard, the public needs to learn that biometrics could be one of the most effective, and in the long run, more profitable means for protecting individual privacy. For instance, a biometrics-based patient information system can reliably ensure that medical records can only be accessed by medical personnel and the individual concerned. As in any industry, government regulations and directives may either provide a boost or lead to the demise of certain types of biometric technologies. Upcoming U.S. legislation such as the Health Information Portability Act (HIPA), may have a favorable impact on the biometrics industry. A good approach to piloting and gaining gradual acceptance of a biometrics solution could be to introduce it on a voluntary basis with either explicit or implicit incentives for opting biometrics-based solution.

Business Confidence -> Econ

That undermines the economic recovery-

Sanderatne 11 [Nimal, Post Graduate Institute of Agriculture, University of Peradeniya, Sri Lanka, Economist. 12/11/11, "Erosion in business confidence will slow economic growth" <http://www.sundaytimes.lk/111211/Columns/eco.html> //jweideman]

It is not only this legislation that has eroded confidence. Several other policies have also eroded business confidence seriously. Several economic enterprises that were previously privatised have been taken over by the government. The government is attempting to control the commanding heights of the economy by the state control of enterprises through government institutions taking over banks and other companies. The government now has control of several commercial banks. These policies have given rise to apprehension about the attitude of the government towards private sector business enterprises. The government's recent measures are likely to scare away foreign investment which is vital for the achievement of high rates of growth. An important prerequisite for investment is the certainty of economic policies. Business confidence is influenced by political and economic stability, certainty in, and predictability of, economic policies. Specific economic policies such as tax and other incentives, labour regulations, work ethics, social and economic infrastructure and costs of production are important considerations. An overall assessment of political and economic conditions, the guaranteeing of property rights, the rule of law and order are among the important prerequisites for developing a climate conducive for investment. These conditions were already in the breach when the latest blow was struck by the Revival of Underperforming Enterprises and Underutilized Assets Act. There is no economic rationale for this piece of legislation. This uncertainty has come at a time when the economy was expected to sustain its growth at 8 per cent and when foreign investments were expected to flow in at a higher rate than before. Both these objectives are now jeopardised. **The erosion of business confidence has affected potential foreign investment as well as domestic private investment as well. Waste of resources Apart from the erosion of business confidence and the likely disincentive to domestic and foreign investment, there are other serious repercussions on the economy. Public resources that are needed for priority sectors such as social and economic infrastructure would be spent on the "revival" of these enterprises.** This is a task that the government is ill-equipped to perform. Government business undertakings are notorious for making huge losses. Incompetence in management, overstaffing, waste and corruption characterise these public enterprises. Ironically most underperforming businesses are in the public sector. The recent report of the Parliamentary Committee on Public Enterprises (COPE) makes this very clear. It revealed that the government has lost an astounding Rs.10 billion from 2010 up to now due to the mismanagement, inefficiency and corruption at 24 state institutions. The government has now taken over another 37 enterprises that are likely to be white elephants. These resources could have been better spent on infrastructure development and poverty alleviation programmes. Decreases in production in these would affect the economy. Impact on foreign investment The impact of these on foreign investment flows would be a serious setback to the economy. Already there have been large outflows of foreign funds from the stock market. Very soon the country's credit ratings by international rating agencies would down grade the country. These will change the perception of Sri Lanka as an investment location. This will be a serious stumbling block to economic development as foreign investment fills the savings-investment gap and contributes towards supplementing domestic savings with foreign savings to enhance its capacity for investment and thereby increase economic growth. The quantum of foreign investment and the nature and type of such foreign investment determine the long term development of the country. Foreign direct investment also contributes to improving work ethics, discipline, skills and knowledge of workers. It is an important means of technology transfer and transmission of management practices. The country has once again lost the opportunity to attract foreign investment that could make these contributions to the country's economic development. Many countries in Asia attract a large amount of foreign investment with China leading the world as the largest recipient of foreign investment. Their economic policies encourage private foreign investment. There is confidence that foreign investment would be guaranteed in these countries. In as far as Sri Lanka is concerned the climate for foreign investment has changed drastically owing to recent economic policies.

Successful businesses power the economy

Thomas J. **Donohue, June 8 2015** [Thomas J. Donohue is president and CEO of the U.S. Chamber of Commerce. Since assuming this position in 1997, Donohue has built the Chamber into a lobbying and political powerhouse with expanded influence across the globe, June 8, 2015, "Small Business Success Powers Our Economy", <https://www.uschamber.com/blog/small-business-success-powers-our-economy>]NRH

Research by analysts at Gallup uncovers some troubling trends about entrepreneurship in America. For the first time in 35 years, more American businesses are being shuttered than started. The United States has slipped to 12th place among developed nations for business creation. Despite the grim statistics, many U.S. small businesses of every kind--from scrappy startups to multigenerational Main Street fixtures--manage to overcome obstacles and long odds to survive and thrive in a challenging environment. They push back against headwinds like higher taxes, stricter regulations, and greater uncertainty and emerge stronger than ever--putting people to work and making positive contributions to their communities. But if Washington continues to get in the way, that will spell real trouble for our economy. Now, more than ever, it is crucial that we build on their successes and reverse the trend of declining startups by taking steps to foster a culture of entrepreneurship. First, we must preserve the right to take risks. Virtually all successful businesspeople have taken a reasonable risk at some point, and many failed along the way but kept trying. If we eliminate the right to take risks, then we'll extinguish the entrepreneurial spirit of our country. America has never been about playing it safe. Second, we can fight for the right policies in Washington. The government should be helping businesses, not interfering. They should be creating the right conditions for businesses to prosper. The U.S. Chamber is pushing our lawmakers to keep taxes low, regulations reasonable, foreign markets open, roads and bridges adequately funded, and students well educated. Third, we must protect the right of business to participate in the policy and political processes. At a time when Washington is increasingly involved in the affairs of business, there is a movement seeking to silence the voice of business in the debate. All Americans should be able to voice their opinions, even unpopular ones, in the public sphere and petition the government without fear, intimidation, or undue regulation. Finally, we must celebrate the success of America's small businesses--we need it!

Successful businesses drive stronger economic growth and create more jobs. They keep the American Dream alive and perpetuate our free enterprise system. The Chamber

will shine a spotlight on the many contributions of small businesses when it welcomes owners and entrepreneurs from across the country to Washington for America's Small Business Summit this week.

Low business confidence leads to a terrible economy

Univ. of Glasgow n.d. homepages.strath.ac.uk/.../MTopic%204%20-%20The%20Role%20of%2... SH

Firm's profits will weaken as market growth slows, stagnates and (possibly) declines. A fall in profitability will in itself cause investment at any r to fall. However, if confidence breaks any such effects will be amplified as the investment function shifts dramatically. Even when the recession is ended and profits strengthening and prospects brightening, confidence may be slow to return. Thus, low confidence can prolong periods of 'bust' and lead to slow to growth of investment in the early phases of a recovery. In general, confidence is easy to destroy and difficult to restore. Loss of confidence in a downturn is likely to be sudden and to quickly amplify a deteriorating trend in investment.

Low confidence plunges economy into depression

Duffy 13 (Philip, Rom Economics, Aug. 26 2013) <http://www.romeconomics.com/what-caused-the-great-depression/> SH

A traditional view is that the depression was caused by a sharp fall in 'consumer confidence' at the beginning of the 1930s. Behavioral hypotheses in economics posit that we are more willing to buy goods and services if we expect to have a stable income in the future, rising wealth and job security. In 1929, the Wall Street Crash shifted expectations, firstly in the US, and then across the world as huge proportions of people's wealth were lost due to plummeting stock prices. This meant that the average person began saving higher proportions of their income as a pre-cautionary measure against future uncertainty and thus reducing current spending/consumption. This caused a fall in consumption, coupled with a fall in housing investments due to a collapse in house prices. These shocks to the economy were amplified through feedback mechanisms, such as banking collapses.

Depression looms if aff is passed

Kim & Nofsinger 03 (Kenneth and John, Financial Times, Jul 4 2003).

<http://www.ftpress.com/articles/article.aspx?p=98127&seqNum=4> SH

If the stock market is only temporarily depressed, it should not create a big problem for the economy. As argued above, the recent market depression is caused more by a lack of investor confidence than poor economic conditions. However, if the stock market remains depressed for long, it may begin to slow down the economy as well. The lack of investor confidence causes consumers to delay their spending. The lower stock market, caused by the confidence crisis, will eventually affect business investment too. With lower consumer purchases and business investment, the economy could sink into another recession. Therefore, it is imperative that investor confidence is restored quickly.

Drop in business confidence will plague the economy

Salmond 14 (Rob, Sep. 10 2014). CEO of Polity, and analytics and communications firm.

[http://robsalmond.com/sites/default/files/Salmond%20working%20paper%20\(Business%20Confidence\).pdf](http://robsalmond.com/sites/default/files/Salmond%20working%20paper%20(Business%20Confidence).pdf)
df SH

In terms of the causal impact of business confidence on the economy, Santero and Westerlund's empirical analysis also found that business confidence measures "Granger caused" changes in economic output. Granger causation is a measure of correlation rather than causation – testing whether variable A (in this case business confidence) provides additional information about the future value of variable B (here GDP growth) beyond the information contained in variable B's own history. While this empirical result is interesting, it does not provide any theory under which business confidence has an independent impact on output. Such an independent impact is of critical importance to business leaders because its existence is ultimately what makes politicians and citizens alike wary of actions that would lower business confidence. A causal impact does, however, exist in economic theory. Ng (1992) showed that, in broadly defined conditions of imperfect competition, self-fulfilling drops in business confidence (which Ng defines as the expected value of aggregate demand) are possible. That is, an exogenously caused drop in business confidence can plausibly cause a recession entirely on its own.

China Tradeoff DA Northwestern

Chinese Tech firms on top, NSA revelations decreases customer confidence in U.S tech firms.

Tiezzi 14- Shannon Tiezzi writes on China's foreign relations, domestic politics, and economy. She got her A.M. from Harvard University and her B.A. from The College of William and Mary. Shannon has also studied at Tsinghua University in Beijing. "Why Snowden's Revelations Were A Win For China." The Diplomat. The Diplomat, 9 Jan. 2014. Web. 30 July 2015. <<http://thediplomat.com/2014/01/why-snowdens-revelations-were-a-win-for-china/>>.

With Edward **Snowden** back in the news again (not that the attention ever really dissipated), it seems like a good time to explore how last year's explosive **revelations** have **affected China**. As Robert Garrett pointed out, **in some ways the Snowden revelations could potentially threaten Chinese leaders, should the files contain incriminating information on corruption within the Party's upper echelon. However,** I would argue that this **potential risk is more than outweighed by the gains that have already been realized.** ¶ First, **there is the economic impact on both the U.S. and China.** An opinion piece by Dr. Cheng Li and Ryan McElveen at Brookings' John L. Thornton China Center argues that **'U.S. technology firms conducting business in China ... will never fully recover from the irreparable damage left by the devastating NSA revelations of 2013.'** China Economic Weekly named eight **U.S. technology companies** that have **"infiltrated" the Chinese market:** Apple, Cisco, Google, IBM, Intel, Microsoft, Oracle and Qualcomm. Since this list was published, Li writes, **"the sales of those companies have fallen precipitously."** Cisco's China orders fell by 18 percent; IBM's China revenue dropped 22 percent, and Microsoft has acknowledged that China growth was weak in 2013. ¶ U.S. companies from Cisco to AT&T have also expressed their concerns directly to **President Obama.** The Washington Post reported that late last year leaders of large U.S. technology firms told President Obama that the NSA surveillance programs are costing them customers. The article further notes that "Silicon Valley has been a critical driver of the economic recovery" — hinting at wider economic consequences should the decline in U.S. tech firms continue. ¶ Meanwhile, **Chinese technology firms** such as ZTE and Huawei **stand directly to benefit from an increasing distrust** (and corresponding decline in market share) **of U.S. firms.** The Chinese government had already toyed with "indigenous innovation" policies that essentially required government offices to favor products invented and patented in China. The U.S.-China Business Council **complained that this policy "encourage[d] discriminatory practices" and** the Treasury Department made **relaxing these restrictions** a priority. In part **due to U.S. pressure, the Chinese government agreed to revise its policy** in 2011. ¶ Now, however, campaigns to "de-Cisco" China have had effectively the same effect — handicapping foreign firms and prioritizing domestic ones — but these new policies can be more than adequately defended as the result of security concerns. Plus, doing so provides a handy way to retaliate for the U.S. congressional decision to blacklist Huawei. Caixin noted in November that **Chinese government procurement regulations are now encouraging officials to "buy local," cutting into U.S. firms' profits while also providing a boost to China's tech industry.** ¶ However, Snowden's greatest impact on China may be political rather than economic. Cheng Li noted that, **as a result of NSA revelations, "the United States had lost all credibility on the cyber security issue."** The timing could not have been worse for the **Obama administration — the Snowden revelations came mere months after the U.S. government had decided to make cyber-security concerns a top priority in its relationship with China.** Now, it is extremely difficult for the U.S. to make headway on cyber issues because the Obama administration is constantly on the defensive about NSA surveillance. ¶ Finally, there are the less tangible but potentially more important effects on the U.S.'s global image and diplomatic relationships. **Allegations of phone tapping and other surveillance of world leaders have caused a backlash around the world.** Germany's Defense Minister called the tapping of Angela Merkel's phone "completely unacceptable," adding **'we simply can't return to business** as usual **[with the U.S.]'** Brazilian President Dilma Rousseff was so upset by the allegations of NSA spying in Brazil that she postponed her planned visit to the U.S. Much of the damage was done to U.S.-European Union ties. While

former State Department and CIA officials have argued that the damage is likely to be short-term, precisely because these relationships are so strong, it will take time for the U.S.'s image to come back. **This is good news for China.** If Beijing can't effectively create or use soft power, as many (including Joseph S. Nye) have argued, the next best thing is watching the United States' own soft power take a serious hit.¶ Worse, other U.S. allies also face credibility issues due to their participation in the cyber-espionage campaign. **The United States,** the United Kingdom, Canada, Australia, **and** New Zealand are all implicated **as the so-called "Five Eyes," partners** in what The Guardian called an "electronic

US/China innovation is zero sum – even if it isn't the perception of leadership makes it so.

Rachman, 11 (Gideon, FT's chief foreign affairs columnist "Zero-Sum World," 10/22/10, www.ft.com/intl/cms/s/2/bcfb2d80-dd62-11df-beb7-00144feabdc0.html)

The economic crash of 2008, however, has **changed the logic of international relations.** **In a new economic situation, the win-win logic** that allowed the major powers to embrace globalisation **is now being replaced by a zero-sum logic,** in which **one country's gain looks like another's loss.** Both as individuals and as a nation, Americans have begun to question whether the "new world order" that emerged after the cold war still favours the US. **The rise of Asia is** increasingly **associated with job losses** for ordinary Americans **and with a challenge** to American power **from** an increasingly confident China. **Chinese thinkers,** for their part, **are increasingly suspicious that a wounded America is intent on thwarting their** nation's **rise.** Tensions between established and rising powers are the traditional stuff of international relations. But the financial and economic crisis has also disrupted the intellectual narrative that helped western leaders to make sense of the world, in the 20 years after the end of the cold war. A western Age of Optimism between 1991 and 2008 was underpinned by a set of ideas, which might be called liberal internationalism. As a journalist at The Economist for most of the period, I was deeply familiar with these ideas, since we argued for many of them on a weekly basis. In retrospect, I think there were five key elements to the ideology of the period before the financial crisis. The first was a faith in the onward march of democracy – expressed most famously by Francis Fukuyama's essay on the "end of history", which appeared in 1989, just as the Soviet empire was collapsing. The second, linked belief was a faith in the triumph of markets over the state. This was also the era of the rise of the personal computer and the internet, and so a third key belief was in the transforming power of technology, as a force driving forward prosperity, democracy and globalisation. The fourth idea, which knitted all these notions together, was the theory of the "democratic peace": the belief that in a world in which democracy and capitalism were on the rise, the risk of conflict between nations inevitably diminished. The fifth and final idea – a sort of insurance policy – was the faith that in the last resort the US military could defeat any power on earth. By the time Barack Obama took office, each of the five ideas that had underpinned American self-confidence during **the Age of Optimism had taken a battering.** The faith in the onward march of freedom had been shaken by the difficulties of exporting democracy to Iraq and Afghanistan, and by the rising confidence of authoritarian China. The belief in the power of free markets took a terrible blow with the economic and financial crisis of 2008. The technological revolution no longer seemed the magical cure-all that it had promised to be, as problems as diverse as climate change and the mechanics of military occupation proved impervious to a technological fix. The theory of the "democratic peace" looked less persuasive, as Russia flexed its military muscles, almost over-running democratic Georgia in August 2008 and China became more assertive in territorial disputes with Japan and India. Finally, the belief in the unstoppable nature of American power looked much shakier with US troops bogged down in Afghanistan and Iraq, and the American economy reeling. I got an early hint of how the psychology of international relations was shifting when I visited the campus of Beijing University, just two weeks after the fall of Lehman Brothers, and met Pan Wei, director of the Center for Chinese and Global Affairs. "My belief," he said, "is that in 20 years we will look the Americans straight in the eye as equals. But maybe it will come sooner than that. Their system is in chaos and they need our money to rescue them." **Rising confidence in Beijing was more than matched by growing pessimism in the US.** At the Davos meeting of the World Economic Forum in January 2010, Larry Summers, President Obama's chief economic adviser, told the assembled plutocrats that one in five American male workers aged between 25 and 55 was now unemployed. In the 1960s, 95 per cent of the same group had been in work. Summers strongly implied that Chinese trade policies were partly to blame – and he was not alone in his diagnosis. Over the following year, moves to impose sanctions on China, in retaliation for its alleged "currency manipulation", gained momentum in the US Congress. **Economic tensions** are now **spilling over into other arenas.** **China and America** have clashed at the world climate change talks. The two countries' **military establishments are** also **increasingly open in their suspicion of each other.** **The rise in tensions between China and the United States is the most obvious example of the growth of zero-sum logic in international affairs.**

Tech innovation key to the Chinese economy

CCTV 14 China Central Television, September 11th, 2014, "Premier Li: Innovation key to China's economic development" (<http://english.cntv.cn/2014/09/11/VIDE1410383282174272.shtml>)
7/31/15 ANH

The 2014 New Leaders Meeting of the World Economic Forum, better known as the Summer Davos, has opened in north China's port city of Tianjin. This year's forum, with a theme of "creating value through innovation" has attracted a record number of global leaders in business, politics and science and technology. 1600 guests from 90 countries and regions are gathering in Tianjin for the Summer Davos forum. Premier Li Keqiang delivered the forum's keynote speech, speaking at length about the current condition of the Chinese economy and his confidence in its future. "This year, the global economic situation is still complex. Developed economies are facing a difficult recovery. The economic growth of the emerging economies have also slowed. And China is facing increasing downward pressure. But we have stuck to the policy of seeking progress while maintaining stability. We avoided strong stimulus or monetary easing. Instead, we continued to push through reforms and restructuring, and we were able to maintain a stable economic growth," said Premier Li. **Premier Li also stressed the importance of innovation and reform as the driving force behind China's economic development both in the past and in the future.** "The global economic recovery requires innovation, and the improvement in efficiency and updating of the Chinese economy also require innovation. China has been able to maintain a sustainable growth in recent years precisely because of reform and innovation," Premier Li said. Under a theme of "creating value through innovation", more than half of this year's agenda covers the issue of innovation in a wide range of fields including finance, science and technology, energy and arts. Founder and executive chairman of the world economic forum Klaus Schwab says China is a very important part of the conversation. During a meeting with entrepreneurs prior to the opening of the Summer Davos, Premier Li reiterated his belief that China would achieve its 7.5% GDP growth target for this year. The premier says that's because China is using targeted and structural policy adjustments and "strong reforms" rather than "strong stimulus" to bolster the economy. The WEF chairman agrees. Premier Li also reassured foreign corporate leaders that China's door will remain open to the world. He said only 10 percent of the companies recently probed by Chinese anti-trust authorities are foreign enterprises, dismissing speculation that recent investigations target foreign companies. Participants will kept busy at the 3-day forum and will have to choose which of the 140 scheduled sessions they'll attend. The forum first debuted in 2007 and rotates annually between the Chinese cities of Dalian and Tianjin. The 2014 New Leaders Meeting of the World Economic Forum, better known as the Summer Davos, has opened in north China's port city of Tianjin. This year's forum, with a theme of "creating value through innovation" has attracted a record number of global leaders in business, politics and science and technology.

China's economic rise prevents CCP instability and lashout --- decline tubes the global economy, US primacy, and Sino relations

Mead 9 Walter Russell Mead, Henry A. Kissinger Senior Fellow in U.S. Foreign Policy at the Council on Foreign Relations, "Only Makes You Stronger," The New Republic, 2/4/9,
http://www.tnr.com/story_print.html?id=571cbbb9-2887-4d81-8542-92e83915f5f8

The greatest danger both to U.S.-China relations and to American power itself is probably not that China will rise too far, too fast; it is that the current crisis might end China's growth miracle. In the worst-case scenario, the turmoil in the international economy will plunge China into a major economic downturn. The Chinese financial system will implode as loans to both state and private enterprises go bad. Millions or even tens of millions of Chinese will be unemployed in a country without an effective social safety net. The collapse of asset bubbles in the stock and property markets will wipe out the savings of a generation of the Chinese middle class. The political consequences could include dangerous unrest--and a bitter climate of anti-foreign feeling that blames others for China's woes. (Think of Weimar Germany, when both Nazi and communist politicians blamed the West for Germany's economic travails.) Worse, instability could lead to a vicious cycle, as nervous investors moved their money out of the country, further slowing growth and, in turn, fomenting ever-greater bitterness. Thanks to a generation of rapid economic

growth, **China has so far been able to manage the stresses and conflicts of modernization and change; nobody knows what will happen if the growth stops.**

Extinction

Yee and Storey 2 Herbert is a Professor of Politics and IR @ Hong Kong Baptist University, and Ian is a Lecturer in Defence Studies @ Deakin University. "The China Threat: Perceptions, Myths and Reality," p. 5

The fourth factor contributing to the perception of a China threat is the fear of **political and economic collapse in the PRC, resulting in territorial fragmentation, civil war and waves of refugees pouring into neighbouring countries.** Naturally, any or all of **these scenarios would have a profoundly negative impact on regional stability.** Today the Chinese leadership faces a raft of internal problems, including the increasing political demands of its citizens, a growing population, a shortage of natural resources and a deterioration in the natural environment caused by rapid industrialization and pollution. These **problems are putting a strain on the central government's ability to govern effectively. Political disintegration or a Chinese civil war might result in millions of Chinese refugees seeking asylum** in neighbouring countries. Such an unprecedented exodus of refugees from a collapsed PRC would no doubt put a severe strain on the limited resources of China's neighbours. **A fragmented China could also result in** another nightmare scenario- **nuclear weapons falling into the hands of irresponsible local provincial leaders or warlords.** From this perspective, **a disintegrating China would also pose a threat to its neighbours and the world.**

--- Uniqueness ---

China Leader b/c of NSA

China capitalizing on US declines resulting from surveillance scandals.

ROBERT O'BRIEN on July 12, 2013 Robert O'Brien is a writer and research analyst at contextChina, a Seattle-based media company covering China-related business, technology and policy. "China's reaction to NSA surveillance gives Microsoft reason to worry" www.geekwire.com/2013/chinas-reaction-nsa-surveillance-microsoft-reason-worry/ AJF

One month after former NSA contractor Edward Snowden revealed the U.S. government's secret electronic intelligence gathering program to the world, new reports show that some Chinese government organs are discarding their foreign-made tech products in favor of domestic alternatives. While this is bad news for all U.S. tech firms, it is likely particularly worrying for Microsoft, a company that was reportedly heavily involved in the National Security Agency program, and one whose field of dominance, software, has become a focal point for Chinese calls to switch to domestic competitors. American tech companies and the Chinese government have long had a complicated relationship. Numerous U.S. Internet firms, including Facebook and Twitter, are outright banned in the People's Republic. Others, like Google, entered the Chinese market, only to later withdraw over concerns about censorship and cybersecurity. Still others, such as Apple, have stayed and found success only to face a blistering spate of government-direct criticism aimed at certain aspects of their in-country operations. One major theme underpinning all of these trials and tribulations is the belief amongst Chinese officials that U.S. tech companies are Trojan Horses for American political values. The information leaked about Prism, a U.S. National Security Agency program that utilizes these companies to collect electronic data both domestically and internationally, appears to confirm these claims. In Microsoft's case, the most recent reports in the Guardian say that the NSA had access to email on Outlook.com and Hotmail before encryption, and that the company worked with the government to allow access to its cloud storage service SkyDrive. Microsoft has maintained that it only provided access to its systems when required to do so by court order. All of these are prompting many in the Chinese tech industry to ask the question: if the Chinese government is so wary of the presence of American tech companies, why does it allow them to control many of the country's tech-related markets? As a recent China Daily article notes: "to ensure the security of information, [industry] insiders and experts are calling on the Chinese government and enterprises to use domestic software." Calls for a switch to domestic software are one thing, but is anyone in China actually heeding these calls? Yes, at least according to a recent Sina Tech piece. In a July 4 article, Sina Tech, a respected online industry publication, cites unnamed "industry insiders" in revealing that Snowden's disclosure of Prism has led some state-owned enterprises and government offices to replace foreign tech products with domestic alternatives. A few unconfirmed reports do not a trend make. Still, such news is hardly likely to comfort Microsoft executives. Consider the following: 1) Prism has increased Chinese distrust of American tech companies; 2) Microsoft was reportedly the first U.S. tech company to participate in Prism and, according to newly leaked documents, "collaborated closely with the National Security Agency and FBI;" and 3) Chinese media reports on calls for the use of domestic tech have focused on software, an area where Microsoft is particularly dominant in the country. Alarm bells need not be ringing on Microsoft's campus just yet. Chinese officials and media outlets have been known to threaten major retribution on American enterprises in the wake of significant diplomatic incidents. Remember the time China threatened to sanction Boeing for its connection to U.S. arms sales to Taiwan? Well, the sanctions never came, tensions cooled, and Boeing sales to China continue to boom. Will Microsoft enjoy a similar reprieve? Most likely, if the prior patterns are any indication. It's not all good news for the Redmond-based tech giant, though. Prism has clearly highlighted the ramifications of Chinese dependence on American technology. Even if the short-run impact on U.S. tech companies is negligible, this incident provides the Chinese government with a powerful incentive to nurture the development of homegrown competitors. In short, then, though there may be little for Microsoft executives to worry about today, tomorrow is an entirely different story.

China = Tech Leader Now

China is a global tech leader- outsourcing

Shepherd 3/2/15 (Adam, is a writer for ITPRO, "Is China the next world leader in tech?", <http://www.itpro.co.uk/careers/24270/is-china-the-next-world-leader-in-tech>, accessed: 7/31/15, SP)

OPINION: Could China be the next technology powerhouse? Some might claim it already is, thanks to the country's cheap labour and strong manufacturing base, but that's not really the whole story. Yes, a high number of tech goods are already manufactured in China, but how long before they're all designed there, too? The consumer technology market is currently a pretty even split, with available technologies comprising a wide range of brands from a diverse mix of countries - Britain, the US, Korea and Japan immediately spring to mind. But China looks set on not only catching up with its western counterparts, but on overtaking them. To see this in action, you need look no further than 2015's CeBIT show. As the partner country for this year's expo, China has brought along a substantial number of companies and products - and it makes for an impressive sight. One of the best-known faces at the convention has been Jack Ma, billionaire owner of Alibaba Group. The e-commerce brand experienced a record-breaking stock market launch, and is one of China's strongest economic players. The company this week unveiled a facial recognition-based payment system. This development sees the B2B sales firm joining the ranks of companies such as Apple and Facebook, which have both recently launched their own payment solutions. While China has been a major force in the OEM and B2B manufacturing world for decades, the new millenium has also seen Chinese firms build their own brands in the western world. Due to the scarcity of western goods in the strictly controlled Chinese marketplace, domestic companies have a huge foothold in China's increasingly large technology industry, and that gives them an immediate advantage thanks to sheer efficiencies of scale. Huawei and Xiaomi - and many other companies - have built their enterprises on cost-effectively made mid-range smartphones that they market to China's affluent, upwardly-mobile middle classes. These firms and there brands are now starting to enter the western arena, filling the current gap in the mid-tier and budget device markets. This shrewd tactic has seen Huawei become the third largest smartphone manufacturer in the world, while Chinese-owned multinational Lenovo is fourth, and five-year-old Xiaomi fifth. With Android controlling 76.6 per cent of the smartphone market, the fact that three of its top four brands are Chinese is telling. Lenovo is also a market leader in the PC and tablet industries, and the ubiquity of Chinese goods in western homes and offices is only increasing. As China's economy continues to develop and its population grows wealthier, the expansion of companies such as Xiaomi, Huawei and Lenovo is likely to accelerate exponentially, with expanding revenues allowing them to push into new markets. The rise of low-cost, high-performance technology from this region isn't new, however. Japan experienced a similar period of rapid growth, when the country's output went from being viewed as cheap, sub-par knock-offs to the very best in top-of-the-line equipment. While Japan's star may be on the wane, China looks decidedly set on taking its place. With the country's tech products growing in sophistication and popularity daily, and with its brands making a worldwide push for recognition through increased marketing, it could be only a matter of time before everything from our smartphones to our smart watches aren't just made in China - they're designed there too.

China's motivation to be tech leader is growing now

Stratfor 6/18 [Stratfor, June 18, 2015, global intelligence company, China's Developing Technology Sector, www.stratfor.com/image/chinas-developing-technology-sector] JE

A decade ago, Chinese electronics company Lenovo bought out IBM's personal computer arm for \$1.75 billion in what was China's first major overseas acquisition in the technology sector. The deal cemented Lenovo's status as one of the world's biggest PC manufacturers (it now ranks as the largest), and it launched China's journey to becoming one of the world's largest foreign investors in the technology sector.¶ That process has accelerated exponentially; in 2014, for example, Chinese direct investment in the U.S. information and communications technology industry accounted for about half of all Chinese investment into the United States. In some areas, such as semiconductors, biotechnology and green energy, investment came almost entirely from private Chinese investors.¶ China is following in the footsteps of Japan, South Korea and Taiwan in what is becoming the traditional pathway of development for East Asian economies. The first step is exporting low-end manufactured goods. Next, the economy moves into middle-end manufacturing while licensing foreign technology. Domestic companies then begin imitating or developing technology independent of licensing. The economy then focuses on middle- and high-end manufacturing. Finally, it begins its own innovations.¶ Domestic constraints, such as government-imposed regulations and economic controls, could limit how quickly or how far China can go down this path. However, China's ambition is clear: It wants to become a high-tech leader, rather than a follower, and leverage its size in the high-tech sector domestically and abroad.¶ Although China has often been criticized for stealing technology rather than developing it independently, in some areas the country is beginning to grow out of that stage of its development and contribute to the growth of technology. In March, for example, Germany's Deutsche Telekom invited ZTE to participate in its 5G innovation laboratory. This was in line with China's move toward international collaboration in developing new technologies that eventually will find their way back to its domestic telecommunications networks. China's progress is evident in other areas as well, such as startups and the Silicon Valley-like culture emerging in places such as Shenzhen. The question is whether this progress can be replicated throughout the country. China is the world's largest consumer and producer of semiconductors, but it relies heavily on the licensing of U.S. or other foreign technology and equipment rather than indigenous components. China hopes that one day its acquisitions will enable it to develop those technologies, either through collaboration or on its own.

China will be the technology leader by 2020 and allows for tech spillover, 3 reasons why

Sharif 7/09 (Naubahar, associate professor in the Division of Social Science at the Hong Kong University of Science and Technology, Three reasons why China has the makings of a global technology leader, South China Morning Post, <http://www.scmp.com/comment/insight-opinion/article/1835035/three-reasons-why-china-has-makings-global-technology-leader>)

A recent report on Chinese investments in research and development organizations in the US indicates Beijing's desire to leverage US-based research to generate new patents. This is part of China's concerted long-term effort to become the global leader in technology and it is clearly setting its sights on hi-tech, high-value-added industries on an ever-increasing scale. Although there is widespread scepticism about China's capacity to be a global tech leader, it has three distinct advantages that

should enable it to claim leadership in two to three decades. First is China's rapidly growing domestic market. Already the world's second largest, the Chinese economy is likely to overtake the US economy by 2020 or soon after. It is well known that market size is a powerful indicator of demand, and that growing demand for new products and services drives innovation. Indeed, China is now the world's largest producer in nearly a third of the most important industrial sectors, and leads the world in producing steel, cement, automobiles and fertiliser. The second big advantage lies in its autocratic model of governance. Few developed or newly emerging economies are growing under governments that enjoy the latitude China has to shape industrial and business policy. Fuelled by a 20 per cent annual growth in research and development investments, China is encouraging "indigenous innovation". Having doubled the share in gross domestic product of R&D expenditure since 1999, it is on pace to triple that rate by 2020. Say what you will about China's approach to governance, it can channel public funding and facilities to spur growth where it sees fit. Finally, China will continue to reap the benefits of globalization for the foreseeable future. This means, on the one hand, that China can acquire innovative technologies on the global market without having to foot the total bill for the R&D and commercialization of such technologies. Examples of China's increasing presence in the global marketplace include the acquisition by BAIC Group of the intellectual property of Swedish automaker Saab, and Geely's acquisition of Volvo in 2010. On the other hand, globalization means China will be increasingly attractive to foreign firms seeking new markets, creating what economists call spillover effects. Foreign companies will increasingly invest in and partner Chinese firms to cash in on the nation's growth. Foreign firms are also increasingly deploying state-of-the-art technology in China and even seeking patents there, with corresponding technological spillovers to Chinese firms.

China's investing in high tech commerce now

Rapoza 6/21 Kenneth, international business reporter for Forbes Magazine, June 21st, "China Sees Itself Building 'American Style' Entrepreneurial Class"
(<http://www.forbes.com/sites/kenrapoza/2015/06/21/china-sees-itself-building-american-style-entrepreneurial-class/2/>) 7/29/15 ANH

China wants to be American. Over the last week, China's government rolled out a number of initiatives and promises to promote new technologies, start-ups and small businesses in second and third tier cities. The move is part of China's shift from an economy dominated by state run enterprises. On Sunday, China's State Council announced policies designed to encourage migrant workers, recent college graduates and former military just re-entering civilian life to return to their rural hometowns and start small businesses. To get them started, Beijing said it would ease business registration procedures and allow entrepreneurs to venture into rural infrastructure projects through limited liability arrangements, and set up shop in the public services space, normally operated by the government. Newcomers supposedly get waivers or reduced taxes and administrative fees. **Besides the high tech start-up crowd that Beijing hopes to build into a Chinese Silicon Valley and, probably, a dot-com bubble, small businesses that set up shop in retail, tourism and internet marketing will get the most government support**. The government pledged to invest more in rural infrastructure, especially IT facilities, and to provide business training for those just getting started. On Saturday, the State Council released a guideline to streamline customs procedures for e-commerce exports and imports, the Shanghai Daily reported on Monday. The paper said Beijing will keep export taxes low while reforming import tax policies on certain goods that favor domestic consumption. China is also betting heavy on e-commerce payment platforms. The newspaper said the government will "encourage domestic banks and institutions to launch cross-border electronic payment businesses and advance pilot overseas payments in foreign currencies." Chinese e-

commerce firms will be given state financial support on international projects while credit insurance services will also be introduced. What does this mean? It means Western firms will soon cry foul and say China is subsidizing the likes of JD.com or even Alibaba. The announcements come as **China's economy transitions from low cost manufacturer to high tech**, value added producer in a middle class society. With most of its market closed to foreign competition, China's official support for its private tech firms could give some a nice cushion of support when testing the waters outside of the mainland. That being said, most of the revenue from China's e-commerce players is domestic. Some of China's biggest e-commerce investments listed in the U.S. include Alibaba, JD.com and e-Commerce Dang Dang,

China increasing tech innovation now

Juro **Osawa** and Paul **Mozur 14** (1/16/14, Juro Osawa writes about technology from the Wall Street Journal's Hong Kong bureau. His reporting includes stories about electronics, telecoms and online services, with a focus on Asian companies. He previously covered Japanese technology companies in Tokyo. Paul Mozur writes about technology from The Wall Street Journal's Beijing bureau. His coverage areas include companies such as Foxconn, Huawei and Tencent and industry topics such as social media, censorship and China's electronics supply chain. "The Rise of China's Innovation Machine"
<http://www.wsj.com/articles/SB10001424052702303819704579320544231396168> Accessed 7/30/15) EK

China has long been the factory floor that churns out popular gadgets for companies world-wide, but the country's own technology products were rarely viewed as leading edge. **Now, that is beginning to change. Increasingly, China's own technology companies are challenging market leaders and setting trends in telecommunications, mobile devices and online services.** Keeping better-known global competitors at bay in their massive home market, they are hiring Silicon Valley executives and expanding overseas with aggressive marketing campaigns featuring international sports stars and celebrities. Chinese companies still face a perception problem among consumers in many parts of the world that their products aren't as high-quality or reliable as others. Some foreign competitors have alleged that Beijing gives unfair advantages through subsidies, cheap financing and control over the currency market. But, many executives at Chinese and Western companies contend, **China's technology sector is reaching a critical mass of expertise, talent and financial firepower that could realign the power structure of the global technology industry in the years ahead. "Traditionally Chinese companies were fast followers, but we are starting to see true innovation"** said Colin Light, partner at PricewaterhouseCoopers. The rise of China's tech industry is fueled in part by its growing investment in research and development. According to a study released in December by U.S.-based Battelle Memorial Institute, R&D spending in China will likely reach \$284 billion this year, up 22% from 2012. That compares with just 4% growth forecast in the U.S. to \$465 billion for the same period. It forecasts **China will surpass Europe in terms of R&D spending by 2018 and exceed the U.S. by 2022.**

Tech Innovation High

Chinese gov't pushing tech innovation now

Chen and Roberts 7/25 Lulu Yilun, reporter for Bloomberg News in Hong Kong and Dexter, Asia News Editor and Chinese bureau chief for Bloomberg, July 25th, 2015, "China Wants Silicon Valley Everywhere", accessed through Lexis ANH

"Ignite the innovative drive of hundreds of millions of people." That's what China's Premier Li Keqiang called on all levels of government to do in a March address. With its industrial complex losing steam, **the country must rely on innovation, especially of the digital kind, for new sources of growth.** "You can see there are two Chinas. One is the old China that is slowing down in growth; there's a new China that is driven by the Internet," Says Hans Tung, managing partner at GGV Capital, a venture capital firm in Menlo Park, Calif. "You know they need to grow the new China to offset the slowing down of the old China." The result of Li's speech and other similar messages from the central government is that municipalities across China have designated areas in their towns and cities as special high-tech zones where entrepreneurs can enjoy the fastest Internet connections, government assistance in funding, and access to affordable software programmers from the closest university. Such zones can be found in many countries. What's remarkable about China's effort is its scale: As of March 2015, 129 high-tech zones had been approved by the State Council. "Are they all likely to become major hubs of innovation or technology?" asks Gary Rieschel, founding managing partner at Qiming Venture Partners. He figures the US has four such hubs: Boston, New York, San Francisco/Silicon Valley, and Seattle. "Maybe China will ultimately have eight," Rieschel says. "So most of them will not." This drive to promote Internet development isn't a guarantee to reviving China's economy, says Valentine Ding, managing director at ATF Capital, which focuses on tech-sector investments. "If these startups can't create a real connection with consumers," Ding says, "it will create an even worse employment picture for the locals when the bubble crashes." City officials in Changsha, capital of Hunan province, are doing their best to nurture their own Silicon Valley. Changsha's high-tech zone is 15 times the size of New York's Central Park. The city wants to lure companies that focus on new materials, software development, electronics manufacturing, and mobile apps. Entrepreneurs who started out in Hunan have formed Hu Xiang Hui, meaning the Hunan Club, to promote Changsha's and the zone's advantages. The club's members include Hugo Shong, a well-known venture capitalist; Yao Jingbo, founder of classified ads website 58.com; and Jeffrey Zeng, head of the venture capital unit of Citic Capital Holdings. "In the past you would see most of the venture capital deals coming from the big cities, but now you're seeing second- and third-tier cities providing great opportunities," says Shong, a founding partner of IDG Capital Partners, which was an early investor in Tencent and Baidu. In the year since officials in Hunan reached out to Shong to help beef up the region's competitiveness, more than 500 companies have been founded in the high-tech zone and 10,000 new jobs added, Chen Songling, a deputy director at the economic and information department for the province, said at an investment forum in April. At dinner with the party secretary of Changsha during that forum, Shong said he suggested that the government take a more hands-off approach and not try to overregulate or manage these fledgling companies. Shong says he also told the party secretary that Changsha should play to its strengths. "Hunan has a foundation for entertainment content," he says. Hunan's television station has produced a top-ranking show in China. "If we can combine that with the Internet, it would be quite interesting." While officials work to make cities such as Changsha innovation hubs, the entrepreneurial instincts at work in Beijing are stoked by huge sums of private-sector cash. With home-grown champions such as Baidu attracting top talent, Beijing's Zhongguancun high-tech district has since 2003 created the most software companies valued at more than \$1bn each. Only the US has created more, according to venture capital investor Atomico. The allure of Zhongguancun comes from the camaraderie that promotes brainstorming in the district's coffee shops and at the numerous forums that attract the city's brightest electronics innovators. That's something Changsha doesn't yet have. Says 21-year-old Zhou Jieliang: "To be honest, the overall startup vibe in Hunan isn't that great right now." Zhou, a university student in Changsha who co-founded an online education platform there, says she spends more than half her time in Beijing, Hangzhou, and Shanghai. The contrast with Changsha is "quite stark," she says.

China is pushing technological innovation efforts now

Shan 7/29 Huang, author for China Radio International, July 29th, 2015, "Chinese Premier Encourages Sci-tech Innovation" (<http://english.cri.cn/12394/2015/07/29/4021s889289.htm>)
7/31/15 ANH

Chinese Premier Li Keqiang has called for greater efforts to boost innovation in key technologies, saying innovation is the "golden key" for China's development. He has also encouraged a profound integration of science, technology and economy. For more on this, CRI's Huang Shan reports. Premier Li Keqiang says **China should consider science and technology as a primary productive force. "Scientific and technological innovation to a large extent determines the future of China's development strategy.** In history, we have missed several technological revolutions. At present, **we must put innovation at the core of the country's comprehensive development, and thus restructure our competitive advantages.**" Stressing the country's "Internet Plus" campaign for better digital infrastructure, **Premier Li encourages enterprises and individuals to pool funds and knowledge. Internet Plus is a development campaign raised by the premier earlier this year. The goal to it is to integrate the Internet and traditional industries through online platforms and IT technology, in an effort to help the country's economic restructuring.** The premier says **the government will ensure a fair and open environment for sci-tech businesses, and further cut red tape to help meet these goals.** Along with this, experts suggest effort should be made to improve innovation abilities in western China. Currently, most science and education resources are concentrated in more developed regions, such as Beijing and Shanghai. Xie Yi, an inorganic chemist with the Chinese Academy of Sciences, gives her suggestions. "I think the government can distribute some important scientific engineering projects and national laboratories in major cities in western and central China where conditions permit it. By this means, **the regions' capacity for independent innovation can be significantly enhanced.** Meanwhile, this can provide long-term, stable support for science, technology, and talented professionals." The suggestions were made at a symposium on science and technology strategy, which is to mark the 60th anniversary of the founding of China's top scientific think tanks, the Academic Divisions of the Chinese Academy of Sciences. Meeting with members from the think tank, Premier Li said scientific and technological personnel are the core driving force of innovation. "Scientific and technological personnel ought to be among the higher-income groups in society, as they have played a pivotal and irreplaceable role in creating social wealth. Along with measures protecting incomes of people involved in basic research, the country will improve income distribution to enable personnel to become well-off through their inventions. This action can stimulate their innovation power." For CRI, I'm Huang Shan.

U: Predictive

China set to be leader in technology and is picking up now

Chang 14 (Andrea, technology reporter for the Los Angeles Times covering Silicon Valley. She previously covered the retail industry, “China set to become a leader in the world of technology”, The Seattle Times, <http://www.seattletimes.com/business/china-set-to-become-a-leader-in-the-world-of-technology/>)

SHANGHAI — Alibaba was just the beginning. Get ready to hear a lot more about Chinese tech companies. China’s technology industry, much like China in general, is transforming. Entrepreneurs speak of an innovation “golden age” fueled by a mobile-device-obsessed culture, upward economic mobility and an influx of capital from investors locally and abroad. “China is going through an extraordinarily innovative period,” said Eric X. Li, a venture capitalist and political scientist in Shanghai. “My bet is that five years from now, the most valuable company in the world will be a Chinese technology company. My second bet is that five years from now, the second-most-valuable company in the world will be a Chinese technology company.” The success of Chinese e-commerce behemoth Alibaba, which went public on Wall Street in September, has been instrumental in paving the way: Founder Jack Ma, a former schoolteacher, is now China’s richest man, and Alibaba has become a \$26 -billion juggernaut with far-flung interests in areas such as entertainment, mapping and banking. “It proved one thing, which is you can grow a company pretty much from ground zero to a very high level. It gave young graduates a good example,” said Lingyun Gu at Beijing-based IDG Capital Partners. China for years has been laying the groundwork to become an innovative tech power player, not just an electronics manufacturing machine. The government subsidizes and promotes numerous high-tech clusters around the country, and university-affiliated and independent incubators have stepped in to nurture young entrepreneurial talent. Those efforts are beginning to pay off. In the second quarter, investments in China’s fast-growing telecommunications, media and technology companies totaled \$5.35 billion across 214 deals, the cash coming from inside and outside China. In the comparable quarter a year earlier, the industry received only \$752 million, according to a recent MoneyTree report from PricewaterhouseCoopers. “China’s private equity and venture capital investment in the telecommunications, media and technology industry is now in full swing,” the report said. There are several reasons for the boom. First, it takes a lot less capital to start a tech company than in the past because of the widespread availability and affordability of cloud computing and other business services that have brought costs down. There are China-specific factors as well. Many of America’s stalwart tech companies, including Facebook, Twitter and Google, are heavily censored by the government in China, leaving room for homegrown services to step in. Entrepreneurs also point to an Internet culture centered on the smartphone. Many middle-class families in China never owned a personal computer or television, and jumped directly to mobile devices as they became more affluent. The number of Internet users in China is staggering: By the end of last year, 618 million Chinese were connected to the Internet, compared with more than 250 million in the U.S. The number of smartphone users in China is expected to exceed 500 million this year. That has made building a Web-based business extremely attractive. China’s Internet giants Baidu, Alibaba and Tencent have exploded in popularity. To encourage college graduates, IDG created a \$100 million fund three months ago geared toward Chinese entrepreneurs born in the 1990s. Established tech firms are stepping in as well. Kim Xu, director of strategy of IBM’s Greater China Group, said the company has donated to 100 Chinese universities for tech-related education and is actively looking for fledgling companies to fund and work with. “Today, everybody is a possible candidate for partnership,” she said. “It’s not just about venture capital activity; it’s about growing and nurturing startup companies.” As the opportunities have grown, Chinese who were educated in the U.S. say they’re more willing to return home to set up companies there. Jennifer Xu left China to attend Harvard Business School but moved back after getting her MBA in 2011. Last year she founded Green Apple, a Shanghai-based mobile health care startup that

connects doctors and patients for appointment scheduling and pharmacy orders. The app, which quickly received its Series A funding from angel investors, launched in March and currently has thousands of doctors on its platform. "It's the best time for entrepreneurs," she said. "The mobile health sector is super active now and the venture capitalists are chasing after deals." Although starting a company is easier than ever, long-term success is still far from guaranteed. Investors worry about regulatory hurdles and loose intellectual-property rules, with some privately complaining that many companies are mere copycats of U.S. ideas. Industry watchers predict that Chinese tech companies will become more commonplace in the U.S. So far, the firms have focused primarily on growing their businesses domestically. But in the next decade many will begin to step up their global expansion efforts, with the U.S. being an attractive market, said S. Ramakrishna Velamuri, who teaches entrepreneurship at the China Europe International Business School in Shanghai. Velamuri also predicts more Wall Street fervor in China. There's an "obsession to list abroad" after the U.S. IPOs of Alibaba and Chinese microblog Weibo, he said. U.S. venture capitalists doing deals in China describe a booming space not unlike what is found in Silicon Valley, although the energy and pace are even more intense. Techies are experimenting in an array of sectors including online media, mobile, alternative energy and gaming. "Founders work real hard," said Doug Leone, a managing partner at Sequoia Capital, one of the earliest U.S. venture capital firms to enter China. "I've had midnight meetings in China — I've never had a midnight meeting here." China is Sequoia's largest market for investments after the U.S. and deals are "incredibly varied across a broad spectrum of opportunities," Leone said. Sequoia has invested in numerous Chinese companies, including Meituan, a group discount website backed by Alibaba; Dianping, a restaurant reviews platform; and Pinterest-like Meilishuo. A decade ago, when Sequoia first considered investing in China, "We asked ourselves the simple question: If you look out 10 years from now, where are the most valuable companies in the world going to be created?" Leone said. "In that case, we made the correct call."

Chinese to be competitive

Lohr December 14 (Steve, Journalist Awards: Pulitzer Prize for Explanatory Reporting "In 2015, Technology Shifts Accelerate and China Rules, IDC Predicts", The New York Times, <http://bits.blogs.nytimes.com/2014/12/02/in-2015-technology-shifts-accelerate-and-china-rules-idc-predicts>)

In the year-end predictions game, most technology forecasts tend to be either blue sky or boring, flights of imagination or a firm grasp of the obvious. For the last several years, IDC has published prediction reports that generally avoid the pitfalls of the genre, and offer a useful framework for thinking about the trajectory of trends in technology. The technology research firm's predictions for 2015, published on Tuesday, come in a 17-page report that is rich in numbers and analysis. Beyond the detail, a couple of larger themes stand out. First is China. Most of the reporting and commentary recently on the Chinese economy has been about its slowing growth and challenges. "In information technology, it's just the opposite," Frank Gens, IDC's chief analyst, said in an interview. "China has a roaring domestic market in technology." In 2015, IDC estimates that nearly 500 million smartphones will be sold in China, three times the number sold in the United States and about one third of global sales. Roughly 85 percent of the smartphones sold in China will be made by its domestic producers like Lenovo, Xiaomi, Huawei, ZTE and Coolpad. The rising prowess of China's homegrown smartphone makers will make it tougher on outsiders, as Samsung's slowing growth and profits recently reflect. More than 680 million people in China will be online next year, or 2.5 times the number in the United States. And the China numbers are poised to grow further, helped by its national initiative, the Broadband China Project, intended to give 95 percent of the country's urban population access to high-speed broadband networks. In all, China's spending on information and communications technology will be more than \$465 billion in 2015, a growth rate of 11 percent. The expansion of the China tech market will account for 43 percent of tech-sector growth worldwide. Another theme in the IDC report is the quickening pace of the move from older technologies to new ones. Overall spending on technology and telecommunications, IDC estimates, will rise by a modest 3.8 percent in 2015. Yet the top-line numbers mask the trends beneath. IDC predicts there will be growth of 13 percent in what the research firm calls "3rd platform" technologies (cloud, mobile, social and big data). By contrast, older technologies will face a no-growth "near recession," according to IDC, and "will shift fully into recession" by the second half of next year. IDC's 3rd platform is similar to what Gartner, another big research firm, has called a "nexus of forces" sweeping through the industry. (Gartner's ingredients are virtually the same as IDC's with slightly different labels — social interaction, mobility, cloud and information.) The 1st platform, in IDC's taxonomy, was the mainframe era, running from the 1960s into the 1980s. The 2nd platform included personal computers and the Internet, and began in the 1980s and ran through the middle of the first decade of this century. Cloud-computing data centers are the engine rooms of the other 3rd platform technologies of mobile, social and big data. Building these cloud power plants is increasingly a costly, high-stakes endeavor. In 2015, IDC predicts, there will be a winnowing. The leading players will keep spending and growing, and IDC identifies the leaders as Amazon, Google, Microsoft and IBM. "But we'll see a

lot of dropouts, as companies pull back from cloud infrastructure and focus on what they're good at," Mr. Gens said. Candidates to drop out of delivering computing resources as a public cloud service, he said, include Hewlett-Packard and the telecommunications companies. Salesforce, a leader in cloud-based business software, may want to do a deal with one of the big builders of cloud data centers, Mr. Gens suggested. That way, he added, Salesforce could concentrate its resources on software — as the German software maker SAP did recently in a deal with IBM. But while some retreat, China will likely produce a major cloud rival or two, IDC predicts. Alibaba, China's dominant online merchant, Baidu, the Chinese search engine, or Tencent, China's big social network, might well move beyond building data centers for their own use to supplying cloud computing as a service — the path taken by both Amazon and Google. "Driven by their massive domestic market," IDC predicts, "one or more of these Big Three cloud-based giants will challenge Amazon, Microsoft, IBM, Google" and others over the next three to four years.

AT: Censorship → Low Competitiveness

Regardless of censorship China remains a strong competitor internationally

Downes 7/15 (Larry, Internet industry analyst and author on business strategies and information technology. “China’s stock market is falling, but its innovators are still rising fast”, The Washington Post, <http://www.washingtonpost.com/blogs/innovations/wp/2015/07/15/chinas-stock-market-is-falling-but-its-innovators-are-still-rising-fast/>)

The recent volatility in China’s stock markets, and the untraditional steps taken by Beijing to calm them (including a ban on selling shares), is yet another reminder that China is, well, different. Though the country has moved dramatically to open its economy to market principles, the Chinese way is still both unique and inscrutable. Westerners, and even most Chinese, are kept largely in the dark on even the basic workings of the Chinese economy. And Beijing seems determined to keep it that way, both when their policies are successful and when they’re not. But at least so far, the Chinese experiment is still working when it comes to the red-hot information technology market. Even as Europe tries once again to reboot its Internet economy with a new Digital Single Market initiative, China continues to make dramatic progress pursuing its own brand of public-private partnerships. In the last 20 years, China has launched some of the most valuable Internet companies in the world, including Baidu, Alibaba, Tencent and JD.com. While some of these giants largely serve the enormous local market, Chinese companies such as Foxconn dominate the assembly of computing and consumer electronics devices worldwide. And now Chinese companies are evolving from the manufacture of other companies’ products to become leading-edge designers themselves. Xiaomi and Lenovo, for example, are producing “must-have” new smartphones, often at prices far below what Apple and Samsung charge. All this in a country where the government’s far-reaching intervention and even policies are shadowy. And where significant parts of the Internet are theoretically (and often actually) cut off from public view.

Link: Surv Hurts US

Surveillance reform increases US global market shares – reverses Snowden effects on the market

Castro and McQuinn 6/9/15 (Daniel, is the Vice President of the Information Technology and Innovation Foundation, Alan is a Research Assistant with the Information Technology and Innovation Foundation, “Beyond the USA Freedom Act: How U.S. Surveillance Still Subverts U.S. Competitiveness”, <http://www.itif.org/publications/2015/06/09/beyond-usa-freedom-act-how-us-surveillance-still-subverts-us-competitiveness>, accessed: 7/30/15

ITIF estimated in 2013 that even a modest drop in the expected foreign market share for cloud computing stemming from concerns about U.S. surveillance could cost the United States between \$21.5 billion and \$35 billion by 2016. Since then, it has become clear that the U.S. tech industry as a whole, not just the cloud computing sector, has under-performed as a result of the Snowden revelations. Therefore, the economic impact of U.S. surveillance practices will likely far exceed ITIF’s initial \$35 billion estimate. This report catalogues a wide range of specific examples of the economic harm that has been done to U.S. businesses. In short, foreign customers are shunning U.S. companies. The policy implication of this is clear: Now that Congress has reformed how the National Security Agency (NSA) collects bulk domestic phone records and allowed private firms—rather than the government—to collect and store approved data, it is time to address other controversial digital surveillance activities by the U.S. intelligence community. The U.S. government’s failure to reform many of the NSA’s surveillance programs has damaged the competitiveness of the U.S. tech sector and cost it a portion of the global market share. This includes programs such as PRISM—the controversial program authorized by the FISA Amendments Act, which allows for warrantless access to private-user data on popular online services both in the United States and abroad—and Bullrun—the NSA’s program to undermine encryption standards both at home and abroad. Foreign companies have seized on these controversial policies to convince their customers that keeping data at home is safer than sending it abroad, and foreign governments have pointed to U.S. surveillance as justification for protectionist policies that require data to be kept within their national borders. In the most extreme cases, such as in China, foreign governments are using fear of digital surveillance to force companies to surrender valuable intellectual property, such as source code. In the short term, U.S. companies lose out on contracts, and over the long term, other countries create protectionist policies that lock U.S. businesses out of foreign markets. This not only hurts U.S. technology companies, but costs American jobs and weakens the U.S. trade balance. To reverse this trend, ITIF recommends that policymakers:

Status quo prove that NSA reform failures cuts US competitiveness.

Castro and McQuinn 6/9 [Daniel Castro and Alan McQuinn, June 9, 2015, “Beyond the USA Freedom Act: How U.S. Surveillance Still Subverts U.S. Competitiveness”, Daniel Castro is the Vice President of the Information Technology and Innovation Foundation and Director of the Center for Data Innovation (link is external). Mr. Castro writes and speaks on a variety of issues related to information technology and internet policy, including privacy, security, intellectual property, internet governance, e-government, and accessibility for people with disabilities. His work has been quoted and cited in numerous media outlets, including The Washington Post, The Wall Street Journal, NPR, USA Today, Bloomberg News, and Businessweek, Alan McQuinn is a Research Assistant with the Information Technology and Innovation Foundation. His research areas include a variety of issues related to information technology and Internet policy, such as

cybersecurity, privacy, virtual currencies, e-government, Internet governance, and commercial drones. Prior to joining ITIF, he was a telecommunications fellow for Congresswoman Anna Eshoo, an honorary co-chair of ITIF. www.itif.org/publications/2015/06/09/beyond-usa-freedom-act-how-us-surveillance-still-subverts-us-competitiveness] JE

Almost two years ago, [ITIF described how](#) revelations about [pervasive digital surveillance by the U.S. intelligence community could severely harm](#) the [competitiveness of the United States](#) if foreign customers turned away from U.S.-made technology and services. [Since then, U.S. policymakers have failed to take sufficient action to address these surveillance concerns](#); in some cases, they have even fanned the flames of discontent by championing weak information security practices. In addition, other countries have used anger over U.S. government surveillance as a cover for implementing a new wave of protectionist policies specifically targeting information technology. [The](#) combined [result is a set of policies both at home and abroad that sacrifices robust competitiveness of the U.S. tech sector](#) for vague and unconvincing promises of improved national security. ¶ [ITIF estimated in 2013 that even a modest drop in the expected foreign market share for cloud computing stemming from concerns about U.S. surveillance could cost the United States between \\$21.5 billion and \\$35 billion by 2016.](#) Since then, it has become clear that [the U.S. tech industry as a whole](#), not just the cloud computing sector, has [under-performed as a result of the Snowden revelations](#). Surveillance tanks US competitiveness – tech companies prove

Taylor 6/29 [Brian Taylor, June 29, 2015, Reporter for Tech Republic, Report: Surveillance programs may cost US tech over \$35 billion and its competitive edge, news.yahoo.com/report-surveillance-programs-may-cost-222900657.html] JE

In August 2013, just as the ink was drying from the press covering the initial Snowden revelations, **ITIF estimated that the economic fallout for US cloud computing providers could run from \$22 to \$35 billion.** In the two years since, ITIF noted that US technology continues to underperform due to mistrust of US government surveillance. They concluded that the long-term repercussions "will likely far exceed" the \$35 billion figure from 2013.¶ **The increasing lack of trust has even affected trade with closely aligned nations** including the UK and Canada. A January 2014 survey showed that **25% of respondents in those two nations intended to pull their organizational data out of the US as a result of the** National Security Agency (**NSA**) **surveillance controversy.**¶ Further repercussions affecting major US companies include the following.¶ Salesforce saw a leading German insurance firm cancel an agreement to manage a consumer database. In the fiscal quarter after the Snowden revelations, Salesforce saw short-term sales losses and a deficit of \$124 million.¶ **Cisco suffered sales losses in China, Brazil, and Russia due to a report that the NSA covertly placed surveillance tools into its hardware.** In a quarterly earnings call, CEO John Chambers stated that the **NSA was a factor in revenue declines in China.**¶ Qualcomm has admitted that, despite growth projections in China, NSA revelations are hurting its business there.¶ Also in China, Apple, Cisco, Citrix Systems, and McAfee (Intel) were dropped from the approved purchase list for state enterprises; this was part of the wave of foreign protectionism ITIF cited that results from the NSA surveillance uproar.¶ **Boeing in Brazil and Verizon Wireless in Germany were dropped from government contracts because of spying concerns.**¶ Protectionism by foreign governments¶ In its report, ITIF described how in 2012 a Rackspace competitor in Australia, after Rackspace had built data centers there, argued that the US would use the Patriot Act as a way to track Australian citizens. That same Australian company also lobbied lawmakers, using a report it had funded, to convince them to place limits on foreign cloud providers. After the US spying revelations in 2013, protectionist efforts stemming from surveillance concerns have grown larger in Australia.¶ In Europe, the NSA backlash has led to calls for data localization laws, and procurement regulations that support European providers. Germany and France have started to build their own national networks: Schlandnet and Sovereign Cloud, respectively. In addition, France has invested \$200 million in two startups to create an independent, domestic infrastructure.¶ **Australia, China, India, and Russia have passed laws requiring that their citizens' personal information does not leave their borders,** effectively mandating that international cloud providers build data centers in those countries. Apple and Salesforce have already done so to support their worldwide business and to respond to critics.

SSRA Link

NSA “Backdoor” reforms boosts US tech competitiveness

AVH 3/25/15 (allvideo24h is a global news source, “World’s top tech companies ask Congress to relax NSA spying laws”, <http://allvideo24h.com/Video-worlds-top-tech-companies-ask-congress-to-relax-nsa-spying-laws.html>, accessed: 7/30/15, SP)

More than 40 companies wrote a letter to Congress and the Obama administration, sent Wednesday. Industry leaders such as Apple, Google and Facebook got in touch with civil liberties organizations like the American Civil Liberties Union **to try and get Washington to change its spying laws, in the wake of the NSA scandal**. “Now is the time to take on meaningful legislative reforms to the nation’s surveillance programs that maintain national security while preserving privacy, transparency and accountability,” the group said in the letter. “[T]he status quo is untenable and it is urgent that Congress move forward with reform.” Tech companies have been amongst the biggest supporters of implementing change, as they believe they are losing out financially as the public becomes more suspicious about potential spying from the NSA, in the wake of whistleblower Edward Snowden’s revelations. Richard Salgado, who is Google’s director for law enforcement and information security, told a US Senate panel on November 13, 2014, that spying carried out by the **NSA has** “the great potential for doing **serious damage to the competitiveness**” of US companies such as Apple, Facebook and Microsoft. He added that **“the trust that’s threatened is essential to these businesses,”** Bloomberg News reported. The Information Technology & Innovation Foundation, a policy research group based in Washington, says that US companies may lose as much as \$35 billion because the public has lost confidence in the security of their products. READ MORE: Tech heavyweights Facebook, Google, Apple support bill limiting NSA spying “The potential fallout is pretty huge, given how much our economy depends on the information economy for its growth,” said Rebecca MacKinnon, a senior fellow at the New America Foundation, a Washington policy group, speaking to Bloomberg. “It’s increasingly where the US advantage lies.” In their letter, the group said they want politicians to end the NSA’s power to collect public data en masse, while transparency measures should also be introduced so both the government and private companies can tell the public what surveillance agencies may be collecting. They are hoping to make a June 1 Congress deadline, which will see some aspects of the current Patriot Act up for renewal. One section includes a controversial provision, known as Section 215, which allows the NSA to collect phone records of almost all Americans. This is not the first time that tech giants have lobbied Congress to change the current spying laws. In November, their CEOs sent a letter to the Senate, asking lawmakers to demonstrate leadership and restore the confidence of internet users while keeping citizens safe. READ MORE: Congress quietly expands NSA powers for spying on Americans “It’s been a year since the first headlines alleging the extent of government surveillance on the Internet... We understand that governments have a duty to protect their citizens. But the balance in many countries has tipped too far in favor of the state and away from the rights of the individual. This undermines the freedoms we all cherish, and it must change,” the letter’s authors said. However, they were unable to pass the motion as their attempts to reform the NSA were just two votes short of overcoming a filibuster in the Senate. In December, Congress used a set of provisions to expand the surveillance of Americans by the NSA. The US government gave the agency what civil liberties advocates argue is an unprecedented authority to collect and store data belonging to American citizens. In order to get the spending bill passed in December by the House, they had to **remove a provision for NSA backdoor surveillance**. They put the emphasis on **tech companies to make sure that the products that they produced were more surveillance-friendly**. Also, under Section 309 of the Intelligence Authorization Act 2015, Congress allowed the government unprecedented access to have surveillance powers without a warrant, which would allow for “the acquisition, retention, and dissemination” of US phone and internet data.

Link: STEM

STEM is key to US competitiveness.

Han et. Al '15 [03/1/15 Xueying Han, scholar at nanotechnology, "Will They Stay or Will They Go? International Graduate Students and Their Decisions to Stay or Leave the U.S. upon Graduation," <http://www.ncbi.nlm.nih.gov/pmc/articles/PMC4356591/> DA July 13, 15]

The U.S. currently enjoys a position among the world's foremost innovative and scientifically advanced economies but the emergence of new economic powerhouses like China and India threatens to disrupt the global distribution of innovation and economic competitiveness. Among U.S. policy makers, the promotion of advanced education, particularly in the STEM (Science, Technology, Engineering and Mathematics) fields, has become a key strategy for ensuring the U.S.'s position as an innovative economic leader. Since approximately one third of science and engineering post-graduate students in the U.S. are foreign born, the future of the U.S. STEM educational system is intimately tied to issues of global competitiveness and American immigration policy. This study utilizes a combination of national education data, a survey of foreign-born STEM graduate students, and in-depth interviews of a subset of those students to explain how a combination of scientists' and engineers' educational decisions, as well as their experience in school, can predict a students' career path and geographical location, which can affect the long-term innovation environment in their home and destination country. This study highlights the fact that the increasing global competitiveness in STEM education and the complex, restrictive nature of U.S. immigration policies are contributing to an environment where the American STEM system may no longer be able to comfortably remain the premier destination for the world's top international students.

Lack of STEM retention hurts American Competitiveness

Gordon and Bock 12

(Bart Gordon and Larry Bock, former Democratic Member of the House from Tennessee and executive director of the USA Science & Engineering Festival, "Gordon, Bock: STEM Education Is Key to a Competitive America", April 27th, 2012, Rollcall, <http://www.rollcall.com/news/Gordon-Bock-STEM-Education-Is-Key-to-a-Competitive-America-214160-1.html>, JAS)

America is facing a crisis of competitiveness on the global stage. Our nation is not developing a generation of students pursuing science careers or retaining the talents of the non-U.S. citizens who now earn more than two-thirds of Ph.D. degrees awarded by American colleges and universities. Fewer young Americans are entering fields of science, technology, engineering and mathematics, putting the nation's status as an innovative world leader in severe jeopardy. Each year since 2008, the majority of patents issued by the U.S. Patent and Trademark Office have been awarded to international owners. Inspiring young Americans to study STEM fields is critical to reversing this trend and creating a new generation of innovative entrepreneurs. That is why the USA Science and Engineering Festival — the nation's largest celebration of science and engineering, to be held April 28-29 at the Walter E. Washington Convention Center — was created. This weekend, hundreds of thousands of participants will gather at the Washington Convention Center for what promises to be America's largest celebration of science. In his 2010 State of the Union address, President Barack Obama said, "The first step in winning the future is encouraging American innovation." Discussing the inaugural USA Science and Engineering Festival, House Science, Space and Technology Chairman Ralph Hall (R-Texas), said that "inspiring our children to become more interested in the STEM fields and in careers through endeavors such as this is the key to unlocking our future economic and innovative potential." More than 120 Members of Congress from both sides of the aisle have supported the festival by joining its Honorary Congressional Host Committee. The commitment from America's technology companies to support the festival's

expo and other events has been equally remarkable. At their highest executive levels, these companies know that their futures also hang in the balance. This issue is one which transcends party and geographical boundaries and will shape our nation for generations to come. This year's festival brings together a unique assortment of the country's leading high-technology companies, colleges and universities, federal agencies and professional societies to provide an array of thousands of interactive, hands-on exhibits, stage shows and other activities. Participants will meet science celebrities and innovators who provide real-life role models in STEM fields and be able to learn about internships, mentorships and scholarship opportunities from colleges, universities and companies focused on scientific innovation. **With our nation's global competitiveness on the line, now is the time to make celebrating science a priority and create a new generation of inventors and explorers who will solve the challenges of the future and continue America's tradition of being a world leader in innovation.**

--- Tech Competition Zero Sum ---

Ext: Tech = Zero Sum

Tech market share is zero sum.

Katz, 11 (Abie, associate at August Capital, "How much of a zero-sum game is tech-company growth? 9/21/11, www.quora.com/How-much-of-a-zero-sum-game-is-tech-company-growth)

On the other hand, market share can be a zero sum game. For example, if Google gains search market share, that inherently means some other search engine lost market share. Overtime, the growth rate of certain online markets may slow down as they mature, thus making certain tech markets more of a zero sum game.

US lagging now will allow China to gain the lead in tech competitiveness

Coleman 15 Kevin, Chief Strategist at Netscape and author for Extreme Tech and Business Insider, March 26th, "The US is in Danger of Losing its Technological Edge" (<http://www.extremetech.com/internet/206445-the-us-is-in-danger-of-losing-its-technological-edge>) 7/30/15 ANH

While that is concerning, another study found that China is emerging as a serious contributor to global technology development. The supporting data found that 67 percent agree or strongly agree that over the next 5 to 10 years China will be a source of major innovation in specific tech sectors, including electronics and software. In that same survey, 76 percent agree or strongly agree that China will be a disruptive force in the global technology market within the next 5 to 10 years. When you examine China's tech sector, you can't help but be impressed by the rate in which it improved in the last few years. On the other side, 49 percent of those surveyed see the emerging tech centers in the U.S. as little or no threat! Only 8 percent felt they were a significant threat. Whatever happened to good old American ingenuity? That is a dramatic change. The social, economic influence and security issues this creates are huge. Even the U.S. Pentagon expressed concern over the U.S. losing its military technological superiority to rivals. An article published last year clearly stated the U.S. is no longer the technology leader in military gear. Now add to that the statement before the House Armed Services Committee made by U.S. Deputy Defense Secretary Robert Work who said that "bold action" is necessary if the U.S. is to keep the lead in technology. Technology innovation and creative application of those new technologies are an increasing part of global competitiveness and a country's security and influence, as well as global power. Looking out over the next three to five years, several technologies are poised to enter the accelerated advancement and adoption state of their evolution during the same window of time. The U.S. does not know how to be viewed as anything but first when it comes to technology. Addressing this decline has to rapidly become a national priority driven by the leaders in the U.S. government and industry. The U.S. has no time to waste, given the rapid pace of technological advancement and the continued growth in competition. A technology renaissance is needed now if the U.S. is to retain its technological dominance. The next era of rapid technology advancement is at hand. Unlike other similar events, this one will be fueled by multiple technologies all entering into their rapid advancement and adoption stage of evolution in the same period of time. The United States had better get to work and work collectively to address this competitive challenge or we will all fail together and fall further behind for sure.

China is pushing against the US tech industry now – momentum is high

Atkinson 15 Robert, economist and president of the Information Technology and Innovation Foundation, April 1st, 2015, “Stop China’s Plan to Weaken American Innovation” (<http://www.csmonitor.com/Technology/Breakthroughs-Voices/2015/0401/Stop-China-s-plan-to-weaken-American-innovation>) 7/30/15 ANH

China’s government is orchestrating a comprehensive effort to eradicate American competitors from its markets for information and communications technology (ICT) products and services. **The intent is to hobble US companies competing in China, cultivate and promote China’s own domestic champions, and ultimately replace the US as the world’s ICT leader.** To achieve those goals, the Chinese are investing tens of billions of dollars to build up domestic production that can substitute for US imports in key industries such as semiconductors and software; fencing out US websites, applications, and other digital content platforms; forcing disclosure of proprietary intellectual property, technology, and source code; using anti-monopoly laws as a club to extract concessions from US companies; and even pressuring Chinese enterprises to stop using American-made hardware and software. Furthermore, China is utilizing a panoply of additional mercantilist measures that seek to unfairly advantage Chinese producers – from currency and standards manipulation to special benefits for state-owned enterprises. To understand the context for these policies, you must first understand the evolution of Chinese economic policy over the past two decades. Up to the mid-2000s, China’s economic development strategy sought principally to induce foreign multinationals to shift production to China. In 2006, China pivoted to a “China Inc.” model of “indigenous innovation” which called for the nation to master 402 core technologies, from intelligent automobiles to integrated circuits and high-performance computers. This shift essentially announced that Chinese economic strategy would now seek absolute advantage across virtually all advanced technology industries. It rejected the notion of comparative advantage, which holds that nations should specialize in the production of products or services at which they are the most efficient and trade for the rest. Instead, China wishes to dominate in production of both advanced technology products such as airplanes, semiconductors, and pharmaceuticals – plus commodity manufacturing. Ultimately, Chinese policymakers are trying to independently supply Chinese markets for advanced technology products with their own production while still benefitting from unfettered access to global markets for their technology exports. In no sector is this strategy more apparent than in ICT. Here, China has used virtually every tool at its disposal to advantage domestic producers, including a vast array of mercantilist practices that are specifically designed to disadvantage American competitors. For instance, the Chinese government has launched its “De-IOE” campaign to unabashedly pressure Chinese companies to replace products from IBM, Oracle, and EMC with Chinese-made alternatives. Cisco, Microsoft, and Qualcomm have meanwhile found themselves targeted for alleged violation of China’s anti-monopoly laws – though their only crime has been to innovate and use patents. China routinely blocks e-mail services, social media networks, digital content platforms, and Web-based productivity applications provided by American ICT firms such as Facebook, Google, and Microsoft. And China is investing more than \$25 billion in an attempt to foster development of an indigenous semiconductor manufacturing industry to wrest market share from US competitors such as Intel, Qualcomm, and Texas Instruments. In January, China announced regulations that foreign-enterprise-developed ICT products and services be deemed “secure and controllable,” including having to undergo intrusive security testing, complying with Chinese national standards, and potentially disclosing valuable source code. And the government is considering new anti-terror laws requiring that tech companies turn over encryption keys to the government, which could make it difficult for US companies to do any business in China. Put simply, China is pursuing not just a “De-IOE” strategy, but a blatant “De-USA” strategy, and this high-tech harassment will in all likelihood continue until China finally gets what it wants: the complete replacement in China of foreign technology companies with Chinese ones. It is high time American policymakers recognize that China’s goal of replacing US-made advanced technology products with Chinese-made ones is a central component of China’s economic development strategy, and it won’t abate unless America makes clear that these policies are unacceptable and have costs and consequences.

--- China Econ Impacts ---

Brink

Chinese economy on the brink – needs growth.

CNN Money, 7/27 ("China's economy is getting sick. Will it infect America?,"
money.cnn.com/2015/07/26/investing/china-slowdown-impact-us-stocks/)

After years of explosive expansion, China is cooling off. Growth has fallen to its lowest level since 2009, and investors believe it might be even worse because Beijing may be fudging the official numbers. China is now the second biggest economy in the world. The fear is that China will pull other major economies -- including the U.S. -- down with it. That would be scary given how slowly the global economy is currently growing and how little ammo governments have left to jump start business. "We need all the growth we can get. A slowdown in China wouldn't help," said David Joy, chief market strategist at Ameriprise Financial. Investors around the world went on high alert when China's stock market began to crumble in late June and early July, causing prices for oil, gold and copper to tumble. Chinese equities stabilized for a few weeks after massive government intervention but the rout resumed Monday, with stocks slumping 8.5%.

I/L: Intl Tech Market Key to China Econ Recovery

Tech sector expansion key to prevent Chinese economic collapse.

Clover, 15 (Charles, Financial Times China correspondent, "China's leaders look to the net for growth," Financial Times, 3/5/15, blogs.ft.com/the-world/2015/03/chinas-leaders-look-to-the-net-for-growth/)

China's leaders are looking to the internet to offset sagging economic growth. At the annual meeting on Thursday of the National People's Congress, China's legislature, internet and ecommerce merited a dozen mentions, culminating in Prime Minister Li Keqiang announcing an "internet-plus action plan". That, he promised, would "integrate the mobile internet, cloud computing, big data and the internet of things with modern manufacturing, to encourage the healthy development of ecommerce, industrial networks, and internet banking, and to guide internet based companies to increase their presence in the international market". Relying on the internet to rescue the economy is a constant theme among the leadership. According to Ma Jiantang, chief of the national statistics bureau, "traditional industries . . . have been faced with many challenges. However, new products, industries, business models and formats arising from the mobile internet are burgeoning". And that is clearly the case: online retail grew 49.7 per cent in 2014 year-on-year, while logistics services, which cater to ecommerce shoppers, grew 51.9 per cent. "This is where our hope lies," he said. That seems sensible. McKinsey, the consulting firm, has estimated that internet applications could fuel some 7-22 per cent of China's incremental GDP growth until 2025. The "internet-plus" plan will probably benefit a trio of companies that dominate the Chinese internet. In fact "internet plus" was a strategy originally put forward by Pony Ma, chairman of Tencent, China's second-largest internet company. "We hope that our vision may be adopted as part of the

I/L: Innovation Key to China Econ

Tech innovation will boost China's economy and push them into the global market

Sharif 15 Naubahar, Associate Professor in Social Science at the Hong Kong University of Science and Technology, February 2015, "Global Technology Leadership: The Case of China" (<http://iems.ust.hk/wp-content/uploads/2015/02/IEMSWP2015-11.pdf>) 7/29/15 ANH

China's rapidly growing domestic market—now the second largest in the world—will continue to grow and is likely to surpass the US market around 2020. As market size is an important determinant of innovation activities, burgeoning demand will drive Chinese companies to continuously advance their technological capabilities to profit from successful innovation, providing a global advantage such as no other economy enjoys. In spite of China's openness to market forces, however, Beijing's autocratic system of governance largely persists, providing ample room for the Chinese government to enact and implement industrial and innovation policy to enhance the technological capabilities of Chinese companies to an extent that mature Western market-oriented economies and democratic governments cannot match. This represents the second advantage we discuss here. Able to enact policy facing little or no opposition, **Beijing can steer economic development as it sees fit.** Benefiting from 7 China's so-called 'indigenous innovation' strategy, Chinese companies enjoy government support of R&D, enabling them to develop technologies independently and to own intellectual property rights. Large-scale government grants and low interest loans from state-owned banks under the framework of the indigenous innovation strategy provide Chinese firms with strong incentives to become global technological leaders.

national strategy. The idea is to use the internet as a platform, and to integrate all industries, including traditional industries, through internet technology, to create a new ecosystem in new areas," Mr Ma said this week.

I/L: Strong Tech Key to China Econ

Technology is key to China's economic growth

Mongelluzzo 12 Bill, JOC reporter on Trans-Pacific trade and labor, March 28th, 2012, "China's Growth Tied to Technology, Consultant Says" (http://www.joc.com/economy-watch/chinas-growth-tied-technology-consultant-says_20120328.html) 7/31/15 ANH

China will continue to expand its economy, but its growth will be based upon technology and innovation rather than low-cost labor, according to a consultant who has lived there for the past 20 years. For U.S. companies seeking to invest in or sell their products to China, some of the best opportunities will therefore be found in areas such as clean-energy technology, information technology, biotechnology and high-end manufacturing, said James McGregor, senior counselor in Beijing to APCO Worldwide. China over the past 30 years has experienced unprecedented growth as the so-called factory for the world. That economic model, which began under Communist Party leader Deng Xiaoping, is running out of steam, McGregor said. "The Deng Xiaoping era is over," McGregor told the annual Asia/Pacific Business Outlook conference Tuesday at the University of Southern California. China will not forgo low-cost manufacturing altogether. Some of the manufacturing will shift inland. Many plants will remain in the coastal regions but will achieve significant productivity improvements through implementation of technology. Other plants will move to Southeast Asia in search of low-cost labor. "It will balance out," he said. The focus of government initiatives today, however, derives from the "indigenous innovation" movement that the government announced in 2006. China is encouraging scientific research and its application to industries that will employ the millions of college graduates that are pouring into the work force today. The number of college graduates each year has tripled to 6 million. These young graduates have known only prosperity and exponential economic growth in their lives. They want white collar jobs that will give them instant middle class status. "The government runs scared of the expectations of these people. They are impatient people," McGregor said. Although China has been the subject of much criticism from international institutions such as the World Bank for the massive number of state-owned enterprises that dominate its economy, U.S. companies that want to do business in China should not expect these enterprises to lose their influence anytime soon. In many key sectors of the economy, state-owned-enterprises control 75 to 90 percent of the assets. "This will be hard to break because they are integrated with the Communist Party," McGregor said. It is difficult to predict what type of reform, if any, will occur later this year when Vice President Xi Jinping replaces Hu Jintao as head of the Communist Party, but the country's new leader will have to deal with the "princelings," or descendants of prominent and influential senior Communists, that have gained influence in China, McGregor said.

A strong technology field is key to boost China's innovation-driven economy

Agnihotri 14 Iti, media relations project manager for ASU's Office of Entrepreneurship and Innovation, April 9th, 2014, "China looks to science, technology to fuel its plans for innovation-based economy" (<https://asunews.asu.edu/20140409-china-conference-outcomes>) 7/31/15 ANH

Maintaining stability in the face of rapid change and growth, and proactively partaking in cooperative global ties in science and technology fields will be key in helping China become an innovation-based economy, according to Denis Simon, vice provost for International Strategic Initiatives at Arizona State University. One of the world's leading experts on science, technology and innovation in China, Simon recently hosted an ASU conference that focused on the evolving role of science and technology in China's international relations. Supplemented with strategic investments in research and development over the last five years, a more active participation in cross-border science and technology collaboration is also allowing China to have a greater voice and more influence in setting the global agenda regarding specific focus areas on an international platform. China is becoming increasingly effective at using science and technology diplomacy to promote economic and trade cooperation, such as with its 2011 launch of the China-Africa Science and Technology Partnership Program. "In the past, China shared asymmetrical relationships with most countries, especially from the West," said Simon. "When it came to science and technology cooperation, it

was often simply the recipient of technologies as part of a very hierarchical relationship. In today's world of globally-oriented knowledge networks, we are seeing China shift away from the traditional unilateral patterns of technology transfer to establishing more bilateral, mutually beneficial patterns by strengthening its domestic innovation system. Chinese officials now understand that to get technology, you increasingly have to have some technology and related capabilities." The ASU conference featured more than 30 speakers and panelists from all over the world, including Xue Lan from China's Tsinghua University, Wang Zhongcheng from China Science and Technology Exchange Center, Liu Xielin from the Chinese Academy of Sciences, Nannan Lundin from Sweden's Global Challenge and Mark Cohen from the United States Patent and Trademark Office. The panel of experts examined a diverse array of topics, including the policies and strategies that drive China's international science and technology relations; its government-to-government relationships with specific countries; international space competition; China's role in climate change and clean energy; changing patterns of technology transfer to and from China; and China's evolving role in the global intellectual property regime. The conference also looked at the role of China's returning scientists and engineers, many of whom have graduate degrees from North America and Europe. These returnees have the potential to play a catalytic role as China tries to improve its research and development infrastructure. Cao Cong, a faculty member from the University of Nottingham in the United Kingdom, said that more than 1.4 million Chinese citizens living or working abroad had returned to China by the end of 2013. He noted that most returnees have focused on building institutions supporting science and technology, as well as on efforts to improve the management and funding of research and development activities. The Chinese government systematically has supported the return of its talented citizens by launching programs like The Thousand Young Talent program and the Chang Jiang Scholars Program. "However, there are a few emerging concerns," said Cao. "Researchers from China and abroad are carefully watching the role of the Chinese government in determining research productivity and culture. They are also paying close attention to China's short term versus long term research goals, the accountability of the scientific community to the public and political leadership, and the role returnees will play in pursuing excellence in research versus challenging the current system." Nannan Lundin from Global Challenge, an independent Swedish think tank, remarked that while China's rapid growth as the world's second largest economy is a source of outside admiration and national pride, it is important to ask some pointed questions. "China won't be considered an innovation economy unless it is seen as a global commercial success," Lundin said. "Not only do we need international collaboration for multidisciplinary work to overcome the gaps in basic research and new knowledge creation, but we also need to train Chinese researchers to apply their knowledge suitably to drive commercial success." "China steadily positioning itself to play a more active and important role in international science and technology affairs is a good development," said Simon. "I cannot imagine one single current global science and technology-related problem or challenge – including climate change, new energy, world health, etc. – that will not require close collaboration between China, the U.S. and the world's other major advanced countries to find real solutions." Or as Li Xin of the Ministry of Science and Technology of China said while commenting on global S&T issues, "We are not only part of the problem, but we are part of the solution too."

China Econ Terminal

Global nuclear war

Plate 3 (Tom, Professor of Communications – UCLA, Straights Times, 6-28, Lexis)

But imagine a China disintegrating - on its own, without neo-conservative or Central Intelligence Agency prompting, much less outright military invasion - because the economy (against all predictions) suddenly collapses. That would knock Asia into chaos. A massive flood of refugees would head for Indonesia and other places with poor border controls, which don't want them and can't handle them; some in Japan might lick their lips at the prospect of World War II Revisited and look to annex a slice of China. That would send Singapore and Malaysia - once occupied by Japan - into nervous breakdowns. Meanwhile, India might make a grab for Tibet, and Pakistan for Kashmir. Then you can say hello to World War III, Asia-style. That's why wise policy encourages Chinese stability, security and economic growth - the very direction the White House now seems to prefer.

--- CCP Lash Out Debate ---

Ext: China Econ Decline → CCP Lash Out

Chinese economic collapse causes lash out and global conflict

Chang 14 Gordon, Distinguished Senior Fellow at the Gatestone Institute, April 16th, 2014, "China on the Edge" (<http://www.gatestoneinstitute.org/4269/china-on-the-edge>) 7/31/15 ANH

There is something very wrong in China at the moment. China, I believe, has just passed an inflection point. Until recently, everything was going its way. Now, however, it seems all its problems are catching up with the Chinese state at the same time. The country has entered an especially troubling phase, and **we have to be concerned that Beijing—out of fundamental weakness and not out of strength—will lash out and shake the world.** So what happened in the past decade? To understand China's new belligerent external policies, we need to look inside the country, and we might well start with the motor of its rise: its economy. Everyone knows China's growth is slowing. Yet what is not obvious is that it is slowing so fast that the economy could fail. The Chinese economy almost failed in June. There were extraordinary events that month including two waves of bank defaults. The Industrial and Commercial Bank of China, the country's largest bank—the world's largest bank—was obviously in distress: it even had to shut down its ATMs and online banking platforms to conserve cash. The Bank of China, the country's third-largest lender, was also on the edge of default. There was panic in China in June, but central government technocrats were able to rescue the economy by pouring even more state money into "ghost cities" and high-speed-rail-lines-to-nowhere. Doing so created gross domestic product—economic output—but that was the last thing Beijing should have been doing at that—or this—moment. China, at every level of government, is funding all its construction with new debt. You think America has a debt problem; China's is worse. As one economist told us recently, every province in China is a Greece. China, after the biggest boom in history, is heading into what could end up as the biggest debt crisis in history. This is not a coincidence. Soon, there must be a reckoning because the flatlined economy is not able to produce sufficient growth to pay back debt. If we ignore official statistics and look at independent data—such as private surveys, corporate results, and job creation numbers—we see an economy that cannot be expanding in the high single digits as Beijing claims. How fast is the country really growing? In 2012—the last year for which we have a full set of employment statistics—the number of jobs in China increased 0.37% over 2011. This indicates that China could not have grown by more than 2.0% In 2013's third quarter, preliminary surveys show the number of jobs decreased 2.5% from Q3 in 2012 and 4.0% from Q2 2013. That is an indication that China's economy has already begun to contract both year-on-year and quarter-on-quarter. And why are China's severe economic problems relevant to us? Because for more than three decades the Communist Party has primarily based its legitimacy on the continual delivery of prosperity. And without prosperity, the only remaining basis of legitimacy is nationalism. Naval Marines of China's People's Liberation Army. (Image source: U.S. Marine Corps) The People's Liberation Army, which is configuring itself to fight the United States, is the embodiment of that nationalism. China's militant nationalism is creating friction in an arc of nations from India in the south to South Korea in the north. Let us focus on the Philippines and Japan. Nearly two years ago, Chinese vessels surrounded and seized Scarborough Shoal from the Philippines. Washington, not wanting to antagonize Beijing and hoping to avoid a confrontation, did nothing to stop the Chinese taking over the shoal despite our mutual defense treaty with Manila. The Chinese, however, were not satisfied with their seizure. They are now pressuring Second Thomas Shoal and other Philippine territory, also in the South China Sea. Beijing claims about 80% of that critical body of international water as an internal Chinese lake. As soon as the Chinese took Scarborough, they began to increase pressure on Japan's Senkaku Islands in the East China Sea. The barren outcroppings are claimed and administered by Japan, but Beijing, which calls them the Diaoyus, claims them as well. As a matter of international law, the claim of the People's Republic is weak—Beijing acknowledged they were Japanese until 1971, when it first asserted sovereignty over them. Yet the weakness of the claim is not the problem. Many countries pursue weak territorial claims. The problem is China's tactics. Beijing is using forceful tactics to try to take the Senkakus, regularly sending its ships into Japanese territorial waters surrounding the islands and sometimes flying planes into Japanese airspace there. Many people ask why the Japanese should care about eight barren outcroppings. The reason is that the Chinese are acting like classic aggressors. They were not satisfied with Scarborough, so they ramped up pressure on the Senkakus. They will not be happy with just the Senkakus. Chinese policymakers—and state media—are now arguing that Beijing should claim Okinawa and the rest of the Ryukyu chain. And recently, Beijing expanded its Air-Defense Identification Zone to include airspace over Japan's sovereign territory, a clearly hostile act and one that can lead to conflict. There has been a noticeable increase in the

tempo of China's territorial incursions during the last year. This uptick has generally coincided with the elevation of Xi Jinping as China's new ruler in November 2012. Of course, we all want to understand what is going on inside Beijing's political circles and what is causing this new aggressiveness. There are two theories. First, some think Xi Jinping has quickly consolidated control and that he is really an ardent nationalist, that he is the one pushing the military to act aggressively. There is some support for this conclusion because it has been repeatedly reported that he is personally directing Beijing's hostile campaign to take the Senkakus. Even some in the Xi-is-strong camp acknowledge the incompleteness of the leadership transition, however. For instance, Kenneth Lieberthal of Brookings, who is one of Xi's defenders, believes that the new leader is a domestic reformer but cannot get on the wrong side of the ugly nationalism the Party has fostered in the past. Lieberthal believes Xi is allowing the military to engage in provocative behavior so that he will have the political capital to push through economic reforms at home. Second, others, including me, believe the transition has not been completed. More than Lieberthal, I see a weak leader who does not control the military. People who share this view, which is a minority one, are concerned that flag officers are either making their own policies independently of China's civilian leaders, or essentially telling civilian leaders what policies they will adopt. In short, I believe we should be careful speaking of "Beijing this" or "Beijing that," but should be looking instead at the factional messiness inside the Communist Party and realizing that the People's Liberation Army is now the Party's most powerful faction. Xi Jinping has, in fact, no faction of his own. People say he heads the "Princelings," but that term merely describes sons and daughters of either former leaders or high officials. These offspring have views that span the political spectrum and do not form a cohesive group. Xi became China's supreme leader because he appealed to all factions, in large part because he had no faction. He was, in short, the least unacceptable candidate. And because he still has no identifiable faction, he cannot afford to offend the generals and admirals, who, in my view have been driving the bus for some time. Some political analysts even joke that the military is now Xi Jinping's faction. In any event, China's external policies are of deep concern. It is not just that Beijing is hostile; its foreign policy now makes little sense. In the past, Beijing threw tantrums and even started wars when it wanted to punish a neighbor. Chinese leaders were always smart enough to direct their anger at just one or two targets to make sure they got what they wanted. And many times they were successful. Today, Beijing is taking on many others, all at the same time, especially countries to its south and its east and the United States. How many adversaries does a country need? The Party is lashing out, and that is not a good sign. If nothing else, it betrays a lack of strategic thinking. It is not promoting worldwide revolution, as it did in the early years of the People's Republic, but it is trying to upend the existing international order, something that Mao also attempted. So we have to be prepared to face the fact that China is no longer a status quo power. Is China really going back to its Maoist origins? On the face of it, this sounds absurd. Almost everybody believes China has left its past forever, but that belief does not accord with the facts. The Chinese political system, thanks to Xi Jinping, is now going on a bender, with his Maoist and Marxist "mass line" campaigns, one right after the other; his prolonged attack on civil society; and his new movement promoting "ideological purification." If the dominant view is correct—that Xi Jinping is now firmly in control of China—it means that he must really believe in his extremist positions. Either way, Xi is roiling Chinese politics at the moment. For one thing, he is purging political opponents under the guise of a crackdown on corruption. One of these probes, against Zhou Yongkang, breaks the most sacred rule of Chinese communist politics. To heal the Party's grievous wounds caused by Mao Zedong's decade-long Cultural Revolution, leaders in the early part of the 1980s, after the trial of the Gang of Four, decided that no member or former member of the Politburo Standing Committee could be investigated. Those at the apex of political power were immune from prosecution. The theory was that if leaders knew they would not be hunted down, as they were in the Cultural Revolution, they would be willing to withdraw gracefully after losing political struggles. In other words, Deng Xiaoping, Mao's crafty successor, reduced the incentive for political figures to fight to the end and, as a result, tear the Communist Party apart. Xi Jinping, however, is reversing the process and upping the stakes, something evident in the tribulations of Mr. Zhou, the former internal security chief, as well as the more famous Bo Xilai, once China's most openly ambitious politician, who is now serving a life term after an incompetently run show trial last August. The widespread use of criminal penalties is a sign that China is returning to a period that many thought was long past. Last year, then Premier Wen Jiabao warned that China could descend into another Cultural Revolution. Observers at the time thought he was being melodramatic. He probably was not. China is on the edge, taking wrong turns at the moment. Most foreign policy establishments in Washington and other capitals are doing their best to ignore what is happening in Beijing. They have always hoped that China could become a partner for the U.S., rather than another Soviet Union or, worse, a 1930s Germany or Japan. And this leads us to the central question in Sino-U.S. ties today: How are we going to develop good relations with a China that, out of weakness or strength, is roiling the world? Almost everyone says we need to talk to the Chinese because we talked to the Soviets. Talking, the argument goes, will build good relations or, at the very least, will avoid miscommunications and misunderstandings. The argument sounds compelling. After all, who can be against good relations? Who can be in favor of miscommunication and misunderstanding? Since the early 1970s, however, the U.S. has talked to China in every conceivable format, formal and informal, bilateral and multilateral, secret and announced. Discussions have been held in Washington and Beijing and many places in between. There have been state visits, the Strategic and Economic Dialogues, and even the "shirtsleeves summit" in southern California in June. During the previous administration, the number of ongoing bilateral forums between China and the U.S. reached fifty. Today, there are about 90 of them. Yet as the interactions between American and Chinese officials have increased dramatically during the Obama administration and the last one, ties between the two nations have remained strained. Obviously something is wrong. We have talked about what is wrong in China. We also need to think about what is wrong on our side. There are three things we are getting wrong. First, we do not understand how the Chinese think. We fervently

believe that if we try hard enough, the Chinese will have to respond in kind. This is a product of our reasoning that we are people, the Chinese are people, we respond to gestures of friendship, so the Chinese will respond favorably to our friendly gestures. By now we should have learned that this line of reasoning, which has a surface logic to it, is faulty because it has not in fact produced good outcomes. Chinese leaders do not distrust us because they have insufficient contact with us. They distrust us because they see themselves as the protector of an ideology threatened by free societies. The mistrust is inherent in their one-party state. It can never be relieved as long as the Communist Party remains in power. As Ronald Reagan taught us, the nature of regimes matters. In short, illiberal regimes cannot maintain enlightened foreign policies, at least over the long term. So we should not be surprised that China cannot compromise or maintain good relations with its neighbors, the international community, with us. The second thing we get wrong about China is that we believe that it is safe to ignore periodic Chinese threats to incinerate our cities and wage war on us, like the reports that appeared in state media in October 2013 boasting how Chinese submarines can launch missiles with nuclear warheads that can kill tens of millions of Americans. These are real threats and every time we fail to respond to them, the concept of deterrence erodes. Already, Shen Dengli of Fudan University in Shanghai tells us, in public, that we have "no guts" to stand up to China. Bad things happen when your adversary does not respect you. The third thing we get wrong about China is that we think it is inadvisable to call the Chinese out in public. In 2012, for instance, we learned that the Chinese military sold the North Koreans at least six transporter-erector-launchers—TELS—for their newest missile, the KN-08. And we said nothing to the Chinese in public. Why is that omission important? Because we are not that concerned at this moment with North Korea's longest-range launchers being used as weapons. These launchers take weeks to transport, assemble, fuel, and test. We can destroy them on the pad. We are, however, concerned about the nuclear-capable, road-mobile KN-08, which can hide and shoot. We should remember that the Pentagon last March cited the KN-08 as one of the principal reasons for going ahead with 14 additional ground-based interceptors in Alaska and California. So Beijing substantially increased North Korea's ability to wage nuclear war on us, and we acted as if it did not matter. Personally speaking, not offending the Chinese is low on my list of priorities. And our bashfulness has other consequences. The Chinese, with justification, complain that we are not being transparent with them about the "pivot." We keep on saying that the pivot has nothing to do with them, yet we are rotating B-52s through Australia and B-52s and B-2s through Guam and the Chinese have to be asking what that is all about. We need to be able to say, in public and in clear tones, that the pivot is all about them, that the pivot is about ensuring peace and stability in the region and they are the ones threatening it. If we cannot say those things clearly, the Chinese will think we are afraid of them. If they think we are afraid of them, they will act accordingly. I repeat: bad things happen when your adversary does not respect you. Let me put all that we have just talked about into context. Chinese leaders, it is true, have not launched a large-scale invasion since 1979. Instead, they employ salami-slicing tactics, to grab territory in increments, so that they do not invite retaliation. For instance, they successfully salami-sliced Scarborough Shoal. The Chinese were not the first to use this clever stratagem. We actually know where they learned this because the Chinese were the victims of these same tactics. The hardline Japanese military in the 1930s kept grabbing chunks of northeastern China. The Chinese then were continually pushed back and humiliated. In the second half of 1937, there was a feeling in Chinese circles that, although Nationalist forces were no match for Japan's, Chiang Kai-shek had no choice but to fight back. Chiang ultimately made his stand after Japanese soldiers fired on his troops in July of that year in a minor—and undoubtedly accidental—scrap at the Marco Polo Bridge, a few miles southwest of what is now the Chinese capital. This is, of course, a lesson for us today. The parallels between then and now are striking. Then, the Japanese military, like the Chinese military today, was emboldened by success and was ultra-nationalist. Then, like now, civilians controlled Asia's biggest army only loosely. Then, the media publicized the idea that Japan was being surrounded by hostile powers that wished to prevent its rise. That is exactly what the Communist Party says today about China. Instead of ignoring Beijing's current salami tactics, as Washington does, we should be alive to the fact that countries on China's periphery, pushed to the limit by Beijing's unrelenting belligerence, could very well be forced into the same decision that Chiang Kai-shek made in 1937, to resist aggression with force of arms. Let us all remember, World War II started not on the plains of Europe in 1939 but near Beijing two years before. We live in an era defined by the absence of major war, but this peace may not last. At this moment, we do not know whether a Chinese political system in turmoil will drive the country to become the aggressor of the 21st century, but we should be prepared. We live in consequential times.

Economic decline causes CCP collapse.

Cheng 9. [Li, research director and senior fellow at the Brookings Institution's John L. Thornton China Center, "China's Team of Rivals" Foreign Policy -- March 1 -- www.foreignpolicy.com/articles/2009/02/16/china_s_team_of_rivals]

The two dozen senior politicians who walk the halls of Zhongnanhai, the compound of the Chinese Communist Party's leadership in Beijing, are worried. What was inconceivable a year ago now threatens their rule: an economy in freefall. Exports, critical to China's searing economic growth, have plunged. Thousands of factories and businesses, especially those in the prosperous coastal regions, have closed. In the last six months of 2008, 10 million workers, plus 1 million new college graduates, joined the already gigantic ranks of the country's unemployed. During the same period, the Chinese stock market lost 65 percent of its value, equivalent to \$3 trillion. The crisis, President Hu Jintao said recently, "is a test of our ability to control a complex situation, and also a test of our party's governing ability." With this rapid downturn, the Chinese Communist Party suddenly looks vulnerable. Since Deng Xiaoping initiated economic reforms three decades ago,

the party's legitimacy has relied upon its ability to keep the economy running at breakneck pace. If China is no longer able to maintain a high growth rate or provide jobs for its ever growing labor force, massive public dissatisfaction and social unrest could erupt. No one realizes this possibility more than the handful of people who steer China's massive economy. Double-digit growth has sheltered them through a SARS epidemic, massive earthquakes, and contamination scandals. Now, the crucial question is whether they are equipped to handle an economic crisis of this magnitude—and survive the political challenges it will bring. This year marks the 60th anniversary of the People's Republic, and the ruling party is no longer led by one strongman, like Mao Zedong or Deng Xiaoping. Instead, the Politburo and its Standing Committee, China's most powerful body, are run by two informal coalitions that compete against each other for power, influence, and control over policy. Competition in the Communist Party is, of course, nothing new. But the jockeying today is no longer a zero-sum game in which a winner takes all. It is worth remembering that when Jiang Zemin handed the reins to his successor, Hu Jintao, in 2002, it marked the first time in the republic's history that the transfer of power didn't involve bloodshed or purges. What's more, Hu was not a protégé of Jiang's; they belonged to competing factions. To borrow a phrase popular in Washington these days, post-Deng China has been run by a team of rivals. This internal competition was enshrined as party practice a little more than a year ago. In October 2007, President Hu surprised many China watchers by abandoning the party's normally straightforward succession procedure and designating not one but two heirs apparent. The Central Committee named Xi Jinping and Li Keqiang—two very different leaders in their early 50s—to the nine-member Politburo Standing Committee, where the rulers of China are groomed. The future roles of these two men, who will essentially share power after the next party congress meets in 2012, have since been refined: Xi will be the candidate to succeed the president, and Li will succeed Premier Wen Jiabao. The two rising stars share little in terms of family background, political association, leadership skills, and policy orientation. But they are each heavily involved in shaping economic policy—and they are expected to lead the two competing coalitions that will be relied upon to craft China's political and economic trajectory in the next decade and beyond.

Chinese governmental instability causes CCP lash-out with WMD that kills billions

Rexing 5 (San, Staff – Epoch Times, The CCP's Last Ditch Gamble: Biological and Nuclear War, 8-5, <http://english.epochtimes.com/news/5-8-5/30975.html>)

Since the Party's life is "above all else," it would not be surprising if the CCP resorts to the use of biological, chemical, and nuclear weapons in its attempt to extend its life. The CCP, which disregards human life, would not hesitate to kill two hundred million Americans, along with seven or eight hundred million Chinese, to achieve its ends. These speeches let the public see the CCP for what it really is. With evil filling its every cell the CCP intends to wage a war against humankind in its desperate attempt to cling to life. That is the main theme of the speeches. This theme is murderous and utterly evil. In China we have seen beggars who coerced people to give them money by threatening to stab themselves with knives or pierce their throats with long nails. But we have never, until now, seen such a gangster who would use biological, chemical, and nuclear weapons to threaten the world, that they will die together with him. This bloody confession has confirmed the CCP's nature: That of a monstrous murderer who has killed 80 million Chinese people and who now plans to hold one billion people hostage and gamble with their lives.

--- China/Asian War Debate ---

China Growth Good

Chinese growth solves nuclear wars in Taiwan, Korea, and South Asia

Chen 1 (Shuxen, RAND Corp, China the United States and The Global Economy)

Indeed, U.S.-Chinese relations have been consistently driven by strong common interests in preventing mutually damaging wars in Asia that could involve nuclear weapons; in ensuring that Taiwan's relations with the mainland remain peaceful; in sustaining the growth of the U.S., China, and other Asian-Pacific economies; and, in preserving natural environments that sustain healthy and productive lives. What happens in China matters to Americans. It affects America's prosperity. China's growing economy is a valuable market to many workers, farmers, and businesses across America, not just to large multinational firms like Boeing, Microsoft, and Motorola, and it could become much more valuable by opening its markets further. China also affects America's security. It could either help to stabilize or destabilize currently peaceful but sometimes tense and dangerous situations in Korea, where U.S. troops are on the front line; in the Taiwan Straits, where U.S. democratic values and strategic credibility may be at stake; and in nuclear-armed South Asia, where renewed warfare could lead to terrible consequences. It also affects America's environment. Indeed, how China meets its rising energy needs and protects its dwindling habitats will affect the global atmosphere and currently endangered species. Yet, China's leadership, preoccupied with preserving its own power, lacks a convincing vision of China's future. While we do not know whether China will rise to the challenge and prosper, or stagnate and falter, Americans have a great stake in China's successful reform. That is why they have an interest in China's acceding to the WTO, opening it to the global economy, and strengthening its compliance with international rules and norms.

2NC Asian War Outweighs

The impact is the most probable scenario for global nuclear war

Dibb 1. (Paul, Prof – Australian National University, Strategic Trends: Asia at a Crossroads, Naval War College Review, Winter, <http://www.nwc.navy.mil/press/Review/2001/Winter/art2-w01.htm>)

The areas of maximum danger and instability in the world today are in Asia, followed by the Middle East and parts of the former Soviet Union. The strategic situation in Asia is more uncertain and potentially threatening than anywhere in Europe. Unlike in Europe, it is possible to envisage war in Asia involving the major powers: remnants of Cold War ideological confrontation still exist across the Taiwan Straits and on the Korean Peninsula; India and Pakistan have nuclear weapons and ballistic missiles, and these two countries are more confrontational than at any time since the early 1970s; in Southeast Asia, Indonesia—which is the world's fourth-largest country—faces a highly uncertain future that could lead to its breakup. The Asia-Pacific region spends more on defense (about \$150 billion a year) than any other part of the world except the United States and Nato Europe. China and Japan are amongst the top four or five global military spenders. Asia also has more nuclear powers than any other region of the world. Asia's security is at a crossroads: the region could go in the direction of peace and cooperation, or it could slide into confrontation and military conflict. There are positive tendencies, including the resurgence of economic growth and the spread of democracy, which would encourage an optimistic view. But there are a number of negative tendencies that must be of serious concern. There are deep-seated historical, territorial, ideological, and religious differences in Asia. Also, the region has no history of successful multilateral security cooperation or arms control. Such multilateral institutions as the Association of Southeast Asian Nations and the ASEAN Regional Forum have shown themselves to be ineffective when confronted with major crises.

2NC: US-China War = Existential Threat

US-China war causes extinction – existential risk outweighs.

Wittner 11 (11/30/11 Dr. Lawrence, Prof of History Emeritus at SUNY Albany, "Is a Nuclear War with China Possible?")

But what would that "victory" entail? An attack with these Chinese nuclear weapons would immediately slaughter at least 10 million Americans in a great storm of blast and fire, while leaving many more dying horribly of sickness and radiation poisoning. The Chinese death toll in a nuclear war would be far higher. Both nations would be reduced to smoldering, radioactive wastelands. Also, radioactive debris sent aloft by the nuclear explosions would blot out the sun and bring on a "nuclear winter" around the globe -- destroying agriculture, creating worldwide famine, and generating chaos and destruction. Moreover, in another decade the extent of this catastrophe would be far worse. The Chinese government is currently expanding its nuclear arsenal, and by the year 2020 it is expected to more than double its number of nuclear weapons that can hit the United States. The U.S. government, in turn, has plans to spend hundreds of billions of dollars "modernizing" its nuclear weapons and nuclear production facilities over the next decade.

Turns US Econ

Chinese economic decline tanks the US economy

Manning and Garrett 13. [Robert A., Senior Fellow in the Brent Scowcroft Center on International Stability, Banning, Strategic Foresight Senior Fellow for Global Trends Strategic Foresight Initiative, “Does Beijing Have a Strategy? China’s Alternative Futures” Atlantic Council -- March 19 -- <http://www.acus.org/publication/does-beijing-have-strategy-chinas-alternative-futures>]

The United States needs to avoid schadenfreude as China faces increasing difficulties in the future and recognize that US interests are best served by a successful, not failing, China and that a successful China is more likely to eschew extreme nationalism in favor of bilateral and global cooperation with the United States. China experiencing a sharp economic decline and resulting political and social instability, would likely have a devastating effect on the global economy and on international stability and security. In short, hoping for or seeking to promote failure or a sharp decline in China’s fortunes could lead to mutual assured economic destruction as well as to global governance gridlock in the face of mounting global challenges threatening the prosperity and security of China, the United States and all other nations.

--- China Relations Impacts ---

I/L: Competition Jacks Relations

Increased economic competition between the US and China decks relations.

Bremmer and Feigenbaum 11 Ian, political scientist specializing in foreign policy, and Evan, senior associate in the Asia program at the Carnegie Endowment for International Peace, April 1st, 2011, “Watch Out for Rising US-China Competition” (<https://hbr.org/2011/04/watch-out-for-rising-us-china>) 7/31/15 ANH

Conventional wisdom says that when it comes to U.S.-China relations, commerce plays a stabilizing role, giving both sides a reason to work together. But **in the next few years, commercial ties between the two countries will almost certainly become more competitive and could even disrupt the relationship.** That’s because **China wants to become a leader in just the kinds of technology sectors that have traditionally given the U.S. a global edge. The result will be increased competition between the two countries** — within China and globally — **and a deepening unease on both sides.** China has made no secret of its goals. Even though the country emerged from the global crisis stronger than nearly every other major economy, Premier Wen Jiabao reiterated last month that its current economic-growth model, based on low-cost manufacturing and overinvestment, is “unbalanced, unstable, uncoordinated, and unsustainable.” Instead, **China is set on developing higher-value-added and technology-intensive industries.** And its huge capacity to mobilize domestic capital gives it the **power to do so. For many U.S. firms, the first battleground will be within China, where there is already significant competition between foreign and local companies for market share.** A 2010 survey by the American Chamber of Commerce in China found that 38% of U.S. companies feel unwelcome in the Chinese market, up from 23% just two years earlier. And it’s a sentiment that extends beyond technology companies, like Google, into the manufacturing sector. Numerous companies now complain about a host of issues, from intellectual property theft to nontariff barriers to aspects of China’s regulatory regime. **There is fear among U.S. firms that if China can quickly produce substitutable (but cheaper) products, foreign companies in China will be marginalized.** But the next battleground will be the global marketplace for sophisticated technologies. In some sectors, such as high-speed rail, China is already a leader, largely because it demanded technology as the price for domestic market access. China is a preferred partner in that sector for Argentina, for example. China also is globally competitive in solar energy — California has been a big market for its solar panels. Other sectors to watch include aircraft, nuclear power, electric vehicles, and electronics. These trends have had political consequences in both countries. **The once-solid coalition of U.S. businesses and officials that helped to achieve permanent normal trading status for China is stressed and fraying.** And in China, the exporters, bankers, and political leaders who had coalesced around trade-related issues are increasingly at odds. Multinationals are adapting quickly to changes in the landscape. Some, such as Boeing, are seeking to move technology frontiers faster than China can breach them. Others, such as Apple, are separating production and basic design from more complex and essential aspects of design. Apple manufactures everything from iPods to iPads in China but retains its essential design processes in Cupertino, California. Still other companies will aim to involve Chinese partners in the innovation process — for instance, through joint research and development activities and facilities. There’s some evidence that as China becomes a producer as well as a consumer of intellectual property, Chinese companies will increasingly cooperate with foreign multinationals on the basis of shared, rather than sole, advantage. For example, China’s private national champion BYD has struck up a partnership with Daimler to develop alternative-energy vehicles. And Chinese national oil companies are in or are seeking partnerships with international oil companies — first, to acquire technology; second, to share risks in an increasingly risky world; and, third, to connect to new skills and industry practices. Such collaboration may help to redefine at least some U.S.-Chinese corporate partnerships. But **the overall trend will be one of increased tension in the superpowers’ commercial relationship, now that China is aiming squarely at the heart of U.S. advantage.**

Circumvention DA Michigan 7

Yes Circumvention

1NC – plan circumvented

Reforms are not possible—the plan will be circumvented

Greenwald 2014 (Glenn [Constitutional lawyer- patriot]; CONGRESS IS IRRELEVANT ON MASS SURVEILLANCE. HERE'S WHAT MATTERS INSTEAD; Nov 19;

<https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nsas-mass-surveillance/>; kdf)

All of that illustrates what is, to me, the most important point from all of this: the last place one should look to impose limits on the powers of the U.S. government is . . . the U.S. government. Governments don't walk around trying to figure out how to limit their own power, and that's particularly true of empires. The entire system in D.C. is designed at its core to prevent real reform. This Congress is not going to enact anything resembling fundamental limits on the NSA's powers of mass surveillance. Even if it somehow did, this White House would never sign it. Even if all that miraculously happened, the fact that the U.S. intelligence community and National Security State operates with no limits and no oversight means they'd easily co-opt the entire reform process. That's what happened after the eavesdropping scandals of the mid-1970s led to the establishment of congressional intelligence committees and a special FISA "oversight" court—the committees were instantly captured by putting in charge supreme servants of the intelligence community like Senators Dianne Feinstein and Chambliss, and Congressmen Mike Rogers and "Dutch" Ruppberger, while the court quickly became a rubber stamp with subservient judges who operate in total secrecy. Ever since the Snowden reporting began and public opinion (in both the U.S. and globally) began radically changing, the White House's strategy has been obvious. It's vintage Obama: Enact something that is called "reform"—so that he can give a pretty speech telling the world that he heard and responded to their concerns—but that in actuality changes almost nothing, thus strengthening the very system he can pretend he "changed." That's the same tactic as Silicon Valley, which also supported this bill: Be able to point to something called "reform" so they can trick hundreds of millions of current and future users around the world into believing that their communications are now safe if they use Facebook, Google, Skype and the rest. In pretty much every interview I've done over the last year, I've been asked why there haven't been significant changes from all the disclosures. I vehemently disagree with the premise of the question, which equates "U.S. legislative changes" with "meaningful changes." But it has been clear from the start that U.S. legislation is not going to impose meaningful limitations on the NSA's powers of mass surveillance, at least not fundamentally. Those limitations are going to come from—very different places¹ Individuals refusing to use internet services that compromise their privacy. The FBI and other U.S. government agencies, as well as the U.K. Government, are apoplectic over new products from Google and Apple that are embedded with strong encryption, precisely because they know that such protections, while far from perfect, are serious impediments to their power of mass surveillance. To make this observation does not mean, as some deeply confused people try to suggest, that one believes that Silicon Valley companies care in the slightest about people's privacy rights and civil liberties.

Yes circumvention – Generic

Reform attempts just provide a veneer of legitimacy for national security officials

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, “National Security and Double Government,” <http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf>, JMP)

VI. Conclusion

U.S. national security policy has **scarcely changed from** the **Bush to the Obama** Administration. The theory of Walter Bagehot explains why. Bagehot described the emergence in 19th-century Britain of a “disguised republic” consisting of officials who actually exercised governmental power but remained unnoticed by the public, which continued to believe that visible, formal institutions exercised legal authority.⁶⁰¹ Dual institutions of governance, one public and the other concealed, were referred to by Bagehot as “double government.”⁶⁰² A similar process of bifurcated institutional evolution has occurred in the United States, but in reverse: a network has emerged within the federal government that **exercises predominant power with respect to national security matters**. It has evolved in response to structural incentives rather than invidious intent, and it consists of the several hundred executive officials who manage the military, intelligence, diplomatic, and law enforcement agencies responsible for protecting the nation’s security. These officials are as little disposed to stake out new policies as they are to abandon old ones. They define security more in military and intelligence terms rather than in political or diplomatic ones. Enough examples exist to persuade the public that the network is subject to judicial, legislative, and executive constraints. This appearance is important to its operation, for the network derives legitimacy from the ostensible authority of the public, constitutional branches of the government. The appearance of accountability is, however, largely an illusion fostered by those institutions’ pedigree, ritual, intelligibility, mystery, and superficial harmony with the network’s ambitions. The courts, Congress, and even the presidency in reality impose little constraint. Judicial review is negligible; congressional oversight dysfunctional; and presidential control nominal. Past efforts to revive these institutions have thus fallen flat. Future reform efforts are no more likely to succeed, relying as they must upon those same institutions to restore power to themselves by exercising the very power that they lack. External constraints—public opinion and the press—are insufficient to check it. Both are manipulable, and their vitality depends heavily upon the vigor of constitutionally established institutions, which would not have withered had those external constraints had real force. Nor is it likely that any such constraints can be restored through governmental efforts to inculcate greater civic virtue, which would ultimately concentrate power even further. Institutional restoration can come only from an energized body politic. The prevailing incentive structure, however, encourages the public to become less, not more, informed and engaged.

Yes circumvention – CIA

Limits on the CIA fail

Cushing 6/16/2015 (Tim; CIA still acting like a domestic surveillance Agency, Despite Instructions Otherwise; <https://www.techdirt.com/articles/20150616/14381731365/cia-still-acting-like-domestic-surveillance-agency-despite-instructions-otherwise.shtml>; kdf)

The ACLU has received another document dump from the government as a result of its FOIA lawsuits, with this bundle dealing with the CIA's activities. This isn't directly related to the late Friday evening doc dump announced by the Office of the Director of National Intelligence, which dealt more with the CIA's counterterrorism activities leading up to the 9/11 attacks, but there is some overlap. Most of what the ACLU is highlighting from this pile of documents is the CIA's domestic surveillance activities. Ideally -- and according to the agency's own directives -- the amount of domestic surveillance it should be performing is almost none at all. It is charged with collecting and disseminating foreign intelligence and counterintelligence. It is allowed to track certain activities of Americans abroad, but for the most part, it is not supposed to be a domestic surveillance agency. Despite this, the CIA has done so repeatedly. Back in the 70s, the Church Committee uncovered domestic surveillance by the agency, targeting anti-war activists and political dissenters, as well as multiple joint programs with the FBI that -- over the course of thirty years -- resulted in the interception and opening of millions of pieces of US first class mail. Under Executive Order 120333, the CIA's domestic powers have expanded. No one knows to what extent the CIA performs domestic surveillance thanks to heavy redactions, but it appears to be just as widespread today, thanks mainly to its connection at the FISA Court: the FBI. Although EO 12333, AR 2-2, and Annex B prohibit the agency from engaging in electronic surveillance within the United States, the CIA can nevertheless ask the FBI to do its bidding: By partnering with the FBI, the CIA has done things like collect Americans' financial records in bulk under Section 215. A just-released Annex hints at other surveillance powers as well: Annex B explains that the CIA may "use a monitoring device within the United States under circumstances in which a warrant would not be required for law enforcement purposes if the CIA General Counsel concurs." Unfortunately, other details have been redacted, so it's not clear exactly what sort of "monitoring devices" the CIA is using. It appears to believe that -- despite its foreign priorities -- it can engage in any sort of warrantless domestic surveillance US law enforcement agencies can. And it appears its domestic activities aren't all that limited. The ACLU has obtained Inspector General's reports that detail the extent of the CIA's US-focused spying activities. The heading "Intelligence Activities Conducted by CIA within the United States" is followed by "dozens" of redacted pages. so, lots of bad news for privacy and civil liberties enthusiasts, with presumably more to come once some of this heavy redaction is cleared away. On the bright side, the Privacy and Civil Liberties Oversight Board is moving towards tackling the CIA's activities under Executive Order 120333. While this may not result in sweeping changes to the agency's programs, it should at least provide more insight into its domestic activities.

The CIA circumvent the plan by outsourcing their investigations

Musgrave 6/23/15 Projects Editor at the public records intelligence site MuckRock (Shawn, "CIA can give "specialized equipment" to other agencies Domestic partnerships allowed on surveillance as long as CIA agents don't push the buttons", <https://www.muckrock.com/news/archives/2015/jun/23/cia-can-give-specialized-equipment-other-agencies-//AN>)

New Central Intelligence Agency documents shed light on the agency's authority to partner with domestic law enforcement agencies. These procedures appear to give the green light for such programs as the development of aerial cell phone trackers in collaboration with the US Marshals. Last November, the Wall Street Journal first disclosed a US Marshals surveillance program that uses cell site simulators mounted on airplanes to track down suspects on the run. In March, WSJ uncovered that the CIA is a key partner in the program, having provided millions in funding and equipment transfers to the US Marshals over more than decade. People familiar with the operation told WSJ that the program was fully functional as of 2007, and that the US Marshals currently operate Cessna aircraft equipped with "dirtbox" cell phone trackers on a regular

basis from at least five metropolitan-area airports. Officials characterized the collaboration between the US Marshals' Technical Operations Group and the CIA's Office of Technical Collection as a "marriage." A CIA spokesperson declined to confirm any specifics. Although he disputed the "marriage" description, he told WSJ that some equipment developed by the CIA "have been lawfully and responsibly shared with other U.S. government agencies." "How those agencies use that technology is determined by the legal authorities that govern the operations of those individual organizations — not CIA," the spokesperson said. Federal law bars the CIA from collecting intelligence within the borders of the United States except under particular circumstances. But internal rules and procedures published last week outline how the CIA can provide training and "specialized equipment" to domestic law enforcement agencies, such as the US Marshals. The CIA procedure documents were obtained by the American Civil Liberties Union as part of an ongoing Freedom of Information Act lawsuit in partnership with the Media Freedom Information Access Clinic at Yale Law School. In May 2013, the ACLU requested documents regarding the CIA's interpretation of Executive Order 12333, which was signed by President Reagan in 1981. The order divvies up intelligence collection responsibilities among various federal agencies and establishes oversight procedures for the intelligence community. Under EO 12333, the CIA may provide "specialized equipment, technical knowledge, or assistance of expert personnel" to other federal agencies. In emergency cases when lives are endangered, the order authorizes the CIA to give the same assistance to local law enforcement agencies. As a public executive order, the text of EO 12333 has been public since its signing. But the order requires intelligence agencies to develop more specific implementation procedures, which are approved by the Attorney General. Until their release under the FOIA lawsuit, the CIA's implementation procedures for EO 12333 remained secret. Beyond joint actions to protect its intelligence personnel and to investigate foreign spying, terrorism, or narcotics activity, Agency Regulation 2-2 dictates that the CIA's Office of General Counsel must approve all partnerships with domestic law enforcement agencies. The newly released regulation's wording mirrors that of EO 12333's provision of "specialized equipment, technical knowledge, or assistance of expert personnel" to federal agencies, and to local law enforcement under emergency conditions. The CIA regulation also allows agents to provide "generalized training" to law enforcement personnel, whether for federal, state or local agencies. Such "specialized equipment" appears to include cell site simulators and other technologies that help law enforcement to track or locate mobile devices. The CIA did not return a request for confirmation as to whether the agency relies on these provisions for its collaboration with the US Marshals. The CIA thus has the authority to train other law enforcement agencies on surveillance techniques for domestic deployment. The CIA can provide the buttons and show which ones to press, but only so long as their agents aren't pushing the buttons themselves. Under a dedicated section of the regulations, CIA agents may assist other law enforcement agencies with electronic surveillance abroad. A separate annex which governs CIA activities within US borders bars agents from directly participating in "the collection of raw information" in domestic operations. But the definition of "electronic surveillance" as found in EO 12333 and the CIA regulations may not cover StingRays and other devices that law enforcement use to track cell phones. Under the executive order, electronic surveillance is "acquisition of a nonpublic communication by electronic means without the consent of a person who is a party to an electronic communication [...]" but not including the use of radio direction-finding equipment solely to determine the location of a transmitter." An appendix to the CIA regulations expands on this definition to encompass "telephone surveillance, microphone (audio) surveillance, and signals intelligence (SIGINT)." But the appendix definition likewise excludes "the use of radio direction finding equipment solely to determine the location of a transmitter." A StingRay might qualify as "radio direction finding equipment," and so fall outside the CIA's proscription against electronic surveillance on US soil. Other agencies such as the FBI, on the other hand, classify cell site simulators as an electronic surveillance tool. Similarly, the regulations detail how, if the general counsel signs off, CIA agents may use "monitoring devices" within the United States "under circumstances in which a warrant would not be required for law enforcement purposes." The heavily redacted definition in the CIA appendix hardly helps to clarify whether cell site simulators qualify as monitoring devices. If the CIA does consider StingRays to fall within the "monitoring device" moniker, the question remains whether agency lawyers consider their deployment to require a warrant. Justice Department lawyers held for more than a decade that no warrant was necessary to use a StingRay, and only recently did the FBI begin to seek warrants for cell site simulator deployments. Here, again, the regulations and other documents released by the CIA don't provide definitive answers. MuckRock is seeking additional documents on the CIA's partnership with the US Marshals on aerial cell site simulator technology.

Empirically this has happened with the NYPD

Apuzzo and Goldman 2011 are Pulitzer Prize-winning American journalist for the New York Times and Washington Post (Matt and Adam, "With CIA help, NYPD moves covertly in Muslim areas", [//AN">http://www.ap.org/Content/AP-In-The-News/2011/With-CIA-help-NYPD-moves-covertly-in-Muslim-areas\)//AN](http://www.ap.org/Content/AP-In-The-News/2011/With-CIA-help-NYPD-moves-covertly-in-Muslim-areas)

In New Brunswick, N.J., a building superintendent opened the door to apartment No. 1076 one balmy Tuesday and discovered an alarming scene: terrorist literature strewn about the table and computer and surveillance equipment set up in the next room. The panicked superintendent dialed 911, sending police and the FBI rushing to the building near Rutgers University on the afternoon of June 2, 2009. What they found in that first-floor apartment, however, was not a terrorist hideout but a command center set up by a secret team of New York Police Department intelligence officers. From that apartment, about an hour outside the department's jurisdiction, the NYPD had been staging undercover operations and conducting surveillance throughout New Jersey. Neither the FBI nor the local police had any idea. Since the terrorist attacks of Sept. 11, 2001, the NYPD has become one of the country's most aggressive domestic intelligence agencies. A months-long investigation by The Associated Press has revealed that the NYPD operates far outside its borders and targets ethnic communities in ways that would run afoul of civil liberties rules if practiced by the federal government. And it does so with unprecedented help from the CIA in a partnership that has blurred the bright line between foreign and domestic spying. Neither the city council, which finances the department, nor the federal government, which contributes hundreds of millions of dollars each year, is told exactly what's going on. The department has dispatched teams of undercover officers, known as "rakers," into minority neighborhoods as part of a human mapping program, according to officials directly involved in the program. They've monitored daily life in bookstores, bars, cafes and nightclubs. Police have also used informants, known as "mosque crawlers," to monitor sermons, even when there's no evidence of wrongdoing. NYPD officials have scrutinized imams and gathered intelligence on cab drivers and food cart vendors, jobs often done by Muslims. Many of these operations were built with help from the CIA, which is prohibited from spying on Americans but was instrumental in transforming the NYPD's intelligence unit. A veteran CIA officer, while still on the agency's payroll, was the architect of the

NYPD's intelligence programs. The CIA trained a police detective at the Farm, the agency's spy school in Virginia, then returned him to New York, where he put his new espionage skills to work inside the United States. And just last month, the CIA sent a senior officer to work as a clandestine operative inside police headquarters. While the expansion of the NYPD's intelligence unit has been well known, many details about its clandestine operations, including the depth of its CIA ties, have not previously been reported. The NYPD denied that it trolls ethnic neighborhoods and said it only follows leads. In a city that has repeatedly been targeted by terrorists, police make no apologies for pushing the envelope. NYPD intelligence operations have disrupted terrorist plots and put several would-be killers in prison. "The New York Police Department is doing everything it can to make sure there's not another 9/11 here and that more innocent New Yorkers are not killed by terrorists," NYPD spokesman Paul Browne said. "And we have nothing to apologize for in that regard." But officials said they've also been careful to keep information about some programs out of court, where a judge might take a different view. The NYPD considers even basic details, such as the intelligence division's organization chart, to be too sensitive to reveal in court. One of the enduring questions of the past decade is whether being safe requires giving up some liberty and privacy. The focus of that debate has primarily been federal programs like wiretapping and indefinite detention. The question has received less attention in New York, where residents do not know for sure what, if anything, they have given up. The story of how the NYPD Intelligence Division developed such aggressive programs was pieced together by the AP in interviews with more than 40 current and former New York Police Department and federal officials. Many were directly involved in planning and carrying out these secret operations for the department. Though most said the tactics were appropriate and made the city safer, many insisted on anonymity, because they were not authorized to speak with reporters about security matters. The story begins with one man.

Yes circumvention – Courts

Intelligence agencies will find loopholes in the plan

Rosenthal 6/12/2015 (Max J, Government's secret surveillance court may be about to get a little less secret; www.motherjones.com/politics/2015/06/usa-freedom-act-fisa-court-transparency; kdf)

"I think the transparency provisions are going to be effective for the judges who are inclined to support them and are going to be ineffective for the judges who aren't," says Steve Vladeck, a professor at American University's Washington College of Law. There are other procedural moves the government could use to limit what information is made public. The court could simply issue summaries of decisions that don't include their key parts, or the executive branch could heavily redact them. "In theory, the executive branch could comply with this part of the statute by redacting 99 percent—everything but one sentence, essentially—of an opinion," Goitein says. She admits that specific tactic is unlikely—it would be an obvious and public skirting of the law's intent—but stresses that even though the law makes important progress in disclosure, there are still many loopholes that could cut down on how much the public will get to see. "I think the history strongly suggests that the intelligence establishment will take every single little bit of rope it has," she says. "And then some."

Court's will fail

Greenwald 2014 (Glenn [Constitutional lawyer- patriot]; CONGRESS IS IRRELEVANT ON MASS SURVEILLANCE. HERE'S WHAT MATTERS INSTEAD; Nov 19; <https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nsas-mass-surveillance/>; kdf)

3) U.S. court proceedings. A U.S. federal judge already ruled that the NSA's domestic bulk collection program likely violates the 4th Amendment, and in doing so, obliterated many of the government's underlying justifications. Multiple cases are now on appeal, almost certainly headed to the Supreme Court. None of this was possible in the absence of Snowden disclosures. For a variety of reasons, when it comes to placing real limits on the NSA, I place almost as little faith in the judiciary as I do in the Congress and executive branch. To begin with, the Supreme Court is dominated by five right-wing justices on whom the Obama Justice Department has repeatedly relied to endorse their most extreme civil-liberties-destroying theories. For another, of all the U.S. institutions that have completely abdicated their role in the post-9/11 era, the federal judiciary has probably been the worst, the most consistently subservient to the National Security State.

Yes circumvention – DEA

Agencies will they'll use state and local courts to circumvent the plan – empirics

Shackford 6/3/2015 (Scott; The DEA bypasses federal oversight to better snoop on us all; reason.com/blog/2015/06/03/the-dea-bypasses-federal-oversight-to-be; kdf)

Reason has written extensively in our coverage of police asset forfeiture about how local law enforcement agencies bypass state restrictions by turning to the Department of Justice's looser federal sharing program. Doing so allows some law enforcement agencies to keep more of the money and property they seize. It seems as though the Drug Enforcement Administration (DEA) has reversed this dynamic, all in the name of more easily snooping on people. USA Today has determined that the DEA has drastically increased its use of electronic surveillance over the past decade by deliberately bypassing its own federal oversight and turning to local prosecutors. The Department of Justice (DOJ) has tougher requirements to permit eavesdropping than states and local judges: the DEA conducted 11,681 electronic intercepts in the fiscal year that ended in September. Ten years earlier, the drug agency conducted 3,394. Most of that ramped-up surveillance was never reviewed by federal judges or Justice Department lawyers, who typically are responsible for examining federal agents' eavesdropping requests. Instead, DEA agents now take 60% of those requests directly to local prosecutors and judges from New York to California, who current and former officials say often approve them more quickly and easily. Drug investigations account for the vast majority of U.S. wiretaps, and much of that surveillance is carried out by the DEA. Privacy advocates expressed concern that the drug agency had expanded its surveillance without going through internal Justice Department reviews, which often are more demanding than federal law requires. Wiretaps — which allow the police to listen in on phone calls and other electronic communications — are considered so sensitive that federal law requires approval from a senior Justice Department official before agents can even ask a federal court for permission to conduct one. The law imposes no such restriction on state court wiretaps, even when they are sought by federal agents.

Yes Circumvention – Drones

The plan will get circumvented, they'll find other aircraft

Stanley 2015 (Jay [Senior policy analyst, ACLU speech, privacy & tech project]; What's spooky about the FBI's fleet of spy planes?; <https://www.aclu.org/blog/free-future/whats-spooky-about-fbis-fleet-spy-planes>; kdf)

Following up on a May story by the Washington Post about mysterious aircraft spotted circling over Baltimore, the Associated Press reported today that the FBI maintains a secret air force with scores of small aircraft registered with 13 front companies under apparently false names, and that these planes fly over American cities frequently. Obviously law enforcement has been using aircraft for many decades. So what's spooky about this story? Several things: **These are not your grandparents' surveillance aircraft.**

As I discussed when the Baltimore story broke, there are several very powerful mass-surveillance technologies that utilize low-circling manned aircraft, including "Dirtboxes" and persistent wide-area surveillance in which an entire 25-square mile area can be monitored, and vehicles tracked, for extended periods of time by a single camera. We need more information about the scope of surveillance these planes are being used for. The FBI told the AP that its fleet was "not equipped, designed or used for bulk collection activities or mass surveillance." We are glad to hear that—but that statement bears more interrogation. For example the AP reports that the FBI "occasionally" uses Dirtboxes (aka "IMSI catchers" or "cell-site simulators") on the aircraft. **Those certainly qualify as mass surveillance devices.** If the FBI is only using the aircraft when it has a specific target rather than for broad fishing expeditions, that would be a good thing—but that is not the same thing as saying that data on masses of people is not being swept up. The FBI told the AP that "under a new policy it has recently begun obtaining court orders to use cell-site simulators." But we don't know what kind of "court orders" they're getting to use the devices. Rather than warrants, they may just be obtaining "pen register" orders, as we have seen done by local police in Baltimore and elsewhere. The sheer scope of the program. A 2010 federal budget document found by the AP mentions at least 115 planes in the FBI's fleet, and the FBI has flown over 100 flights over more than 30 American cities in recent weeks, the AP found. Surveillance turning inward. One trend we've seen in the last 15 years or so is a great "Turning Inward," as US surveillance capabilities originally built to spy on the Soviet Union and other overseas targets have swung inward on the American people. The FBI has a spy plane fleet, hidden behind shell companies with three-letter names and headed by ghost CEOs with signatures that don't match over time— it's all very CIA. Yet these are American cities that they're flying over. **Cessnas today, drones tomorrow.** Another thing that makes these flights spooky is the prospect that manned aircraft may soon be replaced with drones. And that will make it all the cheaper and easier to deploy these flights all the more frequently over even more American cities and towns. And unlike manned aircraft, drones may not be easy to track through web sites like flightradar24.com, which shows the manned aircraft currently in the air around the world and played a key role in uncovering the FBI's air force. It is true that under orders from President Obama the DOJ recently promulgated a privacy policy for its use of drones, but that policy is not very airtight—for example, it says DOJ agencies can't use the planes "solely for the purpose of monitoring activities protected by the First Amendment." That is good, but when agencies want to do surveillance they always claim to have other reasons so the monitoring is not "solely" for such monitoring. In the end, it doesn't make sense for drones to be subject to privacy regulations, but not manned aircraft. Manned aircraft can and do raise very real privacy concerns; for example their use in persistent wide-area surveillance, and in voyeurism incidents. But manned aircraft are not regulated today, because historically they have been expensive and their use therefore relatively rare, and their surveillance abilities well-understood and relatively limited. What this story tells us is that their use is now more widespread than we thought—and we know their surveillance capabilities are growing by leaps and bounds. Drones, by raising the prospect of endless free and easy aerial surveillance, have brought to the fore issues that already existed with manned aircraft, and new regulations designed to protect against aerial surveillance should not

distinguish between manned and unmanned aircraft. Law enforcement has been using aircraft for many decades. So what's spooky about reports of FBI fleet of low-circling planes?

Yes Circumvention – Executive

Executive will just ignore Congress and FISA typically defers to it

Bendix & Quirk, 15 --- *assistant professor of political science at Keene State College, AND **Phil Lind Chair in U.S. Politics and Representation at the University of British Columbia (March 2015, William Bendix and Paul J. Quirk, "Secrecy and negligence: How Congress lost control of domestic surveillance," <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, JMP)

Even if Congress at some point enacted new restrictions on surveillance, **the executive might ignore the law and continue to make policy unilaterally.** The job of reviewing executive conduct would again fall to the FISA Court.⁵⁶ In view of **this court's history of broad deference to the executive**, Congress would have a challenge to ensure that legislative policies were faithfully implemented.

Executive lawyers provides the means to circumvent the plan

Shane, 12 --- Jacob E. Davis and Jacob E. Davis II Chair in Law, The Ohio State University Moritz School of Law (Peter M., Journal of National Security Law & Policy, "Executive Branch Self-Policing in Times of Crisis: The Challenges for Conscientious Legal Analysis," 5 J. Nat'l Security L. & Pol'y 507))

II. The Breakdown of Government Lawyering The military and foreign policy disasters generated by presidential unilateralism demonstrate the practical importance of maintaining a pluralist view of checks and balances. Political officials are not simply rational actors who respond with dispassionate calculation to evidence and circumstance. Facts and options are always filtered through ideological prisms. Presidentialism narrows the prism. Pluralism works to offset that filtering. Pluralism guards against too much distortion by seeking to maximize the number of meaningful institutional voices in the policy making process. Equally troubling is the risk of presidentialism to the rule of law. Even in normal times, a heavy burden falls on government attorneys in virtually every agency. Government lawyering frequently represents the exclusive avenue through which the law is actually brought to bear on decisionmaking. This professional review within the executive branch is crucial. Most government decisions are simply too low in visibility, or too diffuse in impact, to elicit judicial review or congressional oversight as ways of monitoring legal compliance. Yet, **the ideological prism of presidentialism can bend the light of the law so that nothing is seen other than the claimed prerogatives of the sitting chief executive. Champions of executive power - even skilled lawyers who should know better - wind up asserting that, to an extraordinary extent, the President as a matter of constitutional entitlement is simply not subject to legal regulation by either of the other two branches of government.** [*511] Government attorneys must understand their unique roles as both advisers and advocates. In adversarial proceedings before courts of law, it may be fine for each of two contesting sides, including the government, to have a zealous, and not wholly impartial, presentation, with the judge acting as a neutral decisionmaker. But in their advisory function, government lawyers must play a more objective, even quasi-adjudicative, role. They must give the law their most conscientious interpretation. If they fail in that task, frequently there will be no one else effectively situated to do the job of assuring diligence in legal compliance. Government lawyers imbued with the ideology of presidentialism too easily abandon their professional obligations as advisers and too readily become ethically blinkered advocates for unchecked executive power. Jack Goldsmith headed the Office of Legal Counsel (OLC) for a little less than ten months in 2003-2004. Of the work done by some government

attorneys and top officials after 9/11, he said they dealt with FISA limitations on warrantless surveillance by the National Security Agency (NSA) "the way they dealt with other laws they didn't like: they blew through them in secret based on flimsy legal opinions that they guarded closely so no one could question the legal basis for the operations." n7

He describes a 2003 meeting with David Addington, who was Counsel and later Chief of Staff to Vice President Dick Cheney, in which Addington denied the NSA Inspector General's request to see a copy of OLC's legal analysis in support of the NSA surveillance program. Before Goldsmith arrived at OLC, "not even NSA lawyers were allowed to see the Justice Department's legal analysis of what NSA was doing." n8 OLC's analysis of the legality of NSA surveillance, issued on January 19, 2006, justified the program on two grounds: the President's inherent war powers and the Authorization for Use of Military Force (AUMF). However, the AUMF did not say anything about electronic surveillance. In 1978, Congress expressly stated that no statute other than the Foreign Intelligence Surveillance Act (FISA) or Title III - the law that applies to ordinary federal criminal prosecution - provides authority for electronic surveillance by the federal government. The AUMF could supersede FISA by repealing it, but only by making the repeal explicit. An argument that the AUMF implicitly repealed FISA necessarily falls short. OLC also argued that the President had an inherent constitutional power to conduct the NSA program no matter what FISA said. According to OLC, if FISA of 1978, as amended, were read to preclude the NSA program, the statute would be unconstitutional. n9 [*512] What prompted the Justice Department to argue in this fashion? One answer might be that Justice Department lawyers are institutionally expected to advocate for the President's powers and simply adopt the most ambitious arguments consistent with appropriate standards of professional competence in legal research and analysis. However, it is not the responsibility of Justice Department lawyers to advocate for every contemplated assertion of presidential authority, no matter how far-fetched. Even in my brief period at Justice, I witnessed multiple and significant examples of Department lawyers refusing to provide analytic support for legally ill-conceived proposals for executive action. Moreover, it is difficult to make a case for the professional competence of the FISA memorandum. Although the Justice Department manages to elaborate its views in over forty pages of single-spaced and highly technical verbiage, its memorandum never confronts the enormity of the initiative it is endorsing or the power of alternative arguments. Instead, it proffers distinctions from contrary precedents that are often, in a word, silly. Even if the authors felt institutionally constrained to reach a particular bottom line, the failure to assert any principle limiting the claims being made and the too-frequent lack of rhetorical judgment in structuring their argument suggest something other than diligent lawyering was at play. What accounted for the bad arguments was political and professional pressure.

When I worked at Justice, the refusal to take positions that could not be defended by

respectable standards did not harm the lawyer. As anyone who has ever worked in an organization knows, however, informal pressure can be an extraordinarily effective method of stifling disagreement and guiding decisions in the way top management desires. We know that supervision of the process of executive branch lawyering on the NSA memorandum was significantly usurped by the Office of the Vice President. David Addington, the Vice President's Counsel, and John Yoo, then a deputy in OLC, worked together to craft a series of arguments for unprecedented claims of executive power to pursue the campaign against terrorism. n10 Jack Goldsmith reports that Addington blackballed from future advancement in the executive

branch any lawyer who dared cross swords with him. n11 The deficiencies of legal analysis of NSA surveillance were replicated in other initiatives after 9/11, including the treatment of persons

captured and suspected of aiding and abetting terrorism. The Justice Department, through OLC, produced legal opinions stating, in effect, that anyone [*513] captured in the Afghanistan campaign had few, if any, rights under U.S. or international law and certainly no rights susceptible to vindication in U.S. courts. n12 The function of these legal opinions - indeed, their obvious purpose - was to ratify a scheme of maximum license to do with the detainees whatever the military, the CIA, or any other U.S. authority might choose to do with them. The Administration's lawyering process cleared the path to

horrors at the Abu Ghraib prison and Guantanamo - crimes whose stain upon our national honor is likely to remain, for decades at least, firmly embedded in the world's collective memory, deeply undermining our image and influence abroad. It is understandable that the Administration would want some flexibility in dealing with a threat it rightly regarded as in some ways unprecedented and of very grave magnitude. And yet, to move the detainees so completely beyond the realm of normal legal process was itself a plainly risky strategy in terms of compromising international support, exposing U.S. military personnel to mistreatment, risking the honor of U.S. military culture, and weakening the fabric of international law generally in its protection of both combatants and civilians during wartime. The desire for flexibility was understandable, but not at the cost of all other values. On a number of the most important points discussed in the OLC lawyers' memoranda, the courts subsequently held them to be wrong. Contrary to OLC, the Supreme Court held that foreign detainees at Guantanamo who challenged their classification as enemy combatants were entitled to judicial review of the legality of their detention. n13 Contrary to OLC, the Court held that the Geneva Conventions protected the detainees, whether or not they strictly qualified as prisoners of war. n14 Contrary to OLC and Justice Department briefs, the Court held that the military commissions as originally constituted were not sufficiently protective of the detainees' rights to permit their use for war crimes trials. n15 On all of these questions, whether of morality, policy, or law, there were at least serious arguments to be entertained by both sides. The fact that the Administration reached incorrect conclusions is, in itself, only a limited indictment of its lawyering. Even good lawyers make mistakes, and the fact that executive branch lawyers would consistently make mistakes erring on the side of executive authority is not in itself damning. What is damning, however, is that on

critical questions - questions going to the core of national honor and identity - executive branch lawyering was not just [*514] wrong, misguided, or ethically insensitive. It was incompetent. It was so sloppy, so one-sided, and at times so laughably unpersuasive that it cannot be defended as ethical lawyering in any context. Tax advice this bad would be malpractice. Government lawyering this bad should be grounds for discharge.

--- AT: President Will Comply

The President doesn't matter --- Glennon says a double government exists and a network of officials exists within government that exercises predominant power on national security.

The President can't ensure compliance --- the national security bureaucracy firmly controls the process

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," <http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf>, JMP)

Put differently, the question whether the President could institute a complete about-face supposes a top-down policy-making model. The illusion that presidents issue orders and that subordinates simply carry them out is nurtured in the public imagination by media reports of "Obama's" policies or decisions or initiatives, by the President's own frequent references to "my" directives or personnel, and by the Trumanites own reports that the President himself has "ordered" them to do something. But true top-down decisions that order fundamental policy shifts are rare.³⁶⁹ The reality is that when the President issues an "order" to the Trumanites, **the Trumanites themselves normally formulate the order.**³⁷⁰ The Trumanites "cannot be thought of as men who are merely doing their duty. They are the ones who determine their duty, as well as the duties of those beneath them. They are not merely following orders: **they give the orders.**"³⁷¹ They do that by "entangling"³⁷² the President. This dynamic is an aspect of what one scholar has called the "deep structure" of the presidency.³⁷³ As Theodore Sorensen put it, "Presidents rarely, if ever, make decisions—particularly in foreign affairs—in the sense of writing their conclusions on a clean slate . . . [T]he basic decisions, which confine their choices, have all too often been previously made."³⁷⁴

National security bureaucracy acts independent of the President

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," <http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf>, JMP)

Sometimes, however, the Trumanites **proceed without presidential approval.** In 1975, a White House aide testified that the White House "didn't know half the things" intelligence agencies did that might be legally questionable.³⁷⁸ "If you have got a program going and you are perfectly happy with its results, why take the risk that it might be turned off if the president of the United States decides he does not want to do it," he asked.³⁷⁹ Other occasions arise when Trumanites in the CIA and elsewhere originate presidential "directives"—directed to themselves.³⁸⁰ Presidents then ratify such Trumanite policy initiatives after the fact.³⁸¹ To avoid looking like a bystander or mere commentator, the President embraces these Trumanite policies, as does Congress, with the pretense that they are their own.³⁸² To maintain legitimacy, the President

must appear to be in charge. In a narrow sense, of course, Trumanite policies are the President's own; after all, he did formally approve them.³⁸³ But the policies ordinarily are formulated by Trumanites—who prudently, in Bagehot's words, prevent "the party in power" from going "all the lengths their orators propose[]." ³⁸⁴ The place for presidential oratory, to the Trumanites, is in the heat of a campaign, not in the councils of government where cooler heads prevail.³⁸⁵

Military frames decision-making to force President to accept the policy it wants

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," <http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf>, JMP)

Presidential choice is further circumscribed by the Trumanites' ability to frame the set of options from which the President may choose— even when the President is personally involved in the decisionmaking process to an unusual degree, as occurred when President Obama determined the number of troops to be deployed to Afghanistan.⁴¹⁴ Richard Holbrooke, the President's Special Representative for Afghanistan and Pakistan, predicted that the military would offer the usual three options— the option they wanted, bracketed by two unreasonable alternatives that could garner no support.⁴¹⁵ "And that is exactly what happened,"⁴¹⁶ Nasr recalled. It was, as Secretary Gates said, "the classic Henry Kissinger model You have three options, two of which are ridiculous, so you accept the one in the middle."⁴¹⁷ The military later expanded the options— but still provided no choice. "You guys just presented me [with] four options, two of which are not realistic." The other two were practically indistinguishable. "So what's my option?" President Obama asked. "You have essentially given me one option."⁴¹⁸ **The military was "really cooking the thing in the direction that they wanted,"** he complained. "They are not going to give me a choice."⁴¹⁹

Presidential control is very limited

Glennon, 14 --- Professor of International Law at Tufts (Michael, Harvard National Security Journal, "National Security and Double Government," <http://harvardnsj.org/wp-content/uploads/2014/01/Glennon-Final.pdf>, JMP)

This is, again, hardly to suggest that the President is without power. Exceptions to the rule occur with enough regularity to create the impression of overall presidential control. "As long as we keep up a double set of institutions—one dignified and intended to impress the many, the other efficient and intended to govern the many—we should take care that the two match nicely," Bagehot wrote.⁴²⁰ He noted that "[t]his is in part effected by conceding some subordinate power to the august part of our polity" ⁴²¹ Leadership does matter, or at least it can matter. President Obama's decision to approve the operation against Osama bin Laden against the advice of his top military advisers is a prominent example.⁴²² Presidents are sometimes involved in the decisional loops, as Bagehot's theory would predict. Overlap between Madisonians and Trumanites preserves the necessary atmospherics. Sometimes even members

of Congress are brought into the loop.⁴²³ But seldom do presidents participate personally and directly, let alone the Madisonian institutions in toto. The range of presidential choice is tightly hemmed in.⁴²⁴ As Sorensen wrote in 1981, “[e]ven within the executive branch, the president’s word is no longer final . . .”⁴²⁵ When the red lights flash and the sirens wail, it is the Trumanites’ secure phones that ring.

Yes Circumvention – FBI

FBI will circumvent the plan – empirics

Lendman 2015 (Stephen; Unconstitutional mass FBI aerial surveillance; Jun 10;
www.thesleuthjournal.com/unconstitutional-mass-fbi-aerial-surveillance/; kdf)

Free and open societies don't spy on their citizens. They don't invent phony threats as justification. America is a belligerent nation waging endless wars of aggression against invented enemies. Fear-mongering is rife. It's done to rape, ravage and destroy one country after another. It's a tactic used to scare people to believe they're safer by sacrificing fundamental freedoms. Mass surveillance is a defining rogue state characteristic. Post-9/11, government-usurped authority turned America into a police state. Big Brother watches everyone. Tuesday Senate passage of the USA Freedom Act (the renamed Patriot Act) changed little. Government intrusion into the private lives of its citizens remains largely unchanged. The only good news is that USAF slightly rolled back its intrusiveness instead of giving spy agencies more powers. History shows restrictions imposed are easily circumvented or ignored. A separate article discusses systematic FBI misuse of Patriot Act authority. Bureau secrecy and cover-up make it impossible to know the full extent of its lawlessness. It operates ad libitum with minimum oversight and accountability. One example is its mass surveillance of US citizens by drones and other aircraft. On June 2, AP reported "(s)cores of low-flying planes circling American cities..." "They're "part of a civilian air force operated by the FBI and obscured behind fictitious companies..." It's not secret. It's been reported before. In July 2013, the agency admitted using drones for domestic surveillance numerous times without court authorized warrants or other forms of oversight. At the time, deputy director Stephen D. Kelly said "(t)he FBI uses UAVs in very limited circumstances to conduct surveillance when there is a specific operational need." "Since late 2006, the FBI has conducted surveillance using UAVs in eight criminal cases and two national security cases." Former FBI director Robert Mueller admitted spying on US citizens with no "operational guidelines." Warrantless spying by any means threatens everyone. No probable cause is needed. No restraints are imposed. Constitutional protections are circumvented. Once a program is established, it takes on a life of its own. In the last decade, FBI aerial spying expanded to "civilian air force" level. In April alone, AP identified at least 50 FBI aircraft conducting more than 100 flights over urban and rural areas in 11 states. It cited a 2009 budget document indicating 115 planes, including 90 Cessna aircraft. FBI aerial spying is longstanding. Today, drones and other aircraft are equipped with high-tech cameras for close-up visual surveillance as well as technology able to monitor thousands of cell phones – a blatant breach of privacy. According to Senate Judiciary Committee chairman Charles Grassley (R. IA): "It's important that federal law enforcement personnel have the tools they need to find and catch criminals." "But whenever an operation may also monitor the activities of Americans who are not the intended target, we must make darn sure that safeguards are in place to protect the civil liberties of innocent Americans." No safeguards whatever exist – nor does Congress back up high-minded rhetoric with effective policies protecting the public from abusive government practices. Rogue agencies like the FBI, NSA, CIA, DEA and Homeland Security operate by their own rules – easily circumventing weak and ineffective restraints on their authority.

Recent Inspector General report confirms the plan gets circumvented

Lendman 2015 (Stephen; FBI Misuse of Patriot Act Authority; Jun 3;
sjlendman.blogspot.com/2015/06/fbi-misuse-of-patriot-act-authority.html; kdf)

America is a police state. The FBI is the nation's Gestapo. It's abuse of power and misconduct are longstanding. It's an instrument for systematically violating civil liberties. It's a rogue agency operating unconstitutionally. Bureau secrecy and cover-up make it impossible to know the full extent of its lawlessness. It operates with minimal oversight and accountability. A new Justice Department Office of the Inspector General (OIG) report titled "A Review of the FBI's Use of Section 215 Orders: Assessment of Progress in Implementing Recommendations and Examination of Use in 2007 - through 2009." Section 215 of the Patriot Act tramples on Bill of Rights protections. Its language is vague and deceptive. It's used to permit unconstitutional meta-data mining. It allows police state investigatory practices. It authorizes government access to "any tangible item" - including personal financial records and transactions, medical records, phone conversations, emails, other Internet use and whatever else Washington wants to monitor. FBI powers are sweeping.

They're greatly enhanced. They're used extrajudicially. Anyone can be spied on for any reason or none at all. No probable cause, reasonable grounds, or suspicions are needed. Exercising free expression makes you vulnerable. Section 215 is unconstitutional. It permits warrantless searches without probable cause. It violates First Amendment rights by mandating secrecy. It prohibits targeted subjects from telling others what's happening to them. It compromises free expression, assembly and association by authorizing the FBI to investigate anyone based on what they say, write, or do with regard to groups they belong to or associate with. It violates Fourth and Fifth Amendment protections by not telling targeted subjects their privacy was compromised. It subverts fundamental freedoms for contrived, exaggerated, or nonexistent security reasons. Section 215 powers expire on June 1 if Congress fails to extend them. So far, enough votes are lacking to do so. The battle continues. Senate Majority Leader Mitch McConnell called for another reauthorization vote on Sunday, May 31 before the provision expires. House leaders oppose re-extension. In early May, the US Second Circuit Court of Appeals struck down bulk NSA phone spying. It ruled Section 215 doesn't permit bulk collection of Americans' phone records. A three-judge panel ruled unanimously - overturning a lower court decision. It said collecting and storing meta-data "anywhere in the private sector (constitutes) an unprecedented and unwarranted contraction of the privacy expectations of all Americans." The FBI administers the law. It gets secretive virtually rubber-stamp Foreign Intelligence Surveillance Court (FISC) authorization for the NSA and itself to do so. OIG's new report discusses the FBI's egregious abuse of Section 215 powers. The 2005 Patriot Act Reauthorization required the agency to follow "minimization procedures" to limit the amount of private information collected, retained, disseminated and used - often inappropriately. The FBI failed to comply until March 2013 - nor NSA. Illegal interpretation of Section 215 persists. NSA abuse of power is notorious. The FBI concocted a set of so-called "Interim Procedures" under which it unilaterally decided it could obey its congressionally mandated procedures by declaring its preexisting duties enough. Section 215 minimization procedures in force contain vague language with lots of wiggle room permitting retention of information "necessary to understand foreign intelligence." In other words, whatever the FBI claims it needs to protect against alleged foreign threats (real or invented) is OK to collect, retain and use in whatever way the agency wishes - undermining privacy protections. The FBI, like the NSA, is a secretive agency operating unaccountably. Whatever it does is OK because nothing is done constrain it. Illegal surveillance persists out-of-control. Section 215 is a license for abuse. Secrecy hides the worst of what goes on. Even when federal courts strike down abusive practices, they persist. Agencies like the FBI and NSA operate extrajudicially. Reform is only possible by shutting them down entirely - replacing them with heavily constrained new agencies operating under strict regulations and oversight.

FBI surveillance continues even after restrictions on its activities

Fisher, 4 --- Associate Professor of Law and Director, Center for Social Justice, Seton Hall Law School (Winter 2004, Linda E., Arizona Law Review, "Guilt by Expressive Association: Political Profiling, Surveillance and the Privacy of Groups," 46 Ariz. L. Rev. 621, Lexis, JMP)

The history of the FBI and other law enforcement surveillance gives scant comfort to those engaged in lawful political and religious activities who are [*623] concerned about becoming targets of surveillance. n5 From its inception until restrictions on its activities were imposed in the mid-1970s - and even sometimes thereafter - the FBI regularly conducted politically motivated surveillance, choosing targets based on their political or religious beliefs. As part of its investigations, it compiled and widely disseminated political dossiers, engaged in warrantless searches, and disrupted the lawful First Amendment activities of a wide array of groups opposed to government policy. n6 Local police "Red Squads" did the same. n7 During the war in Vietnam, the CIA, despite restriction of its mission to foreign intelligence, also conducted domestic surveillance operations. n8 Religious groups engaged in political activity were among the targets of intelligence agency investigations. n9

Yes Circumvention – Lower Courts

Leading expert – lower courts will be ignored

Ackerman 2015 (Spencer; Fears NSA will seek to undermine surveillance reform; Jun 1; www.theguardian.com/us-news/2015/jun/01/nsa-surveillance-patriot-act-congress-secret-law;kdf)

Jameel Jaffer, the deputy legal director of the ACLU, expressed confidence that the second circuit court of appeals' decision last month would effectively step into the breach. The panel found that legal authorities permitting the collection of data "relevant" to an investigation cannot allow the government to gather data in bulk – setting a potentially prohibitive precedent for other bulk-collection programs. “We don’t know what kinds of bulk-collection programs the government still has in place, but in the past it’s used authorities other than Section 215 to conduct bulk collection of internet metadata, phone records, and financial records. If similar programs are still in place, the ruling will force the government to reconsider them, and probably to end them,” said Jaffer, whose organization brought the suit that the second circuit considered. Julian Sanchez, a surveillance expert at the Cato Institute, was more cautious. “The second circuit ruling establishes that a ‘relevance’ standard is not completely unlimited – it doesn’t cover getting hundreds of millions of people’s records, without any concrete connection to a specific inquiry – but doesn’t provide much guidance beyond that as to where the line is,” Sanchez said. “I wouldn’t be surprised if the government argued, in secret, that nearly anything short of that scale is still allowed, nor if the same Fisa court that authorized the bulk telephone program, in defiance of any common sense reading of the statutory language, went along with it.””

Yes Circumvention – NSA

The NSA will circumvent the plan

Ackerman 2015 (Spencer; Fears NSA will seek to undermine surveillance reform; Jun 1; www.theguardian.com/us-news/2015/jun/01/nsa-surveillance-patriot-act-congress-secret-law;kdf)

Privacy advocates fear the National Security Agency will attempt to weaken new restrictions on the bulk collection of Americans' phone and email records with a barrage of creative legal wrangles, as the first major reform of US surveillance powers in a generation looked likely to be a foregone conclusion on Monday. The USA Freedom Act, a bill banning the NSA from collecting US phone data in bulk and compelling disclosure of any novel legal arguments for widespread surveillance before a secret court, has already been passed by the House of Representatives and on Sunday night the Senate voted 77 to 17 to proceed to debate on it. Between that bill and a landmark recent ruling from a federal appeals court that rejected a longstanding government justification for bulk surveillance, civil libertarians think they stand a chance at stopping attempts by intelligence lawyers to undermine reform in secret. Attorneys for the intelligence agencies react scornfully to the suggestion that they will stretch their authorities to the breaking point. Yet reformers remember that such legal tactics during the George W Bush administration allowed the NSA to shoehorn bulk phone records collection into the Patriot Act. Rand Paul, the Kentucky senator and Republican presidential candidate who was key to allowing sweeping US surveillance powers to lapse on Sunday night, warned that NSA lawyers would now make mincemeat of the USA Freedom Act's prohibitions on bulk phone records collection by taking an expansive view of the bill's definitions, thanks to a pliant, secret surveillance court. "My fear, though, is that the people who interpret this work at a place known as the rubber stamp factory, the Fisa [court]," Paul said on the Senate floor on Sunday. Paul's Democratic ally, Senator Ron Wyden, warned the intelligence agencies and the Obama administration against attempting to unravel NSA reform. "My time on the intelligence committee has taught me to always be vigilant for secret interpretations of the law and new surveillance techniques that Congress doesn't know about," Wyden, a member of the intelligence committee, told the Guardian. "Americans were rightly outraged when they learned that US intelligence agencies relied on secret law to monitor millions of law-abiding US citizens. The American people are now on high alert for new secret interpretations of the law, and intelligence agencies and the Justice Department would do well to keep that lesson in mind." The USA Freedom Act is supposed to prevent what Wyden calls "secret law". It contains a provision requiring congressional notification in the event of a novel legal interpretation presented to the secret Fisa court overseeing surveillance. Yet in recent memory, the US government permitted the NSA to circumvent the Fisa court entirely. Not a single Fisa court judge was aware of Stellar Wind, the NSA's post-9/11 constellation of bulk surveillance programs, from 2001 to 2004.

Yes circumvention – K Card

Scare tactics will be used to stifle debate – turns their framework args

Greenwald 2014 (Glenn [Constitutional lawyer- patriot]; CONGRESS IS IRRELEVANT ON MASS SURVEILLANCE. HERE'S WHAT MATTERS INSTEAD; Nov 19;

<https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nsas-mass-surveillance/>; kdf)

The “USA Freedom Act”—which its proponents were heralding as “NSA reform” despite its suffocatingly narrow scope—died in the august U.S. Senate last night when it attracted only 58 of the 60 votes needed to close debate and move on to an up-or-down vote. All Democratic and independent senators except one (Bill Nelson of Florida) voted in favor of the bill, as did three tea-party GOP Senators (Ted Cruz, Mike Lee, and Dean Heller). One GOP Senator, Rand Paul, voted against it on the ground that it did not go nearly far enough in reining in the NSA. On Monday, the White House had issued a statement “strongly supporting” the bill. The “debate” among the Senators that preceded the vote was darkly funny and deeply boring, in equal measure. The black humor was due to the way one GOP senator after the next—led by ranking intelligence committee member Saxby Chambliss of Georgia (pictured above)—stood up and literally screeched about 9/11 and ISIS over and over and over, and then sat down as though they had made a point. Their scary script had been unveiled earlier that morning by a Wall Street Journal op-ed by former Bush Attorney General Mike Mukasey and former CIA and NSA Director Mike Hayden warning that NSA reform would make the terrorists kill you; it appeared under this Onion-like headline: So the pro-NSA Republican senators were actually arguing that if the NSA were no longer allowed to bulk-collect the communication records of Americans inside the U.S., then ISIS would kill you and your kids. But because they were speaking in an empty chamber and only to their warped and insulated D.C. circles and sycophantic aides, there was nobody there to cackle contemptuously or tell them how self-evidently moronic it all was. So they kept their Serious Faces on like they were doing The Nation’s Serious Business, even though what was coming out of their mouths sounded like the demented ramblings of a paranoid End is Nigh cult. The boredom of this spectacle was simply due to the fact that this has been seen so many times before—in fact, every time in the post-9/11 era that the U.S. Congress pretends publicly to debate some kind of foreign policy or civil liberties bill. Just enough members stand up to scream “9/11” and “terrorism” over and over until the bill vesting new powers is passed or the bill protecting civil liberties is defeated. Eight years ago, when this tawdry ritual was still a bit surprising to me, I live-blogged the 2006 debate over passage of the Military Commissions Act, which, with bipartisan support, literally abolished habeas corpus rights established by the Magna Carta by sanctioning detention without charges or trial. (My favorite episode there was when GOP Sen. Arlen Specter warned that “what the bill seeks to do is set back basic rights by some nine hundred years,” and then voted in favor of its enactment.) In my state of naive disbelief, as one senator after the next thundered about the “message we are sending” to “the terrorists,” I wrote: “The quality of the ‘debate’ on the Senate floor is so shockingly (though appropriately) low and devoid of substance that it is hard to watch.” So watching last night’s Senate debate was like watching a repeat of some hideously shallow TV show. The only new aspect was that the aging Al Qaeda villain has been rather ruthlessly replaced by the show’s producers with the younger, sleeker ISIS model. Showing no gratitude at all for the years of value it provided these senators, they ignored the veteran terror group almost completely in favor of its new replacement. And they proceeded to save a domestic surveillance program clearly unpopular among those they pretend to represent. There is a real question about whether the defeat of this bill is good, bad, or irrelevant. To begin with, it sought to change only one small sliver of NSA mass surveillance (domestic bulk collection of phone records under section 215 of the Patriot Act) while leaving completely unchanged the primary means of NSA mass surveillance, which takes place under section 702 of the FISA Amendments Act, based on the lovely and quintessentially American theory that all that matters are the privacy rights of Americans (and not the 95 percent of the planet called “non-Americans”).

AT: Transparency solves/Durable Fiat

Normal means proves that the plan will be circumvented and expand the power of the surveillance state

Fidler 6/8/2015 (David [Visiting Fellow for Cybersecurity]); Taking stock of Snowden's disclosures two years on; blogs.cfr.org/cyber/2015/06/08/taking-stock-of-snowdens-disclosures-two-years-on/

The Global Context Snowden intended to spark global debate by framing expansive surveillance and espionage as threats to universal human rights. His June 4 op-ed claimed a “change in global awareness” is underway and “the balance of power is beginning to shift.” However, the gap between these claims and reality is great, suggesting his impact globally has been weak, if not counterproductive. The latest Freedom on the Net survey does not support Snowden. Between May 2013 and May 2014 (roughly the first year of his disclosures), **Internet freedom declined “for the fourth consecutive year**, with 36 out of 65 countries assessed . . . experiencing a negative trajectory[.]” Little has happened since May 2014 to suggest this trend has been reversed. Increased surveillance by many states, including democracies, contributed to this trajectory’s momentum. For example, governments in France, Turkey, and the United Kingdom said “yes” to increased surveillance. In the midst of this decline, Snowden damaged the U.S. government’s international standing, created rifts among democracies, and harmed U.S. technology companies. The Snowden-triggered move by tech companies toward stronger encryption pits democratic governments against the private sector and civil society in a looming zero-sum brawl. Meanwhile, unperturbed by Snowden, autocratic countries exploit the disarray within and among democracies, bash the hypocrisy of Internet freedom’s champions, conduct intrusive surveillance at home and abroad, and strengthen their manipulation, control, and censorship of digital communications. Given these facts, the UN resolution on the right to privacy in the digital age, which represents global progress for Snowden, does not reflect consensus among states on the relationship between surveillance and human rights. An unprincipled but ineffective program is dead. Long-standing controversies about large-scale surveillance programs targeting foreigners continue. Government surveillance powers are increasing, democracies are bitterly divided, and Internet freedom is in retreat. Whether these outcomes mean we have, as a country and an international community, reached a better place is hotly debated—a reminder that history’s arc is longer than two years.

Intelligence agencies will find loopholes in the plan

Rosenthal 6/12/2015 (Max J, Government’s secret surveillance court may be about to get a little less secret; www.motherjones.com/politics/2015/06/usa-freedom-act-fisa-court-transparency; kdf)

“I think the transparency provisions are going to be effective for the judges who are inclined to support them and are going to be ineffective for the judges who aren’t,” says Steve Vladeck, a professor at American University’s Washington College of Law. There are other procedural moves the government could use to limit what information is made public. The court could simply issue summaries of decisions that don’t include their key parts, or the executive branch could heavily redact them. “In theory, the executive branch could comply with this part of the statute by redacting 99 percent—everything but one sentence, essentially—of an opinion,” Goitein says. She admits that specific tactic is unlikely—it would be an obvious and public skirting of the law’s intent—but stresses that even though the law makes important progress in disclosure, there are still many loopholes that could cut down on how much the

public will get to see. **"I think the history strongly suggests that the intelligence establishment will take every single little bit of rope it has,"** she says. **"And then some."**

Circumvention Bad

1NC –relations and internet turn

Future circumventions tanks US relations with key countries & destroys internet hegemony

Greenwald 2014 (Glenn [Constitutional lawyer- patriot]; CONGRESS IS IRRELEVANT ON MASS SURVEILLANCE. HERE'S WHAT MATTERS INSTEAD; Nov 19;

<https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nsas-mass-surveillance/>; kdf)

**Chart omitted

2) Other countries taking action against U.S. hegemony over the internet. Most people who claim nothing has changed from the Snowden disclosures are viewing the world jingoistically, with the U.S. the only venue that matters. But the real action has long been in other countries, acting individually and jointly to prevent U.S. domination of the internet. Brazil is building a new undersea internet infrastructure specifically to avoid U.S. soil and thus NSA access. That same country punished Boeing by denying the U.S. contractor a long-expected \$4.5 billion contract for fighter jets in protest over NSA spying. Another powerful country, Germany, has taken the lead with Brazil in pushing for international institutions and regulatory schemes to place real limits on NSA mass surveillance. **U.S. diplomatic relations with numerous key countries have been severely hampered by revelations of mass surveillance.** In July, Pew reported that "a new...survey finds widespread global opposition to U.S. eavesdropping and a decline in the view that the U.S. respects the personal freedoms of its people" and that, while the U.S. remains popular in many countries, particularly relative to others such as China, "in nearly all countries polled, majorities oppose monitoring by the U.S. government of emails and phone calls of foreign leaders or their citizens." After just one year of Snowden reporting, there have been massive drops in the percentage of people who believe "the U.S. government respects personal freedom," with the biggest drops coming in key countries that saw the most NSA reporting: All of that has significantly increased the costs for the U.S. to continue to subject the world, and the internet, to dragnets of mass surveillance. It has resulted in serious political, diplomatic, and structural impediments to ongoing spying programs. And it has meaningfully altered world opinion on all of these critical questions.

Internet freedom is key to solve all impacts

Genachowski and Bollinger 2013 (Julius [Chairman of the FCC] and Lee [President of Columbia U]; The plot to block internet freedom; Apr 16;

www.foreignpolicy.com/articles/2013/04/16/plot_block_internet_freedom?page=full; kdf)

The Internet has created an extraordinary new democratic forum for people around the world to express their opinions. It is revolutionizing global access to information: Today, more than 1 billion people worldwide have access to the Internet, and at current growth rates, 5 billion people -- about 70 percent of the world's population -- will be connected in five years. But this growth trajectory is not inevitable, and threats are mounting to the global spread of an open and truly "worldwide" web. The expansion of the open Internet must be allowed to continue: The mobile and social media revolutions are critical not only for democratic institutions' ability to solve the collective problems of a shrinking world, but also to a dynamic and innovative global economy that depends on financial transparency and the free flow of information. The threats to the open Internet were on stark display at last December's World Conference on International Telecommunications in Dubai, where the United States fought attempts by a number of countries -- including Russia, China, and Saudi Arabia -- to give a U.N. organization, the International Telecommunication Union (ITU), new regulatory authority over the

Internet. Ultimately, over the objection of the United States and many others, 89 countries voted to approve a treaty that could strengthen the power of governments to control online content and deter broadband deployment. In Dubai, two deeply worrisome trends came to a head. First, we see that the Arab Spring and similar events have awakened nondemocratic governments to the danger that the Internet poses to their regimes. In Dubai, they pushed for a treaty that would give the ITU's imprimatur to governments' blocking or favoring of online content under the guise of preventing spam and increasing network security. Authoritarian countries' real goal is to legitimize content regulation, opening the door for governments to block any content they do not like, such as political speech. Second, the basic commercial model underlying the open Internet is also under threat. In particular, some proposals, like the one made last year by major European network operators, would change the ground rules for payments for transferring Internet content. One species of these proposals is called "sender pays" or "sending party pays." Since the beginning of the Internet, content creators -- individuals, news outlets, search engines, social media sites -- have been able to make their content available to Internet users without paying a fee to Internet service providers. A sender-pays rule would change that, empowering governments to require Internet content creators to pay a fee to connect with an end user in that country. Sender pays may look merely like a commercial issue, a different way to divide the pie. And proponents of sender pays and similar changes claim they would benefit Internet deployment and Internet users. But the opposite is true: If a country imposed a payment requirement, content creators would be less likely to serve that country. The loss of content would make the Internet less attractive and would lessen demand for the deployment of Internet infrastructure in that country. Repeat the process in a few more countries, and the growth of global connectivity -- as well as its attendant benefits for democracy -- would slow dramatically. So too would the benefits accruing to the global economy. Without continuing improvements in transparency and information sharing, the innovation that springs from new commercial ideas and creative breakthroughs is sure to be severely inhibited. To their credit, American Internet service providers have joined with the broader U.S. technology industry, civil society, and others in opposing these changes. Together, we were able to win the battle in Dubai over sender pays, but we have not yet won the war. Issues affecting global Internet openness, broadband deployment, and free speech will return in upcoming international forums, including an important meeting in Geneva in May, the World Telecommunication/ICT Policy Forum. The massive investment in wired and wireless broadband infrastructure in the United States demonstrates that preserving an open Internet is completely compatible with broadband deployment. According to a recent UBS report, annual wireless capital investment in the United States increased 40 percent from 2009 to 2012, while investment in the rest of the world has barely inched upward. And according to the Information Technology and Innovation Foundation, more fiber-optic cable was laid in the United States in 2011 and 2012 than in any year since 2000, and 15 percent more than in Europe. All Internet users lose something when some countries are cut off from the World Wide Web. Each person who is unable to connect to the Internet diminishes our own access to information. **We become less able to understand the world and formulate policies to respond to our shrinking planet.** Conversely, we gain a richer understanding of global events as more people connect around the world, and those societies nurturing nascent democracy movements become more familiar with America's traditions of free speech and pluralism. That's why we believe that the Internet should remain free of gatekeepers and that no entity -- public or private -- should be able to pick and choose the information web users can receive. That is a principle the United States adopted in the Federal Communications Commission's 2010 Open Internet Order. And it's why we are deeply concerned about arguments by some in the United States that broadband providers should be able to block, edit, or favor Internet traffic that travels over their networks, or adopt economic models similar to international sender pays. We must preserve the Internet as the most open and robust platform for the free exchange of information ever devised. Keeping the Internet open is perhaps the most important free speech issue of our time.

2NC – plan expands surveillance

The plan will be used as a rouse to expand the power of intelligence groups – empirics

Groll 2015 (Elias [assistant editor at Foreign Policy]; Congress May Have Passed the Freedom Act, But Mass Surveillance Is Alive and Well; Jun 4; foreignpolicy.com/2015/06/04/congress-may-have-passed-the-freedom-act-but-mass-surveillance-is-alive-and-well/; kdf)

One useful way to think about the USA Freedom Act that President Barack Obama signed into law on Tuesday night is as a lightning-rod for the National Security Agency. By changing the way the NSA examines domestic phone records, the agency is now able to make the argument that it has undergone significant reforms in the aftermath of the Edward Snowden revelations. By giving up the authority to collect all American phone records, the agency has paid a small price — and gotten rid of a program that it had come to consider a burden, anyway — to keep its most important authorities intact. The full measure of those powers were on prominent display in the New York Times on Thursday, when the paper reported that the agency has expanded its “warrantless surveillance of Americans’ international Internet traffic to search for evidence of malicious computer hacking.” The NSA, the paper reported, has also partnered with the FBI to provide federal investigators with intelligence about computer intrusions carried out by foreign powers, according to documents provided by Snowden. There is no evidence of outright wrongdoing in Thursday’s reports, but they signal another expansion of the NSA’s authorities to collect data on the Internet. Sen. Patrick Leahy, the Vermont Democrat and ranking member of the Judiciary Committee, said Thursday’s report “underscores the critical importance of placing reasonable and commonsense limits on government surveillance in order to protect the privacy of Americans” and that “Congress should have an open, transparent and honest debate about how to protect both our national security and our privacy.” Jonathan Mayer, a cybersecurity researcher, told the Times that FBI use of NSA data to combat cybercrime threatens to conflate the latter’s intelligence gathering role with the former’s law enforcement mandate. “That’s a major policy decision about how to structure cybersecurity in the U.S. and not a conversation that has been had in public,” he said. In short, the Times report, which was published in conjunction with ProPublica, reveals that the NSA has directed some of its most powerful tools toward cracking down on state-sponsored hackers online. The agency now has the power to search the data streams it has access to for snippets of code and other identifying information to spot hackers and track their activities. It is doing so by relying on one of its most important tools: Its position atop the global Internet infrastructure. The NSA has risen to become the world’s most powerful intelligence agency in no small part because a huge amount of the world’s Internet traffic flows through the United States. Fiber optic cables carry large amounts of Internet data from one part of the world to another, and when that traffic arrives in the United States, the NSA is there to have a look at it. Section 702 of the FISA Amendments Act governs parts of the NSA’s relationship with U.S. telecommunications companies, and it is through such companies that the NSA is able to access enormous troves of data for terrorism and foreign intelligence purposes. Privacy activists are concerned that such collection activities potentially Hoover up the communications of ordinary Americans, and Thursday’s revelation that the FBI is now allowed to partake of some data collected from telecom activities is likely to add to those concerns. According to the Times and ProPublica, the FBI’s access to such data — which is routed to a data center in Quantico, Virginia — is focused on foreign hackers trying to penetrate U.S. data systems. That’s a mission that’s central to the U.S. government’s obligations to combat cybercrime, but the contention of rights activists is that that effort has become far too reliant on the tools of mass data collection. Thursday’s reports signal just how far these activists have to go if they hope to rein in the NSA’s powers.

Impact: Circumvention Turns Case

Empirically, the plan makes surveillance worse because it provides cover for circumvention

Vladeck 2015 (Stephen [Prof of Law @ American U]; Forget the Patriot Act-Here are the privacy violations you should be worried about; June 1; foreignpolicy.com/2015/06/01/section-215-patriot-act-expires-surveillance-continues-fisa-court-metadata/; kdf)

The Obama administration, along with a number of more moderate members of Congress, took more of a middle road, calling for the fairly modest reforms provided by the USA Freedom Act, which would replace the phone records program with a somewhat less open-ended (and somewhat better regulated) series of authorities for the government to obtain and review similar data — and which the House of Representatives overwhelmingly passed on May 13. But whatever the merits of the competing sides in this debate, the larger problem is that this conversation has missed the forest for a very small — and largely irrelevant — tree. In fact, from the perspective of individual privacy rights, the phone records program is much less problematic than the government's other authorities to conduct mass surveillance under Executive Order 12333 and the 2008 FISA Amendments Act. And so, in focusing on how to “fix” Section 215, we’ve given short shrift to the far more significant problems raised by these other authorities — and, just as importantly, the broader lessons we should be taking away from the surveillance reform conversation that Snowden started.

Impact: Internet Good – Warming

The internet is key to cloud computing key which solves climate modeling

Boyce, 10

[Eric, technical writer and user advocate for The Rackspace Cloud, September 14, 2010
<http://www.rackspacecloud.com/blog/2010/09/14/the-future-of-cloud-computing-the-big-25-in-the-next-25/>]

The promise of the cloud isn't just about gaming and the ability to safely store all those photos that you wish you hadn't ever taken. Many of **the most promising cloud-based applications** also **require massive computational power**. Searching a database of global DNA samples requires abundant, scalable processing power. Modeling protein folding is another example of how compute resources will be used. Protein folding is linked to many diseases including Alzheimer's and cancer, and analyzing the folding process can lead to new treatments and cures, but it requires enormous compute power. Projects like Folding@home are using distributed computing to tackle these modeling tasks. **The cloud will offer a larger, faster, more scalable way to process data and thus benefit any heavy data manipulation task**. 6. Is it going to be hot tomorrow? Like protein folding modeling, **climate simulation and forecasting requires a large amount of data storage and processing**. Recently the German Climate Computing Center (DKRZ) **installed a climate calculating supercomputer that is capable of analyzing 60 petabytes of data** (roughly 13 million DVD's) at over 158 teraflops (trillion calculations per second). In the next couple of decades, this level of computing power **will be widely available and will exist on remote hardware**. **Sophisticated climate models combined with never before seen compute power will provide better predictions of climate change and more rapid early warning systems**

Key to warming adaptation

Pope, 10

[Vicky Pope is the head of climate science advice at the Met Office Hadley Centre, " How science will shape climate adaptation plans," 16 September 2010,
<http://www.guardian.co.uk/environment/cif-green/2010/sep/16/science-climate-change-adaptation>]

Some would argue that **the demand for information on how climate change will affect our future outstrips the current capability of the science and climate models**. My view is that **as scientists**, we can provide useful information, but **we need to** be clear about its limitations and **strive to improve information for the future**. We need to be clear about the uncertainties in our projections while still extracting useful information for practical decision-making. I have been involved in developing climate models for the last 15 years and despite their limitations we are now able to assess the probability of different outcomes for the first time. That means **we can quantify the risk of these outcomes happening**. These projections – the UK climate projections published in

2009 - are already forming the backbone of adaptation decisions being made in the UK for 50 to 100 years ahead. A project commissioned by the Environment Agency to investigate the impact of climate change on the Thames estuary over the next 100 years concluded that current government predictions for sea level rise are realistic. A major outcome from the scientific analysis was that the worst-case scenarios for high water levels can be significantly reduced - from 4.2m to 2.7m – because we are able to rule out the more extreme sea level rise. As a result, massive investment in a tide-excluding estuary barrage is unlikely to be needed this century. This will be reviewed as more information becomes available, taking a flexible approach to adaptation. The energy industry, working with the Met Office, looked at the likely impact of climate change on its infrastructure. The project found that very few changes in design standards are required, although it did highlight a number of issues. For instance, transformers could suffer higher failure rates and efficiency of some types of thermal power station could be markedly reduced because of increasing temperatures. A particular concern highlighted by this report and reiterated in today's report from the Climate Change Committee - the independent body that advises government on its climate targets - is that little is known about how winds will change in the future - important because of the increasing role of wind power in the UK energy mix. Fortunately many people, from private industry to government, recognise the value of even incomplete information to help make decisions about the future. **Demand for climate information is increasing, particularly relating to changes in the short to medium term. More still needs to be done to refine the climate projections and make them more usable and accessible. This is especially true if we are to provide reliable projections for the next 10 to 30 years. The necessary science and modelling tools are being developed,** and the first tentative results are being produced. We need particularly to look at how we communicate complex and often conflicting results. In order to explain complex science to a lay audience, scientists and journalists are prone to progressively downplay the complexity. Conversely, in striving to adopt a more scientific approach and include the full range of uncertainty, we often give sceptics an easy route to undermine the science. All too often uncertainty in science offers a convenient excuse for delaying important decisions. However, in the case of climate change there is overwhelming evidence that the climate is changing — in part due to human activities — and that changes will accelerate if emissions continue unabated. In examining the uncertainty in the science we must take care to not throw away what we do know. Science has established that climate is changing. **Scientists now need to press on in developing the emerging tools that will be used to underpin sensible adaptation decisions which will determine our future.**

Warming is a threat magnifier, makes all impacts inevitable

Pascual and Elkind 2010 (Carlos [US Ambassador to Mexico, Served as VP of foreign policy @ Brookings]; Jonathan [principal dep ass sec for policy and int energy @ DOE]; Energy Security; p 5; kdf)

Climate change is arguably the greatest challenge facing the human race. It poses profound risks to the natural systems that sustain life on Earth and consequently creates great challenges for human lives, national economies, nations' security, and international governance. **New scientific reports** emerging from one year to the next **detail ever more alarming potential impacts and risks.** It is increasingly common for analysts and policymakers to refer to **climate change as a threat multiplier, a destructive force that will exacerbate existing social, environmental, economic, and humanitarian stresses.** The warming climate is predicted to bring about prolonged droughts in already dry

regions, flooding along coasts and even inland rivers, an overall increase in severe weather events, rising seas, and the spread of disease, to cite just a few examples. Such impacts may spark conflict in weak states, lead to the displacement of millions of people, create environmental refugees, and intensify competition over increasingly scarce resources. One of the great challenges of climate change is, indeed, the scope of the phenomenon. The ongoing warming of the globe results chiefly from one of the most ubiquitous of human practices, the conversion of fossil fuels into energy through simple combustion. Halting and reversing climate change, however, will require both unproven—perhaps even unimaginable—technology and sustained political commitment. We must change living habits in all corners of the globe over the course of the next several decades. We must resist the impulse to leave the problem for those who follow us or to relax our efforts if we achieve a few years of promising progress. The profound challenge will lie in the need for successive rounds of sustained policymaking, successive waves of technological innovation, and ongoing evolution of the ways in which we live our lives.

Impact: US Internet Leadership Good

US leadership key to prevent global internet fragmentation – kills the economy

Weinstein 2014 Mark, award-winning author, and the founder of MeWe, one of the world's foremost privacy advocates, Mark has served as a Steering Committee Member of National Strategy for Trusted Identities in Cyberspace (NSTIC), and has been named Privacy by Design Ambassador by the Information and Privacy Commissioner of Ontario, Huffington Post, November 12, 2014, "Obama Heroically Wages Internet War, But Misses World Wide Web Target", http://www.huffingtonpost.com/mark-weinstein/obama-heroically-wages-in_b_6137324.html

I have a greater fear -- a rudderless World Wide Web and captain-less ICANN. That's why eight months ago I preached for Net Neutrality and for the United States to push such an agenda through as stewards of ICANN. I was overjoyed on Monday to see Obama support half of my wish list when he released an emphatic video statement throwing his administration's full support behind Net Neutrality and asking the FCC to implement strict rules to give weight to such an agenda. Way to go, Mr. President! Yet **there's more to do** here. What's interesting about Monday's statement is for all its good, it turns the discussion away from a global perspective to a domestic one. Obama's speech focuses on a free and open Internet within our borders that doesn't speed up or slow down content delivery based on the whims of broadband companies. Take that Netflix with your big ideas of Internet favoritism. At the same time, is this a first step of a philosophy or a final one? I hope the former but fear the latter. **Imagine** for a second **if every country had its own Internet. The World Wide Web would become anything but, leading to an economic and individual rights disaster that would complicate commerce and freedom around the world.** In 1997, Bill Clinton helped create ICANN within his Green Paper proposal **for privatizing the domain name system** (DNS). In that regard, **our impartiality and creation of checks and balances built into the system** have **led to a rather impressive run**, one **that has averted partisan politics** and lobbyists **and helped keep the Internet as a free platform.** I think that our **losing** such **a leadership role is a mistake for the United States** and the principles of Net Neutrality. **Yet in the spirit of compromise, I commend Obama for taking a stand within our borders. Now he needs to take the next step.** The hope I have is that whatever new governance structure emerges for ICANN in 2015 turns into a United Nations of Internet protection where the entire world has access to a free Internet. However, if the new structure cannot guarantee Net Neutrality, then I believe the U.S. government should revoke its decision to relinquish leadership. **The risk is too great and the ramifications too frightening to idly stand by and allow any other conclusion.**

Impact: Internet good – Extinction (Eagleman)

A free internet is vital to combating every existential threat

Eagleman, 10 - American neuroscientist and writer at Baylor College of Medicine, where he directs the Laboratory for Perception and Action and the Initiative on Neuroscience and Law (David, "Six ways the internet will save civilization" Wired, 9/10, <http://www.wired.co.uk/magazine/archive/2010/12/start/apocalypse-no>)

Many great civilisations have fallen, leaving nothing but cracked ruins and scattered genetics. Usually this results from: natural disasters, resource depletion, economic meltdown, disease, poor information flow and corruption. But we're luckier than our predecessors because we command a technology that no one else possessed: a rapid communication network that finds its highest expression in the internet. I propose that there are six ways in which the net has vastly reduced the threat of societal collapse. Epidemics can be deflected by telepresence One of our more dire prospects for collapse is an infectious-disease epidemic. Viral and bacterial epidemics precipitated the fall of the Golden Age of Athens, the Roman Empire and most of the empires of the Native Americans. The internet can be our key to survival because the ability to work telepresently can inhibit microbial transmission by reducing human-to-human contact. In the face of an otherwise devastating epidemic, businesses can keep supply chains running with the maximum number of employees working from home. This can reduce host density below the tipping point required for an epidemic. If we are well prepared when an epidemic arrives, we can fluidly shift into a self-quarantined society in which microbes fail due to host scarcity. Whatever the social ills of isolation, they are worse for the microbes than for us. The internet will predict natural disasters We are witnessing the downfall of slow central control in the media: news stories are increasingly becoming user-generated nets of up-to-the-minute information. During the recent California wildfires, locals went to the TV stations to learn whether their neighbourhoods were in danger. But the news stations appeared most concerned with the fate of celebrity mansions, so Californians changed their tack: they uploaded geotagged mobile-phone pictures, updated Facebook statuses and tweeted. The balance tipped: the internet carried news about the fire more quickly and accurately than any news station could. In this grass-roots, decentralised scheme, there were embedded reporters on every block, and the news shockwave kept ahead of the fire. This head start could provide the extra hours that save us. If the Pompeians had had the internet in 79AD, they could have easily marched 10km to safety, well ahead of the pyroclastic flow from Mount Vesuvius. If the Indian Ocean had the Pacific's networked tsunami-warning system, South-East Asia would look quite different today. Discoveries are retained and shared Historically, critical information has required constant rediscovery. Collections of learning -- from the library at Alexandria to the entire Minoan civilisation -- have fallen to the bonfires of invaders or the wrecking ball of natural disaster. Knowledge is hard won but easily lost. And information that survives often does not spread. Consider smallpox inoculation: this was under way in India, China and Africa centuries before it made its way to Europe. By the time the idea reached North America, native civilisations who needed it had already collapsed. The net solved the problem. New discoveries catch on immediately; information spreads widely. In this way, societies can optimally ratchet up, using the latest bricks of knowledge in their fortification against risk. Tyranny is mitigated Censorship of ideas was a familiar spectre in the last century, with state-approved news outlets ruling the press, airwaves and copying machines in the USSR, Romania, Cuba, China, Iraq and elsewhere. In many cases, such as Lysenko's agricultural despotism in the USSR, it directly contributed to the collapse of the nation. Historically, a more successful strategy has been to confront free speech with free speech -- and the internet allows this in a natural way. It democratises the flow of information by offering access to the newspapers of the world, the photographers of every nation, the bloggers of every political stripe. Some posts are full of doctoring and dishonesty whereas others strive for independence and impartiality -- but all are available to us to sift through. Given the attempts by some governments to build firewalls, it's clear that this benefit of the net requires constant vigilance. Human capital is vastly increased Crowdsourcing brings people together to solve problems. Yet far fewer than one per cent of the world's population is involved. We need expand human capital. Most of the world not have access to the education afforded a small minority. For every Albert Einstein, Yo-Yo Ma or Barack Obama who has educational opportunities, uncountable others do not. This squandering of talent translates into reduced economic output and a smaller pool of problem solvers. The net opens the gates education to anyone with a computer. A motivated teen anywhere on the planet can walk through the world's knowledge -- from the webs of Wikipedia to the curriculum of MIT's OpenCourseWare. The new human capital will serve us well when we confront existential threats we've never imagined before. Energy expenditure is reduced Societal collapse can often be understood in terms of an energy budget:

when energy spend outweighs energy return, collapse ensues. This has taken the form of deforestation or soil erosion; currently, the worry involves fossil-fuel depletion. The internet addresses the energy problem with a natural ease. Consider the massive energy savings inherent in the shift from paper to electrons -- as seen in the transition from the post to email. Ecommerce reduces the need to drive long distances to purchase products. Delivery trucks are more eco-friendly than individuals driving around, not least because of tight packaging and optimisation algorithms for driving routes. Of course, there are energy costs to the banks of computers that underpin the internet -- but these costs are less than the wood, coal and oil that would be expended for the same quantity of information flow. The tangle of events that triggers societal collapse can be complex, and there are several threats the net does not address. But vast, networked communication can be an antidote to several of the most deadly diseases threatening civilisation. The next time your coworker laments internet addiction, the banality of tweeting or the decline of face-to-face conversation, you may want to suggest that the net may just be the technology that saves us.

AT: Circumvention Takes out terror DA

None of our evidence speaks to the effectiveness of the new programs, just that they will find new ways to conduct surveillance, taking out all of their privacy and perception based internal links.

AT: Circumvention now/ inevitable

Circumvention now/inevitable is a negative argument because it proves the plan will never solve any of their internal links, means vote neg on presumption – at worst for us, it just means we don't get access to our external offense but we still get our "turns case" args.

Yes Fill-in

1NC Fill-in

A litany of other programs prove the aff fails

Cohn and Crocker 2015 (Cindy & Andrew [Electronic Frontier Foundation]; Don't Worry, The Government Still Has Plenty Of Surveillance Power Despite Section 215 Sunset; Jun 2; www.defendingdissent.org/now/dont-worry-the-government-still-has-plenty-of-surveillance-power-despite-section-215-sunset/; kdf)

The story being spun by the defenders of Section 215 of the Patriot Act and the Obama Administration is that if the law sunsets entirely, the government will lose critical surveillance capabilities. The fearmongering includes President Obama, who said: "heaven forbid we've got a problem where we could've prevented a terrorist attack or could've apprehended someone who was engaged in dangerous activity but we didn't do so." So how real is this concern? Not very. Section 215 is only one of a number of largely overlapping surveillance authorities, and the loss of the current version of the law will leave the government with a range of tools that is still incredibly powerful. First, there's the most famous use of Section 215—the bulk collection of telephone records by the NSA. Of course, no matter what law the government relies on, bulk surveillance is unconstitutional. But equally importantly, it doesn't work. Every assessment about the bulk collection of telephone records, including two by hand-picked administration panels, have concluded that "collecting it all" hasn't materially aided any terrorism investigation. The same goes for other still-secret bulk surveillance programs under Section 215, the latest evidence of which came in a recently released oversight report by the Justice Department's Office of the Inspector General (OIG). And then there's the matter of targeted investigations. The ACLU's Jameel Jaffer has explained that this too is scaremongering, because "the sunset of Section 215 wouldn't affect the government's ability to conduct targeted investigations of terrorist threats."That's because even without Section 215, the government still has broad powers to collect information during its national security investigations. EFF believes that many of these laws can be scaled back and made more transparent as well, but given the current situation, these are the tools in the national security investigators' toolbox: Pen Registers: These allow the government to collect "dialing, routing, addressing, or signaling information" including telephone numbers dialed and Internet metadata such as IP addresses and email headers. There are two pen register statutes, one for foreign intelligence surveillance and one for law enforcement. Both rely require only that the pen register be likely to obtain information relevant to a national security or criminal investigation respectively. Until the end of 2011, the NSA used the Foreign Intelligence Surveillance Act (FISA) pen register statute to conduct mass surveillance of Internet metadata, much as it still uses Section 215 for mass collection of telephone records. **The Pre-Patriot Act Business Records Provision:** Before the passage of the Patriot Act in 2001, FISA contained a provision allowing the government to obtain business records from transportation carriers and storage facilities. Harley Geiger of the Center for Democracy and Technology has pointed out that under a June 1 sunset, FISA would simply revert to this provision. **An ECPA "D Order":** Under Section 2703(d) of the Electronic Communications Privacy Act (ECPA), the government can get a court order for information from ISPs or other communications providers about their customers, including the sorts of metadata the government gets with Section 215. To get a D Order, the government must provide "specific and articulable facts showing that there are reasonable grounds to believe that . . . the records or other information sought, are relevant and material to an ongoing criminal investigation." **Grand Jury Subpoenas:** Given that Section 215 explicitly says that the FISA Court (FISC) "may only require the production of a tangible thing if such thing can be obtained" with a grand jury subpoena, it's apparent that a grand jury subpoena is a reasonable substitute, at least where a grand jury can be convened. **National Security Letters (NSLs):** Similar to subpoenas, NSLs allow intelligence agencies to collect records from a range of entities including telecommunications providers, financial institutions, credit reporting bureaus, travel agencies and others. Nearly all NSLs include self-certified gag orders, which EFF has successfully challenged as unconstitutional. Nevertheless, the FBI and other agencies can use NSLs to collect much the same information as Section 215, although the government has also misused NSLs to obtain communication records not authorized by the NSL statute. Administrative Subpoenas: Many federal agencies have the authority to issue subpoenas for customer records in their normal course of business. These authorities are

extremely widespread, comprising 335 different statutes by one count. FISA Warrants: Under FISA, the government can get warrants from the FISC forelectronic surveillance and physical searches in the context of national security investigations. Although these require a higher showing—probable cause—statistics compiled by EPIC show the FISC routinely issues them, and has done so since FISA was passed in 1978.

Other countries spy on US citizens –the ultimate violation of privacy

Wittes June 18, 2015 (Benjamin [editor in chief of Lawfare and a Senior Fellow in Governance Studies at the Brookings Institution]; Turns out privacy groups are outraged about the OPM Hack-At me; www.lawfareblog.com/turns-out-privacy-groups-are-outraged-about-opm-hack---me; kdf)

The other day, I wrote a little piece about the silence among our self-appointed privacy guardians at the monstrous breach of privacy perpetrated by the Chinese in the OPM hack. The piece made the (I think) modest observation that privacy groups—who have denounced NSA collection obsessively though it takes place under the rule of law and with strict restrictions—have had remarkably little to say about the mass collection of the most sensitive sorts of data, and I speculated about the reason for that silence: the privacy community is virtually silent. Look on the websites of the major privacy groups and you'll see almost nothing about this program. Don't look for breathless coverage of it on the The Intercept either. The reason? This giant surveillance program isn't being run by the United States government. It's being run against the U.S. government—by the Chinese government. And for some reason, even the grossest of privacy violations—in this case the pilfering of millions of background investigations and personnel records—just doesn't seem so bad when someone other than the United States is doing it. I didn't expect this piece to make me many friends, but I have been amused and a bit surprised by the harsh reactions from a number of privacy groups on Twitter. In particular, Harley Geiger of CDT and Chris Soghoian of the ACLU seemed to take particular umbrage—both issuing lengthy streams of tweets denouncing the piece. Neither made points that seem to me to warrant response. In the flurry of invective, however, there was one point that seemed to me substantial and worth addressing. That was made by the Cato Institute's Julian Sanchez, somewhat crudely, on Twitter, as well as by a correspondent by email: I didn't expect this piece to make me many friends, but I have been amused and a bit surprised by the harsh reactions from a number of privacy groups on Twitter. In particular, Harley Geiger of CDT and Chris Soghoian of the ACLU seemed to take particular umbrage—both issuing lengthy streams of tweets denouncing the piece. Neither made points that seem to me to warrant response. In the flurry of invective, however, there was one point that seemed to me substantial and worth addressing. That was made by the Cato Institute's Julian Sanchez, somewhat crudely, on Twitter, as well as by a correspondent by email: Is Sanchez right here? Should we understand the silence of privacy groups on this score as just reflecting the fact that there's no controversy, that everyone agrees the conduct is terrible? Sanchez goes on to point out that most advocacy work is directed at one's own government. So maybe the privacy groups are making a tactical judgment that it's better to focus on their own government and its policies than that a foreign authoritarian sovereign over which one has no influence. In this account, the issue is not so much a double standard as a hard-headed assessment of where one's energy is best spent. There are several reasons why I think this is not an adequate account of the behavior of the privacy groups in this instance, and to the extent it does explain their behavior, why I think they are grossly misjudging the merits of the matter. For one thing, human rights groups comment all the time on the behavior of governments over which they have no influence. Glance at the front page of Human Rights Watch's home page and you won't see the implausibility of the group's influencing Russian or Angolan policy inhibiting HRW from talking about what governments are doing. Yes, it's true that democracies subject to human rights suasion tend to get more of it as a result of their responsiveness. But this does not explain the near-total silence on the part of the privacy groups about Chinese behavior on this score. Tilting at authoritarian windmills is part of what human rights advocacy is. Second and more importantly, privacy issues associated with giant international hacks are unlike other human rights issues in at least one fundamental sense. When China abuses due process or stifles free speech or tortures people, or harvests their organs, its victims are its own people. A U.S. advocacy group can reasonably take the position that, though terrible, this is not really that group's problem but a problem between the Chinese government and its people and civil society. Conversely, if you're a privacy group devoted to protecting the privacy of Americans, the OPM hack should be unthinkable to ignore. It is, after all, a far bigger threat to the interests you are pledged to protect than is any activity by your own government. You may have an argument for leaving Chinese domestic collection to Chinese civil libertarians to restrain, but to the extent you don't speak up against the bulk collection of the health records of kids of U.S. federal employees, you

are tolerating an absurd double standard in which anyone can ride roughshod over Americans' privacy except the United States government.

2NC – Alt causes overwhelm

Other programs overwhelm the plan—zero solvency

Patel 6/25/2015 (Faiza [co-director of the Brennan Center’s Liberty and National Security Program]; When will surveillance reform stop being just 'cool'?; www.brennancenter.org/blog/when-will-surveillance-reform-stop-being-just-'cool'; kdf)

Several NSA programs are carried out under 2008’s FISA Amendments Act, which permits the agency to collect information in the U.S. as long as it is targeting foreigners who are thought to be overseas. Despite their purported foreign focus, these programs undoubtedly pull in huge pools of Americans’ communications. International communications have grown exponentially in the last years as it has become easier and cheaper to talk and text with people abroad. In our increasingly interconnected world, the notion that surveillance targeted at foreigners overseas pulls in only a negligible amount of Americans’ private correspondence is simply outdated. Nor is the NSA limited to targeting terrorism suspects. It is permitted to collect “foreign intelligence information,” a capacious category that includes the open-ended class of material relevant to foreign affairs. This allows the NSA to scan all our international communications and keep those that it thinks are interesting. E-mails sent by a Human Rights Watch lawyer to a researcher in Nigeria would be scanned, even if neither is suspected of involvement in wrongdoing. If they mention something about the political situation there of interest to the NSA, they could be retained. A text message from an American journalist to a colleague in Turkey asking a question about the Islamic State in Iraq and the Levant could be picked up as well. We don’t know how many NSA databases of Americans’ information exist or how large they are. We do know that the Federal Bureau of Investigation dips into these archives of emails, texts, videos and chat messages with few constraints. In other words, information collected without any type of warrant or judicial review for intelligence purposes can be obtained by a U.S. law enforcement agency and used in a domestic criminal proceeding. The House of Representatives recently passed an amendment to the defense appropriations bill (the National Defense Authorization Act) that would end these backdoor searches by defunding them. While this initiative might not pass, lawmakers will have another chance to stop the program when the extraordinary and controversial grant of powers in the FISA Amendments Act expires in 2017. Even that would just be skimming the surface. The vast majority of U.S. surveillance doesn’t take place under any law passed by Congress. When our intelligence agencies collect information overseas — for example, by tapping into fiber optic cables to scoop up all information that flows through them — they operate under an order issued by President Ronald Reagan in 1981, Executive Order 12333, which gives the NSA even greater latitude to collect information with even fewer privacy safeguards than any legislation. Just because information is collected from a cable overseas doesn’t mean that it concerns only foreigners. Purely domestic emails may be routed through another country and picked up. Copies of documents are stored by cloud providers overseas, sometimes in multiple locations. Domestic websites often have ads, pop-ups and other such links that are hosted on foreign servers, effectively sending search queries into the international ether. Americans’ privacy is just as affected by overseas collection as it is by what happens on U.S. soil.

2NC – Only overhaul solves

The plan gets circumvented, only complete overhaul solves

Goitein and Patel 2015 (Elizabeth and Faiza [co-directors of the Brennan Center for Justice's Liberty and National Security Program]; What went wrong with the FISA court; https://www.brennancenter.org/sites/default/files/analysis/What_Went_%20Wrong_With_The_FISA_Court.pdf; kdf)

Changes in the law and technology over the last 40 years have upended the compromise reached by Congress in 1978 when it first established the FISA Court to supervise the collection of foreign intelligence in the United States. Today, the court's activities resemble neither the granting of warrants nor the ordinary adversarial process for reviewing a challenge to the constitutionality of an agency's program. Instead, the court provides a veneer of judicial oversight for surveillance activities, blessing mammoth covert programs without hearing from those affected by them. But this type of approval is not what the Constitution contemplates or allows. Nor does the Constitution countenance the mass collection of information about ordinary, law-abiding Americans who happen to communicate with foreigners overseas. Revamping this system is one of the most crucial challenges of our time. It will not be accomplished by small reforms that nibble at the edges of the problem. Congress must directly tackle the foundational legal weaknesses of the FISA Court to bring it back into line with its constitutional role of providing a strong judicial check on executive branch surveillance.

Fill-in – Silicon Valley

Tech companies will circumvent the plan on behalf of the government

Greenwald 2014 (Glenn [Constitutional lawyer- patriot]; CONGRESS IS IRRELEVANT ON MASS SURVEILLANCE. HERE'S WHAT MATTERS INSTEAD; Nov 19; <https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nasas-mass-surveillance/>; kdf)

1) Individuals refusing to use internet services that compromise their privacy. The FBI and other U.S. government agencies, as well as the U.K. Government, are apoplectic over new products from Google and Apple that are embedded with strong encryption, precisely because they know that such protections, while far from perfect, are serious impediments to their power of mass surveillance. To make this observation does not mean, as some deeply confused people try to suggest, that one believes that Silicon Valley companies care in the slightest about people's privacy rights and civil liberties. As much of the Snowden reporting has proven, these companies don't care about any of that. Just as the telecoms have been for years, U.S. tech companies were more than happy to eagerly cooperate with the NSA in violating their users' privacy en masse when they could do so in the dark. But it's precisely because they can't do it in the dark any more that things are changing, and significantly. That's not because these tech companies suddenly discovered their belief in the value of privacy. They haven't, and it doesn't take any special insight or brave radicalism to recognize that. That's obvious. Instead, these changes are taking place because these companies are petrified that the perception of their collaboration with the NSA will harm their future profits, by making them vulnerable to appeals from competing German, Korean, and Brazilian social media companies that people shouldn't use Facebook or Google because they will hand over that data to the NSA. That—fear of damage to future business prospects—is what is motivating these companies to at least try to convince users of their commitment to privacy. And the more users refuse to use the services of Silicon Valley companies that compromise their privacy—and, conversely, resolve to use only truly pro-privacy companies instead—the stronger that pressure will become. Those who like to claim that nothing has changed from the NSA revelations simply ignore the key facts, including the serious harm to the U.S. tech sector from these disclosures, driven by the newfound knowledge that U.S. companies are complicit in mass surveillance. Obviously, tech companies don't care at all about privacy, but they care a lot about that. Just yesterday, the messaging service WhatsApp announced that it "will start bringing end-to-end encryption to its 600 million users," which "would be the largest implementation of end-to-end encryption ever." None of this is a silver bullet: the NSA will work hard to circumvent this technology and tech companies are hardly trustworthy, being notoriously close to the U.S. government and often co-opted themselves. But as more individuals demand more privacy protection, the incentives are strong. As The Verge notes about WhatsApp's new encryption scheme, "'end-to-end' means that, unlike messages encrypted by Gmail or Facebook Chat, WhatsApp won't be able to decrypt the messages itself, even if the company is compelled by law enforcement."

Silicon Valley will fill-in data gaps for the government

Carr 2015 (Madeline [Senior lecturer in International Politics and the Cyber Dimension @ Aberystwyth University]; US government clips NSA wings, but snooping is a global effort; Jun 3; theconversation.com/us-government-clips-nsa-wings-but-snooping-is-a-global-effort-42771; kdf)

Questions about the balance between privacy and security are ongoing and to some extent, they define the times. With increasing intensity, organisations have been racing to take advantage of personal data trail that we now generate online. There can be little doubt that this provides opportunities for use in law enforcement and intelligence. It's worth remembering, though, that mass surveillance is not carried out by the NSA or the FBI or even GCHQ. It's carried out by private corporations such as Google and

Facebook. Adequate oversight of the way intelligence agencies access and use that data is extremely important but we have remarkably little oversight of the way private companies deal with our data. And in many cases, they operate with very little transparency themselves. In February 2015, the Belgian Privacy Commission found that Facebook is acting in violation of European law. A few months later, Apple CEO Tim Cook launched an attack against the collection and monetisation of personal data saying that Silicon Valley businesses are “lulling their customers into complacency about their personal information”. And as for telcos and ISPs, those that don’t already retain our data aren’t acting out of ethical concerns – they don’t keep the information because the expense of storage currently outweighs the commercial value of the data. So while US citizens have reasons to celebrate about the USA Freedom Act, they should remember that the NSA has allies around the world who continue to collect data on both their own citizens – and those in the US.

Tech companies will erode privacy more than any government

Newton 6/2/2015 (Casey; Tim Cook: Silicon Valley's most successful companies are selling you out; www.theverge.com/2015/6/2/8714345/tim-cook-epic-award-privacy-security; kdf)

Apple CEO Tim Cook has made no secret of his disdain for online services that ask you to trade highly personal data for convenience – a trade that describes most big advertising-supported technology companies. But last night, in some of his strongest comments to date, Cook said the erosion of privacy represents a threat to the American way of life. Cook spoke at a dinner in Washington, DC, hosted by the Electronic Privacy Information Center, which honored him as a "champion of freedom" for his leadership at Apple. "Our privacy is being attacked on multiple fronts," Cook said in a speech that he delivered remotely, according to EPIC. "I'm speaking to you from Silicon Valley, where some of the most prominent and successful companies have built their businesses by lulling their customers into complacency about their personal information. They're gobbling up everything they can learn about you and trying to monetize it. We think that's wrong. And it's not the kind of company that Apple wants to be." Cook's comments appeared to be directed at companies including Google, Facebook, and Yahoo, which offer advertisers platform for targeting their users with increasing sophistication. Cook also made what sounded like an oblique reference to the new Google Photos, questioning whether Google would ultimately use it for ad targeting. (It currently does not, and Google says it has no plans to.) "You might like these so-called free services, but we don't think they're worth having your email or your search history or now even your family photos data-mined and sold off for God knows what advertising purpose," Cook said. "And we think someday, customers will see this for what it is." "SOMEDAY, CUSTOMERS WILL SEE THIS FOR WHAT IT IS." It's worth noting that Apple has an ad business of its own: iAds, which runs inside iOS apps and on iTunes Radio. The ads enable companies to target customers by cross-referencing their email addresses and phone numbers anonymously against other data obtained by marketers. (It is possible to opt out of iAds personalization.) But the pointed nature of Cook's comments indicate the way trust and privacy are becoming a battleground for major tech companies as they increasingly encroach on one another's terrain. Google decided to move its Photos product out of Google+ in part because it found people didn't want to store their pictures in a social network, where they might be actually shared. Meanwhile, Apple's reputation is still recovering from the theft of hundreds of nude photos that were stored in iCloud accounts. As tech companies increasingly compete for personal data, the one that customers trust most will have an important advantage.

Fill-in – Five Eyes

Other countries circumvent the plan for the US – empirics

Carr 2015 (Madeline [Senior lecturer in International Politics and the Cyber Dimension @ Aberystwyth University]; US government clips NSA wings, but snooping is a global effort; Jun 3; theconversation.com/us-government-clips-nsa-wings-but-snooping-is-a-global-effort-42771; kdf)

Agencies such as the NSA and the FBI will no longer be permitted to arbitrarily access the logs of phone calls, emails and internet use. Congress has passed the USA Freedom Act of 2015, which limits the power of government intelligence organisations to access the communications records of US citizens. Rather than intercepting data and retaining it in case it's needed for an investigation, intelligence agencies will now have to access the data from the private companies that collect it. And they will only be able to do so in specific and justified cases. This is being hailed as an important amendment to intelligence practices, as well as vindication for Edward Snowden, who revealed the extent of the surveillance that was going on after the September 11 attacks in 2001. Many argue that there is still a long way to go. The Electronic Frontier Foundation actually withdrew its support for the Freedom Act in an effort to push politicians to go further with it. And ironically, the transition period for the implementation of the bill means the NSA will actually restart its data gathering program, having suspended it in May due to legal uncertainty. Once the Act comes into force, the NSA will have six months to adapt to the new requirements. The Senate voted 77-17 to take up the House-passed USA Freedom Act. EPA/Pete Marovich And while the changes may come as welcome news to US citizens, not a great deal has actually changed for everyone else in the world. The USA Freedom Act only applies to US citizens, which means the NSA is still free to gather meta data on citizens of other nations. Meanwhile, other governments are moving to hand greater powers to their intelligence services. Watching you around the world In the UK, for example, GCHQ operates a similar program to the NSA. In early 2015, a consortium of civil rights organisations took GCHQ before the Investigatory Powers Tribunal – a British court set up to hear complaints against the security services. The consortium argued that GCHQ's mass surveillance program – as well sharing the results of that program with the NSA – was an abuse of human rights law. The tribunal found in favour of GCHQ but the case is expected to proceed to the European Court of Human Rights in Strasbourg later this year. Left as it is, GCHQ can help to alleviate problems that the NSA will face in collecting data on US citizens. As part of the "Five Eyes" intelligence sharing arrangement that includes the US, UK, Australia, New Zealand and Canada, GCHQ is perfectly positioned to collect and pass on communications data on US citizens that the NSA may be prevented from collecting itself.

Fill-in – FISA

The plan gets rolled back as long as FISA is on the books

Goitein and Patel 2015 (Elizabeth and Faiza [co-directors of the Brennan Center for Justice's Liberty and National Security Program]; What went wrong with the FISA court; https://www.brennancenter.org/sites/default/files/analysis/What_Went_%20Wrong_With_The_FISA_Court.pdf; kdf)

Fundamental changes are needed to fix these flaws. Following Snowden's disclosures, several bills were introduced to try to ensure that the court would hear the other side of the argument, generally from some type of public advocate. Other bills addressed the court's secrecy by requiring the executive branch to declassify significant opinions or release summaries. These proposals would make important improvements, but they do not address the full range of constitutional deficiencies resulting from the changes in law and technology detailed in this report. The problem with the FISA Court is far broader than a particular procedure or rule. **The problem with the FISA Court is FISA.** The report proposes a set of key changes to FISA to help restore the court's legitimacy. • Congress should end programmatic surveillance and require the government to obtain judicial approval whenever it seeks to obtain communications or information involving Americans. This would resolve many constitutional concerns. • Congress should shore up the Article III soundness of the FISA Court by ensuring that the interests of those affected by surveillance are represented in court proceedings, increasing transparency, and facilitating the ability of affected individuals to challenge surveillance programs in regular federal courts. Finally, Congress should address additional Fourth Amendment concerns by ensuring that the collection of information under the rubric of "foreign intelligence" actually relates to our national security and does not constitute an end-run around the constitutional standards for criminal investigations. Under today's foreign intelligence surveillance system, the government's ability to collect information about ordinary Americans' lives has increased exponentially while judicial oversight has been reduced to near-nothingness. **Nothing less than a fundamental overhaul** of the type proposed here is needed to restore the system to its constitutional moorings

Circumvention & Non-Compliance File - Georgetown 2015

Thanks to Maggie Berthiaume of Woodward – she put together nearly all of these cards.

****Negative Starts Here**

Versus Packet Aff

Specific to the Packet Aff (Original Freedom Act)

Aff can't solve because of circumvention. Even Original Freedom Act is not strict enough.

Granick '14

Jennifer Granick is the Director of Civil Liberties at the Stanford Center for Internet and Society. Jennifer was the Civil Liberties Director at the Electronic Frontier Foundation. Jennifer practices, speaks and writes about computer crime and security, electronic surveillance, consumer privacy, data protection, copyright, trademark and the Digital Millennium Copyright Act. From 2001 to 2007, Jennifer was Executive Director of CIS and taught Cyberlaw, Computer Crime Law, Internet intermediary liability, and Internet law and policy. Before teaching at Stanford, Jennifer earned her law degree from University of California, Hastings College of the Law and her undergraduate degree from the New College of the University of South Florida. "USA Freedom Act: Oh, Well. Whatever. Nevermind." – Just Security - May 21, 2014 <http://justsecurity.org/10675/usa-freedom-act-oh-well-whatever-nevermind/>

Additionally, in December of 2013, Deputy Attorney General James Cole testified before the Senate Judiciary Committee that the NSA might continue its bulk collection of nearly all domestic phone call records, even if the original USA FREEDOM ACT passed into law. As I wrote at the time, this testimony shows that the Administration and the intelligence community believe they can do whatever they want, regardless of the law is Congress passes, so long they can convince one of the judges appointed to the secretive Foreign Intelligence Surveillance Court (FISC) to agree. All they need is some legal hook they can present with a straight face.

General

1NC — Surveillance Noncompliance Defense

Surveillance restrictions entirely fail — no real Congressional support, new technology and creative interpretations of law.

Waldman 15 — Paul Waldman, senior writer at The American Prospect, blogger for the Washington Post, 2015 (“A reality check on the future of government spying,” Washington Post, June 3rd, Available Online at <http://www.washingtonpost.com/blogs/plum-line/wp/2015/06/03/a-reality-check-on-the-future-of-government-spying/>, Accessed 06-08-2015)

It’s tempting to hail the passage yesterday of the subtly-named USA Freedom Act as a victory for civil liberties in America and a step toward a healthy recalibration of the government’s surveillance policies. But if that’s your feeling today, **you might want to think twice.**

Not only are the changes the Freedom Act makes to existing practices relatively minor, **both parties have signed on with the dramatic expansion of surveillance on law-abiding Americans** that occurred after September 11. **And both will continue to support it.**

The Freedom Act does take the bulk collection of Americans’ telephone records out of the hands of the National Security Agency and leaves those records with the phone companies; it sets up procedures for the NSA to get access to those records when it wants to. But the truth is that this program wasn’t particularly useful for the NSA to begin with. The government has been unable to point to a single terrorist attack that was thwarted by the use of these records. Not only that, just last month an appeals court ruled that the bulk collection program went way beyond anything envisioned by the section of the USA Patriot Act that was used to justify it, and it was therefore illegal.

That doesn’t mean this new law isn’t significant, because anything that dials back the surveillance contained in the Patriot Act is significant. But let’s not forget that had Edward Snowden not revealed the existence of this program, the Obama administration would have been happy to keep it secret from the public indefinitely. It was only once the program’s existence was revealed that President Obama came out in favor of taking the records out of the NSA’s hands. Even if many Republicans (including Mitch McConnell) would have preferred to keep the bulk collection going as it was, we still have a bipartisan preference in Washington for keeping the gargantuan surveillance apparatus we set up after 9/11 in business.

You might not have expected that from Barack Obama if you were a liberal who supported him over Hillary Clinton in the 2008 primaries, concluding that he was the dove while she was the hawk because of his opposition to the Iraq War. As a senator, Obama had been quite active in proposing reforms to the government’s surveillance powers; as president, most of what he advocated has **fallen by the wayside.**

And is Clinton going to move to restrict the government’s surveillance powers if she’s elected president? There’s no particular reason to believe she will. Up until now Clinton has been vague about what she might do when it comes to surveillance; when she’s asked about it, her answers tend to go like this: Yes there are concerns about privacy, we have to balance that with security, it’s something I’ll be thinking about. Yes, she supported the Freedom Act, but it remains to be

seen whether she'll go into detail about any other particular type of surveillance she'd like to restrict.

And let's not forget that the NSA and other government agencies are certain — **not possible, not likely, but certain** — to come up with new ways to spy on Americans as new technologies become available. Just as the NSA did with the bulk phone data collection, they'll probably take a look at earlier laws and decide that there's a legal basis for whatever new kind of surveillance they want to begin — and that it's best if the public didn't know about it.

Indeed, just this week an investigation by the Associated Press revealed that the FBI is using aircraft with advanced cameras to conduct investigations without warrants. That's a relatively mundane use of technology, but there will always be new tools and capabilities coming down the pike, and the impulse will always be to put them into operation, then figure out afterward if it's legally justifiable.

The story of the bulk telephone data collection tells us that the only thing likely to restrain the expansion of government surveillance is public exposure. If you're hoping that politicians who care about privacy will do it on their own, you're likely to be disappointed.

Alternate Rationale — the government will find another way to get the same data. FISA Court is unable to intervene.

Ackerman 15 — Spencer Ackerman, national security editor for Guardian US, former senior writer for Wired, won the 2012 National Magazine Award for Digital Reporting, 2015 (“Fears NSA will seek to undermine surveillance reform,” The Guardian, June 1st, Available Online at <http://www.theguardian.com/us-news/2015/jun/01/nsa-surveillance-patriot-act-congress-secret-law>, Accessed 06-08-2015)

The USA Freedom Act is supposed to prevent what Wyden calls “secret law”. It contains a provision requiring congressional notification in the event of a novel legal interpretation presented to the secret Fisa court overseeing surveillance.

Yet in recent memory, the US government permitted the NSA to **circumvent the Fisa court entirely. Not a single Fisa court judge** was aware of Stellar Wind, the NSA's post-9/11 constellation of bulk surveillance programs, from 2001 to 2004.

Energetic legal tactics followed to fit the programs under existing legal authorities after internal controversy or outright exposure. When the continuation of a bulk domestic internet metadata collection program risked the mass resignation of Justice Department officials in 2004, an internal NSA draft history records that attorneys found a **different legal rationale** that “essentially gave NSA the same authority to collect bulk internet metadata that it had”.

After a New York Times story in 2005 revealed the existence of the bulk domestic phone records program, attorneys for the US Justice Department and NSA argued, with the blessing of the Fisa

court, that Section 215 of the Patriot Act authorized it all along – precisely the contention that the second circuit court of appeals rejected in May.

Compliance is a joke — the oversight agencies are inept and the NSA and FBI refuse to be monitored, even by the Justice Department.

Schulberg and Reilly 15 — Jessica Schulberg, reporter covering foreign policy and national security for The Huffington Post, former reporter-researcher at The New Republic, MA in international politics from American University, and Ryan J. Reilly, reporter who covers the Justice Department and the Supreme Court for The Huffington Post, 2015 (“Watchdog Finds Huge Failure In Surveillance Oversight Ahead Of Patriot Act Deadline,” Huffington Post, May 21st, Available Online at http://www.huffingtonpost.com/2015/05/21/section-215-oversight_n_7383988.html, Accessed 06-05-2015)

WASHINGTON -- In a declassified and heavily redacted report on a controversial Patriot Act provision, the Justice Department’s inspector general found that the government had **failed to implement guidelines** limiting the amount of data collected on Americans for seven years.

Section 215 of the Patriot Act, which is set to expire June 1 unless Congress reauthorizes it, has been the legal basis for the intelligence community’s bulk metadata collection. As a condition for reauthorization back in 2005, the Justice Department was required to minimize the amount of nonpublic information that the program gathered on U.S. persons. According to the inspector general, **the department did not** adopt sufficient guidelines until 2013. It was not until August of that year -- two months after the bombshell National Security Agency disclosures by Edward Snowden -- that Justice began applying those guidelines in applications to the Foreign Intelligence Surveillance Act court, the secretive body that approves government surveillance requests.

“It’s an indictment of the system of oversight that we’ve relied upon to check abuses of surveillance powers. The report makes clear that, for years, the FBI **failed to comply with its basic legal requirements** in using Section 215, and that should trouble anyone who thinks that secret oversight is enough for surveillance capabilities that are this powerful,” Alex Abdo, a staff attorney at the American Civil Liberties Union, told HuffPost.

“The report confirms that the government has been using Section 215 to collect an ever-expanding universe of records. Given the timing, it’s particularly significant,” he continued referring to the looming expiration date.

At times during that seven-year period, the report noted, **the government blocked the Justice Department’s** Office of the Inspector General from determining whether the minimization guidelines had been implemented:

The FBI in the past has taken the position, over the OIG’s objections, **that it was prohibited from disclosing FISA-acquired information to the OIG for oversight purposes** because the Attorney General had not designated anyone in the OIG as having

access to the information for minimization reviews of other lawful purposes, and because there were no specific provisions in the procedures authorizing such access.

The president will use signing statements to ignore the laws that he signs — empirically proven on surveillance and War on Terror.

Van Bergen 6 — Jennifer Van Bergen, JD, author of *The Twilight of Democracy: The Bush Plan For America*, Professor at Santa Fe Community College, 2006 (“The Unitary Executive: Why the Bush Doctrine Violates the Constitution,” *Couterpunch*, January 12th, Available Online at <http://www.couterpunch.org/2006/01/12/the-unitary-executive/>, Accessed 06-07-2015)

When President Bush signed the new law, sponsored by Senator McCain, restricting the use of torture when interrogating detainees, he also issued a Presidential signing statement. That statement asserted that his power as Commander-in-Chief gives him the authority to bypass the very law he had just signed.

This news came fast on the heels of Bush’s shocking admission that, since 2002, he has repeatedly authorized the National Security Agency to conduct electronic surveillance without a warrant, in flagrant violation of applicable federal law.

And before that, Bush declared he had the unilateral authority to ignore the Geneva Conventions and to indefinitely detain without due process both immigrants and citizens as enemy combatants.

All these declarations echo the refrain Bush has been asserting from the outset of his presidency. That refrain is simple: **Presidential power must be unilateral, and unchecked.**

But the most recent and blatant presidential intrusions on the law and Constitution supply the verse to that refrain. They not only claim unilateral executive power, but also supply the train of the President’s thinking, the texture of his motivations, and the root of his intentions.

They make clear, for instance, that the phrase "unitary executive" is a code word for a doctrine that favors nearly unlimited executive power. Bush has used the doctrine in his signing statements to quietly expand presidential authority.

The President will explicitly violate legislative restrictions on surveillance during the war on terror. The resulting conflict will endanger the rule of law and impair wartime decisions.

Lobel 8 — Jules Lobel, Professor of Law at the University of Pittsburgh, 2008 (“Conflicts Between the Commander in Chief and Congress: Concurrent Power over the Conduct of War,” *Ohio State Law Journal*, Vol. 69, 2008, pp.391-467, Available Online at http://moritzlaw.osu.edu/students/groups/oslj/files/2012/04/69.3.lobel_.pdf, Accessed 05-29-2015)

The critical difficulty with a contextual approach is its inherent ambiguity and lack of clarity, which tends to sharply shift the balance of power in favor of a strong President acting in disregard of congressional will. For example, the application of the Feldman and Issacharoff test asking whether the congressional restriction makes realistic sense in the modern world would yield no coherent separation of powers answer if applied to the current Administration's confrontation with Congress. It would undoubtedly **embolden the President to ignore Congress's strictures**. The President's advisors would argue that the McCain Amendment's ban on cruel and inhumane treatment, or **FISA's requirement of a warrant, does not make realistic sense in the context of the contemporary realities of the war on terror** in which we face a shadowy, ruthless nonstate enemy that has no respect for laws or civilized conduct, a conclusion hotly disputed by those opposed to the President's policies. Focusing the debate over whether Congress has the power to control the treatment of detainees on the President's claim that the modern realities of warfare require a particular approach will merge the separation of powers inquiry of who has the power with the political determination of what the policy ought to be. Such an approach is likely to encourage the President to ignore and violate legislative wartime enactments whenever he or she believes that a statute does not make realistic sense—that is, when it conflicts with a policy the President embraces. 53

The contextual approach has a “zone of twilight” quality that Justice Jackson suggested in *Youngstown*. 54 Often constitutional norms matter less than political realities—wartime reality often favors a strong President who will overwhelm both Congress and the courts. While it is certainly correct—as Jackson noted—that neither the Court nor the Constitution will preserve separation of powers where Congress is too politically weak to assert its authority, a fluid contextual approach is an invitation to Presidents to push beyond the constitutional boundaries of their powers and **ignore legislative enactments that seek to restrict their wartime authority**.

Moreover, another substantial problem with a contextual approach in the war powers context is that the judiciary is unlikely to resolve the dispute. 55 The persistent refusal of the judiciary to adjudicate the constitutionality of the War Powers Resolution strongly suggests that courts will often refuse to intervene to resolve disputes between the President and Congress over the constitutionality of a statute that a President claims impermissibly interferes with her conduct of an ongoing war. 56 This result leaves the political branches to engage in an intractable dispute over the statute's constitutionality that saps the nation's energy, diverts focus from the political issues in dispute, and endangers the rule of law.

Additionally, in wartime it is often important for issues relating to the exercise of war powers to be resolved quickly. Prompt action is not usually the forte of the judiciary.

If, however, a constitutional consensus exists or could be consolidated that Congress has the authority to check the President's conduct of warfare, that consensus might help embolden future Congresses to assert their power. Such a consensus might also help prevent the **crisis, chaos, and stalemate** that may result when the two branches assert competing constitutional positions and, as a practical matter, judicial review is unavailable to resolve the dispute.

Moreover, the adoption of a contextual, realist approach will undermine rather than aid the cooperation and compromise between the political branches that is so essential to success in wartime. In theory, an unclear, ambiguous division of power between the branches that leaves

each branch uncertain of its legal authority could further compromise and cooperation. However, **modern social science research** suggests that the opposite occurs. 57 Each side in the dispute is likely to grasp onto aspects or factors within the ambiguous or complex reality to support its own self-serving position. This **self-serving bias** hardens each side's position and allows the **dispute to drag on**, as has happened with the ongoing, unresolved dispute over the constitutionality of the War Powers Resolution. Pg. 407-409

2NC/1NR — Legal Interpretations

NSA reform gets quietly rolled back — expansive interpretations and FISA rubber stamps.

Ackerman 15 — Spencer Ackerman, national security editor for Guardian US, former senior writer for Wired, won the 2012 National Magazine Award for Digital Reporting, 2015 (“Fears NSA will seek to undermine surveillance reform,” The Guardian, June 1st, Available Online at <http://www.theguardian.com/us-news/2015/jun/01/nsa-surveillance-patriot-act-congress-secret-law>, Accessed 06-08-2015)

Privacy advocates fear the National Security Agency will attempt to weaken new restrictions on the bulk collection of Americans’ phone and email records **with a barrage of creative legal wrangles**, as the first major reform of US surveillance powers in a generation looked likely to be a foregone conclusion on Monday.

The USA Freedom Act, a bill banning the NSA from collecting US phone data in bulk and compelling disclosure of any novel legal arguments for widespread surveillance before a secret court, has already been passed by the House of Representatives and on Sunday night the Senate voted 77 to 17 to proceed to debate on it. Between that bill and a landmark recent ruling from a federal appeals court that rejected a longstanding government justification for bulk surveillance, civil libertarians think they stand a chance at stopping attempts by intelligence lawyers to undermine reform in secret.

Attorneys for the intelligence agencies react scornfully to the suggestion that they will stretch their authorities to the breaking point. Yet reformers remember that such legal tactics during the George W Bush administration allowed the NSA to shoehorn bulk phone records collection into the Patriot Act.

Rand Paul, the Kentucky senator and Republican presidential candidate who was key to allowing sweeping US surveillance powers to lapse on Sunday night, warned that NSA lawyers would now **make mincemeat** of the USA Freedom Act’s prohibitions on bulk phone records collection by taking an **expansive view of the bill’s definitions**, thanks to a **pliant, secret** surveillance court.

“My fear, though, is that the people who **interpret** this work at a place known as the rubber stamp factory, the Fisa [court],” Paul said on the Senate floor on Sunday.

Surveillance legislation will be reinterpreted to covertly allow the things it’s intended to ban — USA Freedom Act proves. Legal complexity makes the plan meaningless.

Richman 15 — Sheldon Richman, chairman of the board of trustees of the Center for a Stateless Society and proprietor of the blog Free Association, 2015 (“The USA Freedom Act Is Inscrutable—and That’s How Politicians Like It,” Reason.com, June 7th, Available Online at <http://reason.com/archives/2015/06/07/power-thrives-in-complexity>, Accessed 06-08-2015)

But that's not all. Even a person who might be willing to carve out time to keep an eye on the government will find that doing so is probably more than he can handle. Apart from the natural barriers mentioned above, **government personnel have myriad ways to obscure what they do.** Whether this is done innocently or deliberately, the effect is the same. To most people the costs of monitoring the state are raised to prohibitive levels. This lets politicians and bureaucrats get away with things they might not otherwise get away with.

The controversy over the USA Patriot Act and USA Freedom Act provides a good illustration of this problem. Before getting into that, however, let's look at the theory a little more closely. Fortunately, we have an excellent book on the subject: economist Charlotte Twight's *Dependent on D.C.: The Rise of Federal Control over the Lives of Ordinary Americans* (2002).

Twight's thesis is that the people who run the government have a long list of ways to raise the "political transaction costs" that the taxpayers would have to overcome to keep the state in check. In economics, transaction costs are the money, effort, and time spent on seeing a transaction through to successful completion. If you mow your own lawn, you face no such costs. But if you hire someone, you do. The effort and resources devoted to finding the right person and making sure the job is done right constitute transactions costs.

The political arena has transactions costs also. As Twight puts it: "They are the costs to each of us of perceiving, and acting upon our assessment of, the net costs of particular governmental actions and authority." Besides the inevitable and built-in transaction costs entailed by government, there are also "contrived" costs, that is, those "deliberately created by government officials to increase our costs of assessing and responding to government policies." The array of devices to raise these costs ranges from needless complexity and secrecy to outright lying. These devices have one thing in common: they obscure the government's activities, making it difficult to impossible to see what the state is up to. As a result, most people perceive that even trying to lift the government's veil is essentially futile. (And even if it can be lifted occasionally, what could one person do?) Twight's book contains several historical cases illustrating her theory, including stories about the origins of Social Security, Medicare, and government surveillance—which brings us to Patriot and Freedom Acts.

If you followed the congressional and public debate over whether parts of the Patriot Act should be permitted to expire and whether the Freedom Act would really limit government surveillance, you'd be **understandably bewildered.** The amount of reading was huge, and nearly everyone had a different take. Defenders of government spying wanted simply to extend the sections due to expire, but those who wanted to abolish mass spying took different positions. Just attempting to thoroughly read up on whether the Freedom Act was a worthwhile step toward eliminating bulk phone-data collection or just a cosmetic change would have required giving up your job or your family or both.

You might think you could leave the hard work to the civil-liberties organizations you trust, but that path was not without its problems. The various groups disagreed over whether the bill was a net plus or a net minus. Respected authorities **couldn't be sure** that bulk collection of phone metadata would really end with the bill's passage. For example, the Electronic Frontier Foundation (EFF) said, "So the bulk collection of everybody's phone records? As far as we can tell, this should end that" (emphasis added).

As far as they can tell? They spend all their time watching this stuff.

Likewise, the Freedom of the Press Foundation's postmortem on Congress's action stated:

The USA Freedom Act **supposedly** bans bulk collection of phone records or any other private records, and **we certainly hope it actually does**. But its provisions are **vague and confusing**, leading many legal experts to believe they could be **re-interpreted in secret**—by NSA lawyers with a **history of warping the common definitions** of ordinary words beyond recognition—and could lead the FISA court to continue to allow the NSA to collect large quantities of Americans' data in secret. [Emphasis added.]

The foundation is no more certain that the EFF about the bill's effect on bulk data collection. If these professional experts can't really be sure of the bill's effect, how can the rest of us?

Even the guy who blew the whistle on mass surveillance, Edward Snowden, in a New York Times op-ed celebrating the expiration of Section 215, warns:

Though we have come a long way, the right to privacy ... remains under threat. Some of the world's most popular online services have been enlisted as partners in the N.S.A.'s mass surveillance programs, and technology companies are being pressured by governments around the world to work against their customers rather than for them. Billions of cellphone location records are still being intercepted without regard for the guilt or innocence of those affected. We have learned that our government intentionally weakens the fundamental security of the Internet with "back doors" that transform private lives into open books. Metadata revealing the personal associations and interests of ordinary Internet users is still being intercepted and monitored on a scale unprecedented in history: As you read this online, the United States government makes a note.

So why the big to-do about the Freedom Act? If you wanted to decide for yourself without experts, you could have read the text of the USA Freedom Act. It begins:

SEC. 101. ADDITIONAL REQUIREMENTS FOR CALL DETAIL RECORDS.

(a) Application.—Section 501(b)(2) (50 U.S.C. 1861(b)(2)) is amended—

(1) in subparagraph (A)—

(A) in the matter preceding clause (i), by striking "a statement" and inserting "in the case of an application other than an application described in subparagraph (C) (including an application for the production of call detail records other than in the manner described in subparagraph (C)), a statement"; and...

Well, you get the idea. It goes on that way for a hundred pages. Even when you think you may understand something, you still can't be sure. For example:

SEC. 301. LIMITS ON USE OF UNLAWFULLY OBTAINED INFORMATION.

Section 702(i)(3) (50 U.S.C. 1881a(i)(3)) is amended by adding at the end the following new subparagraph:

"(D) LIMITATION ON USE OF INFORMATION.—

"(i) IN GENERAL.—Except as provided in clause (ii), if the Court orders a correction of a deficiency in a certification or procedures under subparagraph (B), no information obtained or evidence derived pursuant to the part of the certification or procedures that has been identified by the Court as deficient concerning any United States person shall be received in evidence or otherwise disclosed in any trial, hearing, or other proceeding in or before any court, grand jury, department, office, agency, regulatory body, legislative committee, or other authority of the United States, a State, or political subdivision thereof, and no information concerning any United States person acquired pursuant to such part of such certification or procedures shall subsequently be used or disclosed in any other manner by Federal officers or employees without the consent of the United States person, except with the approval of the Attorney General if the information indicates a threat of death or serious bodily harm to any person.

"(ii) EXCEPTION.—If the Government corrects any deficiency identified by the order of the Court under subparagraph (B), the Court may permit the use or disclosure of information obtained before the date of the correction under such minimization procedures as the Court may approve for purposes of this clause."

You might do better with the official summary, but not much.

To complicate things, your interpretation of the text may differ radically from that of the secret FISA court or someone in the Justice Department. Remember, an appeals court ruled that the now-expired Section 215 of the Patriot Act did not authorize bulk-data collection—and the author of the bill agreed.

Surveillance is hardly the only part of government with high contrived political transaction costs. The budget is another. A few years ago I learned the hard way that calculating the effect of budget sequestration is a task that only policy wonks and masochists were likely to undertake.

What's the moral here? Power thrives in complexity, just as roaches flourish in the dark. Complexity raises political transaction costs and thereby reduces public scrutiny and resistance. That's just how the politicians and bureaucrats like it.

Executive Order 12333

Plan can't solve – it won't stop collection under EO 12333.

EPIC '14

(internally quotes former Obama State Department official, John Napier Tye – who had access to programs conducted under EO 1233 authorities. Tye served as section chief for Internet freedom in the State Department's Bureau of Democracy, Human Rights and Labor from January 2011 to April 2014. The Electronic Privacy Information Center or "EPIC" - is a public interest research center in Washington, D.C... EPIC routinely participates as amicus curiae before federal and state courts in cases concerning the protection of privacy. Members of the EPIC Advisory Board are expert in issues of domestic surveillance. "Executive Order 12333" – last footnote of this piece is from July, 2014 – page was last updated in 2015 - <https://epic.org/privacy/surveillance/12333/>)

EPIC has a long-standing interest in public oversight of government surveillance, including activities conducted under Executive Order 12333. As Professor Francesca Bignami has explained, "[t]he NSA's original mandate was considerably elaborated and extended in Executive Order 12,333, promulgated by President Reagan in 1981." EPIC has tracked the government's reliance on **EO 12333**, particularly the reliance on Section 1:12(b)(13), which **authorizes** the NSA to provide "such administrative and technical support **activities within and outside the United States** as are necessary to perform the functions described in sections (1) through (12) above, including procurement." **This provision appears to have opened the door for the NSA's broad and unwarranted surveillance of U.S. and foreign citizens.** Executive Order 12333 was signed by President Ronald Reagan on December 4, 1981. It established broad new surveillance authorities for the intelligence community, outside the scope of public law. EO 12333 has been amended three times. It was amended by EO 13284 on January 23, 2003 and was then amended by EO 13555 on August 27, 2004. EO 13555 was subtitled "Strengthened Management of the Intelligence Community" and reflected the fact that the Director of National Intelligence (DNI) now existed as the head of the intelligence community, rather than the CIA which had previously served as the titular head of the IC. EO 13555 partially supplemented and superseded EO 12333. On July 30, 2008, President George W. Bush signed EO 13470, which further supplemented and superseded EO 12333 to strengthen the role of the Director of National Intelligence. Since the Snowden revaluations there has been a great deal of discussion regarding the activities of the IC community, but **relatively little attention has been paid to EO 12333. EO 12333 often serves an alternate basis of authority for surveillance activities above and beyond Section 215 and 702.** As Bruce Schneier has emphasized, **"Be careful when someone from the intelligence community uses the caveat "not under this program," or "not under this authority"; almost certainly it means that whatever it is they're denying is done under some other program or authority.** So when [NSA General Counsel Raj] De said that companies knew about NSA collection under Section 702, it doesn't mean they knew about the other collection programs." Senator Dianne Feinstein (D-CA), Chair of the Senate Intelligence Committee, has said in August 2013 that, "The committee does not receive the same number of official reports on other NSA surveillance activities directed abroad that are conducted pursuant to legal authorities outside of FISA (specifically Executive Order 12333), but I intend to add to the committee's focus on those activities." In July 2014, **a former Obama State Department official**, John Napier Tye, **wrote** an Op-Ed in the Washington Post calling **for greater scrutiny of EO 12333.** Tye noted that "based in part on classified facts that I am prohibited by law from publishing, I believe that **Americans should be even more concerned about the collection and storage of their communications under Executive Order 12333** than under Section 215." Structure of EO 12333 EO 12333 is divided into three parts (this describes the current EO 12333 as amended). The first part is the bulk of the order, describing the overall goals, directions, duties, and responsibilities of U.S. intelligence efforts. The second part applies to the actual conduct of intelligence activities and includes a prohibition on assassination. The third part consists of general provisions and includes general definitions, implementation, and the requirement of compliance with congressional oversight. Part 1: Goals, Directions, Duties, and Responsibilities with Respect to United States Intelligence Efforts 1:1 Goals 1.2 The National Security Council 1.3 Director of National Intelligence 1.4 The Intelligence Community 1.5 Duties and Responsibilities of the Heads of Executive Branch Departments and Agencies 1.6 Heads of Elements of the Intelligence Community 1.7 Intelligence Community Elements a) The Central Intelligence Agency b) The Defense Intelligence Agency c) The National Security Agency d) National Reconnaissance Office e) The National Geospatial-Intelligence Agency f) The Intelligence and Counterintelligence Elements of the Army, Navy, Air Force, and Marine Corps g) Intelligence Elements of the Federal Bureau of Investigation h) The Intelligence and Counterintelligence Elements of the Coast Guard i) The Bureau of Intelligence and Research, Department of State; The Office of Intelligence and Analysis, Department of the Treasury; The Office of National Security Intelligence, Drug Enforcement Administration; The Office of Intelligence and Analysis, Department of Homeland Security; and the Office of Intelligence and Counterintelligence, Department of Energy. j) The Office of the Director of National Intelligence. 1.8 Department of State 1.9 The Department of the Treasury 1.10 The Department of Defense 1.11 The Department of Homeland Security 1.12 The Department of Energy 1.13 The Federal Bureau of Investigation Part 2: Conduct of Intelligence Activities 2.1 Need 2.2 Purpose 2.3 Collection of Information 2.4 Collection Techniques 2.5 Attorney General Approval 2.6 Assistance to Law Enforcement and Other Civil Authorities 2.7 Contracting 2.8 Consistency With Other Laws 2.9 Undisclosed Participation in Organizations Within the United States 2.10 Human Experimentation 2.11 Prohibition on Assassination 2.12 Indirect Participation 2.13 Limitation on Covert Action Part 3: General Provisions 3.1 Congressional Oversight 3.2 Implementation 3.3 Procedures 3.4 References and Transition

3.5 Definitions 3.6 Revocation 3.7 General Provisions EPIC's Interest In 2012, EPIC sought and obtained from the Office of the Director of National Intelligence the guidelines for the National Counterterrorism Center (NCTC). The NCTC is a part of the intelligence community, which operates under the authority of EO 12333. EPIC has stressed through its comments, statements, and testimony that U.S. intelligence agencies should not exercise broad authority without oversight. Executive Order 12333 is such a case, an order that has never been subject to meaningful oversight by either courts or Congress. Senator Dianne Feinstein, the Chair of the Senate Intelligence Committee, referring to EO 12333, has said, "I don't think privacy protections are built into it. It's an executive policy. The executive controls intelligence in the country." Ronald Reagan executed the order in 1981.

Executive Order 12333 authorizes the collection of not only metadata, but of the actual communications of US citizens, so long as the communications are collected "incidentally."

These communications can then be held for five years, as described by a document that the Director of National Intelligence recently declassified. The NSA has used Executive Order 12333 to justify, among other things, the interception of unencrypted data between Google and Yahoo data centers. None of the currently proposed reforms address the over-broad surveillance authorities established by Executive Order 12333. EPIC has long urged PCLOB to move beyond their Section 215 and Section 702 investigations and examine the scope of information under EO 12333 and the need for greater public oversight. As EPIC Advisory Board member Steven Aftergood has noted, "If they deviated from their own rules, how would it be discovered? I am not satisfied that they have an answer to that question."

EO 12333 secrecy means democratic movement can't solve. It shuts-down any hope for change.

Tye '14

John Napier Tye served as section chief for Internet freedom in the State Department's Bureau of Democracy, Human Rights and Labor from January 2011 to April 2014 – where he had inside access programs under EO 12333 authorities. He is now a legal director of Avaaz, a global advocacy organization. "Meet Executive Order 12333: The Reagan rule that lets the NSA spy on Americans" – Washington Post - July 18th - http://www.washingtonpost.com/opinions/meet-executive-order-12333-the-reagan-rule-that-lets-the-nsa-spy-on-americans/2014/07/18/93d2ac22-0b93-11e4-b8e5-d0de80767fc2_story.html

In March I received a call from the White House counsel's office regarding a speech I had prepared for my boss at the State Department. The speech was about the impact that the disclosure of National Security Agency surveillance practices would have on U.S. Internet freedom policies. The draft stated that "If U.S. citizens disagree with congressional and executive branch determinations about the proper scope of signals intelligence activities, they have the opportunity to change the policy through our democratic process." But the White House counsel's office told me that no, that wasn't true. I was instructed to amend the line, making a general reference to "our laws and policies," rather than our intelligence practices. I did. Even after all the reforms President Obama has announced, some intelligence practices remain so secret even from members of Congress, that there is no opportunity for our democracy to change them. Public debate about the bulk collection of U.S. citizens' data by the NSA has focused largely on Section 215 of the Patriot Act, through which the government obtains court orders to compel American telecommunications companies to turn over phone data. But Section 215 is a small part of the picture and does not include the universe of collection and storage of communications by U.S. persons authorized under Executive Order 12333. From 2011 until April of this year, I worked on global Internet freedom policy as a civil servant at the State Department. In that capacity, I was cleared to receive top-secret and "sensitive compartmented" information. Based in part on classified facts that I am prohibited by law from publishing, I believe that Americans should be even more concerned about the

collection and storage of their communications under Executive Order 12333 than under Section 215. Bulk data collection that occurs inside the United States contains built-in protections for U.S. persons, defined as U.S. citizens, permanent residents and companies. Such collection must be authorized by statute and is subject to oversight from Congress and the Foreign Intelligence Surveillance Court. The statutes set a high bar for collecting the content of communications by U.S. persons. For example, Section 215 permits the bulk collection only of U.S. telephone metadata — lists of incoming and outgoing phone numbers — but not audio of the calls. Executive Order 12333 contains no such protections for U.S. persons if the collection occurs outside U.S. borders. Issued by President Ronald Reagan in 1981 to authorize foreign intelligence investigations, 12333 is not a statute and has never been subject to meaningful oversight from Congress or any court. Sen. Dianne Feinstein (D-Calif.), chairman of the Senate Select Committee on Intelligence, has said that the committee has not been able to “sufficiently” oversee activities conducted under 12333.

NSA uses 12333 as an end-around. Taps the global lines of US companies to circumvent domestic surveillance restrictions.

Pitter ‘14

Laura Pitter, senior national security counsel in Human Rights Watch's US Program, monitors, analyzes and writes on US national security policies. Prior to joining Human Rights Watch, Laura was a journalist, human rights advocate, and attorney who practiced in both the public and private sectors. She was a reporter during the war in Bosnia where she wrote for Time Magazine and Reuters News Agency among other media outlets. Following the war she worked for the United Nations in both Bosnia and post Sept. 11-Afghanistan as a protection and political affairs officer. After Afghanistan, Laura practiced law for eight years, first as a public defender and later with a product liability law firm, both in New York. Laura holds a bachelor's degree from the University of California at Santa Barbara, a master's in international affairs from Columbia University, and a law degree from the University of San Francisco. “US: It's Been a Year Since Snowden, and Nothing's Really Changed” – Human Rights Watch is an independent, international organization that works as part of a vibrant movement to uphold human dignity and advance the cause of human rights for all. June 5, 2014 - <http://www.hrw.org/news/2014/06/05/us-its-been-year-snowden-and-nothings-really-changed>

At the same time that the United States has been forcing companies to turn over data here in the United States at the front end, it has been reportedly collecting their customers' information without their knowledge, by tapping into the main global communication links of Google, Yahoo!, and other companies overseas. The administration is reportedly relying on Executive Order 12333, which authorizes surveillance activities outside the United States, in order to tap into these lines, and is collecting millions of records daily, including metadata, text, audio, and video -- an effort that Google Executive Chairman Eric Schmidt, called "outrageous." It has intercepted packages of technology equipment en route to customers in order to install malware or backdoor-enabling hardware before the equipment reaches its destination, and has been systematically undermining encryption standards and creating backdoors in commercial encryption software.

Section 702

Plan will get circumvented - Section 702 of the FAA allows gathering of “foreign intelligence information”

But first, a brief review: In the past year, we've learned that not only is our telephone data collected -- our Internet communications are under watch. Stunning amounts of data are being collected under the government's interpretation of the Foreign Intelligence Surveillance Act (FISA). U.S. Internet companies turn over the content of communications like texts, emails, videos, and chat messages, under Section 702 of FISA, which authorizes the warrantless collection -- inside American borders -- of communications containing "foreign intelligence information," a term defined to include essentially anything about the foreign affairs of the United States -- so long as at least one person on the end of the communication is located outside the country. According to a recently disclosed 2011 FISA court opinion, roughly 250 million Internet communications were acquired under Section 702; as of April 5, 2013, there were 117,675 active "targets." Those targets, by the way, don't have to be individuals. Under guidelines previously secret but disclosed by Snowden, they can be "facilities" or "places," too -- meaning each target can potentially rope huge numbers of people into the dragnet. All of this collection has been happening under gag orders that prevent the companies from speaking publicly about it or informing their customers in any meaningful way.

Section 702 will be used to circumvent the plan

Nelson ‘15

Steven Nelson is a reporter at U.S. News & World Report. “Senate Passes Freedom Act, Ending Patriot Act Provision Lapse” – USNWR – June 2nd - <http://www.usnews.com/news/articles/2015/06/02/senate-passes-freedom-act-ending-patriot-act-provision-lapse>

The Freedom Act does not revise some of the most significant legal authorities the government uses to conduct surveillance, such as Section 702 of the Foreign Intelligence Surveillance Act, which is used for vast Internet surveillance, and Executive Order 12333, which governs collection of intelligence overseas and,

according to whistleblower John Napier Tye, could be used to override many congressional reforms without court oversight. Section 702 will expire without congressional reauthorization in 2017.

2NC/1NR — Find Another Method

Obama and the NSA will just find another way to collect the same data — shutting down programs empirically fails to end the intrusion.

Ackerman 15 — Spencer Ackerman, national security editor for Guardian US, former senior writer for Wired, won the 2012 National Magazine Award for Digital Reporting, 2015 (“Fears NSA will seek to undermine surveillance reform,” The Guardian, June 1st, Available Online at <http://www.theguardian.com/us-news/2015/jun/01/nsa-surveillance-patriot-act-congress-secret-law>, Accessed 06-08-2015)

The USA Freedom Act, a compromise bill, would not have an impact on the vast majority of NSA surveillance. It would not stop any overseas-focused surveillance program, no matter how broad in scope, nor would it end the NSA’s dragnets of Americans’ international communications authorized by a different law. Other bulk domestic surveillance programs, like the one the Drug Enforcement Agency operated, would not be impacted.

The rise of what activists have come to call “bulky” surveillance, like the “large collections” of Americans’ electronic communications records the FBI gets to collect under the Patriot Act, continue unabated – or, at least, will, once the USA Freedom Act passes and restores the Patriot Act powers that lapsed at midnight on Sunday.

That collection, recently confirmed by a largely overlooked Justice Department inspector general’s report, points to a **slipperiness in shuttering surveillance programs** – one that creates **opportunities for clever lawyers.**

The Guardian revealed in 2013 that Barack Obama had permitted the NSA to collect domestic internet metadata in bulk until 2011. Yet even as Obama closed down that NSA program, the Justice Department inspector general confirms that by 2009, the FBI was already collecting the same “**electronic communications**” metadata under a **different authority.**

It is unclear as yet how the FBI transformed that authority, passed by Congress for the collection of “business records”, into large-scale collection of Americans’ email, text, instant message, internet-protocol and other records. And a similar power to for the FBI gather domestic internet metadata, obtained through non-judicial subpoenas called “National Security Letters”, also exists in a different, non-expiring part of the Patriot Act.

Jameel Jaffer, the deputy legal director of the ACLU, expressed confidence that the second circuit court of appeals’ decision last month would effectively step into the breach. The panel found that legal authorities permitting the collection of data “relevant” to an investigation cannot allow the government to gather data in bulk – setting a potentially prohibitive precedent for other bulk-collection programs.

“We don’t know what kinds of bulk-collection programs the government still has in place, but in the past it’s used authorities other than Section 215 to conduct bulk collection of internet metadata, phone records, and financial records. If similar programs are still in place, the ruling will force the government to reconsider them, and probably to end them,” said Jaffer, whose organization brought the suit that the second circuit considered.

Julian Sanchez, a surveillance expert at the Cato Institute, was more cautious.

“The second circuit ruling establishes that a ‘relevance’ standard is not completely unlimited – it doesn’t cover getting hundreds of millions of people’s records, without any concrete connection to a specific inquiry – but doesn’t provide much guidance beyond that as to where the line is,” Sanchez said.

“I wouldn’t be surprised if the government argued, **in secret**, that nearly anything short of that scale is still allowed, nor if the same Fisa court that authorized the bulk telephone program, in defiance of any common sense reading of the statutory language, went along with it.”

2NC/1NR — Oversight Fails

NSA surveillance explicitly and knowingly violates the FISA statute. The President historically ignores both Congress and the courts in this area. There is no legal remedy.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power and the NSA’s Surveillance Authority II,” testimony before the Senate Judiciary Committee, February 28th, Available Online at <http://www.cato.org/publications/congressional-testimony/wartime-executive-power-nsas-surveillance-authority-ii#26>, Accessed 05-29-2015)

If the president thought the law should be amended to authorize warrantless surveillance of either agents or non-agents, he had a convenient vehicle for that purpose shortly after 9/11. That’s when the PATRIOT Act was passed, substantially enhancing the president’s authority under FISA and expanding his ability to conduct foreign intelligence surveillance. The president could have, but did not, seek new authority for the NSA — authority that he has now decreed, unilaterally, without input from either Congress or the courts.

Maybe Congress would not have approved if asked. Or maybe the courts would have overridden any further loosening of the warrant provisions. But the legal stumbling block for the administration is not just that it failed to get affirmative support for expanded surveillance from Congress and the courts. The bigger predicament is that Congress, without objection from the president, expressly rejected warrantless domestic surveillance and codified that prohibition in the FISA statute, which the president implicitly accepted when he signed the PATRIOT Act.

Because the central problem with the NSA surveillance program is too much unchecked authority in the executive branch, the obvious solution is for the federal legislature or the federal judiciary to intervene. But the courts may decide they cannot play a role: First, the Justice Department will not prosecute; second, surveillance targets who have been secretly monitored are unlikely to know of their victimization; third, potential targets may not be able to prove sufficient injury; and fourth, aggrieved members of Congress have previously been denied legal standing to sue.⁷⁰

That elevates the need for congressional intervention. But the president has resisted asking Congress to approve NSA domestic surveillance because, among other things, publicity might tip off al-Qaeda.⁷¹ Perhaps his concern is legitimate, but “tipping off terrorists” is an excuse not to debate any counterterrorism statute, including the PATRIOT Act, which was nonetheless debated vigorously. Moreover, the president’s rationale assumes that al-Qaeda would be blissfully ignorant of the surveillance but for congressional deliberations.

The administration may be justified in taking measures that in pre-9/11 times could be seen as infringements of civil liberties. After all, the fuzzy text of the Fourth Amendment (unreasonable searches) and the Fifth Amendment (due process) leaves room for exceptions at the margin. But

the executive branch cannot, in the face of an express prohibition by Congress, unilaterally set the rules, execute the rules, and eliminate oversight by the other branches.

() Circumvention inevitable – FISA Courts prove

Brown '14

Bruce Brown - Counsel of Record. BRIEF OF THE REPORTERS COMMITTEE FOR FREEDOM OF THE PRESS AND 17 MEDIA ORGANIZATIONS AS AMICI CURIAE IN SUPPORT OF PLAINTIFF-APPELLANT - The Reporters Committee for Freedom of the Press is an unincorporated association of reporters. The Reporters Committee has provided representation, guidance and research in First Amendment and Freedom of Information Act litigation since 1970. Amicus Brief for Smith v. Obama – before the United States Ninth Circuit Court of Appeals. “Amici” means “friend of the court” and – in this context - is legal reference to the Reporters Committee – Sept 9th - <https://www.eff.org/document/rcfp-smith-amicus-brief>

Internal protections built into these enormous databases cannot prevent overreaching in all cases.⁴ Government documents released in September of 2013 show that for a three-year period, until March 2009, the NSA regularly searched call logs of about 15,000 numbers without having a reasonable ^{articulable} suspicion of terrorism. Josh Gerstein, NSA broke rules on call-tracking program, court filings show, Politico (Sept. 10, 2013), <http://politi.co/17UxEJR>. Further, an internal NSA audit from 2012 revealed that the agency conducted unauthorized searches of data, including phone records and e-mail, of thousands of Americans since 2008. See Barton Gellman, NSA Broke Privacy Rules Thousands of Times Per Year, Audit Finds, Wash. Post (Aug. 15, 2013), <http://wapo.st/16SWco2>. Such conduct – which has “include[d] unauthorized access to intercepted communications, the distribution of protected content[,] and the use of automated systems without built-in safeguards to prevent unlawful surveillance,” id.— cast serious doubt on the government’s ability to police itself when implementing such a far-reaching mass call-tracking program. In fact, the FISA Court chief judge Reggie B. Walton said his court does not have the capacity to investigate issues of noncompliance.” Carol D. Leonnig, Court: Ability to police U.S. spying program limited, Wash. Post (Aug. 15, 2013), <http://wapo.st/1cR581f>.

Even the President admits that existing NSA spying violates the Congressional FISA statute.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power and the NSA’s Surveillance Authority II,” testimony before the Senate Judiciary Committee, February 28th, Available Online at <http://www.cato.org/publications/congressional-testimony/wartime-executive-power-nas-surveillance-authority-ii#26>, Accessed 05-29-2015)

Accordingly, even if the administration establishes that NSA warrantless surveillance during wartime is reasonable in the context of the Fourth Amendment, the question remains whether the NSA program violates the express terms of FISA. It does.

The text of FISA is unambiguous: “A person is guilty of an offense if he intentionally engages in electronic surveillance ... except as authorized by statute.”¹⁸ That provision covers

communications from or to U.S. citizens or permanent resident aliens in the United States. Moreover, the Wiretap Act provides that its procedures and FISA “shall be the exclusive means by which electronic surveillance ... may be conducted.” 19

From the early 1960s until 1973, the NSA, without approval of Congress, used a “watch list” of U.S. citizens and organizations in sorting through intercepted foreign communications. That was known as Project Minaret.²⁰ From 1945 to 1975, telegraph companies gave the NSA copies of most telegrams sent from the United States to overseas. That was known as Project Shamrock, “probably the largest governmental interception program affecting Americans ever undertaken.”²¹ Of course, there were also domestic spying abuses by the Federal Bureau of Investigation under J. Edgar Hoover against suspected communists, Black Panthers, civil rights leaders and others. That’s why FISA was enacted in 1978. It had a dual purpose: to curb abuses while facilitating domestic surveillance for foreign intelligence purposes.

To be sure, the FISA statute was drafted to deal with peacetime intelligence. But that does not mean the statute can be ignored when applied to the post-9/11 war on terror. First, the FISA text makes no distinction between wartime and peacetime. To conduct surveillance without statutory authorization, in wartime or peacetime, is a crime, punishable by up to five years in prison.²² Second, in passing FISA, Congress expressly contemplated warrantless surveillance during wartime, but limited it to the first 15 days after war is declared. The statute reads: “Notwithstanding any other law, the President, through the Attorney General, may authorize electronic surveillance without a court order under this title to acquire foreign intelligence information for a period not to exceed fifteen calendar days following a declaration of war by the Congress.”²³ Third, FISA warrant requirements and electronic surveillance provisions were amended by the USA PATRIOT Act,²⁴ which was passed in response to 9/11 and signed by President Bush. If 9/11 triggered “wartime,” as the administration has repeatedly and convincingly argued, then the amended FISA is clearly a wartime statute.

Some administration supporters have argued that FISA and the PATRIOT Act provide tools that the president had anyway, except he could not use the acquired evidence in a criminal prosecution.²⁵ Yet there is no support for the notion that members of Congress, in passing the two statutes, thought they were simply debating the rules of evidence. Moreover, warrant requirements are triggered even if the government declines to prosecute. Imagine police secretly entering a private home without a warrant, installing bugs on phones and tracer software on computers, searching every room and closet, then leaving, never to be heard from again — no arrest, no indictment, no notice to the target. Clearly, the Fourth Amendment’s warrant provisions have been violated, even if the target is unaware and no fruits of the search are used as evidence in a criminal prosecution. A key purpose of the Amendment is to ensure privacy in those situations in which an expectation of privacy is reasonable.

That said, there may be some international satellite or radio communications that do not come under FISA’s prohibition because the communicating parties could not reasonably expect privacy. But I know of no court case that has denied there is a reasonable expectation of privacy by U.S. citizens and permanent resident aliens in their phone calls and emails.

Moreover, the Justice Department, in a December 2005 letter to Congress, acknowledged that the president’s October 2001 NSA eavesdropping order **did not comply with the** “procedures”

of the FISA statute.²⁶ The Department offers two justifications — the first of which I examine next.

The president authorized NSA surveillance without input from Congress or the courts — there is precedent for unilateral actions in this area.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power: Are Warrantless Wiretaps Legal?,” *The Freeman*, a publication of the Foundation for Economic Education, drawn from his testimony before the Senate Judiciary Committee, August 1st, Available Online at <http://fee.org/freeman/detail/wartime-executive-power-are-warrantless-wiretaps-legal/>, Accessed 05-29-2015)

Finally, if the President thought the law should be amended to authorize warrantless domestic surveillance, he had a convenient vehicle for that purpose shortly after 9/11. That’s when the PATRIOT Act was passed, substantially enhancing the president’s authority under FISA and expanding his ability to conduct foreign intelligence surveillance. The President could have, but did not, seek new authority for the NSA—**authority that he has now decreed, unilaterally, without input from either Congress or the courts.**

2NC/1NR — Signing Statements

The President will covertly use signing statements to ensure the law isn't enforced — the Court won't overturn.

Van Bergen 6 — Jennifer Van Bergen, JD, author of *The Twilight of Democracy: The Bush Plan For America*, Professor at Santa Fe Community College, 2006 ("The Unitary Executive: Why the Bush Doctrine Violates the Constitution," *Couterpunch*, January 12th, Available Online at <http://www.couterpunch.org/2006/01/12/the-unitary-executive/>, Accessed 06-07-2015)

Bush has used presidential "signing statements" — statements issued by the President upon signing a bill into law — to expand his power. Each of his signing statements says that he will interpret the law in question "in a manner consistent with his constitutional authority to supervise the unitary executive branch."

Presidential signing statements have gotten very little media attention. They are, however, highly important documents that define how the President interprets the laws he signs. Presidents use such statements to protect the prerogative of their office and ensure control over the executive branch functions.

Presidents also — since Reagan — have used such statements to create a kind of alternative legislative history. Attorney General Ed Meese explained in 1986 that:

To make sure that the President's own understanding of what's in a bill is the same . . . is given consideration at the time of statutory construction later on by a court, we have now arranged with West Publishing Company that the presidential statement on the signing of a bill will accompany the legislative history from Congress so that all can be available to the court for future construction of what that statute really means.

The alternative legislative history would, according to Dr. Christopher S. Kelley, professor of political science at the Miami University at Oxford, Ohio, "contain certain policy or principles that the administration had lost in its negotiations" with Congress.

The Supreme Court has paid close attention to presidential signing statements. Indeed, in two important decisions — the Chadha and Bowsher decisions — the Court relied in part on president signing statements in interpreting laws. Other federal courts, sources show, have taken note of them too.

2NC/1NR — Covert Noncompliance

Even if the President claims to support the law, Obama will use the State Secrets Doctrine to covertly avoid compliance with surveillance statutes.

Bazzle 12 — Timothy Bazzle, litigation associate at Goodwin Procter LLP in Boston, J.D., Georgetown University Law Center, M.I.A., School of International and Public Affairs at Columbia, 2012 (“Shutting The Courthouse Doors: Invoking The State Secrets Privilege To Thwart Judicial Review In The Age Of Terror,” Civil Rights Law Journal, Vol 23, No 1, Available Online at <http://civilrightslawjournal.com/issues/23.29.pdf>, Accessed 06-05-2015)

The war on terror has led to an increased use of the state secrets privilege by the Executive Branch—to dismiss legal challenges to widely publicized and controversial government actions—ostensibly aimed at protecting national security from terrorist threats.¹ Faced with complaints that allege indiscriminate and warrantless surveillance,² tortious detention, and torture that flouts domestic and international law,³ courts have had to reconcile impassioned appeals for private justice with the government’s unyielding insistence on protecting national security. **Courts, almost unanimously, have cast their lot with national security, granting considerable deference to government assertions of the state secrets principle. This deference to state secrets shows no signs of abating; indeed, the growing trend is for courts to dismiss these legal challenges pre-discovery,**⁴ even before the private litigants have had the chance to present actual, non-secret evidence to meet their burden of proof. Although many looked optimistically at President Obama’s inauguration as a chance to break decisively from the Bush Administration’s aggressive application of the state secrets privilege,⁵ the Obama Administration has largely disappointed on the state-secrets front, asserting the privilege with just as much fervor—if not as much regularity⁶ —as its predecessor.⁷

Judicial deference to such claims of state secrecy, whether the claims merit privileged treatment, exacts a decisive toll on claimants, permanently shutting the courthouse doors to their claims and interfering with public and private rights.⁸ Moreover, **courts’ adoption of a sweeping view of the state secrets privilege has raised the specter of the government disingenuously invoking state secrets to conceal government misbehavior under the guise of national security.**⁹ By granting greater deference to assertions of the state secrets privilege, courts share responsibility for eroding judicial review as a meaningful check on Executive Branch excesses. This Article argues for a return to a narrowly tailored state secrets privilege—one that ensures that individuals who allege a credible claim of government wrongdoing retain their due process rights.

Presidents will use secret National Security Directives to continue to thwart Congress and the Courts on surveillance — no effective oversight.

Moe and Howell 99 — Terry M. Moe, William Bennett Munro Professor of Political Science at Stanford University and a senior fellow at the Hoover Institution, and William G. Howell, Ph.D. Candidate at Stanford, now a Professor in American Politics at the University of Chicago Harris School of Public Policy Studies, 1999 (“The Presidential Power of Unilateral Action,” The Journal

of Law, Economics, and Organization, Vol 15 No 1, Available Online at <http://home.uchicago.edu/~whowell/papers/ThePresidential.pdf>, Accessed 06-05-2015)

Presidents also have advantages in foreign affairs because of the expertise they control, and because of the **frequent need for secrecy**. These are reasons why Congress feels the need to delegate—but they also give presidents key resources, whatever the delegation, for taking **unilateral action that can easily go beyond the bounds** of what Congress intends. This is true throughout the realm of foreign policy, but it is perhaps **most consequential for policies bearing on the intelligence community**. While the Central Intelligence Agency and other intelligence organizations within the government have played key roles in U.S. foreign policy, they have been almost entirely under the control of presidents— who have used these agencies to promote their own agendas throughout the world, exercised their control largely in secret, and sometimes, as in the Iran-Contra affair, **done things of which Congress would never have approved if it knew** (Fleishman and Aufses, 1976).

The key is that Congress often doesn't know. Presidents control the intelligence community through their own orders, with heavy reliance on "national security directives," which can be kept secret. Thus even though Congress, as part of its "resurgence" after Vietnam and Watergate, set up committees to oversee aspects of the intelligence community, the pervasive secrecy has made their job extremely difficult. Consider the words of Lee Hamilton [(D) Indiana], chair of the Iran Contra Committee, who vented his frustration at a 1988 House hearing:

The use of secret [national security directives, or NSDs] to create policy infringes on Congress's constitutional prerogatives by inhibiting effective oversight and limiting Congress's policymaking role. **[NSDs] are revealed to Congress only under irregular, arbitrary, or even accidental circumstances, if at all.** Even the Intelligence Committees do not usually receive copies of [NSDs]. (U.S. House of Representatives, 1988:29)

1NC — Single Branch

Single branch approaches fail — the NSA is so powerful it requires all three branches to control it.

BloombergBusiness 14 — BloombergBusiness, Byline David Lerman, 2014 (“U.S. Spy Agency Reports Improper Surveillance of Americans,” BloombergBusiness Online, December 24th, Available Online at <http://www.bloomberg.com/news/articles/2014-12-24/spy-agency-to-release-reports-documenting-surveillance-errors>, Accessed 06-05-2015)

“The government conducts sweeping surveillance under this authority -- surveillance that increasingly puts Americans’ data in the hands of the NSA,” Patrick C. Toomey, staff attorney with the ACLU’s National Security Project, said in an e-mail.

No Oversight

“Despite that fact, this spying is conducted almost entirely in secret and without legislative or judicial oversight,” he said.

The reports show greater oversight by all three branches of government is needed, Toomey added.

NSA Circumvention

The NSA will independently circumvent the plan — they've had decades of non-compliance.

BloombergBusiness 14 — BloombergBusiness, Byline David Lerman, 2014 (“U.S. Spy Agency Reports Improper Surveillance of Americans,” BloombergBusiness Online, December 24th, Available Online at <http://www.bloomberg.com/news/articles/2014-12-24/spy-agency-to-release-reports-documenting-surveillance-errors>, Accessed 06-05-2015)

(Bloomberg) -- The National Security Agency today released reports on intelligence collection that may have violated the law or U.S. policy over more than a decade, including unauthorized surveillance of Americans' overseas communications.

The NSA, responding to a Freedom of Information Act lawsuit from the American Civil Liberties Union, released a series of required quarterly and annual reports to the President's Intelligence Oversight Board that cover the period from the fourth quarter of 2001 to the second quarter of 2013.

The heavily-redacted reports include examples of data on Americans being e-mailed to unauthorized recipients, stored in unsecured computers and retained after it was supposed to be destroyed, according to the documents. They were posted on the NSA's website at around 1:30 p.m. on Christmas Eve.

In a 2012 case, for example, an NSA analyst “searched her spouse's personal telephone directory without his knowledge to obtain names and telephone numbers for targeting,” according to one report. The analyst “has been advised to cease her activities,” it said.

Other unauthorized cases were a matter of human error, not intentional misconduct.

Last year, an analyst “mistakenly requested” surveillance “of his own personal identifier instead of the selector associated with a foreign intelligence target,” according to another report.

Unauthorized Surveillance

In 2012, an analyst conducted surveillance “on a U.S. organization in a raw traffic database without formal authorization because the analyst incorrectly believed that he was authorized to query due to a potential threat,” according to the fourth-quarter report from 2012. The surveillance yielded nothing.

The NSA's intensified communications surveillance programs initiated after the Sept. 11, 2001, terrorist attacks on New York and Washington unleashed an international uproar after they were disclosed in classified documents leaked by fugitive former contractor Edward Snowden last year.

The NSA fails to comply with regulations — even the FISA court cannot effectively exercise oversight. The harms of the affirmative will continue.

Toomey 14 — Patrick Toomey, staff attorney in the ACLU's National Security Project, where he works on issues related to electronic surveillance, national security prosecutions, whistleblowing, and racial profiling, JD from Yale Law, former law clerk to the Hon. Nancy Gertner, United States District Judge for the District of Massachusetts, and to the Hon. Barrington D. Parker, United States circuit judge for the Second Circuit Court of Appeals, 2014 ("Too Big To Comply? NSA Says It's Too Large, Complex to Comply With Court Order," ACLU Blog, June 14th, Available Online at <https://www.aclu.org/blog/too-big-comply-nsa-says-its-too-large-complex-comply-court-order>, Accessed 06-05-2015)

In an era of too-big-to-fail banks, we should have known it was coming: An intelligence agency too big to rein in — and brazen enough to say so.

In a remarkable legal filing on Friday afternoon, the NSA told a federal court that its spying operations are **too massive and technically complex to comply with an order** to preserve evidence. The NSA, in other words, now says that it cannot comply with the rules that apply to any other party before a court — the very rules that ensure legal accountability — **because it is too big.**

The filing came in a long-running lawsuit filed by the Electronic Frontier Foundation challenging the NSA's warrantless collection of Americans' private data. Recently, the plaintiffs in that case have fought to ensure that the NSA is preserving relevant evidence — a standard obligation in any lawsuit — and **not destroying the very data that would show the agency spied on the plaintiffs' communications.** Yet, as in so many other instances, the NSA appears to believe it is exempt from the normal rules.

In its filing on Friday, the NSA told the court:

[A]ttempts to fully comply with the Court's June 5 Order would be a massive and uncertain endeavor because the NSA may have to shut down all databases and systems that contain Section 702 information in an effort to comply.

For an agency whose motto is "Collect It All," the NSA's claim that its mission could be endangered by a court order to preserve evidence is a remarkable one. That is especially true given the immense amount of data the NSA is known to process and warehouse for its own future use.

The NSA also argued that retaining evidence for EFF's privacy lawsuit would put it in violation of other rules designed to protect privacy. But what the NSA presents as an impossible choice between accountability and privacy is actually a false one. Surely, the NSA — with its ability to sift and sort terabytes of information — can devise procedures that allow it to preserve the plaintiffs' data here without retaining everyone's data.

The crucial question is this: if the NSA does not have to keep evidence of its spying activities, how can a court ever test whether it is in fact complying with the Constitution?

Perhaps most troubling, the new assertions continue the NSA's decade-long effort to evade judicial review — at least in any public court. For years, in cases like the ACLU's Amnesty v. Clapper, the NSA evaded review by telling courts that plaintiffs were speculating wildly when they claimed that the agency had intercepted their communications. Today, of course, we know those claims were prescient: Recent disclosures show that the NSA was scanning Americans' international emails en masse all along. Now, the NSA would put up a new roadblock — claiming that it is unable to preserve the very evidence that would allow a court to fully and fairly review those activities.

As Brett Max Kaufman and I have written before, **our system of oversight is broken** — this is only the latest warning sign flashing red. The NSA has grown far beyond the ability of its overseers to properly police its spying activities. That includes the secret FISA Court, which has struggled to monitor the NSA's compliance with basic limits on its surveillance activities. It includes the congressional oversight committees, which operate with too little information and too often appear captive to the interests of the intelligence community. And, now we are to believe, it includes the public courts as well.

No intelligence agency should be too big to be accountable to the rule of law.

The NSA breaks privacy rules thousands of times per year — aff's regulations are meaningless.

Washington Post 13 — Washington Post, Byline Barton Gellman, 2013 (“NSA broke privacy rules thousands of times per year, audit finds,” Washington Post, August 15th, Available Online at http://www.washingtonpost.com/world/national-security/nsa-broke-privacy-rules-thousands-of-times-per-year-audit-finds/2013/08/15/3310e554-05ca-11e3-a07f-49ddc7417125_story.html, Accessed 06-06-2015)

The National Security Agency has broken privacy rules or overstepped its legal authority thousands of times each year since Congress granted the agency broad new powers in 2008, according to an internal audit and other top-secret documents.

Most of the infractions involve unauthorized surveillance of Americans or foreign intelligence targets in the United States, both of which are restricted by statute and executive order. They range from significant violations of law to typographical errors that resulted in unintended interception of U.S. e-mails and telephone calls.

The documents, provided earlier this summer to The Washington Post by former NSA contractor Edward Snowden, include a level of detail and analysis that is not routinely shared with Congress or the special court that oversees surveillance. In one of the documents, agency personnel are instructed to remove details and substitute more generic language in reports to the Justice Department and the Office of the Director of National Intelligence.

In one instance, the NSA decided that it need not report the unintended surveillance of Americans. A notable example in 2008 was the interception of a “large number” of calls placed

from Washington when a programming error confused the U.S. area code 202 for 20, the international dialing code for Egypt, according to a “quality assurance” review that was not distributed to the NSA’s oversight staff.

In another case, the Foreign Intelligence Surveillance Court, which has authority over some NSA operations, did not learn about a new collection method until it had been in operation for many months. The court ruled it unconstitutional.

The Obama administration has provided almost no public information about the NSA’s compliance record. In June, after promising to explain the NSA’s record in “as transparent a way as we possibly can,” Deputy Attorney General James Cole described extensive safeguards and oversight that keep the agency in check. “Every now and then, there may be a mistake,” Cole said in congressional testimony.

Executive Noncompliance — Congress

Executive noncompliance likely — long term trends and a weak Congress prove.

Barron and Lederman 8 — David J. Barron, United States Circuit Judge for the United States Court of Appeals for the First Circuit and former Professor of Public Law at Harvard Law School, and Martin S. Lederman, Deputy Assistant Attorney General in the Department of Justice's Office of Legal Counsel, and Professor of Law at Georgetown, 2008 (“The Commander In Chief At The Lowest Ebb — A Constitutional History,” Harvard Law Review, Vol 121, No 4, February, Available Online at http://cdn.harvardlawreview.org/wp-content/uploads/pdfs/barron_lederman2.pdf, Accessed 06-05-2015)

Powers once claimed by the Executive are not easily relinquished. One sees from our narrative how, in a very real sense, the constitutional law of presidential power is often made through accretion. A current administration eagerly seizes upon the loose claims of its predecessors, and applies them in ways perhaps never intended or at least not foreseen or contemplated at the time they were first uttered. The unreflective notion that the “conduct of campaigns” is for the President alone to determine has slowly insinuated itself into the consciousness of the political departments (and, at times, into public debate), and has gradually been invoked in order to question all manner of regulations, from requirements to purchase airplanes, to limitations on deployments in advance of the outbreak of hostilities, to criminal prohibitions against the use of torture and cruel treatment. In this regard, the claims of the current Administration represent as clear an example of living constitutionalism in practice as one is likely to encounter. There is a radical disjuncture between the approach to constitutional war powers the current President has asserted and the one that prevailed at the moment of ratification and for much of our history that followed.

But that dramatic deviation did not come from nowhere. Rarely does our constitutional framework admit of such sudden creations. Instead, the new claims have drawn upon those elements in prior presidential practice most favorable to them. That does not mean our constitutional tradition is foreordained to develop so as to embrace unchecked executive authority over the conduct of military campaigns. At the same time, it would be wrong to assume, as some have suggested, that the emergence of such claims will be necessarily selfdefeating, inevitably inspiring a popular and legislative reaction that will leave the presidency especially weakened. In light of the unique public fears that terrorism engenders, the more substantial concern is an **opposite one**. It is entirely possible that the emergence of these claims of preclusive power will subtly but increasingly influence future Executives to eschew the harder work of accepting legislative constraints as legitimate and actively working to make them tolerable by building public support for modifications. The temptation to argue that the President has an obligation to protect the prerogatives of the office asserted by his or her predecessors will be great. Congress’s capacity to effectively check such defiance will be comparatively weak. After all, the President can veto any effort to legislatively respond to defiant actions, and impeachment is neither an easy nor an attractive remedy.

The prior practice we describe, therefore, could over time become a faint memory, recalled only for the proposition that it is anachronistic, **unsuited for what are thought to be the unique perils of the contemporary world**. Were this to happen it would represent an unfortunate

development in the constitutional law of war powers. Thus, it is incumbent upon legislators to challenge efforts to bring about such a change. Moreover, executive branch actors, particularly those attorneys helping to assure that the President takes care the law is faithfully executed, should not abandon two hundred years of historical practice too hastily. At the very least, they should resist the urge to continue to press the new and troubling claim that the President is entitled to unfettered discretion in the conduct of war.

The President will simply refuse to enforce the law — empirically proven when national security information is involved. This is true *even if he signs the bill into law.*

McGinnis 93 — Assistant Professor, Benjamin N. Cardozo School of Law, former Deputy Assistant Attorney General in the Office of Legal Counsel, Department of Justice, 1993 (“Constitutional Review By The Executive In Foreign Affairs And War Powers: A Consequence Of Rational Choice In The Separation Of Powers,” Law and Contemporary Problems, Vol 56 No 4, Autumn, Available Online at <http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=4213&context=lcp>, Accessed 06-05-2015)

A. The Executive's Rebuff of An Adventitious Congressional Challenge to the Accommodation

One year into President Bush's term, Congress passed the Foreign Relations Authorization Act.⁷⁴ The Act included a provision prohibiting the United States from spending any money authorized for international conferences on the U.S. delegation to the Conference on Security and Cooperation in Europe unless that delegation included representatives of the Commission on Security and Cooperation in Europe.⁷⁵ This Commission was composed almost entirely of members appointed by the legislative branch.⁷⁶

The reasons for Congress's decision to include this provision are obscure,⁷⁷ but a former member of the National Security Council staff recalls that the Counsel to the Foreign Relations Committee of the House of Representatives was particularly interested in these negotiations and wanted to participate in them.⁷⁸ The inclusion of the provision was a sharp challenge to the President's asserted powers in foreign affairs for two reasons. First, presidents from both parties have asserted their authority to represent the United States in foreign affairs and thus control the identity of U.S. negotiators.⁷⁹ Moreover, presidents have also consistently claimed the absolute right to control national security information and prevent its disclosure to Congress—a power that would obviously be impaired if a representative of the legislative branch were required on the negotiating team.⁸⁰

Given the far-reaching challenge to powers of the presidency, President Bush's response was extremely forceful. He announced that the provision was unconstitutional, and that he would refuse to enforce it, permitting him to continue spending funds on the conference. ⁸¹ Announcing his refusal to enforce the provision served the purpose of protecting the boundaries of his powers better than vetoing the bill would have done. By claiming this right of refusal, the President was asserting a power of constitutional review over legislation that interfered with his

constitutional prerogatives, at least in the area of foreign affairs. A veto, even if sustained, would not have permitted the President dramatically to assert a lawmaking role **rivaling that of the Court** in this area.'

The President's move effectively gave him the **last word on the issue**.' Congress could have used its power of impeachment to assert its view of the Constitution (both as to the substance of the President's foreign affairs authorities and as to his authority to refuse to enforce a law), but its use of this power under these circumstances would have seemed politically implausible because of both the relative unimportance of the issue in the public's perception and the general level of support the President enjoyed among the public and Congress at the time. By refusing to enforce the law, the President had effectively called Congress's bluff, both raising the stakes and leaving Congress with no feasible way to make its law binding through the use of its own political powers.

NSA surveillance violates explicit Congressional statutes and Supreme Court case law — the President has refused to comply with appropriate Congressional mandates in the area of surveillance.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power: Are Warrantless Wiretaps Legal?,” *The Freeman*, a publication of the Foundation for Economic Education, drawn from his testimony before the Senate Judiciary Committee, August 1st, Available Online at <http://fee.org/freeman/detail/wartime-executive-power-are-warrantless-wiretaps-legal/>, Accessed 05-29-2015)

Thus the administration can credibly argue that it may conduct some types of warrantless surveillance without violating the Fourth Amendment. And because the president’s Article II powers are elevated during time of war—assuming the AUMF to be the functional, if not legal, equivalent of a declaration of war—his post-9/11 authorization of NSA warrantless surveillance might be justifiable if Congress had not expressly disapproved.

But Congress did expressly disapprove, in the FISA statute. Therefore, the President’s assertion of a national-security exception that encompasses the NSA program misses the point. The proper question is not whether the president has inherent authority to relax the “reasonableness” standard of the Fourth Amendment. The answer to that question is: yes, in some cases. But the narrower issue in the NSA case is whether the president, in the face of an express statutory prohibition, can direct that same surveillance. **The answer is no, and I am not aware of any case law to support an argument to the contrary.**

Put somewhat differently, Article II establishes that the president has inherent powers, especially during wartime. And those powers might be sufficient to support his authorization of warrantless surveillance, notwithstanding the provisions of the Fourth Amendment. But Article II does not delineate the scope of the president’s wartime powers. And because Congress has

concurrent authority in this area, an express prohibition by Congress is persuasive when deciding whether the president has overreached.

The distinction between concurrent and exclusive powers is important. For example, the president's "Power to grant . . . Pardons" is exclusive; there is no stated power for Congress to modify it by legislation—for example, by declaring certain offenses unpardonable. By contrast, the president's wartime powers are shared with Congress, which is constitutionally authorized to "define and punish . . . Offenses against the Law of Nations," "declare War," "make Rules concerning Captures on Land and Water," "raise and support Armies," "provide and maintain a Navy," "make Rules for the Government and Regulation of the land and naval forces," and suspend habeas corpus. That suggests **the president must comply with duly enacted statutes** unless he can show that Congress has exceeded its authority. In this instance, **President Bush has made no such showing.**

Executive Circumvention — Congress

Formal Congressional restriction net increases violations — turns the case.

Spiro 93 — Peter J. Spiro, Professor, Hofstra University School of Law in public international law, immigration law, international trade law, citizenship and nationality law, foreign relations and national security law, 1993 (“War Powers and the Sirens of Formalism,” New York University Law Review, Vol 68, December, Available Online via Lexis)

Moreover, there is a harm in the perpetuation of text that neither reflects nor governs behavior. The War Powers Resolution (either as is or as modified by the Ely proposal) continues to bring the legislative branch into institutional disrepute. Congress looks toothless to the extent that it has not, loosely speaking, lived up to its responsibilities or exploited its prerogatives under the Resolution. n92 At the same time, the presidency seems bold in defiance. Insofar as it has not come to be ignored altogether, the Resolution may play into the hands of executive branch partisans by serving as a lingering reminder that Congress, even as equipped with statutory tools, has acquiesced in the sometimes uncurbed exercise of presidential discretion. This acquiescence, in turn, may fuel the more extreme claims of exclusive presidential powers, as was true of some of President Bush's pronouncements leading up to the Gulf War. Alternatively, the continued formal validity of the Resolution may drive the executive branch to overcompensate rhetorically in defending what it considers to be its exclusive powers unconstitutionally reallocated by the Act. Worse, the disjunction of text and practice could distort the decisionmaking process so as to result in presidential attempts to broaden the range of action undertaken without legislative approval.

Obama will circumvent the plan — Congress won't intervene.

Cohen 12 — Michael A. Cohen, fellow at The Century Foundation, a columnist at the Boston Globe and a regular writer and commentator on American politics and U.S. foreign policy, 2012 (“The Imperial Presidency: Drone Power and Congressional Oversight,” World Politics Review, July 24th, Available Online at <http://www.worldpoliticsreview.com/articles/12194/the-imperial-presidency-drone-power-and-congressional-oversight>)

The Justice Department's formal rationale for the targeting and killing of an American citizen, in apparent violation of due process rights, might very well be legal and proper. After all, Awlaki had joined a terrorist organization that was legally at war with the United States, and American forces have killed U.S. citizens serving in foreign armies in the past. The problem, however, is that no one outside the president, his top advisers and the OLC lawyers who drafted the memo - - many of whom are political appointees -- have seen this legal justification. Indeed, in June 2012, Rep. Jerry Nadler specifically asked Attorney General Eric Holder in a congressional hearing if he would turn the OLC memo over to Congress. Holder demurred and still has yet to do so. The episode is reflective of the current state of congressional oversight of the executive branch on national security issues: The executive branch stonewalls or uses legal justification to avoid oversight, and Congress does precious little to demand that its constitutional prerogatives are respected. Instead of a push and pull between the two branches of the U.S. government limiting both sides' power, the opportunities for the expansion of executive power

are becoming more pronounced -- and could get worse. To be sure, things weren't supposed to be this way. As a presidential candidate on the campaign trail, Barack Obama talked a big game about limiting executive power and adhering more closely to congressional mandates. **As president, he has moved the balance of power in a different direction.** In his handling of the Libyan intervention, for instance, Obama initially refused to go to Congress to get authorization for the use of force. Later he made the credibility-stretching argument that the war in Libya did not meet the definition of "hostilities" under the War Powers Resolution, which requires the president to seek congressional authorization for the use of force within 60 days of the initiation of hostilities. While presidents have generally questioned the resolution's constitutionality, they have also generally abided by its key provisions regarding the use of force. This was not the case in Libya. The Libya intervention is, in key regards, Obama's most ostentatious expansion of executive power, but this disregard for congressional prerogatives has seeped into other areas as well, in particular the so-called shadow war, which includes the use of cyber attacks, drone strikes and special forces to pursue U.S. national security interests and wage the war on terror. Since taking office, the administration has significantly increased the scope of the U.S. drone war. The shift coincides with post-Sept. 11 increases in both the U.S. drone arsenal and the size of the U.S. Special Operations Command (SOCOM). Meanwhile, at the same time that he has reduced the number of U.S. boots on the ground in actual combat zones, Obama has stretched the battlefield of the war on terror. While the administration notifies congressional intelligence committees of its targeted killings of suspected terrorist leaders, it does so in private. In fact, only in recent weeks did the Obama White House publicly confirm the use of "direct action" against targets in Somalia and Yemen -- and even then in a manner that was less than forthcoming and that didn't include reference to CIA targeted killing operations. Ironically, however, the administration stands on firmer legal ground here than it did on Libya. It has used the Authorization of Military Force (AUMF) granted in 2001 by Congress to justify nearly every aspect of these operations, including targeted killing campaigns carried out by both the military and the CIA, and the continued detention of prisoners in Guantanamo Bay and Afghanistan. As Yale Law School professor Bruce Ackerman told me, "The AUMF was a response to a real problem, namely the attacks of Sept. 11. It is now being transformed into a tool for fighting a 100-year war against terrorists." In a sense we are witnessing a perfect storm of executive branch power-grabbing: a broad authorization of military force giving the president wide-ranging discretion to act, combined with a set of tools -- drones, special forces and cyber technology -- that allows him to do so in unprecedented ways. And since few troops are put in harm's way, **there is barely any public scrutiny.** Congress has the ability to stop these excesses. On Libya, it possessed the power to turn off the financial spigot and cut off funding, and indeed, there was a tepid effort in the House of Representatives to do so. On the AUMF, Congress could simply repeal it or more realistically modify it to take into account the new battlefields in the war on terror. Finally, it could conduct greater oversight, in particular public hearings, of how the executive branch is utilizing military force. But not only has Congress not taken these steps, in deliberations over the National Defense Authorization Act earlier this year, it tried to expand the AUMF. On the use of drones and targeted killings, Congress has made little effort to demand greater information from the White House and has not held any public hearings on either of these issues. As Micah Zenko recently noted, claims "that congressional oversight of targeted killings exclusively by the intelligence committees in closed sessions is adequate" are

“indefensible.” The reasons for congressional abdication are legion. **Partisanship plays an important role.** For example, from 2001 to 2006, Republicans largely abstained from overseeing a Republican White House’s wars in Iraq and Afghanistan. Since a Democrat became president, however, congressional oversight and scrutiny of the administration in terms of foreign policy has remained underwhelming, if not nearly as bad. Meanwhile, **the White House has treated Congress dismissively and even with contempt.** Historically, strong institutional prerogatives have been a check on such parochialism -- think William Fulbright and the Senate Foreign Relations Committee’s apostasy on Vietnam or even the bipartisan Iran-Contra hearings in the 1980s. Today, however, few in Congress have shown much interest in upholding even its most basic foreign policy responsibilities. Quite simply, there are no Frank Churches or even Russ Feingolds in Congress anymore. But there are also serious institutional obstacles to enhanced congressional scrutiny. Writing in the Harvard National Security Journal (.pdf), Andru Wall argues that much of the problem with congressional oversight can be traced to an antiquated understanding of how national security operations are actually carried out. **At a time of greater interagency cooperation and coordination between the military and intelligence agencies, Congress still sees these functions as somehow discrete.** As Greg Miller noted in the Washington Post in December, “Within 24 hours of every CIA drone strike, a classified fax machine lights up in the secure spaces of the Senate Intelligence Committee, spitting out a report on the location, target and result. The outdated procedure reflects the agency’s effort to comply with Title 50 requirements that Congress be provided with timely, written notification of covert action overseas. There is no comparable requirement in Title 10, and the Senate Armed Services Committee can go days before learning the details of JSOC strikes. Neither panel is in a position to compare the CIA and JSOC kill lists or even arrive at a comprehensive understanding of the rules by which each is assembled.” In addition, oversight responsibilities are often bifurcated by separate authorization and appropriation processes. The 9/11 Commission recommended ending this dysfunctional arrangement among intelligence committees and creating a single joint intelligence committee with both authorizing and appropriating responsibilities. Nearly 10 years later, it still hasn’t happened. If history is any guide, **so long as Congress fails to hold the president’s feet to the fire, the executive branch will take on more responsibilities that are outside the purview of Congress’ prying eyes.** Ackerman called such “legislative irresponsibility and executive unilateralism” a self-perpetuating phenomenon that is a “recurrent dynamic in presidential systems.” With the lack of any strong institutional pride in Congress, an executive branch that for obvious reasons prefers less oversight and the advent of new tools for fighting America’s wars, this situation is likely to get worse before it gets better, if it ever does.

Executive Circumvention — Impacts

Showdowns with the Supreme Court or Congress only increase Executive Power — turns the case and crushes separation of powers.

Posner and Vermeule 8 — Eric A. Posner, Distinguished Service Professor, University of Chicago Law School and the 4th most-cited legal scholar in the United States, JD from Harvard, former editor of The Journal of Legal Studies, and Adrian Vermeule, Professor of Law at Harvard, former Professor of Law at U Chicago, 2008 (“Constitutional Showdowns,” University of Pennsylvania Law Review, Vol 156, April, Available Online at http://www.ericposner.com/constitutional_showdowns_.pdf, Accessed 06-05-2015)

The point that current checking will fail to internalize the interests of future generations would hold even if there were only two branches in the picture. With three branches, however, externalities among current actors are also possible. One possibility is that the strongest branch - the one with the highest S-value - can play a divide-and-conquer game, alternating alliances with the weaker branches until it effectively dominates both. Here, the externality is that each of the weaker branches fails to take into account the full costs of its short-run opportunism to the other weak branch and to the balance of the whole system. Conversely, the weaker branches will be tempted to free-ride on each other's investment in checking the strongest branch, so long as there is a positive cost to a showdown that checks aggrandizement. A configuration [President = 0.5, Congress = 0.5, Supreme Court = 0] might yield far more aggressive checking of presidential expansion than would a configuration such as [President = 0.5, Congress = 0.25, Supreme Court = 0.25]. In the latter scenario [*1030] Congress and the Court will face temptations to mutual free-riding, while in the former scenario the concentration of nonpresidential power in a single place reduces the scope for presidential aggrandizement. n69

Obviously, many other scenarios are possible. We have assumed, for example, that showdowns will help to check aggrandizement, but this is not obviously true. Showdowns might actually provide the very opportunity the stronger branch has been seeking to crush its adversaries or to clarify their impotence, creating a highly visible precedent that will underscore its power. We mention these scenarios just to illustrate the types of externalities, even with the current generation, that can cause insufficient investments even in showdowns that would check aggrandizement if they occurred. The divergence between private and social costs and benefits will cause suboptimal checking, and there is no reason to think the failure of institutions to invest in showdowns that would promote optimal checking is somehow offset by their private-regarding incentive to invest in showdowns that will promote their own power. There is no invisible-hand mechanism that causes one type of failure to offset the other - a point to which we return below.

The President will win a showdown with Congress — he’s institutionally more invested in the outcome.

Nzelibe 13 — Jide Nzelibe, Associate Dean for Faculty Affairs and Professor of Law at Northwestern, 2013 (“Our Partisan Foreign Affairs Constitution,” American Bar Foundation Version, January 2nd, Available Online at http://www.americanbarfoundation.org/uploads/cms/documents/our_partisan_foreign_affairs_constitution_abf_version.pdf, Accessed 06-05-2015)

An alternative explanation for politically inspired changes in the Foreign Affairs Constitution focuses on the preferences of institutional actors. The underlying assumption is that conflict between the President and Congress often results in incremental changes to the boundary of the foreign affairs powers. In these power tussles, however, the President presumably prevails for two reasons. The first is that due to the singular nature of the President’s office, he has intrinsic institutional reasons to increase his authority since he gets to consume exclusively the benefits of any such usurpation.²³ As Daryl Levinson puts it, “[b]ecause individual presidents can consume a much greater share of the power of their institution than individual members of Congress, we should expect them to be willing to invest more in institutional aggrandizement.”²⁴ By contrast, the prospect of facing frequent elections and collective action problems often make it unlikely that members of Congress will have an incentive to protect or expand their constitutional prerogatives in foreign affairs.²⁵ The second is that Presidents tend to respond to the preferences of a national constituency, while members of Congress respond to the preferences of narrower constituencies who might be less interested in foreign affairs.²⁶

Unitary Executive Doctrine

Aggressive presidents will use the unitary executive doctrine to override Congress and the Courts on surveillance.

Van Bergen 6 — Jennifer Van Bergen, JD, author of *The Twilight of Democracy: The Bush Plan For America*, Professor at Santa Fe Community College, 2006 ("The Unitary Executive: Why the Bush Doctrine Violates the Constitution," *Couterpunch*, January 12th, Available Online at <http://www.couterpunch.org/2006/01/12/the-unitary-executive/>, Accessed 06-07-2015)

Dr. Kelley notes that the unitary executive doctrine arose as the result of the twin circumstances of Vietnam and Watergate. Kelley asserts that "the faith and trust placed into the presidency was broken as a result of the lies of Vietnam and Watergate," which resulted in a congressional assault on presidential prerogatives.

For example, consider the Foreign Intelligence Surveillance Act (FISA) which Bush evaded when authorizing the NSA to tap without warrants — even those issued by the FISA court. FISA was enacted after the fall of Nixon with the precise intention of curbing unchecked executive branch surveillance. (Indeed, Nixon's improper use of domestic surveillance was included in Article 2 paragraph (2) of the impeachment articles against him.)

According to Kelley, these congressional limits on the presidency, in turn, led "some very creative people" in the White House and the Department of Justice's Office of Legal Counsel (OLC) to fight back, in an attempt to foil or blunt these limits. In their view, these laws were legislative attempts to strip the president of his rightful powers. Prominent among those in the movement to preserve presidential power and champion the unitary executive doctrine were the founding members of the Federalist Society, nearly all of whom worked in the Nixon, Ford, and Reagan White Houses.

The unitary executive doctrine arises out of a theory called "departmentalism," or "coordinate construction." According to legal scholars Christopher Yoo, Steven Calabresi, and Anthony Colangelo, the coordinate construction approach "holds that all three branches of the federal government have the power and duty to interpret the Constitution." According to this theory, the president may (and indeed, must) interpret laws, equally as much as the courts.

The Unitary Executive Versus Judicial Supremacy

The coordinate construction theory counters the long-standing notion of "judicial supremacy," articulated by Supreme Court Chief Justice John Marshall in 1803, in the famous case of *Marbury v. Madison*, which held that the Court is the final arbiter of what is and is not the law. Marshall famously wrote there: "It is emphatically the province and duty of the judicial department to say what the law is."

Of course, the President has a duty not to undermine his own office, as University of Miami law professor A. Michael Froomkin notes. And, as Kelley points out, the President is bound by his oath of office and the "Take Care clause" to preserve, protect, and defend the Constitution and to "take care" that the laws are faithfully executed. And those duties require, in turn, that the

President interpret what is, and is not constitutional, at least when overseeing the actions of executive agencies.

However, Bush's recent actions make it clear that he interprets the coordinate construction approach extremely aggressively. In his view, and the view of his Administration, that **doctrine gives him license to overrule and bypass Congress or the courts, based on his own interpretations of the Constitution — even where that violates long-established laws and treaties, counters recent legislation that he has himself signed, or** (as shown by recent developments in the Padilla case) involves offering a federal court contradictory justifications for a detention.

This is a form of presidential rebellion against Congress and the courts, and possibly a violation of President Bush's oath of office, as well.

After all, can it be possible that that oath means that the President must uphold the Constitution only as he construes it – and not as the federal courts do?

And can it be possible that the oath means that the President need not uphold laws he simply doesn't like – even though they were validly passed by Congress and signed into law by him?

Analyzing Bush's Disturbing Signing Statement for the McCain Anti-Torture Bill

Let's take a close look at Bush's most recent signing statement, on the torture bill. It says:

The executive branch shall construe Title X in Division A of the Act, relating to detainees, in a manner consistent with the constitutional authority of the President to supervise the unitary executive branch and as Commander in Chief and consistent with the constitutional limitations on the judicial power, which will assist in achieving the shared objective of the Congress and the President, evidenced in Title X, of protecting the American people from further terrorist attacks.

In this signing statement, Bush asserts not only his authority to internally supervise the "unitary executive branch," but also his power as Commander-in-Chief, as the basis for his interpretation of the law — which observers have noted allows Bush to create a loophole to permit the use of torture when he wants.

Clearly, Bush believes he can ignore the intentions of Congress. Not only that but by this statement, **he has evinced his intent to do so,** if he so chooses.

This Unitary Executive Doctrine causes a collapse in the Separation of Powers and American constitutional democracy.

Van Bergen 6 — Jennifer Van Bergen, JD, author of *The Twilight of Democracy: The Bush Plan For America*, Professor at Santa Fe Community College, 2006 (“The Unitary Executive: Why the Bush Doctrine Violates the Constitution,” *Couterpunch*, January 12th, Available Online at <http://www.couterpunch.org/2006/01/12/the-unitary-executive/>, Accessed 06-07-2015)

The Unitary Executive Doctrine Violates the Separation of Powers

As Findlaw columnist Edward Lazarus recently showed, the President does not have unlimited executive authority, not even as Commander-in-Chief of the military. Our government was purposely created with power split between three branches, not concentrated in one.

Separation of powers, then, is **not simply a talisman**: It is the **foundation of our system**. James Madison wrote in The Federalist Papers, No. 47, that:

The accumulation of all powers, legislative, executive, and judiciary, in the same hands, whether of one, a few, or many, and whether hereditary, self-appointed, or elective, may justly be pronounced the very definition of tyranny.

Another early American, George Nicholas, eloquently articulated the concept of "power divided" in one of his letters:

The most effectual guard which has yet been discovered against the abuse of power, is the division of it. It is our happiness to have a constitution which contains within it a sufficient limitation to the power granted by it, and also a proper division of that power. But no constitution affords any real security to liberty unless it is considered as sacred and preserved inviolate; because that security can only arise from an actual and not from a nominal limitation and division of power.

Yet it seems a nominal limitation and division of power – with real power concentrated solely in the "unitary executive" – is exactly what President Bush seeks. His signing statements make the point quite clearly, and his overt refusal to follow the laws illustrates that point: In Bush's view, there is no actual limitation or division of power; it all resides in the executive.

Thomas Paine wrote in Common Sense:

In America, the law is king. For as in absolute governments the King is law, so in free countries the law ought to be king; and there ought to be no other.

The unitary executive doctrine conflicts with Paine's principle – one that is fundamental to our constitutional system. If Bush can ignore or evade laws, then the law is no longer king. Americans need to decide whether we are still a country of laws – and if we are, we need to decide whether a President who has determined to ignore or evade the law has not acted in a manner contrary to his trust as President and subversive of constitutional government.

AT: “Surveillance Isn’t a War Power”

The President’s War Powers authorize covert surveillance — history abounds with examples.

Yoo 14 — John Yoo, UC Berkeley Law Professor, former Deputy Assistant U.S. Attorney General in the Office of Legal Counsel at the Department of Justice under President GW Bush, 2014 (“Surveillance and executive power,” Constitution Daily, October 3rd, Available Online at <http://blog.constitutioncenter.org/2014/10/surveillance-and-executive-power/>, Accessed 06-07-2015)

As Commander-in-Chief, the President has the constitutional power and the responsibility to wage war in response to a direct attack against the United States.

In the Civil War, President Lincoln undertook several actions—raised an army, withdrew money from the treasury, launched a blockade—on his own authority in response to the Confederate attack on Fort Sumter, moves that Congress and the Supreme Court later approved.

During World War II, the Supreme Court similarly recognized that once war began, the President’s authority as Commander-in-Chief and Chief Executive gave him the tools necessary to effectively wage war.

In the wake of the September 11 attacks, Congress agreed that “the President has authority under the Constitution to take action to deter and prevent acts of international terrorism against the United States,” which recognizes the President’s authority to use force to respond to al Qaeda, and any powers necessary and proper to that end.

Even legal scholars who argue against this historical practice concede that once the United States has been attacked, the President can respond immediately with force.

The ability to collect intelligence is intrinsic to the use of military force. It is inconceivable that the Constitution would vest in the President the powers of Commander-in-Chief and Chief Executive, give him the responsibility to protect the nation from attack, but then disable him from gathering intelligence to use the military most effectively to defeat the enemy.

Every evidence of the Framers’ understanding of the Constitution is that the government would have every ability to meet a foreign danger. As James Madison wrote in The Federalist, “security against foreign danger is one of the primitive objects of civil society.” Therefore, the “powers requisite for attaining it must be effectually confided to the federal councils.”

After World War II, the Supreme Court declared, “this grant of war power includes all that is necessary and proper for carrying these powers into execution.” Covert operations and **electronic surveillance are clearly part of this authority.**

During the writing of the Constitution, some Framers believed that the President alone should manage intelligence because only he could keep secrets.

Several Supreme Court cases have recognized that the President’s role as Commander-in-Chief and the sole organ of the nation in its foreign relations must include the power to collect intelligence.

These authorities agree that intelligence rests with the President because its structure allows it to act with unity, secrecy, and speed.

Presidents have long ordered electronic surveillance without any judicial or congressional participation.

More than a year before the Pearl Harbor attacks, but with war clearly looming with the Axis powers, President Franklin Roosevelt authorized the FBI to intercept any communications, whether wholly inside the country or international, of persons “suspected of subversive activities against the Government of the United States, including suspected spies.”

FDR was concerned that “fifth columns” could wreak havoc with the war effort. “It is too late to do anything about it after sabotage, assassinations and ‘fifth column’ activities are completed,” FDR wrote in his order.

FDR ordered the surveillance even though a federal law at the time prohibited electronic surveillance without a warrant.

Presidents continued to monitor the communications of national security threats on their own authority, even in peacetime.

If Presidents in times of peace could order surveillance of spies and terrorists, executive authority is only the greater now, as hostilities continue against al Qaeda.

Even if they’re right, presidential precedent treats NSA surveillance as an Article II war power.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power: Are Warrantless Wiretaps Legal?,” *The Freeman*, a publication of the Foundation for Economic Education, drawn from his testimony before the Senate Judiciary Committee, August 1st, Available Online at <http://fee.org/freeman/detail/wartime-executive-power-are-warrantless-wiretaps-legal/>, Accessed 05-29-2015)

President Bush has authorized the National Security Agency (NSA) to eavesdrop, without obtaining a warrant, on telephone calls, e-mails, and other communications between U.S. persons in the United States and persons outside the United States. For understandable reasons, **the operational details of the NSA program are secret, as are the details of the executive order that authorized the program.** But Attorney General Alberto Gonzales has stated that surveillance can be triggered if an executive-branch official has reasonable grounds to believe that a communication involves a person “affiliated with al-Qaeda or part of an organization or group that is supportive of al-Qaeda.”

The attorney general has declared that the President’s authority rests on the post-9/11 Authorization for Use of Military Force (AUMF) and the president’s inherent wartime powers

under Article II of the U.S. Constitution, which includes authority to gather “signals intelligence” on the enemy.

My conclusions, as elaborated below, are: First, the president has some latitude under the “Executive Power” and “Commander-in-Chief” Clauses of Article II, even lacking explicit congressional approval, to authorize NSA warrantless surveillance without violating Fourth Amendment protections against “unreasonable” searches. But second, if Congress has expressly prohibited such surveillance (as it has under FISA, the Foreign Intelligence Surveillance Act), then the statute binds the president unless there are grounds to conclude that the statute does not apply. Third, in the case at hand, there are no grounds for such a conclusion—that is, neither the AUMF nor the president’s inherent powers trump the express prohibition in the FISA statute.

Bush treated domestic surveillance as an Article II War Power and used that justification to ignore Congress. This approach led to secret CIA prisons, torture, and indefinite detentions.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power: Are Warrantless Wiretaps Legal?,” *The Freeman*, a publication of the Foundation for Economic Education, drawn from his testimony before the Senate Judiciary Committee, August 1st, Available Online at <http://fee.org/freeman/detail/wartime-executive-power-are-warrantless-wiretaps-legal/>, Accessed 05-29-2015)

Attorney General Gonzales has a second, more plausible, defense of warrantless surveillance—namely, Article II of the Constitution states that “The executive Power shall be vested in a President” who “shall be Commander in Chief” of the armed forces. That power, says the attorney general, trumps any contrary statute during time of war.

I respectfully disagree—which is not to say I believe the president is powerless to order warrantless wartime surveillance. For example, intercepting enemy communications on the battlefield is clearly an incident of his war power. But warrantless surveillance of Americans inside the United States, who may have nothing to do with al-Qaeda, does not qualify as incidental wartime authority. The president’s war powers are broad, but not boundless. Indeed, the war powers of Congress, not the president, are those that are constitutionalized with greater specificity.

The question is not whether the president has unilateral executive authority, but rather the extent of that authority. And the key Supreme Court opinion that provides a framework for resolving that question is Justice Robert Jackson’s concurrence in *Youngstown Sheet & Tube v. Sawyer*—the 1952 case denying President Truman’s authority to seize the steel mills.

Justice Jackson offered the following analysis: First, when the president acts pursuant to an express or implied authorization from Congress, “his authority is at its maximum.” Second, when the president acts in the absence of either a congressional grant or denial of authority, “there is a zone of twilight in which he and Congress may have concurrent authority, or in which its

distribution is uncertain.” But third, where the president takes measures incompatible with the express or implied will of Congress—such as the NSA program, which violates an express provision of the FISA statute—“his power is at its lowest.”

The NSA program does not fit in Youngstown’s second category (congressional silence). It belongs in the third category, in which **the President has acted in the face of an express statutory prohibition.**

Moreover, unilateral authorization of the NSA program by the executive branch suggests that unilateral actions in other areas would be proper. For example: If warrantless domestic surveillance is incidental to the president’s inherent powers, so too are sneak-and-peek searches, roving wiretaps, library records searches, and national-security letters—all of which were vigorously debated in deciding whether to reauthorize the PATRIOT Act. Could the president have proceeded with those activities even if they were not authorized by Congress? If so, what was the purpose of the debate? Why do we even need a PATRIOT Act?

Further, the attorney general asserts that the AUMF and the commander-in-chief power are sufficient to justify the NSA program. He, or his predecessor, made similar claims for military tribunals without congressional authorization, secret CIA prisons, indefinite detention of U.S. citizens, enemy-combatant declarations without hearings as required by the Geneva Conventions, and interrogation techniques that may have violated our treaty commitments banning torture. Is any of those activities outside the president’s commander-in-chief and AUMF powers? If not, what are the bounds, if any, that constrain the president’s unilateral wartime authority?

NSA wiretaps explicitly violate the FISA requirements, but the president uses war powers to ignore Congress. There is no institutional check on these abuses of power.

Woods 6 — Thomas E. Woods, Jr. Ph.D. in History from Columbia, senior fellow of the Ludwig von Mises Institute and a contributing editor of The American Conservative magazine, recipient of the 2004 O.P. Alford III Prize for Libertarian Scholarship and of an Olive W. Garvey Fellowship from the Independent Institute in 2003. He has also been awarded two Humane Studies Fellowships and a Claude R. Lambe Fellowship from the Institute for Humane Studies at George Mason University and a Richard M. Weaver Fellowship from the Intercollegiate Studies Institute, author of eleven books, most recently *Rollback: Repealing Big Government Before the Coming Fiscal Collapse*, 2006 (“All the President’s Power,” *The American Conservative*, January 30th, Available Online at <http://www.theamericanconservative.com/articles/all-the-presidents-power/>, Accessed 05-29-2015)

Whether or not the vice president was correct in his analysis of the state of the presidency in the year 2000, there can be no question that since then George W. Bush has dramatically expanded the powers of the president—primarily though not exclusively in matters pertaining to the war on terror.

One of the most notorious examples involved the torture of prisoners, a power the administration claimed in the face of law and international agreements to the contrary. “The assertion in the various legal memoranda that the President can order the torture of prisoners despite statutes and treaties forbidding it was another reach for presidential hegemony,” wrote Anthony Lewis in the New York Review of Books. “The basic premise of the American constitutional system is that those who hold power are subject to the law Bush’s lawyers seem ready to substitute something like the divine right of kings.”

Arguably the greatest controversy of all was the revelation at the end of 2005 that the Bush administration had engaged in domestic surveillance without the necessary warrants. James Bamford, author of two books on the National Security Agency, points out the pertinent aspects of what would appear to be the relevant law: the Foreign Intelligence Surveillance Act (FISA), passed in 1978. According to Bamford, then-Attorney General Griffin Bell testified before the intelligence committee that FISA acknowledged no “inherent power of the President to conduct electronic surveillance.” As Bell himself put it, “This bill specifically states that the procedures in the bill are the exclusive means by which electronic surveillance may be conducted.”

In the wake of the Sept. 11 attacks, Bush administration officials spoke again and again of the president’s inherent powers. But the pertinent statute in this case disclaims any such powers and requires that the president proceed according to the guidelines set out by Congress, which involves securing warrants from a special court. As things stand, the president is claiming a right to engage in surveillance of any American, unrestrained by any institutional check, in the service of the war on terror—a war that by its very nature must go on indefinitely and, indeed, that we can never really know is truly over.

According to Attorney General Alberto Gonzales, the reason the administration did not seek to revise FISA to give the president the clear and unambiguous power to order these wiretaps was that even a Republican Congress would not have gone along. In a Dec. 19 press briefing, the attorney general said, “We have had discussions with Congress in the past—certain members of Congress—as to whether or not FISA could be amended to allow us to adequately deal with this kind of threat, and we were advised that that would be difficult, if not impossible.”

The administration’s claim, as set forth by the attorney general, is that Congress implicitly agreed to such wiretaps when in the days following Sept. 11 it authorized the use of force against the perpetrators and their allies. Of course, if Congress really had authorized them, it is not clear why it would be so difficult for the administration to persuade Congress to amend FISA accordingly in light of this permission.

Gonzales’s argument calls to mind H.L. Mencken’s 1937 “Constitution for the New Deal,” a satirical rewrite of the U.S Constitution, which says of the attorney general, “It shall be his duty to provide legal opinions certifying to the constitutionality of all measures undertaken by the President.”

AT: FISA Court Checks

FISA court review is meaningless — even with revisions, the court is still a rubber stamp for surveillance.

Schulberg and Reilly 15 — Jessica Schulberg, reporter covering foreign policy and national security for The Huffington Post, former reporter-researcher at The New Republic, MA in international politics from American University, and Ryan J. Reilly, reporter who covers the Justice Department and the Supreme Court for The Huffington Post, 2015 (“Watchdog Finds Huge Failure In Surveillance Oversight Ahead Of Patriot Act Deadline,” Huffington Post, May 21st, Available Online at http://www.huffingtonpost.com/2015/05/21/section-215-oversight_n_7383988.html, Accessed 06-05-2015) * “Paul” = Senator Rand Paul, R-KY

The inspector general's report focused on the government's use of Section 215 between 2007 and 2009. In that two-year period, every Justice Department request to the FISA court for spying authority was granted -- a fact that would seem to bolster critics' argument that the secret court's process needs a permanent privacy advocate.

“Without an adversarial process, you really can't even have a judicial process,” Paul said Wednesday evening. “The FISA court only hears from one side -- the government.”

While the reform bill that passed the House would add a slot for a privacy advocate, Paul and the ACLU have both noted that the legislation still gives the court the authority to decide if and when to appoint someone to the job.

The NSA lies to the FISA court as well — it cannot oversee submission to regulations.

NYT 13 — New York Times, Byline Charlie Savage and Scott Shane, 2013 (“Secret Court Rebuked N.S.A. on Surveillance,” New York Times, August 21st, Available Online at <http://www.nytimes.com/2013/08/22/us/2011-ruling-found-an-nsa-program-unconstitutional.html>, Accessed 06-05-2015)

WASHINGTON — A federal judge sharply rebuked the National Security Agency in 2011 for repeatedly misleading the court that oversees its surveillance on domestic soil, including a program that is collecting tens of thousands of domestic e-mails and other Internet communications of Americans each year, according to a secret ruling made public on Wednesday.

The 85-page ruling by Judge John D. Bates, then serving as chief judge on the Foreign Intelligence Surveillance Court, involved an N.S.A. program that systematically searches the contents of Americans' international Internet communications, without a warrant, in a hunt for discussions about foreigners who have been targeted for surveillance.

The Justice Department had told Judge Bates that N.S.A. officials had discovered that the program had also been gathering domestic messages for three years. Judge Bates found that the

agency had **violated the Constitution** and declared the problems part of a **pattern of misrepresentation** by agency officials in submissions to the secret court.

The release of the ruling, the subject of a Freedom of Information Act lawsuit, was the latest effort by the Obama administration to gain control over revelations about N.S.A. surveillance prompted by leaks by the former agency contractor Edward J. Snowden.

The collection is part of a broader program under a 2008 law that allows warrantless surveillance on domestic networks as long as it is targeted at noncitizens abroad. The purely domestic messages collected in the hunt for discussions about targeted foreigners represent a relatively small percentage of what the ruling said were 250 million communications intercepted each year in that broader program.

While the N.S.A. fixed problems with how it handled those purely domestic messages to the court's satisfaction, the 2011 ruling revealed further issues.

"The court is troubled that the government's revelations regarding N.S.A.'s acquisition of Internet transactions mark the third instance in less than three years in which the government has disclosed a **substantial misrepresentation regarding the scope of a major collection program**," Judge Bates wrote.

One of the examples was redacted in the ruling. Another involved a separate N.S.A. program that keeps logs of all domestic phone calls, which the court approved in 2006 and which came to light in June as a result of leaks by Mr. Snowden.

In March 2009, a footnote said, the surveillance court learned that N.S.A. analysts were using the phone log database in ways that went beyond what the judges believed to be the practice because of a "**repeated inaccurate statements**" in government filings to the court.

"Contrary to the government's repeated assurances, N.S.A. had been routinely running queries of the metadata using querying terms that did not meet the standard for querying," Judge Bates recounted. He cited a 2009 ruling that concluded that the requirement had been "**so frequently and systematically violated** that it can fairly be said that **this critical element** of the overall ... regime **has never functioned effectively.**"

The Electronic Frontier Foundation, a free speech and privacy rights group, sued to obtain the ruling after Senator Ron Wyden, an Oregon Democrat who sits on the Senate Intelligence Committee, fought last summer to declassify the basic fact that **the surveillance court had ruled that the N.S.A. had violated the Fourth Amendment.**

In a statement, Mr. Wyden — an outspoken critic of N.S.A. surveillance — said declassification of the ruling was "long overdue." He argued that while the N.S.A. had increased privacy protections for purely domestic and unrelated communications that were swept up in the surveillance, the collection itself "was a serious violation of the Fourth Amendment."

Mark Rumold of the Electronic Frontier Foundation praised the administration for releasing the document with relatively few redactions, although he criticized the time and the difficulty in obtaining it. But he also said **the ruling showed the surveillance court was not equipped to perform adequate oversight of the N.S.A.**

“This opinion illustrates that the way the court is structured now it cannot serve as an effective check on the N.S.A. because it’s wholly dependent on the representations that the N.S.A. makes to it,” Mr. Rumold said. “It has no ability to investigate. And it’s clear that the N.S.A. representations have not been entirely candid to the court.””

The NSA violates surveillance restrictions thousands of times per year — the FISA Court is unable to regulate compliance.

Jaffer 13 — Jameel Jaffer, ACLU Deputy Legal Director and Director of ACLU Center for Democracy, 2013 (““There Have Been Some Compliance Incidents”: NSA Violates Surveillance Rules Multiple Times a Day,” ACLU Blog, August 16th, Available Online at <https://www.aclu.org/blog/there-have-been-some-compliance-incidents-nsa-violates-surveillance-rules-multiple-times-day?redirect=blog/national-security/nsa-privacy-violations-even-more-frequent-we-imagined>, Accessed 06-05-2015)

The Washington Post reported last night that the NSA has been violating restrictions on surveillance powers thousands of times a year. My first reaction was that the revelation was "jaw-dropping," and that's my second reaction, too. The rules around government surveillance are so permissive that it is difficult to comprehend how the intelligence community could possibly have managed to violate them so often.

Obviously, it's important to know what precisely these compliance incidents involved, and some are more troubling than others. But at least some of these incidents seem to have implicated the privacy of thousands or millions of innocent people.

The Washington Post also published an article making clear that the chief judge of the Foreign Intelligence Surveillance Court doesn't think his court has the tools or capacity to evaluate the government's representations about its compliance with the law. Clearly, the fact that the FISA court is so reliant on the representations of intelligence officials is a problem. It makes no sense at all to let the intelligence community police itself.

Some of the information that the Washington Post published last night is information that the government has previously refused to release under the Freedom of Information Act. In 2010, the ACLU filed a lawsuit to enforce a FOIA request for records on the government's implementation of new surveillance laws. Most of the documents we obtained were heavily redacted. (You can see all of the documents here, and there is a full analysis of the documents here.)

But some of the documents—a series of "Semiannual Assessments" by the intelligence community, in particular—were not entirely redacted. Interestingly, they all included some version of this phrase: "There have been some compliance incidents during the reporting period representing a small percentage of the overall activity." That phrase seemed unremarkable to me until now. If thousands of compliance incidents represented "a small percentage of overall activity," there must have been a whole lot of "activity."

FISC has no ability to investigate or verify NSA reports — there is no court independently policing the NSA.

Washington Post 13 — Washington Post, Byline Carol D. Leonning, 2013 (“Court: Ability to police U.S. spying program limited,” Washington Post, August 15th, Available Online at http://www.washingtonpost.com/politics/court-ability-to-police-us-spying-program-limited/2013/08/15/4a8c8c44-05cd-11e3-a07f-49ddc7417125_story.html, Accessed 06-06-2015)

The leader of the secret court that is supposed to provide critical oversight of the government’s vast spying programs said that its ability to do so is **limited** and that it must **trust the government** to report when it improperly spies on Americans.

The chief judge of the Foreign Intelligence Surveillance Court said the court **lacks the tools to independently verify** how often the government’s surveillance breaks the court’s rules that aim to protect Americans’ privacy. Without taking drastic steps, it also cannot check the veracity of the government’s assertions that the violations its staff members report are unintentional mistakes.

“The FISC is forced to rely upon the accuracy of the information that is provided to the Court,” its chief, U.S. District Judge Reggie B. Walton, said in a written statement to The Washington Post. “**The FISC does not have the capacity to investigate** issues of noncompliance, and in that respect **the FISC is in the same position as any other court when it comes to enforcing [government] compliance** with its orders.”

Walton’s comments came in response to internal government records obtained by The Post showing that National Security Agency staff members in Washington overstepped their authority on spy programs thousands of times per year. The records also show that the number of violations has been on the rise.

The court’s description of its practical limitations contrasts with repeated assurances from the Obama administration and intelligence agency leaders that the court provides central checks and balances on the government’s broad spying efforts. They have said that Americans should feel comfortable that the secret intelligence court provides robust oversight of government surveillance and protects their privacy from rogue intrusions.

President Obama and other government leaders have emphasized the court’s oversight role in the wake of revelations this year that the government is vacuuming up “metadata” on Americans’ telephone and Internet communications.

“We also have federal judges that we’ve put in place who are not subject to political pressure,” Obama said at a news conference in June. “They’ve got lifetime tenure as federal judges, and they’re empowered to look over our shoulder at the executive branch to make sure that these programs aren’t being abused.”

Privacy advocates and others in government have voiced concerns about the ability of overseers to police secret programs of immense legal and technological complexity. Several members of

the House and Senate intelligence committees told The Post last week that they face numerous obstacles and constraints in questioning spy agency officials about their work.

FISA Court has only five lawyers to investigate NSA compliance — they are hopelessly overburdened.

Washington Post 13 — Washington Post, Byline Carol D. Leorning, 2013 (“Court: Ability to police U.S. spying program limited,” Washington Post, August 15th, Available Online at http://www.washingtonpost.com/politics/court-ability-to-police-us-spying-program-limited/2013/08/15/4a8c8c44-05cd-11e3-a07f-49ddc7417125_story.html, Accessed 06-06-2015)

Privacy advocates say they fear that some violations are never reported to the court.

In January 2008, the NSA appeared to have mistakenly collected data on numerous phone calls from the Washington area code 202, thinking they were foreign phone calls from Egypt, whose country code is 20. According to a 2013 “quality assurance” review of the incident, a communications switch misread the coding of the calls and presumed they were international. The NSA has broad authority that is not subject to the FISA court to collect and monitor foreign communications under certain circumstances.

The description of the 2008 problem suggests that the inadvertent collection of U.S. phone calls was not reported to the FISA court.

“However, the issue pertained to Metadata ONLY so there were no defects to report,” the review stated.

Under FISA rules, the government is required to immediately notify the court if it believes it has violated any of its orders on surveillance.

The government does not typically provide the court with case-specific detail about individual compliance cases, such as the names of people it later learned it was improperly searching in its massive phone or e-mail databases, according to the two people familiar with the court’s work.

In contrast to the dozens of staff available to Congress’s intelligence and judiciary committees, the FISA court has **five lawyers** to review compliance violation reports.

AT: Congress Checks

Congress only pretends to oversee surveillance activities — they willingly allow the intelligence community to lie to them and the FISA court.

Eddington 15 — Patrick G. Eddington is a policy analyst in Homeland Security and Civil Liberties at the Cato Institute, and an assistant professor in the Security Studies Program at Georgetown University, 2015 (“NSA Surveillance Programs Are a Cancer on the Constitution,” Reason.com, May 28th, Available Online at <http://reason.com/archives/2015/05/28/snowden-nsa-usa-freedom>, Accessed 06-05-2015)

When the House Judiciary Committee considered the USA Freedom Act in May 2015—one of the few bills introduced in response to Snowden’s revelations—committee chairman Rep. Bob Goodlatte of Virginia claimed the committee had conducted "aggressive" oversight of the issue through a total of three hearings.

As ProPublica noted, Snowden exposed literally dozens of NSA programs and activities that have a direct impact on the constitutional rights of Americans living at home or abroad. The House Judiciary Committee’s three hearings did not even scratch the surface of those programs.

The Senate Judiciary Committee under then-chairman Patrick Leahy of Vermont conducted a worthwhile examination of government surveillance programs in March 2013. It stands out for its singular moment in which Senator Ron Wyden caught Director of National Intelligence James Clapper in a falsehood about the scope of government surveillance against Americans. Snowden’s revelations helped highlight just how **disingenuous Clapper and other U.S. intelligence community officials had been** on the issue, **not just with Congress but with the FISA court as well.**

Yet none of those revelations moved the Senate to create a select committee to investigate the full scope of post-9/11 surveillance programs, and the Senate Intelligence Committee has been far more a defender of these programs than an overseer of them. The House Intelligence Committee’s public record on this issue is also dismal, with only a single public hearing in the months after Snowden’s revelations that discussed almost purely cosmetic changes to U.S. surveillance authorities.

Indeed, when reform-minded House members not on the House Intelligence Committee have attempted to get information on these programs, they have been blocked from doing so— including in periods leading up to PATRIOT Act reauthorization votes. House reformers have also been stymied in their efforts to rein in or even end dubious surveillance activities, largely through the efforts of the House GOP leadership to restrict the terms and scope of the surveillance reform debate.

Even when pushed, Congress only cursorily investigates surveillance — their desire to conceal domestic spying transgressions means they won't meaningfully implement the laws.

Eddington 15 — Patrick G. Eddington is a policy analyst in Homeland Security and Civil Liberties at the Cato Institute, and an assistant professor in the Security Studies Program at Georgetown University, 2015 (“NSA Surveillance Programs Are a Cancer on the Constitution,” Reason.com, May 28th, Available Online at <http://reason.com/archives/2015/05/28/snowden-nsa-usa-freedom>, Accessed 06-05-2015)

The failure of existing committees to properly probe Snowden’s revelations, the active efforts by previous House Intelligence Committee leadership to impede inquiries by individual House members, and the efforts of House and Senate leaders to truncate any meaningful debate over these surveillance powers—all of these actions make it appear that Congressional leaders are engaged in a process designed to conceal the U.S. intelligence community’s domestic spying transgressions rather than educate the public on them and their implications for our democracy.

Congress still unwilling to enforce surveillance law — USA Freedom Act is a ruse.

US News and World Report 15 — US News and World Report, Byline Joseph P. Williams, 2015 (“Last Call: Don’t Think the USA Freedom Act Will Stop Government Snooping,” US News, June 3rd, Available Online at <http://www.usnews.com/news/blogs/washington-whispers/2015/06/03/last-call-dont-think-the-usa-freedom-act-will-stop-government-snooping>, Accessed 06-08-2015)

One Nation, Under Surveillance: Armchair privacy activists cheered when the Senate swatted away Majority Leader Mitch McConnell's attempt to roll back Patriot Act reforms that would have allowed the National Security Agency to continue spying on who you call and when. But upon further review, writes the Washington Post's Paul Waldman, the new USA Freedom Act really doesn't do much to change the overall, post-9/11 surveillance situation. Aside from putting in some minor speed bumps – requiring AT&T or Sprint, say, to collect the info, and making the NSA ask permission from a judge before getting their mitts on it – the government still has broad powers to track personal data, probably will come up with other ways to do it besides phone records, and both Democrats and Republicans generally seem OK with that. And unless another Edward Snowden comes down the pike to spill the beans on government technological spycraft, don't expect Congress or the next occupant of the White House to change things.

AT: "Obama is Different"

Obama is no exception — he ignores Congress on terror and national security issues. Congress can't object.

Cohen 12 — Michael A. Cohen, fellow at The Century Foundation, a columnist at the Boston Globe and a regular writer and commentator on American politics and U.S. foreign policy, 2012 ("Power Grab," Foreign Policy, March 28th, Available Online at <http://foreignpolicy.com/2012/03/28/power-grab/>, Accessed 06-05-2015)

Running roughshod over Congress has becoming something of a norm within the Obama administration. As one foreign-policy analyst close to the White House said to me "they generally don't do a good job of keeping people in the Hill in the loop on what they are doing. They see congressional oversight as a nuisance — even within their own party." Another analyst I spoke to had a one-word response to the question of the administration's attitude toward Congress's role in foreign policy: "Dismissive." Whether the lack of proper consultation over the closing of the detainee facility at Guantanamo Bay, the refusal to share with intelligence committees the rationale for targeted killings, or even brief Hill staffers on changes in missile defense deployment, this sort of ignoring of congressional prerogatives has often been the rule, not the exception.

What has been Congress's response to this disregarding of its role in foreign policy decision-making? The usual hemming and hawing, but little in the way of concrete action. During the Bush years, Republicans were more than happy to let the president expand his executive powers when it came to Iraq, Afghanistan, and the global war on terrorism. When Democrats took back the House and Senate from Republicans in 2006, they placed greater scrutiny on the Bush administration's conduct of the war in Iraq — but still continued to fund the conflict. Even in Washington's highly partisan current environment, little has changed; it's mostly sound and fury signifying nothing.

Republicans eschewed a constitutional confrontation with the White House over Libya, though the House GOP did make a rather partisan effort to defund the Libya operations (a measure that failed) and still today House and Senate members raise their frustrations in committee hearings over their heavy-handed treatment by the White House.

But the actions of some Republicans point in a different direction. Last year, House Armed Services Committee Chairman Buck McKeon actually tried to expand the original Authorization for Use of Military Force that granted U.S. kinetic actions just three days after 9/11 — which would have actually increased executive war-making power. While some on the Hill have long suspected the constitutionality of the War Powers Resolution, it was one of the few checks that Congress maintained over the president (aside from ability to defund operations, which in itself is a difficult tool to wield effectively). Now they have been complicit in its further watering down.

Aside from Ron Paul, there's been little mention of the president's overreach in Libya by the GOP's presidential aspirants. And why should there be? If any of them become president they too would want to enjoy the expanded executive power that Obama has helped provide for

them. Quite simply, in a closely divided country in which each party has a fair shot to win the White House every four years, there is little political incentive for either Democrats or Republicans to say enough is enough.

And with a former constitutional law professor punting on the issue (along with the much abused and maligned Congress), we're now even further from chipping away at the vast power the executive branch has been husbanded on national security issues. In the end, that may be the greatest legacy of the U.S. intervention in Libya.

Obama and future presidents won't be different — the pressures for non-compliance on surveillance will only increase.

Healy 8 — Gene Healy, vice president at the Cato Institute, JD from the University of Chicago Law School, 2008 (“New President Won’t Tame Executive Power,” Cato Institute, October 14th, Available Online at <http://www.cato.org/publications/commentary/new-president-wont-tame-executive-power>, Accessed 06-05-2015)

But there are good reasons to doubt that an Obama administration would meaningfully de-imperialize the presidency.

From Truman and Johnson’s undeclared wars to the warrantless wiretapping carried out by FDR, JFK, LBJ and Nixon, the Imperial Presidency has long been a bipartisan phenomenon. In fact, our most recent Democratic president, Bill Clinton went even further than his predecessors in his exercise of extraconstitutional war powers. Prior presidents had unilaterally launched wars in the face of congressional silence. But Clinton’s war over Kosovo in 1999 made him the first president to launch a war in the face of several congressional votes denying him the authority to wage it.

Recently, Barack Obama has found his own convenient rationales for endorsing broad presidential powers in the area of surveillance. When he signed on to the surveillance bill Congress passed this summer, Sen. Obama broke an explicit campaign promise to filibuster any legislation that would grant immunity to FISA-flouting telecom companies. By voting for the bill, Obama helped legalize large swaths of a dragnet surveillance program he’d long claimed to oppose. Perhaps some were comforted by Obama’s “firm pledge that as president, I will carefully monitor the program.” But our constitutional structure **envisions stronger checks than the supposed benevolence of our leaders.**

What motivated Obama’s flip-flop? Was it a desire to look “tough” on national security-or was it that, as he seems ever closer to winning the office, broad presidential powers seem increasingly appealing? Either way, it’s clear that the post-9/11 political environment will provide enormous incentives for the next president to embrace Bush-like theories of executive power. Can we really expect a Democratic president, publicly suspected of being “soft on terror,” to spend much political capital making himself less powerful?

Not likely, say analysts on both sides of the political spectrum. Law professors Jack Balkin and Sanford Levinson, both left-leaning civil libertarians, predict that “the next Democratic president

will likely retain significant aspects of what the Bush administration has done”; in fact, “future presidents may find that they enjoy the discretion and lack of accountability created by Bush’s unilateral gambits.” Jack Goldsmith, head of the Bush administration’s OLC from 2003-04, argues that “if anything, the next Democratic president - having digested a few threat matrices ... will be even more anxious than the current president to thwart the threat.”

Courts Actor

1NC — Court Stripping

Congress will backlash against aggressive court decisions in the area of surveillance — they will bar the court from hearing the cases.

Vladeck 11 — Stephen I. Vladeck, Professor of Law, American University Washington College of Law, 2011 (“Why Klein (Still) Matters: Congressional Deception and the War on Terrorism,” Journal of National Security Law, Volume 5, Version from June 16th, 9:38AM, Available Online at http://jnslp.com/wp-content/uploads/2011/06/08_Vladeck.pdf, Accessed 06-06-2015)

At least thus far, Congress’s track record in the major policy debates arising out of the war on terrorism has been uneven, at best. By far, the most significant legislative enactment over the past decade came one week after the September 11 attacks, when Congress passed the Authorization for Use of Military Force (AUMF), which, in sweeping language, empowered the President

to use all necessary and appropriate force against those nations, organizations, or persons he determines planned, authorized, committed, or aided the terrorist attacks that occurred on September 11, 2001, or harbored such organizations or persons, in order to prevent any future acts of international terrorism against the United States by such nations, organizations or persons.³³

Six weeks later, Congress enacted the USA PATRIOT Act, which included a series of controversial revisions to immigration, surveillance, and other law enforcement authorities.³⁴ But it would be over four years before Congress would again pass a key counterterrorism initiative, enacting the Detainee Treatment Act of 2005 (DTA)³⁵ after – and largely in response to – the Supreme Court’s grant of certiorari in *Hamdan v. Rumsfeld*.³⁶

In the five years since, Congress had enacted a handful of additional antiterrorism measures, including the Military Commissions Act (MCA) of 2006,³⁷ as amended in 2009,³⁸ the Protect America Act of 2007,³⁹ and the 2008 amendments⁴⁰ to the Foreign Intelligence Surveillance Act of 1978, known in shorthand as the FAA.⁴¹ And yet, although Congress has spoken in these statutes both to the substantive authority for military commissions and to the scope of the government’s wiretapping and other surveillance powers, it has otherwise left some of the central debates in the war on terrorism completely unaddressed.⁴² Thus, Congress has not revisited the scope of the AUMF since September 18, 2001, even as substantial questions have been raised about whether the conflict has extended beyond that which Congress could reasonably be said to have authorized a decade ago.⁴³ Nor has Congress intervened, despite repeated requests that it do so, to provide substantive, procedural, or evidentiary rules in the habeas litigation arising out of the military detention of noncitizen terrorism suspects at Guantánamo.⁴⁴

As significantly, at the same time as Congress has left some of these key questions unanswered, **it has also attempted to keep courts from answering them**. Thus, the DTA and the MCA purported to divest the federal courts of jurisdiction over habeas petitions brought by individuals detained at Guantánamo and elsewhere.⁴⁵ Moreover, the 2006 MCA precluded any lawsuit seeking collaterally to attack the proceedings of military commissions,⁴⁶ along with “any

other action against the United States or its agents relating to any aspect of the detention, transfer, treatment, trial, or conditions of confinement of an alien who is or was detained by the United States and has been determined by the United States to have been properly detained as an enemy combatant or is awaiting such determination.”⁴⁷ And although the Supreme Court in *Boumediene* invalidated the habeas-stripping provision as applied to the Guantánamo detainees,⁴⁸ the same language has been upheld as applied elsewhere,⁴⁹ and the more general non-habeas jurisdiction-stripping section has been repeatedly enforced by the federal courts in other cases.⁵⁰

Such **legislative efforts to forestall judicial resolution** of the merits can also be found in the telecom immunity provisions of the FAA,⁵¹ which provided that telecom companies could not be held liable for violations of the Telecommunications Act committed in conjunction with certain governmental surveillance programs.⁵² Thus, in addition to changing the underlying substantive law going forward, the FAA pretermitted a series of then-pending lawsuits against the telecom companies.⁵³

Analogously, Congress has attempted to assert itself in the debate over civilian trials versus military commissions by barring the use of appropriated funds to try individuals held at Guantánamo in civilian courts,⁵⁴ and by also barring the President from using such funds to transfer detainees into the United States for continuing detention or to other countries, as well.⁵⁵ **Rather than enact specific policies** governing criteria for detention, treatment, and trial, **Congress’s modus operandi** throughout the past decade **has been to effectuate policy indirectly by barring** (or attempting to bar) **other governmental actors from exercising** their core authority, be it **judicial review** or executive discretion.

Wasserman views these developments as a period of what Professor Blasi described as “constitutional pathology,” typified by “an unusually serious challenge to one or more of the central norms of the constitutional regime.” Nevertheless, part of how Wasserman defends the “Kleinvulnerable” provisions of the MCA and FAA is by concluding that the specific substantive results they effectuate can be achieved by Congress, and so Klein does not stand in the way. But if Redish and Pudelski’s reading of Klein is correct, then the fact that Congress could reach the same substantive results through other means is not dispositive of the validity of these measures. To the contrary, the question is whether any of these initiatives were impermissibly “deceptive,” such that Congress sought to “vest the federal courts with jurisdiction to adjudicate but simultaneously restrict the power of those courts to perform the adjudicatory function in the manner they deem appropriate.”⁵⁶

2NC/1NR — Stripping Extensions

Congress will respond with an end-run expansion of executive authority to insulate the policies from judicial review.

Milligan 10 — Luke M. Milligan, Professor of Law at University of Louisville, 2010 (“Congressional End-Run: The Ignored Constraint on Judicial Review,” Georgia Law Review, Vol 45, Fall, Available Online at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1709405, Accessed 06-06-2015)

Ignored by political scientists, **congressional end-runs undoubtedly constrain the decisionmaking of** the strategic **Justices** assumed by judicial politics scholars. End-runs occur when Congress mitigates the policy costs of adverse judicial review through neither formal limits on the Court's authority nor substitution of its own constitutional interpretation for that of the Court, but through a different decision that cannot, as a practical if not legal matter, be invalidated by the Court. End-runs come in several forms, including congressional decisions to adjust appropriations, grant authority to the Executive Branch, modify certain contingent laws, and reorient legislation in alternate constitutional clauses. Importantly, end-runs are generally more affordable for Congress than either of the two congressional constraints addressed in the prevailing judicial politics literature.

Within the field of judicial politics there remains a lingering uncertainty about Congress's practical impact on the Supreme Court's exercise of judicial review. This uncertainty has been compounded by the literature's failure to study the constraining role of congressional end-runs. Going forward, judicial politics scholars should incorporate the end-run into their formal SOP models and related empirical studies. Such incorporation promises to give political scientists a fuller sense of how their strategic Justices interact with Congress in our constitutional democracy.

Court decisions fail absent Congressional support — no way to get that in this political climate.

Devins 9 — Neal Devins, Professor of Law and Government at the College of William and Mary, 2009 (“Presidential Unilateralism and Political Polarization: Why Today 's Congress Lacks the Will and the Way to Stop Presidential Initiatives,” Willamette Law Review, Vol 45 No 3, Spring, Available Online at <http://scholarship.law.wm.edu/cgi/viewcontent.cgi?article=1025&context=facpubs>, Accessed 06-06-2015)

Before explaining why lawmakers lacked the incentives to rein in the President, a bit of a recap. At the start of this essay, I quoted Justices Jackson and Ginsburg to make-what I consider-a fairly obvious point. Congress has the power to check the President. But if it does not use that power, the President has incentive to fill the void. That does not mean that the President can do whatever he wants. As was true in the war on terror cases, the Supreme Court can place **some limits** on presidential power. But **without a Congress willing to assert its institutional prerogatives, defeats in court are not likely to stick to the President.** Richard Nixon lost several

significant cases in court.⁶⁰ But that is not the reason the presidency was hampered after Nixon left office. The reason was tied to the Watergate-era Congress's willingness to assert itself through numerous legislative enactments and through beefed up oversight. Remember: Dick Cheney's complaint about an imperiled presidency had nothing to do with Supreme Court decision-making and everything to do with congressionally imposed constraints that cut against presidential power.⁶¹

Today, Congress has neither the will nor the way to pursue the type of bipartisan reforms that characterized the Watergate-era Congress. Democrats and Republicans in Congress are more interested in strengthening their position vis-a-vis the other party than in strengthening Congress as an institution. Members of the President's party are loyal to their party, not Congress as an institution, and therefore, will not join forces with the opposition party to assert Congress's institutional prerogatives. Equally telling, members of Congress see little personal gain in advancing a legislative agenda that shifts power from the President to Congress.

1NC — Executive Noncompliance

Court decisions on issues related to the War on Terror are meaningless — the public gets a “moral victory” but the activities continue unabated.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

In this Article, I will show that American courts have often approached the extreme policies of the anti-terrorism campaign by splitting the difference between the two sides – the government and suspected terrorists. One side typically got the ringing rhetoric (the suspected terrorists), and the other side got the facts on the ground (the government). In major decisions both designed to attract public attention and filled with inspiring language about the reach of the Constitution even in times of peril, the Supreme Court, along with some lower courts, has stood up to the government and laid down limits on anti-terror policy in a sequence of decisions about the detention and trial of suspected terrorists. But, at the same time, these decisions have provided few immediate remedies for those who have sought the courts’ protection. As a result, suspected terrorists have repeatedly prevailed in their legal arguments, and yet even with these court victories, little changed in the situation that they went to court to challenge. The government continued to treat suspected terrorists almost as badly as it did before the suspected terrorists “won” their cases. And any change in terrorism suspects’ conditions that did result from these victorious decisions was slow and often not directly attributable to the judicial victories they won.

Does this gap between suspected terrorists’ legal gains and their unchanged fates exist because administration officials were flouting the decisions of the courts? The Bush Administration often responded with sound and fury and attempted to override the Supreme Court’s decisions or to comply minimally with them when they had to.⁶ But, as this Article will show, these decisions did not actually require the government to change its practices very quickly. The decisions usually required the government to change only its general practices in the medium term. Judges had a different framework for analyzing the petitioners’ situation than the petitioners themselves did; judges generally couched their decisions in favor of the suspected terrorists as critiques of systems instead of as solutions for individuals. In doing so, however, courts allowed a disjuncture between rights and remedies for those who stood before them seeking a vindication of their claims. Suspected terrorists may have won in these cases – and they prevailed overwhelmingly in their claims, especially at the Supreme Court – but courts looked metaphorically over the suspects’ heads to address the policies that got these suspects into the situation where the Court found them. Whether those who brought the cases actually got to benefit from the judgments, either immediately or eventually, was another question.

Bad though the legal plight of suspected terrorists has been, one might well have expected it to be worse. Before 9/11, the dominant response of courts around the world during wars and other public emergencies was to engage in judicial deference.⁷ Deference counseled courts to

stay out of matters when governments argued that national security concerns were central. As a result, judges would generally indicate that they had no role to play once the bullets started flying or an emergency was declared. If individuals became collateral damage in wartime, there was generally no judicial recourse to address their harms while the war was going on. As the saying goes, *inter arma silent leges*: in war, the law is mute. After 9/11, however, and while the conflict occasioned by those attacks was still “hot,” courts jumped right in, dealing governments one loss after another.⁸ After 9/11, it appears that deference is dead.

But, I will argue, deference is still alive and well. We are simply seeing a new sort of deference born out of the ashes of the familiar variety. While governments used to win national security cases by convincing the courts to decline any serious review of official conduct in wartime, now governments win first by losing these cases on principle and then by getting implicit permission to carry on the losing policy in concrete cases for a while longer, giving governments a victory in practice.⁹ Suspected terrorists have received from courts a vindication of the abstract principle that they have rights without also getting an order that the abusive practices that have directly affected them must be stopped immediately. Instead, governments are given time to change their policies while still holding suspected terrorists in legal limbo. As a result, despite winning their legal arguments, suspected terrorists lose the practical battle to change their daily lives.

Courts may appear to be bold in these cases because they tell governments to craft new policies to deal with terrorism. But because the new policies then have to be tested to see whether they meet the new criteria courts have laid down, the final approval may take years, during which time suspected terrorists may still be generally subjected to the treatment that courts have said was impermissible. Because judicial review of anti-terrorism policies itself drags out the time during which suspected terrorists may be detained, suspected terrorists win legal victories that take a very long time to result in change that they can discern. As a result, governments win the policy on the ground until court challenges have run their course and the courts make decisions that contribute to the time that the litigation takes. This is the new face of judicial deference.

This Article will explore why and how American courts have produced so many decisions in which suspected terrorists appear to win victories in national security cases. As we will see, many judges have handled the challenges that terrorism poses for law after 9/11 by giving firm support, at least in theory, to both separation of powers and constitutional rights. Judges have been very active in limiting what the government can do, requiring substantial adjustments of anti-terrorism policy and vindicating the claims of those who have been the targets. But the solutions that judges have crafted – often bold, ambitious, and brave solutions – nonetheless fail to address the plights of the specific individuals who brought the cases.

This new form of judicial deference has created a slow-motion brake on the race into a constitutional abyss. But these decisions give the government leeway to tackle urgent threats without having to change course right away with respect to the treatment of particular individuals. New deference, then, is a mixed bag. It creates the appearance of doing something – an appearance not entirely false in the long run – while doing far less in the present to bring counter-terrorism policy back under the constraint of constitutionalism.

Unenforced Court rulings cause a collapse of the judicial system and violence — turns the case by ensuring future claimants have no access to remedy.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

The individuals caught up in the assertions of new governmental powers in times of emergency might disagree that winning their cases actually helped them much, however. If petitioners start to believe that courts can really give them nothing in the end, **we may start to see something dangerous**. In fact, we have already seen danger signals in the reaction of petitioners who have “won” but do not feel they have gained anything. When Mr. Hamdan said at his military commission hearing that he didn’t believe he had won his case yet after his “victory” at the Supreme Court,⁴⁰⁹ or when Mr. Padilla said to his counsel that he wondered how often he would have to win before something good happened in his case,⁴¹⁰ we can see the signs that those who might invoke the courts to help them have already realized that the courts are not particularly helpful after all. If the petitioners who need to bring the cases in order for the government to be kept in line by court decisions refuse to bring more cases, then the limited benefits of new deference for keeping constitutionalism intact through crises will disappear too. **There is a very real risk** in these new deference cases that **the petitioners will turn from a peaceful resolution of their claims through court action to something far less constructive**.

Non-Compliance Impacts — Turns Case

New forms of deference are a mask for a continuation of the status quo — the fake action leads to despair for the movements against government abuses.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

Part IV goes normative and argues that new deference is both a better and worse alternative than old deference. New deference is worse because it gives an **appearance that the courts are addressing an issue** while in practice **not actually curbing the immediate abuses**. It therefore gives an **overly optimistic sense of victory** to those who worry about anti-terrorism’s overreach. But those who bring their cases before the courts feel that courts **do nothing for them**. Such victories may lead to **new despair** among those who thought that winning in law would allow them to win something in practice, making those who brought their cases feel that they have come to the wrong place for answers.¹³ That said, new deference also creates a horizon beyond which abuse of constitutionalism cannot go – off in some distant future – and eventually that may have some real effect.

AT: USA Freedom Act Proves Enforcement

The USA Freedom Act is a win for Obama — it's the proposal he trumpeted.

Stewart 15 — Bill Stewart, former U.S. Foreign Service officer and former correspondent for Time magazine, 2015 (“USA Freedom Act a win for Obama,” June 5th, Available Online at http://www.santafenewmexican.com/opinion/local_columns/usa-freedom-act-a-win-for-obama/article_331a4d49-7d7c-52ff-b7c6-60f839710aee.html, Accessed 06-08-2015)

Passage of the new USA Freedom Act is a victory for Obama, who argued that the changes in the new act ought to relieve the fears and anxieties of those who didn't like the old act. Alas, they don't. The new surveillance program created by the Freedom Act will end 10 years of bulk collection of telephone records by the National Security Agency, but it will make available records held by telephone companies for searches by government officials with a court order. The court order allegedly makes a difference. “This is the kind of rigorous and, essentially a rules architecture that the president does believe is important,” said Josh Earnest, the president's press secretary. “And that is materially different than the program he inherited.”

Not all agree. Said McConnell of the president's compromise bill: “We shouldn't be disarming unilaterally as our enemies grow more sophisticated and aggressive.”

Equally opposed, but for different reasons, Paul complained that “the president continues to conduct an illegal program,” a reference to a recent ruling by a federal appeals court that the original NSA telephone data collection program was not authorized by federal law.

The president, however, was a happy man. He had just gotten what he wanted.

2NC/1NR — Empirics

Court decisions empirically fail to constrain the president.

Devins 9 — Neal Devins, Professor of Law and Government at the College of William and Mary, 2009 (“Presidential Unilateralism and Political Polarization: Why Today 's Congress Lacks the Will and the Way to Stop Presidential Initiatives,” Willamette Law Review, Vol 45 No 3, Spring, Available Online at <http://scholarship.law.wm.edu/cgi/viewcontent.cgi?article=1025&context=facpubs>, Accessed 06-06-2015)

Before turning to Part I, let me clarify two points that underlie the analysis that is to follow. First, the focus of this essay is the President's power to advance favored policy initiatives. I do not consider the separate question of presidential power over the administrative state. More to the point, if the President does not express a strong policy preference or, alternatively, delegates decision making authority to agency heads, it may be that agency heads will not look to the White House for policy direction. Agency heads, instead, may focus on their own personal agenda or the agendas of congressional committees, interest groups, or careerists in their agency. For reasons I will detail in Part III of this essay, however, Presidents increasingly seek to rein in agency direction-by appointing presidential loyalists and by making use of regulatory review procedures and pre-enforcement directives such as signing statements. Second, in saying that presidential power is largely defined by the dance that takes place between Congress and the White House, I do not mean to suggest that the courts have no role to play in the separation of powers. My point, instead, is that **court decisions are of limited reach**. They typically settle a case; they **rarely establish precedents that define subsequent bargaining** between the executive and Congress. In case studies of Supreme Court rulings on the legislative veto, executive privilege, and war powers, Lou Fisher and I (both individually and collectively) have demonstrated the limited reach of Supreme Court decisions. In this essay, I will make limited reference to those writings-but I will not try to establish a point that I have made several times before.

War on Terror litigation fails to change actual government practice — enemy combatant detention proves.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

Litigation on behalf of those detained as enemy combatants started almost immediately, with petitions for writs of habeas corpus being the most common legal vehicle for the challenges. Two U.S. citizens held as domestic enemy combatants, Yaser Hamdi and José Padilla, filed habeas petitions, as did a number of the detainees at Guantánamo. Eventually these cases worked their way up to the U.S. Supreme Court, which ruled on the crisis measures taken in response to 9/11 in a string of decisions that appeared to mount a serious challenge to the

enemy combatant framework. For the petitioners, themselves, **however, the legal victories directly resulted in very little** change in their lives.

2NC/1NR — Executive Will Reinterpret

The Executive will just reinterpret countervailing law to support desired Executive powers — post-911 doctrine proves.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

As the country attacked on 9/11, the United States sprang into action immediately with a twinned strategy of aggressive military action and new understandings of law. From launching wars abroad 89 to developing novel strategies for rendition, detention, and interrogation of suspected terrorists outside the United States 90 and curtailing civil liberties through widespread surveillance programs at home,91 the Bush Administration, with the active participation of the Office of Legal Counsel (OLC) at the Department of Justice, took a generous view of its own powers in wartime. The OLC developed new legal understandings to underwrite the anti-terrorism campaign.92

Some of the new legal understandings resulted from new law. Congress quickly passed the Authorization of the Use of Military Force (AUMF), giving the President a green light to use “all necessary and appropriate force against those nations, organizations, or persons he determines planned, authorized, committed, or aided the terrorist attacks that occurred on September 11, 2001.”93 Shortly thereafter, Congress passed the USA PATRIOT Act with nearly unprecedented speed, broadening the definitions of terrorism offenses, clamping down on financial support for terrorism, increasing domestic surveillance capacities of the U.S. government, and adding a toxic mix of small changes in U.S. law that allowed the government to operate secretly and to commandeer private resources in the anti-terrorism campaign.94

But much of the new understanding of law consisted of reinterpreting or repudiating old legal understandings without any new formal lawmaking. From 9/11 onwards, legal officials in the OLC churned out opinion after opinion, radically changing the interpretation of existing law to permit an aggressive response to terrorism.95 New Attorney General Guidelines were promulgated in 2002, changing the ground rules for domestic terrorism investigations.96 Presidential “signing statements” signaled that the President would refuse to enforce many laws that Congress had passed and that he himself had signed.97 The Bush Administration pushed its own lawmaking capacity to the limits. As a result, for much of the Bush Administration’s tenure, it was unclear just which laws were actually being honored as before, which had been radically reinterpreted, and which were functionally suspended.

Court rulings are definitionally ambiguous — the Executive has wide authority to reinterpret as he likes.

Pillard 5 — Cornelia T. Pillard, Professor of Law at Georgetown University Law Center former Assistant to the United States Solicitor General, former Deputy Assistant Attorney General for the Office of Legal Counsel, 2005 ("The Unfulfilled Promise of the Constitution in

Executive Hands," Michigan Law Review Vol 103 No 4, February, Available Online at <http://scholarship.law.georgetown.edu/cgi/viewcontent.cgi?article=1190&context=facpub>, Accessed 06-06-2015)

Even under a robust judicial supremacism, the executive admittedly has significant space and responsibility to interpret and apply the Constitution. Room for executive branch constitutionalism occurs in part because of the acute practical and legal limitations on the courts' ability and willingness to decide many constitutional issues that confront the executive branch. As James Bradley Thayer famously put it, "much which is harmful and unconstitutional may take effect without any capacity in the courts to prevent it, since their whole power is a judicial one."²⁴

First, it hardly needs to be repeated that the Constitution itself leaves large openings for interpretation. Many important constitutional provisions are broadly and generally worded, and cues from history are often ambiguous.¹ Supreme Court precedent, however binding we take it to be, frequently fails to provide crisp answers to the next concrete case.²⁶ Where a novel issue arises, there is both an obligation and an opportunity for the executive to arrive at a view of the matter and act accordingly in advance of a court's opportunity to decide it. Even clearly established judicial precedent permits doubt when the Court itself seems uncommitted to it.²⁷

Second, the executive is the most **frequent** and **influential** Supreme Court litigant. Even when the Supreme Court is poised to decide an issue, the constitutional views voiced by the executive can shape the Court's view. The potential for dynamic interplay between the executive's and the Court's constitutionalism underscores the importance of the executive's own considered views.

Third, even where private parties can get courts to respond to their constitutional harms, they may face interstitial deprivations. Individuals suffer injury in the time lag between constitutional harm and relevant judicial response. There is inevitable delay between execution of a new practice, policy, program, or other executive action, and the courts' ability to decide its constitutionality (assuming someone brings an appropriate case). An executive that has adequate mechanisms of constitutional self-scrutiny would, however, avoid the unconstitutional conduct or check it more promptly than a court. Similarly, even where courts invalidate challenged government action, limits on their remedial capacities may make them unable fully to cure constitutional harms.²⁸ The only remedies available from courts for race-based conviction in violation of equal protection, for example, are release, expungement of the conviction, and money damages; no post hoc remedy can restore the years of lost freedom to a person wrongfully convicted. Privacy, once violated, cannot be retroactively restored. Similarly, any shame or anxiety visited on a government employee unconstitutionally fired in retaliation for her public expression, and any period of exclusion from the job, even if it can be eased or mitigated, cannot be undone by a court award of reinstatement and back pay or other monetary

compensation.²⁹ Thus, the delay in judicial review and the pervasive inadequacy of remedies - especially, but not exclusively, when harm is "irreparable,"³⁰ - also focuses responsibility on the executive to engage constitutional issues and strive to avoid constitutional violations in the first place.

Fourth, when the courts apply procedural or institutional doctrines that avoid decision on the merits of a constitutional question, their nondecision implies that someone else, i.e., people elsewhere in the government, must make the decisive constitutional calls.³¹ " The political question doctrine is a classic example of such judicial avoidance: a decision not to invalidate government action on political question grounds "is of course very different from a decision that specific congressional action does not violate the Constitution,"³² because it leaves open the possibility that the political branches might themselves find a violation. Similarly, other justiciability doctrines, such as standing, ripeness, and mootness,³³ as well as immunity defenses that avoid decisions on the merits,³⁴ mean that many instances of unconstitutional conduct will evade definitive constitutional consideration by the Court, leaving only the political branches to avoid or redress them." Courts are also unlikely to review challenges to the exercise of exclusively executive powers, like the powers to pardon,³⁶ veto,³⁷ make appointments,³⁸ and receive ambassadors,³⁹ nor are they likely to review most congressional-executive power struggles.' Even under judicial supremacy, constitutional obligations regarding the exercise of those powers are in the executive's hands.

Supreme Court restrictions on Presidential power are useless — despite lofty rhetoric, they entirely fail to stop the practices.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 ("The New Judicial Deference," Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

By contrast, the terrorism cases appeared to do more than they did – and that was, I argue, their point. In the terrorism cases, the Supreme Court appeared to expand its powers, stand up to the political branches, and change the course of the anti-terror campaign by announcing that the President was constrained by law. These opinions attracted full glare of media attention with dramatic turns of phrase, generating headlines that implied the Court had exercised a great deal of power to change the results on the ground. And the Court appeared to order an unwilling President to do something he had so far refused to do.

But when the effects of the cases are examined, as we have done above, **the Court's powers are barely visible.**⁴⁰⁰ The Court's public decisions disguised the small effects they actually had because the petitioners could not get much benefit from these rulings without more, much more. The Court did not hide its own judicial power. That, it announced loud and clear! What it hid was precisely what the Marbury Court put out in the open: the defeat of the petitioner's main request.

In Marbury, the Court actually ruled against Mr. Marbury on the crucial question of whether the Court had the power to give him what he sought. The Court told Mr. Marbury that he had to get his commission from another court. That he ultimately did not was not the fault of the Supreme Court (though given the political context, the Justices surely would have guessed that this would have been the result). Congress repealed the Act that created the justice of the peace offices shortly after the Court's decision, and with it expired all of the unissued commissions of the midnight judges.⁴⁰¹ The Court actually told Mr. Marbury precisely what he had to do to get his commission; the Court did not lack for detail in that relevant sense. Mr. Marbury did not get his commission because Congress intervened to shut down the course of action that the Court had specified.⁴⁰²

The new deference logic of the terrorism cases, if applied to the facts of Marbury, would have produced a different result. Had the Court first made a huge statement that all of the midnight judges would suddenly get their commissions and then quietly knocked out from under them any clear avenue through which they could, this would have paralleled the post-9/11 cases. In the terrorism cases, by contrast, the Court told the relevant political officials and lower court judges to give the suspected terrorists what they sought – and then refused to include the instructions that would have helped them determine how to do so.

In addition, unlike in Marbury, the post-9/11 courts practicing new judicial deference did not seem at pains to limit their powers in the short term in order to expand their use in the future. New deference courts are at pains to appear to expand their powers in theory in order to limit their use in practice. And that is the precise inverse of Marbury-ism – which appeared to accomplish nothing while doing a lot. The post-9/11 terrorism cases appeared to do a lot while accomplishing much less.

Court decisions against Executive Power *strengthen the Executive* by creating empty statements that allow the President to claim he's no longer violating the Constitution.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

The case for self-regarding courts can be made even more strongly, on the evidence we've seen in this Article. As long as courts still exercise a certain degree of deference to the way that governments are dealing with specific cases, courts can avoid incurring the wraths of those governments. Governments care primarily in times of crisis about having a green light to go on detaining those whom they want to detain and about stringing out the day of reckoning when proof has to be provided. If governments receive that deference, then governments have no reasons to attack the courts when the courts assert themselves on matters of relatively abstract

principle. If courts stay within these limits, doing whatever they feel they need to do to the law while **letting the governments prevail on the facts**, then governments are likely to appear to follow the court decisions, insist on their respect for the courts, and in general let courts get away with issuing governments these “defeats.” Of course, governments would probably prefer to do whatever they want without being hauled before courts to justify their actions, but as long as being hauled before courts comes with the territory of being a constitutional state, new judicial deference may be the best they can expect.

As we have seen, courts have slapped the government on the wrist and forced it to readjust its policies at the margins. But courts have not required the release of detainees, the immediate provision of evidence against them, or absolutely normal tribunals. It is much easier for governments to comply with court decisions when those court decisions do not in fact second-guess concrete decisions of the government to detain specific individuals in a crisis. In fact, **court decisions that issue a lot of smoke and noise but do little to require immediate action may appear to be upholding constitutional principles while in fact strengthening the hands of governments who can then rightly say that they are doing what the law requires.**

After 9/11, then, courts have been willing to stand up to governments in times of crisis, using their substantial heft against the government’s bulked-up war powers. Governments, in turn, have been willing to comply with court decisions because doing so has not really threatened the immediate actions they have already taken.

AT: The Plan is Clear/Aggressive

The Court will use strong language against activities while tacitly encouraging them to continue.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

A gap between law on the books and law in action is commonplace, and in fact, its examination forms one of the key pillars of the law and society movement.³⁴⁸ To law and society scholars, **the formal sources of law virtually always deviate from law as practiced because of inconsistent enforcement, interpretive differences, strategic ignorance, practical limitations, the avoidance of formality, or outright flouting.** Laws against murder do not prevent murders from happening,³⁴⁹ just as constitutional provisions against forced confessions do not always protect those held in custody from being beaten secretly into submission.³⁵⁰ Everyone is supposed to have her day in court, but nearly all cases – both civil and criminal – settle, often by agreeing to a fiction that is not true – that a lesser included offense was all that really happened in the events that led up to a plea bargain or that no one was responsible for anything in a settlement that nonetheless transfers money from the defendant to the claimant.³⁵¹ Someone may settle out of court for an agreed-upon amount, but then she never gets what was promised her.³⁵² Gaps between law on the books and law in action happen all the time.

But the new judicial deference is different. New judicial deference occurs not when there is a gap between the law as announced by one set of actors (legislators and judges) and the law as carried out by another (citizens, lawyers, prosecutors, and police). Instead, new judicial deference occurs when a single judicial opinion pulls in both directions at once. In these cases, law on the books is not different from law in action. Law on the books is different from law on the books. **Courts say one thing and permit another thing to be done, and they do both within the four corners of the same judgment.**

Our review of the 9/11 cases has emphasized that inspiring rhetoric has generally been paired with incomplete detail about what should happen next. As a result, actors to whom the opinions were directed had to work out new solutions within very general outlines. Because opinions in these high-profile detention cases spectacularly lacked any detail that would have provided logical remedies to follow easily, those who won their cases had to start out on a new road full of uncertainties and novel hurdles while **the government against which the decisions ran could find endless ways to block speedy resolution of the issues.**

In designing a gap between right and remedy, the post-9/11 cases are not alone. In other highly contested, high-visibility cases, courts have used this strategy before. Take, for example, abortion cases. In Roe v. Wade, ³⁵³ the Court created what appeared to be an expansive right, but then in subsequent cases permitted so many regulations about parental consent, waiting times, clinic requirements, and appropriate medical procedures that, in practice, abortion providers found it very difficult to maintain easy access to abortion services.³⁵⁴ Moreover,

abortion services in the United States can be expensive because they are often not covered by insurance.³⁵⁵ The much-trumpeted general right was not backed up by easy access to abortion services. This gap occurred not because reality fell short of a legal promise (the usual law and society problem) but instead because the apparently general right was whittled away by restrictive laws that were in practice inconsistent with the practical realization of the general right.³⁵⁶ Both the right and the restrictions were built into doctrine. By contrast, in Germany, where the Federal Constitutional Court found that a woman's general right to obtain an abortion was far more limited as a matter of doctrine,³⁵⁷ it has been easier – at least in many parts of the country – to get abortions because the procedure was at that time covered by the public health system, with widespread availability of facilities and (until recently) little cost to the woman.³⁵⁸ These, too, are specified in doctrine, softening the harsh effects of the main decision that allowed a balancing of women's rights and fetal rights.

Gaps between the expansive rights outlined in a judicial opinion and the limitations on that right permitted in practice by the same judicial opinion are not the usual fare in court decisions, but they are also not completely new. While a more systematic study would have to be done to see whether this strategy is used by judges more frequently in highly visible and socially contested areas of jurisprudence than in other settings, **“splitting the difference” between uncompromising sides might seem to judges to be particularly attractive in hot-button political settings. The new judicial deference means that both sides win – with one side getting the right in theory while the other side gets the reality on the ground,** each authorized by different aspects of the same judicial decision. By contrast, garden-variety gaps between law in the books and law in action are caused by resistance, evasion, and bureaucratic blocks. New deference builds the conflicts into the legal doctrine.

Deference in terror cases means the Court will pretend to aggressively critique government surveillance while actually supporting its continuation.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

Part III explains why new deference is very different from other patterns with which it might be confused. New deference identifies something other than the usual gap between law in the books and law in action, a gap that the law and society movement has so famously pointed out. **Instead, the gap identified here is built into the opinions themselves.** As a result, the contradiction is not located in the inevitable slip between law and its enforcement but in the connection between right and remedy. In addition, new deference is not just another face of judicial minimalism, in which constitutional theorists – Cass Sunstein, in particular – have counseled judges to go slowly in paddling through rough legal waters. In the terrorism cases, there is nothing minimalist about decisions that break so sharply with the past practice of old deference and generate headlines about how “everything has changed.” If anything, the courts that have taken an aggressive role in the antiterror campaign seem to have been designed to

appear maximalist with their high-flying rhetoric. The decisions therefore are hardly minimalist in ambition or style, even if their results have been incremental. Finally, new deference is not Marbury-ism, to give a name to what the Supreme Court did in Marbury v. Madison. 10 Both Mr. Marbury and the suspected terrorists after 9/11 failed to get much from their victories. But the reasons are different. In Marbury, the Court announced a major new principle in a case that was otherwise minor and court-limiting, making its revolutionary assertion of powers seem less radical in the specific context.¹¹ In Marbury, the Court hid its new light under a barrel, so to speak. In the anti-terrorism cases, by contrast, courts set up a searchlight for all the world to see by announcing a new principle in cases that could not have been more visible or had more at stake. And yet, those who brought the cases felt that the darkness persisted even after they “won.” It appears that the post-9/11 judges who wrote these opinions wanted to be seen to be doing something more than they actually did, while the Marbury judges wanted to appear to be doing less. New deference, as a result, is not just another name for Marbury-ism.¹²

AT: Courts Will Enforce

The Courts covertly defer to the Executive by putting up fake barriers to continue to ignore the follow up cases — Padilla proves.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

Both cases were handed down on the same day.¹³⁵ While the Padilla case may have seemed the easier one because it was not a battlefield capture and all of the judges below had found fault with the detention, **the Court decided to avoid the question.** Finding that Padilla had brought his case to the wrong court in the first place because the commandant of the brig in which he was held was not in New York, the Court ruled that Padilla had to go back and start over again in the proper district court.¹³⁶

Jenny Martinez’s brilliant analysis of this case, which she had argued before the Court, focuses on the way that **the Court sidestepped the substantive question of the legitimacy of the detention by concentrating instead on aspects of the process that surely would not have made a difference to the decision** in the long run.¹³⁷ The case surely would have, and indeed almost did, come back to the Supreme Court again for a final ruling on the legality of the detention; the Court only denied certiorari on the second time around because Padilla would have been incarcerated anyway on other criminal charges.¹³⁸

Even as the Court refused to hear the merits of Padilla’s claim, no language in the Supreme Court’s Padilla judgment pledged deference to the executive in a time of war. In fact, it is hard to tell from the majority opinion in Padilla that this case presented a national security issue at all. Instead the case was decided as if it were a garden-variety habeas action in which jurisdictional precision at the trial level was the core of the matter and forum-shopping was the primary evil to be prevented.¹³⁹ By treating the case as not at all unusual, the Court refused to frame the case in a way that demanded that something be said about deference.

But the odd decision in the case **can hardly be understood as anything other than an evasion.** It not only evaded the question of what to do about Padilla’s detention, but it also evaded the need to defer because it bought time for a political resolution in the case without actually giving the President a judicial stamp of approval on his power to detain. The Court treated Padilla as a normal non-emergency case, and **the President got to maintain his detention without judicial challenge for a while longer.**

The Court will appear to produce strong decisions against the executive while deliberately delaying and rolling back the enforcement — Gitmo proves.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston

University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

The cases arising out of the Guantánamo detentions are so numerous and varied and have been going on for so long that a complete review of all the Guantánamo litigation is impossible.¹⁷⁷ But the three Guantánamo cases that have been decided so far by the Supreme Court have been crucial in setting the parameters of the detentions. All three **appeared to deal severe setbacks** to the Bush Administration policy of maintaining the detentions at Guantánamo while not requiring any oversight from anyone outside the executive branch, the intelligence services, and the military. But all three cases were made from the same recipe as the domestic enemy combatant cases: take a healthy pinch of **robust, defiant language** and mix thoroughly with **muddled remedies**, so that it will take **endless litigation** to result in any change on the ground for the detainees themselves. The result? **New judicial deference, in which the Court will appear to be saving the rule of law from a lawless executive.** But in the immediate aftermath of the decisions, the Court produced results closer to what the executive branch wanted, because each decision left many legal loose ends that had to be tied up before any particular detainee's case could be resolved.

The new model of deference is strong Supreme Court decisions like the plan at the outset with delays in implementation and weak standards to ensure the Executive doesn't have to give up any power. There is zero net improvement in outcomes.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

The Supreme Court's Guantánamo cases examined whether the Court should defer to the political branches in wartime or whether the Court should hold the other branches to their constitutional commitments in time of crisis. Compared with the World War II cases, the post 9/11 detention cases showed that the Supreme Court (and many lower courts) refused to exercise old deference.³³³ Instead, during the heat of the crisis, the courts repeatedly stood up to the President, the Congress, and the President and Congress combined, making them all provide more procedural protections for crisis detainees.

The decisions, as the headlines revealed, were trumpeted as major victories for the detainees and setbacks for the Bush Administration. And yet, more than two years into the Obama Administration's kinder, gentler Guantánamo policy, most of the detainees who were held at Guantánamo when President Obama took office were still there.³³⁴ If in fact Guantánamo housed the worst of the worst, this would not be surprising or even troubling. But even those detainees against whom little evidence has ever been provided to a neutral decision-maker are still there.³³⁵ The continued detentions are, of course, not solely the fault of the courts. Since

the Obama Administration took office, Congress has objected to releasing detainees, which has clearly slowed, and in fact almost completely stopped, the process.³³⁶ But the courts have contributed their part as well, by **slowing review of individual cases** and **developing standards** in individual cases that **favor the government** in determining the legality of continued detention.

If one compares what happened to the detainees themselves, the World War II cases and the post-9/11 cases look very different, but not in the direction one would expect. However horrible the Japanese internment was (and it is surely now recognized as one of the most egregious actions the U.S. government has ever taken),³³⁷ it lasted less than half as long as the Guantánamo detentions lasted before serious review of the Guantánamo cases began after Boumediene. The Japanese internments began with President Roosevelt's order on February 19, 1942 and ended when the last camp was closed on March 20, 1946.³³⁸ The courts did nothing, but most Japanese internees were held less than four years.³³⁹ The war's end provided the reason for the closure of the internment camps, not any intervention of the judiciary.³⁴⁰ By contrast, in the post-9/11 cases, the courts were very active, right from the start. But the Guantánamo detention center was opened in January 2002 – and it remains open for the foreseeable future. Many of the men have been held at that center for nearly a decade, winning case after case, without being released and without having their cases reviewed by anyone but their immediate captors.³⁴¹ The long process of winning cases while remaining in detention for the Guantánamo detainees has already lasted more than twice as long as the Japanese internment. As many of the detainees have now asked their lawyers, **what does it mean to keep winning cases if nothing in fact changes?**

“Misery is not a competition,”³⁴² and the internment of the Japanese becomes no less serious because other detainees in other national crises have been imprisoned for longer. I compare the two situations simply to note that judicial involvement under the new deference model has produced no obviously better outcomes for the detainees than old judicial deference did. One has to ask why detentions under the post-9/11 litigation where detainees kept “winning” have lasted much longer than detentions in World War II when the courts refused to intervene.

AT: Fiat Ensures Compliance

Even if fiat means the plan's ruling stands, the Court will decline to hear follow up cases — they won't get involved in fights over Executive jurisdiction.

Menitove 10 — Jonathan T. Menatove, JD from Harvard, MA from Yale, Clerked for Hon. Robert W. Sweet, US District Court, Southern District of New York, 2010 (“Once More Unto the Breach: American War Power and a Second Legislative Attempt to Ensure Congressional Input,” University of Michigan Journal of Law Reform, Spring, Available Online via Lexis)

In more recent decisions, the courts have adopted a different approach, refusing to decide cases concerning war power on grounds that the issue is a nonjusticiable political question. During the Vietnam War, Members of Congress sought assistance from the courts in reasserting their constitutionally-provided war power. However, rather than hear these cases, the judiciary sidestepped the issue, declining to hear cases concerning the constitutionality of the continuation of the war on grounds that the political question doctrine prevented the courts from deciding the issue. n90 During the Reagan and Bush Administrations, courts declined to reach the merits in war powers cases relying on other excuses including mootness, n91 ripeness, n92 standing, n93 the doctrines on judicial prudence and equitable discretion, n94 and the notion that Congress would be a better fact-finder than the courts on this issue. n95 Unlike the early Supreme Court cases, or the subsequent Prize Cases and Curtiss-Wright decisions, the judicial branch over the last thirty years has steered clear of the war powers issue.

While the Supreme Court once served as a bulwark in defense of Congress's predominance over the president in administering the war power, subsequent Supreme Court decisions undermined Congress's constitutional authority. The courts have thus revealed themselves as unable to restore the balance of war power to the Framers' original vision. The judiciary's more recent strategy of treating war power as a nonjusticiable political question has unequivocally established that the courts cannot be trusted to protect [*791] Congress. For this reason, Congress must seek to help itself, acting to pass a legislative war power reform act to ensure that its input is considered when the United States goes to war.

Even when the Supreme Court acts decisively, lower courts will continue to defer to Executive Power and the Supreme Court will not take the cases.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

The Supreme Court did not have the last word on the Guantánamo detentions, nor did it seem to want that role. Instead, consistent with new judicial deference, the Court left the details to be worked out by others in long processes that allowed the situation on the ground to remain the

same during negotiations over the new policy. Since the Court decided Boumediene, the bold guarantees of due process that the Court announced have been turning into something less robust on the ground, as a result of decisions by the Court of Appeals for the District of Columbia spelling out the details.³⁰⁹ Several judges on that court have made no secret of the fact that they believed that the Supreme Court overstepped its authority in deciding Boumediene in the first place.³¹⁰ As a result, the emerging legal standards for the detention created by the D.C. Circuit are often much more deferential to executive detention than the Supreme Court decision was.³¹¹ For example, the D.C. Circuit's jurisprudence in these cases has permitted continued detention where the evidence against the detainee consists entirely of hearsay.³¹² The government only has to show "a preponderance of the evidence" in order to sustain detentions, according to some of the judges, while other judges have argued that an even lower standard suffices for the government to carry its burden of proof in these cases.³¹³ These are standards designed to give the benefit of the doubt to the government and to allow detentions to continue even with shaky proof.

The plan is exactly like the other Court rulings on terror — a bold statement that's light on details and enforcement — it won't be successfully implemented by lower courts even if the Supreme Court has good intentions.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 ("The New Judicial Deference," Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

As Sunstein recognized, the Supreme Court's terrorism jurisprudence was not really minimalist. Yes, courts left many questions open for future resolution. But they hid the incompleteness while trumpeting their more assertive pronouncements in a manner deeply inconsistent with minimalism. Judges in the post-9/11 cases almost seemed to be seeking the headlines that attributed maximalist intentions to their courts. So, when the newspapers blared "Court Overrules Bush on Enemy Combatants"³⁷⁸ after Hamdi or "High Court Rejects Bush's Claim that He Alone Sets Detainee Rules"³⁷⁹ after Hamdan, the press did not see the Court as minimalist. In fact, given the highflown rhetoric the Court used in these cases – for example, the Court stated, "[A] state of war is not a blank check for the President when it comes to the rights of the Nation's citizens"³⁸⁰ and "The Constitution is best preserved by reliance on standards tested over time and insulated from the pressures of the moment"³⁸¹ – the Court did not seem to want to appear to be minimalist. The Court invited the headlines that the press used.

Moreover, the decisions in the terrorism cases were not in fact minimalist in their broad outlines. They did decide a number of questions that they did not have to reach and in ways that left little scope for democratic debate. In Hamdi, the Court may have narrowly permitted Hamdi's detention on the grounds that the AUMF authorized it in a battlefield context, but the Justices granted habeas rights in such a way that there was nothing for a disagreeing Congress to do but attempt to override the Court. And then, in Boumediene, evaluating what Congress

had done in democratic response to their handiwork in Rasul when Congress blocked the extension of habeas rights to offshore aliens, the Court upped the constitutional ante by elevating the habeas claims to constitutional status.

Of course, the Justices were being minimalist in other ways – but in ways that were **hidden from public view**. The Justices left many questions open. But it was not minimalist to refuse to answer questions about the specific shape of habeas review once the Court had decided habeas review was required. Instead, the Court failed to provide any guidance to other courts that were trying to carry out what the Court had boldly told them they had to do. The Court issued decisions that were incomplete rather than minimalist. The decisions were not restrained; they were vague. It was as if the Justices suddenly required others to march to a new and distant destination and then refused to provide any directions for how to get there. The announcement that there would be a march to the new and distant destination was the bold step that denied minimalism; the lack of directions made the decision not minimalist, only incomplete. Refusing to give directions to those one has ordered off on a new journey does not feel like democratic empowerment to those on the road.

The plan is a court decision without detailed means of enactment or enforcement — like the terrorism cases, it appears to give a surveillance victory while masking the ongoing actions of the government.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

New judicial deference in the post-9/11 terrorism cases may look like Marbury-ism because the suspected terrorists who won their cases on principle nonetheless did not get the remedies they sought. And neither had Mr. Marbury. The rights announced in both Marbury and the terrorism cases **wound up empty**.

But the crucial difference between Marbury and the post-9/11 cases is that the Court announced the lack of a remedy in Marbury. The Court said straight out that it had no power to issue the writ that Mr. Marbury sought. He therefore did not get his commission from the Court because the Court said it would not give it to him.

By contrast, the Supreme Court in the post-9/11 cases always held out the possibility of a remedy and in fact **acted as if it had provided one**. The petitioners won bold victories on virtually all important questions. The suspected terrorists were told by the Court that they had rights, and **the president, Congress, and the lower courts were told to act accordingly**. The petitioners could not realize these rights, however, not because the Court ultimately ruled **against them** and refused to provide the ticket that would enable them to ride to victory – that was Mr. Marbury’s problem – **but instead because the Court gave them rights that were all**

dressed up but had nowhere to go. The Court failed to provide instructions for the other institutions that had to put into practice what the Court had ordered them to do. The lack of instructions invited another round of litigation to figure out how to make the rights real. **This bought time for the government to continue what it had been doing** – and that was why there was no speedy remedy. The Court in the terrorism cases, unlike in Marbury, did not actually refuse the remedy; the remedy was made impossible because the Court announced rights whose content was not specified in any way that could be enforced, without coming back again through the courts to get more detailed specifications. Marburyism and new deference may look the same because there is a gap between right and remedy. But Marbury denied the remedy while the post-9/11 cases ordered remedies that were impossible to realize.

“New Deference” means the Executive gets to continue the practice even after it’s declared unconstitutional. The Court can’t intervene.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

This is why we should consider the brave and bold decisions that found for the suspected terrorists not as an absence of deference, as the judgment themselves often trumpeted, but instead as a new form of deference. As separation of powers cases, the decisions reviewed here created a bold place for the judiciary and stood firm against go-it-alone executive action, both important principles to maintain during a crisis. But as individual rights cases, these decisions provided little immediate relief because they were not specific enough about the next steps for vindicating the rights that detainees were found to have. The combination – long on principle, short on immediate results – is new judicial deference. The government may have lost as a general matter in these cases, but it won by getting effective permission to keep the offending practices in effect long after the government lost in court.

Circumvention & Non-Compliance File - HSS 2015

Thanks to Maggie Berthiaume of Woodward – she put together nearly all of these cards.

****Negative Starts Here**

Versus Packet Aff

Specific to the Packet Aff (Original Freedom Act)

Aff can't solve because of circumvention. Even Original Freedom Act is not strict enough.

Granick '14

Jennifer Granick is the Director of Civil Liberties at the Stanford Center for Internet and Society. Jennifer was the Civil Liberties Director at the Electronic Frontier Foundation. Jennifer practices, speaks and writes about computer crime and security, electronic surveillance, consumer privacy, data protection, copyright, trademark and the Digital Millennium Copyright Act. From 2001 to 2007, Jennifer was Executive Director of CIS and taught Cyberlaw, Computer Crime Law, Internet intermediary liability, and Internet law and policy. Before teaching at Stanford, Jennifer earned her law degree from University of California, Hastings College of the Law and her undergraduate degree from the New College of the University of South Florida. "USA Freedom Act: Oh, Well. Whatever. Nevermind." – Just Security - May 21, 2014 <http://justsecurity.org/10675/usa-freedom-act-oh-well-whatever-nevermind/>

Additionally, in December of 2013, Deputy Attorney General James Cole testified before the Senate Judiciary Committee that the NSA might continue its bulk collection of nearly all domestic phone call records, even if the original USA FREEDOM ACT passed into law. As I wrote at the time, this testimony shows that the Administration and the intelligence community believe they can do whatever they want, regardless of the law is Congress passes, so long they can convince one of the judges appointed to the secretive Foreign Intelligence Surveillance Court (FISC) to agree. All they need is some legal hook they can present with a straight face.

General

1NC — Surveillance Noncompliance Defense

“Reforms” like the plan will be circumvented.

Greenwald 14 — Glenn Greenwald, journalist who received the 2014 Pulitzer Prize for Public Service for his work with Edward Snowden to report on NSA surveillance, Founding Editor of *The Intercept*, former Columnist for the *Guardian* and *Salon*, recipient of the Park Center I.F. Stone Award for Independent Journalism, the Online Journalism Award for investigative work on the abusive detention conditions of Chelsea Manning, the George Polk Award for National Security Reporting, the Gannett Foundation Award for investigative journalism, the Gannett Foundation Watchdog Journalism Award, the Esso Premio for Excellence in Investigative Reporting in Brazil, and the Electronic Frontier Foundation’s Pioneer Award, holds a J.D. from New York University School of Law, 2014 (“Congress is Irrelevant on Mass Surveillance. Here’s What Matters Instead.”)

The Intercept, November 19th, Available Online at <https://firstlook.org/theintercept/2014/11/19/irrelevance-u-s-congress-stopping-nsas-mass-surveillance/>, Accessed 06-16-2015)

All of that illustrates what is, to me, the most important point from all of this: the last place one should look to impose limits on the powers of the U.S. government is . . . the U.S. government. Governments don’t walk around trying to figure out how to limit their own power, and that’s particularly true of empires.

The entire system in D.C. is designed at its core to prevent real reform. This Congress is not going to enact anything resembling fundamental limits on the NSA’s powers of mass surveillance. Even if it somehow did, this White House would never sign it. Even if all that miraculously happened, the fact that the U.S. intelligence community and National Security State operates with no limits and no oversight means they’d easily co-opt the entire reform process. That’s what happened after the eavesdropping scandals of the mid-1970s led to the establishment of congressional intelligence committees and a special FISA “oversight” court—the committees were instantly captured by putting in charge supreme servants of the intelligence community like Senators Dianne Feinstein and Chambliss, and Congressmen Mike Rogers and “Dutch” Ruppertsberger, while the court quickly became a rubber stamp with subservient judges who operate in total secrecy.

Ever since the Snowden reporting began and public opinion (in both the U.S. and globally) began radically changing, the White House’s strategy has been obvious. It’s vintage Obama: Enact something that is called “reform”—so that he can give a pretty speech telling the world that he heard and responded to their concerns—but that in actuality changes almost nothing, thus strengthening the very system he can pretend he “changed.” That’s the same tactic as Silicon Valley, which also supported this bill: Be able to point to something called “reform” so they can trick hundreds of millions of current and future users around the world into believing that their communications are now safe if they use Facebook, Google, Skype and the rest.

Surveillance restrictions entirely fail — no real Congressional support, new technology and creative interpretations of law.

Waldman 15 — Paul Waldman, senior writer at The American Prospect, blogger for the Washington Post, 2015 (“A reality check on the future of government spying,” Washington Post, June 3rd, Available Online at <http://www.washingtonpost.com/blogs/plum-line/wp/2015/06/03/a-reality-check-on-the-future-of-government-spying/>, Accessed 06-08-2015)

It’s tempting to hail the passage yesterday of the subtly-named USA Freedom Act as a victory for civil liberties in America and a step toward a healthy recalibration of the government’s surveillance policies. But if that’s your feeling today, **you might want to think twice.**

Not only are the changes the Freedom Act makes to existing practices relatively minor, **both parties have signed on with the dramatic expansion of surveillance on law-abiding Americans** that occurred after September 11. **And both will continue to support it.**

The Freedom Act does take the bulk collection of Americans’ telephone records out of the hands of the National Security Agency and leaves those records with the phone companies; it sets up procedures for the NSA to get access to those records when it wants to. But the truth is that **this program wasn’t particularly useful for the NSA to begin with.** The government has been unable to point to a single terrorist attack that was thwarted by the use of these records. Not only that, just last month an appeals court ruled that the bulk collection program went way beyond anything envisioned by the section of the USA Patriot Act that was used to justify it, and it was therefore illegal.

That doesn’t mean this new law isn’t significant, because anything that dials back the surveillance contained in the Patriot Act is significant. But let’s not forget that had Edward Snowden not revealed the existence of this program, the Obama administration would have been happy to keep it secret from the public indefinitely. It was only once the program’s existence was revealed that President Obama came out in favor of taking the records out of the NSA’s hands. Even if many Republicans (including Mitch McConnell) would have preferred to keep the bulk collection going as it was, we still have a bipartisan preference in Washington for keeping the gargantuan surveillance apparatus we set up after 9/11 in business.

You might not have expected that from Barack Obama if you were a liberal who supported him over Hillary Clinton in the 2008 primaries, concluding that he was the dove while she was the hawk because of his opposition to the Iraq War. As a senator, Obama had been quite active in proposing reforms to the government’s surveillance powers; as president, most of what he advocated has **fallen by the wayside.**

And is Clinton going to move to restrict the government’s surveillance powers if she’s elected president? There’s no particular reason to believe she will. Up until now Clinton has been vague about what she might do when it comes to surveillance; when she’s asked about it, her answers tend to go like this: Yes there are concerns about privacy, we have to balance that with security, it’s something I’ll be thinking about. Yes, she supported the Freedom Act, but it remains to be

seen whether she'll go into detail about any other particular type of surveillance she'd like to restrict.

And let's not forget that the NSA and other government agencies are certain — **not possible, not likely, but certain** — to come up with new ways to spy on Americans as new technologies become available. Just as the NSA did with the bulk phone data collection, they'll probably take a look at earlier laws and decide that there's a legal basis for whatever new kind of surveillance they want to begin — and that it's best if the public didn't know about it.

Indeed, just this week an investigation by the Associated Press revealed that the FBI is using aircraft with advanced cameras to conduct investigations without warrants. That's a relatively mundane use of technology, but there will always be new tools and capabilities coming down the pike, and the impulse will always be to put them into operation, then figure out afterward if it's legally justifiable.

The story of the bulk telephone data collection tells us that the only thing likely to restrain the expansion of government surveillance is public exposure. If you're hoping that politicians who care about privacy will do it on their own, you're likely to be disappointed.

Alternate Rationale — the government will find another way to get the same data. FISA Court is unable to intervene.

Ackerman 15 — Spencer Ackerman, national security editor for Guardian US, former senior writer for Wired, won the 2012 National Magazine Award for Digital Reporting, 2015 (“Fears NSA will seek to undermine surveillance reform,” The Guardian, June 1st, Available Online at <http://www.theguardian.com/us-news/2015/jun/01/nsa-surveillance-patriot-act-congress-secret-law>, Accessed 06-08-2015)

The USA Freedom Act is supposed to prevent what Wyden calls “secret law”. It contains a provision requiring congressional notification in the event of a novel legal interpretation presented to the secret Fisa court overseeing surveillance.

Yet in recent memory, the US government permitted the NSA to **circumvent the Fisa court entirely. Not a single Fisa court judge** was aware of Stellar Wind, the NSA's post-9/11 constellation of bulk surveillance programs, from 2001 to 2004.

Energetic legal tactics followed to fit the programs under existing legal authorities after internal controversy or outright exposure. When the continuation of a bulk domestic internet metadata collection program risked the mass resignation of Justice Department officials in 2004, an internal NSA draft history records that attorneys found a **different legal rationale** that “essentially gave NSA the same authority to collect bulk internet metadata that it had”.

After a New York Times story in 2005 revealed the existence of the bulk domestic phone records program, attorneys for the US Justice Department and NSA argued, with the blessing of the Fisa

court, that Section 215 of the Patriot Act authorized it all along – precisely the contention that the second circuit court of appeals rejected in May.

Compliance is a joke — the oversight agencies are inept and the NSA and FBI refuse to be monitored, even by the Justice Department.

Schulberg and Reilly 15 — Jessica Schulberg, reporter covering foreign policy and national security for The Huffington Post, former reporter-researcher at The New Republic, MA in international politics from American University, and Ryan J. Reilly, reporter who covers the Justice Department and the Supreme Court for The Huffington Post, 2015 (“Watchdog Finds Huge Failure In Surveillance Oversight Ahead Of Patriot Act Deadline,” Huffington Post, May 21st, Available Online at http://www.huffingtonpost.com/2015/05/21/section-215-oversight_n_7383988.html, Accessed 06-05-2015)

WASHINGTON -- In a declassified and heavily redacted report on a controversial Patriot Act provision, the Justice Department’s inspector general found that the government had **failed to implement guidelines** limiting the amount of data collected on Americans for seven years.

Section 215 of the Patriot Act, which is set to expire June 1 unless Congress reauthorizes it, has been the legal basis for the intelligence community’s bulk metadata collection. As a condition for reauthorization back in 2005, the Justice Department was required to minimize the amount of nonpublic information that the program gathered on U.S. persons. According to the inspector general, **the department did not** adopt sufficient guidelines until 2013. It was not until August of that year -- two months after the bombshell National Security Agency disclosures by Edward Snowden -- that Justice began applying those guidelines in applications to the Foreign Intelligence Surveillance Act court, the secretive body that approves government surveillance requests.

“It’s an indictment of the system of oversight that we’ve relied upon to check abuses of surveillance powers. The report makes clear that, for years, the FBI **failed to comply with its basic legal requirements** in using Section 215, and that should trouble anyone who thinks that secret oversight is enough for surveillance capabilities that are this powerful,” Alex Abdo, a staff attorney at the American Civil Liberties Union, told HuffPost.

“The report confirms that the government has been using Section 215 to collect an ever-expanding universe of records. Given the timing, it’s particularly significant,” he continued referring to the looming expiration date.

At times during that seven-year period, the report noted, **the government blocked the Justice Department’s** Office of the Inspector General from determining whether the minimization guidelines had been implemented:

The FBI in the past has taken the position, over the OIG’s objections, **that it was prohibited from disclosing FISA-acquired information to the OIG for oversight purposes** because the Attorney General had not designated anyone in the OIG as having

access to the information for minimization reviews of other lawful purposes, and because there were no specific provisions in the procedures authorizing such access.

The president will use signing statements to ignore the laws that he signs — empirically proven on surveillance and War on Terror.

Van Bergen 6 — Jennifer Van Bergen, JD, author of *The Twilight of Democracy: The Bush Plan For America*, Professor at Santa Fe Community College, 2006 (“The Unitary Executive: Why the Bush Doctrine Violates the Constitution,” *Couterpunch*, January 12th, Available Online at <http://www.couterpunch.org/2006/01/12/the-unitary-executive/>, Accessed 06-07-2015)

When President Bush signed the new law, sponsored by Senator McCain, restricting the use of torture when interrogating detainees, he also issued a Presidential signing statement. That statement asserted that his power as Commander-in-Chief gives him the authority to bypass the very law he had just signed.

This news came fast on the heels of Bush’s shocking admission that, since 2002, he has repeatedly authorized the National Security Agency to conduct electronic surveillance without a warrant, in flagrant violation of applicable federal law.

And before that, Bush declared he had the unilateral authority to ignore the Geneva Conventions and to indefinitely detain without due process both immigrants and citizens as enemy combatants.

All these declarations echo the refrain Bush has been asserting from the outset of his presidency. That refrain is simple: **Presidential power must be unilateral, and unchecked.**

But the most recent and blatant presidential intrusions on the law and Constitution supply the verse to that refrain. They not only claim unilateral executive power, but also supply the train of the President’s thinking, the texture of his motivations, and the root of his intentions.

They make clear, for instance, that the phrase "unitary executive" is a code word for a doctrine that favors nearly unlimited executive power. Bush has used the doctrine in his signing statements to quietly expand presidential authority.

The President will explicitly violate legislative restrictions on surveillance during the war on terror. The resulting conflict will endanger the rule of law and impair wartime decisions.

Lobel 8 — Jules Lobel, Professor of Law at the University of Pittsburgh, 2008 (“Conflicts Between the Commander in Chief and Congress: Concurrent Power over the Conduct of War,” *Ohio State Law Journal*, Vol. 69, 2008, pp.391-467, Available Online at http://moritzlaw.osu.edu/students/groups/oslj/files/2012/04/69.3.lobel_.pdf, Accessed 05-29-2015)

The critical difficulty with a contextual approach is its inherent ambiguity and lack of clarity, which tends to sharply shift the balance of power in favor of a strong President acting in disregard of congressional will. For example, the application of the Feldman and Issacharoff test asking whether the congressional restriction makes realistic sense in the modern world would yield no coherent separation of powers answer if applied to the current Administration's confrontation with Congress. It would undoubtedly **embolden the President to ignore Congress's strictures**. The President's advisors would argue that the McCain Amendment's ban on cruel and inhumane treatment, or **FISA's requirement of a warrant, does not make realistic sense in the context of the contemporary realities of the war on terror** in which we face a shadowy, ruthless nonstate enemy that has no respect for laws or civilized conduct, a conclusion hotly disputed by those opposed to the President's policies. Focusing the debate over whether Congress has the power to control the treatment of detainees on the President's claim that the modern realities of warfare require a particular approach will merge the separation of powers inquiry of who has the power with the political determination of what the policy ought to be. Such an approach is likely to encourage the President to ignore and violate legislative wartime enactments whenever he or she believes that a statute does not make realistic sense—that is, when it conflicts with a policy the President embraces. 53

The contextual approach has a “zone of twilight” quality that Justice Jackson suggested in *Youngstown*. 54 Often constitutional norms matter less than political realities—wartime reality often favors a strong President who will overwhelm both Congress and the courts. While it is certainly correct—as Jackson noted—that neither the Court nor the Constitution will preserve separation of powers where Congress is too politically weak to assert its authority, a fluid contextual approach is an invitation to Presidents to push beyond the constitutional boundaries of their powers and **ignore legislative enactments that seek to restrict their wartime authority**.

Moreover, another substantial problem with a contextual approach in the war powers context is that the judiciary is unlikely to resolve the dispute. 55 The persistent refusal of the judiciary to adjudicate the constitutionality of the War Powers Resolution strongly suggests that courts will often refuse to intervene to resolve disputes between the President and Congress over the constitutionality of a statute that a President claims impermissibly interferes with her conduct of an ongoing war. 56 This result leaves the political branches to engage in an **intractable dispute** over the statute's constitutionality that **saps the nation's energy, diverts focus** from the political issues in dispute, and **endangers the rule of law**.

Additionally, in wartime it is often important for issues relating to the exercise of war powers to be resolved quickly. Prompt action is not usually the forte of the judiciary.

If, however, a constitutional consensus exists or could be consolidated that Congress has the authority to check the President's conduct of warfare, that consensus might help embolden future Congresses to assert their power. Such a consensus might also help prevent the **crisis, chaos, and stalemate** that may result when the two branches assert competing constitutional positions and, as a practical matter, judicial review is unavailable to resolve the dispute.

Moreover, the adoption of a contextual, realist approach will undermine rather than aid the cooperation and compromise between the political branches that is so **essential to success in wartime**. In theory, an unclear, ambiguous division of power between the branches that leaves

each branch uncertain of its legal authority could further compromise and cooperation. However, **modern social science research** suggests that the opposite occurs. 57 Each side in the dispute is likely to grasp onto aspects or factors within the ambiguous or complex reality to support its own self-serving position. This **self-serving bias** hardens each side's position and allows the **dispute to drag on**, as has happened with the ongoing, unresolved dispute over the constitutionality of the War Powers Resolution. Pg. 407-409

2NC/1NR — Legal Interpretations

NSA reform gets quietly rolled back — expansive interpretations and FISA rubber stamps.

Ackerman 15 — Spencer Ackerman, national security editor for Guardian US, former senior writer for Wired, won the 2012 National Magazine Award for Digital Reporting, 2015 (“Fears NSA will seek to undermine surveillance reform,” The Guardian, June 1st, Available Online at <http://www.theguardian.com/us-news/2015/jun/01/nsa-surveillance-patriot-act-congress-secret-law>, Accessed 06-08-2015)

Privacy advocates fear the National Security Agency will attempt to weaken new restrictions on the bulk collection of Americans’ phone and email records **with a barrage of creative legal wrangles**, as the first major reform of US surveillance powers in a generation looked likely to be a foregone conclusion on Monday.

The USA Freedom Act, a bill banning the NSA from collecting US phone data in bulk and compelling disclosure of any novel legal arguments for widespread surveillance before a secret court, has already been passed by the House of Representatives and on Sunday night the Senate voted 77 to 17 to proceed to debate on it. Between that bill and a landmark recent ruling from a federal appeals court that rejected a longstanding government justification for bulk surveillance, civil libertarians think they stand a chance at stopping attempts by intelligence lawyers to undermine reform in secret.

Attorneys for the intelligence agencies react scornfully to the suggestion that they will stretch their authorities to the breaking point. Yet reformers remember that such legal tactics during the George W Bush administration allowed the NSA to shoehorn bulk phone records collection into the Patriot Act.

Rand Paul, the Kentucky senator and Republican presidential candidate who was key to allowing sweeping US surveillance powers to lapse on Sunday night, warned that NSA lawyers would now **make mincemeat** of the USA Freedom Act’s prohibitions on bulk phone records collection by taking an **expansive view of the bill’s definitions**, thanks to a **pliant, secret** surveillance court.

“My fear, though, is that the people who **interpret** this work at a place known as the rubber stamp factory, the Fisa [court],” Paul said on the Senate floor on Sunday.

Surveillance legislation will be reinterpreted to covertly allow the things it’s intended to ban — USA Freedom Act proves. Legal complexity makes the plan meaningless.

Richman 15 — Sheldon Richman, chairman of the board of trustees of the Center for a Stateless Society and proprietor of the blog Free Association, 2015 (“The USA Freedom Act Is Inscrutable—and That’s How Politicians Like It,” Reason.com, June 7th, Available Online at <http://reason.com/archives/2015/06/07/power-thrives-in-complexity>, Accessed 06-08-2015)

But that's not all. Even a person who might be willing to carve out time to keep an eye on the government will find that doing so is probably more than he can handle. Apart from the natural barriers mentioned above, **government personnel have myriad ways to obscure what they do.** Whether this is done innocently or deliberately, the effect is the same. To most people the costs of monitoring the state are raised to prohibitive levels. This lets politicians and bureaucrats get away with things they might not otherwise get away with.

The controversy over the USA Patriot Act and USA Freedom Act provides a good illustration of this problem. Before getting into that, however, let's look at the theory a little more closely. Fortunately, we have an excellent book on the subject: economist Charlotte Twight's *Dependent on D.C.: The Rise of Federal Control over the Lives of Ordinary Americans* (2002).

Twight's thesis is that the people who run the government have a long list of ways to raise the "political transaction costs" that the taxpayers would have to overcome to keep the state in check. In economics, transaction costs are the money, effort, and time spent on seeing a transaction through to successful completion. If you mow your own lawn, you face no such costs. But if you hire someone, you do. The effort and resources devoted to finding the right person and making sure the job is done right constitute transactions costs.

The political arena has transactions costs also. As Twight puts it: "They are the costs to each of us of perceiving, and acting upon our assessment of, the net costs of particular governmental actions and authority." Besides the inevitable and built-in transaction costs entailed by government, there are also "contrived" costs, that is, those "deliberately created by government officials to increase our costs of assessing and responding to government policies." The array of devices to raise these costs ranges from needless complexity and secrecy to outright lying. These devices have one thing in common: they obscure the government's activities, making it difficult to impossible to see what the state is up to. As a result, most people perceive that even trying to lift the government's veil is essentially futile. (And even if it can be lifted occasionally, what could one person do?) Twight's book contains several historical cases illustrating her theory, including stories about the origins of Social Security, Medicare, and government surveillance—which brings us to Patriot and Freedom Acts.

If you followed the congressional and public debate over whether parts of the Patriot Act should be permitted to expire and whether the Freedom Act would really limit government surveillance, you'd be **understandably bewildered.** The amount of reading was huge, and nearly everyone had a different take. Defenders of government spying wanted simply to extend the sections due to expire, but those who wanted to abolish mass spying took different positions. Just attempting to thoroughly read up on whether the Freedom Act was a worthwhile step toward eliminating bulk phone-data collection or just a cosmetic change would have required giving up your job or your family or both.

You might think you could leave the hard work to the civil-liberties organizations you trust, but that path was not without its problems. The various groups disagreed over whether the bill was a net plus or a net minus. Respected authorities **couldn't be sure** that bulk collection of phone metadata would really end with the bill's passage. For example, the Electronic Frontier Foundation (EFF) said, "So the bulk collection of everybody's phone records? As far as we can tell, this should end that" (emphasis added).

As far as they can tell? They spend all their time watching this stuff.

Likewise, the Freedom of the Press Foundation's postmortem on Congress's action stated:

The USA Freedom Act **supposedly** bans bulk collection of phone records or any other private records, and **we certainly hope it actually does**. But its provisions are **vague and confusing**, leading many legal experts to believe they could be **re-interpreted in secret**—by NSA lawyers with a **history of warping the common definitions** of ordinary words beyond recognition—and could lead the FISA court to continue to allow the NSA to collect large quantities of Americans' data in secret. [Emphasis added.]

The foundation is no more certain that the EFF about the bill's effect on bulk data collection. If these professional experts can't really be sure of the bill's effect, how can the rest of us?

Even the guy who blew the whistle on mass surveillance, Edward Snowden, in a New York Times op-ed celebrating the expiration of Section 215, warns:

Though we have come a long way, the right to privacy ... remains under threat. Some of the world's most popular online services have been enlisted as partners in the N.S.A.'s mass surveillance programs, and technology companies are being pressured by governments around the world to work against their customers rather than for them. Billions of cellphone location records are still being intercepted without regard for the guilt or innocence of those affected. We have learned that our government intentionally weakens the fundamental security of the Internet with "back doors" that transform private lives into open books. Metadata revealing the personal associations and interests of ordinary Internet users is still being intercepted and monitored on a scale unprecedented in history: As you read this online, the United States government makes a note.

So why the big to-do about the Freedom Act? If you wanted to decide for yourself without experts, you could have read the text of the USA Freedom Act. It begins:

SEC. 101. ADDITIONAL REQUIREMENTS FOR CALL DETAIL RECORDS.

(a) Application.—Section 501(b)(2) (50 U.S.C. 1861(b)(2)) is amended—

(1) in subparagraph (A)—

(A) in the matter preceding clause (i), by striking "a statement" and inserting "in the case of an application other than an application described in subparagraph (C) (including an application for the production of call detail records other than in the manner described in subparagraph (C)), a statement"; and...

Well, you get the idea. It goes on that way for a hundred pages. Even when you think you may understand something, you still can't be sure. For example:

SEC. 301. LIMITS ON USE OF UNLAWFULLY OBTAINED INFORMATION.

Section 702(i)(3) (50 U.S.C. 1881a(i)(3)) is amended by adding at the end the following new subparagraph:

"(D) LIMITATION ON USE OF INFORMATION.—

"(i) IN GENERAL.—Except as provided in clause (ii), if the Court orders a correction of a deficiency in a certification or procedures under subparagraph (B), no information obtained or evidence derived pursuant to the part of the certification or procedures that has been identified by the Court as deficient concerning any United States person shall be received in evidence or otherwise disclosed in any trial, hearing, or other proceeding in or before any court, grand jury, department, office, agency, regulatory body, legislative committee, or other authority of the United States, a State, or political subdivision thereof, and no information concerning any United States person acquired pursuant to such part of such certification or procedures shall subsequently be used or disclosed in any other manner by Federal officers or employees without the consent of the United States person, except with the approval of the Attorney General if the information indicates a threat of death or serious bodily harm to any person.

"(ii) EXCEPTION.—If the Government corrects any deficiency identified by the order of the Court under subparagraph (B), the Court may permit the use or disclosure of information obtained before the date of the correction under such minimization procedures as the Court may approve for purposes of this clause."

You might do better with the official summary, but not much.

To complicate things, your interpretation of the text may differ radically from that of the secret FISA court or someone in the Justice Department. Remember, an appeals court ruled that the now-expired Section 215 of the Patriot Act did not authorize bulk-data collection—and the author of the bill agreed.

Surveillance is hardly the only part of government with high contrived political transaction costs. The budget is another. A few years ago I learned the hard way that calculating the effect of budget sequestration is a task that only policy wonks and masochists were likely to undertake.

What's the moral here? Power thrives in complexity, just as roaches flourish in the dark. Complexity raises political transaction costs and thereby reduces public scrutiny and resistance. That's just how the politicians and bureaucrats like it.

Executive Order 12333

Plan can't solve – it won't stop collection under EO 12333.

EPIC '14

(internally quotes former Obama State Department official, John Napier Tye – who had access to programs conducted under EO 1233 authorities. Tye served as section chief for Internet freedom in the State Department's Bureau of Democracy, Human Rights and Labor from January 2011 to April 2014. The Electronic Privacy Information Center or "EPIC" - is a public interest research center in Washington, D.C... EPIC routinely participates as amicus curiae before federal and state courts in cases concerning the protection of privacy. Members of the EPIC Advisory Board are expert in issues of domestic surveillance. "Executive Order 12333" – last footnote of this piece is from July, 2014 – page was last updated in 2015 - <https://epic.org/privacy/surveillance/12333/>)

EPIC has a long-standing interest in public oversight of government surveillance, including activities conducted under Executive Order 12333. As Professor Francesca Bignami has explained, "[t]he NSA's original mandate was considerably elaborated and extended in Executive Order 12,333, promulgated by President Reagan in 1981." EPIC has tracked the government's reliance on **EO 12333**, particularly the reliance on Section 1:12(b)(13), which **authorizes** the NSA to provide "such administrative and technical support **activities within and outside the United States** as are necessary to perform the functions described in sections (1) through (12) above, including procurement." **This provision appears to have opened the door for** the **NSA's broad and unwarranted surveillance of U.S. and foreign citizens.** Executive Order 12333 was signed by President Ronald Reagan on December 4, 1981. It established broad new surveillance authorities for the intelligence community, outside the scope of public law. EO 12333 has been amended three times. It was amended by EO 13284 on January 23, 2003 and was then amended by EO 13555 on August 27, 2004. EO 13555 was subtitled "Strengthened Management of the Intelligence Community" and reflected the fact that the Director of National Intelligence (DNI) now existed as the head of the intelligence community, rather than the CIA which had previously served as the titular head of the IC. EO 13555 partially supplemented and superseded EO 12333. On July 30, 2008, President George W. Bush signed EO 13470, which further supplemented and superseded EO 12333 to strengthen the role of the Director of National Intelligence. Since the Snowden revaluations there has been a great deal of discussion regarding the activities of the IC community, but **relatively little attention has been paid to EO 12333. EO 12333 often serves an alternate basis of authority for surveillance activities above and beyond Section 215 and 702.** As Bruce Schneier has emphasized, **"Be careful when someone from the intelligence community uses the caveat "not under this program," or "not under this authority"; almost certainly it means that whatever it is they're denying is done under some other program or authority.** So when [NSA General Counsel Raj] De said that companies knew about NSA collection under Section 702, it doesn't mean they knew about the other collection programs." Senator Dianne Feinstein (D-CA), Chair of the Senate Intelligence Committee, has said in August 2013 that, "The committee does not receive the same number of official reports on other NSA surveillance activities directed abroad that are conducted pursuant to legal authorities outside of FISA (specifically Executive Order 12333), but I intend to add to the committee's focus on those activities." In July 2014, **a former Obama State Department official**, John Napier Tye, **wrote** an Op-Ed in the Washington Post calling **for greater scrutiny of EO 12333.** Tye noted that "based in part on classified facts that I am prohibited by law from publishing, I believe that **Americans should be even more concerned about** the **collection** and storage of their communications **under Executive Order 12333** than under Section 215." Structure of EO 12333 EO 12333 is divided into three parts (this describes the current EO 12333 as amended). The first part is the bulk of the order, describing the overall goals, directions, duties, and responsibilities of U.S. intelligence efforts. The second part applies to the actual conduct of intelligence activities and includes a prohibition on assassination. The third part consists of general provisions and includes general definitions, implementation, and the requirement of compliance with congressional oversight. Part 1: Goals, Directions, Duties, and Responsibilities with Respect to United States Intelligence Efforts 1:1 Goals 1.2 The National Security Council 1.3 Director of National Intelligence 1.4 The Intelligence Community 1.5 Duties and Responsibilities of the Heads of Executive Branch Departments and Agencies 1.6 Heads of Elements of the Intelligence Community 1.7 Intelligence Community Elements a) The Central Intelligence Agency b) The Defense Intelligence Agency c) The National Security Agency d) National Reconnaissance Office e) The National Geospatial-Intelligence Agency f) The Intelligence and Counterintelligence Elements of the Army, Navy, Air Force, and Marine Corps g) Intelligence Elements of the Federal Bureau of Investigation h) The Intelligence and Counterintelligence Elements of the Coast Guard i) The Bureau of Intelligence and Research, Department of State; The Office of Intelligence and Analysis, Department of the Treasury; The Office of National Security Intelligence, Drug Enforcement Administration; The Office of Intelligence and Analysis, Department of Homeland Security; and the Office of Intelligence and Counterintelligence, Department of Energy. j) The Office of the Director of National Intelligence. 1.8 Department of State 1.9 The Department of the Treasury 1.10 The Department of Defense 1.11 The Department of Homeland Security 1.12 The Department of Energy 1.13 The Federal Bureau of Investigation Part 2: Conduct of Intelligence Activities 2.1 Need 2.2 Purpose 2.3 Collection of Information 2.4 Collection Techniques 2.5 Attorney General Approval 2.6 Assistance to Law Enforcement and Other Civil Authorities 2.7 Contracting 2.8 Consistency With Other Laws 2.9 Undisclosed Participation in Organizations Within the United States 2.10 Human Experimentation 2.11 Prohibition on Assassination 2.12 Indirect Participation 2.13 Limitation on Covert Action Part 3: General Provisions 3.1 Congressional Oversight 3.2 Implementation 3.3 Procedures 3.4 References and Transition

3.5 Definitions 3.6 Revocation 3.7 General Provisions EPIC's Interest In 2012, EPIC sought and obtained from the Office of the Director of National Intelligence the guidelines for the National Counterterrorism Center (NCTC). The NCTC is a part of the intelligence community, which operates under the authority of EO 12333. EPIC has stressed through its comments, statements, and testimony that U.S. intelligence agencies should not exercise broad authority without oversight. Executive Order 12333 is such a case, an order that has never been subject to meaningful oversight by either courts or Congress. Senator Dianne Feinstein, the Chair of the Senate Intelligence Committee, referring to EO 12333, has said, "I don't think privacy protections are built into it. It's an executive policy. The executive controls intelligence in the country." Ronald Reagan executed the order in 1981.

Executive Order 12333 authorizes the collection of not only metadata, but of the actual communications of US citizens, so long as the communications are collected "incidentally."

These communications can then be held for five years, as described by a document that the Director of National Intelligence recently declassified. The NSA has used Executive Order 12333 to justify, among other things, the interception of unencrypted data between Google and Yahoo data centers. None of the currently proposed reforms address the over-broad surveillance authorities established by Executive Order 12333. EPIC has long urged PCLOB to move beyond their Section 215 and Section 702 investigations and examine the scope of information under EO 12333 and the need for greater public oversight. As EPIC Advisory Board member Steven Aftergood has noted, "If they deviated from their own rules, how would it be discovered? I am not satisfied that they have an answer to that question."

EO 12333 secrecy means democratic movement can't solve. It shuts-down any hope for change.

Tye '14

John Napier Tye served as section chief for Internet freedom in the State Department's Bureau of Democracy, Human Rights and Labor from January 2011 to April 2014 – where he had inside access programs under EO 12333 authorities. He is now a legal director of Avaaz, a global advocacy organization. "Meet Executive Order 12333: The Reagan rule that lets the NSA spy on Americans" – Washington Post - July 18th - http://www.washingtonpost.com/opinions/meet-executive-order-12333-the-reagan-rule-that-lets-the-nsa-spy-on-americans/2014/07/18/93d2ac22-0b93-11e4-b8e5-d0de80767fc2_story.html

In March I received a call from the White House counsel's office regarding a speech I had prepared for my boss at the State Department. The speech was about the impact that the disclosure of National Security Agency surveillance practices would have on U.S. Internet freedom policies. The draft stated that "If U.S. citizens disagree with congressional and executive branch determinations about the proper scope of signals intelligence activities, they have the opportunity to change the policy through our democratic process." But the White House counsel's office told me that no, that wasn't true. I was instructed to amend the line, making a general reference to "our laws and policies," rather than our intelligence practices. I did. Even after all the reforms President Obama has announced, some intelligence practices remain so secret even from members of Congress, that there is no opportunity for our democracy to change them. Public debate about the bulk collection of U.S. citizens' data by the NSA has focused largely on Section 215 of the Patriot Act, through which the government obtains court orders to compel American telecommunications companies to turn over phone data. But Section 215 is a small part of the picture and does not include the universe of collection and storage of communications by U.S. persons authorized under Executive Order 12333. From 2011 until April of this year, I worked on global Internet freedom policy as a civil servant at the State Department. In that capacity, I was cleared to receive top-secret and "sensitive compartmented" information. Based in part on classified facts that I am prohibited by law from publishing, I believe that Americans should be even more concerned about the

collection and storage of their communications under Executive Order 12333 than under Section 215. Bulk data collection that occurs inside the United States contains built-in protections for U.S. persons, defined as U.S. citizens, permanent residents and companies. Such collection must be authorized by statute and is subject to oversight from Congress and the Foreign Intelligence Surveillance Court. The statutes set a high bar for collecting the content of communications by U.S. persons. For example, Section 215 permits the bulk collection only of U.S. telephone metadata — lists of incoming and outgoing phone numbers — but not audio of the calls. Executive Order 12333 contains no such protections for U.S. persons if the collection occurs outside U.S. borders. Issued by President Ronald Reagan in 1981 to authorize foreign intelligence investigations, 12333 is not a statute and has never been subject to meaningful oversight from Congress or any court. Sen. Dianne Feinstein (D-Calif.), chairman of the Senate Select Committee on Intelligence, has said that the committee has not been able to “sufficiently” oversee activities conducted under 12333.

NSA uses 12333 as an end-around. Taps the global lines of US companies to circumvent domestic surveillance restrictions.

Pitter ‘14

Laura Pitter, senior national security counsel in Human Rights Watch's US Program, monitors, analyzes and writes on US national security policies. Prior to joining Human Rights Watch, Laura was a journalist, human rights advocate, and attorney who practiced in both the public and private sectors. She was a reporter during the war in Bosnia where she wrote for Time Magazine and Reuters News Agency among other media outlets. Following the war she worked for the United Nations in both Bosnia and post Sept. 11-Afghanistan as a protection and political affairs officer. After Afghanistan, Laura practiced law for eight years, first as a public defender and later with a product liability law firm, both in New York. Laura holds a bachelor's degree from the University of California at Santa Barbara, a master's in international affairs from Columbia University, and a law degree from the University of San Francisco. “US: It's Been a Year Since Snowden, and Nothing's Really Changed” – Human Rights Watch is an independent, international organization that works as part of a vibrant movement to uphold human dignity and advance the cause of human rights for all. June 5, 2014 - <http://www.hrw.org/news/2014/06/05/us-its-been-year-snowden-and-nothings-really-changed>

At the same time that the United States has been forcing companies to turn over data here in the United States at the front end, it has been reportedly collecting their customers' information without their knowledge, by tapping into the main global communication links of Google, Yahoo!, and other companies overseas. The administration is reportedly relying on Executive Order 12333, which authorizes surveillance activities outside the United States, in order to tap into these lines, and is collecting millions of records daily, including metadata, text, audio, and video -- an effort that Google Executive Chairman Eric Schmidt, called "outrageous." It has intercepted packages of technology equipment en route to customers in order to install malware or backdoor-enabling hardware before the equipment reaches its destination, and has been systematically undermining encryption standards and creating backdoors in commercial encryption software.

Section 702

Plan will get circumvented - Section 702 of the FAA allows gathering of “foreign intelligence information”

But first, a brief review: In the past year, we've learned that not only is our telephone data collected -- our Internet communications are under watch. Stunning amounts of data are being collected under the government's interpretation of the Foreign Intelligence Surveillance Act (FISA). U.S. Internet companies turn over the content of communications like texts, emails, videos, and chat messages, under Section 702 of FISA, which authorizes the warrantless collection -- inside American borders -- of communications containing "foreign intelligence information," a term defined to include essentially anything about the foreign affairs of the United States -- so long as at least one person on the end of the communication is located outside the country. According to a recently disclosed 2011 FISA court opinion, roughly 250 million Internet communications were acquired under Section 702; as of April 5, 2013, there were 117,675 active "targets." Those targets, by the way, don't have to be individuals. Under guidelines previously secret but disclosed by Snowden, they can be "facilities" or "places," too -- meaning each target can potentially rope huge numbers of people into the dragnet. All of this collection has been happening under gag orders that prevent the companies from speaking publicly about it or informing their customers in any meaningful way.

Section 702 will be used to circumvent the plan

Nelson ‘15

Steven Nelson is a reporter at U.S. News & World Report. “Senate Passes Freedom Act, Ending Patriot Act Provision Lapse” – USNWR – June 2nd - <http://www.usnews.com/news/articles/2015/06/02/senate-passes-freedom-act-ending-patriot-act-provision-lapse>

The Freedom Act does not revise some of the most significant legal authorities the government uses to conduct surveillance, such as Section 702 of the Foreign Intelligence Surveillance Act, which is used for vast Internet surveillance, and Executive Order 12333, which governs collection of intelligence overseas and,

according to whistleblower John Napier Tye, could be used to override many congressional reforms without court oversight. Section 702 will expire without congressional reauthorization in 2017.

2NC/1NR — Find Another Method

Obama and the NSA will just find another way to collect the same data — shutting down programs empirically fails to end the intrusion.

Ackerman 15 — Spencer Ackerman, national security editor for Guardian US, former senior writer for Wired, won the 2012 National Magazine Award for Digital Reporting, 2015 (“Fears NSA will seek to undermine surveillance reform,” The Guardian, June 1st, Available Online at <http://www.theguardian.com/us-news/2015/jun/01/nsa-surveillance-patriot-act-congress-secret-law>, Accessed 06-08-2015)

The USA Freedom Act, a compromise bill, would not have an impact on the vast majority of NSA surveillance. It would not stop any overseas-focused surveillance program, no matter how broad in scope, nor would it end the NSA’s dragnets of Americans’ international communications authorized by a different law. Other bulk domestic surveillance programs, like the one the Drug Enforcement Agency operated, would not be impacted.

The rise of what activists have come to call “bulky” surveillance, like the “large collections” of Americans’ electronic communications records the FBI gets to collect under the Patriot Act, continue unabated – or, at least, will, once the USA Freedom Act passes and restores the Patriot Act powers that lapsed at midnight on Sunday.

That collection, recently confirmed by a largely overlooked Justice Department inspector general’s report, points to a **slipperiness in shuttering surveillance programs** – one that creates **opportunities for clever lawyers.**

The Guardian revealed in 2013 that Barack Obama had permitted the NSA to collect domestic internet metadata in bulk until 2011. Yet even as Obama closed down that NSA program, the Justice Department inspector general confirms that by 2009, the FBI was already collecting the same “**electronic communications**” metadata under a **different authority.**

It is unclear as yet how the FBI transformed that authority, passed by Congress for the collection of “business records”, into large-scale collection of Americans’ email, text, instant message, internet-protocol and other records. And a similar power to for the FBI gather domestic internet metadata, obtained through non-judicial subpoenas called “National Security Letters”, also exists in a different, non-expiring part of the Patriot Act.

Jameel Jaffer, the deputy legal director of the ACLU, expressed confidence that the second circuit court of appeals’ decision last month would effectively step into the breach. The panel found that legal authorities permitting the collection of data “relevant” to an investigation cannot allow the government to gather data in bulk – setting a potentially prohibitive precedent for other bulk-collection programs.

“We don’t know what kinds of bulk-collection programs the government still has in place, but in the past it’s used authorities other than Section 215 to conduct bulk collection of internet metadata, phone records, and financial records. If similar programs are still in place, the ruling will force the government to reconsider them, and probably to end them,” said Jaffer, whose organization brought the suit that the second circuit considered.

Julian Sanchez, a surveillance expert at the Cato Institute, was more cautious.

“The second circuit ruling establishes that a ‘relevance’ standard is not completely unlimited – it doesn’t cover getting hundreds of millions of people’s records, without any concrete connection to a specific inquiry – but doesn’t provide much guidance beyond that as to where the line is,” Sanchez said.

“I wouldn’t be surprised if the government argued, **in secret**, that nearly anything short of that scale is still allowed, nor if the same Fisa court that authorized the bulk telephone program, in defiance of any common sense reading of the statutory language, went along with it.”

2NC/1NR — Oversight Fails

NSA surveillance explicitly and knowingly violates the FISA statute. The President historically ignores both Congress and the courts in this area. There is no legal remedy.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power and the NSA’s Surveillance Authority II,” testimony before the Senate Judiciary Committee, February 28th, Available Online at <http://www.cato.org/publications/congressional-testimony/wartime-executive-power-nsas-surveillance-authority-ii#26>, Accessed 05-29-2015)

If the president thought the law should be amended to authorize warrantless surveillance of either agents or non-agents, he had a convenient vehicle for that purpose shortly after 9/11. That’s when the PATRIOT Act was passed, substantially enhancing the president’s authority under FISA and expanding his ability to conduct foreign intelligence surveillance. The president could have, but did not, seek new authority for the NSA — authority that he has now decreed, unilaterally, without input from either Congress or the courts.

Maybe Congress would not have approved if asked. Or maybe the courts would have overridden any further loosening of the warrant provisions. But the legal stumbling block for the administration is not just that it failed to get affirmative support for expanded surveillance from Congress and the courts. The bigger predicament is that Congress, without objection from the president, expressly rejected warrantless domestic surveillance and codified that prohibition in the FISA statute, which the president implicitly accepted when he signed the PATRIOT Act.

Because the central problem with the NSA surveillance program is too much unchecked authority in the executive branch, the obvious solution is for the federal legislature or the federal judiciary to intervene. But the courts may decide they cannot play a role: First, the Justice Department will not prosecute; second, surveillance targets who have been secretly monitored are unlikely to know of their victimization; third, potential targets may not be able to prove sufficient injury; and fourth, aggrieved members of Congress have previously been denied legal standing to sue.⁷⁰

That elevates the need for congressional intervention. But the president has resisted asking Congress to approve NSA domestic surveillance because, among other things, publicity might tip off al-Qaeda.⁷¹ Perhaps his concern is legitimate, but “tipping off terrorists” is an excuse not to debate any counterterrorism statute, including the PATRIOT Act, which was nonetheless debated vigorously. Moreover, the president’s rationale assumes that al-Qaeda would be blissfully ignorant of the surveillance but for congressional deliberations.

The administration may be justified in taking measures that in pre-9/11 times could be seen as infringements of civil liberties. After all, the fuzzy text of the Fourth Amendment (unreasonable searches) and the Fifth Amendment (due process) leaves room for exceptions at the margin. But

the executive branch cannot, in the face of an express prohibition by Congress, unilaterally set the rules, execute the rules, and eliminate oversight by the other branches.

() Circumvention inevitable – FISA Courts prove

Brown '14

Bruce Brown - Counsel of Record. BRIEF OF THE REPORTERS COMMITTEE FOR FREEDOM OF THE PRESS AND 17 MEDIA ORGANIZATIONS AS AMICI CURIAE IN SUPPORT OF PLAINTIFF-APPELLANT - The Reporters Committee for Freedom of the Press is an unincorporated association of reporters. The Reporters Committee has provided representation, guidance and research in First Amendment and Freedom of Information Act litigation since 1970. Amicus Brief for Smith v. Obama – before the United States Ninth Circuit Court of Appeals. “Amici” means “friend of the court” and – in this context - is legal reference to the Reporters Committee – Sept 9th - <https://www.eff.org/document/rcfp-smith-amicus-brief>

Internal protections built into these enormous databases cannot prevent overreaching in all cases.⁴ Government documents released in September of 2013 show that for a three-year period, until March 2009, the NSA regularly searched call logs of about 15,000 numbers without having a reasonable ^{articulable} suspicion of terrorism. Josh Gerstein, NSA broke rules on call-tracking program, court filings show, Politico (Sept. 10, 2013), <http://politi.co/17UxEJR>. Further, an internal NSA audit from 2012 revealed that the agency conducted unauthorized searches of data, including phone records and e-mail, of thousands of Americans since 2008. See Barton Gellman, NSA Broke Privacy Rules Thousands of Times Per Year, Audit Finds, Wash. Post (Aug. 15, 2013), <http://wapo.st/16SWco2>. Such conduct – which has “include[d] unauthorized access to intercepted communications, the distribution of protected content[,] and the use of automated systems without built-in safeguards to prevent unlawful surveillance,” id.— cast serious doubt on the government’s ability to police itself when implementing such a far-reaching mass call-tracking program. In fact, the FISA Court chief judge Reggie B. Walton said his court does not have the capacity to investigate issues of noncompliance.” Carol D. Leonnig, Court: Ability to police U.S. spying program limited, Wash. Post (Aug. 15, 2013), <http://wapo.st/1cR581f>.

Even the President admits that existing NSA spying violates the Congressional FISA statute.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power and the NSA’s Surveillance Authority II,” testimony before the Senate Judiciary Committee, February 28th, Available Online at <http://www.cato.org/publications/congressional-testimony/wartime-executive-power-nas-surveillance-authority-ii#26>, Accessed 05-29-2015)

Accordingly, even if the administration establishes that NSA warrantless surveillance during wartime is reasonable in the context of the Fourth Amendment, the question remains whether the NSA program violates the express terms of FISA. It does.

The text of FISA is unambiguous: “A person is guilty of an offense if he intentionally engages in electronic surveillance ... except as authorized by statute.”¹⁸ That provision covers

communications from or to U.S. citizens or permanent resident aliens in the United States. Moreover, the Wiretap Act provides that its procedures and FISA “shall be the exclusive means by which electronic surveillance ... may be conducted.” 19

From the early 1960s until 1973, the NSA, without approval of Congress, used a “watch list” of U.S. citizens and organizations in sorting through intercepted foreign communications. That was known as Project Minaret.²⁰ From 1945 to 1975, telegraph companies gave the NSA copies of most telegrams sent from the United States to overseas. That was known as Project Shamrock, “probably the largest governmental interception program affecting Americans ever undertaken.”²¹ Of course, there were also domestic spying abuses by the Federal Bureau of Investigation under J. Edgar Hoover against suspected communists, Black Panthers, civil rights leaders and others. That’s why FISA was enacted in 1978. It had a dual purpose: to curb abuses while facilitating domestic surveillance for foreign intelligence purposes.

To be sure, the FISA statute was drafted to deal with peacetime intelligence. But that does not mean the statute can be ignored when applied to the post-9/11 war on terror. First, the FISA text makes no distinction between wartime and peacetime. To conduct surveillance without statutory authorization, in wartime or peacetime, is a crime, punishable by up to five years in prison.²² Second, in passing FISA, Congress expressly contemplated warrantless surveillance during wartime, but limited it to the first 15 days after war is declared. The statute reads: “Notwithstanding any other law, the President, through the Attorney General, may authorize electronic surveillance without a court order under this title to acquire foreign intelligence information for a period not to exceed fifteen calendar days following a declaration of war by the Congress.”²³ Third, FISA warrant requirements and electronic surveillance provisions were amended by the USA PATRIOT Act,²⁴ which was passed in response to 9/11 and signed by President Bush. If 9/11 triggered “wartime,” as the administration has repeatedly and convincingly argued, then the amended FISA is clearly a wartime statute.

Some administration supporters have argued that FISA and the PATRIOT Act provide tools that the president had anyway, except he could not use the acquired evidence in a criminal prosecution.²⁵ Yet there is no support for the notion that members of Congress, in passing the two statutes, thought they were simply debating the rules of evidence. Moreover, warrant requirements are triggered even if the government declines to prosecute. Imagine police secretly entering a private home without a warrant, installing bugs on phones and tracer software on computers, searching every room and closet, then leaving, never to be heard from again — no arrest, no indictment, no notice to the target. Clearly, the Fourth Amendment’s warrant provisions have been violated, even if the target is unaware and no fruits of the search are used as evidence in a criminal prosecution. A key purpose of the Amendment is to ensure privacy in those situations in which an expectation of privacy is reasonable.

That said, there may be some international satellite or radio communications that do not come under FISA’s prohibition because the communicating parties could not reasonably expect privacy. But I know of no court case that has denied there is a reasonable expectation of privacy by U.S. citizens and permanent resident aliens in their phone calls and emails.

Moreover, the Justice Department, in a December 2005 letter to Congress, acknowledged that the president’s October 2001 NSA eavesdropping order **did not comply with the** “procedures”

of the **FISA statute**.²⁶ The Department offers two justifications — the first of which I examine next.

The president authorized NSA surveillance without input from Congress or the courts — there is precedent for unilateral actions in this area.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power: Are Warrantless Wiretaps Legal?,” *The Freeman*, a publication of the Foundation for Economic Education, drawn from his testimony before the Senate Judiciary Committee, August 1st, Available Online at <http://fee.org/freeman/detail/wartime-executive-power-are-warrantless-wiretaps-legal/>, Accessed 05-29-2015)

Finally, if the President thought the law should be amended to authorize warrantless domestic surveillance, he had a convenient vehicle for that purpose shortly after 9/11. That’s when the PATRIOT Act was passed, substantially enhancing the president’s authority under FISA and expanding his ability to conduct foreign intelligence surveillance. The President could have, but did not, seek new authority for the NSA—**authority that he has now decreed, unilaterally, without input from either Congress or the courts.**

2NC/1NR — Signing Statements

The President will covertly use signing statements to ensure the law isn't enforced — the Court won't overturn.

Van Bergen 6 — Jennifer Van Bergen, JD, author of *The Twilight of Democracy: The Bush Plan For America*, Professor at Santa Fe Community College, 2006 ("The Unitary Executive: Why the Bush Doctrine Violates the Constitution," *Couterpunch*, January 12th, Available Online at <http://www.couterpunch.org/2006/01/12/the-unitary-executive/>, Accessed 06-07-2015)

Bush has used presidential "signing statements" — statements issued by the President upon signing a bill into law — to expand his power. Each of his signing statements says that he will interpret the law in question "in a manner consistent with his constitutional authority to supervise the unitary executive branch."

Presidential signing statements have gotten very little media attention. They are, however, highly important documents that define how the President interprets the laws he signs. Presidents use such statements to protect the prerogative of their office and ensure control over the executive branch functions.

Presidents also — since Reagan — have used such statements to create a kind of alternative legislative history. Attorney General Ed Meese explained in 1986 that:

To make sure that the President's own understanding of what's in a bill is the same . . . is given consideration at the time of statutory construction later on by a court, we have now arranged with West Publishing Company that the presidential statement on the signing of a bill will accompany the legislative history from Congress so that all can be available to the court for future construction of what that statute really means.

The alternative legislative history would, according to Dr. Christopher S. Kelley, professor of political science at the Miami University at Oxford, Ohio, "contain certain policy or principles that the administration had lost in its negotiations" with Congress.

The Supreme Court has paid close attention to presidential signing statements. Indeed, in two important decisions — the Chadha and Bowsher decisions — the Court relied in part on president signing statements in interpreting laws. Other federal courts, sources show, have taken note of them too.

2NC/1NR — Covert Noncompliance

Even if the President claims to support the law, Obama will use the State Secrets Doctrine to covertly avoid compliance with surveillance statutes.

Bazze 12 — Timothy Bazze, litigation associate at Goodwin Procter LLP in Boston, J.D., Georgetown University Law Center, M.I.A., School of International and Public Affairs at Columbia, 2012 (“Shutting The Courthouse Doors: Invoking The State Secrets Privilege To Thwart Judicial Review In The Age Of Terror,” Civil Rights Law Journal, Vol 23, No 1, Available Online at <http://civilrightslawjournal.com/issues/23.29.pdf>, Accessed 06-05-2015)

The war on terror has led to an increased use of the state secrets privilege by the Executive Branch—to dismiss legal challenges to widely publicized and controversial government actions—ostensibly aimed at protecting national security from terrorist threats.¹ Faced with complaints that allege indiscriminate and warrantless surveillance,² tortious detention, and torture that flouts domestic and international law,³ courts have had to reconcile impassioned appeals for private justice with the government’s unyielding insistence on protecting national security. **Courts, almost unanimously, have cast their lot with national security, granting considerable deference to government assertions of the state secrets principle. This deference to state secrets shows no signs of abating; indeed, the growing trend is for courts to dismiss these legal challenges pre-discovery,**⁴ even before the private litigants have had the chance to present actual, non-secret evidence to meet their burden of proof. Although many looked optimistically at President Obama’s inauguration as a chance to break decisively from the Bush Administration’s aggressive application of the state secrets privilege,⁵ the Obama Administration has largely disappointed on the state-secrets front, asserting the privilege with just as much fervor—if not as much regularity⁶ —as its predecessor.⁷

Judicial deference to such claims of state secrecy, whether the claims merit privileged treatment, exacts a decisive toll on claimants, permanently shutting the courthouse doors to their claims and interfering with public and private rights.⁸ Moreover, **courts’ adoption of a sweeping view of the state secrets privilege has raised the specter of the government disingenuously invoking state secrets to conceal government misbehavior under the guise of national security.**⁹ By granting greater deference to assertions of the state secrets privilege, courts share responsibility for eroding judicial review as a meaningful check on Executive Branch excesses. This Article argues for a return to a narrowly tailored state secrets privilege—one that ensures that individuals who allege a credible claim of government wrongdoing retain their due process rights.

Presidents will use secret National Security Directives to continue to thwart Congress and the Courts on surveillance — no effective oversight.

Moe and Howell 99 — Terry M. Moe, William Bennett Munro Professor of Political Science at Stanford University and a senior fellow at the Hoover Institution, and William G. Howell, Ph.D. Candidate at Stanford, now a Professor in American Politics at the University of Chicago Harris School of Public Policy Studies, 1999 (“The Presidential Power of Unilateral Action,” The Journal

of Law, Economics, and Organization, Vol 15 No 1, Available Online at <http://home.uchicago.edu/~whowell/papers/ThePresidential.pdf>, Accessed 06-05-2015)

Presidents also have advantages in foreign affairs because of the expertise they control, and because of the **frequent need for secrecy**. These are reasons why Congress feels the need to delegate—but they also give presidents key resources, whatever the delegation, for taking **unilateral action that can easily go beyond the bounds** of what Congress intends. This is true throughout the realm of foreign policy, but it is perhaps **most consequential for policies bearing on the intelligence community**. While the Central Intelligence Agency and other intelligence organizations within the government have played key roles in U.S. foreign policy, they have been almost entirely under the control of presidents— who have used these agencies to promote their own agendas throughout the world, exercised their control largely in secret, and sometimes, as in the Iran-Contra affair, done things of which Congress would never have approved if it knew (Fleishman and Aufses, 1976).

The key is that Congress often doesn't know. Presidents control the intelligence community through their own orders, with heavy reliance on "national security directives," which can be kept secret. Thus even though Congress, as part of its "resurgence" after Vietnam and Watergate, set up committees to oversee aspects of the intelligence community, the pervasive secrecy has made their job extremely difficult. Consider the words of Lee Hamilton [(D) Indiana], chair of the Iran Contra Committee, who vented his frustration at a 1988 House hearing:

The use of secret [national security directives, or NSDs] to create policy infringes on Congress's constitutional prerogatives by inhibiting effective oversight and limiting Congress's policymaking role. [NSDs] are revealed to Congress only under irregular, arbitrary, or even accidental circumstances, if at all. Even the Intelligence Committees do not usually receive copies of [NSDs]. (U.S. House of Representatives, 1988:29)

2NC/1NR — GCHQ Makes Circumvention Likely

Restrictions on domestic surveillance will be circumvented via data sharing with GCHQ.

Friedersdorf 13 — Conor Friedersdorf, Staff Writer for *The Atlantic*, 2013 (“Is ‘The Five Eyes Alliance’ Conspiring to Spy on You?,” *The Atlantic*, June 25th, Available Online at <http://www.theatlantic.com/politics/archive/2013/06/is-the-five-eyes-alliance-conspiring-to-spy-on-you/277190/>, Accessed 06-21-2015)

Did you know that the United States, Canada, Britain, Australia, and New Zealand participate together in an electronic eavesdropping cooperative called “The Five Eyes Alliance”? Or that Britain “has secretly gained access to the network of cables which carry the world’s phone calls and internet traffic and has started to process vast streams of sensitive personal information which it is sharing with its American partner, the National Security Agency”? That’s big news, right!

It’s also four days old. Maybe some of you caught it, but you know what: The surveillance news is coming so fast these days that it’s nearly impossible to process it all. One day, the scandal is that big Internet companies secretly share data with the U.S. government. A few more days pass, and then this drops:

One key innovation has been GCHQ’s ability to tap into and store **huge volumes of data** drawn from fibre-optic cables for up to 30 days so that it can be sifted and analysed. That operation, codenamed Tempora, has been running for some 18 months. **GCHQ and the NSA are consequently able to access and process vast quantities of communications** between entirely innocent people, as well as targeted suspects. **This includes recordings of phone calls, the content of email messages, entries on Facebook and the history of any internet user’s access to websites** - all of which is deemed legal, even though the warrant system was supposed to limit interception to a specified range of targets.

And this:

By May last year **300 analysts from GCHQ, and 250 from the NSA, had been assigned to sift through the flood of data.** The Americans were given guidelines for its use, but were told in legal briefings by GCHQ lawyers: “We have **a light oversight regime compared with the US**”. When it came to judging the necessity and proportionality of what they were allowed to look for, would-be American users were told it was **“your call”**.

What **this portends is terrifying.**

Say you’re the NSA. By law, there are certain sorts of spying you’re not lawfully allowed to do on Americans. (And agency rules constraining you too.) **But wait. Allied countries have different laws and surveillance rules.** If there are times when America’s spy agency has an easier time spying on Brits, and times when Britain’s spying agency has an easier time spying on Americans, it’s easy to see **where the incentives lead.** Put bluntly, intelligence agencies have an incentive to **make themselves complicit in foreign governments spying on their own citizens.**

Reuters raised this concern:

NSA spokeswoman Judith Emmel rejected any suggestion the U.S. agency used the British to do things the NSA cannot do legally. Under U.S. law, the NSA must get authorization from a secret federal court to collect information either in bulk or on specific people. "Any allegation that NSA relies on its foreign partners to circumvent U.S. law is absolutely false. NSA does not ask its foreign partners to undertake any intelligence activity that the U.S. government would be legally prohibited from undertaking itself," Emmel said.

What about when foreign partners aren't "asked," per se, to collect information the NSA isn't allowed to gather ... but just happen to have it because, you know, they collect basically everything?

The NSA has been misleading Americans at every opportunity lately, so I'm loath to take their word for anything, but even if this sort of cooperation isn't happening now – which I would not assume – it seems like it's inevitably going to happen if Congress doesn't preempt it, right? The alarming scenarios could fill a whole series of international thrillers. If all this had existed back in the aughts, would George W. Bush's NSA have been tempted to share surveillance with Tony Blair on his political opponents, to keep an Iraq War ally in power? How many of Senator Ron Wyden's private communications can the British government access? Do we ever have to worry about the Anglosphere's executives and spy agencies allying with one another against their respective legislatures? So much to ponder. (Oh, for an update of Mother Earth, Mother Board.)

Meanwhile, a suggested question for the White House press corps: "President Obama, how often do foreign governments let the U.S. government access information collected from U.S. citizens who aren't suspected of any crime?"

Even if domestic surveillance authority is curtailed, GCHQ will still collect the data and share it with NSA.

Gay 13 — John Allen Gay, Associate Managing Editor at *The National Interest*, holds an M.A. in International Relations from Syracuse University, 2013 ("Tempora-Fried Conflict of Interest," *The National Interest*, July 16th, Available Online at <http://nationalinterest.org/blog/the-buzz/tempora-fried-conflict-interest-8731>, Accessed 06-22-2015)

Let's agree, for the sake of argument, that the National Security Agency's various data-gathering activities in the United States are unquestionably constitutional, legitimate and necessary. Let's further agree that the oversight regimes in place—internal measures, Congressional committees, and the Foreign Intelligence Surveillance Courts—are robust and transparent enough to prevent abuse. These assumptions are strong enough to address the vast majority of worries about the programs. Yet they do not touch one major concern: foreign intelligence agencies gathering information on Americans.

The United Kingdom's Government Communications Headquarters—GCHQ—was revealed to have a far more extensive collection program than the NSA's. The program, codenamed

Tempora, extracts data from international fiber-optic data cables and then collates it in a manner quite similar to the NSA's PRISM system. But Tempora takes in more, both in scope and in scale. It stores both the content and the associated metadata of communications, unlike the NSA, which merely takes the latter. While one NSA program took in ninety-seven billion pieces of information in one month, at peak rates Tempora could do that in just over two days. And GCHQ lawyers told their NSA counterparts that "we have a light oversight regime compared to the U.S."

Tempora offers major benefits to the United States, as the NSA enjoys access to the data and works closely with GCHQ on exploiting it. The United States and Britain are surely safer and better informed, and they're cooperating in yet another area. Yet there's a big downside for the United States. British cable-tappers are taking in many American communications. Tempora got its start at a GCHQ station at Bude, Cornwall, where many fiber-optic cables from the United States make landfall. This is partly of necessity—the United States is a major waypoint for data flows, so much of what's going from America and into Tempora does not necessarily involve any U.S. persons.

Yet much surely does. And this is concerning for many reasons. For it is one thing when the American government gathers information on Americans. It is another when a foreign government does—whether allied or not.

American citizens are having their privacy violated en masse by a foreign crown—by one of its espionage services, no less. Preventing such activity is one of the core functions of a government. That's part of the reason Washington has been so unhappy with Chinese cyber snooping. That's why numerous states around the world protested—and even took action—when the NSA's programs were revealed.

The U.S. response to the GCHQ's Tempora program should be similar. A government-to-government complaint is natural and appropriate. But so is a second set of steps—educating the American public about methods that could be used to protect their information from foreign peeping. This would likely be far more effective than a mere protest—espionage is, after all, an eternal element of interstate relations, and modern technology has made it terribly easy. The most effective protection must thus focus on individuals. Widespread public adoption of powerful encryption on communications, and of secure communications endpoints (email clients, phone systems, web browsers, etc.), would make mass foreign cyber snooping extremely expensive, as decryption takes time and lots of computing power. Private citizens have already organized collections of free tools that could make this happen—Peng Zhong's PRISM Break is one example.

Yet that particular page's name may hint at why the U.S. government hasn't taken such steps to protect its citizens from foreign espionage. The programs don't discriminate. Making Americans safer from Tempora would also make them safer from PRISM. Further, it would be virtually impossible to keep the rest of the world from taking the same preventive steps, reducing PRISM's effectiveness against foreign targets. The latter problem merely requires that the government balance contending goals. But the former is a conflict of interest.

There are no legal restrictions on NSA usage of GCHQ data.

Wheatley 13 — Mike Wheatley, Senior Staff Writer at *Silicon Angle* where he covers business and technology news, 2013 (“Project Tempora: How the British GCHQ Helps the NSA Spy on US Citizens,” *Silicon Angle*, June 24th, Available Online at <http://siliconangle.com/blog/2013/06/24/project-tempora-how-the-british-gchq-helps-the-nsa-spy-on-us-citizens/>, Accessed 06-22-2015)

Amidst all the media excitement over Ed Snowden’s dramatic flight from Hong Kong to Moscow, one story that slipped under the radar at the end of last week relates how the UK’s version of the NSA, the GCHQ, has been secretly tapping into the fiber optic systems running into and out of the British Isles.

Project Tempora was exposed by The Guardian as part of the Ed Snowden leaks, and is immediately worrying due to its size and the fact that Britain is a major hub for the world’s internet traffic. US readers might think that there’s nothing to worry – after all this is the UK government right? But, according to some sources, the NSA could well be tapping into the data collected by the UK, free from any restrictions it faces under US law.

The report in The Guardian relates how Project Tempora is currently about half-way complete, meaning that not all traffic to the UK is being monitored at the moment. Documents provided by Snowden claim that there are two aspects to Tempora – “Mastering the Internet,” and “Global Telecoms Exploitation,” with the ultimate aim being to allow GCHQ and its allies to monitor up to 90% of all web traffic and telecommunications that pass through the UK.

“As of last year, the agency had gone half way, attaching probes to 200 fibre-optic cables each with a capacity of 10 gigabits per second. In theory, that gave GCHQ access to a flow of 21.6 petabytes in a day, equivalent to 192 times the British Library’s entire book collection.”

According to The Guardian, GCHQ retains the full content of all transmissions – including emails, phone calls, SMS messages etc., – for three days, with the metadata being kept for 30 days. Even worse, a staggering 850,000 people are said to have the security clearance required to access that data. Given that the NSA has already admitted that it shares data from PRISM with the UK, we can presume that GCHQ returns the favor with anything it picks up.

The Atlantic Wire reports that there are more than 400 fiber optic “waystations” scattered across the UK that route incoming traffic from abroad through the country, and cites one in particular as being a big cause of concern for Americans. Bude, located in south-west England on the Atlantic coast, is said to be the main hub for trans-Atlantic web traffic, which means that it scoops up vast amounts of data incoming from the US.

The Guardian continues:

“As the probes began to generate data, GCHQ set up a three-year trial at the GCHQ station in Bude, Cornwall. By the summer of 2011, GCHQ had probes attached to more than 200 internet links, each carrying data at 10 gigabits a second. “This is a massive amount of data!” as one internal slideshow put it. That summer, it brought NSA analysts into the Bude trials.”

So what were the NSA doing in Bude? Well, what else could they be doing but gathering data on US citizens? As we have constantly been reassured, the NSA is only allowed to spy on US citizens if it obtains a warrant from the FISA court first, but according to Alex Abdo, staff attorney at the ACLU's National Security Project, these restrictions almost certainly don't apply to data collected in foreign countries.

"I don't know the answer, but I suspect there are few limitations to doing so," said Abdo to the Atlantic Wire.

All the while the NSA has been stressing how US citizen's privacy is safeguarded under FISA, it's been operating with no restrictions whatsoever when it comes to data obtained by the GCHQ. And as The Guardian reports, checks on the UK's intelligence agency are even less transparent than those in the US:

"In confidential briefings, one of [GCHQ]'s senior legal advisers, whom the Guardian will not name, made a note to tell his guests: "We have a light oversight regime compared with the US."

Preventing *this form* of circumvention is impossible. There is no U.S. government oversight of GCHQ-to-NSA sharing.

Bump 13 — Philip Bump, Writer for *The Wire*—a news publication of *The Atlantic*, 2013 ("The UK Tempora Program Captures Vast Amounts of Data — and Shares with NSA," *The Wire*, June 21st, Available Online at <http://www.thewire.com/national/2013/06/uk-tempora-program/66490/>, Accessed 06-22-2015)

The British Government Communications Headquarters, or GCHQ, maintains taps on fiber optic systems in the United Kingdom, according to the latest Guardian report from the Edward Snowden leaks. The scale of the operation and the centrality of the UK to global network traffic are one concern. How that data is used by the NSA is another.

Working closely with America's National Security Agency, the GCHQ is about halfway done implementing "Project Tempora." Comprised of two parts, suggestively dubbed "Mastering the Internet" and "Global Telecoms Exploitation," the project aims to eventually allow the agency (and its partner) to survey over 90 percent of the cables that route through the United Kingdom, pulling data from 400 at once. "As of last year," the Guardian reports, "the agency had gone half way, attaching probes to 200 fibre-optic cables each with a capacity of 10 gigabits per second. In theory, that gave GCHQ access to a flow of 21.6 petabytes in a day, equivalent to 192 times the British Library's entire book collection." Full content of transmissions is preserved for three days and metadata for 30. Between them, the GCHQ and NSA have 550 analysts poring over the data — and 850,000 people with top secret clearance can access it. We've known for weeks that the NSA shares its PRISM data with the UK; now we know it also goes in reverse.

But Tempora deals only with traffic in the United Kingdom, right? Well, no. Consider a highway, like Interstate 80 that runs from New York to San Francisco. It also runs through Des Moines. So

if Des Moines decided to stop everyone passing on Route 80 to search their cars, they'd end up searching a lot of people who'd never planned on being in Des Moines at all.

In the GCHQ example, Interstate 80 would be one of the many fiber optic throughputs crossing the globe. You can see them all on SubmarineCableMap.com's interactive graphic. When GCHQ wanted to get Tempora running, it first had to pick its Des Moines.

As the probes began to generate data, GCHQ set up a three-year trial at the GCHQ station in Bude, Cornwall. By the summer of 2011, GCHQ had probes attached to more than 200 internet links, each carrying data at 10 gigabits a second. "This is a massive amount of data!" as one internal slideshow put it. That summer, it brought NSA analysts into the Bude trials.

This is what the cables coming into the UK look like. Many of the lines that continue on to Northern Europe stop over in the UK first, waystations from which the GCHQ can take a sniff.

[Graphic Omitted]

But there's one waystation in particular that plays host to incoming traffic — especially from the United States.

[Graphic Omitted]

Which raises a key question. By law, the NSA is only able to collect data on American citizens if it gets the approval of the Foreign Intelligence Surveillance Court — and only as long as the agency is targeting a foreigner. But can it use data collected on Americans by foreign countries? The Atlantic Wire spoke with Alex Abdo, staff attorney at the ACLU's National Security Project. "I don't know the answer," he indicated, "but I suspect there are few limitations to doing so."

The NSA has repeatedly assured members of Congress that its safeguards protect American privacy. The GCHQ has made no such assurances. And the Guardian reports, their intelligence agencies are pleased with the extent to which they can operate in the shadows.

In confidential briefings, one of [GCHQ]'s senior legal advisers, whom the Guardian will not name, made a note to tell his guests: "We have a light oversight regime compared with the US".

The parliamentary intelligence and security committee, which scrutinises the work of the agencies, was sympathetic to the agencies' difficulties, he suggested.

And American oversight mechanisms, of course, play no role at all. "When it came to judging the necessity and proportionality of what they were allowed to look for," the Guardian reports, "would-be American users were told it was "your call"."

Yes, Tempora is still going strong. Nothing has changed since '13.

Fisher 15 — Dennis Fisher, Writer for *Threatpost*—a security news service published by The Kaspersky Lab, an international software security group, 2015 ("Rights Groups Call for More Change Two Years After Snowden Revelations Began," *Threatpost*, June 5th, Available Online at

<https://threatpost.com/rights-groups-call-for-more-change-two-years-after-snowden-revelations-began/113175#sthash.qACObzJc.dpuf>, Accessed 06-22-2015)

The surveillance report from Privacy International and Amnesty International says that despite the changes that have come, the overall surveillance landscape is **virtually the same** as it was before the **Snowden** revelations began.

“Two years on from Edward Snowden’s revelations, the vast mass surveillance apparatus operated by the US and UK intelligence agencies remains intact, and there are no indications on the horizon that they intend to halt the deployment – and indeed the expansion – of their capabilities,” the report says.

“Despite the information that has been revealed to the public, UK and US mass surveillance programmes remain shrouded in secrecy. Nothing illustrates this better than the UK government’s policy of ‘neither confirm nor deny’ (NCND). The NCND policy has left those who brought legal challenges against UK mass surveillance programmes with no choice but to make legal arguments about hypothetical scenarios – this has meant that actual programmes such as **TEMPORA**, the existence of which is clear based on the documents disclosed by Edward Snowden, are shielded from any kind of meaningful scrutiny.”

TEMPORA is one of the programs under which the British GCHQ has tapped undersea cables that carry data traffic.

1NC — Single Branch

Single branch approaches fail — the NSA is so powerful it requires all three branches to control it.

BloombergBusiness 14 — BloombergBusiness, Byline David Lerman, 2014 (“U.S. Spy Agency Reports Improper Surveillance of Americans,” BloombergBusiness Online, December 24th, Available Online at <http://www.bloomberg.com/news/articles/2014-12-24/spy-agency-to-release-reports-documenting-surveillance-errors>, Accessed 06-05-2015)

“The government conducts sweeping surveillance under this authority -- surveillance that increasingly puts Americans’ data in the hands of the NSA,” Patrick C. Toomey, staff attorney with the ACLU’s National Security Project, said in an e-mail.

No Oversight

“Despite that fact, this spying is conducted almost entirely in secret and without legislative or judicial oversight,” he said.

The reports show greater oversight by all three branches of government is needed, Toomey added.

NSA Circumvention

The NSA will independently circumvent the plan — they’ve had decades of non-compliance.

BloombergBusiness 14 — BloombergBusiness, Byline David Lerman, 2014 (“U.S. Spy Agency Reports Improper Surveillance of Americans,” BloombergBusiness Online, December 24th, Available Online at <http://www.bloomberg.com/news/articles/2014-12-24/spy-agency-to-release-reports-documenting-surveillance-errors>, Accessed 06-05-2015)

(Bloomberg) -- The National Security Agency today released reports on intelligence collection that may have violated the law or U.S. policy over more than a decade, including unauthorized surveillance of Americans’ overseas communications.

The NSA, responding to a Freedom of Information Act lawsuit from the American Civil Liberties Union, released a series of required quarterly and annual reports to the President’s Intelligence Oversight Board that cover the period from the fourth quarter of 2001 to the second quarter of 2013.

The heavily-redacted reports include examples of data on Americans being e-mailed to unauthorized recipients, stored in unsecured computers and retained after it was supposed to be destroyed, according to the documents. They were posted on the NSA’s website at around 1:30 p.m. on Christmas Eve.

In a 2012 case, for example, an NSA analyst “searched her spouse’s personal telephone directory without his knowledge to obtain names and telephone numbers for targeting,” according to one report. The analyst “has been advised to cease her activities,” it said.

Other unauthorized cases were a matter of human error, not intentional misconduct.

Last year, an analyst “mistakenly requested” surveillance “of his own personal identifier instead of the selector associated with a foreign intelligence target,” according to another report.

Unauthorized Surveillance

In 2012, an analyst conducted surveillance “on a U.S. organization in a raw traffic database without formal authorization because the analyst incorrectly believed that he was authorized to query due to a potential threat,” according to the fourth-quarter report from 2012. The surveillance yielded nothing.

The NSA’s intensified communications surveillance programs initiated after the Sept. 11, 2001, terrorist attacks on New York and Washington unleashed an international uproar after they were disclosed in classified documents leaked by fugitive former contractor Edward Snowden last year.

The NSA fails to comply with regulations — even the FISA court cannot effectively exercise oversight. The harms of the affirmative will continue.

Toomey 14 — Patrick Toomey, staff attorney in the ACLU's National Security Project, where he works on issues related to electronic surveillance, national security prosecutions, whistleblowing, and racial profiling, JD from Yale Law, former law clerk to the Hon. Nancy Gertner, United States District Judge for the District of Massachusetts, and to the Hon. Barrington D. Parker, United States circuit judge for the Second Circuit Court of Appeals, 2014 ("Too Big To Comply? NSA Says It's Too Large, Complex to Comply With Court Order," ACLU Blog, June 14th, Available Online at <https://www.aclu.org/blog/too-big-comply-nsa-says-its-too-large-complex-comply-court-order>, Accessed 06-05-2015)

In an era of too-big-to-fail banks, we should have known it was coming: An intelligence agency too big to rein in — and brazen enough to say so.

In a remarkable legal filing on Friday afternoon, the NSA told a federal court that its spying operations are **too massive and technically complex to comply with an order** to preserve evidence. The NSA, in other words, now says that it cannot comply with the rules that apply to any other party before a court — the very rules that ensure legal accountability — **because it is too big.**

The filing came in a long-running lawsuit filed by the Electronic Frontier Foundation challenging the NSA's warrantless collection of Americans' private data. Recently, the plaintiffs in that case have fought to ensure that the NSA is preserving relevant evidence — a standard obligation in any lawsuit — and **not destroying the very data that would show the agency spied on the plaintiffs' communications.** Yet, as in so many other instances, the NSA appears to believe it is exempt from the normal rules.

In its filing on Friday, the NSA told the court:

[A]ttempts to fully comply with the Court's June 5 Order would be a massive and uncertain endeavor because the NSA may have to shut down all databases and systems that contain Section 702 information in an effort to comply.

For an agency whose motto is "Collect It All," the NSA's claim that its mission could be endangered by a court order to preserve evidence is a remarkable one. That is especially true given the immense amount of data the NSA is known to process and warehouse for its own future use.

The NSA also argued that retaining evidence for EFF's privacy lawsuit would put it in violation of other rules designed to protect privacy. But what the NSA presents as an impossible choice between accountability and privacy is actually a false one. Surely, the NSA — with its ability to sift and sort terabytes of information — can devise procedures that allow it to preserve the plaintiffs' data here without retaining everyone's data.

The crucial question is this: if the NSA does not have to keep evidence of its spying activities, how can a court ever test whether it is in fact complying with the Constitution?

Perhaps most troubling, the new assertions continue the NSA's decade-long effort to evade judicial review — at least in any public court. For years, in cases like the ACLU's Amnesty v. Clapper, the NSA evaded review by telling courts that plaintiffs were speculating wildly when they claimed that the agency had intercepted their communications. Today, of course, we know those claims were prescient: Recent disclosures show that the NSA was scanning Americans' international emails en masse all along. Now, the NSA would put up a new roadblock — claiming that it is unable to preserve the very evidence that would allow a court to fully and fairly review those activities.

As Brett Max Kaufman and I have written before, **our system of oversight is broken** — this is only the latest warning sign flashing red. The NSA has grown far beyond the ability of its overseers to properly police its spying activities. That includes the secret FISA Court, which has struggled to monitor the NSA's compliance with basic limits on its surveillance activities. It includes the congressional oversight committees, which operate with too little information and too often appear captive to the interests of the intelligence community. And, now we are to believe, it includes the public courts as well.

No intelligence agency should be too big to be accountable to the rule of law.

The NSA breaks privacy rules thousands of times per year — aff's regulations are meaningless.

Washington Post 13 — Washington Post, Byline Barton Gellman, 2013 (“NSA broke privacy rules thousands of times per year, audit finds,” Washington Post, August 15th, Available Online at http://www.washingtonpost.com/world/national-security/nsa-broke-privacy-rules-thousands-of-times-per-year-audit-finds/2013/08/15/3310e554-05ca-11e3-a07f-49ddc7417125_story.html, Accessed 06-06-2015)

The National Security Agency has broken privacy rules or overstepped its legal authority thousands of times each year since Congress granted the agency broad new powers in 2008, according to an internal audit and other top-secret documents.

Most of the infractions involve unauthorized surveillance of Americans or foreign intelligence targets in the United States, both of which are restricted by statute and executive order. They range from significant violations of law to typographical errors that resulted in unintended interception of U.S. e-mails and telephone calls.

The documents, provided earlier this summer to The Washington Post by former NSA contractor Edward Snowden, include a level of detail and analysis that is not routinely shared with Congress or the special court that oversees surveillance. In one of the documents, agency personnel are instructed to remove details and substitute more generic language in reports to the Justice Department and the Office of the Director of National Intelligence.

In one instance, the NSA decided that it need not report the unintended surveillance of Americans. A notable example in 2008 was the interception of a “large number” of calls placed

from Washington when a programming error confused the U.S. area code 202 for 20, the international dialing code for Egypt, according to a “quality assurance” review that was not distributed to the NSA’s oversight staff.

In another case, the Foreign Intelligence Surveillance Court, which has authority over some NSA operations, did not learn about a new collection method until it had been in operation for many months. The court ruled it unconstitutional.

The Obama administration has provided almost no public information about the NSA’s compliance record. In June, after promising to explain the NSA’s record in “as transparent a way as we possibly can,” Deputy Attorney General James Cole described extensive safeguards and oversight that keep the agency in check. “Every now and then, there may be a mistake,” Cole said in congressional testimony.

Executive Noncompliance — Congress

Executive noncompliance likely — long term trends and a weak Congress prove.

Barron and Lederman 8 — David J. Barron, United States Circuit Judge for the United States Court of Appeals for the First Circuit and former Professor of Public Law at Harvard Law School, and Martin S. Lederman, Deputy Assistant Attorney General in the Department of Justice's Office of Legal Counsel, and Professor of Law at Georgetown, 2008 (“The Commander In Chief At The Lowest Ebb — A Constitutional History,” Harvard Law Review, Vol 121, No 4, February, Available Online at http://cdn.harvardlawreview.org/wp-content/uploads/pdfs/barron_lederman2.pdf, Accessed 06-05-2015)

Powers once claimed by the Executive are not easily relinquished. One sees from our narrative how, in a very real sense, the constitutional law of presidential power is often made through accretion. A current administration eagerly seizes upon the loose claims of its predecessors, and applies them in ways perhaps never intended or at least not foreseen or contemplated at the time they were first uttered. The unreflective notion that the “conduct of campaigns” is for the President alone to determine has slowly insinuated itself into the consciousness of the political departments (and, at times, into public debate), and has gradually been invoked in order to question all manner of regulations, from requirements to purchase airplanes, to limitations on deployments in advance of the outbreak of hostilities, to criminal prohibitions against the use of torture and cruel treatment. In this regard, the claims of the current Administration represent as clear an example of living constitutionalism in practice as one is likely to encounter. There is a radical disjuncture between the approach to constitutional war powers the current President has asserted and the one that prevailed at the moment of ratification and for much of our history that followed.

But that dramatic deviation did not come from nowhere. Rarely does our constitutional framework admit of such sudden creations. Instead, the new claims have drawn upon those elements in prior presidential practice most favorable to them. That does not mean our constitutional tradition is foreordained to develop so as to embrace unchecked executive authority over the conduct of military campaigns. At the same time, it would be wrong to assume, as some have suggested, that the emergence of such claims will be necessarily selfdefeating, inevitably inspiring a popular and legislative reaction that will leave the presidency especially weakened. In light of the unique public fears that terrorism engenders, the more substantial concern is an **opposite one**. It is entirely possible that the emergence of these claims of preclusive power will subtly but increasingly influence future Executives to eschew the harder work of accepting legislative constraints as legitimate and actively working to make them tolerable by building public support for modifications. The temptation to argue that the President has an obligation to protect the prerogatives of the office asserted by his or her predecessors will be great. Congress’s capacity to effectively check such defiance will be comparatively weak. After all, the President can veto any effort to legislatively respond to defiant actions, and impeachment is neither an easy nor an attractive remedy.

The prior practice we describe, therefore, could over time become a faint memory, recalled only for the proposition that it is anachronistic, **unsuited for what are thought to be the unique perils of the contemporary world**. Were this to happen it would represent an unfortunate

development in the constitutional law of war powers. Thus, it is incumbent upon legislators to challenge efforts to bring about such a change. Moreover, executive branch actors, particularly those attorneys helping to assure that the President takes care the law is faithfully executed, should not abandon two hundred years of historical practice too hastily. At the very least, they should resist the urge to continue to press the new and troubling claim that the President is entitled to unfettered discretion in the conduct of war.

The President will simply refuse to enforce the law — empirically proven when national security information is involved. This is true *even if he signs the bill into law.*

McGinnis 93 — Assistant Professor, Benjamin N. Cardozo School of Law, former Deputy Assistant Attorney General in the Office of Legal Counsel, Department of Justice, 1993 (“Constitutional Review By The Executive In Foreign Affairs And War Powers: A Consequence Of Rational Choice In The Separation Of Powers,” Law and Contemporary Problems, Vol 56 No 4, Autumn, Available Online at <http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=4213&context=lcp>, Accessed 06-05-2015)

A. The Executive's Rebuff of An Adventitious Congressional Challenge to the Accommodation

One year into President Bush's term, Congress passed the Foreign Relations Authorization Act.⁷⁴ The Act included a provision prohibiting the United States from spending any money authorized for international conferences on the U.S. delegation to the Conference on Security and Cooperation in Europe unless that delegation included representatives of the Commission on Security and Cooperation in Europe.⁷⁵ This Commission was composed almost entirely of members appointed by the legislative branch.⁷⁶

The reasons for Congress's decision to include this provision are obscure,⁷⁷ but a former member of the National Security Council staff recalls that the Counsel to the Foreign Relations Committee of the House of Representatives was particularly interested in these negotiations and wanted to participate in them.⁷⁸ The inclusion of the provision was a sharp challenge to the President's asserted powers in foreign affairs for two reasons. First, presidents from both parties have asserted their authority to represent the United States in foreign affairs and thus control the identity of U.S. negotiators.⁷⁹ Moreover, presidents have also consistently claimed the absolute right to control national security information and prevent its disclosure to Congress—a power that would obviously be impaired if a representative of the legislative branch were required on the negotiating team.⁸⁰

Given the far-reaching challenge to powers of the presidency, President Bush's response was extremely forceful. He announced that the provision was unconstitutional, and that he would refuse to enforce it, permitting him to continue spending funds on the conference. ¹ Announcing his refusal to enforce the provision served the purpose of protecting the boundaries of his powers better than vetoing the bill would have done. By claiming this right of refusal, the President was asserting a power of constitutional review over legislation that interfered with his

constitutional prerogatives, at least in the area of foreign affairs. A veto, even if sustained, would not have permitted the President dramatically to assert a lawmaking role **rivaling that of the Court** in this area.'

The President's move effectively gave him the **last word on the issue**.' Congress could have used its power of impeachment to assert its view of the Constitution (both as to the substance of the President's foreign affairs authorities and as to his authority to refuse to enforce a law), but its use of this power under these circumstances would have seemed politically implausible because of both the relative unimportance of the issue in the public's perception and the general level of support the President enjoyed among the public and Congress at the time. By refusing to enforce the law, the President had effectively called Congress's bluff, both raising the stakes and leaving Congress with no feasible way to make its law binding through the use of its own political powers.

NSA surveillance violates explicit Congressional statutes and Supreme Court case law — the President has refused to comply with appropriate Congressional mandates in the area of surveillance.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power: Are Warrantless Wiretaps Legal?,” *The Freeman*, a publication of the Foundation for Economic Education, drawn from his testimony before the Senate Judiciary Committee, August 1st, Available Online at <http://fee.org/freeman/detail/wartime-executive-power-are-warrantless-wiretaps-legal/>, Accessed 05-29-2015)

Thus the administration can credibly argue that it may conduct some types of warrantless surveillance without violating the Fourth Amendment. And because the president’s Article II powers are elevated during time of war—assuming the AUMF to be the functional, if not legal, equivalent of a declaration of war—his post-9/11 authorization of NSA warrantless surveillance might be justifiable if Congress had not expressly disapproved.

But Congress did expressly disapprove, in the FISA statute. Therefore, the President’s assertion of a national-security exception that encompasses the NSA program misses the point. The proper question is not whether the president has inherent authority to relax the “reasonableness” standard of the Fourth Amendment. The answer to that question is: yes, in some cases. But the narrower issue in the NSA case is whether the president, in the face of an express statutory prohibition, can direct that same surveillance. The answer is no, and I am not aware of any case law to support an argument to the contrary.

Put somewhat differently, Article II establishes that the president has inherent powers, especially during wartime. And those powers might be sufficient to support his authorization of warrantless surveillance, notwithstanding the provisions of the Fourth Amendment. But Article II does not delineate the scope of the president’s wartime powers. And because Congress has

concurrent authority in this area, an express prohibition by Congress is persuasive when deciding whether the president has overreached.

The distinction between concurrent and exclusive powers is important. For example, the president's "Power to grant . . . Pardons" is exclusive; there is no stated power for Congress to modify it by legislation—for example, by declaring certain offenses unpardonable. By contrast, the president's wartime powers are shared with Congress, which is constitutionally authorized to "define and punish . . . Offenses against the Law of Nations," "declare War," "make Rules concerning Captures on Land and Water," "raise and support Armies," "provide and maintain a Navy," "make Rules for the Government and Regulation of the land and naval forces," and suspend habeas corpus. That suggests **the president must comply with duly enacted statutes** unless he can show that Congress has exceeded its authority. In this instance, **President Bush has made no such showing.**

Executive Circumvention — Congress

Formal Congressional restriction net increases violations — turns the case.

Spiro 93 — Peter J. Spiro, Professor, Hofstra University School of Law in public international law, immigration law, international trade law, citizenship and nationality law, foreign relations and national security law, 1993 (“War Powers and the Sirens of Formalism,” New York University Law Review, Vol 68, December, Available Online via Lexis)

Moreover, there is a harm in the perpetuation of text that neither reflects nor governs behavior. The War Powers Resolution (either as is or as modified by the Ely proposal) continues to bring the legislative branch into institutional disrepute. Congress looks toothless to the extent that it has not, loosely speaking, lived up to its responsibilities or exploited its prerogatives under the Resolution. ⁿ⁹² At the same time, the presidency seems bold in defiance. Insofar as it has not come to be ignored altogether, the Resolution may play into the hands of executive branch partisans by serving as a lingering reminder that Congress, even as equipped with statutory tools, has acquiesced in the sometimes uncurbed exercise of presidential discretion. This acquiescence, in turn, may fuel the more extreme claims of exclusive presidential powers, as was true of some of President Bush's pronouncements leading up to the Gulf War. Alternatively, the continued formal validity of the Resolution may drive the executive branch to overcompensate rhetorically in defending what it considers to be its exclusive powers unconstitutionally reallocated by the Act. Worse, the disjunction of text and practice could distort the decisionmaking process so as to result in presidential attempts to broaden the range of action undertaken without legislative approval.

Obama will circumvent the plan — Congress won't intervene.

Cohen 12 — Michael A. Cohen, fellow at The Century Foundation, a columnist at the Boston Globe and a regular writer and commentator on American politics and U.S. foreign policy, 2012 (“The Imperial Presidency: Drone Power and Congressional Oversight,” World Politics Review, July 24th, Available Online at <http://www.worldpoliticsreview.com/articles/12194/the-imperial-presidency-drone-power-and-congressional-oversight>)

The Justice Department's formal rationale for the targeting and killing of an American citizen, in apparent violation of due process rights, might very well be legal and proper. After all, Awlaki had joined a terrorist organization that was legally at war with the United States, and American forces have killed U.S. citizens serving in foreign armies in the past. The problem, however, is that no one outside the president, his top advisers and the OLC lawyers who drafted the memo - - many of whom are political appointees -- have seen this legal justification. Indeed, in June 2012, Rep. Jerry Nadler specifically asked Attorney General Eric Holder in a congressional hearing if he would turn the OLC memo over to Congress. Holder demurred and still has yet to do so. The episode is reflective of the current state of congressional oversight of the executive branch on national security issues: The executive branch stonewalls or uses legal justification to avoid oversight, and Congress does precious little to demand that its constitutional prerogatives are respected. Instead of a push and pull between the two branches of the U.S. government limiting both sides' power, the opportunities for the expansion of executive power

are becoming more pronounced -- and could get worse. To be sure, things weren't supposed to be this way. As a presidential candidate on the campaign trail, Barack Obama talked a big game about limiting executive power and adhering more closely to congressional mandates. **As president, he has moved the balance of power in a different direction.** In his handling of the Libyan intervention, for instance, Obama initially refused to go to Congress to get authorization for the use of force. Later he made the credibility-stretching argument that the war in Libya did not meet the definition of "hostilities" under the War Powers Resolution, which requires the president to seek congressional authorization for the use of force within 60 days of the initiation of hostilities. While presidents have generally questioned the resolution's constitutionality, they have also generally abided by its key provisions regarding the use of force. This was not the case in Libya. The Libya intervention is, in key regards, Obama's most ostentatious expansion of executive power, but this disregard for congressional prerogatives has seeped into other areas as well, in particular the so-called shadow war, which includes the use of cyber attacks, drone strikes and special forces to pursue U.S. national security interests and wage the war on terror. Since taking office, the administration has significantly increased the scope of the U.S. drone war. The shift coincides with post-Sept. 11 increases in both the U.S. drone arsenal and the size of the U.S. Special Operations Command (SOCOM). Meanwhile, at the same time that he has reduced the number of U.S. boots on the ground in actual combat zones, Obama has stretched the battlefield of the war on terror. While the administration notifies congressional intelligence committees of its targeted killings of suspected terrorist leaders, it does so in private. In fact, only in recent weeks did the Obama White House publicly confirm the use of "direct action" against targets in Somalia and Yemen -- and even then in a manner that was less than forthcoming and that didn't include reference to CIA targeted killing operations. Ironically, however, the administration stands on firmer legal ground here than it did on Libya. It has used the Authorization of Military Force (AUMF) granted in 2001 by Congress to justify nearly every aspect of these operations, including targeted killing campaigns carried out by both the military and the CIA, and the continued detention of prisoners in Guantanamo Bay and Afghanistan. As Yale Law School professor Bruce Ackerman told me, "The AUMF was a response to a real problem, namely the attacks of Sept. 11. It is now being transformed into a tool for fighting a 100-year war against terrorists." In a sense we are witnessing a perfect storm of executive branch power-grabbing: a broad authorization of military force giving the president wide-ranging discretion to act, combined with a set of tools -- drones, special forces and cyber technology -- that allows him to do so in unprecedented ways. And since few troops are put in harm's way, **there is barely any public scrutiny.** Congress has the ability to stop these excesses. On Libya, it possessed the power to turn off the financial spigot and cut off funding, and indeed, there was a tepid effort in the House of Representatives to do so. On the AUMF, Congress could simply repeal it or more realistically modify it to take into account the new battlefields in the war on terror. Finally, it could conduct greater oversight, in particular public hearings, of how the executive branch is utilizing military force. But not only has Congress not taken these steps, in deliberations over the National Defense Authorization Act earlier this year, it tried to expand the AUMF. On the use of drones and targeted killings, Congress has made little effort to demand greater information from the White House and has not held any public hearings on either of these issues. As Micah Zenko recently noted, claims "that congressional oversight of targeted killings exclusively by the intelligence committees in closed sessions is adequate" are

“indefensible.” The reasons for congressional abdication are legion. **Partisanship plays an important role.** For example, from 2001 to 2006, Republicans largely abstained from overseeing a Republican White House’s wars in Iraq and Afghanistan. Since a Democrat became president, however, congressional oversight and scrutiny of the administration in terms of foreign policy has remained underwhelming, if not nearly as bad. Meanwhile, **the White House has treated Congress dismissively and even with contempt.** Historically, strong institutional prerogatives have been a check on such parochialism -- think William Fulbright and the Senate Foreign Relations Committee’s apostasy on Vietnam or even the bipartisan Iran-Contra hearings in the 1980s. Today, however, few in Congress have shown much interest in upholding even its most basic foreign policy responsibilities. Quite simply, there are no Frank Churches or even Russ Feingolds in Congress anymore. But there are also serious institutional obstacles to enhanced congressional scrutiny. Writing in the Harvard National Security Journal (.pdf), Andru Wall argues that much of the problem with congressional oversight can be traced to an antiquated understanding of how national security operations are actually carried out. **At a time of greater interagency cooperation and coordination between the military and intelligence agencies, Congress still sees these functions as somehow discrete.** As Greg Miller noted in the Washington Post in December, “Within 24 hours of every CIA drone strike, a classified fax machine lights up in the secure spaces of the Senate Intelligence Committee, spitting out a report on the location, target and result. The outdated procedure reflects the agency’s effort to comply with Title 50 requirements that Congress be provided with timely, written notification of covert action overseas. There is no comparable requirement in Title 10, and the Senate Armed Services Committee can go days before learning the details of JSOC strikes. Neither panel is in a position to compare the CIA and JSOC kill lists or even arrive at a comprehensive understanding of the rules by which each is assembled.” In addition, oversight responsibilities are often bifurcated by separate authorization and appropriation processes. The 9/11 Commission recommended ending this dysfunctional arrangement among intelligence committees and creating a single joint intelligence committee with both authorizing and appropriating responsibilities. Nearly 10 years later, it still hasn’t happened. If history is any guide, **so long as Congress fails to hold the president’s feet to the fire, the executive branch will take on more responsibilities that are outside the purview of Congress’ prying eyes.** Ackerman called such “legislative irresponsibility and executive unilateralism” a self-perpetuating phenomenon that is a “recurrent dynamic in presidential systems.” With the lack of any strong institutional pride in Congress, an executive branch that for obvious reasons prefers less oversight and the advent of new tools for fighting America’s wars, this situation is likely to get worse before it gets better, if it ever does.

Executive Circumvention — Impacts

Showdowns with the Supreme Court or Congress only increase Executive Power — turns the case and crushes separation of powers.

Posner and Vermeule 8 — Eric A. Posner, Distinguished Service Professor, University of Chicago Law School and the 4th most-cited legal scholar in the United States, JD from Harvard, former editor of The Journal of Legal Studies, and Adrian Vermeule, Professor of Law at Harvard, former Professor of Law at U Chicago, 2008 (“Constitutional Showdowns,” University of Pennsylvania Law Review, Vol 156, April, Available Online at http://www.ericposner.com/constitutional_showdowns_.pdf, Accessed 06-05-2015)

The point that current checking will fail to internalize the interests of future generations would hold even if there were only two branches in the picture. With three branches, however, externalities among current actors are also possible. One possibility is that the strongest branch - the one with the highest S-value - can play a divide-and-conquer game, alternating alliances with the weaker branches until it effectively dominates both. Here, the externality is that each of the weaker branches fails to take into account the full costs of its short-run opportunism to the other weak branch and to the balance of the whole system. Conversely, the weaker branches will be tempted to free-ride on each other's investment in checking the strongest branch, so long as there is a positive cost to a showdown that checks aggrandizement. A configuration [President = 0.5, Congress = 0.5, Supreme Court = 0] might yield far more aggressive checking of presidential expansion than would a configuration such as [President = 0.5, Congress = 0.25, Supreme Court = 0.25]. In the latter scenario [*1030] Congress and the Court will face temptations to mutual free-riding, while in the former scenario the concentration of nonpresidential power in a single place reduces the scope for presidential aggrandizement.
n69

Obviously, many other scenarios are possible. We have assumed, for example, that showdowns will help to check aggrandizement, but this is not obviously true. Showdowns might actually provide the very opportunity the stronger branch has been seeking to crush its adversaries or to clarify their impotence, creating a highly visible precedent that will underscore its power. We mention these scenarios just to illustrate the types of externalities, even with the current generation, that can cause insufficient investments even in showdowns that would check aggrandizement if they occurred. The divergence between private and social costs and benefits will cause suboptimal checking, and there is no reason to think the failure of institutions to invest in showdowns that would promote optimal checking is somehow offset by their private-regarding incentive to invest in showdowns that will promote their own power. There is no invisible-hand mechanism that causes one type of failure to offset the other - a point to which we return below.

The President will win a showdown with Congress — he’s institutionally more invested in the outcome.

Nzelibe 13 — Jide Nzelibe, Associate Dean for Faculty Affairs and Professor of Law at Northwestern, 2013 (“Our Partisan Foreign Affairs Constitution,” American Bar Foundation Version, January 2nd, Available Online at http://www.americanbarfoundation.org/uploads/cms/documents/our_partisan_foreign_affairs_constitution_abf_version.pdf, Accessed 06-05-2015)

An alternative explanation for politically inspired changes in the Foreign Affairs Constitution focuses on the preferences of institutional actors. The underlying assumption is that conflict between the President and Congress often results in incremental changes to the boundary of the foreign affairs powers. In these power tussles, however, the President presumably prevails for two reasons. The first is that due to the singular nature of the President’s office, he has intrinsic institutional reasons to increase his authority since he gets to consume exclusively the benefits of any such usurpation.²³ As Daryl Levinson puts it, “[b]ecause individual presidents can consume a much greater share of the power of their institution than individual members of Congress, we should expect them to be willing to invest more in institutional aggrandizement.”²⁴ By contrast, the prospect of facing frequent elections and collective action problems often make it unlikely that members of Congress will have an incentive to protect or expand their constitutional prerogatives in foreign affairs.²⁵ The second is that Presidents tend to respond to the preferences of a national constituency, while members of Congress respond to the preferences of narrower constituencies who might be less interested in foreign affairs.²⁶

Unitary Executive Doctrine

Aggressive presidents will use the unitary executive doctrine to override Congress and the Courts on surveillance.

Van Bergen 6 — Jennifer Van Bergen, JD, author of *The Twilight of Democracy: The Bush Plan For America*, Professor at Santa Fe Community College, 2006 ("The Unitary Executive: Why the Bush Doctrine Violates the Constitution," *Couterpunch*, January 12th, Available Online at <http://www.couterpunch.org/2006/01/12/the-unitary-executive/>, Accessed 06-07-2015)

Dr. Kelley notes that the unitary executive doctrine arose as the result of the twin circumstances of Vietnam and Watergate. Kelley asserts that "the faith and trust placed into the presidency was broken as a result of the lies of Vietnam and Watergate, which resulted in a congressional assault on presidential prerogatives."

For example, consider the Foreign Intelligence Surveillance Act (FISA) which Bush evaded when authorizing the NSA to tap without warrants — even those issued by the FISA court. FISA was enacted after the fall of Nixon with the precise intention of curbing unchecked executive branch surveillance. (Indeed, Nixon's improper use of domestic surveillance was included in Article 2 paragraph (2) of the impeachment articles against him.)

According to Kelley, these congressional limits on the presidency, in turn, led "some very creative people" in the White House and the Department of Justice's Office of Legal Counsel (OLC) to fight back, in an attempt to foil or blunt these limits. In their view, these laws were legislative attempts to strip the president of his rightful powers. Prominent among those in the movement to preserve presidential power and champion the unitary executive doctrine were the founding members of the Federalist Society, nearly all of whom worked in the Nixon, Ford, and Reagan White Houses.

The unitary executive doctrine arises out of a theory called "departmentalism," or "coordinate construction." According to legal scholars Christopher Yoo, Steven Calabresi, and Anthony Colangelo, the coordinate construction approach "holds that all three branches of the federal government have the power and duty to interpret the Constitution." According to this theory, the president may (and indeed, must) interpret laws, equally as much as the courts.

The Unitary Executive Versus Judicial Supremacy

The coordinate construction theory counters the long-standing notion of "judicial supremacy," articulated by Supreme Court Chief Justice John Marshall in 1803, in the famous case of *Marbury v. Madison*, which held that the Court is the final arbiter of what is and is not the law. Marshall famously wrote there: "It is emphatically the province and duty of the judicial department to say what the law is."

Of course, the President has a duty not to undermine his own office, as University of Miami law professor A. Michael Fromkin notes. And, as Kelley points out, the President is bound by his oath of office and the "Take Care clause" to preserve, protect, and defend the Constitution and to "take care" that the laws are faithfully executed. And those duties require, in turn, that the

President interpret what is, and is not constitutional, at least when overseeing the actions of executive agencies.

However, Bush's recent actions make it clear that he interprets the coordinate construction approach extremely aggressively. In his view, and the view of his Administration, that **doctrine gives him license to overrule and bypass Congress or the courts, based on his own interpretations of the Constitution — even where that violates long-established laws and treaties, counters recent legislation that he has himself signed, or** (as shown by recent developments in the Padilla case) involves offering a federal court contradictory justifications for a detention.

This is a form of presidential rebellion against Congress and the courts, and possibly a violation of President Bush's oath of office, as well.

After all, can it be possible that that oath means that the President must uphold the Constitution only as he construes it – and not as the federal courts do?

And can it be possible that the oath means that the President need not uphold laws he simply doesn't like – even though they were validly passed by Congress and signed into law by him?

Analyzing Bush's Disturbing Signing Statement for the McCain Anti-Torture Bill

Let's take a close look at Bush's most recent signing statement, on the torture bill. It says:

The executive branch shall construe Title X in Division A of the Act, relating to detainees, in a manner consistent with the constitutional authority of the President to supervise the unitary executive branch and as Commander in Chief and consistent with the constitutional limitations on the judicial power, which will assist in achieving the shared objective of the Congress and the President, evidenced in Title X, of protecting the American people from further terrorist attacks.

In this signing statement, Bush asserts not only his authority to internally supervise the "unitary executive branch," but also his power as Commander-in-Chief, as the basis for his interpretation of the law — which observers have noted allows Bush to create a loophole to permit the use of torture when he wants.

Clearly, Bush believes he can ignore the intentions of Congress. Not only that but by this statement, **he has evinced his intent to do so,** if he so chooses.

This Unitary Executive Doctrine causes a collapse in the Separation of Powers and American constitutional democracy.

Van Bergen 6 — Jennifer Van Bergen, JD, author of *The Twilight of Democracy: The Bush Plan For America*, Professor at Santa Fe Community College, 2006 ("The Unitary Executive: Why the Bush Doctrine Violates the Constitution," *Couterpunch*, January 12th, Available Online at <http://www.couterpunch.org/2006/01/12/the-unitary-executive/>, Accessed 06-07-2015)

The Unitary Executive Doctrine Violates the Separation of Powers

As Findlaw columnist Edward Lazarus recently showed, the President does not have unlimited executive authority, not even as Commander-in-Chief of the military. Our government was purposely created with power split between three branches, not concentrated in one.

Separation of powers, then, is **not simply a talisman**: It is the **foundation of our system**. James Madison wrote in The Federalist Papers, No. 47, that:

The accumulation of all powers, legislative, executive, and judiciary, in the same hands, whether of one, a few, or many, and whether hereditary, self-appointed, or elective, may justly be pronounced the very definition of tyranny.

Another early American, George Nicholas, eloquently articulated the concept of "power divided" in one of his letters:

The most effectual guard which has yet been discovered against the abuse of power, is the division of it. It is our happiness to have a constitution which contains within it a sufficient limitation to the power granted by it, and also a proper division of that power. But no constitution affords any real security to liberty unless it is considered as sacred and preserved inviolate; because that security can only arise from an actual and not from a nominal limitation and division of power.

Yet it seems a nominal limitation and division of power – with real power concentrated solely in the "unitary executive" – is exactly what President Bush seeks. His signing statements make the point quite clearly, and his overt refusal to follow the laws illustrates that point: In Bush's view, there is no actual limitation or division of power; it all resides in the executive.

Thomas Paine wrote in Common Sense:

In America, the law is king. For as in absolute governments the King is law, so in free countries the law ought to be king; and there ought to be no other.

The unitary executive doctrine conflicts with Paine's principle – one that is fundamental to our constitutional system. If Bush can ignore or evade laws, then the law is no longer king. Americans need to decide whether we are still a country of laws – and if we are, we need to decide whether a President who has determined to ignore or evade the law has not acted in a manner contrary to his trust as President and subversive of constitutional government.

AT: “Surveillance Isn’t a War Power”

The President’s War Powers authorize covert surveillance — history abounds with examples.

Yoo 14 — John Yoo, UC Berkeley Law Professor, former Deputy Assistant U.S. Attorney General in the Office of Legal Counsel at the Department of Justice under President GW Bush, 2014 (“Surveillance and executive power,” Constitution Daily, October 3rd, Available Online at <http://blog.constitutioncenter.org/2014/10/surveillance-and-executive-power/>, Accessed 06-07-2015)

As Commander-in-Chief, the President has the constitutional power and the responsibility to wage war in response to a direct attack against the United States.

In the Civil War, President Lincoln undertook several actions—raised an army, withdrew money from the treasury, launched a blockade—on his own authority in response to the Confederate attack on Fort Sumter, moves that Congress and the Supreme Court later approved.

During World War II, the Supreme Court similarly recognized that once war began, the President’s authority as Commander-in-Chief and Chief Executive gave him the tools necessary to effectively wage war.

In the wake of the September 11 attacks, Congress agreed that “the President has authority under the Constitution to take action to deter and prevent acts of international terrorism against the United States,” which recognizes the President’s authority to use force to respond to al Qaeda, and any powers necessary and proper to that end.

Even legal scholars who argue against this historical practice concede that once the United States has been attacked, the President can respond immediately with force.

The ability to collect intelligence is intrinsic to the use of military force. It is inconceivable that the Constitution would vest in the President the powers of Commander-in-Chief and Chief Executive, give him the responsibility to protect the nation from attack, but then disable him from gathering intelligence to use the military most effectively to defeat the enemy.

Every evidence of the Framers’ understanding of the Constitution is that the government would have every ability to meet a foreign danger. As James Madison wrote in The Federalist, “security against foreign danger is one of the primitive objects of civil society.” Therefore, the “powers requisite for attaining it must be effectually confided to the federal councils.”

After World War II, the Supreme Court declared, “this grant of war power includes all that is necessary and proper for carrying these powers into execution.” Covert operations and **electronic surveillance are clearly part of this authority.**

During the writing of the Constitution, some Framers believed that the President alone should manage intelligence because only he could keep secrets.

Several Supreme Court cases have recognized that the President’s role as Commander-in-Chief and the sole organ of the nation in its foreign relations must include the power to collect intelligence.

These authorities agree that intelligence rests with the President because its structure allows it to act with unity, secrecy, and speed.

Presidents have long ordered electronic surveillance without any judicial or congressional participation.

More than a year before the Pearl Harbor attacks, but with war clearly looming with the Axis powers, President Franklin Roosevelt authorized the FBI to intercept any communications, whether wholly inside the country or international, of persons “suspected of subversive activities against the Government of the United States, including suspected spies.”

FDR was concerned that “fifth columns” could wreak havoc with the war effort. “It is too late to do anything about it after sabotage, assassinations and ‘fifth column’ activities are completed,” FDR wrote in his order.

FDR ordered the surveillance even though a federal law at the time prohibited electronic surveillance without a warrant.

Presidents continued to monitor the communications of national security threats on their own authority, even in peacetime.

If Presidents in times of peace could order surveillance of spies and terrorists, executive authority is only the greater now, as hostilities continue against al Qaeda.

Even if they’re right, presidential precedent treats NSA surveillance as an Article II war power.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power: Are Warrantless Wiretaps Legal?,” *The Freeman*, a publication of the Foundation for Economic Education, drawn from his testimony before the Senate Judiciary Committee, August 1st, Available Online at <http://fee.org/freeman/detail/wartime-executive-power-are-warrantless-wiretaps-legal/>, Accessed 05-29-2015)

President Bush has authorized the National Security Agency (NSA) to eavesdrop, without obtaining a warrant, on telephone calls, e-mails, and other communications between U.S. persons in the United States and persons outside the United States. For understandable reasons, **the operational details of the NSA program are secret, as are the details of the executive order that authorized the program.** But Attorney General Alberto Gonzales has stated that surveillance can be triggered if an executive-branch official has reasonable grounds to believe that a communication involves a person “affiliated with al-Qaeda or part of an organization or group that is supportive of al-Qaeda.”

The attorney general has declared that the President’s authority rests on the post-9/11 Authorization for Use of Military Force (AUMF) and the president’s inherent wartime powers

under Article II of the U.S. Constitution, which includes authority to gather “signals intelligence” on the enemy.

My conclusions, as elaborated below, are: First, the president has some latitude under the “Executive Power” and “Commander-in-Chief” Clauses of Article II, even lacking explicit congressional approval, to authorize NSA warrantless surveillance without violating Fourth Amendment protections against “unreasonable” searches. But second, if Congress has expressly prohibited such surveillance (as it has under FISA, the Foreign Intelligence Surveillance Act), then the statute binds the president unless there are grounds to conclude that the statute does not apply. Third, in the case at hand, there are no grounds for such a conclusion—that is, neither the AUMF nor the president’s inherent powers trump the express prohibition in the FISA statute.

Bush treated domestic surveillance as an Article II War Power and used that justification to ignore Congress. This approach led to secret CIA prisons, torture, and indefinite detentions.

Levy 6 — Robert Levy, senior fellow in constitutional studies and chairman of the Board of Directors at the Cato Institute, director of the Institute for Justice, the Foundation for Government Accountability, J.D. and Ph.D. in business, former professor of law at Georgetown, 2006 (“Wartime Executive Power: Are Warrantless Wiretaps Legal?,” *The Freeman*, a publication of the Foundation for Economic Education, drawn from his testimony before the Senate Judiciary Committee, August 1st, Available Online at <http://fee.org/freeman/detail/wartime-executive-power-are-warrantless-wiretaps-legal/>, Accessed 05-29-2015)

Attorney General Gonzales has a second, more plausible, defense of warrantless surveillance—namely, Article II of the Constitution states that “The executive Power shall be vested in a President” who “shall be Commander in Chief” of the armed forces. That power, says the attorney general, trumps any contrary statute during time of war.

I respectfully disagree—which is not to say I believe the president is powerless to order warrantless wartime surveillance. For example, intercepting enemy communications on the battlefield is clearly an incident of his war power. But warrantless surveillance of Americans inside the United States, who may have nothing to do with al-Qaeda, does not qualify as incidental wartime authority. The president’s war powers are broad, but not boundless. Indeed, the war powers of Congress, not the president, are those that are constitutionalized with greater specificity.

The question is not whether the president has unilateral executive authority, but rather the extent of that authority. And the key Supreme Court opinion that provides a framework for resolving that question is Justice Robert Jackson’s concurrence in *Youngstown Sheet & Tube v. Sawyer*—the 1952 case denying President Truman’s authority to seize the steel mills.

Justice Jackson offered the following analysis: First, when the president acts pursuant to an express or implied authorization from Congress, “his authority is at its maximum.” Second, when the president acts in the absence of either a congressional grant or denial of authority, “there is a zone of twilight in which he and Congress may have concurrent authority, or in which its

distribution is uncertain.” But third, where the president takes measures incompatible with the express or implied will of Congress—such as the NSA program, which violates an express provision of the FISA statute—“his power is at its lowest.”

The NSA program does not fit in Youngstown’s second category (congressional silence). It belongs in the third category, in which **the President has acted in the face of an express statutory prohibition.**

Moreover, unilateral authorization of the NSA program by the executive branch suggests that unilateral actions in other areas would be proper. For example: If warrantless domestic surveillance is incidental to the president’s inherent powers, so too are sneak-and-peek searches, roving wiretaps, library records searches, and national-security letters—all of which were vigorously debated in deciding whether to reauthorize the PATRIOT Act. Could the president have proceeded with those activities even if they were not authorized by Congress? If so, what was the purpose of the debate? Why do we even need a PATRIOT Act?

Further, the attorney general asserts that the AUMF and the commander-in-chief power are sufficient to justify the NSA program. He, or his predecessor, made similar claims for military tribunals without congressional authorization, secret CIA prisons, indefinite detention of U.S. citizens, enemy-combatant declarations without hearings as required by the Geneva Conventions, and interrogation techniques that may have violated our treaty commitments banning torture. Is any of those activities outside the president’s commander-in-chief and AUMF powers? If not, what are the bounds, if any, that constrain the president’s unilateral wartime authority?

NSA wiretaps explicitly violate the FISA requirements, but the president uses war powers to ignore Congress. There is no institutional check on these abuses of power.

Woods 6 — Thomas E. Woods, Jr. Ph.D. in History from Columbia, senior fellow of the Ludwig von Mises Institute and a contributing editor of *The American Conservative* magazine, recipient of the 2004 O.P. Alford III Prize for Libertarian Scholarship and of an Olive W. Garvey Fellowship from the Independent Institute in 2003. He has also been awarded two Humane Studies Fellowships and a Claude R. Lambe Fellowship from the Institute for Humane Studies at George Mason University and a Richard M. Weaver Fellowship from the Intercollegiate Studies Institute, author of eleven books, most recently *Rollback: Repealing Big Government Before the Coming Fiscal Collapse*, 2006 (“All the President’s Power,” *The American Conservative*, January 30th, Available Online at <http://www.theamericanconservative.com/articles/all-the-presidents-power/>, Accessed 05-29-2015)

Whether or not the vice president was correct in his analysis of the state of the presidency in the year 2000, there can be no question that since then George W. Bush has dramatically expanded the powers of the president—primarily though not exclusively in matters pertaining to the war on terror.

One of the most notorious examples involved the torture of prisoners, a power the administration claimed in the face of law and international agreements to the contrary. “The assertion in the various legal memoranda that the President can order the torture of prisoners despite statutes and treaties forbidding it was another reach for presidential hegemony,” wrote Anthony Lewis in the New York Review of Books. “The basic premise of the American constitutional system is that those who hold power are subject to the law Bush’s lawyers seem ready to substitute something like the divine right of kings.”

Arguably the greatest controversy of all was the revelation at the end of 2005 that the Bush administration had engaged in domestic surveillance without the necessary warrants. James Bamford, author of two books on the National Security Agency, points out the pertinent aspects of what would appear to be the relevant law: the Foreign Intelligence Surveillance Act (FISA), passed in 1978. According to Bamford, then-Attorney General Griffin Bell testified before the intelligence committee that FISA acknowledged no “inherent power of the President to conduct electronic surveillance.” As Bell himself put it, “This bill specifically states that the procedures in the bill are the exclusive means by which electronic surveillance may be conducted.”

In the wake of the Sept. 11 attacks, Bush administration officials spoke again and again of the president’s inherent powers. But the pertinent statute in this case disclaims any such powers and requires that the president proceed according to the guidelines set out by Congress, which involves securing warrants from a special court. As things stand, the president is claiming a right to engage in surveillance of any American, unrestrained by any institutional check, in the service of the war on terror—a war that by its very nature must go on indefinitely and, indeed, that we can never really know is truly over.

According to Attorney General Alberto Gonzales, the reason the administration did not seek to revise FISA to give the president the clear and unambiguous power to order these wiretaps was that even a Republican Congress would not have gone along. In a Dec. 19 press briefing, the attorney general said, “We have had discussions with Congress in the past—certain members of Congress—as to whether or not FISA could be amended to allow us to adequately deal with this kind of threat, and we were advised that that would be difficult, if not impossible.”

The administration’s claim, as set forth by the attorney general, is that Congress implicitly agreed to such wiretaps when in the days following Sept. 11 it authorized the use of force against the perpetrators and their allies. Of course, if Congress really had authorized them, it is not clear why it would be so difficult for the administration to persuade Congress to amend FISA accordingly in light of this permission.

Gonzales’s argument calls to mind H.L. Mencken’s 1937 “Constitution for the New Deal,” a satirical rewrite of the U.S Constitution, which says of the attorney general, “It shall be his duty to provide legal opinions certifying to the constitutionality of all measures undertaken by the President.”

AT: FISA Court Checks

FISA court review is meaningless — even with revisions, the court is still a rubber stamp for surveillance.

Schulberg and Reilly 15 — Jessica Schulberg, reporter covering foreign policy and national security for The Huffington Post, former reporter-researcher at The New Republic, MA in international politics from American University, and Ryan J. Reilly, reporter who covers the Justice Department and the Supreme Court for The Huffington Post, 2015 (“Watchdog Finds Huge Failure In Surveillance Oversight Ahead Of Patriot Act Deadline,” Huffington Post, May 21st, Available Online at http://www.huffingtonpost.com/2015/05/21/section-215-oversight_n_7383988.html, Accessed 06-05-2015) * “Paul” = Senator Rand Paul, R-KY

The inspector general's report focused on the government's use of Section 215 between 2007 and 2009. In that two-year period, every Justice Department request to the FISA court for spying authority was granted -- a fact that would seem to bolster critics' argument that the secret court's process needs a permanent privacy advocate.

“Without an adversarial process, you really can't even have a judicial process,” Paul said Wednesday evening. “The FISA court only hears from one side -- the government.”

While the reform bill that passed the House would add a slot for a privacy advocate, Paul and the ACLU have both noted that the legislation still gives the court the authority to decide if and when to appoint someone to the job.

The NSA lies to the FISA court as well — it cannot oversee submission to regulations.

NYT 13 — New York Times, Byline Charlie Savage and Scott Shane, 2013 (“Secret Court Rebuked N.S.A. on Surveillance,” New York Times, August 21st, Available Online at <http://www.nytimes.com/2013/08/22/us/2011-ruling-found-an-nsa-program-unconstitutional.html>, Accessed 06-05-2015)

WASHINGTON — A federal judge sharply rebuked the National Security Agency in 2011 for repeatedly misleading the court that oversees its surveillance on domestic soil, including a program that is collecting tens of thousands of domestic e-mails and other Internet communications of Americans each year, according to a secret ruling made public on Wednesday.

The 85-page ruling by Judge John D. Bates, then serving as chief judge on the Foreign Intelligence Surveillance Court, involved an N.S.A. program that systematically searches the contents of Americans' international Internet communications, without a warrant, in a hunt for discussions about foreigners who have been targeted for surveillance.

The Justice Department had told Judge Bates that N.S.A. officials had discovered that the program had also been gathering domestic messages for three years. Judge Bates found that the

agency had violated the Constitution and declared the problems part of a pattern of misrepresentation by agency officials in submissions to the secret court.

The release of the ruling, the subject of a Freedom of Information Act lawsuit, was the latest effort by the Obama administration to gain control over revelations about N.S.A. surveillance prompted by leaks by the former agency contractor Edward J. Snowden.

The collection is part of a broader program under a 2008 law that allows warrantless surveillance on domestic networks as long as it is targeted at noncitizens abroad. The purely domestic messages collected in the hunt for discussions about targeted foreigners represent a relatively small percentage of what the ruling said were 250 million communications intercepted each year in that broader program.

While the N.S.A. fixed problems with how it handled those purely domestic messages to the court's satisfaction, the 2011 ruling revealed further issues.

"The court is troubled that the government's revelations regarding N.S.A.'s acquisition of Internet transactions mark the third instance in less than three years in which the government has disclosed a substantial misrepresentation regarding the scope of a major collection program," Judge Bates wrote.

One of the examples was redacted in the ruling. Another involved a separate N.S.A. program that keeps logs of all domestic phone calls, which the court approved in 2006 and which came to light in June as a result of leaks by Mr. Snowden.

In March 2009, a footnote said, the surveillance court learned that N.S.A. analysts were using the phone log database in ways that went beyond what the judges believed to be the practice because of a "repeated inaccurate statements" in government filings to the court.

"Contrary to the government's repeated assurances, N.S.A. had been routinely running queries of the metadata using querying terms that did not meet the standard for querying," Judge Bates recounted. He cited a 2009 ruling that concluded that the requirement had been "so frequently and systematically violated that it can fairly be said that this critical element of the overall ... regime has never functioned effectively."

The Electronic Frontier Foundation, a free speech and privacy rights group, sued to obtain the ruling after Senator Ron Wyden, an Oregon Democrat who sits on the Senate Intelligence Committee, fought last summer to declassify the basic fact that the surveillance court had ruled that the N.S.A. had violated the Fourth Amendment.

In a statement, Mr. Wyden — an outspoken critic of N.S.A. surveillance — said declassification of the ruling was "long overdue." He argued that while the N.S.A. had increased privacy protections for purely domestic and unrelated communications that were swept up in the surveillance, the collection itself "was a serious violation of the Fourth Amendment."

Mark Rumold of the Electronic Frontier Foundation praised the administration for releasing the document with relatively few redactions, although he criticized the time and the difficulty in obtaining it. But he also said the ruling showed the surveillance court was not equipped to perform adequate oversight of the N.S.A.

“This opinion illustrates that the way the court is structured now it cannot serve as an effective check on the N.S.A. because it’s wholly dependent on the representations that the N.S.A. makes to it,” Mr. Rumold said. “It has no ability to investigate. And it’s clear that the N.S.A. representations have not been entirely candid to the court.””

The NSA violates surveillance restrictions thousands of times per year — the FISA Court is unable to regulate compliance.

Jaffer 13 — Jameel Jaffer, ACLU Deputy Legal Director and Director of ACLU Center for Democracy, 2013 (““There Have Been Some Compliance Incidents”: NSA Violates Surveillance Rules Multiple Times a Day,” ACLU Blog, August 16th, Available Online at <https://www.aclu.org/blog/there-have-been-some-compliance-incidents-nsa-violates-surveillance-rules-multiple-times-day?redirect=blog/national-security/nsa-privacy-violations-even-more-frequent-we-imagined>, Accessed 06-05-2015)

The Washington Post reported last night that the NSA has been violating restrictions on surveillance powers thousands of times a year. My first reaction was that the revelation was "jaw-dropping," and that's my second reaction, too. The rules around government surveillance are so permissive that it is difficult to comprehend how the intelligence community could possibly have managed to violate them so often.

Obviously, it's important to know what precisely these compliance incidents involved, and some are more troubling than others. But at least some of these incidents seem to have implicated the privacy of thousands or millions of innocent people.

The Washington Post also published an article making clear that the chief judge of the Foreign Intelligence Surveillance Court doesn't think his court has the tools or capacity to evaluate the government's representations about its compliance with the law. Clearly, the fact that the FISA court is so reliant on the representations of intelligence officials is a problem. It makes no sense at all to let the intelligence community police itself.

Some of the information that the Washington Post published last night is information that the government has previously refused to release under the Freedom of Information Act. In 2010, the ACLU filed a lawsuit to enforce a FOIA request for records on the government's implementation of new surveillance laws. Most of the documents we obtained were heavily redacted. (You can see all of the documents here, and there is a full analysis of the documents here.)

But some of the documents—a series of "Semiannual Assessments" by the intelligence community, in particular—were not entirely redacted. Interestingly, they all included some version of this phrase: "There have been some compliance incidents during the reporting period representing a small percentage of the overall activity." That phrase seemed unremarkable to me until now. If thousands of compliance incidents represented "a small percentage of overall activity," there must have been a whole lot of "activity."

FISC has no ability to investigate or verify NSA reports — there is no court independently policing the NSA.

Washington Post 13 — Washington Post, Byline Carol D. Leonning, 2013 (“Court: Ability to police U.S. spying program limited,” Washington Post, August 15th, Available Online at http://www.washingtonpost.com/politics/court-ability-to-police-us-spying-program-limited/2013/08/15/4a8c8c44-05cd-11e3-a07f-49ddc7417125_story.html, Accessed 06-06-2015)

The leader of the secret court that is supposed to provide critical oversight of the government’s vast spying programs said that its ability to do so is **limited** and that it must **trust the government** to report when it improperly spies on Americans.

The chief judge of the Foreign Intelligence Surveillance Court said the court **lacks the tools to independently verify** how often the government’s surveillance breaks the court’s rules that aim to protect Americans’ privacy. Without taking drastic steps, it also cannot check the veracity of the government’s assertions that the violations its staff members report are unintentional mistakes.

“The FISC is forced to rely upon the accuracy of the information that is provided to the Court,” its chief, U.S. District Judge Reggie B. Walton, said in a written statement to The Washington Post. “**The FISC does not have the capacity to investigate** issues of noncompliance, and in that respect **the FISC is in the same position as any other court when it comes to enforcing [government] compliance** with its orders.”

Walton’s comments came in response to internal government records obtained by The Post showing that National Security Agency staff members in Washington overstepped their authority on spy programs thousands of times per year. The records also show that the number of violations has been on the rise.

The court’s description of its practical limitations contrasts with repeated assurances from the Obama administration and intelligence agency leaders that the court provides central checks and balances on the government’s broad spying efforts. They have said that Americans should feel comfortable that the secret intelligence court provides robust oversight of government surveillance and protects their privacy from rogue intrusions.

President Obama and other government leaders have emphasized the court’s oversight role in the wake of revelations this year that the government is vacuuming up “metadata” on Americans’ telephone and Internet communications.

“We also have federal judges that we’ve put in place who are not subject to political pressure,” Obama said at a news conference in June. “They’ve got lifetime tenure as federal judges, and they’re empowered to look over our shoulder at the executive branch to make sure that these programs aren’t being abused.”

Privacy advocates and others in government have voiced concerns about the ability of overseers to police secret programs of immense legal and technological complexity. Several members of

the House and Senate intelligence committees told The Post last week that they face numerous obstacles and constraints in questioning spy agency officials about their work.

FISA Court has only five lawyers to investigate NSA compliance — they are hopelessly overburdened.

Washington Post 13 — Washington Post, Byline Carol D. Leorning, 2013 (“Court: Ability to police U.S. spying program limited,” Washington Post, August 15th, Available Online at http://www.washingtonpost.com/politics/court-ability-to-police-us-spying-program-limited/2013/08/15/4a8c8c44-05cd-11e3-a07f-49ddc7417125_story.html, Accessed 06-06-2015)

Privacy advocates say they fear that some violations are never reported to the court.

In January 2008, the NSA appeared to have mistakenly collected data on numerous phone calls from the Washington area code 202, thinking they were foreign phone calls from Egypt, whose country code is 20. According to a 2013 “quality assurance” review of the incident, a communications switch misread the coding of the calls and presumed they were international. The NSA has broad authority that is not subject to the FISA court to collect and monitor foreign communications under certain circumstances.

The description of the 2008 problem suggests that the inadvertent collection of U.S. phone calls was not reported to the FISA court.

“However, the issue pertained to Metadata ONLY so there were no defects to report,” the review stated.

Under FISA rules, the government is required to immediately notify the court if it believes it has violated any of its orders on surveillance.

The government does not typically provide the court with case-specific detail about individual compliance cases, such as the names of people it later learned it was improperly searching in its massive phone or e-mail databases, according to the two people familiar with the court’s work.

In contrast to the dozens of staff available to Congress’s intelligence and judiciary committees, the FISA court has **five lawyers** to review compliance violation reports.

AT: Congress Checks

Congress only pretends to oversee surveillance activities — they willingly allow the intelligence community to lie to them and the FISA court.

Eddington 15 — Patrick G. Eddington is a policy analyst in Homeland Security and Civil Liberties at the Cato Institute, and an assistant professor in the Security Studies Program at Georgetown University, 2015 (“NSA Surveillance Programs Are a Cancer on the Constitution,” Reason.com, May 28th, Available Online at <http://reason.com/archives/2015/05/28/snowden-nsa-usa-freedom>, Accessed 06-05-2015)

When the House Judiciary Committee considered the USA Freedom Act in May 2015—one of the few bills introduced in response to Snowden’s revelations—committee chairman Rep. Bob Goodlatte of Virginia claimed the committee had conducted "aggressive" oversight of the issue through a total of three hearings.

As ProPublica noted, Snowden exposed literally dozens of NSA programs and activities that have a direct impact on the constitutional rights of Americans living at home or abroad. The House Judiciary Committee’s three hearings did not even scratch the surface of those programs.

The Senate Judiciary Committee under then-chairman Patrick Leahy of Vermont conducted a worthwhile examination of government surveillance programs in March 2013. It stands out for its singular moment in which Senator Ron Wyden caught Director of National Intelligence James Clapper in a falsehood about the scope of government surveillance against Americans. Snowden’s revelations helped highlight just how **disingenuous Clapper and other U.S. intelligence community officials had been** on the issue, **not just with Congress but with the FISA court as well.**

Yet none of those revelations moved the Senate to create a select committee to investigate the full scope of post-9/11 surveillance programs, and the Senate Intelligence Committee has been far more a defender of these programs than an overseer of them. The House Intelligence Committee’s public record on this issue is also dismal, with only a single public hearing in the months after Snowden’s revelations that discussed almost purely cosmetic changes to U.S. surveillance authorities.

Indeed, when reform-minded House members not on the House Intelligence Committee have attempted to get information on these programs, they have been blocked from doing so— including in periods leading up to PATRIOT Act reauthorization votes. House reformers have also been stymied in their efforts to rein in or even end dubious surveillance activities, largely through the efforts of the House GOP leadership to restrict the terms and scope of the surveillance reform debate.

Even when pushed, Congress only cursorily investigates surveillance — their desire to conceal domestic spying transgressions means they won't meaningfully implement the laws.

Eddington 15 — Patrick G. Eddington is a policy analyst in Homeland Security and Civil Liberties at the Cato Institute, and an assistant professor in the Security Studies Program at Georgetown University, 2015 (“NSA Surveillance Programs Are a Cancer on the Constitution,” Reason.com, May 28th, Available Online at <http://reason.com/archives/2015/05/28/snowden-nsa-usa-freedom>, Accessed 06-05-2015)

The failure of existing committees to properly probe Snowden’s revelations, the active efforts by previous House Intelligence Committee leadership to impede inquiries by individual House members, and the efforts of House and Senate leaders to truncate any meaningful debate over these surveillance powers—all of these actions make it appear that Congressional leaders are engaged in a process designed to conceal the U.S. intelligence community’s domestic spying transgressions rather than educate the public on them and their implications for our democracy.

Congress still unwilling to enforce surveillance law — USA Freedom Act is a ruse.

US News and World Report 15 — US News and World Report, Byline Joseph P. Williams, 2015 (“Last Call: Don’t Think the USA Freedom Act Will Stop Government Snooping,” US News, June 3rd, Available Online at <http://www.usnews.com/news/blogs/washington-whispers/2015/06/03/last-call-dont-think-the-usa-freedom-act-will-stop-government-snooping>, Accessed 06-08-2015)

One Nation, Under Surveillance: Armchair privacy activists cheered when the Senate swatted away Majority Leader Mitch McConnell's attempt to roll back Patriot Act reforms that would have allowed the National Security Agency to continue spying on who you call and when. But upon further review, writes the Washington Post's Paul Waldman, the new USA Freedom Act really doesn't do much to change the overall, post-9/11 surveillance situation. Aside from putting in some minor speed bumps – requiring AT&T or Sprint, say, to collect the info, and making the NSA ask permission from a judge before getting their mitts on it – the government still has broad powers to track personal data, probably will come up with other ways to do it besides phone records, and both Democrats and Republicans generally seem OK with that. And unless another Edward Snowden comes down the pike to spill the beans on government technological spycraft, don't expect Congress or the next occupant of the White House to change things.

AT: "Obama is Different"

Obama is no exception — he ignores Congress on terror and national security issues. Congress can't object.

Cohen 12 — Michael A. Cohen, fellow at The Century Foundation, a columnist at the Boston Globe and a regular writer and commentator on American politics and U.S. foreign policy, 2012 ("Power Grab," Foreign Policy, March 28th, Available Online at <http://foreignpolicy.com/2012/03/28/power-grab/>, Accessed 06-05-2015)

Running roughshod over Congress has becoming something of a norm within the Obama administration. As one foreign-policy analyst close to the White House said to me "they generally don't do a good job of keeping people in the Hill in the loop on what they are doing. They see congressional oversight as a nuisance — even within their own party." Another analyst I spoke to had a one-word response to the question of the administration's attitude toward Congress's role in foreign policy: "Dismissive." Whether the lack of proper consultation over the closing of the detainee facility at Guantanamo Bay, the refusal to share with intelligence committees the rationale for targeted killings, or even brief Hill staffers on changes in missile defense deployment, this sort of ignoring of congressional prerogatives has often been the rule, not the exception.

What has been Congress's response to this disregarding of its role in foreign policy decision-making? The usual hemming and hawing, but little in the way of concrete action. During the Bush years, Republicans were more than happy to let the president expand his executive powers when it came to Iraq, Afghanistan, and the global war on terrorism. When Democrats took back the House and Senate from Republicans in 2006, they placed greater scrutiny on the Bush administration's conduct of the war in Iraq — but still continued to fund the conflict. Even in Washington's highly partisan current environment, little has changed; it's mostly sound and fury signifying nothing.

Republicans eschewed a constitutional confrontation with the White House over Libya, though the House GOP did make a rather partisan effort to defund the Libya operations (a measure that failed) and still today House and Senate members raise their frustrations in committee hearings over their heavy-handed treatment by the White House.

But the actions of some Republicans point in a different direction. Last year, House Armed Services Committee Chairman Buck McKeon actually tried to expand the original Authorization for Use of Military Force that granted U.S. kinetic actions just three days after 9/11 — which would have actually increased executive war-making power. While some on the Hill have long suspected the constitutionality of the War Powers Resolution, it was one of the few checks that Congress maintained over the president (aside from ability to defund operations, which in itself is a difficult tool to wield effectively). Now they have been complicit in its further watering down.

Aside from Ron Paul, there's been little mention of the president's overreach in Libya by the GOP's presidential aspirants. And why should there be? If any of them become president they too would want to enjoy the expanded executive power that Obama has helped provide for

them. Quite simply, in a closely divided country in which each party has a fair shot to win the White House every four years, there is little political incentive for either Democrats or Republicans to say enough is enough.

And with a former constitutional law professor punting on the issue (along with the much abused and maligned Congress), we're now even further from chipping away at the vast power the executive branch has been husbanded on national security issues. In the end, that may be the greatest legacy of the U.S. intervention in Libya.

Obama and future presidents won't be different — the pressures for non-compliance on surveillance will only increase.

Healy 8 — Gene Healy, vice president at the Cato Institute, JD from the University of Chicago Law School, 2008 (“New President Won’t Tame Executive Power,” Cato Institute, October 14th, Available Online at <http://www.cato.org/publications/commentary/new-president-wont-tame-executive-power>, Accessed 06-05-2015)

But there are good reasons to doubt that an Obama administration would meaningfully de-imperialize the presidency.

From Truman and Johnson’s undeclared wars to the warrantless wiretapping carried out by FDR, JFK, LBJ and Nixon, the Imperial Presidency has long been a bipartisan phenomenon. In fact, our most recent Democratic president, Bill Clinton went even further than his predecessors in his exercise of extraconstitutional war powers. Prior presidents had unilaterally launched wars in the face of congressional silence. But Clinton’s war over Kosovo in 1999 made him the first president to launch a war in the face of several congressional votes denying him the authority to wage it.

Recently, Barack Obama has found his own convenient rationales for endorsing broad presidential powers in the area of surveillance. When he signed on to the surveillance bill Congress passed this summer, Sen. Obama broke an explicit campaign promise to filibuster any legislation that would grant immunity to FISA-flouting telecom companies. By voting for the bill, Obama helped legalize large swaths of a dragnet surveillance program he’d long claimed to oppose. Perhaps some were comforted by Obama’s “firm pledge that as president, I will carefully monitor the program.” But our constitutional structure **envisions stronger checks than the supposed benevolence of our leaders.**

What motivated Obama’s flip-flop? Was it a desire to look “tough” on national security-or was it that, as he seems ever closer to winning the office, broad presidential powers seem increasingly appealing? Either way, it’s clear that the post-9/11 political environment will provide enormous incentives for the next president to embrace Bush-like theories of executive power. Can we really expect a Democratic president, publicly suspected of being “soft on terror,” to spend much political capital making himself less powerful?

Not likely, say analysts on both sides of the political spectrum. Law professors Jack Balkin and Sanford Levinson, both left-leaning civil libertarians, predict that “the next Democratic president

will likely retain significant aspects of what the Bush administration has done”; in fact, “future presidents may find that they enjoy the discretion and lack of accountability created by Bush’s unilateral gambits.” Jack Goldsmith, head of the Bush administration’s OLC from 2003-04, argues that “if anything, the next Democratic president - having digested a few threat matrices ... will be even more anxious than the current president to thwart the threat.”

Courts Actor

1NC — Court Stripping

Congress will backlash against aggressive court decisions in the area of surveillance — they will bar the court from hearing the cases.

Vladeck 11 — Stephen I. Vladeck, Professor of Law, American University Washington College of Law, 2011 (“Why Klein (Still) Matters: Congressional Deception and the War on Terrorism,” Journal of National Security Law, Volume 5, Version from June 16th, 9:38AM, Available Online at http://jnslp.com/wp-content/uploads/2011/06/08_Vladeck.pdf, Accessed 06-06-2015)

At least thus far, Congress’s track record in the major policy debates arising out of the war on terrorism has been uneven, at best. By far, the most significant legislative enactment over the past decade came one week after the September 11 attacks, when Congress passed the Authorization for Use of Military Force (AUMF), which, in sweeping language, empowered the President

to use all necessary and appropriate force against those nations, organizations, or persons he determines planned, authorized, committed, or aided the terrorist attacks that occurred on September 11, 2001, or harbored such organizations or persons, in order to prevent any future acts of international terrorism against the United States by such nations, organizations or persons.³³

Six weeks later, Congress enacted the USA PATRIOT Act, which included a series of controversial revisions to immigration, surveillance, and other law enforcement authorities.³⁴ But it would be over four years before Congress would again pass a key counterterrorism initiative, enacting the Detainee Treatment Act of 2005 (DTA)³⁵ after – and largely in response to – the Supreme Court’s grant of certiorari in *Hamdan v. Rumsfeld*.³⁶

In the five years since, Congress had enacted a handful of additional antiterrorism measures, including the Military Commissions Act (MCA) of 2006,³⁷ as amended in 2009,³⁸ the Protect America Act of 2007,³⁹ and the 2008 amendments⁴⁰ to the Foreign Intelligence Surveillance Act of 1978, known in shorthand as the FAA.⁴¹ And yet, although Congress has spoken in these statutes both to the substantive authority for military commissions and to the scope of the government’s wiretapping and other surveillance powers, it has otherwise left some of the central debates in the war on terrorism completely unaddressed.⁴² Thus, Congress has not revisited the scope of the AUMF since September 18, 2001, even as substantial questions have been raised about whether the conflict has extended beyond that which Congress could reasonably be said to have authorized a decade ago.⁴³ Nor has Congress intervened, despite repeated requests that it do so, to provide substantive, procedural, or evidentiary rules in the habeas litigation arising out of the military detention of noncitizen terrorism suspects at Guantánamo.⁴⁴

As significantly, at the same time as Congress has left some of these key questions unanswered, **it has also attempted to keep courts from answering them.** Thus, the DTA and the MCA purported to divest the federal courts of jurisdiction over habeas petitions brought by individuals detained at Guantánamo and elsewhere.⁴⁵ Moreover, the 2006 MCA precluded any lawsuit seeking collaterally to attack the proceedings of military commissions,⁴⁶ along with “any

other action against the United States or its agents relating to any aspect of the detention, transfer, treatment, trial, or conditions of confinement of an alien who is or was detained by the United States and has been determined by the United States to have been properly detained as an enemy combatant or is awaiting such determination.”⁴⁷ And although the Supreme Court in *Boumediene* invalidated the habeas-stripping provision as applied to the Guantánamo detainees,⁴⁸ the same language has been upheld as applied elsewhere,⁴⁹ and the more general non-habeas jurisdiction-stripping section has been repeatedly enforced by the federal courts in other cases.⁵⁰

Such **legislative efforts to forestall judicial resolution** of the merits can also be found in the telecom immunity provisions of the FAA,⁵¹ which provided that telecom companies could not be held liable for violations of the Telecommunications Act committed in conjunction with certain **governmental surveillance** programs.⁵² Thus, in addition to changing the underlying substantive law going forward, the FAA **pretermitted** a series of then-pending **lawsuits** against the telecom companies.⁵³

Analogously, Congress has attempted to assert itself in the debate over civilian trials versus military commissions by barring the use of appropriated funds to try individuals held at Guantánamo in civilian courts,⁵⁴ and by also barring the President from using such funds to transfer detainees into the United States for continuing detention or to other countries, as well.⁵⁵ **Rather than enact specific policies** governing criteria for detention, treatment, and trial, **Congress’s modus operandi** throughout the past decade **has been to effectuate policy indirectly by barring** (or attempting to bar) **other governmental actors from exercising** their core authority, be it **judicial review** or executive discretion.

Wasserman views these developments as a period of what Professor Blasi described as “constitutional pathology,” typified by “an unusually serious challenge to one or more of the central norms of the constitutional regime.” Nevertheless, part of how Wasserman defends the “Kleinvulnerable” provisions of the MCA and FAA is by concluding that the specific substantive results they effectuate can be achieved by Congress, and so Klein does not stand in the way. But if Redish and Pudelski’s reading of Klein is correct, then the fact that Congress could reach the same substantive results through other means is not dispositive of the validity of these measures. To the contrary, the question is whether any of these initiatives were impermissibly “deceptive,” such that Congress sought to “vest the federal courts with jurisdiction to adjudicate but simultaneously **restrict the power of those courts to perform the adjudicatory function** in the manner they deem appropriate.”⁵⁶

2NC/1NR — Stripping Extensions

Congress will respond with an end-run expansion of executive authority to insulate the policies from judicial review.

Milligan 10 — Luke M. Milligan, Professor of Law at University of Louisville, 2010 (“Congressional End-Run: The Ignored Constraint on Judicial Review,” Georgia Law Review, Vol 45, Fall, Available Online at http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1709405, Accessed 06-06-2015)

Ignored by political scientists, **congressional end-runs undoubtedly constrain the decisionmaking of** the strategic **Justices** assumed by judicial politics scholars. End-runs occur when Congress mitigates the policy costs of adverse judicial review through neither formal limits on the Court's authority nor substitution of its own constitutional interpretation for that of the Court, but through a different decision that cannot, as a practical if not legal matter, be invalidated by the Court. End-runs come in several forms, including congressional decisions to adjust appropriations, grant authority to the Executive Branch, modify certain contingent laws, and reorient legislation in alternate constitutional clauses. Importantly, end-runs are generally more affordable for Congress than either of the two congressional constraints addressed in the prevailing judicial politics literature.

Within the field of judicial politics there remains a lingering uncertainty about Congress's practical impact on the Supreme Court's exercise of judicial review. This uncertainty has been compounded by the literature's failure to study the constraining role of congressional end-runs. Going forward, judicial politics scholars should incorporate the end-run into their formal SOP models and related empirical studies. Such incorporation promises to give political scientists a fuller sense of how their strategic Justices interact with Congress in our constitutional democracy.

Court decisions fail absent Congressional support — no way to get that in this political climate.

Devins 9 — Neal Devins, Professor of Law and Government at the College of William and Mary, 2009 (“Presidential Unilateralism and Political Polarization: Why Today 's Congress Lacks the Will and the Way to Stop Presidential Initiatives,” Willamette Law Review, Vol 45 No 3, Spring, Available Online at <http://scholarship.law.wm.edu/cgi/viewcontent.cgi?article=1025&context=facpubs>, Accessed 06-06-2015)

Before explaining why lawmakers lacked the incentives to rein in the President, a bit of a recap. At the start of this essay, I quoted Justices Jackson and Ginsburg to make-what I consider-a fairly obvious point. Congress has the power to check the President. But if it does not use that power, the President has incentive to fill the void. That does not mean that the President can do whatever he wants. As was true in the war on terror cases, the Supreme Court can place **some limits** on presidential power. But **without a Congress willing to assert its institutional prerogatives, defeats in court are not likely to stick to the President.** Richard Nixon lost several

significant cases in court.⁶⁰ But that is not the reason the presidency was hampered after Nixon left office. The reason was tied to the Watergate-era Congress's willingness to assert itself through numerous legislative enactments and through beefed up oversight. Remember: Dick Cheney's complaint about an imperiled presidency had nothing to do with Supreme Court decision-making and everything to do with congressionally imposed constraints that cut against presidential power.⁶¹

Today, Congress has neither the will nor the way to pursue the type of bipartisan reforms that characterized the Watergate-era Congress. Democrats and Republicans in Congress are more interested in strengthening their position vis-a-vis the other party than in strengthening Congress as an institution. Members of the President's party are loyal to their party, not Congress as an institution, and therefore, will not join forces with the opposition party to assert Congress's institutional prerogatives. Equally telling, members of Congress see little personal gain in advancing a legislative agenda that shifts power from the President to Congress.

1NC — Executive Noncompliance

Court decisions on issues related to the War on Terror are meaningless — the public gets a “moral victory” but the activities continue unabated.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

In this Article, I will show that American courts have often approached the extreme policies of the anti-terrorism campaign by splitting the difference between the two sides – the government and suspected terrorists. One side typically got the ringing rhetoric (the suspected terrorists), and the other side got the facts on the ground (the government). In major decisions both designed to attract public attention and filled with inspiring language about the reach of the Constitution even in times of peril, the Supreme Court, along with some lower courts, has stood up to the government and laid down limits on anti-terror policy in a sequence of decisions about the detention and trial of suspected terrorists. But, at the same time, these decisions have provided few immediate remedies for those who have sought the courts’ protection. As a result, suspected terrorists have repeatedly prevailed in their legal arguments, and yet even with these court victories, little changed in the situation that they went to court to challenge. The government continued to treat suspected terrorists almost as badly as it did before the suspected terrorists “won” their cases. And any change in terrorism suspects’ conditions that did result from these victorious decisions was slow and often not directly attributable to the judicial victories they won.

Does this gap between suspected terrorists’ legal gains and their unchanged fates exist because administration officials were flouting the decisions of the courts? The Bush Administration often responded with sound and fury and attempted to override the Supreme Court’s decisions or to comply minimally with them when they had to.⁶ But, as this Article will show, these decisions did not actually require the government to change its practices very quickly. The decisions usually required the government to change only its general practices in the medium term. Judges had a different framework for analyzing the petitioners’ situation than the petitioners themselves did; judges generally couched their decisions in favor of the suspected terrorists as critiques of systems instead of as solutions for individuals. In doing so, however, courts allowed a disjuncture between rights and remedies for those who stood before them seeking a vindication of their claims. Suspected terrorists may have won in these cases – and they prevailed overwhelmingly in their claims, especially at the Supreme Court – but courts looked metaphorically over the suspects’ heads to address the policies that got these suspects into the situation where the Court found them. Whether those who brought the cases actually got to benefit from the judgments, either immediately or eventually, was another question.

Bad though the legal plight of suspected terrorists has been, one might well have expected it to be worse. Before 9/11, the dominant response of courts around the world during wars and other public emergencies was to engage in judicial deference.⁷ Deference counseled courts to

stay out of matters when governments argued that national security concerns were central. As a result, judges would generally indicate that they had no role to play once the bullets started flying or an emergency was declared. If individuals became collateral damage in wartime, there was generally no judicial recourse to address their harms while the war was going on. As the saying goes, *inter arma silent leges*: in war, the law is mute. After 9/11, however, and while the conflict occasioned by those attacks was still “hot,” courts jumped right in, dealing governments one loss after another.⁸ After 9/11, it appears that deference is dead.

But, I will argue, deference is still alive and well. We are simply seeing a new sort of deference born out of the ashes of the familiar variety. While governments used to win national security cases by convincing the courts to decline any serious review of official conduct in wartime, now governments win first by losing these cases on principle and then by getting implicit permission to carry on the losing policy in concrete cases for a while longer, giving governments a victory in practice.⁹ Suspected terrorists have received from courts a vindication of the abstract principle that they have rights without also getting an order that the abusive practices that have directly affected them must be stopped immediately. Instead, governments are given time to change their policies while still holding suspected terrorists in legal limbo. As a result, despite winning their legal arguments, suspected terrorists lose the practical battle to change their daily lives.

Courts may appear to be bold in these cases because they tell governments to craft new policies to deal with terrorism. But because the new policies then have to be tested to see whether they meet the new criteria courts have laid down, the final approval may take years, during which time suspected terrorists may still be generally subjected to the treatment that courts have said was impermissible. Because judicial review of anti-terrorism policies itself drags out the time during which suspected terrorists may be detained, suspected terrorists win legal victories that take a very long time to result in change that they can discern. As a result, governments win the policy on the ground until court challenges have run their course and the courts make decisions that contribute to the time that the litigation takes. This is the new face of judicial deference.

This Article will explore why and how American courts have produced so many decisions in which suspected terrorists appear to win victories in national security cases. As we will see, many judges have handled the challenges that terrorism poses for law after 9/11 by giving firm support, at least in theory, to both separation of powers and constitutional rights. Judges have been very active in limiting what the government can do, requiring substantial adjustments of anti-terrorism policy and vindicating the claims of those who have been the targets. But the solutions that judges have crafted – often bold, ambitious, and brave solutions – nonetheless fail to address the plights of the specific individuals who brought the cases.

This new form of judicial deference has created a slow-motion brake on the race into a constitutional abyss. But these decisions give the government leeway to tackle urgent threats without having to change course right away with respect to the treatment of particular individuals. New deference, then, is a mixed bag. It creates the appearance of doing something – an appearance not entirely false in the long run – while doing far less in the present to bring counter-terrorism policy back under the constraint of constitutionalism.

Unenforced Court rulings cause a collapse of the judicial system and violence — turns the case by ensuring future claimants have no access to remedy.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

The individuals caught up in the assertions of new governmental powers in times of emergency might disagree that winning their cases actually helped them much, however. If petitioners start to believe that courts can really give them nothing in the end, **we may start to see something dangerous**. In fact, we have already seen danger signals in the reaction of petitioners who have “won” but do not feel they have gained anything. When Mr. Hamdan said at his military commission hearing that he didn’t believe he had won his case yet after his “victory” at the Supreme Court,⁴⁰⁹ or when Mr. Padilla said to his counsel that he wondered how often he would have to win before something good happened in his case,⁴¹⁰ we can see the signs that those who might invoke the courts to help them have already realized that the courts are not particularly helpful after all. If the petitioners who need to bring the cases in order for the government to be kept in line by court decisions refuse to bring more cases, then the limited benefits of new deference for keeping constitutionalism intact through crises will disappear too. **There is a very real risk** in these new deference cases that **the petitioners will turn from a peaceful resolution of their claims through court action to something far less constructive.**

Non-Compliance Impacts — Turns Case

New forms of deference are a mask for a continuation of the status quo — the fake action leads to despair for the movements against government abuses.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

Part IV goes normative and argues that new deference is both a better and worse alternative than old deference. New deference is worse because it gives an **appearance that the courts are addressing an issue** while in practice **not actually curbing the immediate abuses**. It therefore gives an **overly optimistic sense of victory** to those who worry about anti-terrorism’s overreach. But those who bring their cases before the courts feel that courts **do nothing for them**. Such victories may lead to **new despair** among those who thought that winning in law would allow them to win something in practice, making those who brought their cases feel that they have come to the wrong place for answers.¹³ That said, new deference also creates a horizon beyond which abuse of constitutionalism cannot go – off in some distant future – and eventually that may have some real effect.

AT: USA Freedom Act Proves Enforcement

The USA Freedom Act is a win for Obama — it's the proposal he trumpeted.

Stewart 15 — Bill Stewart, former U.S. Foreign Service officer and former correspondent for Time magazine, 2015 (“USA Freedom Act a win for Obama,” June 5th, Available Online at http://www.santafenewmexican.com/opinion/local_columns/usa-freedom-act-a-win-for-obama/article_331a4d49-7d7c-52ff-b7c6-60f839710aee.html, Accessed 06-08-2015)

Passage of the new USA Freedom Act is a victory for Obama, who argued that the changes in the new act ought to relieve the fears and anxieties of those who didn't like the old act. Alas, they don't. The new surveillance program created by the Freedom Act will end 10 years of bulk collection of telephone records by the National Security Agency, but it will make available records held by telephone companies for searches by government officials with a court order. The court order allegedly makes a difference. “This is the kind of rigorous and, essentially a rules architecture that the president does believe is important,” said Josh Earnest, the president's press secretary. “And that is materially different than the program he inherited.”

Not all agree. Said McConnell of the president's compromise bill: “We shouldn't be disarming unilaterally as our enemies grow more sophisticated and aggressive.”

Equally opposed, but for different reasons, Paul complained that “the president continues to conduct an illegal program,” a reference to a recent ruling by a federal appeals court that the original NSA telephone data collection program was not authorized by federal law.

The president, however, was a happy man. He had just gotten what he wanted.

2NC/1NR — Empirics

Court decisions empirically fail to constrain the president.

Devins 9 — Neal Devins, Professor of Law and Government at the College of William and Mary, 2009 (“Presidential Unilateralism and Political Polarization: Why Today’s Congress Lacks the Will and the Way to Stop Presidential Initiatives,” *Willamette Law Review*, Vol 45 No 3, Spring, Available Online at <http://scholarship.law.wm.edu/cgi/viewcontent.cgi?article=1025&context=facpubs>, Accessed 06-06-2015)

Before turning to Part I, let me clarify two points that underlie the analysis that is to follow. First, the focus of this essay is the President's power to advance favored policy initiatives. I do not consider the separate question of presidential power over the administrative state. More to the point, if the President does not express a strong policy preference or, alternatively, delegates decision making authority to agency heads, it may be that agency heads will not look to the White House for policy direction. Agency heads, instead, may focus on their own personal agenda or the agendas of congressional committees, interest groups, or careerists in their agency. For reasons I will detail in Part III of this essay, however, Presidents increasingly seek to rein in agency direction-by appointing presidential loyalists and by making use of regulatory review procedures and pre-enforcement directives such as signing statements. Second, in saying that presidential power is largely defined by the dance that takes place between Congress and the White House, I do not mean to suggest that the courts have no role to play in the separation of powers. My point, instead, is that **court decisions are of limited reach**. They typically settle a case; they **rarely establish precedents that define subsequent bargaining** between the executive and Congress. In case studies of Supreme Court rulings on the legislative veto, executive privilege, and war powers, Lou Fisher and I (both individually and collectively) have demonstrated the limited reach of Supreme Court decisions. In this essay, I will make limited reference to those writings-but I will not try to establish a point that I have made several times before.

War on Terror litigation fails to change actual government practice — enemy combatant detention proves.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” *Boston University Law Review*, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

Litigation on behalf of those detained as enemy combatants started almost immediately, with petitions for writs of habeas corpus being the most common legal vehicle for the challenges. Two U.S. citizens held as domestic enemy combatants, Yaser Hamdi and José Padilla, filed habeas petitions, as did a number of the detainees at Guantánamo. Eventually these cases worked their way up to the U.S. Supreme Court, which ruled on the crisis measures taken in response to 9/11 in a string of decisions that appeared to mount a serious challenge to the

enemy combatant framework. For the petitioners, themselves, **however, the legal victories directly resulted in very little** change in their lives.

2NC/1NR — Executive Will Reinterpret

The Executive will just reinterpret countervailing law to support desired Executive powers — post-911 doctrine proves.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

As the country attacked on 9/11, the United States sprang into action immediately with a twinned strategy of aggressive military action and new understandings of law. From launching wars abroad 89 to developing novel strategies for rendition, detention, and interrogation of suspected terrorists outside the United States 90 and curtailing civil liberties through widespread surveillance programs at home,91 the Bush Administration, with the active participation of the Office of Legal Counsel (OLC) at the Department of Justice, took a generous view of its own powers in wartime. The OLC developed new legal understandings to underwrite the anti-terrorism campaign.92

Some of the new legal understandings resulted from new law. Congress quickly passed the Authorization of the Use of Military Force (AUMF), giving the President a green light to use “all necessary and appropriate force against those nations, organizations, or persons he determines planned, authorized, committed, or aided the terrorist attacks that occurred on September 11, 2001.”93 Shortly thereafter, Congress passed the USA PATRIOT Act with nearly unprecedented speed, broadening the definitions of terrorism offenses, clamping down on financial support for terrorism, increasing domestic surveillance capacities of the U.S. government, and adding a toxic mix of small changes in U.S. law that allowed the government to operate secretly and to commandeer private resources in the anti-terrorism campaign.94

But much of the new understanding of law consisted of reinterpreting or repudiating old legal understandings without any new formal lawmaking. From 9/11 onwards, legal officials in the OLC churned out opinion after opinion, radically changing the interpretation of existing law to permit an aggressive response to terrorism.95 New Attorney General Guidelines were promulgated in 2002, changing the ground rules for domestic terrorism investigations.96 Presidential “signing statements” signaled that the President would refuse to enforce many laws that Congress had passed and that he himself had signed.97 The Bush Administration pushed its own lawmaking capacity to the limits. As a result, for much of the Bush Administration’s tenure, it was unclear just which laws were actually being honored as before, which had been radically reinterpreted, and which were functionally suspended.

Court rulings are definitionally ambiguous — the Executive has wide authority to reinterpret as he likes.

Pillard 5 — Cornelia T. Pillard, Professor of Law at Georgetown University Law Center former Assistant to the United States Solicitor General, former Deputy Assistant Attorney General for the Office of Legal Counsel, 2005 ("The Unfulfilled Promise of the Constitution in

Executive Hands," Michigan Law Review Vol 103 No 4, February, Available Online at <http://scholarship.law.georgetown.edu/cgi/viewcontent.cgi?article=1190&context=facpub>, Accessed 06-06-2015)

Even under a robust judicial supremacism, the executive admittedly has significant space and responsibility to interpret and apply the Constitution. Room for executive branch constitutionalism occurs in part because of the acute practical and legal limitations on the courts' ability and willingness to decide many constitutional issues that confront the executive branch. As James Bradley Thayer famously put it, "much which is harmful and unconstitutional may take effect without any capacity in the courts to prevent it, since their whole power is a judicial one."²⁴

First, it hardly needs to be repeated that the Constitution itself leaves large openings for interpretation. Many important constitutional provisions are broadly and generally worded, and cues from history are often ambiguous.¹ Supreme Court precedent, however binding we take it to be, frequently fails to provide crisp answers to the next concrete case.²⁶ Where a novel issue arises, there is both an obligation and an opportunity for the executive to arrive at a view of the matter and act accordingly in advance of a court's opportunity to decide it. Even clearly established judicial precedent permits doubt when the Court itself seems uncommitted to it.²⁷

Second, the executive is the most **frequent and influential** Supreme Court litigant. Even when the Supreme Court is poised to decide an issue, the constitutional views voiced by the executive can shape the Court's view. The potential for dynamic interplay between the executive's and the Court's constitutionalism underscores the importance of the executive's own considered views.

Third, even where private parties can get courts to respond to their constitutional harms, they may face interstitial deprivations. Individuals suffer injury in the time lag between constitutional harm and relevant judicial response. There is inevitable delay between execution of a new practice, policy, program, or other executive action, and the courts' ability to decide its constitutionality (assuming someone brings an appropriate case). An executive that has adequate mechanisms of constitutional self-scrutiny would, however, avoid the unconstitutional conduct or check it more promptly than a court. Similarly, even where courts invalidate challenged government action, limits on their remedial capacities may make them unable fully to cure constitutional harms.²⁸ The only remedies available from courts for race-based conviction in violation of equal protection, for example, are release, expungement of the conviction, and money damages; no post hoc remedy can restore the years of lost freedom to a person wrongfully convicted. Privacy, once violated, cannot be retroactively restored. Similarly, any shame or anxiety visited on a government employee unconstitutionally fired in retaliation for her public expression, and any period of exclusion from the job, even if it can be eased or mitigated, cannot be undone by a court award of reinstatement and back pay or other monetary

compensation.²⁹ Thus, the delay in judicial review and the pervasive inadequacy of remedies - especially, but not exclusively, when harm is "irreparable,"³⁰ - also focuses responsibility on the executive to engage constitutional issues and strive to avoid constitutional violations in the first place.

Fourth, when the courts apply procedural or institutional doctrines that avoid decision on the merits of a constitutional question, their nondecision implies that someone else, i.e., people elsewhere in the government, must make the decisive constitutional calls.³¹ " The political question doctrine is a classic example of such judicial avoidance: a decision not to invalidate government action on political question grounds "is of course very different from a decision that specific congressional action does not violate the Constitution,"³² because it leaves open the possibility that the political branches might themselves find a violation. Similarly, other justiciability doctrines, such as standing, ripeness, and mootness,³³ as well as immunity defenses that avoid decisions on the merits,³⁴ mean that many instances of unconstitutional conduct will evade definitive constitutional consideration by the Court, leaving only the political branches to avoid or redress them." Courts are also unlikely to review challenges to the exercise of exclusively executive powers, like the powers to pardon,³⁶ veto,³⁷ make appointments,³⁸ and receive ambassadors,³⁹ nor are they likely to review most congressional-executive power struggles.' Even under judicial supremacy, constitutional obligations regarding the exercise of those powers are in the executive's hands.

Supreme Court restrictions on Presidential power are useless — despite lofty rhetoric, they entirely fail to stop the practices.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 ("The New Judicial Deference," Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

By contrast, the terrorism cases appeared to do more than they did – and that was, I argue, their point. In the terrorism cases, the Supreme Court appeared to expand its powers, stand up to the political branches, and change the course of the anti-terror campaign by announcing that the President was constrained by law. These opinions attracted full glare of media attention with dramatic turns of phrase, generating headlines that implied the Court had exercised a great deal of power to change the results on the ground. And the Court appeared to order an unwilling President to do something he had so far refused to do.

But when the effects of the cases are examined, as we have done above, **the Court's powers are barely visible.**⁴⁰⁰ The Court's public decisions disguised the small effects they actually had because the petitioners could not get much benefit from these rulings without more, much more. The Court did not hide its own judicial power. That, it announced loud and clear! What it hid was precisely what the Marbury Court put out in the open: the defeat of the petitioner's main request.

In Marbury, the Court actually ruled against Mr. Marbury on the crucial question of whether the Court had the power to give him what he sought. The Court told Mr. Marbury that he had to get his commission from another court. That he ultimately did not was not the fault of the Supreme Court (though given the political context, the Justices surely would have guessed that this would have been the result). Congress repealed the Act that created the justice of the peace offices shortly after the Court's decision, and with it expired all of the unissued commissions of the midnight judges.⁴⁰¹ The Court actually told Mr. Marbury precisely what he had to do to get his commission; the Court did not lack for detail in that relevant sense. Mr. Marbury did not get his commission because Congress intervened to shut down the course of action that the Court had specified.⁴⁰²

The new deference logic of the terrorism cases, if applied to the facts of Marbury, would have produced a different result. Had the Court first made a huge statement that all of the midnight judges would suddenly get their commissions and then quietly knocked out from under them any clear avenue through which they could, this would have paralleled the post-9/11 cases. In the terrorism cases, by contrast, the Court told the relevant political officials and lower court judges to give the suspected terrorists what they sought – and then refused to include the instructions that would have helped them determine how to do so.

In addition, unlike in Marbury, the post-9/11 courts practicing new judicial deference did not seem at pains to limit their powers in the short term in order to expand their use in the future. New deference courts are at pains to appear to expand their powers in theory in order to limit their use in practice. And that is the precise inverse of Marbury-ism – which appeared to accomplish nothing while doing a lot. The post-9/11 terrorism cases appeared to do a lot while accomplishing much less.

Court decisions against Executive Power *strengthen the Executive* by creating empty statements that allow the President to claim he's no longer violating the Constitution.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

The case for self-regarding courts can be made even more strongly, on the evidence we've seen in this Article. As long as courts still exercise a certain degree of deference to the way that governments are dealing with specific cases, courts can avoid incurring the wraths of those governments. Governments care primarily in times of crisis about having a green light to go on detaining those whom they want to detain and about stringing out the day of reckoning when proof has to be provided. If governments receive that deference, then governments have no reasons to attack the courts when the courts assert themselves on matters of relatively abstract

principle. If courts stay within these limits, doing whatever they feel they need to do to the law while **letting the governments prevail on the facts**, then governments are likely to appear to follow the court decisions, insist on their respect for the courts, and in general let courts get away with issuing governments these “defeats.” Of course, governments would probably prefer to do whatever they want without being hauled before courts to justify their actions, but as long as being hauled before courts comes with the territory of being a constitutional state, new judicial deference may be the best they can expect.

As we have seen, courts have slapped the government on the wrist and forced it to readjust its policies at the margins. But courts have not required the release of detainees, the immediate provision of evidence against them, or absolutely normal tribunals. It is much easier for governments to comply with court decisions when those court decisions do not in fact second-guess concrete decisions of the government to detain specific individuals in a crisis. In fact, **court decisions that issue a lot of smoke and noise but do little to require immediate action may appear to be upholding constitutional principles while in fact strengthening the hands of governments who can then rightly say that they are doing what the law requires.**

After 9/11, then, courts have been willing to stand up to governments in times of crisis, using their substantial heft against the government’s bulked-up war powers. Governments, in turn, have been willing to comply with court decisions because doing so has not really threatened the immediate actions they have already taken.

AT: The Plan is Clear/Aggressive

The Court will use strong language against activities while tacitly encouraging them to continue.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

A gap between law on the books and law in action is commonplace, and in fact, its examination forms one of the key pillars of the law and society movement.³⁴⁸ To law and society scholars, **the formal sources of law virtually always deviate from law as practiced because of inconsistent enforcement, interpretive differences, strategic ignorance, practical limitations, the avoidance of formality, or outright flouting.** Laws against murder do not prevent murders from happening,³⁴⁹ just as constitutional provisions against forced confessions do not always protect those held in custody from being beaten secretly into submission.³⁵⁰ Everyone is supposed to have her day in court, but nearly all cases – both civil and criminal – settle, often by agreeing to a fiction that is not true – that a lesser included offense was all that really happened in the events that led up to a plea bargain or that no one was responsible for anything in a settlement that nonetheless transfers money from the defendant to the claimant.³⁵¹ Someone may settle out of court for an agreed-upon amount, but then she never gets what was promised her.³⁵² Gaps between law on the books and law in action happen all the time.

But the new judicial deference is different. New judicial deference occurs not when there is a gap between the law as announced by one set of actors (legislators and judges) and the law as carried out by another (citizens, lawyers, prosecutors, and police). Instead, new judicial deference occurs when a single judicial opinion pulls in both directions at once. In these cases, law on the books is not different from law in action. Law on the books is different from law on the books. **Courts say one thing and permit another thing to be done, and they do both within the four corners of the same judgment.**

Our review of the 9/11 cases has emphasized that inspiring rhetoric has generally been paired with incomplete detail about what should happen next. As a result, actors to whom the opinions were directed had to work out new solutions within very general outlines. Because opinions in these high-profile detention cases spectacularly lacked any detail that would have provided logical remedies to follow easily, those who won their cases had to start out on a new road full of uncertainties and novel hurdles while **the government against which the decisions ran could find endless ways to block speedy resolution of the issues.**

In designing a gap between right and remedy, the post-9/11 cases are not alone. In other highly contested, high-visibility cases, courts have used this strategy before. Take, for example, abortion cases. In Roe v. Wade, ³⁵³ the Court created what appeared to be an expansive right, but then in subsequent cases permitted so many regulations about parental consent, waiting times, clinic requirements, and appropriate medical procedures that, in practice, abortion providers found it very difficult to maintain easy access to abortion services.³⁵⁴ Moreover,

abortion services in the United States can be expensive because they are often not covered by insurance.³⁵⁵ The much-trumpeted general right was not backed up by easy access to abortion services. This gap occurred not because reality fell short of a legal promise (the usual law and society problem) but instead because the apparently general right was whittled away by restrictive laws that were in practice inconsistent with the practical realization of the general right.³⁵⁶ Both the right and the restrictions were built into doctrine. By contrast, in Germany, where the Federal Constitutional Court found that a woman's general right to obtain an abortion was far more limited as a matter of doctrine,³⁵⁷ it has been easier – at least in many parts of the country – to get abortions because the procedure was at that time covered by the public health system, with widespread availability of facilities and (until recently) little cost to the woman.³⁵⁸ These, too, are specified in doctrine, softening the harsh effects of the main decision that allowed a balancing of women's rights and fetal rights.

Gaps between the expansive rights outlined in a judicial opinion and the limitations on that right permitted in practice by the same judicial opinion are not the usual fare in court decisions, but they are also not completely new. While a more systematic study would have to be done to see whether this strategy is used by judges more frequently in highly visible and socially contested areas of jurisprudence than in other settings, **“splitting the difference” between uncompromising sides might seem to judges to be particularly attractive in hot-button political settings. The new judicial deference means that both sides win – with one side getting the right in theory while the other side gets the reality on the ground,** each authorized by different aspects of the same judicial decision. By contrast, garden-variety gaps between law in the books and law in action are caused by resistance, evasion, and bureaucratic blocks. New deference builds the conflicts into the legal doctrine.

Deference in terror cases means the Court will pretend to aggressively critique government surveillance while actually supporting its continuation.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

Part III explains why new deference is very different from other patterns with which it might be confused. New deference identifies something other than the usual gap between law in the books and law in action, a gap that the law and society movement has so famously pointed out. **Instead, the gap identified here is built into the opinions themselves.** As a result, the contradiction is not located in the inevitable slip between law and its enforcement but in the connection between right and remedy. In addition, new deference is not just another face of judicial minimalism, in which constitutional theorists – Cass Sunstein, in particular – have counseled judges to go slowly in paddling through rough legal waters. In the terrorism cases, there is nothing minimalist about decisions that break so sharply with the past practice of old deference and generate headlines about how “everything has changed.” If anything, the courts that have taken an aggressive role in the antiterror campaign seem to have been designed to

appear maximalist with their high-flying rhetoric. The decisions therefore are hardly minimalist in ambition or style, even if their results have been incremental. Finally, new deference is not Marbury-ism, to give a name to what the Supreme Court did in Marbury v. Madison. 10 Both Mr. Marbury and the suspected terrorists after 9/11 failed to get much from their victories. But the reasons are different. In Marbury, the Court announced a major new principle in a case that was otherwise minor and court-limiting, making its revolutionary assertion of powers seem less radical in the specific context.¹¹ In Marbury, the Court hid its new light under a barrel, so to speak. In the anti-terrorism cases, by contrast, courts set up a searchlight for all the world to see by announcing a new principle in cases that could not have been more visible or had more at stake. And yet, those who brought the cases felt that the darkness persisted even after they “won.” It appears that the post-9/11 judges who wrote these opinions wanted to be seen to be doing something more than they actually did, while the Marbury judges wanted to appear to be doing less. New deference, as a result, is not just another name for Marbury-ism.¹²

AT: Courts Will Enforce

The Courts covertly defer to the Executive by putting up fake barriers to continue to ignore the follow up cases — Padilla proves.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

Both cases were handed down on the same day.¹³⁵ While the Padilla case may have seemed the easier one because it was not a battlefield capture and all of the judges below had found fault with the detention, **the Court decided to avoid the question.** Finding that Padilla had brought his case to the wrong court in the first place because the commandant of the brig in which he was held was not in New York, the Court ruled that Padilla had to go back and start over again in the proper district court.¹³⁶

Jenny Martinez’s brilliant analysis of this case, which she had argued before the Court, focuses on the way that **the Court sidestepped the substantive question of the legitimacy of the detention by concentrating instead on aspects of the process that surely would not have made a difference to the decision** in the long run.¹³⁷ The case surely would have, and indeed almost did, come back to the Supreme Court again for a final ruling on the legality of the detention; the Court only denied certiorari on the second time around because Padilla would have been incarcerated anyway on other criminal charges.¹³⁸

Even as the Court refused to hear the merits of Padilla’s claim, no language in the Supreme Court’s Padilla judgment pledged deference to the executive in a time of war. In fact, it is hard to tell from the majority opinion in Padilla that this case presented a national security issue at all. Instead the case was decided as if it were a garden-variety habeas action in which jurisdictional precision at the trial level was the core of the matter and forum-shopping was the primary evil to be prevented.¹³⁹ By treating the case as not at all unusual, the Court refused to frame the case in a way that demanded that something be said about deference.

But the odd decision in the case **can hardly be understood as anything other than an evasion.** It not only evaded the question of what to do about Padilla’s detention, but it also evaded the need to defer because it bought time for a political resolution in the case without actually giving the President a judicial stamp of approval on his power to detain. The Court treated Padilla as a normal non-emergency case, and **the President got to maintain his detention without judicial challenge for a while longer.**

The Court will appear to produce strong decisions against the executive while deliberately delaying and rolling back the enforcement — Gitmo proves.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston

University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

The cases arising out of the Guantánamo detentions are so numerous and varied and have been going on for so long that a complete review of all the Guantánamo litigation is impossible.¹⁷⁷ But the three Guantánamo cases that have been decided so far by the Supreme Court have been crucial in setting the parameters of the detentions. All three **appeared to deal severe setbacks** to the Bush Administration policy of maintaining the detentions at Guantánamo while not requiring any oversight from anyone outside the executive branch, the intelligence services, and the military. But all three cases were made from the same recipe as the domestic enemy combatant cases: take a healthy pinch of **robust, defiant language** and mix thoroughly with **muddled remedies**, so that it will take **endless litigation** to result in any change on the ground for the detainees themselves. The result? **New judicial deference, in which the Court will appear to be saving the rule of law from a lawless executive.** But in the immediate aftermath of the decisions, the Court produced results closer to what the executive branch wanted, because each decision left many legal loose ends that had to be tied up before any particular detainee's case could be resolved.

The new model of deference is strong Supreme Court decisions like the plan at the outset with delays in implementation and weak standards to ensure the Executive doesn't have to give up any power. There is zero net improvement in outcomes.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

The Supreme Court's Guantánamo cases examined whether the Court should defer to the political branches in wartime or whether the Court should hold the other branches to their constitutional commitments in time of crisis. Compared with the World War II cases, the post 9/11 detention cases showed that the Supreme Court (and many lower courts) refused to exercise old deference.³³³ Instead, during the heat of the crisis, the courts repeatedly stood up to the President, the Congress, and the President and Congress combined, making them all provide more procedural protections for crisis detainees.

The decisions, as the headlines revealed, were trumpeted as major victories for the detainees and setbacks for the Bush Administration. And yet, more than two years into the Obama Administration's kinder, gentler Guantánamo policy, most of the detainees who were held at Guantánamo when President Obama took office were still there.³³⁴ If in fact Guantánamo housed the worst of the worst, this would not be surprising or even troubling. But even those detainees against whom little evidence has ever been provided to a neutral decision-maker are still there.³³⁵ The continued detentions are, of course, not solely the fault of the courts. Since

the Obama Administration took office, Congress has objected to releasing detainees, which has clearly slowed, and in fact almost completely stopped, the process.³³⁶ But the courts have contributed their part as well, by **slowing review of individual cases** and **developing standards** in individual cases that **favor the government** in determining the legality of continued detention.

If one compares what happened to the detainees themselves, the World War II cases and the post-9/11 cases look very different, but not in the direction one would expect. However horrible the Japanese internment was (and it is surely now recognized as one of the most egregious actions the U.S. government has ever taken),³³⁷ it lasted less than half as long as the Guantánamo detentions lasted before serious review of the Guantánamo cases began after Boumediene. The Japanese internments began with President Roosevelt's order on February 19, 1942 and ended when the last camp was closed on March 20, 1946.³³⁸ The courts did nothing, but most Japanese internees were held less than four years.³³⁹ The war's end provided the reason for the closure of the internment camps, not any intervention of the judiciary.³⁴⁰ By contrast, in the post-9/11 cases, the courts were very active, right from the start. But the Guantánamo detention center was opened in January 2002 – and it remains open for the foreseeable future. Many of the men have been held at that center for nearly a decade, winning case after case, without being released and without having their cases reviewed by anyone but their immediate captors.³⁴¹ The long process of winning cases while remaining in detention for the Guantánamo detainees has already lasted more than twice as long as the Japanese internment. As many of the detainees have now asked their lawyers, **what does it mean to keep winning cases if nothing in fact changes?**

“Misery is not a competition,”³⁴² and the internment of the Japanese becomes no less serious because other detainees in other national crises have been imprisoned for longer. I compare the two situations simply to note that judicial involvement under the new deference model has produced no obviously better outcomes for the detainees than old judicial deference did. One has to ask why detentions under the post-9/11 litigation where detainees kept “winning” have lasted much longer than detentions in World War II when the courts refused to intervene.

AT: Fiat Ensures Compliance

Even if fiat means the plan's ruling stands, the Court will decline to hear follow up cases — they won't get involved in fights over Executive jurisdiction.

Menitove 10 — Jonathan T. Menatove, JD from Harvard, MA from Yale, Clerked for Hon. Robert W. Sweet, US District Court, Southern District of New York, 2010 (“Once More Unto the Breach: American War Power and a Second Legislative Attempt to Ensure Congressional Input,” University of Michigan Journal of Law Reform, Spring, Available Online via Lexis)

In more recent decisions, the courts have adopted a different approach, refusing to decide cases concerning war power on grounds that the issue is a nonjusticiable political question. During the Vietnam War, Members of Congress sought assistance from the courts in reasserting their constitutionally-provided war power. However, rather than hear these cases, the judiciary sidestepped the issue, declining to hear cases concerning the constitutionality of the continuation of the war on grounds that the political question doctrine prevented the courts from deciding the issue. n90 During the Reagan and Bush Administrations, courts declined to reach the merits in war powers cases relying on other excuses including mootness, n91 ripeness, n92 standing, n93 the doctrines on judicial prudence and equitable discretion, n94 and the notion that Congress would be a better fact-finder than the courts on this issue. n95 Unlike the early Supreme Court cases, or the subsequent Prize Cases and Curtiss-Wright decisions, the judicial branch over the last thirty years has steered clear of the war powers issue.

While the Supreme Court once served as a bulwark in defense of Congress's predominance over the president in administering the war power, subsequent Supreme Court decisions undermined Congress's constitutional authority. The courts have thus revealed themselves as unable to restore the balance of war power to the Framers' original vision. The judiciary's more recent strategy of treating war power as a nonjusticiable political question has unequivocally established that the courts cannot be trusted to protect [*791] Congress. For this reason, Congress must seek to help itself, acting to pass a legislative war power reform act to ensure that its input is considered when the United States goes to war.

Even when the Supreme Court acts decisively, lower courts will continue to defer to Executive Power and the Supreme Court will not take the cases.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

The Supreme Court did not have the last word on the Guantánamo detentions, nor did it seem to want that role. Instead, consistent with new judicial deference, the Court left the details to be worked out by others in long processes that allowed the situation on the ground to remain the

same during negotiations over the new policy. Since the Court decided Boumediene, the bold guarantees of due process that the Court announced have been turning into something less robust on the ground, as a result of decisions by the Court of Appeals for the District of Columbia spelling out the details.³⁰⁹ Several judges on that court have made no secret of the fact that they believed that the Supreme Court overstepped its authority in deciding Boumediene in the first place.³¹⁰ As a result, the emerging legal standards for the detention created by the D.C. Circuit are often much more deferential to executive detention than the Supreme Court decision was.³¹¹ For example, the D.C. Circuit's jurisprudence in these cases has permitted continued detention where the evidence against the detainee consists entirely of hearsay.³¹² The government only has to show "a preponderance of the evidence" in order to sustain detentions, according to some of the judges, while other judges have argued that an even lower standard suffices for the government to carry its burden of proof in these cases.³¹³ These are standards designed to give the benefit of the doubt to the government and to allow detentions to continue even with shaky proof.

The plan is exactly like the other Court rulings on terror — a bold statement that's light on details and enforcement — it won't be successfully implemented by lower courts even if the Supreme Court has good intentions.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 ("The New Judicial Deference," Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

As Sunstein recognized, the Supreme Court's terrorism jurisprudence was not really minimalist. Yes, courts left many questions open for future resolution. But they hid the incompleteness while trumpeting their more assertive pronouncements in a manner deeply inconsistent with minimalism. Judges in the post-9/11 cases almost seemed to be seeking the headlines that attributed maximalist intentions to their courts. So, when the newspapers blared "Court Overrules Bush on Enemy Combatants"³⁷⁸ after Hamdi or "High Court Rejects Bush's Claim that He Alone Sets Detainee Rules"³⁷⁹ after Hamdan, the press did not see the Court as minimalist. In fact, given the highflown rhetoric the Court used in these cases – for example, the Court stated, "[A] state of war is not a blank check for the President when it comes to the rights of the Nation's citizens"³⁸⁰ and "The Constitution is best preserved by reliance on standards tested over time and insulated from the pressures of the moment"³⁸¹ – the Court did not seem to want to appear to be minimalist. The Court invited the headlines that the press used.

Moreover, the decisions in the terrorism cases were not in fact minimalist in their broad outlines. They did decide a number of questions that they did not have to reach and in ways that left little scope for democratic debate. In Hamdi, the Court may have narrowly permitted Hamdi's detention on the grounds that the AUMF authorized it in a battlefield context, but the Justices granted habeas rights in such a way that there was nothing for a disagreeing Congress to do but attempt to override the Court. And then, in Boumediene, evaluating what Congress

had done in democratic response to their handiwork in Rasul when Congress blocked the extension of habeas rights to offshore aliens, the Court upped the constitutional ante by elevating the habeas claims to constitutional status.

Of course, the Justices were being minimalist in other ways – but in ways that were **hidden from public view**. The Justices left many questions open. But it was not minimalist to refuse to answer questions about the specific shape of habeas review once the Court had decided habeas review was required. Instead, the Court failed to provide any guidance to other courts that were trying to carry out what the Court had boldly told them they had to do. The Court issued decisions that were incomplete rather than minimalist. The decisions were not restrained; they were vague. It was as if the Justices suddenly required others to march to a new and distant destination and then refused to provide any directions for how to get there. The announcement that there would be a march to the new and distant destination was the bold step that denied minimalism; the lack of directions made the decision not minimalist, only incomplete. Refusing to give directions to those one has ordered off on a new journey does not feel like democratic empowerment to those on the road.

The plan is a court decision without detailed means of enactment or enforcement — like the terrorism cases, it appears to give a surveillance victory while masking the ongoing actions of the government.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

New judicial deference in the post-9/11 terrorism cases may look like Marbury-ism because the suspected terrorists who won their cases on principle nonetheless did not get the remedies they sought. And neither had Mr. Marbury. The rights announced in both Marbury and the terrorism cases **wound up empty**.

But the crucial difference between Marbury and the post-9/11 cases is that the Court announced the lack of a remedy in Marbury. The Court said straight out that it had no power to issue the writ that Mr. Marbury sought. He therefore did not get his commission from the Court because the Court said it would not give it to him.

By contrast, the Supreme Court in the post-9/11 cases always held out the possibility of a remedy and in fact **acted as if it had provided one**. The petitioners won bold victories on virtually all important questions. The suspected terrorists were told by the Court that they had rights, and the president, Congress, and the lower courts were told to act accordingly. The petitioners could not realize these rights, however, not because the Court ultimately ruled against them and refused to provide the ticket that would enable them to ride to victory – that was Mr. Marbury’s problem – **but instead because the Court gave them rights that were all**

dressed up but had nowhere to go. The Court failed to provide instructions for the other institutions that had to put into practice what the Court had ordered them to do. The lack of instructions invited another round of litigation to figure out how to make the rights real. **This bought time for the government to continue what it had been doing** – and that was why there was no speedy remedy. The Court in the terrorism cases, unlike in Marbury, did not actually refuse the remedy; the remedy was made impossible because the Court announced rights whose content was not specified in any way that could be enforced, without coming back again through the courts to get more detailed specifications. Marburyism and new deference may look the same because there is a gap between right and remedy. But Marbury denied the remedy while the post-9/11 cases ordered remedies that were impossible to realize.

“New Deference” means the Executive gets to continue the practice even after it’s declared unconstitutional. The Court can’t intervene.

Scheppele 12 — Kim Lane Scheppele, Professor of Sociology and Public Affairs and Director of the Program in Law and Public Affairs at Princeton, 2012 (“The New Judicial Deference,” Boston University Law Review, Vol 92, January, Available Online at <http://www.bu.edu/law/central/jd/organizations/journals/bulr/documents/SCHEPPELE.pdf>, Accessed 06-06-2015)

This is why we should consider the brave and bold decisions that found for the suspected terrorists not as an absence of deference, as the judgment themselves often trumpeted, but instead as a new form of deference. As separation of powers cases, the decisions reviewed here created a bold place for the judiciary and stood firm against go-it-alone executive action, both important principles to maintain during a crisis. But as individual rights cases, these decisions provided little immediate relief because they were not specific enough about the next steps for vindicating the rights that detainees were found to have. The combination – long on principle, short on immediate results – is new judicial deference. The government may have lost as a general matter in these cases, but it won by getting effective permission to keep the offending practices in effect long after the government lost in court.

Circumvention Update SDI

Neg

Presidential Circumvention

Circumvention – Statutes – Empirics

Obama will circumvent – statutory constraints fail.

Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, “Secrecy and negligence: How Congress lost control of domestic surveillance” <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, p.1, accessed 7-15-15, TAP]

In enacting the USA PATRIOT Act just weeks after the 9/11 terrorist attacks, Congress sought to enhance investigations against specific, named persons suspected of terrorism. As voluminous documents leaked by whistleblower Edward Snowden have revealed, however, the president and the National Security Agency (NSA) have relied on that law to authorize the daily, ongoing capture of all U.S. communication records. **These documents make clear that the Bush and Obama administrations ignored statutory constraints to authorize exceptionally broad intelligence-gathering programs.** But from our review of legislative hearings and debates on the PATRIOT Act over the last five years, along with numerous declassified documents on surveillance, we find that unilateral action by the executive branch was only partly to blame for unrestrained domestic spying.

Circumvention – Statutes – Secrecy

Circumvention inevitable – secrecy means the Executive does what they want. Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, “Secrecy and negligence: How Congress lost control of domestic surveillance” <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, p.13, accessed 7-15-15, TAP]

In short, the Snowden revelations exposed a profound failure by Congress to understand and deliberate about the government’s massive collection of phone and email records. It dealt with the need for secrecy by leaving the decisions entirely to the president or the intelligence agencies themselves, while pretending to maintain statutory standards.

Circumvention – Statutes – Secret Interpretations

The plan is irrelevant – the Executive branch will use secret interpretations of the law to do whatever it wants.

Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, “Secrecy and negligence: How Congress lost control of domestic surveillance” <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, p.5, accessed 7-15-15, TAP]

Although the shifting evidentiary standards for records requests created a complex body of law, two points stand out. First, in all versions of the business-records provision, Congress made clear that orders were to be used against a specific individual in a particular ongoing investigation. Legislators never contemplated bulk-collection orders that lacked named targets and that permitted the capture of records for cases yet to be launched. Second, in both the PATRIOT Act and its 2006 reauthorization, Congress specified that business-records orders were to be used by the FBI. Neither bill mentioned the NSA. As we discuss next, secret interpretations of the PATRIOT Act authorizing dragnet collection of metadata overlooked the statutory restrictions.¹¹

Circumvention – Statutes – Empirics

Obama will completely ignore statutory restrictions.

Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, "Secrecy and negligence: How Congress lost control of domestic surveillance" <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, p.5, accessed 7-15-15, TAP]

In the decade between the PATRIOT Act's passage and Snowden's first leaks, Congress played no part in developing or modifying the NSA's domestic programs. In fact, aside from the limited involvement of two FISA Court judges, the Bush and Obama administrations made all decisions over blanket-collection procedures. But Congress did not opt out of deliberations and policy formulation. The executive simply ignored surveillance restrictions included in the PATRIOT Act and decided to keep nearly all legislators, except for congressional leaders and four members on the Intelligence committees, in the dark.¹²

AT: Patriot Act Example Bad

The Patriot Act was narrow authorization, not broad sweeping grants of power. Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, "Secrecy and negligence: How Congress lost control of domestic surveillance" <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, p.5, accessed 7-15-15, TAP]

Circumvention – Statutes – Patriot Act Example

Ignores constraints – Patriot Act proves.

Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, "Secrecy and negligence: How Congress lost control of domestic surveillance" <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, p.2, accessed 7-15-15, TAP]

In drafting the original PATRIOT Act mere weeks after the traumatic security failure of the September 11 attacks, Congress sought to expand and improve protections against terrorism. But, contrary to much of the political lore, it also showed serious concern for privacy safeguards. The House Judiciary Committee, controlled by Republicans, pushed for only a limited expansion of investigative powers and insisted that most surveillance provisions in the PATRIOT Act expire after four years unless reauthorized. The sunset provisions were intended to ensure a serious review of the new surveillance practices to determine whether sufficient privacy protections were in place. Yet, 12 years later, as documents made public by Edward Snowden revealed, the NSA was sweeping up and analyzing vast amounts of U.S. communication records, or "metadata," without observing significant constraints. The Snowden documents also showed that the Foreign Intelligence Surveillance Court (FISA) had radically reinterpreted the PATRIOT Act, in secret, to permit bulk collection of phone records. Paradoxically, while the incidence of terrorism has been much lower in the years after 9/11 than anyone expected, government surveillance has been much more intrusive than legislators authorized. What happened? Why did Congress so thoroughly fail to exercise control and ensure effective protection of privacy? What are the lessons for future policymaking?

Congress Fails

1nc – Congress Fails

Congress fails – they won't enforce the aff – no motive and institutional shortcomings – multiple warrants.

Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, "Secrecy and negligence: How Congress lost control of domestic surveillance" <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, p.3-4, accessed 7-15-15, TAP]

We argue that **Congress as an institution has great difficulty acting in any consistent, balanced way to protect privacy interests on surveillance issues.** On one hand, when setting broad priorities in general terms, it attaches considerable weight to privacy interests. On the other hand, when faced with specific issues of investigatory authority, it readily makes sweeping, indiscriminate sacrifices of those same interests—even without distinct evidence of serious threat. The lack of consistency in defending privacy interests has several sources. Most fundamental, legislators reflect the attitudes and demands of their constituencies. **The American public has generally been quite willing to surrender privacy rights for the sake of enhanced security, against even unspecified, highly indefinite terrorist threats.**¹ In addition, there are generally no well-organized, powerful constituencies for privacy interests.² But several factors exaggerate the effect. First, decisions on surveillance are largely about risk (for example, the probability of an abusive "fishing expedition" versus that of a major terrorist attack). **Congress members have strong temptations to defer to the executive branch on decisions that could, therefore, turn out badly.** Second, the president's party is more interested in defending the executive than in checking its decisions.³ Third, surveillance politics is complicated by long-term partisan and ideological divisions that were shaped by the particular conflicts of the Cold War era. For generations, the main targets of intelligence-agency surveillance have been mostly on the political left. This history may inhibit the response of many Republicans to the threat of intrusive government, even though the main targets and likely victims of intrusive surveillance are no longer a well-defined ideological category. Fourth, the committee system has been another impediment: overlapping jurisdictions among the Homeland Security, Intelligence, and Judiciary panels prevent any one of them from being held accountable for stalled policy or lapses in oversight.⁴ Finally, and very important, **Congress has particular difficulties with policies that must be decided in secret**—such as those for controlling technologically advanced surveillance methods. To prevent profuse leaks, Congress and the executive have imposed severe restrictions on members' access to information. When the full House or Senate decides policy, however, the restricted information encourages some members to opt out of serious participation, degrading the intelligence of deliberation and **promoting deference to the executive.** Lacking any settled disposition on surveillance issues, Congress will respond to the leadership, and sometimes merely the political cover, provided by other institutions—especially the president, the intelligence agencies, and the FISA Court. It may take cues from the Justice Department or other executive agencies, and it will defer to rulings by the regular federal

courts. In the end, Congress's performance in protecting privacy may depend on the design of the legislative arrangements for dealing with secret programs and on the structures and missions of relevant administrative and judicial institutions.

Congress Fails – FISA Court

Congress can't check the FISA Court.

Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, "Secrecy and negligence: How Congress lost control of domestic surveillance" <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, p.8, accessed 7-15-15, TAP]

At the same time, Intelligence Chairman Rogers and Judiciary Chairman Lamar Smith (R-Texas) made the false assertion that the extensions merely continued to provide antiterrorism agents with the same tools that criminal investigators had. Business-records orders, they claimed, were used to seize the very same documents as grand jury subpoenas.⁴¹ What they omitted from their explanation was that authorities used FISA Court orders to seize data on millions of calls per day—something that investigators could never do with subpoenas.

No solvency for the FISA Court – congressional indifference and deception.

Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, "Secrecy and negligence: How Congress lost control of domestic surveillance" <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, p.8, accessed 7-15-15, TAP]

In all the discussions on bulk collection **between the White House and the FISA Court**, Congress was absent. This absence resulted initially from the Bush administration's overt decision to exclude legislators. But once legislators gained opportunity to learn about and shape surveillance policy, **a combination of indifference and deception in Congress ensured that most members remained absent** from the debate.

Congress Fails – Motive

Congress has no motive to enforce – lack of knowledge and fear of terrorism. Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, “Secrecy and negligence: How Congress lost control of domestic surveillance” <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, p.3, accessed 7-15-15, TAP]

During the last five years of legislative debates over the PATRIOT Act, Congress has failed to define or control surveillance policy. Prior to the Snowden leaks, most members had little awareness of NSA activities and Congress had little capacity to impose constraints. **Now, more than 18 months after Snowden exposed the mass seizure of phone records, not much has changed.** To a great extent, the source of difficulty has been the inadequacy of the institutional arrangements for legislative deliberation on secret programs. Some members have declined opportunity to learn about domestic-spying practices, while others have opposed placing restrictions on the NSA for fear of giving terrorists any tactical advantage.

Congress Fails – Theory + History

Congress won't enforce the plan – even the best laws are completely meaningless.

Quirk, University of British Columbia U.S. politics and representation professor with the Phil Lind Chair, and Bendix, Keene State College political science assistant professor, 2015

[Paul and William, No. 68, March 2015, “Secrecy and negligence: How Congress lost control of domestic surveillance” <http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>, p.1-2, accessed 7-15-15, TAP]

After the relatively **balanced and cautious provisions** of the 2001 PATRIOT Act, **Congress virtually absented itself from substantive decision making on surveillance. It failed to conduct serious oversight** of intelligence agencies, **ignored government violations of law**, and worked harder to **preserve the secrecy** of surveillance practices than to control them. Even after the Obama administration made the essential facts about phone and email surveillance available in classified briefings to all members, **Congress mostly ignored the information and debated the reauthorizations on the basis of demonstrably false factual premises**. Until the Snowden revelations, only a handful of well-briefed and conscientious legislators—too few to be effective in the legislative process—understood the full extent of domestic intelligence gathering. we describe and explain Congress's deliberative failure on phone and Internet surveillance policy. **We show that along with a lack of consistent public concern** for privacy, and the increasing tendency toward **partisan gridlock**, Congress's **institutional methods for dealing with secret surveillance programs have undermined its capacity to deliberate and act effectively** with respect to those programs. Although the current political environment is hardly conducive to addressing such problems, we discuss long-term goals for institutional reform to enhance this capacity. **We see no easy or decisive institutional fix**. But without some structural change, the prospects look dim for maintaining significant limitations on investigatory intrusion in an era of overwhelming concern for security.

Obama is gradually reforming surveillance programs—hasty change causes him to invoke his surveillance authority—perceives it as undermining security

Dilanian and Parsons 14 (Ken, intelligence reporter for The Associated Press, and Christi, White House correspondent. “Obama to seek only modest reforms in government surveillance” (1/15/14), The Los Angeles Times, <http://articles.latimes.com/2014/jan/15/nation/la-na-nsa-obama-20140116>)

WASHINGTON — President Obama plans to announce new guidelines for government surveillance operations but will not end or order strict limits on the most controversial domestic programs exposed by former National Security Agency contractor Edward Snowden, including the bulk collection of American telephone records. White House aides said reforms proved far more difficult than they initially appeared, and Obama has struggled to find middle ground between those who warn that government surveillance is excessive and could lead to abuses and national security officials who contend that the programs are critical for counter-terrorism and already have passed congressional and judicial review. In a widely anticipated speech on Friday, Obama will seek to boost public confidence in the government's ability to safeguard privacy even as he leaves most current surveillance programs intact with only modest modifications. He thus is expected to say that although the NSA's bulk collection of domestic telephone toll records can't continue in its present form, he will not propose requiring telephone companies or another entity to maintain long-term storage of the so-called metadata — numbers called but not the conversations — to replace the NSA database, as a presidential task force has recommended. PHOTOS: Politics in 2014 The president instead will ask Congress to craft a solution, aides said. He doesn't want to be "hasty" about radically revising a program that top intelligence officials consider valuable, said one advisor. Moreover, legislation almost certainly would be required to revamp the current system, which Congress previously approved. "He will say, 'The program has to change.... Over to you, Congress,'" said a senior intelligence official who has been briefed on the decisions and who insisted on anonymity because he was not authorized to discuss the president's deliberations. Lawmakers are divided on whether or how to change the NSA program, making any major adjustments unlikely in the short term. But the provision in the law that authorizes the program, Section 215 of the Patriot Act, is up for renewal in 2015, and that could provide a platform for review. Obama's posture is likely to deeply disappoint privacy activists and their allies in Congress who argue that the bulk collection program violates civil liberties and contains too much private data on Americans. But Obama has never felt that way, and supported the program both as a senator and as president. It's possible that Obama may yet adjust his views. Some of his top staffers said Wednesday they were not sure exactly how he wanted to proceed. He still hasn't nailed down some details of his speech and, though they know he will limit metadata collection in some way, they can't say how. "Metadata may be the most challenging part," said Sen. Richard J. Durbin (D-Ill.), a member of the Senate Judiciary Committee. "Having all that information at your fingertips can be helpful.... But trying to invent an alternative [to direct NSA control] is tricky." Durbin said Obama didn't "tip his hand" when they discussed the program this week. Telephone companies don't want to become a repository for the calling records because of potential legal liability and because they don't have an obvious way to pay for the added work, according to aides working on the project. A third-party curator appointed and paid by the government might struggle to prove it was independent. Intelligence officials lobbied the White House vigorously not to make it more difficult for them to access the telephone records when they need them. But if the government can examine the material too easily, it may not allay concerns about who controls it. Obama has come under intense pressure to rein in government surveillance and increase oversight since an independent panel that he appointed called last month for 46 changes to current practices. Officials say he already has decided not to support several of the key recommendations. The president, for example, will not propose requiring a court order each time the FBI issues a so-called national security letter, a form of administrative subpoena used to access otherwise private customer records from telephone, banking, credit card and other companies. The FBI, which issues more than 20,000 such subpoenas a year, has strongly opposed requiring a judge to review each one. On Tuesday, a federal judge, John D. Bates, who was appointed to speak for the Foreign Intelligence Surveillance Court, wrote members of Congress to warn of staunch opposition in the judiciary as well. Obama also will not push for new restrictions on the use of data from U.S. citizens that is collected inadvertently while the NSA is targeting foreign Internet traffic under Section 702 of surveillance law. The task force had sought new rules to protect Americans' privacy, but intelligence agencies had opposed any changes. The NSA vacuums up communications from servers owned by Google, Apple, Microsoft and other U.S. technology companies, operating under a program

code-named PRISM. Documents leaked by Snowden showed the NSA could keep information inadvertently collected about Americans for up to five years and share it with other agencies. "We feel like once this information is lawfully collected, there should not be additional restrictions on how it is used," the senior intelligence official said. The president will announce some changes that are likely to hearten NSA critics. He will say that senior administration officials will play a larger role in reviewing foreign surveillance decisions, including eavesdropping on allied foreign leaders. Snowden's disclosures that the NSA was monitoring the cellphones of leaders in Germany, Mexico and Brazil caused an uproar abroad. Obama also will speak in favor of creating a way for an independent advocate to represent privacy interests in classified hearings before the Foreign Intelligence Surveillance Court, although he will not specify how that should work, the senior official said. In his letter to Congress about the views of the federal judiciary, Bates said that proposal was "unnecessary — and could prove counterproductive."

He has full means to circumvent the plan- congressional constraints fail

Bendix and Quirk 15 [William Bendix is an assistant professor of political science at Keene State College. In enacting the USA PATRIOT Act just weeks after the 9/11 terrorist attacks, Congress sought to enhance investigations against specific, named persons suspected of terrorism. As voluminous documents leaked by whistleblower Edward Snowden have revealed, however, the president and the National Security Agency (NSA) have relied on that law to authorize the daily, ongoing capture of all U.S. communication records. These documents make clear that the Bush and Obama administrations ignored statutory constraints to authorize exceptionally broad intelligence-gathering programs. But from our review of legislative hearings and debates on the PATRIOT Act over the last five years, along with numerous declassified documents on surveillance, we find that unilateral action by the executive branch was only partly to blame for unrestrained domestic spying. After the relatively balanced and cautious provisions of the 2001 PATRIOT Act, Congress virtually absented itself from substantive decision making on surveillance. It failed to conduct serious oversight of intelligence agencies, ignored government violations of law, and worked harder to preserve the secrecy of surveillance practices than to control them. Even after the Obama administration made the essential facts about phone and email surveillance available in classified briefings to all members, Congress mostly ignored the information and debated the reauthorizations on the basis of demonstrably false factual premises. Until the Snowden revelations, only a handful of well-briefed and conscientious legislators—too few to be effective in the legislative process—understood the full extent of domestic intelligence gathering. We describe and explain Congress's deliberative failure on phone and Internet surveillance policy. We show that along with a lack of consistent public concern for privacy, and the increasing tendency toward partisan gridlock, Congress's institutional methods for dealing with secret surveillance programs have undermined its capacity to deliberate and act effectively with respect to those programs. Although the current political environment is hardly conducive to addressing such problems, we discuss long-term goals for institutional reform to enhance this capacity. We see no easy or decisive institutional fix. But without some structural change, the prospects look dim for maintaining significant limitations on investigatory intrusion in an era of overwhelming concern for security. INTRODUCTION In drafting the original PATRIOT Act mere weeks after the traumatic security failure of the September 11 attacks, Congress sought to expand and improve protections against terrorism. But, contrary to much of the political lore, it also showed serious concern for privacy safeguards. The House Judiciary Committee, controlled by Republicans, pushed for only a limited expansion of investigative powers and

insisted that most surveillance provisions in the PATRIOT Act expire after four years unless reauthorized. The sunset provisions were intended to ensure a serious review of the new surveillance practices to determine whether sufficient privacy protections were in place. Yet, 12 years later, as documents made public by Edward Snowden revealed, the NSA was sweeping up and analyzing vast amounts of U.S. communication records, or “metadata,” without observing significant constraints. The Snowden documents also showed that the Foreign Intelligence Surveillance Court (FISA) had radically reinterpreted the PATRIOT Act, in secret, to permit bulk collection of phone records. Paradoxically, while the incidence of terrorism has been much lower in the years after 9/11 than anyone expected, government surveillance has been much more intrusive than legislators authorized. What happened? Why did Congress so thoroughly fail to exercise control and ensure effective protection of privacy? What are the lessons for future policymaking? During the last five years of legislative debates over the PATRIOT Act, Congress has failed to define or control surveillance policy. Prior to the Snowden leaks, most members had little awareness of NSA activities and Congress had little capacity to impose constraints. Now, more than 18 months after Snowden exposed the mass seizure of phone records, not much has changed. To a great extent, the source of difficulty has been the inadequacy of the institutional arrangements for legislative deliberation on secret programs. Some members have declined opportunity to learn about domestic-spying practices, while others have opposed placing restrictions on the NSA for fear of giving terrorists any tactical advantage. ...[A]long with a lack of consistent public concern for privacy, and the increasing tendency toward partisan gridlock, Congress’s institutional methods for dealing with secret surveillance programs have undermined its capacity to deliberate and act effectively with respect to those programs. Secrecy and negligence 3 If Congress had conducted thorough, informed deliberations at all stages, we suspect it would have endorsed extensive collection of communication records, but it would have also imposed limitations and constraints to minimize the harm to privacy interests. Instead, it gave the executive branch essentially unfettered authority to operate a massively intrusive program.

Circumvention is worse than the status quo—undermines institutions, kills US credibility

Glennon ’14, professor of international law at Tufts University’s Fletcher School of Law and Diplomacy, Legal Counsel to the Senate Foreign Relations Committee (1977-1980), Fulbright Distinguished Professor of International and Constitutional Law, Vytautas Magnus University School of Law, Kaunas, Lithuania (1998); a Fellow at the Woodrow Wilson International Center for Scholars in Washington D.C. (2001-2002); Thomas Hawkins Johnson Visiting Scholar at the United States Military Academy, West Point (2005); Director of Studies at the Hague Academy of International Law (2006); and professeur invité at the University of Paris II (Panthéon-Assas) from 2006 to 2012., consultant to congressional committees, the U.S. State Department, and the International Atomic Energy Agency, member of the American Law Institute, the Council on Foreign Relations, and the Board of Editors of the American Journal of International Law

Michael J., “Torturing the Rule of Law”, <http://nationalinterest.org/files/digital-edition/%5Buser-last-login-raw%5D/134%20Digital%20Edition.pdf>, EC

The cia’s spying was thus no trivial staff quarrel requiring merely a personal apology. Willfully deceiving a governmental fact-finding body, whether a court or a congressional committee, undermines the integrity of the American legal system. In the constitutional design, these organs were intended to be the government’s portals to truth. To carry out their duties, they depend upon an accurate assessment of the facts. When they are misled, their work product is suspect; judicial opinions and legislative findings then rest upon falsehood. The body politic casts votes based upon misinformation, electing candidates who would not otherwise hold office. The entire system of constitutional and electoral checks on abusive power is thereby corrupted. Those who mislead no doubt believe that they do so for a greater good, the protection of the nation’s security. They are mistaken. The cia, the nsa and other elements of the military/intelligence community do not exist merely to prevent airplanes from flying into buildings. Their larger mission is to protect the nation’s democratic institutions and the rule of

law established by the Constitution. When elements of the national-security apparatus deceive Congress or the courts, they feed the perception that the whole system is rigged and undermine the very institutions that it is their mission to protect. Distrust of government tends to become generalized. People who doubt government officials' assertions on national-security threats are inclined to extend their skepticism to other arenas. Governmental assurances concerning everything from vaccine and food safety to the fairness of stock-market regulation and IRS investigations (not without reason) become widely suspect. The protection of legitimate national-security interests itself suffers if the public is unable to distinguish between measures vital to its protection and those assumed to be undertaken for reasons of doubtful validity. Further, it does not strengthen the United States in its relations with other nations to engage in deception. It weakens our government when its institutions are seen around the world as hollow or its officials as duplicitous. The United States' historic advantage in its international relations has been not merely military or economic. It has been reputational. Legislative and judicial monitors that operate independent of the executive branch, that are able to call the military and intelligence agencies to task when they run amok, lie at the core of America's reputation for a robust rule of law. Whether the United States thrives or declines in this century will rest in large part on its ability or inability to maintain democratic accountability by safeguarding the integrity of its institutions.

Legitimate unipolarity is key to a stable world order

Finnemore '9, professor of political science and international affairs at George Washington University

"Legitimacy, Hypocrisy, and the Social Structure of Unipolarity: Why Being a Unipole Isn't All It's Cracked Up to Be," World Politics, Volume 61, Number 1, http://home.gwu.edu/~finnemor/articles/2009_unipolarity_wp.pdf, EC

The Legitimacy of Power and the Power of Legitimacy. Legitimacy is, by its nature, a social and relational phenomenon. One's position or power cannot be legitimate in a vacuum. The concept only has meaning in a particular social context. Actors, even unipoles, cannot create legitimacy unilaterally. Legitimacy can only be given by others. It is conferred either by peers, as when great powers accept or reject the actions of another power, or by those upon whom power is exercised. Reasons to confer legitimacy have varied throughout history. Tradition, blood, and claims of divine right have all provided reasons to confer legitimacy, although in contemporary politics conformity with international norms and law is more influential in determining which actors and actions will be accepted as legitimate. 9. Recognizing the legitimacy of power does not mean these others necessarily like the powerful or their policies, but it implies at least tacit acceptance of the social structure in which power is exercised. One may not like the inequalities of global capitalism but still believe that markets are the only realistic or likely way to organize successful economic growth. One may not like the P5 vetoes of the Security Council but still understand that the United Nations cannot exist without this concession to power asymmetries. We can see the importance of legitimacy by thinking about its absence. Active rejection of social structures and the withdrawal of recognition of their legitimacy create a crisis. In domestic politics, regimes suffering legitimacy crises face resistance, whether passive or active and armed. Internationally, systems suffering legitimacy crises tend to be violent and

noncooperative. Post-Reformation Europe might be an example of such a system. Without at least tacit acceptance of power's legitimacy, the wheels of international social life get derailed. Material force alone remains to impose order, and order's creation or maintenance by that means is difficult, even under unipolarity. Successful and stable orders require the grease of some legitimation, structure to persist and prosper.¹⁰ The social and relational character of legitimacy thus strongly colors the nature of any unipolar order and the kinds of orders a unipole can construct. Yes, unipoles can impose their will, but only to an extent. The willingness of others to recognize the legitimacy of a unipole's actions and defer to its wishes or judgment shapes the character of the order that will emerge. Unipolar power without any underlying legitimacy will have a very particular character. The unipole's policies will meet with resistance, either active or passive, at every turn. Cooperation will be induced only through material quid pro quo payoffs. Trust will be thin to nonexistent. This is obviously an expensive system to run and few unipoles have tried to do so. More often unipoles attempt to articulate some set of values and shared interests that induce acquiescence or support from others, thereby legitimating their power and policies. In part this invocation of values may be strategic; acceptance by or overt support from others makes exercise of power by the unipole cheaper and more effective. Smart leaders know how to "sell" their policies. Wrapping policies in shared values or interests smoothes the path to policy success by reassuring skeptics.¹¹ Rhetoric about shared interests in prosperity and economic growth accompanies efforts to push free trade deals on unwilling partners and publics. Rhetoric about shared love of human rights and democracy accompanies pushes for political reforms in other states. In their examination of debates leading up to the 2003 Iraq war, in this issue of World Politics, Jack Snyder, Robert Shapiro, and Yaeli Bloch-Elkon provide an example of unipolar attempts to create legitimacy through strategic use of rhetoric. They show how "evocative and evasive rhetoric" allowed proponents of the war to imply links between the 9/11 attacks, weapons of mass destruction, and Saddam Hussein's regime. Potentially unpopular or controversial policies were rationalized by situating them in a larger strategic vision built on more widely held values, as when the authors of the 2002 National Security Strategy memorandum wove together the global war on terror, the promotion of American democratic values abroad, and the struggle against authoritarian regimes to create a justification for preventive war.¹² Indeed, as Ronald Krebs and Patrick Jackson argue, rhetorical "sales pitches" of this kind can be highly coercive. Examining the same case (the selling of the Iraq war), Krebs and Jennifer Lobasz show how the administration's "war-on-terror" discourse, which cast the U.S. as a blameless victim (attacked for "who we are" rather than anything we did), was designed in such a way as to leave opponents with very few arguments they could use to rally effective opposition in Congress.¹³ Usually this articulation of values is not simply a strategic ploy. Decision makers and publics in the unipole actually hold these values and believe their own rhetoric to some significant degree. Unipole states, like all states, are social creatures. They are composed of domestic societies that cohere around some set of national beliefs. Their leaders are products of those societies and often share those beliefs. Even where leaders may be skeptical, they likely became leaders by virtue of their abilities to rally publics around shared goals and to construct foreign and domestic policies that reflect domestic values. Even authoritarian (and certainly totalitarian) regimes articulate shared goals and function only because of the web of social ties that knit people together. Certainly all recent and contemporary strong states that could be

candidates for unipoles—the U.S., China, Russia, Germany, and Britain—do.¹⁴ Thus unipole states, like all states, find naked self-aggrandizement or even the prescriptions of Machiavellian virtù difficult to pursue.¹⁵ Unipoles and the people who lead them pursue a variety of goals derived from many different values. Even “national interest” as most people and states conceive of it involves some broader vision of social good beyond mere self-aggrandizement. Americans like to see democracy spread around the world in part for instrumental reasons—they believe a world of democracies is a safer, more prosperous world for Americans—and also for normative ones—they believe in the virtues of democracy for all. Likewise, Americans like to see markets open in part for instrumental reasons—they believe a world of markets will make Americans richer—and also for normative ones—they believe that markets are the ticket out of poverty. Much of unipolar politics is thus likely to revolve around the degree to which policies promoting the unipole’s goals are accepted or resisted by others. Other states and foreign publics may need to be persuaded, but often influential domestic constituencies must also be brought on board. Channels for such persuasion are many and varied, as is evident from past U.S. diplomatic efforts to sell its policies under bipolarity. The shift from laissez-faire to what John Ruggie terms the “embedded liberal compromise” as the basis for the U.S.-led economic order after WWII required extensive diplomatic effort to persuade other states and New York’s financial elite to go along. The tools of influence used to accomplish this were sometimes material but also intellectual and ideological. It was the “shared social purposes” of these economic arrangements that gave them legitimacy among both state and societal actors cross-nationally.¹⁶ A unipole’s policies are thus circumscribed on two fronts. The policies must reflect values held at home, making them legitimate domestically. At the same time, in order to induce acquiescence or support from abroad, they must appeal to the leaders and publics of other states. Constructing policies across these two spheres—domestic and international—may be more or less difficult, depending on circumstances, but the range of choices satisfying both constituencies is unlikely to be large. Widespread disaffection on either front is likely to create significant legitimacy costs to leaders, either as electoral or stability threats domestically or as decreased cooperation and increased resistance internationally. Creating legitimacy for its policies is thus essential for the unipole but it is also difficult, dangerous, and prone to unforeseen consequences. Domestically, the need to cement winning coalitions in place has polarized U.S. politics, creating incentives to exploit wedge issues and ideological narratives. As Snyder, Shapiro, and Bloch-Elkon describe, neoconservatives, particularly after 9/11, used these tools to great effect to generate support for the Bush administration’s policies. Such ideologically-driven persuasion efforts entail risks, however. Constructing coherent ideological narratives often involves sidelining inconvenient facts, what Snyder and his coauthors call “fact bulldozing.” This is more than just highlighting some facts at the expense of others. It may (or may not) begin with that aim, but it can also involve changing the facts people believe to be true, as when large numbers of people came to believe that weapons of mass destruction were indeed found in Iraq. Thus, to the degree that these persuasion efforts are successful, if their ideology does not allow them to entertain contrary facts, policymakers and publics may make decisions based on bad information. This kind of self-delusion would seem unlikely to result in smart policy. To the extent that ideological narratives become entrenched, these delusions may extend to future generations of policymakers and make them victims of blowback. Even if

successors come to terms with the facts, they may be entrapped by the powerful legitimating rhetoric constructed by their predecessors.¹⁷

Uniqueness

Uniqueness—Obama

Obama is holding off on using increasing surveillance, but keeping major programs around – gaps between rhetoric and action show he'd invoke authority if threatened by immediate curtailment

Cohn and Reitman '14, Executive Director of the Electronic Frontier Foundation

Cindy and Rainey, "A Scorecard for Obama's Surveillance Reform Announcement",
<https://thedaywefightback.org/obama-scorecard/>

1. Stop mass surveillance of digital communications and communication records. ¶ Score: 0.2 ¶ There are three types of mass surveillance that we know about that we were using to evaluate Obama's promises in this category: surveillance of millions of phone records under Section 215 of the PATRIOT Act; surveillance of Internet communications internationally under Section 702 of the FISA Amendments Act; and surveillance of communications overseas under Executive Order 12333. ¶ In order to score a full point in this category, Obama would have needed to declare that the executive branch would no longer be using any of these authorities to engage in mass surveillance. He tackled only one of these issues somewhat: the surveillance of telephony metadata under Section 215 of the Patriot Act. Specifically, he acknowledged the recommendations of his review group that the government cease to collect and maintain a database of all Americans' telephone records. He is ending that program, which is laudable. However, he left open the door to having telecom companies or another third party maintain a similar set of mass data, so even as to 215, we could not give him the full ½ of the point. ¶ 2. Protect the privacy rights of foreigners. ¶ Score: 0.4 ¶ All too often, the NSA's official position is that foreigners—or anybody deemed sufficiently likely to not be a "U.S. person"—are not given any legal protections under surveillance laws. This situation is unacceptable and out of line with international human rights law, as we've put forth in our Necessary and Proportionate Principles, now supported by over 300 organizations worldwide. We demanded that individualized targeting be conducted for non-US persons. ¶ Obama nodded a bit to this situation, and proposed that some reforms be made, but did not give real specifics. While he also did not acknowledge any legal obligations, he did recognize a "special obligation" on U.S. intelligence agencies, and specifically called out a new, higher standard on eavesdropping on foreign leaders. But that's not enough: privacy consideration should not be a privilege afforded only to top officials. Given these small steps forward but ongoing problems, we've given Obama .3 points in this category. ¶ 3. No data retention mandate. ¶ Score: 0 ¶ Obama's review group recommended that the telephone metadata surveillance program be taken away from the government, suggesting that a third party or even telecom companies themselves be responsible for maintaining a searchable list of our calling records. This approach—mandating companies act as Big Brother's little helper—won't alleviate the serious privacy concerns with maintaining a digital record of every call we make. ¶ We had hoped that Obama would make clear that he would reject any form of mandatory data retention. Instead, Obama acknowledged some of the concerns with a data retention mandate but called for "options for a new approach that can match the capabilities and fill the gaps that the Section 215 program was designed to address, without the government holding this metadata itself." He never specifically rejected the idea of forcing companies or a third party to hold this data, and so he does not receive a

point in this category.¶4. Ban no-review National Security Letters.¶Score: 0.5¶The President gets half a point here, since he endorsed ending the permanent gag orders that accompany administrative subpoenas known as National Security Letters, under which the FBI can on its own demand information about you from your communications service providers. We still need specifics, and the details really matter—even fixed-length gags would violate the First Amendment, for example, and gags would still need to be approved by courts—but this was a good and necessary step. Obama didn't get the other half, though, because he did not agree with EFF and his own review panel that NSLs should only issue after judicial approval. Early in 2014, EFF will ask the 9th Circuit Court of Appeals to find, like the District Court for the Northern District of California already did, that the NSL statute is unconstitutional in its current form.¶5. Stop undermining Internet security, weakening encryption, and infiltrating companies.¶Score: 0¶The NSA's systematic efforts to weaken and sabotage the encryption and security technology make us all less safe. But in contrast to his review group's recommendations to stop those practices, Obama was silent on the issue. That silence is disappointing, as this is a critical problem that has not just undermined the privacy of millions around the world, but poisoned our collective trust in institutions that depend most on it. Zero points.¶6. Oppose the FISA Improvements Act.¶Score: 1¶The FISA Improvements Act seeks to codify into law the NSA's controversial and illegal practice of collecting and storing the telephone records of hundreds of millions of Americans. While Obama's administration had earlier indicated support for the bill, today's announcement made clear that Obama was not going to support this program going forward and thus was not supporting the FISA Improvements Act. We would have preferred it if Obama had stated clearly that he would veto any bill that attempts to codify mass telephone metadata surveillance, but we felt this was good enough to merit a point.¶7. Reject the third party doctrine.¶Score: 0¶The third party doctrine is an outdated and deeply problematic legal theory that wipes out many of the privacy protections we could otherwise enjoy. It's the shaky foundation on which some of the most invasive programs by the NSA and other law enforcement agencies rest. Obama should have said that we have a reasonable expectation of privacy in data even though we've trusted third party service providers with it—instead, he was silent on the issue.¶8. Provide a full public accounting of our surveillance apparatus.¶Score: 0.5¶In our criteria, we asked that Obama "appoint an independent committee to give a full public accounting of surveillance programs that impact non-suspects around the world" and that this committee "directly engage whistleblowers like Thomas Drake, William Binney, Edward Snowden and others, and include independent technological experts." For this category, we awarded Obama with a half point because he did appoint his counsel, John Podesta, to lead "a comprehensive review of big data and privacy." However, it remains to be seen whether this committee will actually provide a full public accounting or engage with the whistleblowers who have much to contribute.¶9. Embrace meaningful transparency reform.¶Score: 0¶Fundamental to all of the problems surrounding NSA spying is the fact that the government's notorious secrecy shields it from any sort of meaningful oversight or accountability. This appears, among other places, in the overclassification of documents that should not actually be secret, in the executive branch's ruthless campaign against whistleblowers, and in its continued abuse of the "state secrets" privilege in the courtroom. Obama could have announced changes to these secrecy standards, embracing transparency as a default, and making some good on his now laughable election promise to be "the most transparent administration in history." Instead we

got nothing.¶ 10. Reform the FISA court.¶ Score: 1¶ We gave Obama a full point for these reforms, since he embraced both independent advocates for the FISA court and an annual process of review of FISC decisions for declassification. While we would like the review to be more current, and there is much to be done to ensure that the independent advocacy panel has a real, unfettered role, Obama's announcement indicated a good direction on both.¶ 11. Protect national security whistleblowers.¶ Score: 0¶ Obama was clear: "One thing I'm certain of, this debate will make us stronger." And there is little question that this debate would not have happened without the evidence brought to light by Snowden and other whistleblowers. It might seem that Obama would have some recognition that, but for these individuals, we would not be having this important debate.¶ Sadly, Obama's speech today gave no indication of a change in strategy in his administration's war on whistleblowers. If Obama welcomes this debate, he should stop his attack on the people who have risked so much to help make it happen.¶ 12. Give criminal defendants all surveillance evidence.¶ Score: 0¶ It's a cornerstone of our justice system that the accused have the right to see all the evidence against them. That made it very alarming when we learned that the NSA was collecting intelligence and then laundering it into criminal investigations by the Drug Enforcement Agency and other law enforcement groups. This practice conflicts with the protections enshrined in the Fifth and Sixth amendments, and should be stopped immediately. While Attorney General Holder has promised to review the cases, the Administration has not promised to ensure that everyone whose information was shared with law enforcement agencies by the NSA ultimately gets notice. Obama didn't mention this necessary measure in his speech, and gets no points.

Uniqueness—Gradualism

Obama is gradually reforming surveillance programs—hasty change causes him to invoke his surveillance authority—perceives it as undermining security

Dilanian and Parsons 14 (Ken, intelligence reporter for The Associated Press, and Christi, White House correspondent. “Obama to seek only modest reforms in government surveillance” (1/15/14), The Los Angeles Times, <http://articles.latimes.com/2014/jan/15/nation/la-na-nsa-obama-20140116>)

WASHINGTON — President Obama plans to announce new guidelines for government surveillance operations but will not end or order strict limits on the most controversial domestic programs exposed by former National Security Agency contractor Edward Snowden, including the bulk collection of American telephone records. White House aides said reforms proved far more difficult than they initially appeared, and Obama has struggled to find middle ground between those who warn that government surveillance is excessive and could lead to abuses and national security officials who contend that the programs are critical for counter-terrorism and already have passed congressional and judicial review. In a widely anticipated speech on Friday, Obama will seek to boost public confidence in the government's ability to safeguard privacy even as he leaves most current surveillance programs intact with only modest modifications. He thus is expected to say that although the NSA's bulk collection of domestic telephone toll records can't continue in its present form, he will not propose requiring telephone companies or another entity to maintain long-term storage of the so-called metadata — numbers called but not the conversations — to replace the NSA database, as a presidential task force has recommended. PHOTOS: Politics in 2014 The president instead will ask Congress to craft a solution, aides said. He doesn't want to be "hasty" about radically revising a program that top intelligence officials consider valuable, said one advisor. Moreover, legislation almost certainly would be required to revamp the current system, which Congress previously approved. "He will say, 'The program has to change.... Over to you, Congress,'" said a senior intelligence official who has been briefed on the decisions and who insisted on anonymity because he was not authorized to discuss the president's deliberations. Lawmakers are divided on whether or how to change the NSA program, making any major adjustments unlikely in the short term. But the provision in the law that authorizes the program, Section 215 of the Patriot Act, is up for renewal in 2015, and that could provide a platform for review. Obama's posture is likely to deeply disappoint privacy activists and their allies in Congress who argue that the bulk collection program violates civil liberties and contains too much private data on Americans. But Obama has never felt that way, and supported the program both as a senator and as president. It's possible that Obama may yet adjust his views. Some of his top staffers said Wednesday they were not sure exactly how he wanted to proceed. He still hasn't nailed down some details of his speech and, though they know he will limit metadata collection in some way, they can't say how. "Metadata may be the most challenging part," said Sen. Richard J. Durbin (D-Ill.), a member of the Senate Judiciary Committee. "Having all that information at your fingertips can be helpful.... But trying to invent an alternative [to direct NSA control] is tricky." Durbin said Obama didn't "tip his hand" when they discussed the program this week. Telephone companies don't want to become a repository for the calling records because of potential legal liability and because they don't have an obvious way to pay for the added work, according to aides working on the project. A third-party curator appointed and paid by the government might struggle to prove it was independent. Intelligence officials lobbied the White House vigorously not to make it more difficult for them to access the telephone records when they need them. But if the government can examine the material too easily, it may not allay concerns about who controls it. Obama has come under intense pressure to rein in government surveillance and increase oversight since an independent panel that he appointed called last month for 46 changes to current practices. Officials say he already has decided not to support several of the key recommendations. The president, for example, will not propose requiring a court order each time the FBI issues a so-called national security letter, a form of administrative subpoena used to access otherwise private customer records from telephone, banking, credit card and other companies. The FBI, which issues more than 20,000 such subpoenas a year, has strongly opposed requiring a judge to review each one. On Tuesday, a federal judge, John D. Bates, who was appointed to speak for the Foreign Intelligence Surveillance Court, wrote members of Congress to warn of staunch opposition in the judiciary as well. Obama also will not push for new restrictions on the use of data from U.S. citizens that is collected inadvertently while the NSA is targeting foreign Internet traffic under Section 702 of surveillance law. The task force had sought new rules to protect Americans' privacy, but intelligence agencies had opposed any changes. The NSA vacuums up communications from servers owned by Google, Apple, Microsoft and other U.S. technology companies, operating under a program code-named PRISM. Documents leaked by Snowden showed the NSA could keep information inadvertently collected about

Americans for up to five years and share it with other agencies. "We feel like once this information is lawfully collected, there should not be additional restrictions on how it is used," the senior intelligence official said. The president will announce some changes that are likely to hearten NSA critics. He will say that senior administration officials will play a larger role in reviewing foreign surveillance decisions, including eavesdropping on allied foreign leaders. Snowden's disclosures that the NSA was monitoring the cellphones of leaders in Germany, Mexico and Brazil caused an uproar abroad. Obama also will speak in favor of creating a way for an independent advocate to represent privacy interests in classified hearings before the Foreign Intelligence Surveillance Court, although he will not specify how that should work, the senior official said. In his letter to Congress about the views of the federal judiciary, Bates said that proposal was "unnecessary — and could prove counterproductive."

Uniqueness + Link—Interagency

Bureaucratic conflict between security agencies is restricted to the margins, but sudden curtailment turns into a flashpoint for central infighting

Ehrman 9 (John, serves in the Directorate of Intelligence, frequent contributor to Studies in Intelligence and is a winner of a Studies annual award. “Toward a Theory of CI: What are We Talking About When We Talk about Counterintelligence?” (8/24/09), Central Intelligence Agency Library, <https://www.cia.gov/library/center-for-the-study-of-intelligence/csi-publications/csi-studies/studies/vol53no2/toward-a-theory-of-ci.html>)

External and Internal Politics. Intelligence services are government bureaucracies, subject to the same political forces and tendencies as any others. Thus, anyone seeking to understand or predict the behavior of a service needs to have at least a basic understanding of the political system in which the service is located. In a democratic state, as numerous cases from the past few decades attest, political or other external events can have enormous consequences for services, even when the services are not directly involved or responsible. The end of the Cold War, to cite an exceptional case, led to drastic cuts in the size and capabilities of US and European services; the Asian and Russian financial crises of the late 1990s led to budget cuts that devastated the capabilities of several major services; and recent intelligence failures, such as the 11 September attacks and the Iraqi WMD fiasco (which involved the services of several countries), brought not only public investigations and large-scale restructurings but also internal changes in how individual services collect and evaluate information.⁸ The political situations of intelligence services in authoritarian or totalitarian states are more difficult to determine. The absence of effective legal frameworks and the importance of personal networks over institutional relationships for government decision making make it difficult for outside observers to see what is going on. Examples from the history of communist bloc services, however, suggest that in authoritarian and totalitarian states the positions of their services may be paradoxical. The dependence of such regimes on their services for repression, the integration of the services into the governing apparatus, and the absence of any outside check, provide the services with immunity from external inquiries and pressure for reform. At the same time, however, should the leadership perceive a serious failure or disloyalty within its services, the punishments are likely to be far more harsh than in democracies—jail terms and even executions are not unknown. Even as they are acted upon, however, intelligence services work diligently to protect and advance their interests. The result is that services are almost always engaged in complex, multifront political struggles. The most basic of these is the constant effort to gather more resources—people, funds, and influence over decision making—from their political superiors, and to resist externally imposed changes. Inevitably, a country’s services are forced to compete with one another, and each seeks to gain an advantage by claiming credit for successes, denigrating rivals, or taking away cases. The conflicts between the CIA and FBI, CIA and DIA, MI-5 and SIS, the KGB and the GRU (and now the FSB and SVR) are well-known examples of this phenomenon and suggest that bureaucratic conflict between intelligence services is the norm, even as political leaders try to force them to cooperate. The conflicts do not appear to extend to eliminating competitors, however. Internal, external, and military services are specialized enough and have enough separate consumers so that they do not try to take over each other’s roles. (Governments sometimes merge services, as the French did with their internal and police services to form the DCRI in 2008, but the fear of unitary services limits this to combinations of similar services.) Their attacks tend to be on the margins, especially as they try to claim primacy on a case or specific issue, and this behavior seems opportunistic rather than systematic.⁹ In addition to interservice rivalries, services are prone to internal bureaucratic fighting. The complexity of intelligence organizations and their work provides many potential flashpoints, such as turf battles and disputes regarding primacy for specific operations, arguments about tradecraft, analytical disagreements, or straightforward budget fights. These battles can be as bitter as any with another service, if only because the participants know each other well and, because they see each other every day, can easily keep score. As with interservice rivalries, this behavior is normal and to be expected.

In enacting the USA PATRIOT Act just weeks after the 9/11 terrorist attacks, Congress sought to enhance investigations against specific, named persons suspected of terrorism. As voluminous documents leaked by whistleblower Edward Snowden have revealed, however, the president and the National Security Agency (NSA) have relied on that law to authorize the daily, ongoing capture of all U.S. communication records. These documents make clear that the Bush and Obama administrations ignored statutory constraints to authorize exceptionally broad intelligence-gathering programs. But from our review of legislative hearings and debates on the PATRIOT Act over the last five years, along with numerous declassified documents on surveillance, we find that unilateral action by the executive branch was only partly to blame for unrestrained domestic spying. After the relatively balanced and cautious provisions of the 2001 PATRIOT Act, Congress virtually absented itself from substantive decision making on surveillance. It failed to conduct serious oversight of intelligence agencies, ignored government violations of law, and worked harder to preserve the secrecy of surveillance practices than to control them. Even after the Obama administration made the essential facts about phone and email surveillance available in classified briefings to all members, Congress mostly ignored the information and debated the reauthorizations on the basis of demonstrably false factual premises. Until the Snowden revelations, only a handful of well-briefed and conscientious legislators—too few to be effective in the legislative process—understood the full extent of domestic intelligence gathering. We describe and explain Congress’s deliberative failure on phone and Internet surveillance policy. We show that along with a lack of consistent public concern for privacy, and the increasing tendency toward partisan gridlock, Congress’s institutional methods for dealing with secret surveillance programs have undermined its capacity to deliberate and act effectively with respect to those programs. Although the current political environment is hardly conducive to addressing such problems, we discuss long-term goals for institutional reform to enhance this capacity. We see no easy or decisive institutional fix. But without some structural change, the prospects look dim for maintaining significant limitations on investigatory intrusion in an era of overwhelming concern for security. INTRODUCTION In drafting the original PATRIOT Act mere weeks after the traumatic security failure of the September 11 attacks, Congress sought to expand and improve protections against terrorism. But, contrary to much of the political lore, it also showed serious concern for privacy safeguards. The House Judiciary Committee, controlled by Republicans, pushed for only a limited expansion of investigative powers and insisted that most surveillance provisions in the PATRIOT Act expire after four years unless reauthorized. The sunset provisions were intended to ensure a serious review of the new surveillance practices to determine whether sufficient privacy protections were in place. Yet, 12 years later, as documents made public by Edward Snowden revealed, the NSA was sweeping up and analyzing vast amounts of U.S. communication records, or “metadata,” without observing significant constraints. The Snowden documents also showed that the Foreign Intelligence Surveillance Court (FISA) had radically reinterpreted the PATRIOT Act, in secret, to permit bulk collection of phone records. Paradoxically, while the incidence of terrorism has been much lower in the years after 9/11 than anyone expected, government surveillance has been much more intrusive than legislators authorized. What happened? Why did Congress so thoroughly fail to exercise control and ensure effective protection of privacy? What are the lessons for future policymaking? During the last five years of legislative debates over the PATRIOT Act, Congress has failed to define or control surveillance policy. Prior to

the Snowden leaks, most members had little awareness of NSA activities and Congress had little capacity to impose constraints. Now, more than 18 months after Snowden exposed the mass seizure of phone records, not much has changed. To a great extent, the source of difficulty has been the inadequacy of the institutional arrangements for legislative deliberation on secret programs.

Some members have declined opportunity to learn about domestic-spying practices, while others have opposed placing restrictions on the NSA for fear of giving terrorists any tactical advantage. ...[A]long with a lack of consistent public concern for privacy, and the increasing tendency toward partisan gridlock, Congress's institutional methods for dealing with secret surveillance programs have undermined its capacity to deliberate and act effectively with respect to those programs. Secrecy and negligence 3 If Congress had conducted thorough, informed deliberations at all stages, we suspect it would have endorsed extensive collection of communication records, but it would have also imposed limitations and constraints to minimize the harm to privacy interests. Instead, it gave the executive branch essentially unfettered authority to operate a massively intrusive program.

The executive circumvents the plan

Bendix and Quirk 15 [William Bendix is an assistant professor of political science at Keene State College. His research focuses on Congress, legislative deliberation, and homeland security and civil liberties policies. Paul J. Quirk is the Phil Lind Chair in U.S. Politics and Representation at the University of British Columbia and a former research associate at the Brookings Institution. Even if Congress at some point enacted new restrictions on surveillance, the executive might ignore the law and continue to make policy unilaterally. The job of reviewing executive conduct would again fall to the FISA Court.⁵⁶ In view of this court's history of broad deference to the executive, Congress would have a challenge to ensure that legislative policies were faithfully implemented.

Link—Executive—12333

Past examples prove Obama's willing to use his power by invoking 12333- he's the main check on NSA authority

Gellman '14, Reporter

Barton, "Obama's restrictions on NSA surveillance rely on narrow definition of 'spying'", https://www.washingtonpost.com/world/national-security/obamas-restrictions-on-nsa-surveillance-rely-on-narrow-definition-of-spying/2014/01/17/2478cc02-7fcb-11e3-93c1-0e888170b723_story.html, EC

President Obama said Friday, in his first major speech on electronic surveillance, that "the United States is not spying on ordinary people who don't threaten our national security."¶ Obama placed restrictions on access to domestic phone records collected by the National Security Agency, but the changes he announced will allow it to continue — or expand — the collection of personal data from billions of people around the world, Americans and foreign citizens alike.¶ Obama squares that circle with an unusually narrow definition of "spying." It does not include the ingestion of tens of trillions of records about the telephone calls, e-mails, locations and relationships of people for whom there is no suspicion of relevance to any threat.¶ In his speech, and an accompanying policy directive, Obama described principles for "restricting the use of this information" — but not for gathering less of it.¶ Alongside the invocation of privacy and restraint, Obama gave his plainest endorsement yet of "bulk collection," a term he used more than once and authorized explicitly in Presidential Policy Directive 28. In a footnote, the directive defined the term to mean high-volume collection "without the use of discriminants."¶ That is perhaps the central feature of "the golden age of signals intelligence," which the NSA celebrates in top-secret documents leaked by former contractor Edward Snowden. Obama for the first time put his own imprimatur on a collection philosophy that one of those documents summarized this way: "Order one of everything from the menu."¶ As digital communications have multiplied, and NSA capabilities with them, the agency has shifted resources from surveillance of individual targets to the acquisition of communications on a planetary scale. That shift has fed the appetite of Big Data tools, which are designed to find unseen patterns and make connections that NSA analysts don't know to look for.¶ "It's noteworthy that the president addressed only the bulk collection of call records, but not any of the other bulk collection programs revealed by the media," said Alexander Abdo, an attorney with the ACLU's national security project. "That is a glaring omission. The president needs to embrace structural reforms that will protect us from all forms of bulk collection and that will make future overreach less likely."¶ In principle, these tools have the potential to reveal unknown associates of known foreign targets, although the intelligence community has struggled to offer examples. But they rely, by definition and intent, on the construction of vast databases filled almost entirely with innocent communications. Obama's view, like the NSA's, is that there is no intrusion on privacy until someone calls up the files and reads them.¶ Obama focused his speech on surveillance authorized by Congress and overseen by the Foreign Intelligence Surveillance Court. He spoke most concretely about the collection of domestic telephone logs from virtually every American under a provision of the Patriot Act called Section 215.¶ But fresh assertions of transparency did not resolve other long-standing questions. White

House and intelligence spokesmen declined to say whether the NSA has used that authority to collect any other kinds of data about millions of Americans or whether Obama was committed to disclose such collection if he permits it in the future.¶ Obama avoided almost entirely any discussion of overseas intelligence collection that he authorized on his own, under Executive Order 12333, without legislative or judicial supervision.¶ The Washington Post has disclosed in recent months, based in part on the Snowden documents, that the NSA is gathering hundreds of millions of e-mail address books, breaking into private networks that link the overseas data centers of Google and Yahoo, and building a database of trillions of location records transmitted by cellphones around the world.¶ Those operations are sweeping in a large but unknown number of Americans, beginning with the tens of millions who travel and communicate overseas each year. For at least as many Americans, and likely more, the structure of global networks carries their purely domestic communications across foreign switches.¶ Under the classified rules set forth by the president, the NSA is allowed to presume that any data collected overseas belongs to a foreigner. The “minimization rules” that govern that collection, intended to protect the identities of U.S. citizens and residents, remain classified. The White House and NSA have declined requests to release them.¶ The NSA term for those high-volume programs is “full take” collection — the interception of entire data flows from the fiber optic cables that carry telephone calls, e-mails, faxes and video chats around the world at the speed of light.¶ Unless Obama says otherwise in the classified annex to his directive, those programs will carry on unabated.

12333 provides the same legal authority as the patriot act, but has less oversight

Whittaker 14 [Zack, CBS News. Journalist. 6/30/14, “Legal loopholes could allow wider NSA surveillance, researchers say” <http://www.cbsnews.com/news/legal-loopholes-could-let-nsa-surveillance-circumvent-fourth-amendment-researchers-say///jweideman>]

Since the September 11 terrorist attacks, the subsequent introduction of the Patriot Act allowed certain kinds of data to be collected to help in the fight against terrorism -- so-called "metadata," such as the time and date of phone calls and emails sent, including phone numbers and email addresses themselves. But the contents of those phone calls or emails require a warrant. The classified documents leaked by Edward Snowden showed that while the public laws have been in effect for years or even decades, the U.S. government has used secret and classified interpretations of these laws for wider intelligence gathering outside the statutes' text. The Obama administration previously said there had been Congressional and Judicial oversight of these surveillance laws -- notably Section 215 of the Patriot Act, which authorized the collection of Americans' phone records; and Section 702 of the Foreign Intelligence Surveillance Act (FISA), which authorized the controversial PRISM program to access non-U.S. residents' emails, social networking, and cloud-stored data. But the researchers behind this new study say that the lesser-known Executive Order (EO) 12333, which remains solely the domain of the Executive Branch -- along with United States Signals Intelligence Directive (USSID) 18, designed to regulate the collection of American's data from surveillance conducted on foreign soil -- can be used as a legal basis for vast and near-unrestricted domestic surveillance on Americans. The legal provisions offered under EO 12333, which the researchers say “explicitly allows for intentional targeting of U.S. persons” for surveillance purposes when FISA protections do not apply, was the basis of the authority that reportedly allowed the NSA to tap into the fiber cables that connected Google and Yahoo's overseas to U.S. data centers.

The NSA considers it their main legal authority

Arnbak and Goldberg 15 [Axel Arnbak is a cybersecurity and information law researcher at the Institute for Information Law, University of Amsterdam. Sharon, an associate professor in the Computer Science Department at Boston University, and a member of the BU Security Group. 2015, "Loopholes for Circumventing the Constitution: Unrestrained Bulk Surveillance on Americans by Collecting Network Traffic Abroad" Michigan Telecommunications and Technology Law Review Volume 21 | Issue 2. //jweideman]

LEGAL ANALYSIS. Part I describes the current US regulatory framework for intelligence gathering. Three legal regimes are most relevant to this Article:

1. Surveillance of domestic communications records conducted on

US soil under § 215 of the Patriot Act;²

2. Surveillance of international communications conducted on US

soil under the Foreign Intelligence Surveillance Act (FISA);³

and

3. Surveillance conducted entirely abroad under Executive Order

12333 (EO 12333)⁴ and underlying policies, notably the US Signals Intelligence Directive SP0018 (USSID

18).⁵

Distinguishing factors include where the surveillance is conducted and whom a surveillance operation targets. All three branches of the US government oversee the first two regimes, and have been discussed at length by the government, media, and general public. The third regime, however, is solely the domain of the executive branch and has only recently begun to receive some attention in policy, media, and academic arenas. EO 12333, adopted in 1981 by the Reagan Administration and not substantially updated since, forms the cornerstone of this legal analysis; indeed, the NSA states that EO 12333 is the "primary legal authority" for its operations.⁶ Working with primary legal sources, many of which have only recently been made public and are still redacted on key issues, we make the following central observation: if an intelligence agency can construct plausible presumptions that surveillance does not "intentionally target" a US person and when the surveillance is conducted abroad, the permissive legal regime under EO 12333 applies. Under EO 12333, operations from abroad can be presumed to affect foreigners rather than Americans. Since the Supreme Court has consistently held that foreigners do not enjoy constitutional protection under US law,⁷ the legal incentives to conduct surveillance under EO 12333 are substantial. The legal notion of "targeting a US person" does not rule out bulk collection of Internet traffic, even in situations where the traffic actually contains millions of Americans' communication records. By collecting the traffic abroad, authorities can presume the traffic belongs to foreigners. Any US person's traffic that happens to be captured during bulk collection is considered "incidentally collected" and may be retained for further processing. Users are only "targeted," in the legal sense, once collection is complete and the surveillance operation moves into its retention and analysis phases. Indeed, documents revealed on August 25, 2014 indicate that metadata from retained traffic can be shared between multiple intelligence agencies, including domestic law enforcement and the Drug Enforcement Agency, and used for purposes that include "target development."⁸ Thus, collecting Americans' network traffic abroad creates a legal loophole for surveillance on them. A surveillance operation acting in a manner consistent with EO 12333 allows foreignness to be presumed for data that is

intercepted abroad. This circumvents Americans' Fourth Amendment protections that are assumed (in the legal sense) to be US persons under FISA and § 215 of the Patriot Act during domestic surveillance operations.⁹ As of July 2014, the lack of public scrutiny of EO 12333 seems to have shifted. When the first public version of this Article was posted online prior to its presentation at the 2014 Privacy Enhancing Technologies Symposium, a range of media outlets reported on our findings. Coverage on CBS News¹⁰ spurred an inadequate official response from the NSA compliance department; we discuss this response further in Part I.C.4 of this Article. A few weeks later, a Washington Post editorial by John Napier Tye, who served in the State Department from 2011 to 2014, argued: Based in part on classified facts that I am prohibited by law from publishing, I believe that Americans should be even more concerned about the collection and storage of their communications under Executive Order 12333 than under Section 215. . . . Consider the possibility that Section 215 collection does not represent the outer limits of collection on US persons but rather is a mechanism to backfill that portion of US person data that cannot be collected overseas under 12333.¹¹ The legal notion of "targeting a US person" does not rule out bulk collection of Internet traffic, even in situations where the traffic actually contains millions of Americans' communication records. By collecting the traffic abroad, authorities can presume the traffic belongs to foreigners. Any US person's traffic that happens to be captured during bulk collection is considered "incidentally collected" and may be retained for further processing. Users are only "targeted," in the legal sense, once collection is complete and the surveillance operation moves into its retention and analysis phases. Indeed, documents revealed on August 25, 2014 indicate that metadata from retained traffic can be shared between multiple intelligence agencies, including domestic law enforcement and the Drug Enforcement Agency, and used for purposes that include "target development."⁸

Comparatively outweighs FISA and the Patriot Act

Watkins 13 [Ali Watkins covers intelligence and national security for the Huffington Post, based in Washington, D.C. Previously, she covered national security and regional politics for McClatchy Newspapers' D.C. bureau. She has a journalism degree from Philadelphia's Temple University. 11/21/13, "Most of NSA's data collection authorized by order Ronald Reagan issued" <http://www.mcclatchydc.com/news/nation-world/national/national-security/article24759289.html//jweideman>]

The impact of 12333 is enormous – and largely unknown. Documents leaked by former NSA contractor Edward Snowden suggest that less than half of the metadata the NSA has collected has been acquired under provisions of the USA Patriot Act and the Foreign Intelligence Surveillance Act, the two laws that have received the most attention for permitting NSA programs. Gen. Keith Alexander, the NSA director, has ratified that impression, saying that the majority of NSA data is collected "solely pursuant to the authorities provided by Executive Order 12333." At the time the order was written, the nation's intelligence community was dealing with a shattered reputation after decades of widespread abuses. The Church Committee – a special congressional panel tasked in the 1970s with investigating intelligence abuses – had revealed CIA efforts to cover up the Watergate scandal, the CIA's opening of Americans' mail, and the agency's efforts to assassinate Cuba's Fidel Castro. Executive Order 12333 was intended to bolster a reeling intelligence community and further define its authority to conduct foreign intelligence gathering. The global telecommunications network didn't exist, and collecting foreign communications posed little risk for Americans' data to be swept up in the dragnet. But in the three decades since 12333 was written, global communications have changed dramatically. The order, however, has not. "In 1996, when (12333) was 15 years old, we said, 'Gee, this probably ought to be revised.' Now we're more than 15 years after that," said John Bellinger, a former legal adviser to the National Security Council during the presidency of George W. Bush. Still, the order hasn't undergone any major change, "in part, because it's so difficult and complex to change it," he said. The National Security Act of 1947 requires that Congress be kept "fully and currently informed" about "significant" intelligence activities. But 12333 activities receive little oversight. The problem, legal experts and lawmakers say, is that only the executive branch – and the intelligence agencies that are part of it – determines what "fully and currently informed" means and what details it needs to share with Congress. "There's no clear definition," said House Intelligence Committee member Adam Schiff, D-Calif., who recently sparred with fellow committee members over whether the NSA had briefed the panel on its monitoring of German Chancellor Angela Merkel's cellphone. "We need to have a bigger discussion of what our mutual understanding is of what we want to be informed of."

12333 allows malware attacks for backdoor creation

Arnbak and Goldberg 15 [Axel Arnbak is a cybersecurity and information law researcher at the Institute for Information Law, University of Amsterdam. Sharon, an associate professor in the Computer Science Department at Boston University, and a member of the BU Security Group. 2015, "Loopholes for Circumventing the Constitution: Unrestrained Bulk Surveillance on Americans by Collecting Network Traffic Abroad" Michigan Telecommunications and Technology Law Review Volume 21 | Issue 2. //jweideman]

Internet surveillance falls within the EO 12333 regime when it is conducted on foreign soil and does not fall within the 1978 FISA definition of "electronic surveillance."⁹⁰ As the NSA recently put it, EO 12333 applies when surveillance is "conducted through various means around the globe, largely from outside the United States, which is not otherwise regulated by FISA."⁹¹ While FISA surveillance is conducted on US soil, EO 12333 surveillance is mostly conducted abroad.⁹² EO 12333 presumes that network traffic, intercepted on foreign soil, belongs to non-US persons.⁹³ Companies and associations are also considered in the EO 12333 definition of "US persons."⁹⁴ These entities may be assumed to be non-US persons if they have their headquarters outside the United States. Even when it is known to the NSA that a company is legally controlled by a US company, EO 12333 does not prohibit the NSA to assume such an entity to be a non-US person under USSID 18. Taken together, the hurdles for presuming that surveillance does not affect a US person under EO 12333 are low. By contrast, FISA minimization policies direct authorities to presume that surveillance operations conducted on US soil affect US persons.⁹⁵ INSTALLING A DEVICE. To understand how EO 12333 regulates the network protocol manipulations described in Part II.B, we now return to the question of "installing a device."⁹⁶ These manipulations fall under EO 12333. However, on top of the 1978 FISA definition of "electronic surveillance," neither EO 12333 nor the 2011 update of USSID 18 further specify what "installing a device" means today.⁹⁷ It is not covered in the definitions of "collection,"⁹⁸ "interception,"⁹⁹ or "electronic surveillance."¹⁰⁰ The definition of "installing a device" to enable surveillance could possibly be redacted in USSID 18 or further specified in a still-classified guideline. A post-Snowden NSA memorandum does not provide any clarity. To the contrary: N.S.A. uses EO 12333 authority to collect foreign intelligence from communications systems around the world. Due to the fragility of these sources, providing any significant detail outside of classified channels is damaging to national security.¹⁰¹ One recently leaked document seems to suggest that EO 12333 governs untargeted malware attacks and strategies. The revealed slide on the VALIDATOR program indicates that the VALIDATOR malware is deployed in an untargeted fashion on many machines. Once the VALIDATOR malware infects a given machine, the infected machine contacts a "listening post" server. Finally, analysts at the listening point perform a "USSID-18 check" to "validate the targets identity and location" and thus decide whether "a more sophisticated . . . implant" may be deployed on the infected machine.¹⁰² Importantly, the USSID 18 check is only performed after the untargeted VALIDATOR malware has been deployed.¹⁰³ In other words, legal protection comes into play only after the NSA knows who it is targeting, based on the identity of a target or the location of his/her machine. This is consistent with our contention that the 1978 FISA definition of "installing a device" does not cover the advanced network manipulations presented in Part II.B.¹⁰⁴

Compliance checks are run against 1233 for cyber ops--- they don't look at FISA

Arnbak and Goldberg 15 [Axel Arnbak is a cybersecurity and information law researcher at the Institute for Information Law, University of Amsterdam. Sharon, an associate professor in the Computer Science Department at Boston University, and a member of the BU Security Group. 2015, "Loopholes for Circumventing the Constitution: Unrestrained Bulk Surveillance on Americans by Collecting Network Traffic Abroad" Michigan Telecommunications and Technology Law Review Volume 21 | Issue 2. //jweideman]

Without full access to classified surveillance policies fully implementing the directives of FISA and EO 12333, it is impossible to conclusively determine how the intelligence community interprets US surveillance statutes. But recent revelations on untargeted malware operations seem to support our textual analysis.⁶³ These revelations indicate that NSA analysts perform compliance checks against EO 12333 (but, importantly, not against FISA) when singling out targets for more sophisticated malware operations on the target's machine.⁶⁴ Based on these revelations, it seems likely that advanced active attacks,⁶⁵ which use modern technological capabilities to prepare an infrastructure for a subsequent targeted surveillance operation, are regulated under EO 12333.

Link—NSA—General

The NSA will circumvent- empirics

Gellman '14, Reporter

Barton, "Obama's restrictions on NSA surveillance rely on narrow definition of 'spying'", https://www.washingtonpost.com/world/national-security/obamas-restrictions-on-nsa-surveillance-rely-on-narrow-definition-of-spying/2014/01/17/2478cc02-7fcb-11e3-93c1-0e888170b723_story.html, EC

This basic dynamic, well known to organizational behaviorists, represents the principal reason that U.S. national-security policy has changed so little from the George W. Bush to the Obama administration. As a candidate for president, Obama repeatedly, forcefully and eloquently promised fundamental change in that policy. It never happened. U.S. policies on rendition, covert operations, cyberwar, military detention without trial or counsel, drone strikes, nsa surveillance, whistle-blower prosecutions, nonprosecution of waterboarders, reliance on the state-secrets privilege and a variety of other national-security issues all have remained largely the same. The explanation lies not simply in the huge number of holdovers in high-level policy-making positions; the reality is that structural incentives have given these policies a life of their own—allowing them to run “on autopilot,” as Secretary of State John Kerry described one nsa program, largely immune from constitutional and electoral restraints. A variety of legislative and judicial reforms have been suggested, aimed generally at restoring a semblance of institutional balance. Given the prevailing incentive structure, however, none are likely to succeed. The first difficulty with the proposed reforms is circularity. All rely upon the Madisonian institutions—Congress, the courts and the presidency—to restore power to the Madisonian institutions by exercising the very power that the Madisonian institutions lack. All assume that the Madisonian institutions, in which all reform proposals must necessarily originate, can somehow magically impose those reforms upon the Trumanite network or that the network will somehow merrily acquiesce. All suppose that the forces that gave rise to the Trumanite network can simply be ignored. All assume, at bottom, that Madison's scheme can be made to work—that an equilibrium of power can be restored—without regard to the root cause of the disequilibrium.

Link—NSA—CIA Shift

NSA reform results in CIA circumvention – it holds parallel authority

Jeffrey Richelson **03/20/15** (PhD in political Science from University of Rochester, Senior fellow at the National Security Archive, Authored several books and research papers on subject of intelligence, “The CIA and Signals Intelligence,” [Http://nsarchive.gwu.edu/NSAEBB/NSAEBB50](http://nsarchive.gwu.edu/NSAEBB/NSAEBB50)

While the National Security Agency (**NSA and its military components are at the center of U.S. signals intelligence**) (SIGINT) activities they are **not the only components of the U.S. Government that conduct such operations**.¹ Three Justice Department entities intercept communications for law enforcement and/or intelligence purposes — the Federal Bureau of Investigation (thru its Data Intercept Technology Unit), the Drug Enforcement Administration (via its Office of Investigative Technology), and the U.S. Marshals Service (specifically, its Technical Operations Group).² But **it is the Central Intelligence Agency that, for decades, has conducted a parallel — sometimes complementary, sometimes competitive — signals intelligence effort with NSA**. Components of the history of CIA SIGINT activities include, but are not limited to, organizational issues, audio surveillance and cable tapping, ground stations, aerial collection, space-based SIGINT, the CIA-NSA relationship, the creation and operation of the Special Collection Service, and legal controversies and privacy issues.

FISA and Patriot act allow CIA bulk collection – mirrors NSA surveillance.

Margaret Hartmann 11/15/13 (Contributing Senior Editor for the New York Magazine, Masters in Journalism from Boston University, “The CIA collects Data in Bulk, Just Like the NSA,” <http://nymag.com/daily/intelligencer/2013/11/cia-collects-data-in-bulk-just-like-the-nsa.html>

The revelations about the NSA's spying keep getting worse, and now the scandal is spreading to another agency. Though it doesn't appear the new information has any direct link to Edward Snowden, several anonymous officials say **the CIA is building a huge database** of international money transfers by **scooping up financial information in bulk**. From the few details known about the program, it seems **very similar to the government's phone- and data-collection efforts**. Like various NSA programs, the **CIA's data collection is authorized under** Section 215 of the **Patriot Act and overseen by the FISA Court**. Even the CIA's attempt to downplay the report sounds familiar. "The CIA protects the nation and upholds the privacy rights of Americans by ensuring that its intelligence collection activities are focused on acquiring foreign intelligence and counterintelligence in accordance with U.S. laws," said CIA spokesman Dean Boyd.[¶] According to The Wall Street Journal, the program was inspired by the 9/11 hijackers' ability to transfer about \$300,000 without arousing suspicion. It **collects** information from U.S. money-transfer companies (Western Union was the only participant named specifically), which can include **personal information like Social Security numbers**. Officials said the CIA is not allowed to target Americans or collect data on purely domestic transfers. However, transfers to and from the U.S., as well as foreign transactions, are scooped up. There are reportedly procedures in place to protect American's privacy once the data makes its way into the CIA's database, such as prohibitions on which analysts can conduct searches, what terms they can use, and how long

the CIA can store the data.¶ It appears the CIA isn't the only agency running an NSA-like surveillance program. "The intelligence community collects bulk data in a number of different ways under multiple authorities," one intelligence official told the New York Times. As the paper notes, General Keith Alexander, the NSA director, admitted as much in a "little-noticed exchange" during a Senate hearing in October. When asked by Senator Mazie Hirono, "So what are all of the programs run by the N.S.A. or other federal agencies" that allow warrantless wiretapping of phone calls and e-mails under the Patriot Act, Alexander described the phone surveillance program, saying "none of that is hid from you." Moments later, he clarified that he was only talking about the NSA, adding, "You know, that's of course a global thing that others use as well, but for ours, it's just that way." How could they be any more transparent?¶ NYTWSJ

Revolving doors – positions within the agencies are filled by each other

NSA 01/12/12 (National Security Agency, *Black highlighting was classified info retrieved from archived*, "A Brave, New World," http://nsarchive.gwu.edu/NSAEBB/NSAEBB431/docs/intell_ebb_014.PDF)

This action has removed a major barrier to information sharing that had existed between the two organizations for more than 50 years. The two agencies also created a joint Counterproliferation Fusion Cell to help focus SIGINT collection and reporting on high priority proliferation targets. Located at CIA's Langley, Virginia, CIA and NSA also have established a number of joint target-development teams that meet regularly. Covering both regional and transnational issues, these teams represent a major change in the stovepipe mentality that once dominated two organizations also have begun to At NSA's request, CIA has placed senior officers from the Directorate of Intelligence and Directorate of Operations in key positions at NSA increase the number of general officers on rotation to NSA, the Agency is developing ways to incorporate rotations into career planning and is building an incentive package. NSA has established the position of National Crypto Representative at CIA to manage NSA's large number of employees on rotation at CIA University and the National CryptoLogic School have agreed to establish a joint training program that will involve developing new courses, exchanging training professionals, and opening existing classes to employees of both organizations. Entry-level orientation programs at both agencies include newly developed segments on understanding and working with each other. CIA and NSA also have established a new awards program that recognize and celebrate outstanding contributions by joint teams or individuals working on joint projects.

Executive protocols give CIA bulk surveillance authority.

CIA No Date (Central Intelligence Agency, "Policy and Procedures for CIA Signals Intelligence Activities," <https://www.cia.gov/library/reports/Policy-and-Procedures-for-CIA-Signals-Intelligence-Activities.pdf>)

General Policy: The Agency shall not collect SIGINT unless authorized to do so by statute or Executive Order, proclamation, or other Presidential directive, and such collection shall be undertaken in accordance with the Constitution and applicable statutes, Executive Orders, proclamations, Presidential directives, Agency regulatory issuances, and implementing guidance.

Collection Refining the Process for Collecting Signals Intelligence: The Agency shall participate in the United States Government (USG) policy processes for establishing SIGINT collection priorities and requirements. • PPD-28 provides that the Agency must collect bulk SIGINT in certain circumstances in order to identify new or emerging threats and other vital national security information which is often hidden within the large and complex system of modern global communications. It also recognizes the privacy and civil liberties concerns raised when bulk SIGINT is collected. PPD-28 directs the Intelligence Community (IC) to assess the feasibility of alternatives that would allow the IC to conduct targeted SIGINT collection rather than bulk SIGINT collection. Accordingly, when engaging in SIGINT collection, the Agency should conduct targeted SIGINT collection activities rather than bulk SIGINT collection activities when practicable. SIGINT collection activities should be directed against specific foreign intelligence targets or topics through the use of discriminants (e.g., specific facilities, identifiers, selection terms, etc.) when practicable.

CIA can access NSA meta data surveillance – top officials hold jurisdiction.
Matthew M. Aid 04/26/15 (Leading Expert on NSA, Intelligence Historian, Contributing columnist for several media outputs including: Associated Press, Foreign Policy Magazine, New York Times, etc. “After 9/11 Few CIA Analysts Used SIGNIT from NSA Warrantless Eavesdropping Program Because They Were Not Cleared for Access
<http://www.matthewaid.com/post/117417536506/after-9-11-few-cia-analysts-used-sigint-from-nsa>

A newly-released document from the Central Intelligence Agency’s (CIA) own internal watchdog found that the government’s controversial warrantless surveillance and bulk data collection program was so secretive that the agency was unable to make “full use” of its capabilities even several years after the September 11 attacks. Initially, only top-level CIA officials were cleared on its use, rather than rank-and-file “CIA analysts and targeting officers.” The document, a June 2009 report from the CIA Inspector General (IG) was released as part of a trove of 747 pages entitled the “Report on the President’s Surveillance Program” and was published on Friday by The New York Times as the result of victory in a Freedom of Information Act lawsuit filed against the Department of Justice. The CIA IG report, like the others, is redacted in many places, but provides some new material as to the specific history, play-by-play and internal evaluations of the program. In 2009, the government had previously published a far shorter unclassified version. STELLAR WIND, the code name for the highly-secretive President’s Surveillance Program (PSP, or “The Program”), was created in the wake of the September 11 attacks (which Ars has reported on previously). The legal justification for the PSP has changed

multiple times over the years, and today it stands under the Foreign Intelligence Surveillance Act Amendments Act (FISA AA) of 2008, which remains law.¶ The CIA IG report writes that under the PSP, there were three "sets of data" collected.¶ The first set included the content of individually targeted telephone and e-mail communications. The second set consisted of telephone dialing information—the date, time, and duration of calls; the telephone number of the caller; and the number receiving the call—collected in bulk [REDACTED]. The third data set consisted of e-mail transactional data [REDACTED] collected in bulk [REDACTED].

Link—FISA

FISC will reinterpret other portions of the patriot act to get around the plan

Bendix and Quirk 15 [William Bendix is an assistant professor of political science at Keene State College. His research focuses on Congress, legislative deliberation, and homeland security and civil liberties policies. Paul J. Quirk is the Phil Lind Chair in U.S. Politics and Representation at the University of British Columbia and a former research associate at the Brookings Institution. His work focuses on debate and deliberation in Congress and the mass public. March 2015.

“Secrecy and negligence: How Congress lost control of domestic surveillance” Issues in Governance Studies Number 68.

<http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congres-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>

The future of NSA’s dragnet is uncertain. With the business-records provision set to expire in June, the current legal basis for the metadata program will lapse unless Congress passes another reauthorization. Partisan gridlock on the issue makes a new surveillance law doubtful, and it raises the possibility of the NSA having to restore the far more restricted pre-9/11 procedures. But legislative inaction in 2015 might not end the NSA metadata programs, **even if it ended their current statutory basis. For one thing, the FISA Court might approve bulk collection of communication records by reinterpreting one or more permanent provisions of the PATRIOT Act, much as it did earlier with the business-records provision. Alternatively, it could stretch an obscure provision in the PATRIOT Act** that appears to permit, indefinitely, new business-records orders for terrorism investigations that predate the June 1 sunset—simply **by defining those investigations in very broad terms**.⁵⁴ Supporters of the metadata program may still press for a bill that authorizes the business-records provision permanently, but they may not regard the June 2015 sunset as a critical deadline for accomplishing it.⁵⁵

Link—Personnel

Surveillance will be replaced by increasing security service personnel which has a much greater chilling effect on liberties

James Andrew **Lewis 14**, senior fellow and director of the Strategic Technologies Program at the Center for Strategic and International Studies, December 2014, "Underestimating Risk in the Surveillance Debate,"

http://csis.org/files/publication/141209_Lewis_UnderestimatingRisk_Web.pdf

Broad surveillance of communications is the least intrusive method and most effective means for discovering terrorist activity. The alternatives to mass surveillance are straightforward. Countries can replace communications surveillance by increasing the number of security service personnel responsible for monitoring terrorism or they can decrease surveillance and accept some increase in the level of risk of a successful attack. The dilemma with choosing this course of action is that the number of agents required to replace communications surveillance is expensive and overtly intrusive in a way the communications surveillance is not. Hundreds of thousands of additional agents would be required to provide national coverage, may lack sufficient global reach to detect activity being planned or undertaken outside U.S. territory, and the creation of such a large force risks creating a much greater chilling effect on liberties

Link—Paternalism

Curtailing surveillance is tantamount to a father giving his child a “special privilege”— transparency is key to overcome executive power

Lewis 14 -- Director and Senior Fellow, Strategic Technologies Program at the Center for Strategic & International Studies (James Andrew Lewis, December 2014, “Underestimating Risk in the Surveillance Debate,” http://csis.org/files/publication/141209_Lewis_UnderestimatingRisk_Web.pdf), acui

No president will take the risk of ending surveillance programs, but continuing them without increasing oversight and transparency will erode public confidence and trust. Surveillance programs create serious and legitimate concerns about oversight and constitutionality that must be addressed by the Congress. **Congress needs to modify the 1970s intelligence oversight process to provide greater accountability on the size, scope, and accuracy of domestic collection programs, and increase transparency for FISA** (Foreign Intelligence Surveillance Act) decisions. **Much of what is secret could be made public in summary form without harm to national security.** The United Kingdom, for example, publishes an annual report on surveillance programs that at a minimum makes the public aware of these activities and their scope. **Our goal should be to increase accountability without an unacceptable increase in risk. Some proposed measures would do the exact opposite.** Adding a permanent advocate to the FISA Court, for example, could return the United States to pre-9/11 gridlock for counterterrorism.

Specifically circumvention on surveillance results in a gendered ordering of law and politics

Backer 8 — Pennsylvania State University (Larry Catá Backer, Spring 2008, “Gendering the President Male: Executive Authority Beyond Rule-of-Law Constitutionalism in the American Context,” *FIU Law Vol. 3 No. 2 Article 7*, p. 360 <http://ecollections.law.fiu.edu/cgi/viewcontent.cgi?article=1064&context=lawreview>), acui

And here, Mansfield is able to begin to bring the analysis around to its conclusion—that secrecy is the sort of action that is most consonant with energy, and the responsibility, properly understood, of the executive.¹³⁷ Thus, Mansfield argues, “secrecy is compatible with responsibility because, when one person is responsible, it does not matter how he arrives at his decision.”¹³⁸ By implication, secrecy might be incompatible with law (and the rule-of-law)—with stability—a telling point—but not for Mansfield. Instead, that parallelism suggests **the need for lawlessness in the executive rather than an absence of secrecy within government, considered as a whole.**¹³⁹ **Secrecy is incompatible with law, but perfectly compatible with responsibility bound up in the body of a single executive.**¹⁴⁰ This practice, Mansfield suggests, is truer to American cultural practice than a more collegial and institutionalized decision-making process subsumed under the legislation rule-of-law model.¹⁴¹ **Thus, the attempt to bring secrecy under the law is the same, for Mansfield, as bringing the President under Congress and the Courts as a mere minister of enforcement of law.** It is in this context that Mansfield would prefer surveillance and torture to be understood in the American constitutional context: **the rule-of-law cannot apply when law does not apply—in those emergencies in which a President must assert a lawless, masculine, virile, protective, singular power.**¹⁴² “You have to do what you have to do” reminds Mansfield, quoting John McCain, on the issue of torture.¹⁴³ **Surveillance reasserts a private/public distinction at the heart of gendered ordering of law and politics.**¹⁴⁴

XO 12333 proves that when it comes to surveillance, the executive branch dominates

Newland 15 -- J.D. Candidate at Yale Law School (Erica Newland, April 2015, "Executive Orders in Court," <http://www.yalelawjournal.org/note/executive-orders-in-court>), acui

Yet **a different law**—one that has long served as a linchpin of surveillance programs and that reportedly authorizes many of the NSA's most controversial activities⁴—**has largely escaped public⁵ and congressional⁶ scrutiny**. This law is not a statute but rather an executive order that dates back to 1981.⁷ **Known as E.O. 12,333** (twelve-triple-three), the surveillance executive order creates a framework for intelligence programs that target "the activities, capabilities, plans, and intentions of foreign powers, organizations, and persons and their agents."⁸ Its sweep is extensive, and its first principles are explicit: "All reasonable and lawful means must be used to ensure that the United States will receive the best intelligence available."⁹ The relative scarcity of attention to E.O. 12,333 is all the more surprising because the Order, according to some reports, is the authority behind "most of [the] NSA's data collection."¹⁰ Despite text that imposes limitations on surveillance of U.S. persons,¹¹ press reports have suggested that significant numbers of U.S. persons are caught in the Order's web.¹² And compared to activities authorized by the Order's statutory counterparts, E.O. 12,333 programs are less likely to be briefed to the congressional intelligence committees.¹³ These programs also fall outside the jurisdiction of the Foreign Intelligence Surveillance Court (FISC).¹⁴ **While it has never been put to a congressional vote, E.O. 12,333 nonetheless has the force and effect of law:** executive orders, which can derive their power from congressional delegations of authority to the President (explicit, implicit, or anticipated),¹⁵ from the President's independent authority under Article II of the Constitution,¹⁶ or from some vague combination of the two,¹⁷ are generally **enforceable by courts against private citizens**.¹⁸ E.O. 12,333's authority purportedly derives from both constitutional and statutory sources. President Reagan captured this lineage in the opening lines of the Order, averring that it was issued "by virtue of the authority vested in me by the Constitution and the laws of the United States of America, including the National Security Act of 1947 . . . and as President of the United States of America."¹⁹ Presidents may issue executive orders in order to plant a flag in a particular policy sphere, to reorganize the structure of the executive branch, or to provide policy leadership when Congress is stuck in the mud.²⁰ **Executive orders, like E.O. 12,333, are formidable instruments of power²¹ in large part because they are not immediately constrained by** the "finely wrought and exhaustively considered" process of **bicameralism and presentment**,²² nor are they subject to the **hoops and constraints** of the Administrative Procedure Act.²³ As Kevin Stack has written:⁴ In contrast to legislation or agency regulation, **there are almost no legally enforceable procedural requirements that the president must satisfy before issuing (or repealing) an executive order or other presidential directive.** That, no doubt, is central to their appeal to presidents. **They rid the president of the need to assemble majorities in both houses of Congress, or to wait through administrative processes, such as notice-and-comment rulemaking, to initiate policy.**²⁴

Expansion of executive powers allows the state to become an authoritarian regime in which citizens become subordinates of the paternal government – this logic also justifies war

Young 3 — Dept of Political Science at University of Chicago (Iris Marion Young, 2003, "The Logic of Masculinist Protection: Reflections on the Current Security State," p. 9-12, <http://www.signs.rutgers.edu/content/Young,%20Logic%20of%20Masculinist%20Protection.pdf>), acui

Through the logic of protection the state demotes members of a democracy to dependants. **State officials adopt the stance of masculine protector, telling us to entrust our lives to them,** not to question their decisions about **what will keep us safe.** Their protector position puts the citizens and residents who depend on state officials' strength and vigilance in the

position of women and children under the charge of the male protector (cf. Berlant 1997). Most regimes that suspend certain rights and legal procedures declare a state of emergency. They claim that special measures of unity and obedience are required in order to ensure protection from unusual danger. Because they take the risks and organize the agency of the state, it is their prerogative to determine the objectives of protective action and their means. In a security state there is no room for separate and shared powers, nor for questioning and criticizing the protector's decisions and orders. Good citizenship in a security regime consists of cooperative obedience for the sake of the safety of all. The authoritarian security paradigm, I have argued, takes a form analogous to that of the masculine protector toward his wife and the other members of his patriarchal household. In this structure, I have suggested, masculine superiority flows not from acts of repressive domination but from the willingness to risk and sacrifice for the sake of the others (Elshtain 1987, 1992). For her part, the subordinate female in this structure neither resents nor resists the man's dominance, but rather she admires it and is grateful for its promise of protection. ¶ Patriotism has an analogous emotive function in the constitution of the security state. Under threat from outside, all of us, authorities and citizens, imagine ourselves a single body enclosed on and loving itself. We affirm our oneness with our fellow citizens and together affirm our single will behind the will of the leaders who have vowed to protect us. It is not merely that dissent is dangerous; worse yet, it is ungrateful. Subordinate citizenship does not merely acquiesce to limitations on freedom in exchange for a promise of security; the consent is active, as solidarity with the others uniting behind and in grateful love of country. ¶ The United States as a security state A security state is what every state would have to be if Hobbes were right that human relations are always on the verge of disorder and violence, if only an authoritarian government that brooks no division of power or dissent can keep the peace, and if maintaining peace and security is unambiguously the highest value. Democratic theory and practice, however, question each of these Hobbesian assumptions. Democrats agree that a major purpose of government is to keep peace and promote public safety, but we deny that unquestioning obedience to a unified sovereign is the only means to achieve this, and we question whether values of freedom and autonomy must be traded against the value of security. In a nonideal world of would-be aggressors and states having imperfect procedural justice, transparency, accountability, and lax rights enforcement, every state exhibits features of a security state to some extent. It seems to me, however, that, in recent months, the United States has slipped too far down the authoritarian continuum. The logic of masculinist protection, I suggest, provides a framework for understanding how government leaders who expand arbitrary power and restrict democratic freedom believe that they are doing the right thing and why citizens accept their actions. It also helps explain this state's righteous rationale for aggressive war. ¶ A marauding gang of outsiders attacked buildings in New York and Washington with living bombs, killing thousands in barely an instant and terrifying large numbers of people in the country. Our government responded with a security alert, at home and abroad. Many were frightened, and the heads of state stepped up to offer us protection. Less than a week after the attacks, the Bush administration announced the creation of an Office of Homeland Security to centralize its protection efforts. "Our nation has been put on notice: We are not immune from attack. We will take defensive measures against terrorism to protect Americans" (George W. Bush speech, September 14, 2001 [quoted in Roth 2001]). ¶ The events of September 11, 2001, are certainly a turning point for U.S. politics, for the relation of the government to its citizens and to the rest of the world. Americans learned that "oceans no longer matter when it comes to making us safe" (Bush 2002a), that we are just as vulnerable as persons elsewhere who have long lived with the awareness that some people have the motive and means to kill and wound randomly. More than a year later, it appears that little has changed, either in the fear that some Americans say they have of another attack or in the material ability of law enforcement to predict or prevent one (Firestone 2002). Much has changed in the letter and application of the law in the United States, however, and in the environment of democracy. The Bush administration has repeatedly appealed to the primacy of its role as protector of innocent citizens and liberator of women and children to justify consolidating and centralizing executive power at home and dominative war abroad. ¶ It is arguable that, before September 11, airports and other public places in the United States were too lax in their security screening protocol. I welcome more thorough security procedures; this essay is not an argument against public officials taking measures to try to keep people safe. The key questions are how much power should officials have, how much freedom should citizens have, how fair are the procedures, how well do they follow due process, and how easily can citizens review official policies and actions to hold them accountable. With respect to these questions, there have been very large and damaging changes in the United States since fall 2001, although a direction toward some of them had been enacted by legislation and judicial action in the years before. ¶ The U.S. security state has expanded the prerogative of the executive and eroded the power of the legislative and judicial branches to review executive decisions or to be independent sources of decision making. In the week after the September 11 attacks, for example, Congress passed a resolution effectively waiving its constitutionally mandated power to deliberate and decide on whether the state shall go to war. Months later, again with virtually no debate, Congress approved the largest increase in the military budget in twenty years. Since the war on terrorism has no declared ending, the executive may have been granted permanent legal discretion to do what it wants with U.S. military personnel and equipment, at current taxpayer expense of nearly \$400 billion per year. ¶ Drafted quickly and passed with almost no debate, the USA PATRIOT Act, signed on October 26, 2001, severely reduces the power of courts to review and limit executive actions to keep organizations under surveillance, limit their activities, and search and seize or detain individuals. Under its provisions, individuals and organizations have had their records investigated, their assets seized, and their activities and correspondence monitored. Citizen access to government files and records that took so much struggle to achieve in the 1970s has been severely reduced, with no fanfare and thus no protest (Rosen 2002). Thousands of people have been detained, interrogated, or jailed at the discretion of law enforcement or immigration officials, and hundreds remain in jails without being charged with any crime. Few are allowed access to lawyers. Many

foreign residents have been deported or threatened with deportation, sometimes without time to arrange their lives. Laws with similar purposes have been passed in other supposedly liberal democratic states, such as the United Kingdom and Australia.¶ The U.S. executive branch has taken other steps to enlarge and centralize its power and to put itself above the law. In November 2002, Congress approved the creation of the Department of Homeland Security, which merges twenty-two existing federal agencies. The Bush administration has flouted principles of a rule of law at the international level by holding captured citizens of many countries prisoner and declaring its prerogative to bring any or all of them before secret tribunals.¶ These and other legal and policy changes have far-reaching implications. The most ordinary and fundamental expectations of due process are undermined when search and surveillance do not require court approval, when persons can be jailed without charge, and when there is no regularity or predictability to the process that a person in custody will undergo. The basic American principle of the separation of power has been suspended, with no reversal in sight. Legislatures and judiciaries at federal and more local levels have been stripped of some formal powers and decline to use much of what they have left to question, criticize, or block executive action. Most citizens apparently register approval for the increased policing and war-making powers, and the ability of those who do not to organize, criticize publicly, and protest in public streets and squares has been seriously curtailed, not only by fear of peer and employer disapproval but also directly by official repression and intimidation.

This justifies all forms of violence in the name of security

Denike 8 -- former professor and program coordinator in Gender Studies and of International Human Rights (Margaret Denike, Spring 2008, "The Human Rights of Others: Sovereignty, Legitimacy, and "Just Causes" for the "War on Terror," p. 97-8, <http://muse.jhu.edu/journals/hypatia/v023/23.2.denike.pdf>), acui

Stories of progress and promises of a finer future for "humanity" are endemic to the discourse of human rights. Such promise has resonated throughout the centuries, since the teleological trappings of natural law theory first spoke of the sacred nature of "man," the prospects of fully realizing his potential as the "image and glory of God," and the responsibilities that are his due, by virtue of being so divinely, rationally endowed. These narratives have always guarded the regulatory concept and category of "man," taking pains—as did Aristotle, Augustine, Aquinas, and the international legal theorists that have since drawn on their metaphysics and theology—to restrict "man" to men, and for Aquinas, to Christian men, and to exclude women and others (slaves, barbarians, heretics, and so on) that were presumed to be lacking in the capacity that is most divine" in us and that endows us with dignity: reason. These narratives also instantiate notions of "right authority," "right reason," and "just cause" for presumably peace-loving Christians to go to war and to kill or enslave one's enemies without falling from God's grace⁶ —notions that are often metaphorized through gendered tropes: "For good order would have been wanting in the human family," Aquinas clarified, "if some were not governed by others who were wiser than themselves. So by such a kind of subjection woman is naturally subject to man, because in man the discretion of reason predominates. Nor is inequality among men excluded by the state of innocence, as we shall prove" (1997, I. Q.92, Art.1). For Aquinas, as for Aristotle, the promise and glory of man is the divine telos that imbues his momentous existence; it is what, in exercising his highest capacities, moves him from the base sensual desires and materiality that women embody and represent, and brings him closer to his first cause, his creator—and to the happiness promised of a heavenly afterlife. Engendered through these tropes, what makes man sacred is that, as the image and promise of divinity, he is not woman, not animal, not the slave that God's good order finds wanting to be governed, tamed, and contained. The glory and promise of man turned then, as it often still does, on exercising his godly capacities for the good of all, distinguishing himself from the lesser creatures that lack them, the creatures properly ruled by him.¶ The talk of progress and promise that reverberates in international human rights discourse imports such time-honored distinctions of the sacredness and legitimacy of at least some sectors of humanity, the differentiation among which is facilitated by both the real and symbolic glorification of "man," which at once instantiates and produces the subjugation of the others against which his dignity is defined. The implicit hierarchization of "humanity" also imbues contemporary international humanitarian law and just war doctrine, which, in the rhetoric fueling the "war on terror" hardly conceals the Christian paternalist undertones to the matter, much less to its spirited crusades, in rationalizing and legitimizing sexual and racial differentiation and colonization in the salvational name of security and freedom.

Obama uses “the American people” as a guise for usurpation of power

The Heritage Foundation No Date (“How Is President Obama Abusing Presidential Power?,” <https://www.askheritage.org/how-is-president-obama-abusing-presidential-power/>), acui

Standing behind a podium on a stage just outside Cleveland, President Barack Obama delivered a speech yesterday that will reverberate throughout history. No, its lasting impact will not come because of its soaring rhetoric. Instead, it will make its mark because it was at that moment on a Wednesday afternoon in Ohio that the President announced his plans to act in total and utter disregard of the U.S. Constitution with his illegal appointment of Richard Cordray to serve as director of the Consumer Financial Protection Bureau (CFPB). It’s an astonishingly reckless exercise of executive authority that Heritage’s Todd Gaziano described as a “tyrannical abuse of power.” Never before in the 100-plus years of precedent on the recess appointment power has a President taken such an action while the Senate was still in session. Yet notwithstanding that fact, President Obama yesterday decided that he would be the first. Here’s why the President finds himself so far outside of constitutional bounds. Under Article II, section 2, clause 2 of the Constitution, the President has the power to fill vacancies that may happen during Senate recesses, as Gaziano writes. In this case, President Obama was seeking to fill the vacancy in the CFPB, a new agency that has come under significant criticism given its unparalleled powers to issue expansive regulations with virtually no accountability. Republicans in the Senate, to date, have refused to confirm the President’s nominees to head up the CFPB, vowing to block Senate approval until reforms are made to the agency. So President Obama has decided to act without their approval by attempting to make a recess appointment. The trouble is that Congress is not in a recess because the House of Representatives never consented, as required under the Constitution, Article I, section 5. That means that the President simply does not have the power to make this appointment. Gaziano explains the implications of the President’s actions: [The recess appointment] power has been interpreted by scores of attorneys general and their designees in the Department of Justice Office of Legal Counsel for over 100 years to require an official, legal Senate recess of at least 10-25 days of duration. (There are a few outlier opinions, never sanctioned by the courts, that suggest a recess of six to seven days might be enough—but never less than that.) The President’s purported recess appointment of Cordray would render the Senate’s advice and consent role to normal appointments almost meaningless. It is a grave constitutional wrong that Senator Mitch McConnell (R-KY) has already denounced. But it fits a pattern of extra-constitutional abuse by the White House that seems more interested in energizing a liberal base than safeguarding the office of the presidency. Why take such action? The President says it’s because he can’t wait for Congress to act on behalf of the American people. The truth is that the President is hell bent on ramming through his agenda, and he is entirely unwilling to compromise with the duly elected representatives who sit in the House and Senate. By circumventing the Senate and appointing Cordray, the President can ensure that his big-government regulatory agenda is enacted without the reforms that Congress is demanding. Unfortunately, the Cordray appointment is not the only example of the President’s wanton, unilateral actions. Apart from Cordray, the President also plans to make three appointments to the National Labor Relations Board without Senate approval, which will fundamentally alter the makeup of the board and enable the President to realize his Big Labor agenda. That means an unrestrained push to unionize businesses at all costs and punish companies that seek to grow in non-union states (as was attempted in the Boeing case) — even if it means harming both workers and the economy. And in the case of environmental regulations, immigration law, No Child Left Behind, the auto bailout, the selective enforcement of voting rights laws, and the regulation of the Internet (among others), the Obama Administration has in fact enacted its agenda via legislative fiat time and time again. In an interview last month with 60 Minutes, the President gave warning of his intentions to preside over an imperial presidency for the next year. “What I’m not gonna do is wait for Congress,” he said. “So wherever we have an opportunity and I have the executive authority to go ahead and get some things done, we’re just gonna go ahead and do ‘em.” The President now, though, seems to have made a significant course correction. With these latest illegal, unconstitutional appointments, the President has jumped at an opportunity to act regardless of the fact that he has no executive authority to do it. And under his feet is a

trampled Constitution and 100 years of precedent for which he has no use. It's time for Congress and the American people to take a stand against President Obama's abuse of power.

Emphasis on masculinity suppresses those categorized as “feminine” – implicates all who are not considered sufficiently “masculine”

Cannen 13 -- Bachelor of Arts Communication Social Inquiry/Bachelor of Arts International Studies (First Class Honours) (Emma Cannen, 2013, “US and Venezuelan Presidential Masculinities in the First Decade of the ‘War on Terror’,” p. 33-34, <https://opus.lib.uts.edu.au/research/bitstream/handle/10453/24085/02whole.pdf?sequence=2>), acui

Theoretically, I do not view presidential masculinities as synonymous with hegemonic masculinities but they are related. Presidential masculinities are not automatic contenders for hegemonic masculinity just because of the institutional or even hegemonic power they hold. As Eichler notes, ‘association with hegemonic notions of masculinity often brings social and political advantages. Thus an examination of how notions of militarised masculinity achieve or lose hegemony is important for understanding gendered social and political power’ (2012, p. 8). This thesis uses a focus on presidential masculinities to investigate the gendered social and political power operating in US-Venezuelan relations in the first decade of the ‘WOT’. I am also interested in investigating how US presidential masculinities have been renegotiated throughout the ‘WOT’. After 9/11 the US presidency was further militarised, in a very conventional way under Bush and now, as I elucidate throughout the thesis, in an avant-garde fashion under Obama.¶ While I am proposing the concept of presidential masculinities, it is important to note that to date feminists have thoroughly researched the militarisation and masculinisation of political offices, particularly in the USA. For example in the late 1990s Shawn and Trevor Parry Giles identified a link between hegemonic masculinity, the military and the presidency, asserting that ‘the military and specifically combat (as only recently and partially opened to women) is central to the hegemonic masculinity that symbolically defines the American male and is of great importance for the cultural image of a successful presidential candidate’ (1996, p. 344). Similarly, as Eichler asserts, Enloe in her early writings urged feminists ‘to inquire into how much of the appearance of manliness that leaders seek is achieved through association with the military or war’ (2012, p. 36). Moreover, Enloe has demonstrated how the militarisation of the US presidency ‘is a profoundly gendered distortion that shrinks the meaning of governance and gives a presidential officeholder and “his” strategists a constant incentive to feature military solutions above more subtle, prolonged, complex sorts of solutions’ (2004, p. 154).¶ The militarisation of political offices and leaders also facilitates the effective use of feminisation and hypermasculinisation as strategies in electoral politics and campaigning. As Anna Fahey’s analysis of the feminisation of John Kerry in the 2004 US presidential campaign revealed, ‘the way to the White House, or any office or position of power, for women, gay men, or anyone characterised as inadequately masculine in behavior or political stance is impeded by the hegemonic masculinity deeply embedded in language and American cultural understandings, including those of national identity and the American place in a world gender order’ (2007, p. 146). John Landreau (2011) has concurred with this analysis, demonstrating how both Bush and Obama’s national security rhetoric and policy are oriented by the same logic of US masculinity and myth of American Exceptionalism that have long propelled US militarism. Nonetheless with the exception of Landreau, none of these scholars have framed their discussion as an analysis of presidential masculinities. Landreau does not define the concept but uses it as a descriptive category in passing. My research aims to build on this literature to further elucidate the gendered mechanics behind the militarisation and masculinisation of political offices, as well as the militarism and militarisation in and of the USA and Venezuela more broadly.

The assertion of masculine executive authority necessarily trades off with feminine negotiations

Link—Private Sector

NSA and GCHQ will outsource to third party vendors- cyber skills gap spread from private sector

Stevenson 13 (Alastair Stevenson has worked as a reporter covering security and mobile issues at V3 since March 2012/9/24/13, "GCHQ and NSA outsourcing cyber security tasks to third-party vendors", V3.co.uk, <http://m.v3.co.uk/v3-uk/news/2296504/gchq-and-nsa-outsourcing-cyber-security-tasks-to-third-party-vendors>, 7/13/15, ACC)

Government agencies such as GCHQ and NSA are outsourcing their requirements to private security firms to boost their cyber capabilities, according to F-Secure. F-Secure chief research officer Mikko Hypponen (pictured left) reported uncovering evidence that the NSA's Tailored Access Operations (TAO) unit and GCHQ are outsourcing missions to third-party security companies. "One thing I've been doing for the past two years is finding where they get their expertise from. Do they recruit in house and train? Do they go to universities?" he said. "I found these job posts listing experience with 'the Forte Meade customer' as a necessary skill. The Forte Meade customer is the NSA." Hypponen confirmed to V3 that he has seen similar job posts for roles with the UK GCHQ and several other government intelligence agencies. He added that the trend is unsurprising and is simply a sign that agencies are suffering the same effects of the ongoing cyber skills gap as private industry. "It's no wonder they're outsourcing, because they can't build or find the skills inside. If you want to have a good cyber offensive capability you need a new arsenal of exploits. You need a fresh supply of weaponised exploits, which builds a demand in the market," he said. A lack of skilled cyber security professionals is an ongoing concern within Europe. Within the UK the government has listed plugging the gap as a key goal of its ongoing Cyber Strategy. As part of the strategy, the government has launched several education-focused initiatives designed to increase the number of young people training to enter the information security industry. Initiatives have included the creation of new higher education centres, apprenticeship schemes and open challenges. Most recently the UK GCHQ has launched a Can You Find It challenge to help find and recruit the next generation of cyber security code experts. Hypponen said the outsourcing is troubling as it sheds further doubt on intelligence agencies' ethics, which have come into question since the PRISM scandal. The PRISM scandal broke when whistleblower Edward Snowden leaked confidential documents proving the NSA was gathering vast amounts of web user data from tech companies such as Google, Facebook, Microsoft and Apple.

The executive branch will privatize surveillance functions to escape curtailment by statute or litigation

Jon D. **Michaels 8**, Acting Professor, UCLA School of Law, August 2008, "ARTICLE: All the President's Spies: Private-Public Intelligence Partnerships in the War on Terror," California Law Review, 96 Calif. L. Rev. 901

The "War on Terror" has dramatically increased the nation's need for intelligence, and the federal government is increasingly relying, as it does in so many other contexts, on private actors to deliver

that information. While private-public collaboration in intelligence gathering is not new, what is novel today - and what drives this inquiry - is that some of these collaborations are orchestrated around handshakes rather than legal formalities, such as search warrants, and may be arranged this way to evade oversight and, at times, to defy the law.ⁿ¹ Unable to target or repel terrorists using conventional military tactics and munitions alone, the United States is acutely aware that today's pivotal battlefield is an informational one. Teams of U.S. intelligence agents, acting as eavesdroppers, infiltrators, interrogators, and data-miners, must race against the clock to anticipate terrorists' actions, frustrate their missions, and dismantle their infrastructure. ⁿ¹ Because the U.S. government does not know the who, ^[*902] what, where, and when of the next terrorist strike, but recognizes that the plot might be hatched on domestic soil, its first step must be to cast a wide net to gather all sorts of data points, ⁿ² any one of which might be the clue that leads intelligence agents to prevent another September 11-like catastrophe. ⁿ³ In this regard, there is no better ally than the private sector. Its comparative advantage over the government in acquiring vast amounts of potentially useful data is a function both of industry's unparalleled access to the American public's intimate affairs - access given by all those who rely on businesses to facilitate their personal, social, and economic transactions - and of regulatory asymmetries insofar as private organizations can at times obtain and share information more easily and under fewer legal restrictions than the government can when it collects similar information on its own. ⁿ⁴ ^[*903] Seeking to bridge the private sector's data-gathering capabilities and the nation's need for homeland security is an Executive with a voracious appetite for intelligence and correspondingly little patience for anything that might interfere with its efforts to neutralize the terrorist threat. The Executive is institutionally predisposed to act decisively and unilaterally during times of national crisis, even if it means bypassing legal restrictions, skirting congressional and judicial oversight, and encroaching on civil liberties. ⁿ⁵ As Justice Souter remarked in *Hamdi v. Rumsfeld*: ⁿ¹ deciding ... on what is a reasonable degree of guaranteed liberty whether in peace or war (or some condition in between) is not well entrusted to the Executive Branch of Government, whose particular responsibility is to maintain security. For reasons of inescapable human nature, the branch of the Government asked to counter a serious threat is not the branch on which to rest the Nation's entire reliance in striking the balance between the will to win and the cost in liberty on the way to victory; the responsibility for security will naturally amplify the claim that security legitimately raises. ⁿ⁶ Unilateral executive policymaking of this sort has figured prominently in post-September 11 national-security policies and is reflected in the United States' approach to military detainees, interrogation tactics, battlefield contractors, and, of course, intelligence operations. ⁿ⁷ ^[*904] Although the Bush Administration's intelligence policy has garnered no shortage of interest and criticism, much of the focus has been on what seems to be the Administration's own willingness to defy applicable law, and not on the particular role that corporations play in facilitating these operations. ⁿ⁸ To date, the Executive's apparent practice of identifying and then courting private actors, persuading, coaxing, and sometimes deceiving them to enter into "informal" intelligence-gathering partnerships that often are inscrutable to Congress and the courts, has gone largely unexamined by policymakers and scholars alike. These "handshake agreements" ⁿ⁹ which spawned the now-notorious National Security Agency (NSA) warrantless eavesdropping and call-data programs, as well as a range of lesser-known collaborations with the likes of FedEx and Western Union, have enabled the Executive to operate outside of the congressionally imposed framework of court orders and subpoenas, and also outside of the ambit of inter-branch oversight. In the process, these informal collaborations may unduly threaten privacy rights, separation of powers, the rule of law, and the legitimacy and vitality of bypassed government institutions. In addition, these private-public partnerships may undermine the integrity of the marketplace and weaken consumer trust in key industries.ⁿ¹⁰ Transcending these particular concerns are questions of national security accountability ⁿ¹⁰ - how "privatization," in the guise of informal intelligence agreements with corporations, can help the Executive direct broad swaths of intelligence policy without having to seek ex ante authorization or submit to meaningful oversight. This evasion leaves Congress and the courts ill-equipped to weigh in on important policy considerations regarding the proper scope and calibration of counterterrorism and homeland security operations, not to mention ill-equipped to intervene to remedy individual instances or patterns of injustice. Whether intentional or not, working around the legislative and judicial branches through shadowy collaborations is especially troubling given that many of today's surveillance programs rely on brand-new technologies and cut more broadly and deeply into the domestic fabric than ever before. Thus, ^[*905] the need for careful consideration by the full range of government actors, especially those further removed from the immediate responsibility of hunting terrorists, is particularly acute. Greater scrutiny is essential both to ensure fidelity to existing laws and to determine

whether new, informal surveillance and data-mining practices operating in the interstices of the extant legal framework warrant legislative or administrative responses to fill in those regulatory gaps. In other words, with respect to initiatives that are not currently regulated (and not readily observable), these lawmakers, regulators, and judges need accurate information to determine whether, normatively speaking, the unregulated terrain is in fact underregulated. n11

NSA hiring non-governmental hackers to cope with cyber skills gap
Ungerleider 12 (Neal Ungerleider, reporter for Fast Company covering the intersection of future technology and everyday life, 9/12/12, "THE NSA WANTS HACKERS, AND IT WANTS THEM ON ITS SIDE", <http://www.fastcompany.com/3000879/nsa-wants-hackers-and-it-wants-them-its-side>, 7/13/15, ACC)

Hey, hackers: The NSA is out to get you. If you're an American who can code malware to infiltrate a network, or snoop on SMS messages, or stop a distributed denial-of-service attack in your sleep, you're a person of interest. Age is of little consequence. Location likewise. The NSA's mission is simple: It's trying to identify formidable hackers. But not to arrest them. To recruit them. Despite all of the United States' spending on defense, many experts say the country is still in a vulnerable position—to cyberattacks. According to General Keith Alexander of U.S. Cyber Command, a division of the Department of Defense, attacks on U.S. computer networks increased seventeen-fold between 2009 and 2011. To counter that threat, the U.S. is seeking cybersecurity experts with the chops to neutralize would-be online invaders. But rather than wait for hackers to reach out via LinkedIn, the NSA is being proactive: This fall, four universities—Dakota State, Northeastern, the Naval Postgraduate School (NPS), and Tulsa—are launching NSA-designated cyber-operations curricula intended to fast-track students into security jobs. The goal is to create a pipeline of government-vetted talent and with it, a robust line of virtual national defense. There's no questioning, or avoiding, the growing danger posed by hackers. In 2012 alone, hackers have stolen hundreds of thousands of credit-card numbers from American banks. In all, estimates put the cost of cybercrime to businesses and government agencies at more than \$100 billion annually—and that sum isn't likely to shrink in the coming years. "We can do things to make it more costly to hack into our systems... but [security experts] didn't say we can stop them," Senator Rob Portman (R-Ohio) told the Emerging Threats and Capabilities Subcommittee in March 2012. Explains Cynthia Irvine, chair of the Cyber Academic Group at the NPS, "There is a mission-critical need for cyberwarriors." Starting in the 2012-13 school year, Irvine and her counterparts at the other universities will have the chance to train those soldiers. The pilot schools were selected from a pool of applicants based on their existing cyber-operations course offerings, which were then expanded to meet NSA requirements. "We've had these programs for years," says Sujeet Shenoj, a professor of computer science at Tulsa, "but this is the first time a government agency has formalized it." Though credit and degree requirements for the NSA-designated programs vary from school to school, standard courses include such crowd-pleasers as malware analysis, cloud security, and electronic eavesdropping alongside core subjects like cryptography, network infrastructure, and programming. Beyond that, the schools do as they please. At Tulsa, students in Shenoj's "cyberinja" curriculum will be trained to dumpster-dive for evidence, reconstruct destroyed phones, and develop a Stuxnet-type worm. NPS students, meanwhile, participate in simulated war games played over 11 weeks.

FBI hiring hackers – no governmental experience required

Cook 14 (James Cook, European Technology Reporter working from London, a Contributing Editor at The Daily Dot, and the Deputy Editor of The Kernel.12/31/14, “The FBI Is Hiring Hackers”, <http://www.businessinsider.com/fbi-cyber-special-agents-2014-12>, 7/13/15, ACC)

The FBI has launched a new campaign to hire a group of tech experts to join the agency and become "cyber special agents." An official FBI news story has been posted to describe the kind of role it's hiring for. The agency says that it's looking for people with experience in computer programming, malware analysis, and even ethical hacking. An ethical hacker is someone hired by the owner of a computer system to try and break into it in order to test its security. Now, the FBI is looking to hire people with hacking skills to become cyber special agents. A list of preferred degrees and work experience posted by the FBI reveals that the agency is looking for people with experience working with Apple and Microsoft systems. But having a knowledge of computer programming isn't enough to become an FBI in-house cyber expert. Applicants need to be over 23 but no older than 37, and they'll have to pass the agency's background check and fitness test.

Private Companies developing new surveillance methods now – cities adopting undetectable spy blimp

Street 7/6 (Jon Street, writer for the Blaze, internet news source, 7/7/15, “More Cities Looking to New Surveillance System of ‘Orwellian Proportions’ That Uses an Overhead Blimp to Take Pictures Every Second”, <http://www.theblaze.com/stories/2015/07/07/more-cities-looking-to-new-surveillance-system-of-orwellian-proportions-that-uses-an-overhead-blimp-to-take-pictures-every-second/>, 7/13/15, ACC)

A new type of surveillance system of “Orwellian proportions” being developed by a private U.S. firm could be coming to a city or town near you. Persistent Surveillance Systems is designed to record what happens across entire cities and towns in order to monitor for any criminal activity that might be going on. But unlike many surveillance systems with cameras you can see monitoring the activities that happen where you are, this one isn’t visible to the naked eye, according to news.com.au. That’s because the system uses a blimp that circles the city more than a half-mile overhead and takes a picture of the entire area, not just every hour or even every minute, but every second. The image is then sent to a control center on the ground where the real-time information is kept in a Google Maps-style imagery feature. The equipment stores pictures of everything that happens within a 40-mile radius. That way, whenever authorities are looking for a suspect involved in a crime, all they have to do is pull up the location of where they believe the crime occurred and identify the person or persons who were there. So far, PSS has only been used in a few cities, but firm founder Ross McNutt hopes that will change. “We developed the system quickly to get an initial capability [within] about 18 months. We have since spent the last eight years perfecting it, lowering the cost and increasing the effectiveness,” McNutt said. He said the idea came about in 2004 response to an increasingly violent and deadly situation on the ground for American soldiers during the Iraq War. McNutt was teaching at the Airforce Institute of Technology at the time. “The [improvised explosive devices] were killing

many of our troops and our commander asked that we see what we could do to help,” McNutt said. “We developed an idea that would allow us to track bombers back to the place they came from so we could then address the source of the bombs.” The U.S. military found the equipment so helpful that it spent more than \$1 billion while trying to enhance it. Now, it isn’t just the Pentagon that’s eyeing KPPS — so are law enforcement agencies. Baltimore, Philadelphia, Moscow and London are among the major cities reportedly considering the technology. The company also has about \$133 million worth of proposals from other potential clients.

AT: Obama Stops Exec Circumvention

Obama's a weak president- even if he doesn't circumvent directly he'll back up the NSA's illegal activities

Glennon '14, professor of international law at Tufts University's Fletcher School of Law and Diplomacy, Legal Counsel to the Senate Foreign Relations Committee (1977-1980), Fulbright Distinguished Professor of International and Constitutional Law, Vytautas Magnus University School of Law, Kaunas, Lithuania (1998); a Fellow at the Woodrow Wilson International Center for Scholars in Washington D.C. (2001-2002); Thomas Hawkins Johnson Visiting Scholar at the United States Military Academy, West Point (2005); Director of Studies at the Hague Academy of International Law (2006); and professeur invité at the University of Paris II (Panthéon-Assas) from 2006 to 2012., consultant to congressional committees, the U.S. State Department, and the International Atomic Energy Agency, member of the American Law Institute, the Council on Foreign Relations, and the Board of Editors of the American Journal of International Law

Michael J., "Torturing the Rule of Law", <http://nationalinterest.org/files/digital-edition/%5Buser-last-login-raw%5D/134%20Digital%20Edition.pdf>, EC

President **Obama** thus **said more than he intended when he stated**, referring only to torture, that **"we did some things that were contrary to our values."** As Senator John McCain said, in some ways the spying incident was "worse than criminal." **Had Obama acted consistently with American values**—had the system worked—**the president would have dismissed Brennan** the moment his mistruth became evident. The Justice Department would immediately have initiated an investigation to determine whether cia officials had violated the law by spying on the committee. **The committee leadership would have subpoenaed Brennan at once and called him to testify, under oath, about what he knew and when he knew it. Congress would have been incentivized to do so by an outraged public,** informed and galvanized by a record of judicial opinions from cases in which the courts had heard public testimony about the duplicity, kidnapping and brutality that every knowledgeable observer knew had stained American counterterrorism policy. But the system did not work. **Instead, Obama, more president than decider, sat mutely for months while Clapper's earlier dishonesty festered, even though Obama knew, or should have known, that the intelligence chief's testimony was false.** Obama's silence signaled that official misstatement of the facts would now go unpunished, a premise that Brennan readily embraced. Indeed, the Justice Department, ever solicitous of maintaining friendships in Langley and Fort Meade, promptly dismissed Feinstein's request for a criminal investigation of the cia's breach of trust, with the result that **whether the cia broke the law remained a matter of conjecture.** The committee, thitherto led by cheerleaders for the cia and the nsa, itself did nothing to fill the void. It had failed earlier to learn that **the cia ran secret prisons, waterboarded prisoners, made videotapes of the waterboarding or—after it found out—destroyed the videotapes.** It had failed to learn how the administration used the phone records of American citizens that the nsa collected, or that Angela Merkel's cell phone was being tapped—and a host of other embarrassments (many publicly revealed by Edward Snowden) that a competent oversight committee would have caught. The committee's leadership had little to gain by focusing further public scrutiny on its own omissions and indifference to Clapper's and Brennan's deceit. Even some defenders of nsa surveillance

acknowledged that the oversight committees could not be trusted. “Clearly, they’ve been co-opted,” said McCain. “There’s no doubt about that.” The courts joined the committee in behaving as an annex of the military/intelligence community. The rubberstamp record of the Foreign Intelligence Surveillance Court—the closest thing the nation has to a national-security court—in approving warrant requests has made it the butt of jokes. But its lamentable history is not unique. At the time of Clapper’s statement, it was well nigh impossible to find a single case in which anyone claiming to have suffered even the gravest injury as the result of the U.S. government’s counterterrorism policies had recovered a dime in damages. In fact, it is still hard to find any case in which any plaintiff has even been allowed to litigate any counterterrorism claim on the merits. Challenges have been regularly dismissed before any plaintiff has had a chance to describe what happened either before the courts or, often more important, the court of public opinion. The system’s failure, then, has been far more than a failure of the truth-finding process, or even a failure to prevent torture; its failure has been nothing less than a collapse of the equilibrium of power, the balance expected to result from ambition set against ambition, the resistance to encroachment that was supposed to keep the three branches of the federal government in a state of equilibrium and to protect the people from the government. How could this have happened?

Obama has no power over the NSA- prefer our evidence because it’s based on centuries of empirical qualitative analysis

Glennon ’14, professor of international law at Tufts University’s Fletcher School of Law and Diplomacy, Legal Counsel to the Senate Foreign Relations Committee (1977-1980), Fulbright Distinguished Professor of International and Constitutional Law, Vytautas Magnus University School of Law, Kaunas, Lithuania (1998); a Fellow at the Woodrow Wilson International Center for Scholars in Washington D.C. As it did in the early days of Britain’s monarchy, power in the United States lay initially in one set of institutions—the presidency, Congress and the courts. These are America’s “dignified” institutions. Later, however, a second institution emerged to safeguard the nation’s security. This, America’s “efficient” institution (actually, more a network than an institution), consists of the several hundred executive officials who sit atop the military, intelligence, diplomatic and law-enforcement departments and agencies, that have as their mission the protection of America’s security. Large segments of the public continue to believe that America’s constitutionally established, dignified institutions are the locus of governmental power. That belief allows both sets of institutions to maintain public support and legitimacy. Enough exceptions exist to sustain that illusion. But when it comes to defining and protecting national security, the public’s impression is mistaken. America’s efficient institution makes most of the

key decisions concerning national security, removed from public view and from the electoral and constitutional restrictions that check America's dignified institutions. The United States has, in short, moved beyond a mere imperial presidency to a bifurcated system—a structure of double government—in which even the president now exercises little substantive control over the general direction of U.S. national-security policy. Whereas Britain's dual institutions evolved toward a concealed republic, America's have evolved in the opposite direction, toward greater centralization, less accountability and emergent autocracy.

AT: Congress Solves Circumvention

Current political environment means they won't ensure compliance

Bendix and Quirk 15 [William Bendix is an assistant professor of political science at Keene State College. His research focuses on Congress, legislative deliberation, and homeland security and civil liberties policies. Paul J. Quirk is the Phil Lind Chair in U.S. Politics and Representation at the University of British Columbia and a former research associate at the Brookings Institution. His work focuses on debate and deliberation in Congress and the mass public. March 2015.

"Secrecy and negligence: How Congress lost control of domestic surveillance" Issues in Governance Studies Number 68.

<http://www.brookings.edu/~media/research/files/papers/2015/03/02-secrecy-negligence-congress-surveillance-bendix-quirk/ctibendixquirksecrecyv3.pdf>]

The fragility of congressional concern for privacy was apparent. Critics of the Senate's USA FREEDOM bill made one overriding argument—that weakening surveillance programs now would enable terrorists, especially ISIS, to successfully attack the United States. During floor debate, Senator Marco Rubio (R-Fla.) warned that a "gutted" surveillance program could lead to "a horrifying result."⁵² And Senator Susan Collins (R-Maine) asked, "Why would we weaken the ability of our intelligence community at a time when the threats against this country have never been greater?"⁵³ These critics offered no evidence of the investigative value of the phone dragnet, and simply omitted mentioning considerations of privacy. These debating points demonstrate the rhetorical advantage of concern for security, over that for privacy, in surveillance policy: the dangers of terrorist attacks are obvious and salient; those of intrusive surveillance are speculative and invisible. In the current environment, not only do many members simply accept the executive and FISA Court nullification of the statutory limits on businessrecords seizures, they reject all legislative constraints on the collection, storage, and use of phone metadata.

AT: Rule of Law Solves

They assume respect for the rule of law—doesn't apply to the NSA and FISC deference allows circumvention to the most restrictive legislation

Granick 13 [Jennifer Granick

Director of Civil Liberties, Stanford Center for Internet and Society. 12/16/13, "NSA's Creative Interpretations Of Law Subvert Congress And The Rule Of Law"

<http://www.forbes.com/sites/jennifergranick/2013/12/16/a-common-law-coup-detat-how-nsas-creative-interpretations-of-law-subvert-the-rule-of-law///jweideman>]

Cole noted the reform legislation wouldn't necessarily inhibit the NSA's surveillance capabilities because "it's going to depend on how the court interprets any number of the provisions that are in [the legislation]." Comments like this betray a serious problem inside the Executive Branch. The Administration and the intelligence community believe they can do whatever they want, regardless of the laws Congress passes, so long they can convince one of the judges appointed to the secretive Foreign Intelligence Surveillance Court (FISC) to agree. This isn't the rule of law. This is a coup d'etat. Leahy's proposed legislation would amend section 215 of the USA PATRIOT Act to require the government to show the records it seeks are not only relevant but also material to an authorized investigation and that the target has some connection to terrorism or espionage before it can obtain those records. This latter requirement, the USA FREEDOM Act sponsors say, will "end bulk collection".

Cole apparently disagrees. Responding to a question at yesterday's hearing on the bill, Cole said, "Right now the interpretation of the word 'relevant' is a broad interpretation. Adding 'pertinent to a foreign agent' or 'somebody in contact with a foreign agent' could be another way of talking about relevance as it is right now. We'd have to see how broadly the court interprets that or how narrowly." In other words, the FISA court might let us keep doing what we're doing no matter what the law says and despite Congress' intent. All courts issue opinions about what the laws that legislatures pass mean. These opinions are called the "common law". But common law interpretations of statutes are only legitimate if they are fair and reasonable interpretations. The NSA has a great track record getting FISC judges to interpret even obviously narrow phrases in surprisingly broad ways. For example, Americans, including the Patriot Act's main sponsor Representative Jim Sensenbrenner (R-WI) and a co-sponsor of the USA Freedom Act, were shocked to learn last June that the NSA used Section 215 for bulk collection of phone data (and potentially other sensitive records). Sensenbrenner said, "[i]f Congress knew what the NSA had in mind in the future immediately after 9/11, the Patriot Act never would have passed, and I never would have supported it." The 2004 FISC opinion authorizing the NSA's collection and use of Internet metadata under the pen register statute is another dismaying example of this phenomenon. In this opinion, Judge Colleen Kollar-Kotelly acknowledged that she was allowing an "exceptionally broad" and "novel" form of collection, but nevertheless deferred to "the fully considered judgment of the executive branch in assessing and responding to national security threats and in determining the potential significance of intelligence-related information." This opinion—called "strange" and a "head-scratcher"—later served as precedent upon which FISA Judge Claire Eagan relied in her 2006 authorization of the bulk phone records collection. Time and again, the FISC accepts the Administration's shockingly flimsy arguments. As a set, the few public FISC opinions we've seen suggest that the Executive Branch—in cahoots with a few selected judges—has replaced legitimate public statutes with secret, illegitimate common law. The rule of law is a basic democratic principle meaning that all members of a society—individuals, organizations, and government officials—must obey publicly disclosed legal codes and processes. If Cole is right that, try as it might, Congress cannot end bulk collection because the secret FISA court may

defer to the NSA's interpretation of the rules, there is no rule of law. The NSA is in charge, the FISA court process is just a fig leaf, and this is no longer a democracy. There's been a coup d'etat.

AT: Limits on Collection

Limits on surveillance in U.S. borders is circumvented—data manipulation

Whittaker 14 [Zack, CBS News. Journalist. 6/30/14, "Legal loopholes could allow wider NSA surveillance, researchers say" <http://www.cbsnews.com/news/legal-loopholes-could-let-nsa-surveillance-circumvent-fourth-amendment-researchers-say///jweideman>]

"The loopholes in current surveillance laws and today's Internet technology may leave American communications as vulnerable to surveillance, and as unprotected as the internet traffic of foreigners," Arnbak said. Although Americans are afforded constitutional protections against unwarranted searches of their emails, documents, social networking data, and other cloud-stored data while it's stored or in-transit on U.S. soil, the researchers note these same protections do not exist when American data leaves the country. Furthermore, they suggest that Internet traffic can be "deliberately manipulated" to push American data outside of the country. Although the researchers say they "do not intend to speculate" about whether any U.S. intelligence agencies are actually doing this, they say it could provide a loophole for vacuuming up vast amounts of U.S. citizen data for intelligence purposes, thus "circumventing constitutional and statutory safeguards seeking to protect the privacy of Americans," they warned.

AT: NSA response proves no circumvention

The NSA response was vague legal trickery that doesn't answer our arg

Arnbak and Goldberg 15 [Axel Arnbak is a cybersecurity and information law researcher at the Institute for Information Law, University of Amsterdam. Sharon, an associate professor in the Computer Science Department at Boston University, and a member of the BU Security Group. 2015, "Loopholes for Circumventing the Constitution: Unrestrained Bulk Surveillance on Americans by Collecting Network Traffic Abroad" Michigan Telecommunications and Technology Law Review Volume 21 | Issue 2. //jweideman]

4. The Official NSA Response to Our Analysis As noted in the Introduction to this Article, coverage of an earlier online version of this Article by CBS News spurred an official response from the NSA compliance department.¹²⁴ The relevant part of the media report reads as follows:¹²⁵ However, an N.S.A. spokesperson denied that either EO 12333 or USSID 18 authorizes targeting of U.S. persons for electronic surveillance by routing their communications outside of the U.S., in an emailed statement to CBS News. Absent limited exception (for example, in an emergency), the Foreign Intelligence Surveillance Act requires that we get a court order to target any U.S. person anywhere in the world for electronic surveillance. In order to get such an order, we have to establish, to the satisfaction of a federal judge, probable cause to believe that the U.S. person is an agent of a foreign power,' the spokesperson said. Our response to the NSA statement was published online on July 11, 2014, and the NSA has not yet responded.¹²⁶ The NSA statement to CBS News cleverly sidetracks our analysis by re-framing the issue to construct a legal situation that evades our main arguments. Specifically, the statement concentrates on the legality of "targeting US persons," an issue we barely analyze. Indeed, the loopholes we identify in this Article exist when 1) surveillance is conducted abroad and 2) operations do not intentionally target a US person. The NSA statement, therefore, does not address our concerns. Moreover, in re-wiring the legal situation to cover the targeting of US persons, the element "absent limited exceptions (for example, an emergency)"¹²⁷ of the NSA statement is also misleading. Exceptions for targeting US persons under EO 12333 are outlined in USSID 18 § 4.¹²⁸ These exceptions span four redacted pages and include a completely classified paragraph.¹²⁹ It is impossible to tell what lies beneath those redactions, and we do not intend to speculate on their contents. Even so, it seems unlikely that one could reasonably characterize four pages of exceptions and an entirely classified paragraph—which could amount to dozens of actual scenarios—as "limited."

AT: FISC reform

They won't even go to the court for approval

Arnbak and Goldberg 15 [Axel Arnbak is a cybersecurity and information law researcher at the Institute for Information Law, University of Amsterdam. Sharon, an associate professor in the Computer Science Department at Boston University, and a member of the BU Security Group. 2015, "Loopholes for Circumventing the Constitution: Unrestrained Bulk Surveillance on Americans by Collecting Network Traffic Abroad" Michigan Telecommunications and Technology Law Review Volume 21 | Issue 2. //jweideman]

There are other specific exceptions where "communications which are known to be to, from, or about US persons" may be "intentionally intercepted."¹¹⁴ Even with the many redactions, it is possible to see that the exceptions provide more diminished protections on critical points than the already permissive "minimization procedures" under FISA. Often, instead of FISA Court approval, some operations merely require the Attorney General or the NSA Director's approval.¹¹⁵ Out of dozens of scenarios mentioned, one especially interesting instance is the consent exception.¹¹⁶ It states that when US persons (including US corporations) consent to a surveillance operation, the approval of the Director of the NSA suffices to go ahead with a program as long as the surveillance does not fall within the FISA regime. Indeed, May 2014 saw revelations on NSA's "strategic partnerships" with several leading corporations, which may point to a "consent"-based relationship.¹¹⁷

AT: ESR—Rollback

Executive self restraint fails—future presidents have an incentive and are likely to roll back the XO

Bendix and Quirk 15 [William Bendix is an assistant professor of political science at Keene State College. For the immediate future, however, Congress appears to have gone out of the business of determining policy for antiterrorism surveillance. In the near term, the best hope for privacy interests is for President Obama to make good on his post-Snowden pledge, repeated in his 2015 State of the Union Address, to reform surveillance programs in order to instill “public confidence...that the privacy of ordinary people is not being violated.” He promised to work with Congress on the issue. If Congress is not capable of acting, the executive branch can impose its own constraints on surveillance practices.⁵⁷ But the maintenance of self-imposed executive-branch constraints would depend entirely on the strength of the administration’s commitment—and, in two years’ time, on the disposition of the next president Because of the president’s central responsibility for national security, the presidency is hardly a reliable institutional champion for privacy interests. If over the long run surveillance practices are to afford significant protection to privacy interests, Congress will need to overcome its partisan gridlock and strengthen the institutional framework for surveillance policymaking. We suggest two long-term goals. First, Congress should seek some means of enhancing its capacity for oversight and policymaking on secret surveillance practices. Some reformers have called for abolishing or prohibiting any secret laws or interpretations that control investigations. In his 2011 speech mentioned above, Senator Wyden acknowledged that surveillance activities are necessarily secret.⁵⁸ He insisted, however, that the policies governing those activities should be debated and decided openly, through normal democratic processes. He argued that secret laws, or secretly sanctioned interpretations of laws, are incompatible with democracy.

Impacts

Impact—US Cred

Circumvention is worse than the status quo—undermines institutions, kills US credibility

Glennon '14, professor of international law at Tufts University's Fletcher School of Law and Diplomacy, Legal Counsel to the Senate Foreign Relations Committee (1977-1980), Fulbright Distinguished Professor of International and Constitutional Law, Vytautas Magnus University School of Law, Kaunas, Lithuania (1998); a Fellow at the Woodrow Wilson International Center for Scholars in Washington D.C. (2001-2002); Thomas Hawkins Johnson Visiting Scholar at the United States Military Academy, West Point (2005); Director of Studies at the Hague Academy of International Law (2006); and professeur invité at the University of Paris II (Panthéon-Assas) from 2006 to 2012., consultant to congressional committees, the U.S. State Department, and the International Atomic Energy Agency, member of the American Law Institute, the Council on Foreign Relations, and the Board of Editors of the American Journal of International Law

Michael J., "Torturing the Rule of Law", <http://nationalinterest.org/files/digital-edition/%5Buser-last-login-raw%5D/134%20Digital%20Edition.pdf>, EC

The cia's spying was thus no trivial staff quarrel requiring merely a personal apology. Willfully deceiving a governmental fact-finding body, whether a court or a congressional committee, undermines the integrity of the American legal system. In the constitutional design, these organs were intended to be the government's portals to truth. To carry out their duties, they depend upon an accurate assessment of the facts. When they are misled, their work product is suspect; judicial opinions and legislative findings then rest upon falsehood. The body politic casts votes based upon misinformation, electing candidates who would not otherwise hold office. The entire system of constitutional and electoral checks on abusive power is thereby corrupted. Those who mislead no doubt believe that they do so for a greater good, the protection of the nation's security. They are mistaken. The cia, the nsa and other elements of the military/intelligence community do not exist merely to prevent airplanes from flying into buildings. Their larger mission is to protect the nation's democratic institutions and the rule of law established by the Constitution. When elements of the national-security apparatus deceive Congress or the courts, they feed the perception that the whole system is rigged and undermine the very institutions that it is their mission to protect. Distrust of government tends to become generalized. People who doubt government officials' assertions on national-security threats are inclined to extend their skepticism to other arenas. Governmental assurances concerning everything from vaccine and food safety to the fairness of stock-market regulation and IRS investigations (not without reason) become widely suspect. The protection of legitimate national-security interests itself suffers if the public is unable to distinguish between measures vital to its protection and those assumed to be undertaken for reasons of doubtful validity. Further, it does not strengthen the United States in its relations with other nations to engage in deception. It weakens our government when its institutions are seen around the world as hollow or its officials as duplicitous. The United States' historic advantage in its international relations has been not merely military or economic. It has been reputational. Legislative and judicial monitors that operate independent of the executive branch, that are able to call the military and intelligence agencies to task when they run amok,

lie at the core of America's reputation for a robust rule of law. Whether the United States thrives or declines in this century will rest in large part on its ability or inability to maintain democratic accountability by safeguarding the integrity of its institutions.

Legitimate unipolarity is key to a stable world order

Finnemore '9, professor of political science and international affairs at George Washington University

"Legitimacy, Hypocrisy, and the Social Structure of Unipolarity: Why Being a Unipole Isn't All It's Cracked Up to Be," World Politics, Volume 61, Number 1, http://home.gwu.edu/~finnemor/articles/2009_unipolarity_wp.pdf, EC

The Legitimacy of Power and the Power of Legitimacy. Legitimacy is, by its nature, a social and relational phenomenon. One's position or power cannot be legitimate in a vacuum. The concept only has meaning in a particular social context. Actors, even unipoles, cannot create legitimacy unilaterally. Legitimacy can only be given by others. It is conferred either by peers, as when great powers accept or reject the actions of another power, or by those upon whom power is exercised. Reasons to confer legitimacy have varied throughout history. Tradition, blood, and claims of divine right have all provided reasons to confer legitimacy, although in contemporary politics conformity with international norms and law is more influential in determining which actors and actions will be accepted as legitimate. 9. Recognizing the legitimacy of power does not mean these others necessarily like the powerful or their policies, but it implies at least tacit acceptance of the social structure in which power is exercised. One may not like the inequalities of global capitalism but still believe that markets are the only realistic or likely way to organize successful economic growth. One may not like the P5 vetoes of the Security Council but still understand that the United Nations cannot exist without this concession to power asymmetries. We can see the importance of legitimacy by thinking about its absence. Active rejection of social structures and the withdrawal of recognition of their legitimacy create a crisis. In domestic politics, regimes suffering legitimacy crises face resistance, whether passive or active and armed. Internationally, systems suffering legitimacy crises tend to be violent and noncooperative. Post-Reformation Europe might be an example of such a system. Without at least tacit acceptance of power's legitimacy, the wheels of international social life get derailed. Material force alone remains to impose order, and order creation or maintenance by that means is difficult, even under unipolarity. 10. Successful and stable orders require the grease of some legitimation structure to persist and prosper. The social and relational character of legitimacy thus strongly colors the nature of any unipolar order and the kinds of orders a unipole can construct. Yes, unipoles can impose their will, but only to an extent. The willingness of others to recognize the legitimacy of a unipole's actions and defer to its wishes or judgment shapes the character of the order that will emerge. Unipolar power without any underlying legitimacy will have a very particular character. The unipole's policies will meet with resistance, either active or passive, at every turn. Cooperation will be induced only through material quid pro quo payoffs. Trust will be thin to nonexistent. This is obviously an expensive system to run and few unipoles have tried to do so. More often unipoles attempt to articulate some set of values and shared interests that induce acquiescence or support from others, thereby legitimating their power and policies. In part this invocation of values may be strategic;

acceptance by or overt support from others makes exercise of power by the unipole cheaper and more effective. Smart leaders know how to “sell” their policies. Wrapping policies in shared values or interests smoothes the path to policy success by reassuring skeptics.¹¹ Rhetoric about shared interests in prosperity and economic growth accompanies efforts to push free trade deals on unwilling partners and publics. Rhetoric about shared love of human rights and democracy accompanies pushes for **political reforms** in other states.¹² In their examination of debates leading up to the 2003 Iraq war, in this issue of World Politics, Jack Snyder, Robert Shapiro, and Yaeli Bloch-Elkon provide an example of unipolar attempts to create legitimacy through strategic use of rhetoric. They show how “evocative and evasive rhetoric” allowed proponents of the war to imply links between the 9/11 attacks, weapons of mass destruction, and Saddam Hussein’s regime. Potentially unpopular or controversial policies were rationalized by situating them in a larger strategic vision built on more widely held values, as when the authors of the 2002 National Security Strategy memorandum wove together the global war on terror, the promotion of American democratic values abroad, and the struggle against authoritarian regimes to create a justification for preventive war.¹³ Indeed, as Ronald Krebs and Patrick Jackson argue, rhetorical “sales pitches” of this kind can be highly coercive. Examining the same case (the selling of the Iraq war), Krebs and Jennifer Lobasz show how the administration’s “war-on-terror” discourse, which cast the U.S. as a blameless victim (attacked for “who we are” rather than anything we did), was designed in such a way as to leave opponents with very few arguments they could use to rally effective opposition in Congress.¹⁴ Usually this articulation of values is not simply a strategic ploy. Decision makers and publics in the unipole actually hold these values and believe their own rhetoric to some significant degree. Unipole states, like all states, are social creatures. They are composed of domestic societies that cohere around some set of national beliefs. Their leaders are products of those societies and often share those beliefs. Even where leaders may be skeptical, they likely became leaders by virtue of their abilities to rally publics around shared goals and to construct foreign and domestic policies that reflect domestic values. Even authoritarian (and certainly totalitarian) regimes articulate shared goals and function only because of the web of social ties that knit people together. Certainly all recent and contemporary strong states that could be candidates for unipoles—the U.S., China, Russia, Germany, and Britain—do.¹⁵ Thus unipole states, like all states, find naked self-aggrandizement or even the prescriptions of Machiavellian virtù difficult to pursue.¹⁶ Unipoles and the people who lead them pursue a variety of goals derived from many different values. Even “national interest” as most people and states conceive of it involves some broader vision of social good beyond mere self-aggrandizement. Americans like to see democracy spread around the world in part for instrumental reasons—they believe a world of democracies is a safer, more prosperous world for Americans—and also for normative ones—they believe in the virtues of democracy for all. Likewise, Americans like to see markets open in part for instrumental reasons—they believe a world of markets will make Americans richer—and also for normative ones—they believe that markets are the ticket out of poverty. Much of unipolar politics is thus likely to revolve around the degree to which policies promoting the unipole’s goals are accepted or resisted by others. Other states and foreign publics may need to be persuaded, but often influential domestic constituencies must also be brought on board. Channels for such persuasion are many and varied, as is evident from past U.S. diplomatic efforts to sell its policies under bipolarity. The shift from laissez-faire to what

John Ruggie terms the “embedded liberal compromise” as the basis for the U.S.-led economic order after WWII required extensive diplomatic effort to persuade other states and New York’s financial elite to go along. The tools of influence used to accomplish this were sometimes material but also intellectual and ideological. It was the “shared social purposes” of these economic arrangements that gave them legitimacy among both state and societal actors cross-nationally.¹⁶ A unipole’s policies are thus circumscribed on two fronts. The policies must reflect values held at home, making them legitimate **domestically**. At the same time, in order to induce acquiescence or support from abroad, they must appeal to the leaders and publics of other states. Constructing policies across these two spheres—domestic and international—may be more or less difficult, depending on circumstances, but the range of choices satisfying both constituencies is unlikely to be large. Widespread disaffection on either front is likely to create significant legitimacy costs to leaders, either as electoral or stability threats domestically or as decreased cooperation and increased resistance internationally. Creating legitimacy for its policies is thus essential for the unipole but it is also difficult, dangerous, and prone to unforeseen consequences. Domestically, the need to cement winning coalitions in place has polarized U.S. politics, creating incentives to exploit wedge issues and ideological narratives. As Snyder, Shapiro, and Bloch-Elkon describe, neoconservatives, particularly after 9/11, used these tools to great effect to generate support for the Bush administration’s policies. Such ideologically-driven persuasion efforts entail risks, however. Constructing coherent ideological narratives often involves sidelining inconvenient facts, what Snyder and his coauthors call “fact bulldozing.” This is more than just highlighting some facts at the expense of others. It may (or may not) begin with that aim, but it can also involve changing the facts people believe to be true, as when large numbers of people came to believe that weapons of mass destruction were indeed found in Iraq. Thus, to the degree that these persuasion efforts are successful, if their ideology does not allow them to entertain contrary facts, policymakers and publics may make decisions based on bad information. This kind of self-delusion would seem unlikely to result in smart policy. To the extent that ideological narratives become entrenched, these delusions may extend to future generations of policymakers and make them victims of blowback. Even if successors come to terms with the facts, they may be entrapped by the powerful legitimating rhetoric constructed by their predecessors.¹⁷

Circumvention contributes to the cycle of civic ignorance- that causes authoritarianism in the name of national security

Glennon ’14, professor of international law at Tufts University’s Fletcher School of Law and Diplomacy, Legal Counsel to the Senate Foreign Relations Committee (1977-1980), Fulbright Distinguished Professor of International and Constitutional Law, Vytautas Magnus University School of Law, Kaunas, Lithuania (1998); a Fellow at the Woodrow Wilson International Center for Scholars in Washington D.C. That root cause is difficult to discuss in a democracy, for it **lies in the electorate's own deficiencies**. This is the second great obstacle the reform proposals confront; on this point Bagehot's and Madison's theories converge. Bagehot argued that **when the public becomes too sophisticated to be misled**, any longer about who holds governmental power but not informed enough to play a genuine role in governance, **the whole structure will "fall to the earth,"** in his phrase. Madison, contrary to popular belief, did not suggest that the system that he and his colleagues designed was self-correcting. The Framers did not believe that merely setting "ambition against ambition" within the government would by itself save the people from autocracy. They believed that **this competition for power would not occur absent an informed and engaged public**—what Robert Dahl has called the "adequate citizen," the citizen able and willing to undertake the responsibilities required to make democracy work. Thomas Jefferson spoke for many of the Framers. He said: "If a nation expects to be ignorant and free, in a state of civilization, it expects what never was and never will be." Competition between institutions was thus written into the constitutional architecture not as a substitute for civic virtue—there is none—but as a backstop, as an additional safeguard to forestall the rise of autocracy. But that backstop was not freestanding: it, too, depended upon an electorate possessed of civic virtue. If anything, the essentiality of civic virtue has grown over the years. **In the early days** of the Republic, **public-policy issues were less intricate**, and **the franchise was de jure or de facto more restricted**. A smaller electorate was more capable of mastering the more straightforward issues it faced. As Louis Henkin pointed out, however, the United States has since changed gradually from a republic to a democracy—an "ultra-democracy," Bagehot believed. The problems government has faced over the years have become more complex, and a greater base of **civic knowledge has thus become indispensable for responsible participation in the process of governance**. Yet **a cursory glance at consistent survey results confirms** what former Supreme Court justice David Souter has described today as **the public's "pervasive civic ignorance."** The numbers are sobering. A 2011 Newsweek survey showed that 80 percent of Americans did not know who was president during World War I; 40 percent did not know whom the United States fought in World War II; and 29 percent could not identify the current vice president of the United States. **Far more Americans can name the Three Stooges than any member of the Supreme Court.** One poll has found that **71 percent of Americans believe that Iran already has nuclear weapons**. In 2006, at the height of U.S. military involvement in the region, 88 percent of Americans aged eighteen to twenty-four could not find Afghanistan on a map of Asia, and 63 percent could not find Iraq or Saudi Arabia on a map of the Middle East. Ilya Somin's fine book *Democracy and Political Ignorance* analyzes the problem in depth. The great conundrum is that the public's ignorance does not derive from "stupidity"—average raw IQ scores actually have increased in recent decades—so much as it derives from simple rationality: **Why spend time and energy learning about national-security policies that cannot be changed? That is the nub of the negative feedback loop in which the United States is now locked. Resuscitating the Madisonian institutions requires an informed, engaged electorate,** but voters have little incentive to be informed or engaged if they believe that their efforts would be for naught—and **as they become more uninformed and unengaged, they have all the more reason to continue** on that path. The Madisonian institutions thus **continue to atrophy,**

the power of the Trumanite network continues to grow and the public continues to disengage. Should this trend continue, and there is scant reason to believe it will not, it takes no great prescience to see what lies ahead: outward symbols and rituals of national security, governance that appear largely the same, concealing a Trumanite network that takes on the role of a silent directorate, and Madisonian institutions that, like the British monarchy and House of Lords, quietly and gradually are transformed into museum pieces.

Private Sector Impact—Econ

Private-sector surveillance tanks consumer confidence in the economy

Jon D. **Michaels 8**, Acting Professor, UCLA School of Law, August 2008, "ARTICLE: All the President's Spies: Private-Public Intelligence Partnerships in the War on Terror," California Law Review, 96 Calif. L. Rev. 901

Even if a given informal partnership is not aimed at defying governing legal requirements, a range of harms may still follow from the ostensibly lawful decision to proceed by handshake. For instance, left to their own devices, both corporations and intelligence agencies may systematically undervalue the social costs associated with the commodity being traded (i.e., private information) - and thus traffic in an inordinately high amount of citizens' personal information. n161 As in the case of industrial regulation of pollution, the possibility of exposing or misusing individuals' personal data is not fully internalized by the parties to the given transaction. Therefore, irrespective of what value society as a whole would assign to the personal information in question, n162 the parties to the transaction peg it comparatively lower. n163 In other words, without the government having to resort to legal process (e.g., by obtaining ex ante authorization and compelling corporate cooperation, n164), the [*938] "informal market" may transfer more information with fewer safeguards than is socially optimal, or even necessary. n165 If, on the other hand, the Executive and the corporations were required to internalize these social costs (say, if a robust oversight regime existed or if private rights of action were readily enforceable), n166 it is likely that the parties would have a greater incentive to reduce instances of over-trafficking in the information and thus better abide by whatever agreed-upon privacy protections were in place. This result would be similar to how corporations respond when forced by outside interests to come to terms with an environmental externality. n167¶ Second, under any of the possible arrangements agreed to voluntarily or via legal compulsion, if word gets out that such partnerships exist for the purpose of domestic-intelligence gathering, there could be a chilling effect. Some individuals would be less candid on the telephone and over email (especially when voicing political dissent), and expressive activities would [*939] suffer. n168 Certainly, if such a chilling effect occurred, it would set in no matter what type of private-public intelligence-gathering partnership was reported by the press; but, if the arrangement were described as having been regulated pursuant to the dictates of the law, individuals could take some solace in the fact that the partnership's activities were accountable and being monitored for a requisite showing of cause. n169 They might also find some comfort in the fact that the firms were evidently protective of their customers, giving out information only upon pains of legal compulsion.¶ By contrast, when a legally informal relationship is exposed by the media, a consumer could reasonably fear that intelligence-gathering intrusions lack meaningful limits. Consider a counterfactual about New York's Container Inspection Program, which involves police officers conducting random searches of subway passengers in an effort to locate or deter concealed explosives. n170 While many passengers may find the random search itself to be bothersome and intrusive, they at least know that as a matter of unambiguous law the agents are forbidden from looking through reading materials or collecting personally identifying information about those searched. n171 If suddenly, however, it came to light that the police had mini-hand scanners and, notwithstanding the clear limitations on their discretion, were secretly cataloging personal information and triangulating it with time/location of people's travel and reading habits, it may well be the case that, on the margins, people may choose to take the bus (at least when they are carrying particularly personal materials). Thus, informality, and the corresponding uncertainty that [*940] attaches, may excessively chill expression or limit freedoms. n172¶ Third, and building on the previous point, evidence that any private-public surveillance program operated without complying with the relevant regulatory requirements is likely to engender distrust of private industry writ large. Individuals confronted with the realities of legally informal relationships have no reason to believe that journalists or government watchdogs have smoked out all of the possible collaborations of that kind. Instead, people have cause for suspecting that if such partnerships exist in realms A and B, the government might just as likely be doing something improper in realms C and D, too. n173 These worries are only compounded when revelation of such partnerships, including the infamous NSA warrantless eavesdropping program, prompts an unrepentant President to insist that Congress grant retroactive legal immunity to the private parties involved. n174

Private Sector Impact—National Security

Government outsourcing weakens security and efficiency – open-ended contracts save money at risk of Snowden level leaks

Pearlstein 14 (Steven Pearlstein, an American columnist. He writes a column on business and the economy that is published twice weekly in The Washington Post, 1/31/15, Washington Post, “The federal outsourcing boom and why it’s failing Americans”, http://www.washingtonpost.com/business/the-federal-outsourcing-boom-and-why-its-failing-americans/2014/01/31/21d03c40-8914-11e3-833c-33098f9e5267_story.html, 7/13/15, ACC)

If you give federal managers the choice of filling vacancies from the candidates who emerge from the government’s arcane recruitment and promotion system (and who, once chosen, will be virtually impossible to fire if they don’t work out), or you gave them the choice of handpicking whomever they want and hiring them under an open-ended “umbrella” contract with a private firm (with the power to fire them at a moment’s notice), nine in 10 would hire the contractor. And that’s exactly why you now find so many contract employees in government offices working side by side with government employees. The system the government uses to recruit, hire, evaluate and incentivize its employees is seriously broken. And yet every attempt to reform it is bitterly opposed by federal employee unions, who take it as their mission to prevent good employees from being rewarded and bad employees from being fired. The result is that the unions are protecting ever-fewer employees with ever-lower pay. Those open-ended IDIQ (for “indefinite delivery, indefinite quantity”) contracts, by the way, now account for anywhere between one quarter and one half of all federal service contracting, according to Gordon. Originally, they were designed to allow agencies buy smaller quantity of standardized supplies, or respond to the occasional surge in workload, without having to go through the long and cumbersome process of letting a new contract. But now they are routinely used by agencies for orders worth hundreds of millions of dollars that involve no competition, little transparency and dubious savings. These clever work-arounds to the government’s personnel and contracting systems have driven the rapid growth in government contracting, much of it here in the Washington region. Federal contracting grew from about \$200 billion in 2000 to about \$550 billion in 2011 before falling back to \$450 billion last year. Sixty percent of that was for services. By some estimates, there are twice as many people doing government work under contract than there are government workers. Against that backdrop, hardly anyone considered it remarkable that the government would have outsourced the day-to-day operation of its most secretive computer system to Booz Allen Hamilton, the agency’s leading contractor. Nor, during the homeland security push after 9/11, did anyone question why a company such as USIS, which was originally spun off from the government to do simple background checks for new employees at departments such as Agriculture and Education, should be doing investigations for top security clearances normally done by the FBI. After the Snowden affair, the government sued USIS, accusing the firm of pushing through clearances without sufficient investigation in order to qualify for performance bonuses.

FBI buys invasive hacking software to collect data and control devices – same tech Sudan and Bahrain uses to spy

Cox 7/6 (Joseph Cox, journalist covering the intersection of technology, crime and politics for Motherboard, the Daily Dot and WIRED, and works on documentaries for VICE. He trains journalists and media organisations to keep their communications secure in an age of mass government surveillance. 7/6/15, “The FBI Spent \$775K on Hacking Team’s Spy Tools Since 2011”, Wired.com, <http://www.wired.com/2015/07/fbi-spent-775k-hacking-teams-spy-tools-since-2011/>, 7/13/15, ACC)

THE FBI IS one of the clients who bought hacking software from the private Italian spying agency Hacking Team, which was itself the victim of a recent hack. It’s long been suspected that the FBI used Hacking Team’s tools, but with the publication yesterday of internal documents, invoices, emails and even product source code from the company, we now have the first concrete evidence that this is true. The FBI is not in good company here. According to several spreadsheets within the hacked archive, which contain a list of Hacking Team’s customers, many of the other governments who bought the same software are repressive regimes, such as Sudan and Bahrain. The documents show that the FBI first purchased the company’s “RCS” in 2011. RCS stands for “Remote Control Service,” otherwise known as “Galileo,” Hacking Team’s premiere spy product. RCS is a simple piece of hacking software that has been used by the Ethiopian regime to target journalists based in Washington DC. It has also been detected in an attack on a Moroccan media outlet, and a human rights activist from the United Arab Emirates. Once a target’s computer has been infected, **RCS is able to siphon off data, and listen in on communications before they have been encrypted.** According to researchers based at the University of Toronto’s Citizen Lab, who have monitored the use of RCS throughout the world, the tool can also “record Skype calls, e-mails, instant messages, and passwords typed into a Web browser.” To top that off, RCS is also capable of switching on a target’s web camera and microphone. Hacking Team has generated a total of 697,710 Euros (\$773,226.64) from the FBI since 2011, according to the hacked spreadsheets. In 2015, the FBI spent 59,855 Euros on “maintenance,” and in 2014 the agency spent the same amount on “license/upgrades.” No expenditure was recorded for the whole of 2013. In 2012, however, the FBI allegedly spent 310,000 Euros for Hacking Team’s services, all on licenses or upgrades, and the year before it spent 268,000 Euros.

Hack on spy software company poses major security threat – terrorists have access to surveillance source codes – zero-day vendors at risk

Zetter 7/10 (Kim Zetter, award-winning, senior staff reporter at Wired covering cybercrime, privacy, and security. She is writing a book about Stuxnet, a digital weapon that was designed to sabotage Iran's nuclear program, 7/10/15, “Hacking Team Shows the World How Not to Stockpile Exploits”, Wired, <http://www.wired.com/2015/07/hacking-team-shows-world-not-stockpile-exploits/>, 7/13/15, ACC)

BANK ROBBER WILLIE Sutton’s famous line about why he robs banks—“because that’s where the money is”—was particularly apt this week after the Italian firm Hacking Team was hacked

and at least two zero-day exploits the firm possessed were spilled to the public, along with about 400 gigabytes of company emails and other data. Hacking Team has long been a source of controversy because the company sells surveillance tools to law enforcement and intelligence agencies around the world—among them repressive regimes that use the tools to spy on human rights activists and political dissidents. But the hack this week highlights another serious issue around Hacking Team and companies like it that stockpile or store zero-day exploits, including software vendors who run bug bounty programs: they can be rich targets for hackers who might want to steal the zero-days to use them for nefarious purposes or sell them. This places an added onus on companies to protect their repositories to prevent the zero-days from getting into the hands of unintended parties “Hackers have been hacking each other to steal zero-days for as long as there has been hacking,” says Katie Moussouris, chief policy officer for HackerOne, a company that helps other companies manage their zero-day bug bounty programs. “Why wouldn’t you go after people who do vulnerability research and companies that have databases of their own unpatched vulnerabilities that they’re working on? These are all potential repositories of zero-days that people will want to get.” Zero-day exploits are malicious code designed to target security holes in software that the software maker generally doesn’t know about yet or hasn’t patched yet. This makes the exploits gold to cybercriminals, intelligence agencies, and other hackers who want to sell them or use them to attack vulnerable systems. Zero-days, if purchased, can cost anywhere from \$5,000 to more than \$500,000, depending on what they target and their level of sophistication. One of the leaked emails from Hacking Team discussed the company paying the security firm Netragard \$105,000 to buy one “flawless” remote-code exploit. If someone can get a whole cache of zero-days by surreptitiously stealing them instead, it would be very valuable. Hacking Team and other entities like it that store zero-day exploits—including the US government and US defense contractors and security firms who sell to the government—put the public at risk as long as the zero-days are kept secret from vendors, and vulnerable systems remain unpatched and open to attack. One would hope at the very least, then, that these zero-days would be stored in highly secured networks, to prevent criminal hackers and others from getting them. But Hacking Team’s security was by all accounts abysmal, making it easy for the hacker who breached it to get its exploits. Hacking Team, ironically, published a blog post on Wednesday claiming that the hacker had put everyone at risk by leaking the company’s exploits and the source code for its surveillance tools. “It is now apparent that a major threat exists because of the posting by cyber criminals of HackingTeam proprietary software on the Internet the night of July 6,” the company wrote in the post. “HackingTeam’s investigation has determined that sufficient code was released to permit anyone to deploy the software against any target of their choice.... Terrorists, extortionists and others can deploy this technology at will if they have the technical ability to do so. We believe this is an extremely dangerous situation.” The company also said that “[b]efore the attack, HackingTeam could control who had access to the technology which was sold exclusively to governments and government agencies.” The claim, however, is undermined by the poor security the company maintained over its network, software and exploits. If the hackers put everyone at risk, they were only able to do so because Hacking Team did so first. There have been three exploits discovered so far by researchers among the cache of Hacking Team documents leaked by the hacker on Sunday. Two of them were zero-days. One of them targets a security hole in Adobe’s Flash Player program, the other targets a kernel vulnerability in the

Windows operating system. In an internal document, Hacking Team described one of the security holes as “the most beautiful Flash bug for the last four years.” The vulnerability affects all versions of the Flash Player since version 9, including the latest version 18. Adobe has since released a patch for its zero-day hole, but Microsoft is still working on a patch for the Windows kernel vulnerability. In the meantime, the exploits have already been added to at least three exploit kits being sold to hackers in the underground—Angler EK, Neutrino, and Nuclear Pack. Exploits kits are packages that help automate hacking for attackers. The hacker who breached Hacking Team and dumped its data online appears to have been motivated by a sense of justice—to expose the company’s hypocritical sales to repressive regimes—and probably didn’t have an interest in using the exploits to attack other targets. But if one hacker could breach Hacking Team’s network and get its exploits, others could have, too.

FBI and DEA spy tech supplier was hacked – major threat to privacy info

Bertrand 7/11 (Natasha Bertrand, Before joining Business Insider, worked at a political think tank in Madrid, Spain, researching E.U. relations with the Middle East and North Africa, 7/11/15, “A big leak of hacking tools is 'causing a bit of mayhem right now”, Business Insider, <http://www.businessinsider.com/we-all-got-more-susceptible-to-hackers-this-week-2015-7>, 7/13/15, ACC)

A hefty cache of hacking tools were leaked to the masses this week when the controversial surveillance company Hacking Team was breached and 500 GB of its files were released for download on Twitter. “The hacking team tools are of a much higher quality and are much more effective than anything hackers have had access to,” Lior Div, CEO of Israeli cybersecurity firm Cybereason, told the Times of Israel on Thursday. “Now that anybody can download them and use them in cyberattacks, don’t be surprised to see many more well-protected sites and servers being compromised,” he added. The hackers who infiltrated the company, which sells surveillance technology such as spyware to governments around the world, reportedly “got everything,” according to Vice — including the tools Hacking Team developed to monitor cell phones, laptops, and any other device with network connectivity. “Hacking Team’s investigation has determined that sufficient code was released to permit anyone to deploy the software against any target of their choice,” the company’s spokesperson Eric Rabe said in a statement on Wednesday. “Terrorists, extortionists and others can deploy this technology at will if they have the technical ability.” Experts largely agree that both Div’s and Rabe’s statements are exaggerated — the tools Hacking Team sold to its clients were not very sophisticated, and most of them were already widely available to hackers. Still, “even if the hackers had little use for the tools that were leaked, they could always re-engineer them to serve their own purposes,” Joe Loomis, founder and CEO of Cybersponse security, told Business Insider. “The leak will probably have a bigger impact on personal privacy than anything else since this software is used primarily to monitor individuals and what they’re doing.” The hack also exposed the questionable clients Hacking Team told surveillance tools to, including a number of repressive, US-blacklisted regimes such as the Syrian and Sudanese governments. The US Drug Enforcement Agency was also listed as a client. While they can be used to “snoop and sniff,” the tools are not particularly sophisticated, Dave Aitel, CEO of Immunity, Inc., noted to Business Insider. “The exploits

wouldn't affect systems running basic security mechanisms." But they don't necessarily have to be sophisticated to be effective, Dave Chronister, founder of Parameter Security, countered. "It's causing a bit of mayhem right now," Chronister said. "A lot of the leaked tools were already out there, but there are a few new ones that will definitely add to hackers' arsenals." One of these tools — an Adobe Flash 0day allowing hackers to penetrate Adobe's media player — was exploited by hackers almost immediately after it was leaked. "The only silver lining is that cybersecurity experts know what to watch for because they know which tools were leaked," Chronister added.

FBI and DEA implement same secret hacking tech - court orders aren't specific to hacking tech

Cox 7/6 (Joseph Cox, journalist covering the intersection of technology, crime and politics for Motherboard, the Daily Dot and WIRED, and works on documentaries for VICE. He trains journalists and media organisations to keep their communications secure in an age of mass government surveillance. 7/6/15, "The FBI Spent \$775K on Hacking Team's Spy Tools Since 2011", Wired.com, <http://www.wired.com/2015/07/fbi-spent-775k-hacking-teams-spy-tools-since-2011/>, 7/13/15, ACC)

The FBI did not immediately respond to multiple requests for comment. One interesting tidbit from the spreadsheet is that it appears that Hacking Team has not been selling these products directly to the FBI. Though the FBI is listed as the client, its "Partner/Fulfillment Vehicle" is listed as "CICOM USA." That name is familiar. Earlier this year, an investigation from Motherboard revealed that the Drug Enforcement Administration had been secretly purchasing surveillance technology from Hacking Team. Within that contract, \$2.4 million was sent "between the DEA's Office of Investigative Technology and a government contractor named Cicom USA," according to Motherboard. An invoice with the file name "Commessa019.2014. CICOM USA x FBI.xls," also included in the Hacking Team archive, lists a "One year renewal for Remote Control System," charged to Cicom USA. The invoice says that the product lasts from July 1, 2014 to the June 30, 2015. The file name for the invoice explicitly includes the FBI, and not the DEA. However, the spreadsheet with the client list shows that the FBI is, in fact, joined by the DEA and the DOD in buying products from Hacking Team, which both also use Cicom USA as their "fulfillment vehicles." Cicom USA is little more than a shell company for Hacking Team. "They have the same address, they have the same telephone number," as Hacking Team's US office, Edin Omanovic, a technologist at Privacy International, told WIRED in a phone interview. As for what protections might be in place to make sure that the FBI (or any US government agency) is using this technology responsibly, it's all a bit hazy. "We think they get court orders, and we have even seen a few, but the applications don't really describe how the software works, or how they will get it onto the target's device," Christopher Soghoian, Principal Technologist at the American Civil Liberties Union, told WIRED in an encrypted chat. The problem is that the discussion around law enforcement using hacking as a means of information gathering has never been carried out in public. "Congress has never explicitly granted law enforcement agencies the power to hack. And there have never been any congressional hearings on the topic," Soghoian continued. "We need to have a national debate about whether we want law enforcement agencies to be able to hack into the computers of targets. This is too dangerous a tool for them to start using by themselves."

Gov supported hacking company breaking down encryption – FBI and US Army known investors

Brewster 7/6 (Thomas Fox-Brewster, covers digital crime, privacy and hacker culture for Forbes. 7/6/15, "Leaked Emails: How Hacking Team And US Government Want To Break Web Encryption Together", Forbes.com, <http://www.forbes.com/sites/thomasbrewster/2015/07/06/us-gov-likes-hacking-team/>, 7/13/15, ACC)

Milan said the FBI was still keen on new features in future Hacking Team products, in particular those that target Tor, which has been used to host criminal activity, but is also widely used by activists to keep identities safe. "They [the FBI] continue to be interested in new features all the more related to TOR, VPN [virtual private networks] and less-click infections. In the past their targets were 20 per cent on TOR, now they are 60 per cent on TOR. They want to be able to catch the IP of their targets using TOR," Milan added. She expressed dissatisfaction at missing out on a slice of \$600,000+ of the FBI's budget for "legal interception" technologies. Work with the US Army was also troubled. According to an email found by ACLU principal technologist Christopher Soghoian, the government body signed a deal in 2011 to use Hacking Team but its budget was cut and it hadn't been able to get the system working as it hadn't been given permission to connect the Hacking Team server to the internet. Another Milan mail from 21 May discusses a meeting with the Metropolitan Bureau of Investigation of Orlando, FL. It appears more business with the US government is on the way. "We briefly met the Director of the MBI, who acknowledged [sic] the need for a solution like ours. [NAME REDACTED] agreed and was positive in finding budget, along the lines of the new price list. They are interested in 10 conc. targets to being with, while infection vectors are still to be evaluated." Targeting Apple and Google phones Hacking Team is planning on impressing with more offensive technologies as it builds its business in America. One email dated 30 January, from Milan, outlined a roadmap to be sent to customers. It reads: "It goes without saying that **we are continuously looking for solutions to attack unjailbroken iPhones and install our agents on Android easier than it is possible today.** We are confident we will have good news on that soon." Other files released by the unknown hacker crew on Sunday indicated various efforts to crack iPhones, including attempts to exploit the Newsstand app and use of publicly released jailbreak code, which releases iDevices from Apple control with offensive security techniques. Hacking Team also appeared to have its hands on an official Apple developer certificate, possibly to install its malware, known as Galileo or Remote Control System (RCS). Some in-depth notes on the level of exploitation across a number of Android devices, from the likes of Samsung, HTC and Huawei, were also included in the epic 415GB dump. It appears the exploits weren't always successful in accessing voice or texts on phones. That same Milan email from January indicated some imminent features in Hacking Team's tools included "physical infection of BitLocker protected disks", thereby bypassing the much-used Microsoft disk encryption technology, as well as "extraction of information from pictures posted on Facebook and Twitter". It will also soon be able to "capture of documents edited using Google Docs or Office 365", the roadmap suggested. Another email from Milan, dated 15 May, indicated the security-focused messaging application Wickr was on the target list too, thanks to a request from the US government. "I had a call this morning with an agent from Homeland Security Investigations [a body within the Department of Homeland Security], and he told me he got some requests to intercept suspects using this application, Wickr... we may want to keep an eye on it and eventually evaluate to add support."

FBI and law enforcement able to use hacking systems - court cases aren't specific enough to effectively restrain

Franceschi-Bicchierai 4/15 (Lorenzo Franceschi-Bicchierai, staff writer at VICE Motherboard in Brooklyn, New York, where he covers hacking, information security, and digital rights. Prior to working at Motherboard, Lorenzo worked at Mashable and at Wired's Danger Room 4/15/15, Motherboard.com, "The DEA Has Been Secretly Buying Hacking Tools From an Italian Company", <http://motherboard.vice.com/read/the-dea-has-been-secretly-buying-hacking-tools-from-an-italian-company>, 7/13/15, ACC)

For surveillance experts, the big question is whether the DEA actually has legal authority to use spyware such as Hacking Team's—and how, exactly, it is used. A DEA spokesperson said that the agency "always abides by the laws of the jurisdictions within which it operates." And added that "however, in this case, this is off-the-shelf technology, legally available for purchase by all and used throughout the world by many organizations." But experts are not convinced. "The legal framework governing the use of such tools in the US is extremely unclear, meaning that the use of Hacking Team's spyware is potentially unlawful," Edin Omanovic, a researcher at Privacy International, told Motherboard. The FBI is the only other US law enforcement agency that has been reported to use malware. The bureau has been using it since at least 2001 when FBI's spyware Magic Lantern was revealed. But **the precise legal authority, as well as the process that FBI agents use to get authorization, is still unclear, and very few cases where the bureau used malware have actually come to light.** In 2011, internal emails obtained by the Electronic Frontier Foundation revealed that in some past instances, FBI agents considered using malware known as "Computer and Internet Protocol Address Verifier" (CIPAV) without getting a warrant, or in other cases, hid key details on what the technology actually entailed in order to increase the chances the judge would approve it. In any case, the bureau, after consulting with the Office of General Counsel and the National Security Law Branch finally appeared to settle on a "two-step request" legal process: get a search warrant to authorize the deployment of the software on a target's computer, and then a subsequent order (known as pen register or trap and trace) to authorize the actual surveillance. In 2013, a Texas judge stopped the FBI from using malware, rejecting the bureau's warrant application because it was too vague and didn't specify how the agents would actually install the software. Soghoian, the ACLU surveillance tech expert, said that given the nature of this technology, and the fact that "Congress and the courts have been kept in the dark" about it, Americans should have more information on when and how the feds are using spyware. "Courts are not being told how agencies will get malware onto the computers of targets," Soghoian said. "Similarly, law enforcement agencies have not discussed the use of this technique in any public Congressional hearings." "The American people deserve some answers and I think Congress needs to investigate this," Soghoian told Motherboard. Omanovic, from Privacy International, added that the US needs update the legal framework regarding hacking and the use of spyware by law enforcement agencies and establish "effective oversight mechanisms." Privacy International also released a dossier on Hacking Team on Wednesday, asking Italian authorities to look into the company and its practices in light of European export controls of surveillance technology. (Rabe said that the company "is in compliance with all export laws.") Some legal experts, however, argue that there's nothing illegal about the use of spyware. Although there is no specific law that specifically covers hacking, Jonathan Mayer, a

computer scientist and lawyer at Stanford University, said that **law enforcement agencies are “broadly authorized” to conduct searches in the US, including** using **hacking** techniques. “They don't need some special legislative grant of extra authority before they can hack,” Mayer told Motherboard, adding that a search warrant supported by probable cause and particularly describing what the agents seek is all they need. But for critics, such as Soghoian or Privacy International, there still should be more transparency and a public debate. “If law enforcement agencies can hack into your computer, turn on your webcam, turn on your microphone and steal documents from your computer,” Soghoian said, “that’s the kind of thing that should get the attention of Congress, particularly before this trickles down to local law enforcement agencies.”

Interagency Impact—Terrorism

Independent of circumvention, sudden curtailment creates intelligence gaps, stovepiping – makes strategic intelligence impossible

Stewart 13 (Jeff, Lieutenant Colonel in the United States Army. “Improving the National Strategy Process” (March 2013), U.S. Army War College, Department of National Security and Strategy)

Another issue with the current system is the lack of intelligence gathering and analysis at the strategic level. No nation can develop a strategy to pursue its national interests without accurate intelligence to inform decision makers on what the threats or obstacles to those interests may be. Our current intelligence community consists of 16 different agencies designed to provide integrated intelligence capabilities. ²⁰ These agencies are tasked to provide the government with accurate analysis in a timely manner, but there continue to be problems with the implementation of that goal. The Congressional Research Service identified that, “Congressional intelligence committees have for some time noted weakness in analysis, a lack of language skills, and a predominant focus on current intelligence at the expense of strategic analysis.”²¹ This results in strategy that is frequently developed from estimates based upon very little information.²² The intelligence community must provide strategic intelligence: long range forecasts based upon rigorous analysis and incorporating diverse elements such as the global environment and the predicted actions of other actors. Richard Immerman recommends that in contrast to current intelligence, this strategic intelligence would be “. . . That composite intelligence, interdepartmental in character, which is required . . . in determining policies with respect to national planning and security in peace and war and for the advancement of broad national policy.”²³ Such a shift is required to advance intelligence production beyond the tactical and operational levels into the strategic realm where it will provide meaningful input to the interagency and strategy development processes. This input would be instrumental for the president and the NSC in the production of a grand national strategy and detailed planning guidance, as well as to the various departments as they develop their nested supporting strategies. Once the strategy has been crafted, the focus for the intelligence community then shifts to collection on those identified national interests and the effectiveness of our implemented strategy. The conditions for this shift were created by the Intelligence Reform and Terrorism Prevention Act of 2004. The act established the Director of National Intelligence, a position which would facilitate strategic intelligence gathering in its capacity as the principal intelligence advisor to the president. Rather than seeking solely to provide intelligence on imminent threats and the current global situation, the Director is capable of overseeing the collection and interdepartmental dissemination of intelligence which would support strategists and policy makers in the development and assessment of strategy. As noted by Flournoy and Brimley, “While the Intelligence Community provides valuable products to policymakers on a regular basis, it has not been tasked to support a more interactive process in which future trends, possible developments, and wild cards can be discussed and debated to inform national security issues.”²⁴ Attempting to develop and assess strategy without the appropriate intelligence is haphazard at best and disastrous at worst. In the absence of dedicated support by the intelligence community, strategists will rely on in-house assessments or think tank products, further stovepiping and confusing the interagency process, making coordinated effort all but impossible. Kathleen Hicks recognized this when she wrote that, “The next QDR should also be prefaced by a set of competitive, independent analyses of the strategic environment and its implications for the U.S defense policy.”²⁵ Occasional steps have been made in this direction, such as the National Intelligence Council’s Global Trends 2025 report, but such products are intermittent and not fully integrated into the strategy development and interagency process.²⁶ Show Me the Money Our current system faces significant challenges in resourcing our national strategy. The president, the NSC, and the governmental departments can draft creative and detailed strategies to meet national objectives, but without congressional approval of the required resources those strategies are doomed to failure. Strategies without resources are simply plans. As Eliot Cohen stated, “Strategy is the art of choice that binds means with objectives.”²⁷ The current process is deliberately inefficient, the result of the crafted separation of powers between the executive and legislative branches of government. The executive branch identifies

national interests, devises strategy, and even assigns responsibilities for the ways in which to achieve those objectives. Yet the resources, the means which enable those ways, are controlled by Congress through the budgeting process. Donald Snow and Eugene Brown noted that following World War II, "Foreign and defense policy and its implementation became an increasing part of the competition for scarce government resources."²⁸ This competition can have an adverse affect on strategy implementation. Paul Miller wrote, "Effective policy implementation depends on encouraging teamwork over turf wars."²⁹ Under the current system, the determination of whether a strategy will succeed or fail is firstly determined by the resources allocated to its execution. Consequently, resourcing is the most important execution indicator. A whole of government approach to strategy requires a whole of government approach to budgeting. Janine Davidson states, "Currently the stovepiped committee system in Congress reinforces the agency-centric approach to budgeting and therefore operations."³⁰

Strategic intelligence is key to counterterrorism – strategic foresight requires a whole-of-government approach

Shehadey 14 (Brett Daniel, M.A. in Strategic Intelligence from American Military University. "Strategic Blowback in the Global War on Terror" (1/11/14), In Homeland Security, <http://inhomelandsecurity.com/strategic-blowback-in-the-global-war-on-terror>)

Terrorism is on the rise, not the decline. U.S. strategy of decapitating the leadership has predictably been near futile. While operationally and regionally, there is some progress, much of these are merely isolated short-term gains that do little with the safety of the American people or any actual progress in defeating the evolving international jihadist terrorism. A new approach is greatly needed, fast. While some may go to the extreme to not only condemn these methods entirely, but to cite them as the key fault factor in international counterterrorism set-backs, the reality is more complicated. The US neglect for strategic resolve and their imprudent reliance on operations, regional obsession and over-reliance on tactical execution is a missed opportunity more than a cause in rising terror. A lack of right strategic action is the real policy problem and a narrow theater-by-theater military approach is the obstacle. The major failures in the War on Terror are also frequently and falsely blamed on regional events more than the lack of effective actions and operations of the US government and its international allies. An events-focused analysis will highlight problems such as the Syrian Civil War or the US withdrawal from Afghanistan. Yet these centers of jihad creation happen independent of US action. First, one must perceive international jihad as currently independent, or at least semi-independent, from American operations. Whereas in the past, al Qaeda led a revolutionary Islamic extremist movement against the USA and incited a world of terrorism directed at the USA, this is no longer the case. The US is no longer the number one enemy, there are more pressing matters. In fact, by making the US enemy number two a self-sustaining terrorist movement finds itself a growing political contender for the entire Middle East, Central Asia and parts of Africa. Thus, terrorism is not dependent on the US or its actions; it has its own amorphous and adaptive sustenance. The new theme is not retaliation against a "Satanic America" or Israel but a call to arms and the struggle for local and regional resurgence and political control through the insidious incitement of sectarian conflict and other manipulative measures. International jihadist are incorporating operations to influence or direct Sunni Islamist insurgencies, sympathy, propoganda and recruitment in or destined to key regional conflict areas. Tactics include: assassination, terror, suicide and targeted bombings, raids, sympathy, intimidation by torture, beheadings, kidnappings, etc. Second, US counterterrorism policy has made it easier in some instances only by derailing an American strategic focus into a concentrated projection in limited arenas. Importantly, America has lost the power or the momentum to substantially dictate the terms regarding the War on Terrorism. It is no longer Washington that defines or limits the movements of the international jihadists. Previously they were on the defensive running and hiding. Now there is a resurgence, regrowth and redefining new operations and missions. Syria, however, cannot be balm on the US- it is an internal civil war. Iraqi and Afghani instability on the other hand, and Pakistani in part, can be blamed on US military and political actions. The US and allies are now forced into a position of trying to hold back a growing resurgence of terrorism with little success. New methods are insufficient, such as the diplomatic attempts at truce with the Afghani Taliban will not likely

prevail in any lasting peace. This does not mean that diplomacy is ineffective, but whether the American people choose to exit a war with the enemy there, the Taliban will be at war with them. If you cannot neutralize them all with direct attacks, the next best thing is finding new methods not presently against an enemy that is set to attack the homeland so much as one that is taking advantage of all near-by political opportunities. The major problem is one of local and regional political instability- which is a patented American diplomatic failure, more so than a military failure. The attempt to turn back time and retroactively put in use a larger “whole-of-government” approach has still not achieved a substantial maturity in critical areas. The American devotion to military and security resources and the operational “treatments” rather than the diplomatic, informational and intelligence strategic focus left many vulnerable states prey to such international jihadist influence. As with geopolitical rivalry, international Sunni jihadism seeks to establish itself as a leading political contender in the new Central Asia and Africa. New terrorist safe havens or jihadists camps have sprung up in more and more places. Washington continues to favor US special operations and intelligence special activities as a cure-all for complex and growingly diverse enemy operations and strategic intent. If America and partners show a willingness to substitute the strategic diplomatic, intelligence and informational national functions for military and intelligence operational methods, they will continue to see massive blowback. Military and intelligence operations are needed, but they are the first a result of the failure to implement the appropriate resources of other levels which precede them. By the time they are deployed, US political and information objectives have stalled or been defeated. Eventually, the US will not be able to put out all the fires on the prairie fields of Africa and Central Asia. Firstly, all tactical strikes drone targeted killings and tactical raids should be limited to imminent national threats and friendly state support missions. If they are used at all, they must follow diplomacy, intelligence and informational strategic resources. Yet such cannot continue at the levels they were and be efficient or cost effective within the new strategic dynamic. **Diplomacy, intelligence and information must become the dominant players, using the military and the latter special missions as support roles.** This does not mean that the US is prepared for such a transition. It is not. America’s informational, diplomacy and intelligence must be re-engineered to combat an adaptive pervasive ideological enemy and defeat them globally on a perceptual level. America is nowhere near this capacity. It does not need to spend much money to do so, but **there must be a whole-of-government approach that shares a civil foreign relations end-state or strives for such goal.** Discard the antiquated “us versus them” mentality of warfare and engage them in a more intelligence and informational based approach of infiltration, manipulation and influence; among others. Third, leaving US national security or the War on Terrorism to foreign alliances, coalition partners or multinational operators is not good enough for the safety of the American people or the political well-being of the Afro-Asian regions. The ‘leading from behind’ foreign policy can be a powerful operational initiative to lower the US visibility but it falls short of any essential and needed grand strategy. America must also remain active abroad but not seen in its operational undertakings. On the surface, it must be as innocent as a lamb and as keen as a wolf. Hypocrisy cannot be allowed to continue out in the highly visible wind of large-scale aggressive operations. Anything that the US does at all will be criticized by the enemy- anything except a state’s actions of moral legitimacy or universally accepted sovereign right. On the surface, there must be a new about face of total innocence; economic and innovative military power and strategic prudence. A shifting of alliance to realign the national interest and values should be applicable; particularly at the diplomatic and surface overt levels. The US should act as the wisest and most capable leader in diplomatic affairs; and with strategic intelligence and global information programs should lead political operations in non-lethal and indirect ways, where applicable. Perception is central to a benign grand foreign affairs strategy- which must be created and is at present non-existent. The US must engage the world and the enemy with the power of words and words of power. It must be honest on the surface, principled, honorable, just, fair and benign in relations and actions. As of now, the America appears weakened and two-faced at a time when the Islamic terrorists and militancy movement appear stronger and single-minded. Perception is not truth, but can mean victory or defeat; high or low morale for armed forces and security personnel; partner and potential partners. Moving foreign publics against the enemy must be an objective with and a purpose. Washington must find ways in making the enemy appear far weaker and the US far more capable. Deeds of the enemy must be brought to light with truth campaigns and not ignored or sprinkled by a few words in an unbiased and ironically biased media environment that effectively

objectifies terrorism. A demonstration of power might be needed here and there but it all comes down to destroying the enemy's credibility and incapacitating their ability to approach an audience with any confidence. It becomes increasingly difficult to carry out without political embarrassments like Iraq, Afghanistan, Syria or Pakistan. Such military vacuum states listed above have not been replaced with diplomacy, intelligence or information functions of national power. The US was a large balancer of military state power and such military state power was shipped back home or off to the Asia Pacific. There should have been a proportional transfer of national power, but there was not. It was not a simple pull-out that failed but an over-reliance on military national power and failure to substantially transition to critical national resources of state power. The truth is that America did not and still does not have the appropriate measure of non-military state resources to follow any desired non-aggressive and indirect operations, or to follow the above prescription. Any hard fought stability in previous wars must be immediately followed by a total commitment full-force diplomatic, intelligence and information peace and economic programs.

Personnel Impact—Minority Targetting

Local police forces use spy software to target minorities – warrantless collection of data and monitoring of social spaces

Levinson-Waldman 5/12 (Rachel Levinson-Waldman, counsel in the Liberty and National Security Program at the Brennan Center for Justice at NYU School of Law, 5/12/15, “How the NYPD became George Orwell’s worst nightmare”, Salon.com,

http://www.salon.com/2015/05/12/how_the_nypd_became_george_orwells_worst_nightmare/, 7/13/15, ACC)

There’s been much controversy around the New York City Police Department’s stop and frisk program, which unfairly ensnared tens of thousands of young minority men. But new reports show the NYPD’s tactics are evolving. Now, the Department is monitoring Facebook, Twitter, Instagram, and YouTube accounts — particularly those of young African-American men— and residents have pointed to surveillance cameras liberally sprinkled throughout African-American neighborhoods. The NYPD’s deployment of technology to watch communities of color is only the latest chapter in a much longer story of government surveillance often disproportionately focused on marginalized groups, and now affecting nearly every American in one way or another. We ignore this history at our peril; if we fail to act when one group finds itself targeted by the government, we will soon find we are all under the microscope. The developing welfare state provided the first opportunity to keep tabs on a disfavored community: the poor. Some states require drug tests for aid recipients. Others strictly limit the items that can be purchased with aid dollars. Most recently, Kansas banned welfare recipients from spending aid money at swimming pools, and if the Missouri legislature has its way, those on food stamps will no longer be able to buy canned tuna. Such restrictions are likely to be accompanied by bureaucratic tracking mechanisms as well as limits on using cash to facilitate monitoring of recipients’ spending. The information in some welfare databases is shared extensively within the government, and recipients report that caseworkers are using their electronic welfare benefit cards to monitor their activities. These accumulations of data are also inevitably vulnerable to misuse. Cutting-edge technologies are prone to be targeted at communities of color as well. An advocacy group’s deep dive into license plate records from Oakland, Calif., revealed that lower-income minority neighborhoods – regardless of their crime rates – were lined with the devices, while white wealthier neighborhoods could count on having their cars snapped with far less frequency. Another study conducted after a Michigan city installed surveillance cameras in residential neighborhoods found that African-American residents were twice as likely to be surveilled as their white neighbors. In the counterterrorism context, too, law enforcement and intelligence agencies have frequently, and erroneously, focused on minority populations. The NYPD, for instance, often in close collaboration with the CIA, surveilled and documented barbershops, restaurants, travel agencies, and more, solely because their owners hailed from the Middle East. The FBI spied on Muslims under cover of a community outreach program. The NSA allegedly monitored Muslim activists and scholars. And TSA employees at a major American airport accused their colleagues of pulling aside Middle Easterners, Hispanics, blacks, and other

minorities instead of focusing on real threats. These surveillance efforts often focus on illusory risks, diverting policing, enforcement, and intelligence resources from the real threats. Welfare recipients, for instance, are generally less likely than the overall population to use drugs, and the actual incidence of fraud by beneficiaries of aid is relatively low. Muslims, an enduring target of counterterrorism efforts, are responsible for just a small fraction of all terrorist attacks in the West. Indeed, the NYPD was forced to acknowledge that its spying program origin produced no leads. And the TSA's behavior detection program, which led to its agents' racial and religious profiling, was discredited by the government's own accountability watchdog. Further, using the government's power to widely surveil its own citizens may fundamentally alter the balance of a democratic society. People under surveillance may limit their exercise of First Amendment rights, including choosing whom they associate with and engaging in lawful protest and dissent. When the groups being surveilled have also historically been the disproportionate subjects of law enforcement and intelligence interest, that chilling effect is likely to be magnified.

Director of FBI admits security service personnel react with bias – surveillance technologies solve and debate about alternatives key

Reilly 2/12 — Reporter on Justice Department and the Supreme Court (Ryan J. Reilly, February 12, 2015, "FBI Director: 'Lazy' Racial Biases May Affect Law Enforcement," http://www.huffingtonpost.com/2015/02/12/james-comey-fbi-race-law-enforcement_n_6671030.html), acui

WASHINGTON -- The director of the FBI said on Thursday that law enforcement officers may develop a cynicism that can lead them to treat minorities unfairly, and acknowledged the need for a debate about race and policing. ¶ FBI Director James Comey, in a speech on race and law enforcement delivered at Georgetown University, said that throughout American history, law enforcement has often enforced "a status quo that was often brutally unfair to disfavored groups." Citing the song "Everyone's A Little Bit Racist" from the Broadway musical "Avenue Q," he said that many in America's "white-majority culture have unconscious racial biases and react differently to a white face than a black face." ¶ The speech appears to be the first time that a director of the FBI has so directly addressed the way that race influences law enforcement. Comey said that decades ago, his Irish ancestors likely faced their own problems with discrimination, but said that "little compares to the experience on our soil of black Americans." ¶ While Comey heaped praise upon the nation's law enforcement officers, he also said he was "not looking to let law enforcement off the hook" as he called for an "open and honest discussion" about the role that race can play in the justice system. ¶ "We must better understand the people we serve and protect -- by trying to know, deep in our gut, what it feels like to be a law-abiding young black man walking on the street and encountering law enforcement," Comey said. "We must understand how that young man may see us. We must resist the lazy shortcuts of cynicism and approach him with respect and decency."

Alternatives to personnel allow for more peaceful resolutions

Freskos 11 — news reporter, University of North Carolina (Brian Freskos, October 18, 2011, "NC police dept sees benefits of robotics," <http://www.policeone.com/police-products/police-technology/robots/articles/4508511-NC-police-dept-sees-benefits-of-robotics/>), acui

WILMINGTON, N.C. — Around 1 a.m., after about five hours of tense strategizing and what-if questions, the police dispatched "Sheila," a blue robot that rides on wheels and tracks and used her to make contact with Clay McArthur, a 38-year-old wanted on suspicion of robbing a Wilmington-area bank with a rifle earlier that same day in late September. ¶ The \$187,000 piece of machinery, purchased through federal grant monies, is equipped with four cameras that can tilt, pan and zoom. Her single long arm and claw are so nimble that the robot can open cupboards, pick up suitcases and, if the occasion calls for it, drag a wounded police officer out of harm's way. ¶ And officials

later **credited Sheila with helping bring the McArthur situation to a peaceful conclusion**, an end that came without police breaking down the door. After the window crashed, McArthur came outside and was taken into custody.

Personnel put judgment before the crime – metadata puts the crime first

Alexander 10 -- associate professor of law at Ohio State University, civil rights advocate and writer (Michelle Alexander, 2010, "The New Jim Crow," p. 8), acui

By the time I left the ACLU, I had come to suspect that I was wrong about the **criminal justice system**. It was not just another institution infected with racial bias, but rather a different beast entirely. The activists who posted the sign on the telephone were not crazy; nor were the smattering of lawyers and advocates around the country who were beginning to connect the dots between our current system of mass incarceration and earlier forms of social control. Quite belatedly, **I came to see that mass incarceration in the United States had, in fact, emerged as a stunningly comprehensive and well-disguised system of racialized social control that functions in a manner strikingly similar to Jim Crow.** I state my basic thesis in the introduction to my book, *The New Jim Crow*.[¶] What has changed since the collapse of Jim Crow has less to do with the basic structure of our society than the language we use to justify it. In the era of colorblindness, it is no longer socially permissible to use race, explicitly, as a justification for discrimination, exclusion, and social contempt. So we don't. **Rather than rely on race, we use our criminal justice system to label people of color "criminals" and then engage in all the practices we supposedly left behind.** Today it is perfectly legal to discriminate against criminals in nearly all the ways it was once legal to discriminate against African Americans. Once you're labeled a felon, the old forms of discrimination—employment discrimination, housing discrimination, denial of the right to vote, and exclusion from jury service—are suddenly legal. **As a criminal, you have scarcely more rights, and arguably less respect, than a black man living in Alabama at the height of Jim Crow. We have not ended racial caste in America; we have merely redesigned it.**

Hard statistics prove

Alexander 10 -- associate professor of law at Ohio State University, civil rights advocate and writer (Michelle Alexander, 2010, "The New Jim Crow," p. 9-12), acui

Here are some facts I uncovered in the course of my work and research that you probably have not heard on the evening news:[¶] * **More African American adults are under correctional control today—in prison or jail, on probation or parole—than were enslaved in 1850, a decade before the Civil War began.**[¶] * **In 2007 more black men were disenfranchised than in 1870, the year the Fifteenth Amendment was ratified prohibiting laws that explicitly deny the right to vote on the basis of race.**⁴ During the Jim Crow era, African Americans continued to be denied access to the ballot through poll taxes and literacy tests. Those laws have been struck down, but today felon disenfranchisement laws accomplish what poll taxes and literacy tests ultimately could not.[¶] * **In many large urban areas in the United States, the majority of working-age African American men have criminal records.** In fact, it was reported **in 2002 that, in the Chicago area, if you take into account prisoners, the figure is nearly 80%.** Those bearing criminal records and cycling in and out of our prisons today are part of a growing undercaste—not class, caste—a group of people, defined largely by race, who are relegated to a permanent second-class status by law. **They can be** denied the right to vote, automatically excluded from juries, and **legally discriminated against** in employment, housing, access to education, and public benefits, **much as their grandparents and great-grandparents were during the Jim Crow era.**[¶] I find that when I tell people that mass incarceration amounts to a New Jim Crow, I am frequently met with shocked disbelief. The standard reply is: "How can you say that a racial caste system exists? Just look at Barack Obama! Just look at Oprah Winfrey! Just look at the black middle class!"[¶] The reaction is understandable. But we ought to question our emotional reflexes. The mere fact that some African Americans have experienced great success in recent years does not mean that something akin to a caste system no longer

exists. No caste system in the United States has ever governed all black people. There have always been "free blacks" and black success stories, even during slavery and Jim Crow. During slavery, there were some black slave owners-not many, but some. And during Jim Crow, there were some black lawyers and doctors-not many, but some. The unprecedented nature of black achievement in formerly white domains today certainly suggests that the old Jim Crow is dead, but it does not necessarily mean the end of racial caste. If history is any guide, it may have simply taken a different form.¶ Any honest observer of American racial history must acknowledge that racism is highly adaptable. The rules and reasons the legal system employs to enforce status relations of any kind evolve and change as they are challenged.⁶ In the first chapter of the book, I describe the cyclical rebirths of racial caste in America. Since our nation's founding, African Americans have been repeatedly controlled through institutions, such as slavery and Jim Crow, which appear to die, but then are reborn in new form-tailored to the needs and constraints of the time.¶ For example, following the collapse of slavery, the system of convict leasing was instituted-a system many historians believe was worse than slavery.⁷ After the Civil War, black men were arrested by the thousands for minor crimes, such as loitering and vagrancy, and sent to prison. They were then leased to plantations. It was our nation's first prison boom. The idea was that prisoners leased to plantations were supposed to earn their freedom. But the catch was they could never earn enough to pay back the plantation owner the cost of their food, clothing and shelter to the owner's satisfaction, and thus they were effectively re-enslaved, sometimes for the rest of their lives. It was a system more brutal in many respects than slavery, because plantation owners had no economic incentive to keep convicts healthy or even alive. They could always get another one.¶ Today, I believe the criminal justice system has been used once again in a manner that effectively re-creates caste in America. Our criminal justice system functions more like a caste system than a system of crime control.¶ For those who find that claim difficult to swallow, consider the facts. Our prison system has quintupled for reasons that have stunningly little to do with crime. In less than 30 years, the U.S. penal population exploded from around 300,000 to more than 2 million.⁹ The United States now has the highest rate of incarceration in the world, dwarfing the rates of nearly every developed country, including highly repressive regimes like China and Iran.¹⁰ In fact, if our nation were to return to the incarceration rates of the 1970s-a time, by the way, when civil rights activists thought that imprisonment rates were egregiously high-we would have to release four out of five people who are in prison today." More than a million people employed by the criminal justice system could lose their jobs.¹² That is how enormous and deeply entrenched the new system has become in a very short period of time.¶ As staggering as those figures are, they actually obscure the severity of the crisis in poor communities of color. Professor Loic Wacquant has argued that the term "mass incarceration" itself is a misnomer, since it implies that nearly everyone has been subject to the new system of control.¹³ But, of course that is not the case. The overwhelming majority of the increase in imprisonment has been poor people of color, with the most astonishing rates of incarceration found among black men. It was estimated several years ago that, in Washington, D.C.-our nation's capital-three out of four young black men (and nearly all those in the poorest neighborhoods) could expect to serve time in prison. ¹⁴ Rates of incarceration nearly as shocking can be found in other communities of color across America.¹⁵

War on drugs proves racial stereotyping

Alexander 10 -- associate professor of law at Ohio State University, civil rights advocate and writer (Michelle Alexander, 2010, "The New Jim Crow," p. 13-15), acui

People of all races use and sell drugs at remarkably similar rates, but the enemy in this war has been racially defined.²¹ The drug war has been waged almost exclusively in poor communities of color, despite the fact that studies consistently indicate that people of all races use and sell drugs at remarkably similar rates.²² This evidence defies our basic stereotype of a drug dealer, as a black kid standing on a street corner, with his pants hanging down. Drug dealing happens in the ghetto, to be sure, but it happens everywhere else in America as well. Illegal drug markets, it turns out-like American society generally-are relatively segregated by race.²⁴ Blacks tend to sell to blacks, whites to whites, Latinos sell to each other. University students sell to each other. People of all races use and sell drugs. A kid in rural Kansas does not drive to the 'hood to get his pot, or meth, or cocaine, he buys it from somebody down the road. In fact, the research suggests that where significant differences by race can be found, white youth are more likely to commit drug crimes than youth of color.²⁵ But that is not what you would guess when entering our nation's prisons and jails, overflowing as they are with black and brown drug offenders. In the United States, those who do time for drug crime are overwhelmingly black and brown.²⁶ In some states, African Americans constitute 80 to 90% of all drug offenders sent, ²⁷ to

prison. I find that many people are willing to concede these racial disparities once they see the data. Even so, they tend to insist that the drug war is motivated by concern over violent crime. They say: just look at our prisons. Nearly half of the people behind bars are violent offenders. Typically this is where the discussion ends. The problem with this abbreviated analysis is that violent crime is not responsible for the prison boom. Violent offenders tend to get longer sentences than nonviolent offenders, which is why they comprise such a large share of the prison population. One study suggests that the entire increase in imprisonment can be explained by sentence length, not increases in crime.²⁸ To get a sense of how large a contribution the drug war has made to mass incarceration, consider this: there are more people in prison today just for drug offenses than were incarcerated in 1980 for all reasons.²⁹ The reality is that the overwhelming majority of people who are swept into this system are non-violent offenders.

The police bring racial biases – faceless metadata solves best

Chaney and Robertson 13

— Associate Professor at LSU and Associate Professor in the Department of Criminal Justice at University of Louisiana Lafayette, respectively (Cassandra Chaney and Ray V. Robertson, January 12, 2013, “Racism and Police Brutality in America,” http://download.springer.com/static/pdf/37/art%253A10.1007%252Fs12111-013-9246-5.pdf?originUrl=http%3A%2F%2Flink.springer.com%2Farticle%2F10.1007%2Fs12111-013-9246-5&token2=exp=1436761338~acl=%2Fstatic%2Fpdf%2F37%2Fart%25253A10.1007%25252Fs12111-013-9246-5.pdf%3ForiginUrl%3Dhttp%253A%252F%252Flink.springer.com%252Farticle%252F10.1007%252Fs12111-013-9246-5*~hmac=944244999f9576f96dd7831550ba8952fd63887bc8d0c62950816a11a3029988), acui

Skolnick and Fyfe (1994) asserted that the police are an extension of White supremacy in the field. Accordingly, it should not come as a surprise that increases in police sensitivity training, higher educational requirements for officer recruits, community policing, and other progressive approaches have not produced a measurable decrease in police brutality against Black males because none of these initiatives specifically address the larger societal issues of police brutality and White supremacy of which police are an extension (Alexander 2010; Feagin 2010).

Paternalism Impact—Gender Violence

The logic of circumvention puts the president in the position of the “masculine protector” – he exerts control over what Congress, the Courts and the people can know

*Bendix and Quirk show paternalism towards Congress

*IC on the record cards show paternalism towards the people – executive branch determines what is released

Crowley 6/17 -- political and foreign affairs analyst (Monica Crowley, June 17, 2015, “How Obama screwed up Hillary’s ‘mommy party’ strategy,” <http://www.washingtontimes.com/news/2015/jun/17/monica-crowley-troubles-for-hillary-clintons-mommy/?page=all>), acui

Every president assumes a somewhat paternalistic role as he leads the nation, even if he comes from the “mommy party.” He’s the guy in charge, shaping the country, leading us in war, making or keeping the peace, herding Congress and presiding over some 300 million citizens who look to him for protection, reassurance and guidance.¶ Mr. Obama, however, has taken the daddy role and supersized it. Let’s face it. Mr. Obama is the worst national daddy ever.¶ In his 2009 inaugural address, he returned to a phrase that he had used before as he admonished us to “put away childish things.” In framing it that way, Mr. Obama subliminally put each American in the position of being a child. And of course, the nanny state he is building makes children out of all of us, as the government — with him sitting at the top — strips away your freedom and makes you a dependent.¶ By virtue of his super-paternalistic role, Mr. Obama elevated himself over Congress as well as the American people. Two days after he was sworn-in as president, Mr. Obama invited top congressional leaders to the White House to discuss plans for economic “stimulus.” When Republican Sen. John Kyl challenged him over the package’s massive spending and tax “cut” to people who did not pay income taxes, Mr. Obama shot back: “I won.”¶ Two months later, the House Democratic Caucus met with Mr. Obama to discuss his budget proposal. When the president spotted Democratic Rep. Peter DeFazio, who had voted against the “stimulus,” Mr. Obama leaned in to him and said, “Don’t think we’re not keeping score, brother.”¶ This was the presidency, done Sopranos-style. But it was also designed to remind Congress of who was boss. Big Daddy was now on the scene, and that co-equal branches of government thing? Forget it. In fact, Mr. Obama took to routinely lecturing Congress about this or that policy, repeatedly summoning congressional leaders to the White House on whims, convening numerous joint sessions to make them show up and applaud his latest radical proposal on health care or solar energy.¶ During the 2011 debt debate, Mr. Obama even instructed members of Congress to “eat their peas” and get a deal in front of him. “Hey you kids! Stop fighting and play nice!” He relished playing Big Daddy as he presided over a rapidly growing welfare state in which all of us are infantilized, and like dutiful children, silenced.

The executive will always circumvent to maintain the surveillance state. The resulting redistribution of powers among the branches reentrenches a new form of hegemonic masculinity and authoritarianism

Cannen 13 -- Bachelor of Arts Communication Social Inquiry/Bachelor of Arts International Studies (First Class Honours) (Emma Cannen, 2013, “US and Venezuelan Presidential Masculinities in the First Decade of the ‘War on Terror’,” p. 184-6, <https://opus.lib.uts.edu.au/research/bitstream/handle/10453/24085/02whole.pdf?sequence=2>), acui

In this section, I argue that Obama’s presidential masculinity does rely on this notion of defensive violence but in contrast to Messerschmidt I demonstrate that despite Obama’s much-flouted credentials as a ‘man of the law’, he practices a very healthy disregard for international law in his

pursuit of the 'WOT'. Obama's escalation of the 'WOT' in Afghanistan and Pakistan, his highly controversial use of drones and implementation of a 'kill not capture' policy, are clear evidence of this. In fact, I argue that **Obama maintains the very same commitment to 'unilateral military force' as the sole policy option for obtaining White House goals' as his predecessors** (Messerschmidt 2010, p. 158). As Landreau (2011) eloquently demonstrates, **Obama's national security rhetoric and policy is oriented by the long held logics of US masculinity and American Exceptionalism** that propel US militarism both domestically and globally. Obama does 'perform a softer, more inclusive presidential masculinity in the area of global politics and terrorism', but fundamentally his foreign policy and presidential masculinity are 'in a line of continuity with Bush' (Landreau 2011, pp. 4 & 2). However, as argued earlier in the thesis, as a black man, Obama does not embody US masculinity in the same way as previous US presidents. Instead he performs a unique presidential masculinity. **Obama constructs and performs a hybrid presidential masculinity that** is contemporary, urbane, demilitarised and characterised by a post-hip-hop ghetto-style cool. This presidential masculinity **has successfully distinguished Obama from Bush** and his accompanying gung-ho militarised masculinity, **convincing many that Obama's policies are also different**. This thesis argues to the contrary. **Obama's presidential masculinity is superficially appealing and globally popular but it cleverly and dangerously camouflages ongoing US militarism**. Obama's **presidential masculinity thus functions as a militarising manoeuvre**. It is complicit in promoting the 'lawyer-in-chief' myth alluded to in the vignette above and thus deserves feminist interrogation. **Obama has largely continued Bush's 'WOT' and further institutionalised the government and military architecture** around it both at home and abroad (De Genova 2010; Jackson 2011; Murray 2011; Parmar 2010, 2011).¹¹ At home, **Obama re-appointed Bush militarists in key positions**, most notably Robert Gates as Secretary of Defence, **and normalised the national-surveillance state** (Jack Balkin as cited in Murray 2011, p. 93). **More broadly, he 'redefined the rule of law and how the three branches of government – executive, legislative and judicial – should function'** (Murray 2011, p. 87). **For example**, in mid-2011, **he reauthorised the unreformed Patriot Act, which as a candidate he had promised to overhaul** because of civil liberty concerns (Murray 2011, pp. 89 & 91). On torture, Obama repeatedly invoked 'state secrets' to avoid releasing information in lawsuits and he blocked the release of memos detailing CIA black sites and interrogation practices (Murray 2011, p. 87). He continued the practice of 'rendition' (kidnapping terrorist suspects) and continues to detain many of them, without charge, in Guantanamo Bay (Parmar 2011). Obama even 'signed executive orders formalising Guantanamo's system of indefinite detention without charges or trial and cranked up military commissions' (Murray 2011, p. 92). **The Obama Administration has also been vindictive in its response to whistleblowers, placing Bradley Manning, an alleged leaker, in solitary confinement, and is pursuing a grand jury trial against Wikileaks founder Julian Assange. Like Bush, Obama is undemocratically claiming 'executive privilege and state secrecy' in defending the crime of an aggressive war'** (Kroes 2012, p. 17)¹² Furthermore, Obama has defied the US constitution and the rights of US citizens themselves in the pursuit of his global 'WOT' (Murray 2011). **Unlike any other president, Obama has endorsed the killing of US citizens outside war zones** (Murray 2011, p. 88); **challenges to his warrantless wiretapping of US citizens have been thrown out of court** (Murray, 2011 p. 89); **and under his administration, it is now legal for police to detain domestic terrorist suspects 'without informing them of their constitutional rights**, including the right to remain silent and to have an attorney present during the interrogation' (Murray 2011, p. 92). Although Obama 'gave us every reason to think that he would...reject the impunity of Bush's imperial presidency', he has perpetuated and even expanded that approach (Murray 2011, pp. 85-6).

Hegemonic masculinity has evolved to a demilitarized "influential manliness" – creates the hierarchies that are used to legitimize patriarchal social relations and global war

Cannen 13 – Bachelor of Arts Communication Social Inquiry/Bachelor of Arts International Studies (First Class Honours) (Emma Cannen, 2013, "US and Venezuelan Presidential Masculinities in the First Decade of the 'War on Terror'," p. 22-23, <https://opus.lib.uts.edu.au/research/bitstream/handle/10453/24085/02whole.pdf?sequence=2>), acui

Messerschmidt's work has implications for my research. In this thesis I conclude that Obama's contemporary, demilitarised and post-hip-hop presidential masculinity potentially engenders new modes of US hegemonic masculinities whereas Messerschmidt might argue that it only represents a new 'dominant' or 'dominating' masculinity. That is, in the post-9/11, post-Bush era demilitarised presidential masculinities are now more powerful and/or celebrated than militarised ones and Obama's global political power and the masculinity associated with it allows him to 'call the shots' and 'run the show'. However, Messerschmidt defines dominant masculinities as those that are the most powerful or widespread but these are two very different things. For example, Obama's demilitarised presidential masculinity is now more powerful and celebrated – an 'influential manliness' (Messerschmidt 2012, pg. 64) – but demilitarised masculinities across the US have not necessarily become more widespread or common. Moreover, it is unclear whether Obama's presidential masculinity would be categorised as a 'dominating' masculinity simply because of his global political power or by virtue of his now more celebrated 'dominant' masculinity. Does power to 'call the shots' logically follow from achieving a more socially celebrated masculinity?¶ Thus, I argue that more detailed theorisation between these two types of masculinities, not just their distinction from hegemonic masculinities, is needed. However, intervening in this 'slippage' debate is not a key concern of this thesis. This research project is firmly situated in the feminist global politics field and is more directly concerned with militarised masculinities and how they relate to hegemonic masculinity. I, along with the feminist scholarship reviewed and quoted throughout the thesis argue that militarised masculinities in their varied forms are often hegemonic because they legitimate unequal gender relations via the subordination of women, femininities and non-militarised masculinities. Put simply, militarism relies heavily on patriarchal social relations, so militarised masculinities are natural contenders for hegemonic masculinities in various localities and regions. In fact, feminists argue that militarised masculinities play a key role in constructing and maintaining more generic hierarchies between masculinities, that in turn not only legitimate patriarchal social relations but war and violence across the globe. The latter is of utmost concern in the field and this thesis. I outline this literature in detail in the next section, illustrating how feminists in the field have adopted and utilised the concept of hegemonic masculinity. My research follows this lead and Messerschmidt's acknowledgement that no scholar has a monopoly on the 'correct' use of any concept (2012, p. 63). Thus, I maintain my argument that Obama's contemporary, demilitarised and post-hip-hop presidential masculinity potentially engenders new modes of US hegemonic masculinities, not just dominant or dominating ones, because it simultaneously camouflages, legitimates and propels US imperial militarism and for feminists this also means the legitimisation of patriarchal social relations.

Current oversight is outdated, update is key

*IC on the record could be an example of gradually implementing transparency – be careful reading this with the tag that says IC is paternalistic

Lewis 14 -- Director and Senior Fellow, Strategic Technologies Program at the Center for Strategic & International Studies (James Andrew Lewis, December 2014, "Underestimating Risk in the Surveillance Debate," p. 17-18, http://csis.org/files/publication/141209_Lewis_UnderestimatingRisk_Web.pdf), acui

The oversight process that has served us since the 1970s must change to reflect the expectations of citizens for greater transparency and greater accountability. Delegating responsibility to representatives is no longer by itself sufficient. The United States can strengthen the case for intelligence activities by providing the American people examples of where and how these programs have prevented harm. People will not take on faith or assurances alone that the benefits of surveillance outweigh the risk to civil liberties, and we harm national security by not discussing what these programs have stopped.¶ Oversight involves more than Congress. The biggest change to intelligence oversight is that it must be expanded to include a greater degree of public oversight.

This should involve annual reporting, more open hearings, and other activities, such as public speaking engagements by leaders of the intelligence community. The usual reason for not increasing public oversight is that intelligence programs are secret and must remain so. There is a degree of truth in this, but it should not be an excuse for avoiding all transparency. Whatever the merits of the argument that the surveillance programs cannot be made public even at some high level of detail as this would damage their effectiveness and warn our opponents that the lack of public knowledge and debate is what drives much of the public concern and misunderstanding. **Democratic governance today requires greater transparency and debate, even for secret activities.** Congress and the executive branch must expand its activities in this important public function. Ex post facto releases on intelligence programs and activities, while useful, do not really provide for accountability, as they are too late to provide guidance.¶ The more important structural change to oversight involves the executive branch. The intelligence agencies are the tool of the president for carrying out American foreign policy and for defense. Congress and the courts have the primary oversight responsibility for ensuring that agencies operate in a legal manner, but the president, while ensuring that espionage is conducted in accordance with the law, has primary responsibility for ensuring that agencies are operating in ways that make political and strategic sense. To do this, he or she must rely on the staff of the National Security Council. Success requires dynamic engagement and leadership among the agencies and a clear sense of U.S. goals. It is the NSC that must weigh, as in the cases of Germany and Brazil, when the political risks of espionage outweigh the benefits. A passive approach will lead either to excess or failure.¶ **The greatest weakness in the oversight structure inherited from the 1970s is its lack of transparency.** Adding a privacy advocate to the FISA Court does not solve the transparency problem. It continues the existing overreliance on representative oversight rather than increasing public knowledge. An overreliance on representation is a key flaw in the current oversight system. A privacy advocate would slow the processes of the court—and one of the criticisms of the FISA process as it existed before 9/11 was that it was cumbersome and this contributed to a situation where “the information flow withered.”²² Adding an advocate to the FISA Court smacks of elitism, and a more democratic approach is preferable in the new political environment created by the Internet, which has changed public expectations about how much access to information they should have and where they should have a voice.

AT: Doesn't Turn Perception Advantages

Leaks about circumvention inevitable—turns perception based advantages-- stats, technology, personnel, etc.

Peterson 13 [Andrea Peterson is the Tech Reporter for ThinkProgress. Andrea has a dual degree with honors in political science and East Asian languages and cultures from the University of Kansas and has previously worked as a Constituent Services Aide to Representative Dennis Moore. JUN 25, 2013 “How Technology Makes More Leaks Inevitable”
<http://thinkprogress.org/justice/2013/06/25/2199391/tech-leaks-inevitable///jweideman>]

This week's massive game of “Where In The World Is Edward Snowden?” may soon be a common occurrence, thanks to new technologies that make more leaks and more leak prosecutions virtually inevitable. Snowden is the eighth person the Obama administration has pursued for leaking information under the Espionage Act of 1917 — more than double the number charged by all previous administrations combined — and it is likely that America is on an unstoppable trajectory towards more and more leak prosecutions in future presidencies. Certainly, the sheer increase in the amount of potentially leakable data is a part of this conversation: According to IBM, the world creates 2.5 quintillion bytes of data everyday and that pace means that ninety percent of the data that has ever existed was created within the last two years. And governments are adapting to this new reality. Thanks to Snowden's leaks, we now know that the National Security Agency (NSA) has been siphoning up call records and sniffing through internet data. And according to one 2007 Department of Defense report, the Pentagon is trying to expand its worldwide communications network to handle yottabytes of data with the Utah NSA data center being key to achieving that goal. A yottabyte is equal to about 500,000,000,000,000,000,000,000 pages of text. Yes, that is the correct number of zeros. As a result of the expansion of the national security apparatus in general and the amount of intelligence that apparatus must sift through, there are now more than 4.9 million people with security clearance. That includes roughly 483,000 contractors with top secret clearance, like Snowden. Indirectly, this means that the expansion of government surveillance operations and the technological innovations driving that expansion have led to more and more people having access to the kind of documents that could result in a major intelligence leak. Similarly, with digital storage it's no longer a matter of sneaking out folders or filing cabinets worth of documents to expose a full extent of a program with national security and civil liberty implications. Now you just need a flash drive — or in the alleged case of Bradley Manning, a disc that appears to be a burnt Lady Gaga CD. And services like Wikileaks, the group allegedly used by Bradley Manning to release a vast treasure trove of sensitive content would not exist or have the same impact without the communications capabilities of the internet. Plus, being able to upload documents to an anonymous tool like the New Yorker's strongbox, while onerous, is certainly different beast than meeting in a dark parking garage.

High level insiders agree

AP 15 [Associated press. 5/15/15, “In speech to NSA employees, former official says leak of domestic collection was inevitable” <http://www.foxnews.com/us/2015/05/15/in-speech-to-nsa-employees-former-official-says-leak-domestic-collection-was315620///jweideman>]

WASHINGTON – The decision to keep secret the National Security Agency's collection of American calling records was a strategic blunder that set the stage for Edward Snowden's unauthorized disclosures and ultimately harmed U.S. national security, the agency's former inspector general told NSA employees in blunt remarks Friday. "You now live in a glass house," Joel Brenner, NSA inspector general from 2002 to 2006, said in a speech marking the 40th anniversary of the congressional hearings into the intelligence scandals of the Watergate era. "How could anyone think the bulk collection program would remain secret?" It's not that there no longer can be national security secrets, said Brenner, a lawyer who retired in 2009 after serving as the top U.S. counterintelligence official. But "the idea that the broad rules governing your activities — not specific operations, but the broad rules can be kept secret is a delusion. And they should not be kept secret." Snowden, a former NSA systems administrator, has said he decided to leak thousands of top secret documents to journalists because of what he viewed as deception by Director of National Intelligence James Clapper, when he denied to Congress in 2013 that the U.S. was collecting records on millions of Americans. But Snowden went on to reveal programs that had nothing to do with domestic surveillance, but rather involved NSA's foreign intelligence gathering operations. Clapper and other officials have said they wished the government had been more transparent about the NSA program that since 2002 has collected and stored records of nearly all American landline phone calls for use in counterterrorism investigations, but none put it as starkly as Brenner did. Congress is now debating whether to end the program before the Patriot Act provisions allowing it expire on June 1.

Gradualism Solves

Gradualism- General Movements

Anti-surveillance movements are on the rise—gradually solves the plan

Kosseff and Harris 2-17-15, Associate at the National Law Review, member of the Communications & Media and Privacy & Data Security practice groups, and Associate

Jeff and Meena, “Top 10 U.S. Privacy Developments of 2014”,
<http://www.natlawreview.com/article/top-10-us-privacy-developments-2014>, EC

Data Breaches, Studies show increase. Amidst a flurry of high-profile breaches during 2014, several studies confirmed that data breaches as a whole have risen significantly over the past few years. The California Attorney General released a study showing a 28% increase in breaches in 2013 as compared to 2012. Another study, which examined the volume of data breaches during the first quarter of 2014, found an increase of 233% compared to the same time period in 2013.¶ State laws. In April, Kentucky became the 47th state to enact a data breach notification law. Florida and Iowa each amended their data breach notification laws in 2014 to, among other changes, enhance regulator notification requirements. California amended its data breach notice law to expand the types of information covered and to require certain companies to provide one year of free credit monitoring to affected individuals (although the statutory language on the latter point is subject to multiple interpretations).¶ Federal legislation. Numerous data breach bills, including the Data Security Breach Notification Act of 2014 and the Personal Data Protection and Breach Accountability Act, were introduced in Congress, although none passed during 2014. The Senate Judiciary Committee, the Senate Commerce Committee, and the House Energy and Commerce Subcommittee on Commerce, Manufacturing, and Trade, among others, held hearings during 2014 to discuss the need to address data breaches and the possibility of enacting federal legislation.¶ Federal enforcement. In the enforcement arena, the Federal Trade Commission (“FTC”), the Department of Health and Human Services (“HHS”), and state attorneys general pursued enforcement action during 2014 against companies that had suffered data breaches. The Securities and Exchange Commission also announced in April that it would conduct over 50 cybersecurity examinations of publicly traded companies. The Federal Communications Commission (“FCC”), for its part, levied a \$10 million fine in October against two telecommunications carriers for exposing customer data, which represented the FCC’s first enforcement action in the wake of a data breach.¶ Continued attention in 2015. Legislative interest in data breach issues has only increased in early 2015. Since President Obama proposed national data breach legislation, additional data breach notification bills have been introduced in the House and Senate. The House Subcommittee on Commerce, Manufacturing, and Trade also held a hearing on crafting a national data breach bill, debating the harm that should trigger notification obligations and the appropriate window for providing notifications.¶ Exploring Big Data, White House report. Starting in March, the White House hosted a series of public workshops across the country to review “the implications of collecting, analyzing, and using” big data. The workshops culminated in the publication of the White House’s Big Data Report, outlining the Administration’s approach to open data and privacy, public- and private-sector management of data, and a proposed policy framework for big data, along with other recommendations concerning privacy values, educational innovation, big-data discrimination, law enforcement, and public-resource data.¶ FTC workshop. Building on these efforts to

understand big data, last September the FTC hosted a public workshop on the topic. Specifically, the workshop explored big data's impact on low-income and underserved consumers and the extent to which practices and outcomes facilitated by big-data analytics could have discriminatory effects on protected communities.¶ Mobile App Enforcement¶ Device tracking. Starting in February, the FTC held a series of workshops focused on mobile-device tracking, which has gained attention as brick-and-mortar retailers have begun tracking signals emitted from customer devices in order to better understand shopping habits. On the state side, the California Attorney General released guidelines to help websites comply with a state law requiring websites to explain whether and how they respond to Do Not Track requests.¶ Consumer consent. Throughout 2014, the FTC brought complaints against several tech giants — including Apple, Amazon, and Google — alleging that the companies billed parents and other account holders for children's in-app activities without obtaining proper consent.¶ App security and disclosures. The FTC also obtained settlements with mobile-app providers Credit Karma, Fandango, and Snapchat, for allegedly failing to provide reasonable security for personal information or adequate disclosures regarding security and data-collection practices. In August, the FTC issued a report examining the consumer-protection implications of popular shopping apps, finding that these types of mobile apps frequently failed to provide sufficient pre-download disclosures to consumers. ¶ Increasing Scrutiny of Data Brokers¶ Federal legislation. In early 2014, Senators John D. Rockefeller IV (D-WV) and Ed Markey (D-MA) introduced the Data Broker Accountability and Transparency Act, which would require greater transparency from data brokers about consumer information they collect and sell. Following a majority staff report's finding that some data brokers sell sensitive information, such as data about financial vulnerability, without any mechanism for consumers to control or correct their information, the Act was drafted with an express concern that data brokers operate "behind a veil of secrecy" and with "very little scrutiny and oversight" in a multibillion-dollar industry handling large quantities of personal information.¶ FTC report. Simultaneously with the White House Big Data Report, the FTC released its Data Broker Report, urging Congress to consider legislation promoting transparency and consumer access to information held by data brokers, and calling on data brokers to adopt best practices like privacy by design.¶ Wyndham v. FTC¶ Issue. The FTC alleged that Wyndham Hotels violated Section 5 of the FTC Act's prohibition against "unfair practices" by failing to provide "reasonable" security for the personal information of its customers. Unlike most FTC data security cases, which settle before the FTC files a complaint in federal court, Wyndham refused to settle, and instead challenged the FTC's authority to bring data security cases under Section 5.¶ Denial of motion to dismiss. In April, Judge Esther Salas of the U.S. District Court for the District of New Jersey disagreed with Wyndham and denied its motion to dismiss, concluding that Section 5 provides the FTC with the authority to regulate data security.¶ Interlocutory certification. Recognizing that no federal appellate court has ruled on the issue before, Judge Salas certified the case for review by the U.S. Court of Appeals for the Third Circuit.¶ Third Circuit review. In August, the Third Circuit agreed to review the lower court's decision. The case has been briefed and now awaits argument. Assuming that the Third Circuit publishes its opinion in this case, the ruling would be binding in Delaware, New Jersey, and Pennsylvania. It also likely would be highly persuasive in other jurisdictions.¶ Emerging Regulation of the Internet of Things¶ NSTAC Report. In February, the Industrial Internet Subcommittee of the National Security Telecommunications Advisory Council ("NSTAC")

released a report on the Internet of Things, concluding that the federal government has less than 5 years, and possibly as few as 3 years, to influence how the Internet of Things is adopted to mitigate the associated cybersecurity risks.[¶] Proposal for V2V communication. In August, the National Highway Transportation Safety Administration (“NHTSA”) and the Department of Transportation (“DOT”) initiated rulemaking to require vehicle-to-vehicle (“V2V”) communication on new model cars and trucks. The notice of proposed rulemaking included an interim privacy risk assessment of NHTSA and DOT’s proposed framework for V2V communication.[¶] Voluntary Code of Conduct for Smart Grid Data Privacy. The Department of Energy and the Federal Smart Grid Task Force also solicited comments on a Voluntary Code of Conduct for Smart Grid Data Privacy (“VCC”) in late 2014 before releasing a final version of the VCC in January 2015. Although the VCC’s impact could be limited by its voluntary nature and lack of external enforcement, it provides a framework that utilities and third parties can use to govern their collection, use, and disclosure of smart grid data.[¶] More interest in 2015. Following the release of the FTC’s long-anticipated Internet of Things report in January, interest in the Internet of Things should only continue to grow in 2015. Resulting from the FTC’s Internet of Things workshop in November 2013, the report provided key recommendations on security, data minimization, and consumer notice and choice. The Senate Commerce Committee also held a hearing in February to examine how the federal government should regulate the Internet of Things.

Gradualism – Public Push

There's momentum now- Freedom Act proves

Fox-Brewster 5-14-15, Security and Privacy Journalist

Thomas, "House Says No To NSA Bulk Data Collection As Fight To End Mass Surveillance Gathers Momentum", <http://www.forbes.com/sites/thomasbrewster/2015/05/14/usa-freedom-act-passes-house/>, EC

It appears Edward Snowden's decision to blow open the National Security Agency's mass snooping has been vindicated again, with the House of Representatives passing the USA Freedom Act, which promises to end bulk collection across all domestic surveillance authorities. It was overwhelmingly supported by members of the House, with a vote of 338 to 88 and, if passed by the Senate, would see Section 215 of the Patriot Act amended to stop intelligence agencies collecting Americans' phone call and internet communications data, placing limits on how that data can be obtained from communications providers. The overall aim is of the Act is to make surveillance far more targeted with more oversight on bodies like the Foreign Intelligence Surveillance Court who approve or deny requests from the NSA and other snoop agencies. The Freedom Act has widespread support across Washington and Silicon Valley. Though Mitch McConnell, the Senate majority leader, introduced a bill designed to extend the powers under Section 215 of the Patriot Act until 2020, Senator Ron Wyden said he would filibuster that attempt, whilst praising the House vote. "Supporters of dragnet surveillance are fighting to preserve the status quo, but the American public is rightfully demanding a change. It is time for mass surveillance to end, and I will filibuster any attempt to extend this illegal surveillance, which violates core American rights without making our country any safer," he added. National Security Agency leaker Edward Snowden appears on a live video feed broadcast from Moscow at an event sponsored by the ACLU Hawaii in Honolulu on Saturday, Feb. 14, 2015. (AP Photo/Marco Garcia) Tech firms appear to be in favour of the Act. Chris Riley, the Mozilla Corporation's Head of Public Privacy, said it should put America on a path to "a more private and secure internet". "We urge the Senate to swiftly follow suit and vote to pass the bipartisan USA Freedom Act. We are staunchly opposed to any short- or long-term reauthorization of these sections of the Patriot Act absent meaningful reforms. Now is not the time to delay on these much needed reforms." CloudFlare, a content delivery network that supports a significant portion of the web, also explicitly backed the legislation. But not all privacy advocates are convinced the Freedom Act goes far enough. In the wake of a New York federal appeals court ruling that the NSA's mass collection of telephone records was unlawful, the Electronic Frontier Foundation said the Senate should feel emboldened to tighten up the statute, withdrawing its support for the bill unless changes were made. In particular, it wants any vague terms in the legislation to be clarified. "Most importantly, the Second Circuit's correct interpretation of the law should be expressly embraced by Congress in order to avoid any confusion going forward about what the key terms in the statute mean, especially the terms 'relevant' and 'investigation'." The EFF also wants "super minimization" procedures, that would see agencies delete any information obtained about a person not connected to the investigation, reintroduced from the original 2013 bill. Whatever happens with the final USA

Freedom Act and the imminent decision on the future of the Patriot Act, the pendulum appears to have swung in favour of the anti-surveillance crowd for now.

Gradualism--Advocates

Privacy advocates are at the threshold

Ryan et al '14, staff correspondent

Laura, "NSA Critics Gain Momentum", <http://www.nationaljournal.com/tech-edge/nsa-critics-gain-momentum-20140623>, EC

TODAY'S TOP PARAGRAPH: Privacy advocates have a new spring in their step after last week's House vote to curb NSA spying. The administration, however, gained approval to continue its bulk collection of phone records. The FCC unveiled its proposal to pump money into WiFi in schools, and all eyes are on the Supreme Court this week with the Aereo decision looming.¶TOP NEWS¶HOUSE VOTE BOOSTS NSA CRITICS: A strong House vote to close "backdoor" NSA spying programs has given privacy advocates a new boost of momentum as they try to toughen up surveillance reform legislation in the Senate. "That overwhelming vote changes the trajectory of this issue moving forward," Rep. Zoe Lofgren, a sponsor of one of the amendment to the defense bill, said. Lawmakers also approved an amendment from Rep. Alan Grayson to bar the NSA from undermining encryption standards.¶Lofgren argued that the votes are a "better reflection of the actual views" of House members than the USA Freedom Act, which leaders scaled back with last minute changes before a floor vote last month. Even if the provisions don't become law through the appropriations process, they put pressure on the Senate to adopt stronger reform.¶"I'll be urging my colleagues in the Senate to follow the House's lead," Sen. Ron Wyden said in a statement. "It is time to slam this back door shut."

Gradualism—Freedom Act Emboldened

Privacy supporters are rallying behind momentum from the Freedom Act

Volz and Fox 6-3-15, staff correspondents

Dustin and Lauren, "The War Over NSA Spying Is Just Beginning",

<http://www.nationaljournal.com/tech/the-war-over-nsa-spying-is-just-beginning-20150603>, EC

June 3, 2015 Now that Congress has passed the USA Freedom Act, a surveillance overhaul bill that will shutter the National Security Agency's bulk gathering of U.S. call data—having done so while shutting down attempts from the Senate Majority Mitch McConnell to weaken it—reform-minded legislators are emboldened. But while reformers hope Tuesday's victory is an appetizer to a multiple-course meal to rein in the NSA, security hawks—many of them Republicans vying for the White House—hope to halt the post-Snowden momentum behind surveillance reform. And some already are talking about unraveling the Freedom Act. ¶ "What you are seeing on the floor of the Senate is just the beginning," said Sen. Ron Wyden, a civil-liberties stalwart in the upper chamber who serves on the intelligence committee and has worked for more than a decade to reform government surveillance. "There is a lot more to do when—in effect—you can ensure you protect the country's safety without sacrificing our liberty." ¶ Wyden used the Freedom Act's passage to call for additional intelligence-gathering reforms that he has long advocated, such as closing the so-called "backdoor search loophole" that allows U.S. spies to "incidentally" and warrantlessly sweep up the email and phone communications—including some content—of Americans who correspond with foreigners. He added he plans to move quickly on reworking Section 702 of the Foreign Intelligence Surveillance Act, before Congress is up backed up against its renewal deadline in 2017. ¶ The Oregon Democrat also supports tech companies in their ongoing tussle with the administration over smartphone encryption as a key priority. While Google and Apple have begun to build their phones with "too-tough-to-crack" encryption standards, the FBI has warned that the technology locks out the bad guys and the good—and can impede law-enforcement investigations. ¶ ADVERTISEMENT ¶ Wyden and his allies, though, are bumping up against an impending presidential campaign, where many Republicans will jockey with one another to look toughest on national security. ¶ Few issues divide the GOP White House contenders more than NSA surveillance, as defense hawks such as former Florida Gov. Jeb Bush and Sen. Marco Rubio continue to defend the NSA bulk metadata program as necessary to protect the homeland, while libertarian-leaning agitators such as Sens. Rand Paul and Ted Cruz warn voters of the privacy perils associated with the government's prying eyes. ¶ Rubio, who has said he'd prefer that the NSA's phone dragnet be made permanent, issued a statement after the Freedom Act's passage saying it fell to the next president to undo its policies. ¶ "The failure to renew the expiring components of the PATRIOT Act was a mistake," Rubio said in a statement after the vote. "The 'USA Freedom Act' weakens U.S. national security by outlawing the very programs our intelligence community and the FBI have used to protect us time and time again. A major challenge for the next president will be to fix the significantly weakened intelligence system that the current one is leaving behind." ¶ Paul, meanwhile, continues to fundraise on social media and in campaign emails off his hardline opposition to "illegal NSA bulk data collection." The Kentucky senator succeeded in drawing enormous attention to the issue by forcing a temporary lapse this week of the Patriot Act's spy authorities, and has vowed to limit the agency's mass surveillance practices "on day one" if elected

president.¶ But Paul also was a major obstacle for the Freedom Act's passage, repeatedly voting against it and helping delay its consideration on grounds it didn't go far enough—and codified parts of the Patriot Act he thinks should stay dead.¶ Cruz, meanwhile, represented the middle ground and was a chief GOP backer of the legislation, setting up a potential argument with Paul on debate stages about who has done more to fight against mass surveillance. Any jockeying between the two will expose them to sniping from candidates on the other side of the debate, including potential candidate Chris Christie, the New Jersey governor, who often goes out of his way to condemn those who criticize government snooping. Rand Paul already has become a regular punching bag for the GOP field's security hawks.¶ DON'T MISS TODAY'S TOP STORIES¶ “I read the Tech Edge every morning.” Ashley, Senior Media Associate Sign up form for the newsletter¶ Back on Capitol Hill, many of the same members who were trying to block reform warn that it only takes one security setback for Congress to stop taking powers away from the NSA.¶ “The next time there is a terrorist act within the United States, the same people are going to be coming to the floor seeking changes to the tools that our intelligence community, our law enforcement community has at their disposal because the American people will demand it,” said Sen. Richard Burr, the chairman of the Intelligence Committee.¶ Sen. Susan Collins, who also serves on the intelligence panel, recognized that reforms and oversight will likely continue now that the USA Freedom Act has passed, but she said she's not so sure supporters of the Freedom Act won't have buyer's remorse down the line.¶ “I believe it is actually going to expose Americans' data to greater privacy risk and to vulnerability from computer data breaches,” Collins said.¶ The momentum to end the NSA's phone dragnet snowballed over the past year and a half as two review panels deemed it ineffective. President Obama pledged to end it “as it currently exists” and a federal appeals court deemed it illegal.

Gradualism- Drones

There's new privacy concerns regarding domestic drones

Kosseff and Harris 2-17-15, Associate at the National Law Review, member of the Communications & Media and Privacy & Data Security practice groups, and Associate

Jeff and Meena, "Top 10 U.S. Privacy Developments of 2014",
<http://www.natlawreview.com/article/top-10-us-privacy-developments-2014>, EC

¶ Limiting Use of Drones¶ FAA proposal and privacy advocates' concerns. This month, the FAA released a Notice of Proposed Rulemaking that would allow limited commercial use of drones less than 55 pounds. Over the past year, news of the FAA's plans has raised a number of privacy concerns, such as fears that companies and the government would use drones to spy on individuals.¶ White House response. To address these concerns, the White House released a memorandum that limits the government's ability to use drones to collect information about individuals, and requires the government to be transparent about its drone use. The memorandum also directs the National Telecommunications and Information Administration to work with the private sector to develop voluntary best practices for drone use.¶ Federal legislation. In December, retiring Sen. Jay Rockefeller released a bill that would prohibit the use of drones for surveillance of an individual without the individual's prior express consent and require drone operators to anonymize and aggregate information about individuals who have not provided prior express consent.

Gradualism- NSA Data Collection

NSA data's on the decline- recent reforms prove

Kosseff and Harris 2-17-15, Associate at the National Law Review, member of the Communications & Media and Privacy & Data Security practice groups, and Associate

Jeff and Meena, "Top 10 U.S. Privacy Developments of 2014",
<http://www.natlawreview.com/article/top-10-us-privacy-developments-2014>, EC

Reforming NSA Data Collection¶ Restricting collection and expanding disclosure. In January, President **Obama called for an "end" to the National Security Agency's ("NSA") bulk data collection program "as it currently exists"** and released a Presidential Policy Directive restricting the NSA's ability to collect bulk data or target specific individuals surveillance. Later in the same month, the Department of Justice loosened restrictions regarding public disclosure of Foreign Intelligence Surveillance Act ("FISA") orders and National Security Letters, providing recipients of these requests with two options for disclosing to the public the approximate volume of the requests.¶ Federal legislation. **The White House also proposed legislation to restrict the collection of bulk calling records by the NSA. Under the proposal, the records would be retained for 18 months by telecommunications providers, instead of the NSA, and the NSA would have to obtain a court order to access the records.** The House Intelligence Committee also proposed a similar bill, which included slightly looser restrictions on the FISA Court's oversight of government data requests. None of these bills, however, passed successfully. One such bill, the USA Freedom Act, was blocked by Senate Republicans in November over concerns that the bill would hamper the government's ability to fight terrorism.¶ Sharing of Cyber Threat Information¶ DOJ/FTC Antitrust Policy Statement. Although the concept of cyber threat information-sharing has been discussed for several years, **the federal government took several small but important steps in 2014 towards making widespread sharing a reality. In April, the Department of Justice ("DOJ") and the FTC released a joint Antitrust Policy Statement**, stating that the sharing of cyber threat information does not implicate antitrust concerns. The DOJ reiterated this position in a business review letter in October, announcing that it had no intention of challenging the TruSTAR information sharing platform under antitrust laws.¶ Federal legislation. Following these developments, **Congress passed the National Cybersecurity Protection Act of 2014, which codified the National Cybersecurity and Communications Integration Center within the Department of Homeland Security as a platform for cyber threat information sharing between the public and private sector. However, this bill did not provide any liability protection for the sharing of cyber threat information.** Passing information-sharing legislation that includes liability protections has remained a central issue in early 2015. After President Obama proposed an information-sharing bill in January, the Senate Committee on Homeland Security and Governmental Affairs held a hearing to discuss with a cross-section of private industry stakeholders and cybersecurity experts the need for information sharing and liability protection.¶ Cyber Threat Intelligence Integration Center. **Last week, the White House announced the creation of the Cyber Threat Intelligence Integration Center, which will coordinate cyber threat intelligence from the FBI, the Department of Homeland Security, the National Security Agency, and other federal agencies.**¶ Telemarketing Enforcement¶ TCPA amendment. In October 2013, the Federal Communications Commission amended its

telemarketing rules under the Telephone Consumer Protection Act (“TCPA”) to require companies to collect consumers’ prior express written consent for autodialed or prerecorded telemarketing calls (including text messages) to wireless telephone numbers.¶ Increase in lawsuits. Because statutory damages can reach \$1,500 per call, the new TCPA rules have been attractive to class action plaintiffs’ lawyers. TCPA lawsuits increased by 30 percent between September 2013 and September 2014.¶ Federal court ruling on definition of “autodialer.” In a significant recent opinion, a federal judge in the Northern District of California dismissed a putative class action lawsuit under the TCPA, ruling that an automated telephone dialing system or “autodialer” is not used when a third party group inviter has provided the number that resulted in the initiation of the automated text by a company to a consumer.

Gradualism- Reforms

Reforms are happening now despite a history of circumvention

Timm 3-14-15, Guardian US columnist and executive director of the Freedom of the Press Foundation

Trevor, “Congress won't protect us from the surveillance state – they'll enhance it”,
<http://www.theguardian.com/commentisfree/2015/mar/14/congress-wont-protect-us-from-the-surveillance-state-theyll-enhance-it>, EC

The same Senator who warned the public about the NSA's mass surveillance pre-Snowden said this week that the **Obama** administration **is still keeping more spying programs** aimed at Americans **secret**, and it seems **Congress only wants to make it worse**.[¶] In a revealing interview, **Ron Wyden** – often the lone voice in favor of privacy rights on the Senate's powerful Intelligence Committee – **told** BuzzFeed's John **Stanton** that American citizens are being monitored **by intelligence agencies in ways that still have not been made public more than a year and a half after the Snowden revelations and countless promises by the intelligence community to be more transparent**. Stanton wrote:[¶] Asked if intelligence agencies have domestic surveillance programs of which the public is still unaware, Wyden said simply, “Yeah, there's plenty of stuff.”[¶] **Wyden's warning is not the first clue about the government's still-hidden surveillance; it's just the latest reminder that they refuse to come clean** about it. For instance, **when** the New York Times' Charlie Savage and Mark **Manzetti** exposed a secret CIA program “collecting bulk records of international money transfers handled by companies like Western Union” into and out of the United States in 2013, they also reported that “**several government officials said more than one other bulk collection program has yet to come to light**.”[¶] Since then – beyond the myriad Snowden revelations that continue to pour out – **the public has learned about** the Postal Service's massive database containing **photographs of** the front and back of **every single piece of mail** that is sent in the United States. **There was** also **the Drug Enforcement Administration's** mass phone **surveillance program** – wholly separate than the NSA's – **in which “phone records were retained even if there was no evidence the callers were involved in criminal activity,”** according to the New York Times. And recently, the Justice Department's “national database to track in real time the movement of vehicles around the US”, reported by the Wall Street Journal.[¶] That **there are** still **programs** aimed at Americans that the Obama administration is **keeping secret from the public** should be a front page scandal.[¶] Instead of exposing and informing these programs, however, Congress seems much more intent on giving the intelligence agencies even more power. On the same day that Wyden issued his warning, **the Senate Intelligence Committee passed its** latest version of CISA, a supposed “cybersecurity” **bill that allows companies to hand over** large swaths of **personal information** to the government without any court order at all – and gives the companies immunity from any privacy lawsuits that may result.[¶] Wyden called it “a surveillance bill by another name” – and was the only Senator on the Intelligence Committee member to vote against it.[¶] The committee claims they passed some privacy amendments, but we have no idea what since they did so in complete secrecy, and the announcement came after it had already passed. The public has yet to see the bill.[¶] While members of Congress attempt to pass a new way for the government – and the NSA – to get their hands on more data of Americans, they've barely made a peep about reforming

Section 215 of the Patriot Act, the controversial law that was twisted and warped to allow the NSA to collect every phone record in the United States.¶ Soon they'll have no choice but to address it: Section 215 has to be renewed by Congress in June, or the law expires. With no progress on reforming, there will be a huge push in the coming weeks for Congress to reject Section 215 entirely – and many people believe the surveillance state might not have the votes to keep it.¶ Congress can keep trying to avoid change, but reform is coming one way or another.

Congressional momentum is shifting opinion towards privacy

Steinhauer and Weisman 6-2-15, reporters

Jennifer and Jonathan, “US Surveillance in Place Since 9/11 Is Sharply Limited”

http://www.nytimes.com/2015/06/03/us/politics/senate-surveillance-bill-passes-hurdle-but-showdown-looms.html?_r=0, EC

WASHINGTON — In a significant scaling back of national security policy formed after the Sept. 11, 2001, terrorist attacks, the Senate on Tuesday approved legislation curtailing the federal government’s sweeping surveillance of American phone records, and President Obama signed the measure hours later.¶ The passage of the bill — achieved over the fierce opposition of the Senate majority leader — will allow the government to restart surveillance operations, but with new restrictions.¶ The legislation signaled a cultural turning point for the nation, almost 14 years after the Sept. 11 attacks heralded the construction of a powerful national security apparatus. The shift against the security state began with the revelation by Edward J. Snowden, a former National Security Agency contractor, about the bulk collection of phone records. The backlash was aided by the growth of interconnected communication networks run by companies that have felt manhandled by government prying.¶ The storage of those records now shifts to the phone companies, and the government must petition a special federal court for permission to search them.¶ Even with the congressional action, the government will continue to maintain robust surveillance power, an authority highlighted by Senator Rand Paul, Republican of Kentucky, whose opposition to the phone records program forced it to be shut down at 12:01 a.m. Monday. Mr. Paul and other critics of the legislation said the government’s reach into individuals’ lives remained too intrusive.¶ The bill cleared the Senate 67 to 32 after a fierce floor fight; at least four of the opponents voted no because they felt the bill did not go far enough.¶ Mr. Obama was quick to praise passage of the legislation and to scold those who opposed it.¶ “After a needless delay and inexcusable lapse in important national security authorities, my administration will work expeditiously to ensure our national security professionals again have the full set of vital tools they need to continue protecting the country,” Mr. Obama said. “Just as important, enactment of this legislation will strengthen civil liberty safeguards and provide greater public confidence in these programs.”¶ The Senate’s longest-serving member, Patrick J. Leahy, the seven-term Democrat of Vermont, said the legislation, which he co-sponsored, represented “the most significant surveillance reform in decades.”¶ The fight for the changes was led largely by Democrats and a new generation of Republicans in the House and the Senate who were elected a decade after the terrorist attacks. Even as threats have multiplied since then, privacy concerns, stoked by reports of widespread computer security breaches at private companies, have shifted public opinion.¶ “National security and privacy are not mutually exclusive,” said Senator James Lankford, Republican of Oklahoma, a freshman who like several

other younger Republicans voted against the senior senator from his state. “They can both be accomplished through responsible intelligence gathering and careful respect for the freedoms of law-abiding Americans.”¶ Tuesday’s vote was a rebuke to Senator Mitch McConnell, Republican of Kentucky and the majority leader, who, until the end in a bitter floor speech, maintained the bill was a dangerous diminishment of national security. Lawmakers in both parties beat back amendments — one by one — that he insisted were necessary to blunt some of the bill’s controls on government spying.¶ Mr. McConnell blasted his fellow senators — and by association Speaker John A. Boehner, who heartily endorsed the measure — as taking “one more tool away from those who defend our country every day.”¶ “This is a significant weakening of the tools that were put in place in the wake of 9/11 to protect the country,” he said. “I think Congress is misreading the public mood if they think Americans are concerned about the privacy implications.”¶ But even scores of senators who loathed the actions of Mr. Snowden voted for the legislation.¶ The legislation’s goals are twofold: to rein in aspects of the government’s data collection authority and to crack open the workings of the secret national security court that oversees it. After six months, the phone companies, not the N.S.A., will hold the bulk phone records — logs of calls placed from one number to another, and the time and the duration of those contacts, but not the content of what was said. A new kind of court order will permit the government to swiftly analyze them.¶ The Foreign Intelligence Surveillance Court, for the first time, will be required to declassify some of its most significant decisions, and outside voices will be allowed to argue for privacy rights before the court in certain cases.¶ The battle over the legislation, the USA Freedom Act, made for unusual alliances. Mr. Boehner joined forces with Mr. Obama, the bipartisan leadership of the House Judiciary Committee, and a bipartisan coalition of senators against Mr. McConnell and his Intelligence Committee chairman, Senator Richard Burr, Republican of North Carolina.¶ Mr. McConnell made a series of miscalculations, stretching back to last year, when he filibustered a similar surveillance overhaul measure. Last month, after Republicans blocked consideration of the Freedom Act, Mr. McConnell sent the Senate on a weeklong Memorial Day recess, pushing Washington up against a June 1 deadline, when surveillance authority would lapse.¶ That empowered Mr. Paul, who promised supporters of his presidential campaign that he would single-handedly ensure that surveillance authority lapsed, a promise on which he delivered. When Mr. McConnell then argued in favor of amending the Freedom Act, senators in both parties — even some who supported him — said any changes would only extend the surveillance blackout and risk the country’s security.¶ In a heated meeting of House Republicans on Tuesday morning, one of the architects of the post-Sept. 11 USA Patriot Act, Representative Jim Sensenbrenner of Wisconsin, angrily told Senator John Barrasso of Wyoming, an emissary from the Senate leadership, to deliver a message to his colleagues: Any change to the House bill would be flatly rejected.¶ About a dozen Republican senators — most of them recent House members — took the warning to heart, joined Democrats and voted down all of Mr. McConnell’s proposed changes.¶ As the debate over the bulk phone records program unfolded, supporters and opponents both trotted out worst case scenarios to make their argument. Opponents warned that the government could root through the records to learn who was calling psychiatrists and political groups, while supporters said ending it would lead to terrorist attacks on the United States.¶ Neither of those warnings was supported by how the program had performed in its nearly 14 years of existence. Repeated studies found no evidence of intentional abuse for personal or political gain, but also found no

evidence that it had ever thwarted a terrorist attack.¶ Still, the debaters on each side also made other points. Opponents said that the mere collection of Americans' calling records by the government was a privacy violation and that it risked being abused in the future. Supporters said it had helped flesh out investigations in other ways, and could still prove to be crucial in the future.¶ Senator Mike Lee, a Utah Republican, and Senator Leahy made it clear after passage that curtailing the phone sweeps might be only the beginning. The two are collaborating on legislation to undo a provision in the Electronic Communications Privacy Act of 1986 that allows the government to read the contents of email over six months old. House members and senators from both parties are already eyeing a section of the Foreign Intelligence Surveillance Act that they say has also been abused by the government.¶ But opponents of the law said they imagined further fights going forward for their positions, too. Senator Susan Collins, Republican of Maine, said she and others would continue to seek reforms and oversight.¶ "It's not the end," she said.

Gradualism- Congress

Freedom Act passage proves Congress is taking the side of privacy

Kaplan 6-1-15, Pulitzer Prize-winning journalist

Fred, “America isn’t defenseless without the Patriot Act, and the revised law won’t hurt national security, either.”,

http://www.slate.com/articles/news_and_politics/war_stories/2015/06/don_t_worry_about_the_patriot_act_expiring_the_usa_freedom_act_won_t_hurt.2.html, EC

After the Senate’s rare Sunday night session, Congress is on track to end the National Security Agency’s practice of sweeping millions of Americans’ phone records—the most controversial program revealed by former NSA consultant Edward Snowden two years ago. The move will reduce the potential for NSA abuse in the future, but—contrary to the dire warnings of some and the dizzy celebrations of others—it will not diminish the agency’s ability to spy on terrorists, either abroad or inside the United States.¶ Under Section 215 of the Patriot Act, which was passed in 2001, shortly after the Sept. 11 attacks, certain phone companies have been required to give the NSA bulk records known as “metadata”—the numbers, dates, times, and durations of all phone calls, but not the identities of the callers or the contents of their conversations. The NSA has then stored the metadata for up to five years and has used it to draw links between suspected terrorists and possible associates—or that’s the theory.¶ A revision to this law, known as the USA Freedom Act, which the House passed in May, would keep these records stored with the phone companies. The NSA could gain access to the metadata only by requesting it through the Foreign Intelligence Surveillance Court—and, even then, the requests and access would be limited to specific phone numbers or information.¶ On May 23, the Senate voted, 57-42, to adopt the House bill, but the tally fell three votes short of the 60 needed to override a filibuster—and a filibuster was threatened from the right and from the libertarian-left.¶ Senate Majority Leader Mitch McConnell was pushing a bill to extend the Patriot Act, unchanged, for another five years. Under ordinary circumstances, he might have won, or held out for some compromise between the House bill and his proposal, but that tactic wouldn’t work this time. Back in 2001, in the wake of the terrorist attacks, then-President George W. Bush pushed Congress to pass the Patriot Act immediately; the bill was still hot off the presses, almost no one had read it, and it differed substantially from a similar measure hammered out by the judiciary committees. In exchange for their haste, key legislators insisted that a “sunset clause”—an expiration date—be written into some parts of the law (including Section 215), which Congress could extend or let lapse in a more sober, reflective time.¶ Removing the metadata from the NSA removes the temptation, or opportunity, for abuse.¶ In 2011, when the bill was last scheduled to expire, Congress voted to extend the law until 2015. In the interim, three things have happened. First, and pivotaly, came Snowden’s disclosures. Second, a presidential commission—which was formed as a result of those disclosures—recommended several reforms to NSA practices, some of which are included in the USA Freedom Act. Third, in early May, a federal appeals court ruled that Section 215 of the Patriot Act did not in fact authorize anything so broad as the NSA’s bulk metadata-collection program—that, in other words, the bulk-collection program was illegal.

And it's just the first step- other legislation's on the agenda

Calabrese 7-5-15, vice president of policy at the Center for Democracy & Technology

Chris, "Post USA Freedom Act: There's more to be done",

http://www.ourmidland.com/opinion/editorials/post-usa-freedom-act-there-s-more-to-be-done/article_6676dd8c-7565-5ba4-8387-0158caae0784.html, EC

Congress delivered a **resounding win** for the American people and their **right to privacy**. By **passing the USA FREEDOM Act**, they showed that **we could protect** our national **security while respecting privacy rights**, and do so **in a bipartisan manner**. The **momentum is now clearly on the side of** those seeking broad government **surveillance reform** and hopefully Congress keeps the forward progress going.¶ Perhaps **the most logical**, and easiest, **reform** that should be on their agenda **is** reform of **the** Electronic Communications Privacy Act (**ECPA**). **This** outdated law continues to threaten the very thing it was intended to protect — the privacy of Americans using the Internet.¶ In 1986, when ECPA was written, few Americans owned computers and even fewer used email. Hard drives were small. Service providers offered little storage capacity and the storage they did sell was expensive. The World Wide Web didn't exist in 1986. Neither did cloud computing or broadband or social media or smartphones. Few people needed to store anything in digital form longer than it took to write or read an email.¶ To protect the privacy of the small numbers of Americans who used email then, ECPA restricted the government's access to emails to only those stored with service providers for less than 180 days. No one imagined anyone would keep emails longer than six months, and those emails that were left on a third party server for that amount of time were assumed to be abandoned.¶ That was a perfectly reasonable assumption in 1986. It's an absurd notion in 2015, decades after the Internet Age began. Today, we store all kinds of sensitive possessions online indefinitely — emails, work documents, financial records, diaries, photographs and much else. According to this outdated law, all of it — every email, every text, every document, every picture of our grandchild, every love letter, everything we have communicated in digital form and kept for six months — is subject to government inspection without a warrant.¶ The Fourth Amendment protects us from "unreasonable searches and seizures" of our "persons, houses, papers and personal effects." The government can't inspect our mail or tap our phones or search our homes and offices without obtaining a warrant from a judge after showing probable cause to believe a crime is being committed.¶ But unless ECPA is reformed to reflect modern realities, government agents will continue to assert the authority to search our communications and our private possessions without a warrant and without showing any evidence whatsoever that a crime has been committed.¶ That's an intolerable and completely unwarranted invasion of our privacy. It isn't what the law's authors intended, of course. But government agencies are taking advantage of ECPA's unintended consequences to evade constitutional checks on their powers. And as long as ECPA remains on the books as written, it no longer represents an unexpected assault on our liberty. It is an intentional one.¶ Fortunately, **members in both houses** of Congress, led by Senators Mike Lee and Pat Leahy, and Representatives Kevin Yoder and Jared Polis, **have introduced legislation to reform ECPA**, and restore Fourth Amendment protections to our online communications. **The ECPA Amendments Act and Email Privacy Act**, respectively, **would restore the law's original purpose to protect privacy in the ways we communicate**, transact businesses, learn and recreate today by protecting emails and other communications stored with third party

service providers for any amount of time.¶Their **legislation has broad, bipartisan support**. It is backed by hundreds of members in Congress, including more than 270 House members. **Outside the halls of Congress, conservatives, moderates and liberals, small and large businesses, labor unions, civil libertarians and former prosecutors** all **advocate reforms** to an obsolete law that threatens the liberty and prosperity of the American people.¶ Congress has regularly had to pass reforms to legislation that technology has rendered obsolete and vulnerable to exploitation by the executive branch. We're calling on ECPA to be next.¶Since our founding as a nation, Americans have insisted that we be secure in our persons and secure in our liberties. We made progress toward that end with the passage of the USA Freedom Act. The next step is the reform of ECPA, and re-establishing that neither changes in technology nor laws that have outlived their purpose can be allowed to infringe on Americans' privacy protections.

Gradualism—FBI Surveillance

Senate bill proposed to limit aerial surveillance – SQ FBI doesn't need warrants for plane investigations

AP 6/18 (Jack Gillum, Associated Press reporter on the DC investigations desk covering privacy, technology and surveillance; Eileen Sullivan, AP reporter; and Eric Tucker, AP Reporter; 6/18/15, "FBI: Surveillance flights by the book, rarely track phones", Associated Press,

<http://bigstory.ap.org/article/1240a8a42edf4a86aff72a0246525a95/fbi-surveillance-flights-book-rarely-track-phones>, 7/11/15, ACC)

The FBI would not openly answer some questions about its planes, which routinely orbit major U.S. cities and rural areas. Although the FBI has described the program as unclassified and not secret, it declined to disclose during an unclassified portion of a Capitol Hill briefing any details about how many planes it flies or how much the program costs. In a 2009 budget document, the FBI said it had 115 planes in its fleet. The briefing Wednesday to Senate staff was the first effort in recent years — if ever — to impose oversight for the FBI's 30-year aerial surveillance program that gives support to specific, ongoing investigations into counterterrorism, espionage and criminal cases and ground surveillance operations. While it withheld some details, it offered assurances that the planes are not intended to perform mass surveillance or bulk intelligence collection. However, there is still no formal oversight regimen for the program. The briefing came two weeks after the FBI confirmed to The Associated Press for the first time its wide-scale use of the aircraft, after the AP traced at least 50 planes registered to fake companies back to the FBI. The AP investigation identified more than 100 flights in 11 states over a 30-day period this spring. The planes since June 1 have flown more than two-dozen times over at least seven states, including parts of Texas, Georgia and the Pacific Northwest. The ubiquity of the flights, combined with few details about the surveillance equipment aboard the planes, raised civil liberties concerns over Americans' privacy. The AP had reported that, in rare circumstances, the FBI equipped the planes with technology capable of tracking thousands of cellphones using a device known as a "cell-site simulator." These can trick pinpointed cellphones into revealing identification numbers of subscribers, including those not suspected of a crime. The FBI said that technology has been used on its surveillance aircraft only five times since 2010, according to one Senate staffer present at the briefing. The FBI would not say how often it has used the technology in ground surveillance operations. Staffers shared details with the AP on condition of anonymity because they were not authorized to speak publicly about them. The FBI said 85 percent of the aircraft have commercially available infrared still and video cameras. The remaining 15 percent use binoculars for surveillance missions. The FBI said there were only eight high-definition cameras in the fleet, though it would like to have that technology for more of its planes. The FBI, like the Drug Enforcement Administration, said it hides its aircraft behind fake companies so that it can discreetly conduct surveillance and protect the safety of the pilots. The FBI said most surveillance flights — some 64 percent — are part of national security investigations. It was unclear over what time period those flights took place. Senate Judiciary Chairman Chuck Grassley, R-Iowa, pressed for answers about the FBI's aerial surveillance

program after The Washington Post reported in May that an FBI surveillance plane was used over Baltimore during rioting that erupted following the death of 25-year-old Freddie Gray, who sustained grievous injuries while in police custody. In that instance, the FBI was helping local police with aerial support. Despite government concerns that publicity about the planes might impede surveillance, the number of flights has remained consistent since the AP first reported on the program, according to an AP review of flight records and radar data. Flights since June 2 have occurred a few times each day over cities across the United States, including San Francisco, Phoenix and Orange County, California. They are generally flown without a warrant, which the FBI says is consistent with the law. Two senators proposed changing that Wednesday. Sen. Dean Heller, a Nevada Republican, and Sen. Ron Wyden, an Oregon Democrat who has been outspoken about government surveillance, introduced a bill that would limit what the federal government can record from the skies and require a warrant to conduct surveillance from planes and drones. "Technology has made it possible to conduct round-the-clock aerial surveillance. The law needs to keep up," Wyden said in a statement. "Clear rules for when and how the federal government can watch Americans from the sky will provide critical certainty for the government, and help the unmanned aircraft industry reach its potential as an economic powerhouse in Oregon and the United States." The FBI said it does not comment on pending legislation, but maintained that a warrant was not necessary for the type of surveillance being conducted from its planes. Courts are grappling with balancing constitutional protections against evolving technologies, as laws have not kept pace with technological advancements. Among other reasons, the surveillance planes were exposed as belonging to the FBI because one of its fake companies shared a post office box with the Justice Department, creating a link between the companies and the FBI through publicly available Federal Aviation Administration records. The FBI told Senate staffers it was working with the FAA to restore some cover to preserve operational security, but it did not plan to spend the money required to operate under "deep cover."

FBI uses secret aircraft surveillance – Collects video records and basic cell-phone subscriber info

AP 6/2 (Jack Gillum, Associated Press reporter on the DC investigations desk covering privacy, technology and surveillance; Eileen Sullivan, AP reporter; and Eric Tucker, AP Reporter; 6/2/15, "FBI behind mysterious surveillance aircraft over US cities", Associated Press

https://www.washingtonpost.com/world/national-security/fbi-behind-mysterious-surveillance-aircraft-over-us-cities/2015/06/02/030ce2e2-0959-11e5-951e-8e15090d64ae_story.html, 7/11/15, ACC)

U.S. law enforcement officials confirmed for the first time the wide-scale use of the aircraft, which the AP traced to at least 13 fake companies registered to post office boxes in Bristow, Virginia. Those include FVX Research, KQM Aviation, NBR Aviation and PXW Services. "The FBI's aviation program is not secret," spokesman Christopher Allen said in a statement. "Specific aircraft and their capabilities are protected for operational security purposes." Allen added the

FBI's planes "are not equipped, designed or used for bulk collection activities or mass surveillance." The FBI does occasionally help local police with aerial support, such as during the recent disturbance in Baltimore that followed the death of 25-year-old Freddie Gray, who sustained grievous injuries while in police custody. Those types of requests are reviewed by senior FBI officials. The FBI does not generally obtain warrants to record video of people moving outside in the open. But it says it needs warrants to help identify potentially thousands of cellphones below — using what are known as cell-site simulators — even if a user is not making a call or in public. Officials said that practice, which mimics cell towers to get phones to reveal basic subscriber information, is rare. An FBI spokesman said the flights comply with agency rules, although details are heavily redacted in publicly available documents that discuss limitations and justifications for such surveillance. "It's important that federal law enforcement personnel have the tools they need to find and catch criminals," said Sen. Charles Grassley of Iowa, who chairs the Senate Judiciary Committee. "But whenever an operation may also monitor the activities of Americans who are not the intended target, we must make darn sure that safeguards are in place to protect the civil liberties of innocent Americans." Details about the flights come as the Justice Department seeks to navigate privacy concerns arising from aerial surveillance by unmanned aircrafts, or drones. The AP traced at least 50 aircraft back to the FBI, and the agency told Congress in 2010 it had at least 115 planes. The FBI asked the AP not to disclose the names of the fake companies it uncovered, saying that would saddle taxpayers with the expense of creating new cover companies to shield the government's involvement, and could endanger the planes and the surveillance missions. The AP declined the FBI's request because the companies' names — as well as common addresses linked to the Justice Department — are listed on public documents and in government databases. Justice Department lawyers approved the decision to create fictitious companies to protect the flights' operational security and the Federal Aviation Administration was aware of the practice, officials said. The FBI has been careful not to reveal its surveillance flights in court documents. After The Washington Post revealed flights by two planes circling over Baltimore in early May, the AP began analyzing the mysterious owners behind planes that shared similar addresses and flight patterns. Independent journalists have also recently cited companies traced to post office boxes in Virginia, including one shared with the Justice Department. The AP had analyzed similar data from the website FlightRadar24.com, while also drawing upon aircraft registration documents, business records and interviews with U.S. officials to understand the scope of the government's operations.

AT: Freedom Act Isn't Momentum

The Freedom Act is a crucial first step to combating abuse

Kaplan 6-1-15, Pulitzer Prize-winning journalist

Fred, "America isn't defenseless without the Patriot Act, and the revised law won't hurt national security, either.",

http://www.slate.com/articles/news_and_politics/war_stories/2015/06/don_t_worry_about_the_patriot_act_expiring_the_usa_freedom_act_won_t_hurt.2.html, EC

So does the new law have any significance whatever? Can it properly be called a reform law? Yes, for three main reasons. First, it adopts another of the Obama commission's recommendations: requiring the appointment of a privacy advocate on the FISA Court. This may make the court hearings—which are held in secret—less of a rubber-stamp exercise. Second, it requires periodic declassification review of the court's rulings (another commission recommendation), which may lead to greater accountability. Third, and most significant, the very removal of metadata from NSA headquarters substantially reduces the potential for abuse. The Obama commission found no evidence that the NSA has used metadata analysis to go after political opponents—or, for that matter, any target other than suspected members or associates of three specific terrorist organizations. It is worth noting that Snowden's documents have revealed no such evidence, either. However, one can imagine what Richard Nixon or J. Edgar Hoover might have done with the technology that the NSA has at its disposal—and it's hardly a farfetched notion that the likes of Nixon or Hoover could again ascend to national power. The NSA has set its metadata-search algorithms to trace terrorists, but there's no physical reason why they couldn't be set to search for domestic drug traffickers, criminals, political enemies, or troublemakers of whatever category some rogue director might choose. (Currently the NSA is crawling with lawyers, who assiduously follow reporting requirements, but one can imagine a climate in which a director might tear down this whole apparatus.) Removing the metadata from the NSA removes the temptation, or opportunity, for abuse. Given the fears tapped by Snowden's disclosures, and some harrowing chapters of 20th-century American history, this is a very good thing. And it's been accomplished with no compromise of national security.

AT: Obama Controls NSA

Vague rulings and past NSA behavior prove Obama's got no control independently over the agency

Schwartz '15, Staff Writer

Mattathias, "Who Can Control NSA Surveillance?", <http://www.newyorker.com/news/news-desk/can-control-n-s-surveillance>, EC

President Obama spent only a few moments of his State of the Union this week talking about the National Security Agency and civil liberties. A year before, he'd promised to "end" Section 215, the N.S.A.'s most controversial surveillance program, "as it currently exists." In his speech last Tuesday, he said almost nothing concrete, aside from mentioning a forthcoming report "on how we're keeping our promise to keep our country safe while strengthening privacy." Since Edward Snowden revealed the extent of the N.S.A.'s activities in the summer of 2013, there have been a number of official reports on the troubled relationship between surveillance and privacy—one from the President's Review Group, two from the Privacy and Civil Liberties Oversight Board, and another, last week, from the National Academy of Sciences. In August, 2013, the Office of the Director of National Intelligence started a Tumblr, on which they've posted many interesting and useful documents, including redacted orders from the secret Foreign Intelligence Surveillance Court (FISA). But, while the government has made some moves toward transparency about its surveillance programs, it has enacted few substantial reforms of them. The N.S.A. continues to use Section 215, named after a part of the Patriot Act, to collect metadata on hundreds of billions of U.S. phone calls. Obama has talked about moving the data to some third party. Congress has talked about more serious reforms, including an independent advocate who would represent privacy concerns before the FISA court. But the most significant reform that has been undertaken as the result of an order from Obama is a reduction in the scope of metadata searches, from three "hops," or degrees of association, to two. There isn't much evidence to suggest that Section 215 helps catch the most dangerous terrorists, like those who committed the attacks in Paris two weeks ago. It may even slow investigators down, by eating up resources and generating extraneous leads. (I wrote about Section 215's track record in this week's magazine.) Nevertheless, opponents of N.S.A. reform continue to claim that Section 215 can stop violent terrorists. Last week, House Speaker John Boehner, of Ohio, said that information collected from phone records helped halt a plot to bomb the U.S. Capitol, despite the fact that, as the Guardian reported, the F.B.I. has indicated that the critical information came from a government informant. "The first thing that strikes me is that we would've never known about this had it not been for the FISA program and our ability to collect information for people who pose an imminent threat," Boehner told Politico. When Obama and Congress talk about N.S.A. reform, they're mostly talking about Section 215. But what other classified surveillance programs are out there? The difficulty of answering this question was made clear last week, when the Drug Enforcement Administration revealed in a court filing that it had maintained a database of calls made from U.S. phone numbers to and from overseas callers. The D.E.A. held the database under a law ostensibly related to administrative subpoenas, not metadata, and used it in criminal drug-trafficking investigations, not counterterrorism activities. Despite the apparent lack of a connection to terrorism, all the D.E.A.

needed to search the database was a “reasonable articulable suspicion,” a lower standard of evidence than probable cause that is most often associated with counterterrorism and counterintelligence programs. According to the D.E.A. filings, the program was suspended in September, 2013. All of the information that was contained in the database has since been deleted, a D.E.A. spokesperson told the Times.¶ If Obama and Congress were to undertake serious surveillance reforms, they would have a hard time doing it one authority at a time. The limits on U.S. surveillance were written in an analog age, when “pen registers” and “trap and trace devices” intercepted communications moving on copper wire. The legality of collecting phone metadata rests on a 1979 Supreme Court case, Smith v. Maryland, which held that the police did not need a warrant to obtain the phone numbers dialed from a single suspect’s land line. It didn’t say anything about location tracking, pattern-based analysis, or collecting phone records by the million. The discrepancy between the old guidelines and the new technology they describe has facilitated surprisingly broad interpretations of the ruling, most notably Section 215.

AT: No Compliance

The status quo maintains the possibility of judicial review, which triggers effective compliance

McGreal '6, dean of the University of Dayton School of Law

Paul E., "Counteracting Ambition: Applying Corporate Compliance and Ethics to the Separation of Powers Concerns with Domestic Surveillance",

<http://www.smu.edu/~media/Site/Provost/Ethics/pdfs/McGreal%20Paper.ashx?la=en>, EC

And like data collected by private firms, the government's data will be vulnerable to abuse or attack. Data could be improperly disclosed, either through inadvertence or misconduct of government personnel, who handle the data, or through the wrongful acts of those who obtain unauthorized access to the data. Disclosure can cause harm through either embarrassment or the subsequent misuse of the information (e.g., identity theft or blackmail). Also, the data could be abused by those with authorized access, as when the government targets its political opponents. And even legitimate use of the data can lead to false positives, as when an innocent person is mistakenly identified as a terrorist target. The threats posed by domestic surveillance raise serious separation of powers concerns. Recall that when liberty is at issue, first principles counsel that the federal courts should play some role in checking abuses of government power. Here, the judiciary must play some role checking the abuses posed by data collection, analysis, and storage. Part IV argues that judicial review ought to examine whether the government's domestic surveillance programs implement an effective compliance and ethics program designed to reduce threats to data security. The next part describes what such a program entails.

Presidential Elections Trick (read with GOP DA)

We'll concede that the GOP will win the elections- that means that circumvention is inevitable because changes in the executive moot any arguments about Obama or the current administration not overturning the aff's statutes

Volz and Fox 6-3-15, staff correspondents

Dustin and Lauren, "The War Over NSA Spying Is Just Beginning",
<http://www.nationaljournal.com/tech/the-war-over-nsa-spying-is-just-beginning-20150603>, EC

June 3, 2015 Now that **Congress** has **passed the** USA **Freedom Act**, a surveillance overhaul bill that will shutter the National Security Agency's bulk gathering of U.S. call data—having done so while shutting down attempts from the Senate Majority Mitch McConnell to weaken it—reform-minded legislators are **emboldened**.[¶] But while reformers hope Tuesday's victory is an appetizer to a multiple-course meal to rein in the NSA, **security hawks**—**many** of them **Republicans vying for the White House**—**hope to halt the post-Snowden momentum behind surveillance reform**. And **some** already **are talking about unraveling the Freedom Act**.[¶] "What you are seeing on the floor of the Senate is just the beginning," said Sen. Ron Wyden, a civil-liberties stalwart in the upper chamber who serves on the intelligence committee and has worked for more than a decade to reform government surveillance. "There is a lot more to do when—in effect—you can ensure you protect the country's safety without sacrificing our liberty."[¶] Wyden used the Freedom Act's passage to call for additional intelligence-gathering reforms that he has long advocated, such as closing the so-called "backdoor search loophole" that allows U.S. spies to "incidentally" and warrantlessly sweep up the email and phone communications—including some content—of Americans who correspond with foreigners. He added he plans to move quickly on reworking Section 702 of the Foreign Intelligence Surveillance Act, before Congress is up backed up against its renewal deadline in 2017.[¶] The Oregon Democrat also supports tech companies in their ongoing tussle with the administration over smartphone encryption as a key priority. While Google and Apple have begun to build their phones with "too-tough-to-crack" encryption standards, the FBI has warned that the technology locks out the bad guys and the good—and can impede law-enforcement investigations.[¶] **Wyden and his allies**, though, **are bumping up against an impending presidential campaign, where many Republicans will jockey with one another to look toughest on national security**.

Surveillance Inevitable

Surveillance reform inevitable – generational divide

Romero 4/21 — Executive Director of the American Civil Liberties Union (Anthony D. Romero, April 21, 2015, “Generation Snowden: On Why Surveillance Reform Is Inevitable,” <http://www.commondreams.org/views/2015/04/21/generation-snowden-why-surveillance-reform-inevitable>), acui

In late February, the American Civil Liberties Union commissioned a global poll surveying millennials (18- to 34-year-olds) in 10 countries, including the United States, about their opinions of Snowden and what the effect of his disclosures will mean for privacy. The results confirmed that surveillance reform, like marriage equality, will come about because of generational change.¶ The poll showed that in every country surveyed — Australia, Canada, France, Germany, Britain, Italy, New Zealand, the Netherlands, Spain and the U.S. — millennials have an overwhelmingly positive opinion of Snowden. In continental Europe, 78% to 86% has positive opinions of him. Even in the United States, where the Justice Department has charged Snowden with espionage, 56% view him favorably.¶ The poll also found that millennials believe Snowden's disclosures will benefit privacy rights. In Germany, Italy, Spain and the Netherlands, 54% to 59% said they thought Snowden's actions would lead to more privacy protection.¶ **By 2020, [millennials] will represent 1 out of 3 adults. As they grow in influence, so too will the demand to rein in the surveillance state.** - ¶ It might seem counterintuitive to think that Snowden's disclosures will lead to greater privacy protections when many of the governments in the countries polled are insistent on maintaining or enhancing their abilities to spy on their citizens. Canada, France and the Netherlands are considering expansive surveillance powers similar to the Patriot Act, and Australia already has enacted such a law.¶ **Though surveillance reform may confront resistance in the near term, millennials have made it clear that they don't want government agencies tracking them** online or collecting data about their phone calls. In the United States, millennials will surpass the baby boomer generation this year, and by 2020, they will represent 1 out of 3 adults. As they grow in influence, so too will the demand to rein in the surveillance state.¶ Conventional wisdom says that the young and idealistic grow up and shed their naive ideals as they confront the real world. By that logic, as millennials age, they will recognize the need for the surveillance state to keep us safe from terrorism. But **given the lack of evidence that mass surveillance works** — President Obama's own review group concluded that the National Security Agency's call-records program never played a pivotal role in any investigation — **it is unlikely this generation of digital natives will shed a fundamental commitment to the free exchange of information.**¶ Their ethos — that the Internet should be a place where people are free to share knowledge and ideas without government interference — is already reflected in tech culture. Technology companies, compelled by profit and principle, recognize how governments continue to violate their citizens' trust with secretive surveillance practices, and some have responded by providing encryption measures for their customers to circumvent it. Last month, the Reform Government Surveillance coalition, which includes Google, Apple, AOL, Facebook, LinkedIn, Microsoft, Twitter and Yahoo, sent a letter to U.S. lawmakers calling for the government to end the bulk collection of data.¶ **It's important to remember how fast even the most entrenched beliefs can change. Not so long ago, the majority of Americans opposed same-sex marriage.** In 2003, the Pew Research Center found that 59% of the U.S. population opposed same-sex marriage. But that same year, 51% of millennials supported it. Since then, support for it has increased every year, in every age group. Federal legalization of same-sex marriage now appears inevitable.

Man-in-the-middle hijacking poses a real threat

Cowie 13 — chief scientist at Dyn, founder and CTO of Renesys (Jim Cowie, November 19, 2013, “The New Threat: Targeted Internet Traffic Misdirection,” <http://research.dyn.com/2013/11/mitm-internet-hijacking/>), acui

For years, we've observed that there was potential for someone to weaponize the classic Pakistan-and-YouTube style route hijack. Why settle for simple denial of service, when you can instead steal a victim's traffic, take a few milliseconds to inspect or modify it, and then pass it along to the intended recipient?¶ This year, that potential has become reality. We have actually observed live Man-In-the-Middle (MITM) hijacks on more than 60 days so far this year. About 1,500 individual IP blocks have been hijacked, in events lasting from minutes to days, by attackers working from various countries.¶ Simple BGP alarming is not sufficient to distinguish MITM from a generic route hijacking or fat-finger routing mistake; you have to follow up with active path measurements while the attack is underway in order to verify that traffic is being simultaneously diverted and then redelivered to the victim. We've done that here.¶ Here's a map of 150 cities in which we've observed at least one victim of a validated MITM route hijacking attack so far this year (click to inspect). The victims have been diverse: financial institutions, VoIP providers, and world governments have been prominent targets.¶ What makes a Man-in-the-Middle routing attack different from a simple route hijack? Simply put, the traffic keeps flowing and everything looks fine to the recipient. The attackers keep at least one outbound path clean. After they receive and inspect the victim's traffic, they release it right back onto the Internet, and the clean path delivers it to its intended destination. If the hijacker is in a plausible geographic location between the victim and its counterparties, they should not even notice the increase in latency that results from the interception. It's possible to drag specific Internet traffic halfway around the world, inspect it, modify it if desired, and send it on its way. Who needs fiberoptic taps?¶ It's even possible to see these attacks as they are occurring, if you have the right global measurement infrastructure. Renesys maintains a realtime view of the Internet from hundreds of independent BGP vantage points. We have to, because that's how we can detect evidence of Internet impairment worldwide, even when that impairment is localized. We also maintain an active measurement infrastructure that sends out billions of measurement packets each day, crisscrossing the Internet in search of impaired or unusual paths like these. Finally, we have a distributed realtime-taskable measurement system that allows us to trigger quick measurements from all over the planet when trouble is detected in a region, so that we can immediately evaluate its significance.¶ Example 1: Belarusian Traffic Diversion¶ In February 2013, we observed a sequence of events, lasting from just a few minutes to several hours in duration, in which global traffic was redirected to Belarusian ISP GlobalOneBel. These redirections took place on an almost daily basis throughout February, with the set of victim networks changing daily. Victims whose traffic was diverted varied by day, and included major financial institutions, governments, and network service providers. Affected countries included the US, South Korea, Germany, the Czech Republic, Lithuania, Libya, and Iran.¶ We recorded a significant number of live traces to these hijacked networks while the attack was underway, showing traffic detouring to Belarus before continuing to its originally intended destination.¶ Here's an example of a trace from Guadalajara, Mexico to Washington, DC that goes through Moscow and Minsk. Mexican provider Alestra hands it to PCCW for transit in Laredo, Texas. PCCW takes it to the Washington, DC metro area, where they would normally hand it to Qwest/Centurylink for delivery.¶ Instead, however, PCCW gives it to Level3 (previously Global Crossing), who is advertising a false Belarus route, having heard it from Russia's TransTelecom, who heard it from their customer, Belarus Telecom. Level3 carries the traffic to London, where it delivers it to Transtelecom, who takes it to Moscow and on to Belarus. Beltelecom has a chance to examine the traffic, and then sends it back out on the "clean path" through Russian provider ReTN. ReTN delivers it to Frankfurt and hands it to NTT, who takes it to New York. Finally, NTT hands it off to Qwest/Centurylink in Washington DC, and the traffic is delivered.¶ The recipient, perhaps sitting at home in a pleasant Virginia suburb drinking his morning coffee, has no idea that someone in Minsk has the ability to watch him surf the web. Even if he ran his own traceroute to verify connectivity to the world, the paths he'd see would be the usual ones. The reverse path, carrying content back to him from all over the world, has been invisibly tampered with.¶ May 2013: Changing of the Guard¶ The Belarus traffic diversions stopped in March. They restarted briefly in May, using a different customer of BelTelecom as the source, and then ended for several months. Within the same hour as the final Belarus hijack of May, however, we saw a first BGP hijack lasting only five minutes from a completely new source: Nyherji hf (AS29689), a small Icelandic provider.¶ Example 2: Icelandic Traffic Diversion¶ After this "first light" from Iceland in May, there were no more route hijacks from Iceland for more than two months. Then, at 07:36:36 UTC on July 31st 2013, Icelandic provider Opin Kerfi (AS48685) began announcing origination routes for 597 IP networks owned by one of the largest facilities-based providers of managed services in the United States, a large VoIP provider. On a normal day, Opin Kerfi normally originates only three IP networks, and has no downstream AS customers.¶ Opin Kerfi has two ISPs: Fjarskipti (AS 12969) and Síminn (AS 6677). The faulty routes propagated exclusively through Síminn, never through Fjarskipti.¶ In fact, this was one of seventeen Icelandic events, spread over the period July 31 – August 19th. And Opin Kerfi was not the only Icelandic company that appeared to announce international IP address space: in all, we saw traffic redirections from nine different Icelandic autonomous systems, all

customers of (or belonging to) the national incumbent Síminn. Hijacks affected victims in several different countries during these events, following the same pattern: false routes sent to Síminn's peers in London, leaving 'clean paths' to North America to carry the redirected traffic back to its intended destination.¶ Here's an example in which traffic between two locations in Denver, Colorado actually ends up getting carried all the way to Iceland and back. The Icelandic providers have hijacked a block of address space belonging to Qwest/Centurylink in Denver. Atrato receives a false peer route to this block from Síminn Iceland, so when an Atrato customer needs to send content across town, Atrato instead carries their traffic to London. There they hand it off to Síminn, who takes it to Iceland before returning it to Montreal on the clean path to Cogent via the Greenland Cable.¶ Cogent gamely carries the traffic back from Montreal to Chicago, and then to New York, where they hand it to Qwest/Centurytel for delivery. Centurytel brings it back across the USA through Dallas and Kansas City, and on to the intended recipient in Denver.¶ Attribution¶ It's important to clarify that we base these conclusions on direct observation and active measurement. Various providers' BGP routes were hijacked, and as a result, some portion of their Internet traffic was misdirected to flow through Belarusian and Icelandic ISPs. We have BGP routing data that show the second-by-second evolution of 21 Belarusian events in February and May 2013, and 17 Icelandic events in July-August 2013.¶ We have active measurements that verify that during the period when BGP routes were hijacked in each case, traffic redirection was taking place through Belarusian and Icelandic routers. These facts are not in doubt; they are well-supported by the data.¶ What's not known is the exact mechanism, motivation, or actors.¶ We first contacted the peering team at Iceland's Síminn in July, when their traffic redirection began in earnest, highlighting some of the erroneous routes. We received no response.¶ We contacted them again recently while researching this story. We were told that the problems were the result of a bug in vendor software, that the problem had gone away when patched, and that they did not believe this problem had a malicious origin. Despite repeated requests for supporting details, we received no further communication.¶ If this is a bug, it's a dangerous one, capable of simulating an extremely subtle traffic redirection/interception attack that plays out in multiple episodes, with varying targets, over a period of weeks. If it's a bug that can be exploited remotely, it needs to be discussed more widely within the global networking community and eradicated.¶ We believe it's unlikely that a single router vendor bug can account for the 2013 worldwide uptick in route hijacking with traffic redirection. These Belarusian and Icelandic examples represent just two of a series of MITM attack sequences that we've observed playing out in the last 12 months, launched from these and other countries around the world.¶ Implications¶ In practical terms, this means that Man-In-the-Middle BGP route hijacking has now moved from a theoretical concern to something that happens fairly regularly, and the potential for traffic interception is very real. Everyone on the Internet — certainly the largest global carriers, certainly any bank or credit card processing company or government agency — should now be monitoring the global routing of their advertised IP prefixes.

Court Capital DA Wake 2015

Notes

Zivotofsky v. Kerry is a court case determining whether or not the president has executive authority to declare whether a state exists or not. This boy (Zivotofsky) wants to put Jerusalem, Israel on his birthplace even though the government doesn't consider Jerusalem to be Israeli territory. You shouldn't have too hard of a time winning that the court will side with Kerry (the government) bc the President generally has the final word on Foreign Policy. Kennedy is the swing vote and you have to use one of the link modules to win that the plan will cause him to switch his vote bc he's a centrist. The impact is middle east war between Israel and Palestine which would escalate.

Go Deacs,

Luke Sullivan

1NC

Court likely to side with the Kerry now- Zivotofsky win causes Middle East war and SOP in foreign policy breakdown

Spiro 4/21 (Peter holds the Charles Weiner Chair in international law. Before joining Temple's faculty in 2006, Professor Spiro was Rusk Professor of Law at the University of Georgia Law School, where he also served as Associate Dean for Faculty Development. A former law clerk to Justice David H. Souter of the U.S. Supreme Court, "Supreme Court Takes Jerusalem Passport Case on the Merits", <http://opiniojuris.org/2014/04/21/supreme-court-takes-jerusalem-passport-case-merits/>)

NY Times dispatch here. **The Supreme Court will now confront the** question of whether Congress can force the Secretary of State to include the birthplace "Jerusalem, Israel" at a U.S. citizen's option. **This could be a huge case or a not-so-huge case. If the Court affirms the D.C. Circuit's ruling** below and strikes down legislation purporting to constrain the Secretary of State's passport authority, the ruling **would** be important **but hardly epochal. That would protect the president's authority** over foreign relations, and fit neatly into a doctrinal tradition dating back at least a century. It is something new for the Court to get to the merits of the question — that's why the decision in Zivotofsky I itself marked something of a watershed. **If the Court accepts expansive executive branch powers, the jurisprudential gun remains loaded but no shots get fired. But if the Court upholds the law, it will be a major departure from that tradition. The passport case implicates a genuinely sensitive issue of foreign relations.** **If the Court forces the State Department into something like formal acknowledgement of Israeli sovereignty over Jerusalem, who knows what would follow on the ground.** This isn't a case like Medellin, which predictably upset Mexico at the same time that our relations predictably weathered any such upset. Nor would it play out like Bond, which even if it restricts the Treaty Power will hardly be noticed by foreign audiences. To use the vocabulary of the foreign relations canon, **a Supreme Court ruling against the executive branch in Zivotofsky could severely "embarrass" the President in the conduct of foreign relations.** Think unruly crowds outside U.S. embassies. That would have been inconceivable 20 years ago. But foreign relations law is being normalized. (For an excellent take on the shift, see Harlan Cohen's piece here.) **Foreign affairs has long been immune to judicial activism; maybe no longer. The Court may still hesitate to the extent it sees some real, even uncabinable, damage to the Middle East peace process in siding with Congress on the question.** The easier path would have been to duck the case altogether. By accepting review, it may already have tipped its hand in a new direction.

(insert link)

Kennedy's the swing vote

Gilhooley 14 ("The Judiciary, the Constitution and US Foreign Policy, Simon at Bard College is Visiting Assistant Professor of Political Studies. Primary Academic Program: Political Studies <http://www.bard.edu/civicingagement/usfp/resources/2014/index.php?action=getfile&id=1536307>.)

A decision by the Supreme Court is regarded as final, and on constitutional questions, the Court has asserted a doctrine of judicial supremacy since 1958, and the case of Cooper v. Aaron. Judicial Supremacy is the idea that the Supreme Court's rulings on the constitutionality of government action represent the final word on such matters. In reality, there is nothing to stop Congress re-

asserting a statute found unconstitutional by voting it through again. Check up on this behavior. The requirement of 4 justices to approve the selection of a case has importance given the make up of the Supreme Court. Justices are nominated by the President when a vacancy arises, and approved by the Senate. While every President hopes to shape the Supreme Court with his nominees, since at least the 1980s this process has become progressively more partisan in nature. Of the current nine justices, 5 have been appointed by Republican Presidents and 4 by Democrats. **The most moderate of the Republican appointees is Justice Kennedy**, appointed by Ronald Reagan. Apart from 9-0 decisions, where the Court is unanimous, **the most common split in decisions is 5-4**. In the 2012 term of the 23 5-4 decisions, Kennedy was in the majority in 20 cases. **Of these 23 cases, 16 were decided on the basis of either Kennedy and the 4 Republican appointees or Kennedy and the 4 democratic appointees.** For this reason, **Kennedy is regarded as the “swing” vote for many issues.** So 4 justices may vote to bring a case before the Court if they believe that they can get Kennedy to join them in a ruling. So to recap: - the federal judiciary is made up of three layers - the Supreme Court comprises of 9 members, often regarded as holding ideological positions similar to the Presidents that appointed them - the Supreme Court controls its docket - On constitutional matters seen as the final arbiter of legal disputes. Hopefully, that provides a little background on the operation of the federal judiciary – and sets the scene for a discussion of the judiciary’s involvement in foreign policy. The Judiciary in Foreign Policy: Judicial Rulings - Judicial Supremacy and the Treaty Power o John Marshall and Foster v. Neilson (1829) o “Self-Executing” and Medellín v. Texas (2008) - The Political Question Doctrine o Goldwater v. Carter (1979) - Judicial Intervention in the War on Terror o Hamdi v. Rumsfeld (2004), Boumediene v. Bush (2008) So, what I would like to do now, is talk about three areas in which the Supreme Court has come into contact with foreign policy – Judicial Supremacy and the Treaty power, the so-called “Political Question Doctrine,” and the recent judicial intervention in the War on Terror. A crucial early case in which the Supreme Court was drawn into a foreign policy dispute concerned the results of the 1819 treaty between Spain and the United States. The 1829 case of Foster v. Neilson saw contested land claims emerging from the rotation of sovereign authorities in West Florida during the early C19th. The Court was called on to adjudicate between these competing claims. The problems this posed for the Court were noted by the presiding chief Justice, John Marshall: “A question like this respecting the boundaries of nations is, as has been truly said, more a political than a legal question, and, in its discussion, the courts of every country must respect the pronounced will of the Legislature.” Should the Court rule against its own government in a dispute with a foreign power? In most countries a treaty is an obligation on the part of the sovereign nations, and a court would not be readily called to intervene in disputes over its implementation. But as we noted earlier, the US Constitution places treaties on the level of law. The Court was therefore required to rule somehow. Marshall offered the following view: “Our Constitution declares a treaty to be the law of the land. It is consequently to be regarded in courts of justice as equivalent to an act of the Legislature whenever it operates of itself, without the aid of any legislative provision. But when the terms of the stipulation import a contract, when either of the parties engages to perform a particular act, the treaty addresses itself to the political, not the Judicial, Department, and the Legislature must execute the contract before it can become a rule for the Court.” Three things emerge here: 1) the acknowledgment of the legal stature of a treaty (2) the distinction between political and judicial questions, & (3) the notion of a requirement for some treaties to be “executed” via legislation. These in effect carve out a very small area in which the Court can be involved in disputes over treaties – when they are not political questions and when they require no legislative execution. The issue of so-called “self-executing” treaties has recently emerged in the 2008 case of Medellín v. Texas. This case concerned the conviction of Jose Medellin of the rape and murder of two teenage girls in Houston in 1993. Medellin had signed a confession after being read his Miranda rights, but was not advised of his right to contact the Mexican consulate as a foreign citizen under the Vienna Convention. After conviction, he raised this issue on appeal but was denied relief in both Texas and federal courts. In the meantime, Mexico brought suit to the International Court of Justice. The ICJ ruled that Medellin and 50 other similarly affected defendants were entitled to review and reconsideration of their cases. Medellin pursued this route of appeal to the Supreme Court, which decided that in the absence of congressional action “executing” the relevant treaties and enforcing Medellin’s claim the Court was unable to require a further round of appeals on the basis of the ICJ’s ruling. In such a way, the idea of “non-self-executing” treaties enabled the Supreme Court to be deferent to the Legislative when it comes to international treaties or to reject the rulings of international institutions dependent on your outlook. The issue of “political questions” received its most recent review with regard to foreign affairs by the Supreme Court in the 1979 case of Goldwater v. Carter. In this case, Barry Goldwater, the 1964 Republican presidential candidate challenged President Carter’s rescinding of a treaty with Taiwan as part of recognition of the People’s Republic of China. In its ruling the Court judged this to be a political question and passed on the opportunity to opine on the issue – instructing the lower courts to dismiss the case. However, despite the Court’s limited involvement in foreign affairs on the basis of these legal restraints, it did find itself involved in foreign policy as it regarded War on Terror, and specifically detention. In Hamdi v. Rumsfeld in 2004, the Court examined the question of whether an American citizen captured in a foreign country could be detained indefinitely without due process. In this case the Court ruled 5-4 that Hamdi could be held as an “enemy combatant,” but 8-1 that he be accorded due process and a meaningful hearing. In 2006, in Hamdan v. Rumsfeld the Court ruled that the use of military tribunals to designate enemy combatant status lacked legislative or executive authority. In response, Congress passed the 2006 Military Commission Act, which created military commissions to process non-citizen enemy combatants. In 2008’s BOUMEDIENE v. BUSH, the Court ruled that the procedures set up in 2006 under the Military Commission Act were not adequate replacements for habeas corpus. In effect it rejected claims that habeas corpus protections extend only to US nationals and/or to the borders of the United States. In recognizing the claims of those detained at Guantánamo Bay, the Court also struck a blow to the Bush Administration’s attempts to respond to the legal complexities created by the War on Terror. The Court’s involvement in the War on Terror brought it therefore indirectly into the sphere of foreign affairs, insofar as its ruling on individual claims forced

Congressional and Executive responses that shaped relationships and actions with traditional spheres of foreign policy. Current Issues - The Supreme Court and FISA Court o Oversight o Activity of FISA Court - The Judiciary and Drones o Al-Aulaqi v. Panetta (2014) - Issues Before the Court o Zivotofsky v. Kerry o Bond v. United States o Republic of Argentina v. NML Capital Ltd. At this point, I'd like to make use of the remainder of the time to discuss the judiciary's role in current issues within international relations. The first of these concerns surveillance. The activities of the National Security Agency have been getting much national and international coverage of late. In its capacity as the overseer of surveillance the judiciary has a part to play in these debates. The Chief Justice of the Supreme Court has responsibility for the appointment of members of the FISC – established under the 1978 Foreign Intelligence Surveillance Act. You can see the oversight on the slide here: However, the New York Times has reported that since the mid-2000s, the FISA Court has developed a body of law pertaining to the surveillance carried out by the NSA. In doing so it has extended the special needs exceptions to the Fourth Amendments protections on warrantless search and seizures, creating a parallel – and secret – body of Fourth Amendment law to that publically produced by the Supreme Court itself. As Congress moves to reign in the activities of the NSA attention could turn to the rule of the judiciary within the oversight of this area of government activity. The second issue of current interest, is the use of drones. In April of this year, the US District Court for the District of Columbia threw out the claim in the case of AlAulaqi v. Panetta In this case the families of Al-Aulaqi and two other US Citizens sought damages for their deaths in Yemen as a consequence of a drone strike. In this instance, Al-Aulaqi was targeted as a leader of Al-Queda in Yemen. The Court ruled that while this case raised interesting questions as to the personal liability of officials carrying out drone strikes, there was no clear remedy available in case law for such an instance and that given Al-AAulaqi's membership of Al-Queda and the existence of an Authorization for Use of Military Force the Court was hesitant to intervene. Judge Collyer did however note the Executive's recalcitrance in assisting the court's work in this case noting that she would have not dismissed the case had the court itself not been able to put together sufficient factual information from its own research. In that same month, the US Court of Appeals for the 2nd Circuit reversed a lower court decision and requested that the government release memos pertaining to the drone strike, which were released this week. At this moment, its not clear if this case line will develop, but it perhaps indicates the judiciary's involvement within the legal and constitutional questions relating to drones. Finally, the Supreme Court has dealt with several cases this term which had potential consequences for foreign policy. In Bond v United States, the Court was encouraged to consider whether Congress is given authority to pass legislation required by a treaty that it would ordinarily not have. In this instance that concerned the Chemical Weapons Convention, which as a "non-self-executing" treaty, was enforced in the United States by the Chemical Weapons Convention Implementation Act of 1998. In this improbable case Carol Anne Bond sought to attempt to poison her husband's lover with photograph-printing chemicals purchased from Amazon.com. Charged under the Chemical Weapons Convention Implementation Act, she challenged the Act's constitutionality. Had the Supreme Court agreed that Congress can not pass legislation to enforce treaties it has entered into, it may have caused problems going forward. As it turned out, the Court sidestepped this issue and questioned whether this law was intended to apply to Bond's case at all. In Republic of Argentina v. NML Capital Ltd. decided two weeks ago, the Supreme Court gave Argentina's creditors the ability to pursue claims against the nation on an equal footing with those that have accepted a bond swap. In doing so, the Court refused to support Argentina's claim that it ought not be beholden to the rulings of lower American courts. The ruling has been criticized by charities as it may make future sovereign debt relief more difficult. Mexico, France, and Brazil had filed friend of the court briefs asking the Court to side with Argentina, and the ruling may make nations more reticent to issue bonds in future – or it may shift the legal arena of bond issuances away from the United States. Greek bonds issued under English and Greek law were effectively restructured in 2012. And [the Court has agreed to hear](#) next session the case of [Zivotofsky](#) v. Kerry. This case asks whether the Secretary of State, John Kerry is correct to regard a federal statute that directs the Secretary of State, on request, to record the birthplace of an American citizen born in Jerusalem as born in "Israel" on a Consular Report of Birth Abroad and on a United States passport as unconstitutional. Kerry (standing in for the Dept of State in the case) asserts this view on the ground that the law infringes the President's power of recognizing foreign states on his own terms. In July 2013 the Court of Appeals for the District of Columbia sided with the Department of State on this issue. So even as it does its best to stay deferent to Congress and the Executive on issues of foreign policy, [the Court is often drawn in to foreign affairs by the need to decide constitutional questions](#). From a start as an act of foreign policy, the Constitution – and as a result [the Court](#) - [remains a significant](#), if not ever present, [consideration in foreign affairs](#).

Kennedy wants to be perceived as a centrist – plan makes him vote conservative
Bilionis '5

(Samuel Ashe Distinguished Professor, University of North Carolina at Chapel Hill (Louis,
 "LOCATING THE CONSTITUTIONAL CENTER CENTRIST JUDGES AND MAINSTREAM VALUES: A

MULTIDISCIPLINARY EXPLORATION: GRAND CENTRISM AND THE CENTRIST JUDICIAL PERSONAM” 83 N.C.L. Rev. 1353, June, lexis)

We could say that Justice **Kennedy is a switch-hitting centrist**. When shared faith cannot serve as the centering force, a more palatable, metaphorically centered and grounded framework that avoids the extremes of the competition does. **(Given his ability to produce rulings that please conservatives one day and liberals the next, we also could say that Justice Kennedy can hit the ball to all fields.)** It should interest us that an intelligent man who obviously has devoted much thought to these matters has chosen to invoke both of these brands of centrism to stake his ground in the areas that have proved most controversial during his years on the Supreme Court. Justice **Kennedy plainly perceives himself as a centrist and wishes to be perceived as one**. These are the ways he has chosen to construct a centrist judicial personam.

Failure to side with the president causes world war 3

Lipsky 4/22 (Seth- editor of The New York Sun. He was a foreign editor and a member of the editorial board of The Wall Street Journal, founding editor of The Forward and editor from 1990 to 2000, 2014, **“The Jerusalem question: Will a U.S. court case trigger WWII?”**, <http://www.haaretz.com/opinion/.premium-1.586566>)

The decision of the U.S. Supreme Court Monday **to give another hearing to one of the most explosive cases** before it in years – the so-called Jerusalem question – certainly **sets the stage for some high court drama in the Middle East**. It concerns whether Secretary of State John Kerry will have to bow to Congress and state in Menachem Binyamin Zivotofsky’s U.S. passport that he was born in Israel. **The law that requires Kerry to do this** – for Zivotofsky, or any other American born in Jerusalem who wants Israel listed as his place of birth – **was passed in 2002** by an almost unanimous House and a unanimous Senate. The Jerusalem requirement was part of a larger bill funding the State Department. **It was signed by one of America’s most pro-Israel presidents, George W. Bush. But Bush issued a signing statement saying the requirement to issue consular documents listing Jerusalem as part of Israel infringed on his executive powers**. He may have promised to move the American embassy to Jerusalem, but he defaulted on that. He also refused to yield to Congress on the passport question. President Barack Obama took the same position, as did secretaries of state Colin Powell, Hillary Clinton and now Kerry. Clinton and Kerry balked, even though they’d been in the Senate that passed the law unanimously. **They all tried to dodge it by saying that the question of Jerusalem was the president’s to decide and, in any event, was a political matter beyond the ken of the courts. All the liberal commentators and the anti-Israel left were certain Master Zivotofsky was going to lose. And he was losing, until it reached the Supreme Court** the first time. Then, in March 2012, **the Supreme Court stunned the foreign policy bar by casting aside Secretary of State Clinton’s pettifogging**. It did so by a vote of 8-1, in a stern opinion written by Chief Justice John Roberts, who told the lower court in **no uncertain terms that it would have to step up and decide the matter**. Roberts made clear that the courts weren’t being asked to decide whether Jerusalem was part of Israel. That is a political question. They were being asked to decide whether Congress has the authority, under the Constitution, to decide the political question. “This is what courts do,” Roberts wrote. “The political question doctrine poses no bar to judicial review of this case.” So, the matter went back to the second most powerful bench: the United States Court of Appeals for the District of Columbia Circuit. Last year, it issued its second ruling against Zivotofsky. It held that Congress had infringed on the president’s so-called “recognition power.” So Zivotofsky went back to the Supreme Court and successfully asked for a second hearing. **Now the Nine will have an opportunity to answer what I call the World War III question**. It was first posed by Justice Sonia Sotomayor, who asked point-blank about the possibility that war could result from America listing “Israel” as the country of birth of a person born in Jerusalem. **“Let’s assume that a dozen nations said this designation on the passport is – we view as an act of war; if the United States is going to do this, we’re going to view it as an act of war,”** Justice Sotomayor said.

“Would that then permit the president to ignore Congress...” The court’s transcript indicates the justice let the last word hang in the air. Zivotofsky’s lawyer – the famed constitutionalist Nathan Lewin – replied, “If Congress determines that in any event this is what the passport should say, then that is Congress...” He was interrupted by one of the justices, and the moment, through no fault of his own, was lost. The answer is – or ought to be – that if it’s war that the Supreme Court fears, then the decision belongs to Congress.

For it is expressly to Congress that the Constitution grants the power to declare war in the first place. **There were signs that the Supreme Court was having a hard time deciding** even whether to take a second look at the Case.

Zivotofsky’s petition had been on the docket for its secret conference three times so far this term, and no decision had emerged.

But the court finally granted certiorari, setting the stage for a final showdown. The consequences are potentially **huge** – not only for Israel, but also for other countries at a time when we have an administration that wants to retreat overseas and a Congress that doesn’t.

Links

Link- Trade-off

The plan trades off---the Court has limited willingness to fight Congress by striking down statutes

Ernest A. Young 99, Assistant Professor at the University of Texas School of Law, 1999, "ARTICLE: State Sovereign Immunity and the Future of Federalism," Supreme Court Review, 1999 Sup. Ct. Rev. 1, p. lexis

The opportunity cost of immunity rulings. The first reason, and the simplest, is that **the Court has limited political capital.** n261 As Dean Choper has argued, "**the federal judiciary's ability to persuade the populace and public leaders that it is right** and they are wrong **is determined by the number and frequency of its attempts** [*59] to do so, **the felt importance of the policies it disapproves,** and the perceived substantive correctness of its decisions." n262 **There is thus likely to be,** at some point, **a limit on the Court's ability to continue striking down federal statutes** in the name of states' rights. n263 To the extent that this limit exists, then the Court's extended adventure in aggressive enforcement of state sovereign immunity will trade off with its ability to develop a meaningful jurisprudence of process or power federalism. If protecting state authority to regulate private conduct is the key to a viable state/federal balance, then a considered reaffirmation, explanation, or extension of Lopez may do more good than another expansion of Seminole Tribe.¶ "Political capital," of course, is a pretty vague concept. It might be that the Court's ability to enforce federalism limits is more like muscles than money: it atrophies unless it is exercised regularly. n264 The National League of Cities story arguably illustrates this phenomenon, in that the Court's failure to apply the doctrine to check federal power in a series of subsequent cases may have helped lead to the outright rejection of the doctrine in Garcia. n265 **The important point,** however, **is that the Justices who matter most on these issues** tend to **think in terms of limited capital and worry about judicial actions that may draw down the reserves.** n266 **Political capital** [*60] **is** thus **likely to function as an internal constraint on the Court's willingness repeatedly to confront Congress.**

L- Liberal Ruling Mod

Liberal rulings are *heavily scrutinized* and ensure *future conservative wins*
Ware 13

(Honorable Charles J., "SCOTUS Synopsis: U.S. Supreme Court 2012-2013 Term," Open Salon, 1-24,
http://open.salon.com/blog/charlesjware/2013/01/24/scotus_synopsis_gestalt_us_supreme_court_2012-2013_term)

The term will also provide signals about the repercussions of Chief Justice John G. Roberts Jr.'s surprise decision in June to join the court's four more liberal members and supply the decisive fifth vote in the landmark decision to uphold President Obama's health care law. Every decision of the new term will be scrutinized for signs of whether Chief Justice Roberts, who had been a reliable member of the court's conservative wing, has moved toward the ideological center of the court.¶ The term could clarify whether the health care ruling will come to be seen as the case that helped Chief Justice Roberts protect the authority of his court against charges of partisanship while accruing a mountain of political capital in the process. He and his fellow conservative justices might then run the table on the causes that engage him more than the limits of federal power ever have: cutting back on racial preferences, on campaign finance restrictions and on procedural protections for people accused of crimes.

L- Popularity Mod

Controversy forces the court to side with popular opinions in future cases Bragaw and Perry, '2

[Stephen (Assistant Professor of Government at Sweet Briar College) and Barbara (Professor of Government at Sweet Briar College), 2002, "The "Brooding Omnipresence" in Bush v. Gore" 13 Stanford Law and Policy Review 19]

At the March 2001 House of Representatives Subcommittee meeting, Congressman **Serrano begged** Justices **Kennedy** and **Thomas to explain Bush v. Gore** to the American people. While proclaiming his profound respect for the justices and the high court they represented, Serrano berated their decision on Election 2000, which he said struck some of his immigrant constituents as similar to the corrupt electoral practices in their native countries from which they had fled. ⁿ⁹² Kennedy, who at this point had already testified for half an hour before the subcommittee on the minutest technical details of the Supreme Court building's upcoming renovation--all without notes--began a dramatic soliloquy. ⁿ⁹³ He noted that the **justices knew**, even as they decided the presidential election case, **that their opinion would provoke strong feelings among the American people** (How could they have thought otherwise when protestors for each side in the presidential race staged loud demonstrations at the Court's very doorstep? ⁿ⁹⁴). **Launching an institutional defense of the tribunal** he represented, **Kennedy attempted to distinguish the Court from the other two branches** by virtue of its language, ethic, discipline, dynamic, grammar, tradition, and logic of the law that are all "different from the political branches." ⁿ⁹⁵ Thus, he contended, **the Supreme Court would be judged on Bush v. Gore** not by what the justices say after the fact, but "by what we put in the appellate reports." ⁿ⁹⁶ **Kennedy** also **revealed the Court's consideration of its institutional capital**, observing, "Ultimately, **the power and the prestige and the respect of the Court depends on trust. My colleagues and I want to be the most trusted people in America. How do you instill that trust? Over time you build up a** deposit, a reservoir, a [*31] **storehouse of trust**. And **when we make a difficult decision . . . you draw down on that capital of trust.**" ⁿ⁹⁷ Then the brooding, soul-searching Kennedy admitted, "**You must make sure you are listening to the right voice**, not the wrong voice. And I've been a judge for over 25 years, and I know how hard it is to search for that voice and to make sure you're doing what's neutral." ⁿ⁹⁸ Kennedy next turned to the substance of **Bush v. Gore**, citing its two main themes: the fundamental right to vote that the Florida Supreme Court had violated with its equal protection transgressions and the supreme authority of the U.S. Supreme Court to decide such a case. ⁿ⁹⁹ On the latter contention, Kennedy grew particularly grave, observing that the justices "did not bring it [the election case] there [to the Court] ... It **involved a constitutional issue of the gravest importance**, decided 4 to 3 by a state court on a federal issue, . . . it was our responsibility to take the case." ⁿ¹⁰⁰ Paraphrasing the closing refrain of Bush v. Gore's per curiam opinion, Kennedy concluded, "Sometimes it's easy, so it seems, to enhance your prestige by not exercising your responsibility, but that's not been the tradition of our Court." ⁿ¹⁰¹ Summing up his oration, he declared, "**I'm confident that the people will understand the position that the Court was in and will trust the institution** for what it is." ⁿ¹⁰² The brooding justice had found his voice.

**Public opinion is heavily on the side of Israel, even during times of conflict
Devaney 8/3 (Tim- staff writer for the Hill, 2014, "Poll finds majority in US support
Israel", <http://thehill.com/policy/international/214173-poll-finds-majority-in-us-support>)**

As the conflict in Gaza rages on, Americans say they are three times more likely to side with Israel than the Palestinians, according to a new poll from The Wall Street Journal and NBC News. The poll found 43 percent of voters support Israel, while just 14 percent sympathize with the Palestinians. However, another 43 percent say they are not sure who to side with in the most recent month-long conflict in Gaza. When comparing Israel to Hamas, a terrorist organization that is operating in Gaza, 54 percent of voters say they sympathize with Israel, compared with just 7 percent who support Hamas, according to the poll. The poll was conducted between July 28 and 31, as United Nations officials blamed Israeli forces for a strike on a school in Gaza that killed at least 20 people, including many children, who were taking shelter at the school.

L- AT: 9/0

The plan's likely to be a 5-4 Cooper '95

[Phillip –Professor of Political Science @ U of Vermont – Battles on the Bench, Page 58//JVOSS]

The **excessive fragmentation of the Court** noted by O'Brien, particularly during the 1980s and 1990s, flashes a warning. The **expansion of separate opinions**, among other uses, provides a means to vent disagreement, and these opinions have clearly been used for that purpose. But the character of separate opinions has changed. Furthermore, the **rise in the number of pluralities and opinions** for the Court **joined only in discrete parts** by members of the Court is **particularly troublesome**. It is as though the **members of the Court are avoiding the task of compromise** and are moving back toward the tradition of seriatim opinions that John Marshall worked so hard to eliminate. Granted, too much concern with consensus may paper over in public what are serious differences within the institution. Conversely, however, too little concern with the coherence of institutional decisions in order to purchase tranquility and avoid hard negotiations within the Court is conflict by another means, and it is far less helpful than a careful compromise hammered out through intense negotiations. The **current spate of opinions in which one justice concurs in parts A, C, E, and F, and two other justices concur only in parts A and E** is reminiscent of Alexander Hamilton's complaint about the plethora of state court rulings with **no coherent synthesis in a national body**. His observation that **so many opinions "are a hydra in government from which nothing but confusion and chaos can proceed"** is worth remembering for those who prefer apparent peace to effective institutional judgment.

Unanimous decisions still trigger the link Ignani and Meernik '94

[Profs Poli Sci North Texas. "Explaining Congressional Attempts to Reverse Supreme Court Decisions" *Political Science Quarterly*, 1994. In//GBS-JV]

The age of the legislation the Court overturns and **court unanimity both have a significant impact on the chances for congressional reversal and are statistically significant**. The derivative at mean for the AGE OF LEGISLATION variable is .006, which indicates that, for example, for every year that passes between the date of enactment and the year the Court strikes down the legislation, the probability of a congressional response decreases by .6 percent holding all other factors constant at their mean value. Thus, it would appear that **the Congress is slightly less attached to legislation the members are unfamiliar with** or feel no allegiance to or that has become irrelevant with the passage of time. Congress, in effect, lets the matter rest with the Court's decision. Interestingly, our results indicate that **the commonly held belief among judicial scholars concerning the value of the Court presenting a unified front is unfounded**. In fact, from 1954 to 1990 **the Congress was more likely to strike back if the decision was unanimous**. The derivative at mean statistic for this variable is .24 which indicates that **when the Court is unanimous in overturning federal legislation, the probability of a congressional response increases by 24 percent** when holding all other variables constant at their mean value. In fact, **in 48 percent of the cases where the Court verdict was unanimous, the decision was later reversed by the Congress**, while in only 17 percent of the cases where the verdict was non-unanimous was the decision overturned. These results would seem to show that **this institutional defense mechanism does not deter the Congress**. The variable measuring ideological conflict, however, is statistically insignificant. Unfortunately when ideological conflict must be measured at the institutional level, we cannot take into

consideration contention between the Court and individual Congress members or groups. To determine if our measure was, in fact, partly to blame for our findings we also used the partisan division of Congress and ADA rankings on Congress to measure ideological conflict, but still found no relationship.

More ev – the plan’s a 5-4 – our ev about the Roberts Court – too adversarial to agree

Rosen ‘7

[Jeffery Rosen. Political Correspondent for TIME. “Disorder in the Court” TIME July 10, 2007. Pg 26-27. In//JVOSS]

But he added an important qualifier: "There will of course be disagreements on the court, and these could and should not be artificially suppressed." Roberts practiced what he preached in his three dissents, using often forceful prose. "It is a sordid business, this divvying us up by race," he declared last week in the partisan-gerrymandering case, which left all but one of Texas' redrawn congressional districts in place. Earlier in the term, he attacked an opinion by Justice David Souter that held that a wife couldn't give the police permission to search a house over her husband's objection. "The majority reminds us, in high tones, that a man's home is his castle," Roberts wrote, "but even under the majority's rule, it is not his castle if he happens to be absent, asleep in the keep, or otherwise engaged when the constable arrives at the gate." Souter responded in kind. "In the dissent's view, the centuries of special protection for the privacy of the home are over," he announced with an uncharacteristic note of melodrama. Having abandoned his famous Yankee reserve, he started to make a habit of it. During oral arguments in the Gitmo case, the government's lawyer seemed to suggest that Congress could suspend the writ of habeas corpus--which allows prisoners to challenge the legality of their detentions--inadvertently. Souter, incredulous, asked, "Isn't there a pretty good argument that a suspension of the writ [by] Congress is just about the most stupendously significant act that the Congress of the United States can take? The writ is the writ!" Antonin Scalia, one of the most reliable defenders of Executive power, insisted that Congress could suspend habeas corpus even if it didn't say so explicitly. That mini courtroom brawl between Souter and Scalia, which had the overtones of an 18th century boxing match, was picked up again in the final days of the term. By a 5-to-4 vote, the court upheld a death-penalty verdict in Kansas, and Souter filed an agonized dissent listing recent cases in which DNA testing had led to innocent people's exoneration. Dripping with sarcasm, Scalia chided Souter for encouraging the "sanctimonious criticism of America's death penalty" that he said was common in "some parts of the world." "I say sanctimonious," Scalia added, "because most of the countries to which these finger wagers belong had the death penalty themselves until recently." Scalia is famous for picking intellectual street fights on and off the court, and this year he has been even more pugnacious than usual. In March, Scalia ridiculed the challenge to military tribunals during a speech in Switzerland. "Give me a break," he declared. "I had a son on that battlefield, and they were shooting at my son, and I'm not about to give this man who was captured in a war a full jury trial. I mean, it's crazy." A few weeks later, when a Boston reporter asked whether his participation at a Mass for Catholic lawyers might raise questions about his impartiality, Scalia fanned the fingers of his right hand under his chin. "That's Sicilian," he said, explaining that the gesture meant he "could not care less." Scalia can always be counted on to pick a fight, but what has changed this year is that other Justices, once relative wallflowers, are increasingly emboldened to fire back in kind.

In February, Ruth Bader Ginsburg, ordinarily a model of judicial composure, gave a speech in South Africa attacking [attacked] critics in Congress who have assailed her citations of international law as an offense against U.S. sovereignty. Those criticisms, she said, "fuel the irrational fringe" and have encouraged threats on her life. She singled out Scalia, who had called the consultation of "alien law" a form of "sophistry."

L- AT: Generic Link Turns

The link only goes our direction – the Court will *take the blame* but *won't get any credit*

Grosskopf and Mondak '98

(Anke, Prof PoliSci – U Pitt and Jeff, Prof PoliSci – Florida Stat, Political Research Quarterly,, v. 51, n3, September, p. 635)

Few of us cheer an umpire's good call with the same passion that we boo when the umpire gets one wrong, and we certainly do not remember the good calls when we talk about the game at work on Monday. We hypothesize that precisely such a negativity bias operates on perception concerning the Supreme Court, meaning that the harm the Court suffers from its unpopular rulings is not offset by a boost in public esteem from its popular rulings. In research consistent with the negativity effect, several studies of the Supreme Court have found that, as in other contexts, negative information is more memorable than positive. Specifically, respondents offered approximately three times more disliked than liked cases when answering open-ended questions about the Court's actions (Murphy and Tanenhaus 1968; Adamany and Grossman 1983). Also, a mathematical model of public support for the Supreme Court casts the negativity bias in formal terms, and shows that observed change in confidence in the Court in the period of 1973 to 1994 is consistent with the presence of a very strong negativity effect (Mondak and Smithey 1997).

More reasons they can't win a link turn –

A. Negative reactions overwhelm any positive benefit that the Court could achieve

Friedman '5

Barry Friedman, the Jacob D. Fuchsberg Professor of Law, New York University School of Law, December 2005, "Article: The Politics of Judicial Review," Texas Law Review, 84 Tex. L. Rev. 257, p. lexis

The critical question thus becomes how deep the Court's diffuse support among the general public is; for if theory holds, this is the leash on which the Court operates. Actually, a bungee cord might be a better analogy; for, in operation, the diffuse support hypothesis suggests that the judiciary can stray a certain distance from public opinion but that ultimately it will be snapped back into line. n393 Testing the length and flexibility of the cord is hard to do, however. It may be that there is greater tolerance for judicial deviation in some directions, such as with regard to the First Amendment. n394 Although the Court's degree of freedom of movement around public opinion may not be certain, positive scholars are fairly confident that one major determinant is information. The dynamics here are complex, but some generalities may be possible. Both negative and positive reactions to the Court influence public opinion, but negative reactions seem to be more intense and have a shorter half-life. n395 Perhaps it is for this reason that the [*328] less people hear about the Court, the better for it. n396 As time passes, people develop a store of good feelings about the Supreme Court, reflected in the

Court's relatively strong performance in public mood indicators. n397 Commentators who have studied public opinion and the Court regularly advise it to keep a low profile. n398

B. The abrupt nature of the ruling causes the link Marshall '2

[William Marshall, prof of law @ UNC, Fall 2002 (73 U. Colo. L. Rev. 1217)]

It might also be argued that the judicial activism question is misguided because judicial activism is not inherently wrong. Rather, the proper inquiry should simply be whether a case was correctly decided - not whether it was activist. Although I agree that a determination of activism is not the same as a determination of merit (an activist decision is not necessarily wrong, a non-activist decision is not necessarily correct), the activism inquiry can shed light on the merits issue. A decision that overturns a federal law while ignoring precedent, text, history, and jurisdictional limitations would appropriately be subject to an activist critique regardless of result. In addition, one need not be completely in the camps of Alexander Bickel, Robert Nagel, Mark Tushnet, and others to recognize that there is value in judicial restraint. Court overreaching may negatively affect the political capital of the judiciary. Alexander M. Bickel, *The Least Dangerous Branch: The Supreme Court at the Bar of Politics* (1962). Abrupt judicial action invalidating politically achieved results may undermine long-term support for the principles the decision was designed to achieve. Robert F. Nagel, *Constitutional Cultures: The Mentality and Consequences of Judicial Review* (1989). Courts may well be less receptive to progressive social and economic action than are the political branches. Mark Tushnet, *Taking the Constitution Away from the Courts* (1999). Finally, the activism critique is important in that it sets rhetorical constraints on actions that might otherwise appear unbounded. The legitimacy of a particular decision cannot be completely appraised without evaluating the deciding court's methodology. Activism is a part of that inquiry.

C. negativity bias Grosskopf and Mondak 98

(Anke, Prof PoliSci – U Pitt and Jeff, Prof PoliSci – Florida Stat, *Political Research Quarterly*, v. 51, n3, September, p. 636-7)

Few of us cheer an umpire's good call with the same passion that we boo when the umpire gets one wrong, and we certainly do not remember the good calls when we talk about the game at work on Monday. We hypothesize that precisely such a negativity bias operates on perception concerning the Supreme Court, meaning that the harm the Court suffers from its unpopular rulings is not offset by a boost in public esteem from its popular rulings. In research consistent with the negativity effect, several studies of the Supreme Court have found that, as in other contexts, negative information is more memorable than positive. Specifically, respondents offered approximately three times more disliked than liked cases when answering open-ended questions about the Court's actions (Murphy and Tanenhaus 1968; Adamany and Grossman 1983). Also, a mathematical model of public support for the Supreme Court casts the negativity bias in formal terms, and shows that observed change in confidence in the Court in the period of 1973 to 1994 is consistent with the presence of a very strong negativity effect (Mondak and Smithey 1997).

L- AT: Winners Win

This might be true for the President...definitely not of the Supreme Court – there is no restriction on what cases they can hear or how many of them they can arbitrate...this argument literally makes no sense

Even if they're right in theory, our link outweighs. Justices think in terms of limited capital and will constrain their rulings because of the plan

Yoo 4

(John C., Professor of Law, University of Texas, Texas LR, November, 83 Tex. L. Rev. 1)

n443. This last point is quite controversial. Jesse Choper has argued, for example, that "the people's reverence and tolerance is not infinite and the Court's public prestige and institutional capital is exhaustible." The judiciary's ability to strike down laws without incurring severe institutional costs, therefore, "is determined by the number and frequency of its attempts to do so, the felt importance of the policies it disapproves, and the perceived substantive correctness of its decisions." Choper, *supra* note 35, at 139. Others, by contrast, have asserted that the Court may - at least in some circumstances - actually enhance its legitimacy by actively confronting the political branches. See, e.g., Peter M. Shane, Rights, Remedies and Restraint, 64 Chi.-Kent L. Rev. 531, 546 (1988) (suggesting that, in some cases, the Court may enhance its legitimacy through opposing the political branches). It would be exceptionally difficult to verify either proposition empirically; about all that can be said with confidence is that the Court sometimes seems to behave as if it thinks its "institutional capital" is limited in this way, and the notion may at least constrain judicial behavior in this sense. See Young, State Sovereign Immunity, *supra* note 92, at 58-60.

L- AT: Oral Arguments Take Out the Link

Oral arguments mean nothing

Johnson 4

(Timothy R., Professor of Political Science – U Minnesota, Oral Arguments and Decision Making on the United States Supreme Court, p. 3)

The contention that oral arguments do not affect the Court's decisions is not unique to adherents of the attitudinal model, however. For instance, Abraham (1993) points out that while questions asked during oral arguments may "forecast the ultimate decision of the Court... in few, if any, instance is it possible to give accurate prognosis" (193). Further, Smith (1993) suggests that the justices use these proceedings simply to "probe the attorneys' minds for additional arguments and justifications to make their case opinions more complete and compelling" (271). The bottom line is that most Court scholars still adhere to the view that the oral arguments are little more than window dressing and have no effect on how justices make decisions.³ For them, the short time allotted for oral arguments, combined with the fact that justices' preferences are fixed, means that their votes will not change as a result of what transpires during these proceedings.⁴ In short, many Court scholars simply dismiss oral arguments because they find no direct link between these proceedings and disposition (final vote) of a case.

This magnifies the link

Johnson 1

(Timothy R., Professor of Political Science – U Minnesota, "Information, Oral Arguments, and Supreme Court Decision Making", American Politics Research 29(4))

If Supreme Court justices are to make decisions that satisfy their own goals, will be accepted by other actors, and will not violate institutional rules, they must possess information about cases that they hear. As such, it is no surprise that they seek, and receive, an abundance of information from a variety of sources. For example, the parties and amici curiae submit briefs that contain hundreds of pages of materials, arguments, and reasons the Court should decide a case in a particular manner. This clearly decreases the "information problem" (see Caldeira&Wright, 1988) facing the justices because these briefs often help them understand the range of policy options available to them, as well as how external actors might react to decisions (see, e.g., Epstein & Knight, 1998b; Epstein & Kobyłka, 1992). Although litigant and amicus briefs certainly quell the justices' information problem, they also create another, possibly more difficult dilemma: All of the information provided in briefs or obtained from other sources (law reviews, lower court decisions, etc.) is that which others want the justices to see and use. In other words, this information reflects the biased goals and preferences of the parties or groups who present it to the Court. Therefore, if the justices want additional, or different, information entered into the record, they must look elsewhere. One means by which justices can obtain information that they themselves want is by asking questions during oral arguments. Anecdotal evidence supports this assumption and also demonstrates that justices use this information

when writing opinions. For instance, in a comparison of justices' inquiries during oral arguments with positions taken by the majority in *TVA v. Hill* (1978), D. Cohen (1978) found explicit instances in which Justices Powell and Stevens use issues from these proceedings in their opinions. More recently, Benoit (1989) analyzed four incorporation cases to discern whether the Court's majority opinions include issues advanced by the winning party during oral arguments. Benoit's findings corroborate Cohen's but also make a key improvement over the earlier work. That is, Benoit's method controls for issues raised during oral arguments that were not discussed in the litigants' briefs, as well as for those that were raised in both instances. This is important because Benoit's findings suggest that oral arguments may provide information beyond the briefed arguments.

L- AT: Announced in June

The question's not when the decision's announced---the justices make and write their decisions before then obviously, and adding the plan means they'll change how they vote in the Zivotofsky case.

Uniqueness

Court will rule for the executive in Zivotofsky now but it's close and requires ruling against Congress

Victoria **Kwan 11/7**, Blog Editor for The Brooklyn Quarterly, citing Abed Ayoub, Legal & Policy Director of the Arab-American Anti-Discrimination Committee, "A Tinderbox of a Case," <http://brooklynquarterly.org/tinderbox-case/>

Abed Ayoub thinks that **it's going to be a close decision in Zivotofsky** v. Kerry, **the separation of powers battle between Congress and the President** over U.S. policy on Jerusalem that is currently under consideration at the Supreme Court. ¶ **I'd predict a 5-4 decision for the State Department**, or possibly even 6-3." Ayoub, the Legal and Policy Director for the American-Arab Anti-Discrimination Committee (ADC), said this week after attending the Court's oral argument in Zivotofsky. ¶ The case's central figure is a 12-year-old Jerusalem-born American citizen, Menachem Zivotofsky, who wants the birthplace line in his passport to say "Israel." While this sounds like a simple enough request, the Executive branch has a longstanding policy of not recognizing any state's sovereignty over the city, so his passport merely says that he is born in "Jerusalem," with no designated country of birth. **Zivotofsky and his parents invoked a 2002 law passed by Congress** that included a section (known as Section 214(d)) **ordering the State Department to amend the birthplace from "Jerusalem" to "Israel" for any American citizen who requests the change.** But **the State Department refused** to do so for Zivotofsky, **citing Congress' intrusion into the Executive's power to determine foreign policy and the harm that even a one-word change would inflict on American diplomacy efforts in the already-volatile Middle East.** Zivotofsky took the dispute to the Supreme Court, which must decide whether Section 214(d) is a proper exercise of Congress' constitutional powers. ¶ Because the law Congress wrote addresses only Jerusalem's relationship to Israel, Palestinian Americans born in that city do not have the option of swapping out "Jerusalem" for "Palestine" in their passports, which is where the ADC comes in. The organization, which describes itself as the country's largest Arab American civil rights grassroots group, is adamant in its belief that Jerusalem is not a part of Israel. If the ADC had its way, the passports of all Americans born in Jerusalem would list "Palestine" as the place of birth. Since it is unlikely that Congress or the Executive would approve such a policy, however, the ADC wants Palestinian Americans to at least be able to pick Palestine as their country of birth—the same right to self-identification that Zivotofsky argues he should have. ¶ According to Ayoub, most of the ADC's staff attended the **oral argument** on Monday, including the team of attorneys who had submitted an amicus brief in support of the State Department. "The **questions were in line with what we anticipated,**" he said. They were pleased when Justice Elena **Kagan characterized Section 214(d) as a "very selective vanity plate law" and Jerusalem as a "tinderbox"** where the United States government's every move regarding Israel or Palestine matters. They did not agree with Justice Antonin Scalia's comments that the Palestinians' feelings toward the matter were "irrelevant" or Chief Justice John G. Roberts, Jr.'s questions about whether the law would actually have "such dramatic effects on American foreign policy." Overall, though, Ayoub thought that the justices "really got to the nuts and bolts of the questions at hand." ¶ The only moment that was "genuinely surprising" came when Justice Samuel A. **Alito, Jr.**, in the course of questioning Zivotofsky's attorney, said that he did not "completely understand... the position of the United States regarding Israeli sovereignty over Jerusalem." Ayoub had expected the justices to be familiar with the Executive's official policy already. Despite this and Alito's skepticism of the State Department's position at oral argument, Ayoub still thinks that the 64-year-old justice **might** wind up being the fifth or sixth **vote for the Executive, alongside** Justices **Ginsburg, Breyer, Sotomayor, and Kagan.** "He had good questions." **Ayoub is also hopeful that** Justice Anthony M. **Kennedy will vote to strike down** **Section 214(d).** He sensed that "Kennedy was thinking about how the United States could be neutral on this"—the justice had suggested early on that the Executive could put "Israel" as the country of birth, but then add a disclaimer to say the birthplace line is neither an acknowledgment nor a declaration by the State Department or the President that Jerusalem belongs to Israel—but predicted that "**Kennedy] would probably fall on the side of the government.**"

Kerry Will Win, Kennedy is the swing, and any opposite decision will cause distress in the Middle East.

Bob 11/3- Yonah Jeremy Bob is legal affairs correspondent and an international affairs commentator for the Jerusalem Post. Yonah graduated with honors from both Columbia University, receiving a BA, and Boston University, receiving a JD, where he focused his studies on international relations and international law. ("US Supreme Court appears split on landmark

Jerusalem passport case”, <http://www.jpost.com/International/US-Supreme-Court-appears-split-on-landmark-Jerusalem-passport-case-380667>)

The US Supreme Court on Monday seemed divided on the question of whether it is constitutional to register “Israel” as the birthplace of Jerusalem-born Americans. After Monday’s hearing on the issue, Menachem Zivotofsky, the boy on whose behalf the case was filed, told reporters, “I am an Israeli and I want people to know that I am glad that I am an Israeli, and that I am not embarrassed by the fact that I am an Israeli.” During a long-awaited onehour argument, **the left-wing justices** on the nine-member court – Ruth Bader-Ginsburg, Stephen Breyer, Sonia Sotomayor, and Elena Kagan – **signaled support for the president’s position** against placing “Israel” on US passports of citizens born in Jerusalem, while **the right-wing judges** – Chief Justice John Roberts and Justices Antonin Scalia, Clarence Thomas, and Samuel Alito – **seemed more sympathetic to the position of Congress**, that “Israel” should be placed on such passports. Though the justices are not bound by their questions and comments at oral argument, their statements often hint at which way they are leaning. Still, justices sometimes rule differently than their earlier statements would indicate, if the purpose of their statements was merely to focus on resolving a specific legal concern. Justice Anthony Kennedy, often **the court’s swing vote** in close decisions, may find himself in that position in this case. He did not appear to commit clearly to either side. **He signaled some support for the president**, saying that if the case rests on who gets to recognize a foreign government’s authority, the State Department “should be given deference.” He mentioned, however, a possible compromise, suggested by some scholars, in which the 2002 US law requiring that “Jerusalem, Israel” be placed on the passports is enforced, but the government adds disclaimers saying the place of birth is not intended to recognize Israel’s sovereignty over the city – theoretically alleviating concerns that the policy change would be viewed as taking sides in the Israeli-Arab conflict. **The State Department has argued that if the court rules for Congress and upholds the law, “irreversible damage” could be caused to America’s power to influence the peace process.** The solicitor-general, who represents the president, has noted that US citizens born in other places in the region where sovereignty has not been established, including the West Bank and the Gaza Strip, are similarly prevented from stating a country of birth on their passports. **The case, Zivotofsky v. Kerry, has been winding through the US courts for years. The overall prediction has been that the Supreme Court will likely side with the president.**

Kerry Will Win, but it’s close

Lee 11/3- Ed Professor of Law, Director of the Program in Intellectual Property Law, and Norman and Edna Freehling Scholar (“Predicting the Winners in Zivotofsky v. Kerry and Omnicare v. Laborers District Council”, <http://blogs.kentlaw.iit.edu/iscotus/predicting-winners-zivotofsky-and-omnicare/>)

The Supreme Court heard oral argument in two cases on Monday. I’m predicting the winners of the Supreme Court cases based on the number of questions asked during oral argument. **Studies have shown that the advocate who receives more questions during oral argument is more likely to lose.** For more about this method, see my post on last Term’s Aereo case. Zivotofsky v. Kerry asks whether a federal statute that directs the Secretary of State, on request, to record the birthplace of an American citizen born in Jerusalem as born in “Israel” on a Consular Report of

Birth Abroad and on a United States passport is unconstitutional, on the ground that the statute “impermissibly infringes on the President’s exercise of the recognition power reposing exclusively in him.” This is a very close call. Petitioner (Zivotofsky) received 51 questions, while the Respondent (Solicitor General) received 46 questions. If you break down the questions asked by Justice, 3 Justices (Roberts, Scalia, and Alito) asked the Petitioner fewer questions, and 4 Justices (Kennedy, Breyer, Sotomayor, and Kagan) asked the Solicitor General fewer questions. Justice Ginsburg asked both sides an equal number of questions. Justice Thomas asked no questions. Given the conservative and liberal alignment of Justices in the question count, the key in this case appears to be Justice Kennedy. My confidence level is not high in predicting Kennedy’s vote based on the question count. He asked only one question more of the Petitioner, and his prior questioning in other cases does not correspond as well to the predicted pattern of outcomes based on question counts. Nonetheless, if I had to choose, my predicted winner is the Respondent (Solicitor General).

Link magnifier- the case is important

Savage 5/26- Staff Writer Duluth News Tribune, Washington Bureau (“U.S. Supreme Court to soon rule on 13 important cases”, David G.

<http://www.duluthnewstribune.com/news/3753072-us-supreme-court-soon-rule-13-important-cases>)

A seemingly minor case involving the passport of a 12-year-old American boy born in Jerusalem raises a major question: Does Congress or the president have the final word on foreign policy? Congress in 2002 passed a law giving U.S. parents a right to have “Israel” listed as the birthplace for a child born in Jerusalem, but Presidents George W. Bush and Barack Obama refused to abide by it, noting that both Israelis and Palestinians claim the city as their capital. They say the law interferes with a president’s “exclusive authority to recognize foreign states” and handle a sensitive matter of foreign policy. The case of Zivotofsky vs. Kerry was argued in November, so the decision is overdue.

It’s Close

Grand 15- Cara J. JD Candidate Duke University Law School 2016 (“ZIVOTOFSKY V. KERRY: OF PASSPORTS, POLITICS, AND FOREIGN POLICY POWERS”, Duke Journal of Constitutional Law, lexis)

The Supreme Court's repeated use of the Youngstown framework, including in its recent *Medellin v. Texas* n149 decision, strongly suggests that it will apply the framework in this case. This means that it will likely evaluate whether or not historical evidence supports an exclusive presidential recognition authority strongly enough to [*58] overcome Congress's will when the President's power is "at its lowest ebb." n150 As the Secretary correctly notes, this likely can be done if section 214(d) is found to constitute legislation beyond the outer bounds of Congress's constitutional authority. n151 Whether the Supreme Court will reach this holding is somewhat

unclear in light of the notable absence of precedent illuminating this particular tension between the legislative and executive branches. On the one hand, no Supreme Court dicta appear to strongly support the concept of an exclusive presidential recognition power beyond the reach of congressional intervention. The "sole organ" dictum upon which the D.C. Circuit largely relied has been historically misinterpreted. n152 In making the original statement, evidence suggests that Chief Justice Marshall was discussing only the President's power to execute a treaty absent congressional instruction. n153 He never claimed exclusive executive recognition power, but rather, supported Congress's ability to intervene in foreign policy matters. n154 Moreover, other Supreme Court dicta appear to contradict the theory of exclusive executive recognition authority, stating "Congress and the President share . . . [recognition] power." n155 However, the Court may ultimately be persuaded by existing scholarly arguments favoring a broad reading of the President's authority over matters concerning diplomacy. n156 Such arguments explain that the President enjoys a "residual" foreign affairs power under Article II, Section 1's grant of the "executive Power[,]," and that leading political writers of the founding era, including Locke, Montesquieu, and Blackstone, expressed that the executive power included broad foreign affairs powers. n157 In addition, the explicit allocations of some foreign affairs powers to other government bodies, such as the power to declare war to Congress, may constitute [*59] evidence of the outer bounds of the President's foreign affairs authority, which may otherwise be all-encompassing. n158 CONCLUSION Zivotofsky presents a unique dilemma to the Supreme Court in that it will force it to define, for the first time, the boundaries of legislative and executive power in matters of foreign recognition. Ambiguities in dicta and a stark absence of analogous historical examples will prevent the Court from drawing upon the security of well-established precedent and venerated pillars of constitutional interpretation. Instead, the Supreme Court will have to fulfill its ultimate role in examining what relationship, if any, the Constitution envisioned between these two branches in regard to foreign affairs, and what historical practice has suggested the future should hold for the implementation of so many crucial United States recognition decisions.

Impacts

i/l to M.E.

Decision for Zivotofsky would de-facto declare Palestine as a state

Ayoub 11/2- Abed Ayoub Legal & Policy Director of the Arab-American Anti-Discrimination Committee (“Zivotofsky v. Kerry decision could further destabilize Mideast”, <http://thehill.com/blogs/congress-blog/judicial/222492-zivotofsky-v-kerry-decision-could-further-destabilize-mideast>)

With new Israeli limits being placed on Palestinians seeking to pray in Jerusalem, violence mounting, and Palestinian neighborhoods being illegally colonized, Congress is ill-equipped to make a unilateral decision on the status of Jerusalem. Yet this could happen in the days ahead if the Supreme Court decides to strip the executive branch of its typical powers, ceding them to Congress, in the closely watched Zivotofsky v. Kerry case. Constitutional authority grants power to the executive in foreign affairs. For decades Americans have recognized the executive's power to determine United States foreign policy as paramount. The executive branch, not Congress, is tasked with the duty to defend and uphold American national interests. This obligation is based on the executive being elected by all citizens of the United States. Congressional members, however, are elected by citizens only from their state, territory, or district of residence. National interests are not the focus of Congressional members. The issues and interests of a Congress member's particular constituency and state are given greater weight, among other private interests. House representatives are always subject to the worries of surviving the next election and push forward local interests that will get them re-elected. Consequently, the executive is in a better position to shape foreign policy free of domestic constraints and pressures. The executive is also in a better position to react quickly to crises by taking substantive action as national interests change. Congress must go through the lengthy process of drafting legislation, debate, and having it pass both the House and Senate before any substantive action is taken. Executive orders are a product of this understanding of the limited capacity of Congress to enact substantive change to readily address vital and quickly evolving foreign policy concerns. Foreign policy must be made in one voice, not with conflicting and/or competing positions as in Congress. This necessity is easily achieved with the executive as the sole organ of United States external relations. It would be extremely difficult if 535 people were tasked with negotiating treaties and agreements, or establishing and maintaining diplomatic relations with other countries and international organizations. Furthermore, the president is the U.S. representative to the United Nations and the world. The president, not Congress, is held accountable by the international community for American compliance with international law and human rights. In U.S. domestic politics, political expediency incentivizes Congress to support ill-advised Israeli policy with little concern for Palestinian human rights and freedom or international law prohibitions on settlement activity. The executive branch has broader considerations. In the context of Jerusalem, the executive's power to decide U.S. foreign policy on the status of Jerusalem is imperative. Foremost, Israel's annexation of East Jerusalem is illegal. Israel's expansion of settlements in East Jerusalem, uprooting and displacing thousands of Palestinians, violates international law. Israel has taken this action with the purpose of altering the cultural makeup of Jerusalem to be more Israeli and to limit Palestinian population growth in the city. This is done in spite of United Nations Security Council Resolution 476, adopted in June 1980, which states that “all legislative and administrative actions taken by

Israel, the occupying Power, which purport to alter the character and status of the Holy City of Jerusalem, have no legal validity and constitute a fragrant violation of the Fourth Geneva Convention.” Nevertheless, Congress continues to pass numerous pro-Israel resolutions – even as Israel colonizes occupied Palestinian territory and kills civilians in Gaza. Congressional members often feel obliged to support these resolutions because to do otherwise would isolate them from pro-Israel constituents whose backing takes primacy over upholding the rights of politically weak Palestinians. This flawed incentive structure makes Congress ill-equipped to make a unilateral decision on the status of Jerusalem. The executive’s leadership role in peacekeeping and peacemaking around the globe makes the executive better positioned to determine the status of Jerusalem. Jerusalem is the center of the Israeli-Palestinian conflict. Since President Harry Truman recognized the nation of Israel in 1948, the executive branch has consistently exercised its duty to attempt to preserve peace by maintaining Jerusalem’s neutral status. Even former Israeli Prime Minister Yitzhak Rabin opposed U.S. legislation to move Israel’s capital to Jerusalem because he knew it would endanger the Oslo Peace Process. All presidents since Clinton have invoked the national security waiver to prevent the U.S. embassy from moving to Jerusalem in order to avoid sabotaging peace efforts. To recognize Jerusalem as the capital of Israel, either concretely or symbolically as the Passport Statute does, is political dynamite and would be grossly irresponsible. Federal case precedent should be upheld and afforded deference. The court should be mindful of Congressional politics and judicial activism being allowed to further destabilize the region.

Middle East Module

Destroys US ability to mediate tensions and prevent war in the Middle East

Abed **Ayoub 10/31**, Legal & Policy Director of the Arab-American Anti-Discrimination Committee, “Expert Q&A: The US Supreme Court & Jerusalem (Zivotofsky v. Kerry)”
<http://imeu.org/article/expert-qa-the-us-supreme-court-jerusalem-zivotofsky-v.-kerry>

Q - What would be the implications, legal and otherwise, **if the justices rule in favor of the plaintiff**? ¶ AA - “Preliminarily, the decision may require the U.S. Department of State to comply with all requests by U.S. citizens born in Jerusalem to have their country of birth recorded as Israel on their passport. The Department of State will not be able to refuse, contrary to current policy and practice, to record the place of birth as Jerusalem. ¶ “Foremost, **it will constitute a concrete and symbolic recognition of Israel’s sovereignty over Jerusalem** by the United States. First, **this recognition will place the U.S. at odds with its current policy** to remain neutral on **Jerusalem and the international community consensus that the entire city of Jerusalem is not part of** Israel. The pre-1967 boundaries as established by the 1949 armistice agreements and under international law through several United Nations resolutions recognize that East Jerusalem is part of Palestine. Under Section 214(d) all of Jerusalem, not just West Jerusalem, can be identified as part of Israel. Thus Section 214(d) recognition will explicitly constitute U.S. support and approval of Israel’s illegal annexation of East Jerusalem and Israel’s continuous violations of international law through the ongoing building of Israeli settlements in East Jerusalem. So not only will this case force the Executive to recognize Jerusalem as the capital and under the sovereignty of Israel but also the territorial boundaries of Palestine, disregarding the national origin of thousands of Palestinian Americans and violating international law. Thousands of Palestinian Americans’ right to also recognize Jerusalem as part of and/or the capital of Palestine is not recognized. ¶ “Second, **this will immediately hinder the role of the U.S. in the Israeli-Palestinian peace process and in the Middle East.** The sensitive status of **Jerusalem is at the center of** the Israeli-Palestinian conflict and **tensions in the Middle East. The U.S.’s neutrality has been key in easing tensions, as well as in bringing both sides to the table to resolve armed conflicts.** Thus not only will **U.S. credibility in the international community be at stake, which has broad implications on foreign affairs beyond the Israeli-Palestinian conflict**, but also the U.S. role as a key negotiating partner for a two-state solution. ¶ “The sensitive status of Jerusalem has further implications. To recognize Jerusalem as part of Israel, a Jewish state, will also recognize Jerusalem as a Jewish state. **To indicate recognition of Jerusalem as part of a Jewish state will directly impact and alienate the Christian and Muslim communities.** They hold Jerusalem as religious sacred “holy land” and have legitimate ties to Jerusalem. Additionally, **the case may also open the door and set a precedent to allow Congress to legislate on other sensitive foreign affairs** issues that are **usually reserved for the Executive, especially** issues concerning the Israeli-Palestinian conflict and the Middle East, effectively abrogating the power of the Executive and shifting the balance of powers largely to Congress. With this comes serious concern of biased and/or discriminatorily motivated legislation against and/or at the expense of Palestine and Palestinian Americans.”

Global nuclear war

James **Russell 9**, Senior Lecturer Department of National Security Affairs, Spring, “Strategic Stability Reconsidered: Prospects for Escalation and Nuclear War in the Middle East” Security Studies Center Proliferation Papers, <http://www.analyst-network.com/articles/141/StrategicStabilityReconsideredProspectsforEscalationandNuclearWarintheMiddleEast.pdf>

Strategic stability in the region is thus undermined by various factors: ⁽¹⁾ **asymmetric interests in the bargaining framework that can introduce unpredictable behavior from actors;** ⁽²⁾ **the presence of non-state actors** that introduce unpredictability into relationships between the antagonists; ⁽³⁾ **incompatible assumptions about the structure of the deterrent relationship** that makes the bargaining framework strategically unstable; ⁽⁴⁾ **perceptions by Israel and the United States that its window of opportunity for military action is closing, which could prompt a preventive attack.** ⁽⁵⁾ **the prospect that Iran’s response to pre-emptive attacks could involve unconventional weapons, which could prompt escalation by Israel and/or the United States;** ⁽⁶⁾ **the lack of a communications framework to build trust and cooperation among framework participants.** ^{These systemic weaknesses in the coercive bargaining framework all suggest that} **escalation by any the parties could happen either on purpose or as a**

result of **miscalculation** or the pressures of wartime circumstance. Given these factors, it is disturbingly easy to imagine scenarios under which a conflict could **quickly escalate** in which the **regional antagonists would consider the use of chemical, biological, or nuclear weapons**. It would be a mistake to believe the nuclear taboo can somehow magically **keep nuclear weapons from being used** in the context of an unstable strategic framework. Systemic **asymmetries** between actors in fact suggest a certain **increase in the probability of war** – a war in which **escalation could happen quickly** and from a variety of participants. Once such a war starts, events would likely develop a momentum all their own and decision-making would consequently be shaped in unpredictable ways. The international community must take this possibility seriously, and muster every tool at its disposal to prevent **such an outcome** which **would be an unprecedented disaster for the peoples of the region, with substantial risk for the entire world.**

Blocks

AT: Judicial Review Good

The link only goes one way---Court decisions don't build political capital

Schauer 4 [Frederick Schauer, Professor of the First Amendment, John F. Kennedy School of Government, Harvard University, 2004 (92 Calif. L. Rev. 1045)]

Examples of the effects of judicial supremacy hardly occupy the entirety of constitutional law. As the proponents of popular constitutionalism properly claim, **it is** simply **not plausible to argue that** all of the Supreme Court's decisions are counter-majoritarian, nor that **the Court is unaware of the potential repercussions if a high percentage of its decisions diverges too dramatically from the popular or legislative will**. Nevertheless, **there is no indication that the Court uses its vast repository of political capital only to accumulate more political capital**, and in many areas judicial supremacy has made not just a short-term difference, but a long-term difference as well. Perhaps most obvious is school prayer. For over forty years the Court has persisted in its view that organized prayer in public schools is impermissible under the Establishment Clause n59 despite the fact that public opinion is little more receptive to that view now than it was in 1962. n60 So too with flag burning, where the Court's decisions from the late 1960s n61 to the present have remained dramatically divergent from public and legislative opinion. n62 Or consider child pornography, where the Court's decision in Ashcroft v. Free Speech Coalition n63 flew in the face of an overwhelming congressional majority approving the extension of existing child pornography laws to virtual child pornography. Similarly, in the regulation of "indecentcy," the Court has spent well over a decade repeatedly striking down acts of Congress that enjoyed overwhelming public and [*1059] congressional support. n64 Most dramatic of all, however, is criminal procedure, where the Supreme Court's decision in Dickerson v. United States, n65 invalidating a congressional attempt to overrule Miranda v. Arizona, n66 underscores the persistent gap in concern for defendants' rights between Congress and the public, on the one hand, and the Supreme Court, on the other.

AT: Kennedy No Vote Switch

Uniqueness evidence says Kennedy is key---he thinks capital is finite and works to limit fights with Congress

Michael B. **Rappaport**, University Professor, University Of San Diego School Of Law. The Rehnquist Court, Northwestern University Law Review, Fall, **2004**. 99 Nw. U.L. Rev. 369

If these critiques of the Rehnquist Court are not accurate, then how should we portray the Court? The answer can be summarized in a sentence: It is the O'Connor Court or perhaps the O'Connor-Kennedy Court. The three conservatives cannot obtain a majority without both O'Connor and Kennedy joining the opinion, and therefore these justices dominate the Court's decisions. The O'Connor-Kennedy appellation fairly reflects the decisions and overall work product of the Court as I have been describing it. O'Connor [*377] and Kennedy are political moderates, often leaning in a conservative direction, but sometimes following liberal views. In addition, neither Justice appears willing to consistently impose his or her views on other political institutions. One important element of O'Connor and **Kennedy's judicial behavior is** that they appear **especially concerned with protecting the Court's political capital**. Consequently, these **Justices would be unlikely to reach too many decisions that would lead to significant attacks on the Court**. Many of the **decisions** that have been criticized for excessive judicial supremacy **are** actually better **understood as reflecting an undue concern with the Court's political capital**. For example, Larry Kramer portrays United States v. Dickerson, which held unconstitutional a congressional statute that conflicted with Miranda v. Arizona, as reflecting a judicially supremacist view that took umbrage at, and refused to defer to, a constitutional interpretation by Congress. n46 In my view, however, Dickerson is better understood as deriving from the Court's unwillingness to be seen as overruling Miranda. Miranda arguably is the most famous decision in all of constitutional law. Citizens who know little else about constitutional law know from television and movies about "the right to remain silent." If the Rehnquist Court had overruled Miranda, it would have not only been criticized by elite opinion but also taken a highly visible action to eliminate "a constitutional right." As a result, Dickerson could have been used to suggest that the Court was demolishing the people's liberties generally. In this situation, the most politically sensitive "conservative" Justices - O'Connor, Kennedy, and Rehnquist - bolted. A similar analysis applies to Planned Parenthood v. Casey, where the joint opinion of Justices O'Connor, Kennedy, and Souter refused to overrule Roe v. Wade. n47 Kramer again views this case as involving undue judicial supremacy because the joint opinion was concerned about the appearance created to its independence and credibility if it were to "overrule under fire ... a watershed decision." n48 While I certainly do not want to defend the joint opinion on legal grounds, I see no reason to doubt that it was motivated by its stated fear for the political capital of the Court rather than disrespect for the public's constitutional views. Had the Court overruled Roe v. Wade, it was likely to have been subjected to a vehement attack by the political elite as well as by large numbers of ordinary citizens. These attacks could have charged not only that the Court had mistakenly eliminated a constitutional right, but that it had responded to political pressure. [*378] **It was much safer for the Court to approve the precedent while suggesting that the decision was wrong as an original matter**. n49 Finally, **the Court's federalism decisions can also be understood as an element of Justice O'Connor and Kennedy's political sensitivity**. n50 While the five federalism Justices clearly seek to enforce constitutional federalism, **the Court has not struck down any politically important legislation that might provoke the political branches to strongly attack it**. Justices O'Connor and Kennedy have also adopted narrow positions regarding federalism, both in separate concurrences and in their votes. n51 It would seem that Justices O'Connor and Kennedy are wary of doing anything that would provoke the strong reactions that occurred during the New Deal.

Kennedy's a switch-hitting centrist but the plan flips his vote

Bilionis 5, Samuel Ashe Distinguished Professor at the University of North Carolina-Chapel Hill, (Samuel, 83 N.C.L. Rev. 1353, Lexis)

We could say that Justice **Kennedy is a switch-hitting centrist**. When shared faith cannot serve as the centering force, a more palatable, metaphorically centered and grounded framework that avoids the extremes of the competition does. **(Given his ability to produce rulings that please conservatives one day and liberals the next, we also could say that Justice Kennedy can hit the ball to all fields.)** It should interest us that **an intelligent man** who obviously has devoted much thought to these matters **has chosen to invoke both of these brands of centrism to stake his ground** in the areas that have proved most controversial during his years on the Supreme Court. Justice **Kennedy** plainly **perceives himself as a centrist and wishes to be perceived as one**. These are the ways he has chosen to construct a centrist judicial personam.

AT: No Palestine War

Most likely scenario for war---normal checks on conflict don't apply

Michael **Singh 11**, Washington Institute director, 9/22, "What has really changed in the Middle East?",

http://shadow.foreignpolicy.com/posts/2011/09/22/what_has_really_changed_in_the_middle_east

Third, and **most troubling, the Middle East is likely to be a more dangerous and volatile region in the future. For the past several decades, a relatively stable regional order has prevailed**, centered around Arab-Israeli peace treaties and close ties between the United States and the major Arab states and Turkey. **The region was not conflict-free by any means**, and Iran, Iraq, and various transnational groups sought to challenge the status quo, albeit largely unsuccessfully. **Now, however, the United States appears less able or willing to exercise influence in the region, and the leaders and regimes who guarded over the regional order are gone or under pressure. Sensing either the need or opportunity to act autonomously, states like Turkey, Saudi Arabia, and Iran are increasingly bold, and all are well-armed and aspire to regional leadership. Egypt, once stabilized, may join this group. While interstate conflict is not inevitable by any means, the risk of it has increased and the potential brakes on it have deteriorated.** Looming over all of this is Iran's quest for a nuclear weapon, which would shift any contest for regional primacy into overdrive.

1NR Zivotofsky Impacts / Internals

DA wrecks foreign affairs SOP—a Zivotofsky win causes WW3

Seth **Lipsky 14**, editor of the New York Sun and foreign editor and member of the Wall Street Journal editorial board and founding editor of The Forward, 4/22/, “The Jerusalem Question: Will a U.S. Court Case Trigger WWIII?”, <http://www.haaretz.com/opinion/.premium-1.586566>)

The decision of the U.S. Supreme Court Monday to give another hearing to one of the most explosive cases before it in years – the so-called Jerusalem question – certainly sets the stage for some high court drama in the Middle East. It concerns whether Secretary of State John Kerry will have to bow to Congress and state in Menachem Binyamin Zivotofsky’s U.S. passport that he was born in Israel. The law that requires Kerry to do this – for Zivotofsky, or any other American born in Jerusalem who wants Israel listed as his place of birth – was passed in 2002 by an almost unanimous House and a unanimous Senate. The Jerusalem requirement was part of a larger bill funding the State Department. It was signed by one of America’s most pro-Israel presidents, George W. Bush. But **Bush issued a signing statement saying the requirement to issue consular documents listing Jerusalem as part of Israel infringed on his executive powers.** He may have promised to move the American embassy to Jerusalem, but he defaulted on that. He also refused to yield to Congress on the passport question. President Barack **Obama took the same position, as did secretaries of state Colin Powell, Hillary Clinton and now Kerry.** Clinton and Kerry balked, even though they’d been in the Senate that passed the law unanimously. They all tried to dodge it by saying that the question of Jerusalem was the president’s to decide and, in any event, was a political matter beyond the ken of the courts. **All the liberal commentators and the anti-Israel left were certain Master Zivotofsky was going to lose.** And he was losing, until it reached the Supreme Court the first time. Then, in March 2012, the Supreme Court stunned the foreign policy bar by casting aside Secretary of State Clinton’s pettifoggery. It did so by a vote of 8-1, in a stern opinion written by Chief Justice John Roberts, who told the lower court in no uncertain terms that it would have to step up and decide the matter. Roberts made clear that the courts weren’t being asked to decide whether Jerusalem was part of Israel. That is a political question. They were being asked to decide whether Congress has the authority, under the Constitution, to decide the political question. “This is what courts do,” Roberts wrote. “The political question doctrine poses no bar to judicial review of this case.” So, the matter went back to **the second most powerful bench:** the United States Court of Appeals for the District of Columbia Circuit. Last year, it issued its second ruling against Zivotofsky. It **held that Congress had infringed on the president’s so-called “recognition power.”** So Zivotofsky went back to the Supreme Court and successfully asked for a second hearing. Now **the Nine will have an opportunity to answer** what I call **the World War III question.** It was first posed by Justice Sonia **Sotomayor**, who **asked point-blank about the possibility that war could result from America listing “Israel” as the country of birth of a person born in Jerusalem.** “Let’s assume that **a dozen nations said this designation on the passport is** – we view as **an act of war:** if the United States is going to do this, we’re going to view it as an act of war,” Justice Sotomayor said. “Would that then permit the president to ignore Congress...” The court’s transcript indicates the justice let the last word hang in the air. Zivotofsky’s lawyer – the famed constitutionalist Nathan Lewin – replied, “If Congress determines that in any event this is what the passport should say, then that is Congress...” He was interrupted by one of the justices, and the moment, through no fault of his own, was lost. The answer is – or ought to be – that if it’s war that the Supreme Court fears, then the decision belongs to Congress. For it is expressly to Congress that the Constitution grants the power to declare war in the first place. There were signs that **the Supreme Court was having a hard time deciding** even whether to take a second look at the case. Zivotofsky’s petition had been on the docket for its secret conference three times so far this term, and no decision had emerged. But **the court finally granted certiorari, setting the stage for a final showdown. The consequences are** potentially **huge** – not only for Israel, but also for other countries at a time when we have an administration that wants to retreat overseas and a Congress that doesn’t.

Turns case---undermines the President’s recognition power---destroys diplomatic credibility

Donald **Verrilli 14**, US Solicitor General, J.D. from Columbia Law School, September 2014, Brief for the Respondent in Zivotofsky v Kerry,

http://www.americanbar.org/content/dam/aba/publications/supreme_court_preview/BriefsV4/13-628_resp.authcheckdam.pdf

ii. **Section 214(d)**, which purports to establish "United States policy with respect to Jerusalem as the capital of Israel," **encroaches on the President's exclusive constitutional authority to recognize foreign sovereigns**. Since Israel's founding, U.S. Presidents have followed a consistent policy of **recognizing no state as having sovereignty over Jerusalem**. Section 214(d) purports to require the President simultaneously to express precisely the opposite view in official communications with foreign sovereigns-and to do so at the behest of individual citizens seeking to express their personal views on what the Nation's position should be. The Executive historically has been understood to possess inherent constitutional authority to determine passport content as it pertains to the conduct of diplomacy. Although Congress may enact passport legislation in furtherance of its enumerated powers, it may not encroach on the President's use of passports as instruments of diplomacy. Section 214(d) bears no apparent relation to Congress's enumerated powers over foreign commerce and naturalization-the only sources of authority petitioner and his amici identify as supporting Section 214(d)-and it bears no resemblance to the passport regulations Congress has historically enacted. Thus, although petitioner seeks to justify Section 214(d) as "passport legislation", that label fairly describes Section 214(d) only insofar as the provision uses passports as a vehicle to accomplish a recognition-related purpose. The Executive's practice of designating "Jerusalem" as the birthplace on passports implements the President's recognition position. By reversing that practice, Section 214(d) would force the Executive to convey to foreign sovereigns that -contrary to the President's longstanding recognition position-the United States has concluded that Israel exercises sovereignty over Jerusalem. **A decision by this Court requiring the Executive to implement Section 214(d) would** thus result in significant uncertainty about the United States' position and **undermine the President's ability to effectively exercise and implement his recognition power. It would also force the Executive to take an inconsistent position in conducting foreign relations** on behalf of the United States, thereby **undermining the President's credibility and his conduct of sensitive diplomatic efforts**.

AT: Peace Process Fails

Even if total resolution is unlikely, US mediation is key to strengthen moderates and prevent escalation

Richard **Haass 13**, President, Council on Foreign Relations, "The Irony of American Strategy," May/June 2013, Foreign Affairs, <http://www.cfr.org/middle-east-and-north-africa/irony-american-strategy/p30534>

As **for the Israeli-Palestinian divide, the prospects for advancing reconciliation and peace are poor. But this is not an argument for standing pat; bad situations can and do get worse. Ideally, the Israeli government or the Palestinian Authority would put forward a comprehensive peace proposal that would generate real excitement and support both at home and across the divide; failing that, the U.S. should articulate principles for establishing a sustainable peace settlement that would leave all parties better off. Hopefully, a political process and negotiations would then ensue.** Hamas, which controls Gaza, should be able to participate in negotiations only if it eschews violence and demonstrates a willingness to coexist with Israel. **Washington should do what it can to bolster moderate forces in the Palestinian community and discourage Israel from engaging in activities -- including, but not limited to, settlement construction -- that will further undermine what few prospects remain to create a viable Palestinian state.**

AT: ME War Defense

Middle East war sparks global great power war

Walter Russell **Mead 14**, Professor of Foreign Affairs and Humanities at Bard College; Editor-at-Large of The American Interest magazine, 7/7/14, "Have We Gone From a Post-War to a Pre-War World?," http://www.huffingtonpost.com/walter-russell-mead/new-global-war_b_5562664.html

One hundred years later, the world is nervously keeping its eyes peeled for misguided chauffeurs and asking itself whether history could repeat. The great powers are at peace, and trade and cultural ties between nations seem closer than ever before, yet the international scene is in many ways surprisingly brittle. In particular, a rising naval power is challenging an established hegemon, and a "powder keg" region replete with ethnic and religious quarrels looks less stable by the day.

In 1914, Germany was the rising power, the U.K. the weary hegemon and the Balkans was the powder keg. In 2014, China is rising, the United States is staggering under the burden of world leadership and the Middle East is the powder keg.

Only a few years ago, most western observers believed that the age of geopolitical rivalry and great power war was over. Today, with Russian forces in Ukraine, religious wars exploding across the Middle East, and territorial disputes leading to one crisis after another in the East and South China seas, the outlook is darker. Serious people now ask whether we have moved from a post-war into a pre-war world. Could some incident somewhere in the world spark another global war?

MIDDLE EAST POWDER KEG

Let's start with the powder keg. The immediate cause of the fighting in World War I was the set of ethnic and religious conflicts in the Balkans. In the second half of the 19th century, economic development and modernization led to heightened competition among the region's peoples. The drive for self-determination set Croats, Serbs, Magyars, Kosovars, Bosniaks, Macedonians, Bulgarians, Greeks and others at one another's throats. The death toll mounted and the hatred grew as massacres and ethnic cleansing spread -- and the ability of the outside powers to control the region's dynamics shrank as the imperial powers were themselves undermined by rising social and nationalist tensions.

The Middle East today bears an ominous resemblance to the Balkans of that period. The contemporary Middle East has an unstable blend of ethnicities and religions uneasily coexisting within boundaries arbitrarily marked off by external empires. Ninety-five years after the French and the British first parceled out the lands of the fallen Ottoman caliphate, that arrangement is now coming to an end. Events in Iraq and Syria suggest that the Middle East could be in for carnage and upheaval as great as anything the Balkans saw. The great powers are losing the ability to hold their clients in check; the Middle East today is at least as explosive as the Balkan region was a century ago.

GERMANS THEN, CHINESE NOW

What blew the Archduke's murder up into a catastrophic world war, though, was not the tribal struggle in southeastern Europe. It took the hegemonic ambitions of the German Empire to turn a local conflict into a universal conflagration. Having eclipsed France as the dominant military power in Europe, Germany aimed to surpass Britain on the seas and to recast the emerging world order along lines that better suited it. Yet the rising power was also insecure, fearing that worried neighbors would gang up against it. In the crisis in the Balkans, Germany both felt a need to back its weak ally Austria and saw a chance to deal with its opponents on favorable terms.

Could something like that happen again? China today is both rising and turning to the sea in ways that Kaiser Wilhelm would understand. Like Germany in 1914, China has emerged in the last 30 years as a major economic power, and it has chosen to invest a growing share of its growing wealth in military spending.

But here the analogy begins to get complicated and even breaks down a bit. Neither China nor any Chinese ally is competing directly with the United States and its allies in the Middle East. China isn't (yet) taking a side in the Sunni-Shia dispute, and all it really wants in the Middle East is quiet; China wants that oil to flow as peacefully and cheaply as possible.

AMERICA HAS ALL THE ALLIES

And there's another difference: alliance systems. The Great Powers of 1914 were divided into two roughly equal military blocs: Austria, Germany, Italy and potentially the Ottoman Empire confronted Russia, France and potentially Britain.

Today the global U.S. alliance system has no rival or peer; while China, Russia and a handful of lesser powers are disengaged from, and in some cases even hostile to, the U.S. system, the military balance isn't even close.

While crises between China and U.S. allies on its periphery like the Philippines could escalate into US-China crises, we don't have anything comparable to the complex and finely balanced international system at the time of World War I. Austria-Hungary attacked Serbia and as a direct result of that Germany attacked Belgium. It's hard to see how, for example, a Turkish attack on Syria could cause China to attack Vietnam. Today's crises are simpler, more direct and more easily controlled by the top powers.

On the other hand, the Middle East's supplies of oil will keep China, as well as other powers, more involved in events there than geography would suggest. The Balkans had no products in 1914 that the rest of the world much cared about; the Middle East looms much larger in the global economy than the Balkan peninsula ever has. Already, countries including Russia and Iran have been involving themselves in Iraq. If the slide into regional chaos continues and countries like China and Japan believe that direct action is needed to secure their oil supplies, almost anything could happen in a few years.

Legitimacy DA Michigan 7

A. Uniqueness – The Supreme Court has legitimacy – that’s key to enforcement of its decisions

Hillygus’12 [Sunshine, professor of political science at Duke University, Perceptions of Supreme Court Legitimacy, You Gov, 7/15/2012

<https://today.yougov.com/news/2012/07/15/perceptions-supreme-court-legitimacy/> LM]

In the two weeks since the Supreme Court upheld Obama’s Affordable Care Act (ACA), journalists and pundits have scrutinized the public’s response. Most have found quite mixed reviews of the decision. For example, Pew reports divided approval of the court’s decision, with “disappointed” being the most common one-word reaction to the ruling. Given this, we wondered about more general evaluations of the court’s legitimacy since the ruling; especially in light of Larry Bartels recent post here at Model Politics. The U.S. Supreme Court is a unique institution in American politics because it lacks explicit mechanisms to enforce its rulings (i.e. the “power of purse or sword”), relying instead on the goodwill of other institutions, and of the American public. This makes the study of Supreme Court legitimacy particularly important. Broadly speaking, the received wisdom in the scholarly literature on Supreme Court legitimacy is comprised of two, related observations: (1) the Court is perceived as above the “political fray” that characterizes the other branches, and thus enjoys relatively high levels of legitimacy, and (2) legitimacy itself rests on solid foundations, such as support for democratic values, and is thus independent of its decision-making as it relates to citizens’ partisan or ideological preferences. However, a forthcoming article in the American Journal of Political Science (ungated here, summary here), co-authored by one of us (Christopher Johnston) and Brandon Bartels, concludes that legitimacy is conditional on perceptions of the ideological direction of the Court’s decision making.

B. Insert Link

C. Impact – Legitimacy key to Democracy

Peretti 1999 (Terri J., In Defense of a Political Court, Princeton University Press)

Should the Court lose its legitimacy and, consequently, its power, we in turn lose the benefits that only the Court can provide. Vitally important constitutional rights and liberties, as well as minority groups, would be unprotected and would likely suffer at the hands of an indifferent or hostile majority. An additional loss of paramount importance is the ideal and the reality of the rule of law. All government action would be reduced to arbitrary will and force, rather than being justified according to reason and, thus, rendered legitimate. The consequences of the Court losing its legitimacy and the ability to play its specialized role, if we are to believe Philip Kurland, are horrible indeed.

Democracy solves war

Diamond 95, (Larry Diamond, Promoting Democracy in the 1990s: Actors and Instruments, Issues and Imperatives, Carnegie Commission, December 1995,

<http://carnegie.org/fileadmin/Media/Publications/PDF/Promoting%20Democracy%20in%20the%201990s%20Actors%20and%20Instruments,%20Issues%20and%20Imperatives.pdf>)

Other Threats. This hardly exhausts the lists of threats to our security and well-being in the coming years and decades. In the former Yugoslavia nationalist aggression tears at the stability of Europe and could easily spread. The flow of illegal drugs intensifies through increasingly powerful international crime syndicates that have made common cause with authoritarian regimes and have utterly corrupted the institutions of tenuous, democratic ones. Nuclear, chemical, and biological weapons continue to proliferate. The very source of

life on Earth, the global ecosystem, appears increasingly endangered. Most of these new and unconventional threats to security are associated with or aggravated by the weakness or absence of democracy, with its provisions for legality, accountability, popular sovereignty, and openness. LESSONS OF THE TWENTIETH CENTURY The experience of this century offers important lessons. Countries that govern themselves in a truly democratic fashion do not go to war with one another. They do not aggress against their neighbors to aggrandize themselves or glorify their leaders. Democratic governments do not ethnically "cleanse" their own populations, and they are much less likely to face ethnic insurgency. Democracies do not sponsor terrorism against one another. They do not build weapons of mass destruction to use on or to threaten one another. Democratic countries form more reliable, open, and enduring trading partnerships. In the long run they offer better and more stable climates for investment. They are more environmentally responsible because they must answer to their own citizens, who organize to protest the destruction of their environments. They are better bets to honor international treaties since they value legal obligations and because their openness makes it much more difficult to breach agreements in secret. Precisely because, within their own borders, they respect competition, civil liberties, property rights, and the rule of law, democracies are the only reliable foundation on which a new world order of international security and prosperity can be built.

Uniqueness

Court legitimacy high now- popular recent court decision

Liptak 6/26 [Adam, American journalist, lawyer and instructor in law and journalism & Supreme Court correspondent for The New York Times, "Gay Marriage Backers Win Supreme Court Victory", the New York Times, 6/26/15

<http://www.nytimes.com/2015/06/27/us/supreme-court-same-sex-marriage.html> LM]

WASHINGTON — In a long-sought victory for the gay rights movement, the Supreme Court ruled on Friday that the Constitution guarantees a right to same-sex marriage. Justice Anthony M. Kennedy wrote the majority opinion in the 5 to 4 decision. He was joined by the court's four more liberal justices. The decision, the culmination of decades of litigation and activism, came against the backdrop of fast-moving changes in public opinion, with polls indicating that most Americans now approve of same-sex marriage. Justice Kennedy said gay and lesbian couples had a fundamental right to marry. "No union is more profound than marriage, for it embodies the highest ideals of love, fidelity, devotion, sacrifice, and family," he wrote. "In forming a marital union, two people become something greater than once they were." "It would misunderstand these men and women to say they disrespect the idea of marriage," Justice Kennedy said of the couples challenging state bans on same-sex marriage. "Their plea is that they do respect it, respect it so deeply that they seek to find its fulfillment for themselves. Their hope is not to be condemned to live in loneliness, excluded from one of civilization's oldest institutions. They ask for equal dignity in the eyes of the law. The Constitution grants them that right." Chief Justice John G. Roberts Jr., in a dissent joined by Justice Antonin Scalia and Clarence Thomas, said the Constitution had nothing to say on the subject. "If you are among the many Americans — of whatever sexual orientation — who favor expanding same-sex marriage, by all means celebrate today's decision," Chief Justice Roberts wrote. "Celebrate the achievement of a desired goal. Celebrate the opportunity for a new expression of commitment to a partner. Celebrate the availability of new benefits. But do not celebrate the Constitution. It had nothing to do with it." In a second dissent, Justice Scalia mocked Justice Kennedy's soaring language. "The opinion is couched in a style that is as pretentious as its content is egotistic," Justice Scalia wrote of his colleague's work. "Of course the opinion's showy profundities are often profoundly incoherent." As Justice Kennedy finished announcing his opinion, several attendees seated in the bar section of the court's gallery wiped away tears, while others grinned and exchanged embraces. As a relatively young gay man I am glad I get to live in this time ... My life is much better than it would have been even just 20 years ago. Thank you to all the previous generations who fought hard for this for so long. Justice John Paul Stevens, who retired in 2010, was on hand for the decision and many of the justices' clerks took seats in the chamber, which was nearly full as the ruling was announced. In earlier civil rights cases, the Supreme Court had moved cautiously and methodically, laying careful judicial groundwork for a transformative decision. As late as October, the justices ducked the issue, refusing to hear appeals from rulings allowing same-sex marriage in five states. That decision delivered a tacit victory for gay rights, immediately expanding the number of states with same-sex marriage to 24, along with the District of Columbia, up from 19. Largely as a consequence of the Supreme Court's decision not to act, the number of states allowing same-sex marriage has since grown to 36, and more than 70 percent of Americans live in places where gay couples can marry. The court did not agree to resolve the issue for the rest of the nation until January, in cases filed by gay and lesbian couples in Kentucky, Michigan, Ohio and Tennessee. The court heard extended arguments in April, and the justices seemed sharply divided over what the Constitution has to say about same-sex marriage. I feel as if we're emerging from the Dark Ages and into the Renaissance. The dismal right wing years after 9/11 are finally ending. Now if... Lawyers for the plaintiffs said their clients had a fundamental right to marry and to equal protection, adding that the bans they challenged demeaned their dignity, imposed countless practical difficulties and inflicted particular harm on their children. The Obama administration, which had gradually come to embrace the cause of same-sex marriage, was unequivocal in urging the justices to rule for the plaintiff

Recent decision on Obama Care makes Court Legitimacy High

Beutler 15 (Brian, senior editor at The New Republic, 04/22/15, The New Republic, "Obamacare's Rising Popularity Could Sink Republicans in 2016", <http://www.newrepublic.com/article/121614/obamacare-popular-kaiser-poll> , 06/25/15)

Two days ago, I observed that the Affordable Care Act remained barely unpopular, with a 2 percent unfavorability margin that could be attributed entirely to elderly people who have little-to-no stake in the law. ¶ A day later, the Kaiser Family Foundation updated its tracking poll numbers and revealed that the margin hasn't merely disappeared: It has reversed. ¶ Even accounting for cranky old people, Obamacare's popularity is above water, 43 percent to 42 percent, and its trend lines are improving. The numbers reflect a steady but remarkable climb back from November 2013, when the Healthcare.gov outage left the law under water by a 16-point margin. Part of the reversal owes to the simple fact that the website now works. But even that only returned the numbers to their pre-launch levels, when the law was under water by margins of 4 to 8 points. ¶ It's hard to know what accounts for the rest. I'd wager the 20 million Americans who now count on Obamacare for their insurance coverage have something to do with it. ¶ Whatever explains it, conservatives are adjusting to the new reality with predictable equanimity. ¶

Public pleased with recent decision on Obama Care- Legitimacy high now
Mangan 15 (Dan, healthcare reporter for CNBC, 04/21/15, CNBC, "Obamacare is becoming more popular: Kaiser poll", <http://www.cnbc.com/id/102602525> , 06/25/15 DanLeigh)

For the first time since President Barack Obama won re-election, his signature health-care law may have slightly more fans than foes, a new poll shows. ¶ The Kaiser Health Tracking poll, released Tuesday, found that 43 percent of the public said they have a favorable opinion of the Affordable Care Act. That compares with 42 percent who said they view the law negatively. ¶ The 1 percentage point gap is within the poll's margin of error and is not statistically significant, the Kaiser Family Foundation said. ¶ Nonetheless, the results follow several months of that gap narrowing, and mark the first time since Obama's November 2012 re-election that the number of people with a favorable view on the law has topped those with an unfavorable view. ¶ "I think what we're seeing is a sort of a return to the normal state" of public opinion about the health law, said Mollyann Brodie, who oversees the poll for Kaiser. ¶ "This narrowing of opinion is occurring at the same time there hasn't been a lot of bad news about the law," she said. ¶ The survey, which questioned 1,506 adults and had a sampling error of plus or minus 3 percentage points, also comes amid signs that the Republican push to repeal the Affordable Care Act has lost steam. ¶

Supreme Court legitimacy high now – upheld precedent on Obamacare Cohn and Young, 6/25

Johnathon Cohn and Jeffrey Young, senior national correspondent and health care reporter respectively for the Huffington Post, "Supreme Court Rejects Obamacare Lawsuit, Preserving Insurance For Millions," 6/25/2015, Huffington Post, http://www.huffingtonpost.com/2015/06/25/obamacare-supreme-court-decision_n_7346048.html

WASHINGTON -- The latest and possibly the last serious effort to cripple Obamacare through the courts has just failed. On Thursday, for the second time in three years, the Supreme Court rejected a major lawsuit against the Affordable Care Act -- thereby preserving the largest expansion in health coverage since the creation of Medicare and Medicaid half a century ago. The stakes of the case, *King v. Burwell*, were enormous. Had the plaintiffs prevailed, millions of people who depend upon the Affordable Care Act for insurance would have lost financial assistance from the federal government. Without that money, most of them would have had to give up coverage altogether. And the loss of so many customers would have forced insurers to raise premiums, seriously disrupting state insurance markets. But two of the court's conservatives, Chief Justice John Roberts and Justice Anthony Kennedy, joined the court's four liberals in rejecting the lawsuit in a 6-3 decision. Roberts delivered the opinion for the majority. And the decision was a concise, stinging rebuke of the plaintiffs, who contended that Congress intended to write a law that would leave so many people without coverage, and cause such disarray. "Congress passed the Affordable Care Act to improve health insurance markets, not destroy them," Roberts wrote. The decision is a major defeat for conservatives, who have been trying to wipe Obamacare off the books ever since its enactment in 2010. The sweeping health care reform law, a key component of President Barack Obama's legacy, now appears to be secure at least through the 2016 elections. "Today, after more than 50 votes in Congress to repeal or weaken this law, after a presidential election based in part on preserving or repealing this law, after multiple challenges to this law in front of the Supreme Court, the Affordable Care Act is here to stay," Obama said.

Legitimacy high now - most recent overturn was five years ago, and didn't affect the public Goldstein, 2010

Thomas Goldstein, attorney and founder of Goldstein and Russell which is a Supreme Court litigation firm, "Supreme Court Overturns Restriction On Corporate and Union Spending In Elections," February 2010, Metropolitan Corporate Counsel, Southwest Edition

On January 21, in a decision written by Justice Anthony Kennedy, the Supreme Court by a five-to-four vote overturned decades of

restrictions on the ability of corporations and labor unions to use general treasury funds in support of, or opposition to, candidates for federal office. The Court did uphold (by an eight-to-one vote) the statutory requirements on corporate disclosures in advertising. The decision in Citizens United v. Federal Election Commission has been anxiously awaited after the Court ordered the case reargued to consider whether two precedents upholding restrictions on corporate money in elections should be overruled.

Plan causes breach of security which causes public outrage- Public agree that the government should fight terrorism even if privacy is compromised

Cohen' 13 [John, Political Analyzer, "Most Americans back NSA tracking phone records, prioritize probes over privacy", the Washington Post, http://www.washingtonpost.com/politics/most-americans-support-nsa-tracking-phone-records-prioritize-investigations-over-privacy/2013/06/10/51e721d6-d204-11e2-9f1a-1a7cdee20287_story.html 6/10/13 LM]

A large majority of Americans say the federal government should focus on investigating possible terrorist threats even if personal privacy is compromised, and most support the blanket tracking of telephone records in an effort to uncover terrorist activity, according to a new Washington Post-Pew Research Center poll. Fully 45 percent of all Americans say the government should be able to go further than it is, saying that it should be able to monitor everyone's online activity if doing so would prevent terrorist attacks. A slender majority, 52 percent, say no such broad-based monitoring should occur. The new survey comes amid recent revelations of the National Security Agency's extensive collection of telecommunications data to facilitate terrorism investigations. Overall, 56 percent of Americans consider the NSA's accessing of telephone call records of millions of Americans through secret court orders "acceptable," while 41 percent call the practice "unacceptable." In 2006, when news broke of the NSA's monitoring of telephone and e-mail communications without court approval, there was a closer divide on the practice — 51 percent to 47 percent. General priorities also are similar to what they were in 2006: Sixty-two percent of Americans now say it's more important for the government to investigate terrorist threats, even if those investigations intrude on personal privacy, while 34 percent say privacy should be the focus, regardless of the effect on such investigations. But with a Democratic president at the helm instead of a Republican, partisan views have turned around significantly. Sixty-nine percent of Democrats say terrorism investigations, not privacy, should be the government's main concern, an 18-percentage-point jump from early January 2006, when the NSA activity under the George W. Bush administration was first reported. Compared with that time, Republicans' focus on privacy has increased 22 points. The reversal on the NSA's practices is even more dramatic. In early 2006, 37 percent of Democrats found the agency's activities acceptable; now nearly twice that number — 64 percent — say the use of telephone records is okay. By contrast, Republicans slumped from 75 percent acceptable to 52 percent today. Compared with a 2002 Pew poll, Democrats are now 12 percentage points more apt to support the government's monitoring of all e-mails and other online activity if officials say that it might help prevent terrorist attacks. On the flip side, the number of Republicans who say the government should not do this has increased by 13 points. The poll was conducted Thursday through Sunday among a random national sample of 1,004 adults. Results from the full poll have a margin of sampling error of plus or minus 3.5 percentage points. The question on monitoring everyone's online activity was asked starting Friday; results from that question have a 4.5-point error margin.

Americans support the patriots Act

Puglie 6/2 [Andre, Political Analyzer, "Majority of Americans Back NSA's Bulk Data Collection" Latin Post, <http://www.latinpost.com/articles/57174/20150602/poll-majority-of-americans-back-nsas-bulk-data-collection.htm> 6/2/15 LM]

Most Americans support the federal government's bulk collection of telephone metadata first revealed by NSA leaker Edward Snowden, and they want Congress to reauthorize the program, CNN reported based on a poll it conducted along with the Opinion Research Corporation. Sixty-one percent of those surveyed think that the recently expired provisions of the Patriot Act, which ostensibly allow the National Security Administration to collect

that information, should be extended; 36 percent are opposed to the renewal, the news channel detailed. Republican leaders in the Senate hope to quickly reinstate the law after its Monday expiration..

6 in 10 back renewal of NSA data collection

Song' 15 [Sharon, Political Analyzer, "6 in 10 back renewal of NSA data collection", Kron News June 1, 2015, <http://kron4.com/2015/06/01/poll-6-in-10-back-renewal-of-nsa-data-collection/> LM]

Americans overwhelmingly want to see Congress renew the law that authorizes the bulk collection of data on the public's telephone calls, though they are split on whether allowing that law to expire increases the risk of terrorism in the U.S., according to a new survey. With the provisions of the Patriot Act which allow the National Security Administration to collect that data now newly expired, a new CNN/ORC poll shows 61% of Americans think the law should be renewed, including majorities across party lines, while 36% say it should not be reinstated. Republican leaders in the Senate are working to pass a bill to reinstate the law which expired at 12:01 a.m. Monday. The bill faced resistance from opponents including Sen. Rand Paul (R-Kentucky), whose presidential campaign has been noted for its appeal to independent voters and younger Republicans. But Paul's stance on the issue is unlikely to bring him many fans within his own party. Support for renewal peaks among Republicans, 73% of whom back the law. Democrats largely agree, with 63% saying the law should be renewed. Independents are least apt to back it, with 55% saying renew it and 42% let it expire. Liberals, regardless of partisan affiliation, are most likely to say the law should not be renewed, 50% say so while 48% want to see it renewed. About half of Americans, 52%, say that if the law is not renewed, the risk of terrorism here in the U.S. would remain about the same. Still, a sizable 44% minority feel that without the law, the risk of terrorism will rise. Only 3% feel it would decrease. The sense that the risk will rise is greatest among Republicans, 61% of whom say the risk of terrorism will climb if the NSA is unable to collect this data. Among Democrats and independents, less than half feel the risk of terrorism would increase if the program ended. The poll reveals a steep generational divide on the data collection program. Among those under age 35, just 25% say the risk of terrorism would increase without NSA data collection. That figure more than doubles to 60% among those age 65 or older. The survey found those under age 35 are also split on whether the law should be renewed at all, 50% say it should be renewed while 49% say it should not. Among those age 35 or older, 65% back renewal of the law.

L- Drones

Decreasing drones tanks legitimacy – overturned precedent Friedersdorf '14

Conor Friedersdorf, staff writer for The Atlantic discussing the *Florida v. Riley* decision, "Why Police Don't Need Warrants to Snoop With Drones," 8/28/2014, The Atlantic, <http://www.theatlantic.com/politics/archive/2014/08/california-lawmakers-back-a-restraining-order-on-police-drones/379267/>

"In the 1989 case Florida v. Riley, the U.S. Supreme Court ruled that since airplanes and helicopters often fly over private property, citizens do not have a reasonable expectation of privacy that their activities will not be observed from the air," Ronald Bailey explains in Reason. "Consequently, the police were permitted use of evidence obtained without a search warrant from helicopter observation of a greenhouse in which they suspected marijuana was being grown."

L-High Visibility Link

High visibility decisions influence court legitimacy Hoekstra, 2003

Valerie J. Hoekstra, PhD in political science; specializes in judiciary politics and judicial decision-making, Public Reaction to Supreme Court Decisions, 2003, p. 119

Most previous accounts suggest that the majority of Court decisions go unnoticed; still, the possibility that Court decisions influence attitudes remains an open question, in large part due to the findings from experimental research. In such research, the connection between institutional support and Court decisions has been well established (Mondak 1991, 1992; Segal 1995). It is only outside of the laboratory that this connection remains rather elusive (Mondak and Smithey 1997; Grasskopf and Mondak 1998; Kritzer 2001). The reason is straightforward: If people do not hear about Court decisions. By definition those decisions can have no impact. But, as revealed in Chapter 3, levels of awareness in the local communities were quite high, especially in the Monroe and Center Moriches cases, and it was often higher among those from the immediate communities. This provides a unique opportunity to examine this question under more realistic, real-world conditions.

Decrease in court legitimacy builds and escalates – negativity bias Grosskopf, 1998

Anke Grosskopf, PhD in political science; specializing in international politics, Do Attitudes toward Specific Supreme Court Decisions Matter? The Impact of Webster and Texas v. Johnson on Public Confidence in the Supreme Court, 1998, Political Research Quarterly, Vol. 51, No. 3, p. 4

If reaction to Supreme Court decisions affects subsequent opinion about the Court, does this necessarily imply that esteem for the Court will tend to be lessened by the Court's actions? The answer is no if we

assume that the Supreme Court benefits from its popular rulings to an extent sufficient to offset antipathy toward its unpopular rulings. This, however, is a rather bold assumption, and one that is supported by neither relevant theories of decision making nor past empirical research. Social psychologists have shown a tendency of people to weigh negative information more heavily than positive information in various cognitive tasks, a phenomenon commonly known as a “negativity bias”; (e.g., Fiske 1980; Pratto and John 1991; Skrowonski and Carlston 1987, 1989). We believe that such a bias may affect judgments about the Supreme Court. The dominance of negative evaluations has been demonstrated in the world of politics by Lau (1982, 1985), who showed that the impact of negative information on candidate approval was some three times stronger than that of positive information in congressional campaigns between 1968 and 1980. Lau (1985) argues that the existence of a negativity bias in the evaluation of political leaders is partly a perceptual phenomenon. Political leaders are expected to behave in a positive manner, and thus people see nothing extraordinary nor even particularly commendable when politicians behave properly. Negative information stands out, however, because it runs contrary to our expectations. In recent research consistent with this view, McGraw and Steenbergen (1995) find that participants in a laboratory experiment remembered more negative than positive information about the study’s hypothetical congressional candidates.

Court legitimacy is based on public opinion, overturns wreck support

Bigel '93

Alan Bigel, PhD in political science on the effect of court case decisions on public support of and legitimacy of the court, “PLANNED PARENTHOOD OF SOUTHEASTERN PENNSYLVANIA v. CASEY: CONSTITUTIONAL PRINCIPLES AND POLITICAL TURBULENCE,” 1993, 18 Dayton L. Rev. 733

In an effort to quell potential criticism of the Court's failure to overrule Roe, the joint majority also elaborated on the role of the Court in American society. n144 The joint majority wrote that, unlike the political branches, which derive support by

ballot, the justices over time must cultivate public confidence in the Court by making decisions "grounded truly in principle" apart from prevailing "social and political pressures." n145 To enhance respect for the law and facilitate order and continuity in human behavior through each generation, the joint majority asserted that the Court must avoid overturning precedent "in the absence of the most compelling reason to reexamine a watershed decision" n146 After noting the significant impact that the Roe decision has had on the social and economic life of the nation, the Court concluded that a decision to overrule its "essential holding" would inflict "profound and unnecessary damage to the Court's legitimacy." n147

L- Overturn

Decreasing surveillance wrecks court legitimacy – overturns precedent Donohue '15

Laura K. Donohue, associate professor of law at Georgetown Law School with a JD as well as a Ph.D. in history, "SECURITY VS. FREEDOM: CONTEMPORARY CONTROVERSIES: THE THIRTY-THIRD ANNUAL FEDERALIST SOCIETY NATIONAL STUDENT SYMPOSIUM ON LAW AND PUBLIC POLICY -- 2014: ARTICLE: SECTION 702 AND THE COLLECTION OF INTERNATIONAL TELEPHONE AND INTERNET CONTENT," 2015, 38 Harv. J.L. & Pub. Pol'y 117

Banks was not the only one to question the implementation of Section 702. Cases began to appear, raising facial and as applied constitutional challenges. Problems characteristic of relying on Article III courts in the context of surveillance came to the fore.

In Clapper v. Amnesty International plaintiffs
alleged that Section 702 violated the targets' Fourth
Amendment rights because it allowed for the
acquisition of international communications absent an
individualized court order supported by probable
cause. ⁿ¹⁵¹ The Supreme Court dismissed the suit
for lack of standing --that is, the absence of any concrete injury. It did not
reach the merits of the Fourth Amendment
claim. ⁿ¹⁵²

**Overtorn of congressional actions decreases public support, it's counter-majoritarian
Barnum '85**

David G. Barnum, professor of political science at DePaul University in Chicago, **The Supreme Court and Public Opinion: Judicial Decision Making in the Post-New Deal Period, 1985, The Journal of Politics, Vol. 47, No. 2, p. 1**

The Supreme Court is appointed, not elected, and it consists of only nine members. As a result, democratic theorists have always been uncomfortable with the institution of judicial review and in particular with the power of the Court to overturn acts of Congress. "The root difficulty," according to Alexander Bickel, "is that judicial review is a counter-majoritarian force in our system... [W]hen the Supreme Court declares unconstitutional a legislative act or the action of an elected executive, it thwarts the will of representatives of the actual people of the here and now; it exercises control, not in behalf of the prevailing majority, but against it" (1962, pp. 16-17).

Legitimacy based in precedents, overturning them wrecks support

Fowler 08

James H. Fowler, Ph.D in Government from Harvard and M.A. in IR from Yale; professor of Political Science at UCSD; senior fellow on global justice at UCSD, The authority of Supreme Court precedent, 2008, Social Networks, Vol. 30(1), p. 16-30

Legal historians suggest that justices in the 19th Century responded to the crisis of legitimacy by strengthening the norm of stare decisis, a legal norm inherited from English common law that encourages judges to follow precedent by letting the past decision stand (Friedman, 1985, pp. 127-133). In order to foster compliance and enhance the institutional reputation of the Court, stare decisis was implemented to place decision-making in the domain of neutral

legal principles and the “accumulated experience of many judges responding to the arguments and evidence of many lawyers” (Landes and Posner, 1976, p. 250) rather than at the whim of the personal preferences of individuals. To this day, the justices of the Supreme Court are aware of the inherent weakness of the federal judiciary and place high value on maintaining their institutional and decisional legitimacy through the use of precedent (Ginsburg, 2004, Powell, 1990 and Stevens, 1983). Recognizing that legitimacy is essential to achieve their policy objectives, the members of the Court justify their substantive rulings through court opinions, which allow the justices to demonstrate how their decisions are consistent with existing legal rules and principles established in prior cases (see Hansford and Spriggs, 2006, pp. 24–30). Because it is the application of existing precedents that creates the perception of judicial decision-making to be procedurally neutral and fair (Tyler and Mitchell, 1994), these opinions are often considered to be the source of the Court's power (Epstein and Knight, 1998 and Segal and Spaeth, 2002).

Court bases a majority of its decisions on precedents set by previous cases

Spriggs & Hansford 02 (James F. II and Thomas G., Ph.D in Political Science from Washington University in St. Louis and the Sidney W. Souers Professor of Government Chair, Department of Political Science, Ph.D in Political Science from University of California, Davis and Associate Professor of Political Science at University of California, Merced, 01/01/2002, Law and Society Review, “The U.S Supreme Court’s Incorporation and Interpretation of Precedent”, <https://www.questia.com/library/journal/1P3-235040221/the-u-s-supreme-court-s-incorporation-and-interpretation> , 06/26/15)

What explains how and why the Supreme Court interprets precedent? We contend that Justices incorporate precedents into their opinions to maximize the extent to which the Court's legal policy reflects their own policy preferences and to increase the likelihood that their opinions will be efficacious. Thus, we expect the interpretation of precedent to be influenced by the Justices' policy preferences, the norm of stare decisis, and certain characteristics of precedents. To test this idea, we examined how, in all cases decided in the 1991 and 1995 terms, the Court's majority opinions chose to legally interpret the set of available Supreme Court precedents. While our results are not uniformly supportive of our

hypotheses, they lend general support to our theoretical argument. First, we demonstrate that the Court is more likely to positively interpret (rather than not interpret) a precedent that is ideologically proximate to the Court, that is legally relevant, or that was previously positively interpreted by the Court. When considering negative treatment broadly construed, our data only demonstrate that the legal relevance of a precedent exerts any influence. However, when we restrict our analysis to "strong" negative interpretation of precedent, we uncover reasonable support for the influence of stare decisis in that both the legal relevance of precedent and prior negative interpretation of precedent affect strong negative treatment. Thus, one implication of this study is that, contrary to the attitudinal model's prediction, the Court's prior treatment of precedent does appear to influence the way Justices make decisions. ¶ The explanation and prediction of Supreme Court policy outcomes endures as a topic of scholarly inquiry. For decades, scholars attempted to identify the factors that account for the disposition of Court cases, individual Justices' final votes on the merits, and aggregate patterns in Court outcomes (e.g., Baum 1988; Rohde & Spaeth 1976; Segal 1984). The policy set by the Court, however, is not solely, or even mainly, a function of case dispositions. While case dispositions determine who prevails in a particular dispute, **the Court establishes legal policy through the legal rules or precedents developed in its majority opinions.** These precedents set up referents for behavior by providing decisionmakers with information necessary to develop expectations and by outlining sanctions for noncompliance (see Spriggs 1996; Wahlbeck 1997). As a result, scholars recognize that the interpretation of precedent represents one of the Court's central policy outputs (e.g., Knight & Epstein 1996; Landes & Posner 1976). ¶ Despite the acknowledged importance of precedent, few scholars have attempted to explain systematically how or why courts choose to interpret it. The literature on the quantitative study of precedent can be broadly divided into two parts. First, a variety of studies examine either the citation of court opinions (e.g., Friedman et al. 1981; Landes & Posner 1976; Merryman 1977) or patterns of citations among state courts (e.g., Caldeira 1985; Walsh 1997). These articles shed light, for example, on the conditions under which one court will cite the opinions of another court. This line of research, however, does not seek to explain how court opinions actually interpret precedents. Second, a handful of studies examine how the Supreme Court substantively treats its own precedents (e.g., Brenner & Spaeth 1995; Johnson 1985, 1986). For instance, Spriggs and Hansford (2001) show in part that the Supreme Court is more likely to overrule one of its precedents when it is either ideologically distant from the precedent or when the Court has previously interpreted the precedent in a negative manner. Yet, despite this insight into the Court's overruling of precedent, we have little understanding of why the Court more generally chooses to interpret precedent positively, negatively, or not at all. ¶

The Supreme Court already ruled that all phone and internet metadata collection is legal when they made the Clapper v. Amnesty international decision. To enact the aff's plan through the court, the only way to do it is by ruling the surveillance unconstitutional. That changes the precedent already made, which is the link to the DA.

L-Prism

Public overwhelmingly supports Prism- aff creates disapproval

Logiurato 13' [Brett, M.A political science & Politics Editor, "The NSA's PRISM Program Is Shockingly Uncontroversial with the American Public, Business Insider, 6/17/13 <http://www.businessinsider.com/prism-surveillance-poll-nsa-obama-approval-2013-6> LM]

President Barack Obama's approval rating is sinking like a stone in a new CNN/ORC poll — but it's not because of Americans' reactions to the National Security Agency surveillance program known as "PRISM." In fact, **the public overwhelmingly approves of the program.** The poll found that 66 percent of Americans say the Obama administration was right to gather and analyze information from major internet companies to help locate suspected terrorists. Here's the full wording of the question posed in the poll: [F]or the past few years the Obama administration has reportedly been gathering and analyzing information from major internet companies about audio and video chats, photographs, e-mails and documents involving people in other countries in an attempt to locate suspected terrorists. The government reportedly does not target internet usage by U.S. citizens and if such data is collected, it is kept under strict controls. Do you think the Obama administration was right or wrong in gathering and analyzing that internet data? Overall, according to the poll, the public has exhibited a collective shrug to new revelations detailing the scope of the NSA's surveillance efforts. On its collection of phone data, the public is less gung-ho about the program, but still supportive — 51 percent say the Obama administration is right, while 48 percent say it's wrong. Incidentally, **partisans on both sides of the aisle are most likely to support the programs.** Self-identified Republicans and Democrats approve of both programs, while Independents are much less enthusiastic.

IL- K/T Global Power

Supreme Court legitimacy on law is key to global leadership and solving terrorism

Frank 07' [Daniel J, B.A Law Carleton College, "Constitutional Interpretation Revisited: The Effects of a Delicate Supreme Court Balance on the Inclusion of Foreign Law in American Jurisprudence" 3/5/2007]

Conservative politicians echo the sentiments of originalist Court members, weary of the Court's "dangerous" trend of citing foreign law in domestic constitutional matters²³ reintroduced in *Lawrence and Roper*. For years, the Court largely decided not to participate in an ongoing judicial dialogue in which foreign law was seriously considered, even if the law was²³⁹ not binding. Perhaps the real danger, though, stems from this insular posture and nonparticipation, which tend to perpetuate an unfavorable view of the United States (particularly of the U.S. judiciary) by the outside world.²⁴ ° The originalists' refusal to look outward when dealing with basic civil liberties, "labeling them as idiosyncratic American values," effectively "declare[s] the world irrelevant to our Constitution. This traditional unwillingness to engage in transnational judicial dialogue on a meaningful level has already had an impact: "the U.S. Supreme Court is no longer viewed worldwide as a beacon or trailblazer on civil and individual rights."²⁴² In the wake of September 11th, as President George W. Bush attempts to lead a worldwide coalition against terror, American judicial passivity feeds the outward perception that the United States "pays only lip service to the opinions of mankind."²⁴³ Originalist opposition to considering foreign law when interpreting the Constitution may, in turn, invite undue friction and ultimately strain U.S. foreign relations at a time when America seeks the military, political, and economic cooperation of other countries. Although²⁴⁵ the U.S. Supreme Court is empowered to settle cases and controversies and not to mollify cross-border tensions, the scope of today's problems oftentimes demands that Justices understand and acknowledge foreign²⁴⁶ law. According to Justice Ginsburg, "We are the losers if we neglect what others can tell us about endeavors to eradicate bias against women, minorities, and other disadvantaged groups.²⁴⁷ Lawrence and Roper signaled to the world once again that the American judiciary values opinions of other nations and considers foreign law in constitutional matters, thereby acknowledging the world community without²⁴⁸ compromising domestic legal norms. If such a course continues, a ripple effect may then ensue: as America's image abroad improves, the spirit of cooperation between countries increases, and the United States can serve as a more effective global leader. Admitting that certain outmoded practices state interference with private sexual conduct and the juvenile death penalty, for example-are similarly condemned abroad has helped steer the Court on the path to reclaiming its image abroad while maintaining the primacy of American domestic law. VI. CONCLUSION American law does not exist in a vacuum. The rigid textual analysis that originalists employ should not govern the manner in which the Court interprets the Constitution in the future. *Lawrence and Roper* offer great strides in according other nations the respect they deserve under the roadmap provided by our Founding Fathers. However, this does not mean that our Constitution should sacrifice its uniqueness at the expense of cooperating with the international community. Justice Breyer himself concedes that courts should use foreign law sparingly when circumstances present domestic constitutional issues centered on fundamental freedoms.⁴⁹ The lens through which Lawrence and Roper considered foreign law was specific, restricting foreign norms to a confirmatory role after laying a solid groundwork in American law.¹⁵ In this way, the Court seemed to prevent the usurpation of American ideals by foreign ones. ¹⁵ Michael Kirby, a Justice on Australia's High Court, warned that the United States "is in danger 'of becoming something of a legal backwater' if its courts continue to disregard foreign precedent."²⁵² As long as the Court continues to limit the relevance of foreign law to issues that concern the protection of fundamental rights and does not seek to transpose foreign norms onto purely domestic affairs (e.g., American social-welfare practices not shared by other democratic nations), the real danger appears to be in America's refusal to participate in the ongoing, global judicial dialogue.

IL- K/T Rule of Law

Legitimacy key to Judicial Power

Tyler and Mitchell 94, (Tom R. Tyler, Gregory Mitchell, LEGITIMACY AND THE EMPOWERMENT OF DISCRETIONARY LEGAL AUTHORITY: THE UNITED STATES SUPREME COURT AND ABORTION RIGHTS, Duke Law Journal, Volume 43, Number 4, February 1994, <http://www.jstor.org/stable/1372774>)

In other words, when stating their rationales for the Casey decision, the Justices focus not simply on whether people accept the Court's authority to make decisions regarding abortion rights but also on why they do so. The Justices contrast legitimacy to other possible bases of authority, including purchasing or physically coercing obedience. They argue that the Court's authority rests heavily on legitimacy because the Court lacks the ability to be authoritative in other ways. The Justices' argument resonates with the work of political scientists, who also have emphasized the limited power of the Supreme Court to enforce its decisions. "In a political system ostensibly based on consent, the Court's legitimacy-indeed, the Constitution's-must ultimately spring from public acceptance . . . of its various roles." Legitimacy is important to all political institutions. It is especially important, however, to judicial authorities like the U.S. Supreme Court because, as the Justices themselves note, the Court has only limited coercive power and can do little to reward those who comply with its directives.55As Gregory Caldeira and James Gibson observe, the Court "is an uncommonly vulnerable institution. The Court lacks an electoral connection to provide legitimacy, is sometimes obligated to stand against the winds of public opinion, operates in an environment often intolerant of those in need of defense, and has none of the standard political levers over people and institutions."If the legitimacy thesis is correct, then the directives of the Supreme Court may still carry considerable obligatory force, even in controversial realms. Historical research suggests that Americans have traditionally been more willing to accept unpopular public policy decisions if the Supreme Court legitimizes those decisions.57This legitimizing ability-the legitimacy conferring hypothesis-is central to theories about the basis for the Court's effectiveness. The general legitimacy of the Court as an institution of government may have aided acceptance of a wide variety of unpopular decisions, including banning school prayer, mandating school desegregation, and limiting criminal prosecutions through the exclusionary rule." That is, the Court's institutional legitimacy may have increased the willingness of the public to empower the Court to settle these issues and then to accept the decisions willingly and compliantly. "The general theory is that the procedures, rituals, ideology, and substantive decisions of legal institutions, particularly judicial institutions, measurably shape American popular beliefs in the legitimacy of government and the American sense of obligation and loyalty to the nation."6

K/T to Environment

Legitimacy key to Environment protection

Benjamin and Fulton 11, (Antonio Herman Benjamin, justice at Supreme Court of Brazil, Scott Fulton, General Council Member, Effective National Environmental Governance – A Key to Sustainable Development, UNEP, October 12-13, 2011, <http://www.unep.org/delc/Portals/24151/EffectiveNationalEnvironmentalGovernance.pdf>)

The judiciary (and, in some countries, administrative courts) plays a vital role as the guarantor of the protective benefits of environmental law. What judges treat as important, a society comes to judge as important. And thus the response of the courts to environmental problems can have a powerful transforming effect for a society at large. The seriousness of judicial attention and response can project to the regulated community and to the public at large the importance of environmental quality and the unacceptability of behaviors that jeopardize the environment. The judicial response can serve as a powerful catalyst toward the solidification of the environmental rule of law and the development of an environmental ethic – an ethic that, once it takes hold, can engender a sense of responsibility in all sectors of society, inspire citizens to think green and buy green, and encourage businesses to respond to green consumer demand and to their own emergent corporate environmental conscience.

K/T Hedge

Supreme Court legitimacy key to US heg

Knowles 09, (Robert Knowles, professor at New York University Public Law, American Hegemony and the Foreign Affairs Constitution, 41 Ariz. St. L.J. 87 2009)

This Article offers a new model for assessing appropriate judicial deference in foreign affairs that takes account of American-led order. By maintaining consistent interpretation of U.S. and international law over time and providing virtual representation for other nations and non-citizens, U.S. courts bestow legitimacy on the acts of the political branches, provide public goods for the world, and increase America's soft power—all of which assist in maintaining the stability and legitimacy of the American-led hegemonic order. This "hegemonic" model substantially eliminates the problematic deference gap between foreign and domestic cases and enables courts to appropriately balance foreign affairs needs against other separation-of-powers goals by "domesticating" foreign affairs deference. The hegemonic model also has explanatory and predictive value. In four recent cases addressing habeas claims by alleged enemy combatants, the Supreme Court rejected special deference. It refused to defer to the executive branch interpretations of foreign affairs statutes and international law, and even asserted military exigencies. The hegemonic model justifies this recent rejection of special deference and explains why it could augur increased judicial involvement in foreign affairs.

Supreme Court legitimacy key to US heg-empirics

Knowles 09, (Robert Knowles, professor at New York University Public Law, American Hegemony and the Foreign Affairs Constitution, 41 Ariz. St. L.J. 87 2009)

During the years following 9/11, the Supreme Court has made a substantial departure from the special deference norm in four habeas cases regarding the detention of "enemy combatants." These cases concerned a foreign affairs power thought to be least appropriate for judicial oversight: the authority to wage war. Rather than apply the special deference doctrines or abstain from deciding the cases altogether under the still vibrant political question doctrine in foreign affairs, the Supreme Court rejected the government's functional rationales for exceptional deference each time. Hamdi v. Rumsfeld addressed the executive branch power to detain enemy combatants as part of the war against al Qaeda and the Taliban, and the process due U.S. citizens who dispute their enemy combatant status. The government's central argument was functional: given the courts' "limited institutional capabilities ... in matters of military decision making" in connection with an ongoing conflict, courts should eschew evaluation of individual cases and decide only whether the overall detention scheme was legally authorized. At most, the Court's role was to review for facial sufficiency a two-page declaration by a Defense Department official who had reviewed classified documents allegedly providing the legal and factual basis for an individual's detention. The Fourth Circuit had agreed, citing the expertise and accountability justifications for Curtiss-Wright deference and concluding that "[n]o further factual inquiry is necessary or proper." The Supreme Court rejected these functional arguments. The Court acknowledged that Congress had authorized the detention of

"enemy combatants" to prevent return to the battlefield, but it was the Court's role to independently evaluate the procedures used for a detainee's challenge to his enemy combatant status." The plurality's approach applied a domestic, functional doctrine—the *Matthews v. Eldridge*² due process balancing test—to weigh the detainee's liberty interest and the value of additional procedures against the government's interest in security and the cost of those additional procedures." "At a minimum, due process required that "a citizen-detainee . . . must receive notice of the factual basis for his classification, and a fair opportunity to rebut the Government's factual assertions before a neutral decisionmaker."¹⁴ Rather than try to conform to these requirements, the government released Hamdi."

Hegemony solve great power war

Ward 14, (Alex Ward, defense policy and strategy specialist, Only US Can Prevent Great Power War, *The Diplomat*, August 22, 2014, <http://thediplomat.com/2014/08/only-us-can-prevent-great-power-war/>)

But Gilpin's preconditions shouldn't be misconstrued as predictive or fatalistic. Indeed, the United States, as the hegemon, has the capability (and responsibility) to preserve the international order and lead the world out of this mess. By keeping good relations with partners and allies, deterring adversaries, reversing the perception of its decline, and leveraging technological capabilities for global good, there is a decent chance that the U.S. can make the great-power-war-incubation period fade away. Should the United States not seize this moment, and ensure that China is a responsible partner in the current global system alongside it, then the chance of a great power war cannot be dismissed, however remote.

No Solvency

Lack of legitimacy prevents AFF solvency

Gibson et al. 03 (James L. Gibson, Gregory A. Caldeira and Lester Kenyatta Spence, Measuring attitudes toward the United States Supreme Court, American Journal of Political Science, Volume 47, Issue 2, pg. 354-367, April 14, 2003, <http://onlinelibrary.wiley.com/doi/10.1111/1540-5907.00025/epdf>)

Most analysts distinguish between “diffuse” and “specific” support. Though some thoughtful scholars doubt that the distinction between the two types of support can be made empirically, most recognize a difference at least at the theoretical level between approval of the policy outputs of an institution in the short term and more fundamental loyalty to the institution in the short-term and more fundamental loyalty to the institution over the long-haul. “Specific support” is satisfaction with the immediate outputs of the institution. When specific support is low (i.e., people are dissatisfied, diffuse support becomes especially important since it cushions the impacts of policy dissatisfaction. Over the long-term the two types of support should be related, although the meaning of any given cross-sectional correlation may be unclear. We contend that the most important attitudes ordinary citizens hold toward institutions like the supreme court have to do with institutional loyalty. Institutions like courts need the leeway to be able to go against public opinion. Thus, a crucial attribute of judicial institutions is the degrees to which they enjoy the loyalty of their constituents.

Courts Link

Courts link to politics.

Harrison, Jenner and Block Litigation associate, 2005

(Lindsay, "Does the Court Act as "Political Cover" for the Other Branches?" 11-18 legaldebate.blogspot.com)

While the Supreme Court may have historically been able to act as political cover for the President and/or Congress, that is not true in a world post-Bush v. Gore. The Court is seen today as a politicized body, and especially now that we are in the era of the Roberts Court, with a Chief Justice hand picked by the President and approved by the Congress, it is highly unlikely that Court action will not, at least to some extent, be blamed on and/or credited to the President and Congress. The Court can still get away with a lot more than the elected branches since people don't understand the technicalities of legal doctrine like they understand the actions of the elected branches; this is, in part, because the media does such a poor job of covering legal news. Nevertheless, it is preposterous to argue that the Court is entirely insulated from politics, and equally preposterous to argue that Bush and the Congress would not receive at least a large portion of the blame for a Court ruling that, for whatever reason, received the attention of the public.

Links to politics – Obama appointed Sotomayor and Kagan – he would get the blame

Courts link

Mirengoff 10 [Paul E. Mirengoff, JD Stanford, Attorney in DC, [And if Barack **Obama** is still president at that time, he likely will receive some of the blame.](http://webcache.googleusercontent.com/search?q=cache:aNOGdaFrKhYJ:www.fed-soc.org/debates/dbtid.41/default.asp+obama+minimalism+blame+court+confirmation&cd=1&hl=en&ct=clnk&gl=us&client=firefox-a, 6-23-10]There's a chance that <u>the Democrats' latest partisan innovation will come back to haunt them.</u> Justice Sotomayor and soon-to-be Justice Kagan are on record having articulated a traditional, fairly minimalist view of the role of judges. If a liberal majority were to emerge -- or even if the liberals prevail in a few high profile cases -- the charge of)

Causes fights with congress

Brickman '7 (Danette. "Congressional Reaction to U.S. Supreme Court Decisions: Understanding the Introduction of Legislation to Override" Paper presented at the annual meeting of the Southern Political Science Association, Hotel InterContinental, New Orleans, LA, Jan 03, 2007 <Not Available>. 2009-05-24 <http://www.allacademic.com/meta/p143265_index.html>The United States Constitution sets forth a government that prescribes specific roles for each of its branches. **While, constitutionally, Congress is the policy-making branch, the U.S. Supreme Court enters the policy-making arena through statutory interpretation and judicial review decisions. The preferred policies of these two branches of government do not always coincide, causing conflict between the Court and Congress. At such times this conflict can lead to a battle over control of national policy.** This paper explains congressional reaction to Supreme Court decisions by relaxing two of the assumptions of the separation of powers game and incorporating changing congressional preferences and context. **U.S. Supreme Court decisions tend to be**

viewed “not **as** a mere interpretation of law, but **a determinative statement of national policy that is**, for all practical purposes, **irrevocable**” (Paschel 1991:144). While the majority of Supreme Court decisions remain untouched by Congress, a number of statutory interpretation and judicial review decisions have been successfully overridden by the legislative branch, making it apparent that Supreme Court decisions are not necessarily final. **In certain circumstances Congress is willing to do battle with the Court to achieve their preferred policy**. Although successful congressional overrides of Supreme Court decisions are infrequent, their occurrence has generated a body of research that has contributed to our understanding of the interaction between these two branches of government. What is missing from the discourse is an examination that focuses on the introduction of legislation to override Supreme Court decisions¹. This paper fills that gap, examining the circumstances under which Congress introduces legislation attempting to override a Supreme Court decision. Using an approach which incorporates changing congressional preferences and context this research contributes to our understanding of Court-Congress interaction.

Courts Don't Link

Courts shield

Whittington 5 Keith E., Cromwell Professor of Politics – Princeton University, ““Interpose Your Friendly Hand”: Political Supports for the Exercise of Judicial Review by the United States Supreme Court”, *American Political Science Review*, 99(4), November, p. 585, 591-592

There are some issues that politicians cannot easily handle. For individual legislators, their constituents may be sharply divided on a given issue or overwhelmingly hostile to a policy that the legislator would nonetheless like to see adopted. Party leaders, including presidents and legislative leaders, must similarly sometimes manage deeply divided or cross-pressured coalitions. When faced with such issues, elected officials may actively seek to turn over controversial political questions to the courts so as to circumvent a paralyzed legislature and avoid the political fallout that would come with taking direct action themselves. As Mark Graber (1993) has detailed in cases such as slavery and abortion, elected officials may prefer judicial resolution of disruptive political issues to direct legislative action, especially when the courts are believed to be sympathetic to the politician's own substantive preferences but even when the attitude of the courts is uncertain or unfavorable (see also, Lovell 2003). Even when politicians do not invite judicial intervention, strategically minded courts will take into account not only the policy preferences of well-positioned policymakers but also the willingness of those potential policymakers to act if doing so means that they must assume responsibility for policy outcomes. For cross-pressured politicians and coalition leaders, shifting blame for controversial decisions to the Court and obscuring their own relationship to those decisions may preserve electoral support and coalition unity without threatening active judicial review (Arnold 1990; Fiorina 1986; Weaver 1986). The conditions for the exercise of judicial review may be relatively favorable when judicial invalidations of legislative policy can be managed to the electoral benefit of most legislators. In the cases considered previously, fractious coalitions produced legislation that presidents and party leaders deplored but were unwilling to block. Divisions within the governing coalition can also prevent legislative action that political leaders want taken, as illustrated in the following case.

They alleviate political pressure

Ward, political science professor Northern Illinois University, 2009

(Artemus, “Political Foundations of Judicial Supremacy: The Presidency, the Supreme Court”, *Congress & the Presidency*, Jan-Apr, (36)1; p. 119)

After the old order has collapse the once- united, new-regime coalition begins to fracture as original commitments are extended to new issues. In chapter 3 Whittington combines Skowronek's articulation and disjunctive categories into the overarching "affiliated" presidencies as both seek to elaborate the regime begun under reconstructive leaders. By this point in the ascendant regime, Courts are staffed by justices from the dominant ruling coalition via the appointment process - and Whittington spends time on appointment politics here and more fully in chapter 4. Perhaps counter-intuitively, affiliated political actors - including presidents - encourage Courts to exercise vetoes and operate in issue areas of relatively low political salience. Of course, this "activism" is never used against the affiliated president per se. Instead, affiliated Courts correct for the overreaching of those who operate outside the preferred constitutional vision, which are often state and local governments who need to be brought into line with nationally dominant constitutional commitments. Whittington explains why it is easier for affiliated judges, rather than affiliated presidents, to rein in outliers and conduct constitutional maintenance. The latter are saddled with controlling opposition political figures, satisfying short-term political demands, and navigating intraregime gridlock and political thickets. Furthermore, because of their electoral accountability, politicians engage in position-taking, credit-claiming, and blame-avoidance behavior. By contrast, their judicial counterparts are relatively sheltered from political pressures and have more straightforward decisional processes. Activist Courts can take the blame for advancing and legitimizing constitutional commitments that might have electoral costs. In short, a division of labor exists between politicians and judges affiliated with the dominant regime.

Courts avoid partisanship Tushnet, law professor at Harvard, 2008

(Mark, "THE OBAMA PRESIDENCY AND THE ROBERTS COURT: SOME HINTS FROM POLITICAL SCIENCE: POLITICAL FOUNDATIONS OF JUDICIAL SUPREMACY: THE PRESIDENCY, THE SUPREME COURT, AND CONSTITUTIONAL LEADERSHIP IN U.S. HISTORY", Summer, 25 Const. Commentary 343, lexis)

What can the courts do for a resilient regime? **Presidents and Congress have limited time and political energy.** They will spend them on what they regard as central issues. But at any time there will be "outliers" - geographic regions as yet uncommitted to the regime's constitutional understandings, or substantive areas that plainly require change if those understandings are to become deeply implanted in society, yet politically too touchy [*347] or relatively unimportant to Congress. **For the affiliated leader, enhancing judicial authority to define and enforce constitutional meaning provides an efficient mechanism for supervising and correcting those who might fail to adhere to the politically preferred constitutional vision** (pp. 105-06). **The courts can serve as a convenient but essentially administrative mechanism for bringing these outliers into the constitutional order. n16 In addition, the courts may have rhetorical resources unavailable to presidents.** Their obligation to explain their decisions, and the fact that they make decision after decision, means that they have an opportunity to develop a **reasonably general account of the resilient regime's constitutional understandings.** In Whittington's words, "It is the classic task of judges within the Anglo-American tradition ... to render new decisions and lay down new rules that can be explicated as a mere working out of previously established legal principles" (p. 84). Presidents, in contrast, only sporadically make speeches illuminating those understandings. **More boldly, affiliated presidents may try to use the courts to "overcome gridlock"** (p. 124) caused by the strategic positions recalcitrant opponents of the new constitutional regime may occupy. **And, if not "use the courts," at least rely on the courts to take the initiative, because "the Court can sometimes move forward on the constitutional agenda where other political officials cannot" (p. 125). "Coalition leaders might be constrained by the needs of coalition maintenance," but "judges have a relatively free hand" (p. 125).** This "use" of the courts, though, poses risks. The courts may push the regime's constitutional principles further and faster than is politically wise, and the regime's political leaders may find themselves on the defensive. Indeed, in this way the courts can contribute to making a resilient regime vulnerable, which may be part of the story about the Warren Court and the demise of the New Deal/Great Society regime. n17 [*348] Preemptive presidents face a special strategic problem. Sometimes they take office because they manage to persuade the public that they remain committed to a resilient regime's constitutional vision even if in their hearts they want to transform the regime. n18 At other times they take office as a regime becomes vulnerable, but do not themselves have the program, vision, or charisma to be reconstructive presidents themselves. n19 They are likely to face opposition in Congress and to some degree in the courts. But they can turn divided government to their advantage by seeking judicial confirmation of executive prerogative. The judges in place might be sympathetic to such claims for doctrinal and political reasons. They will have "inherited from affiliated administrations" (p. 169) doctrines supporting executive authority. And, though Whittington doesn't make this point explicitly, they may see the preemptive president as an accident, soon to be replaced by an affiliated one whose exercises of presidential power they will want to endorse. Finally, preemptive presidents need to get their authority from somewhere when they face congressional opposition, as they will. They don't have much of their own, but they can try "to borrow from the authority of the courts in order to hold off their political adversaries" (p. 195). One final point before I move to some speculations about the future of judicial supremacy. Whittington emphasizes the growth of judicial supremacy during the twentieth century, both in terms of the judges' self-understanding and, perhaps more importantly, in terms of the degree of political commitment to judicial supremacy (p. 25). **He suggests that politicians have had increasingly strong reasons to support the Supreme Court. The reconstructive presidency of Ronald Reagan was less ambitious than that of Franklin Roosevelt (p. 232), assuring the American people that Reagan's policies would strengthen rather than destroy the social safety nets that Roosevelt and**

Lyndon Johnson's regimes had created. Even a reconstructive president could hope that the Supreme Court would assist in articulating regime principles in the way the Court ordinarily does for affiliated presidents. Further, drawing again on Skowronek's account of the [*349] ways in which regimes leave a residue even after they have been displaced, Whittington describes the doctrinal thickening that occurred during the twentieth century with respect to essentially every possible ideological and political commitment a President could have (p. 283). Doctrinal thickening means that every member of a ruling coalition will have some basis in constitutional law for its assertions that the Constitution requires satisfaction of its policy preferences, and that the Court cannot possibly satisfy all the demands on it. n20 So, for the future, we might expect Presidents to have increasingly ambivalent views about the Supreme Court. In the twenty-first century, the Supreme Court will be useful and annoying to every President - useful because the Court can serve to articulate regime principles and can do some policy work that Presidents would rather not expend time and political capital on, and annoying because the Court's failure to satisfy all the demands emanating from a President's political supporters will put pressure on the President to do something about the Court.

Politics

Courts Link to Politics

(--) Health care proves—Republicans will lash out against unpopular Supreme Court decisions:

Stephen **Manual**, 2012 6/28/2012, staff writer, “Will Supreme Court judgment help Obama win presidential election?” Accessed 7/26/2012 at <http://www.allvoices.com/contributed-news/12483143-will-supreme-court-judgment-help-obama-win-presidential-election, rwg>

Finally, President Barack **Obama has** carried the day. He **stood winner as the Supreme Court ruled on Thursday to uphold the Affordable Care Act.** However, the president remained humble during his speech following the decision. He said that it was a victory for the American people and his administration would continue to work for betterment of the people. **The Supreme Court judgment is clearly against the anticipation of Republicans,** as they were predicting a contrary decision on the issue. The judgment can be called one of the biggest victories of the Obama administration in years. **However, the question arises whether the Obama administration will be able to translate the victory into successful election campaign or not. Observers believe the administration would definitely exploit the judgment in its favor** and try its best to convince electorates to cast vote for Obama in the upcoming presidential election. The visionary abilities of Obama would be highlighted and people would be told about revolutionary plans of Obama for the people and that all these plans would be implemented only if he is reelected into the office in November’s election. The judgment would also help the Obama administration to undermine capabilities of Republican presidential candidate Mitt Romney. Observers opine the judgment dealt a heavy blow to the Republicans, as they believed the court would strike down the individual mandate – at the very least. They were planning to celebrate the judgment and shaming the Obama administration once the verdict was out, but they were shocked after the judgment was released. Observers believe that the Obama administration has got a fresh opportunity to set the house in order and focus more on public-related issues so that they could bag maximum votes in the upcoming presidential election. It is the best opportunity for Obama to sell his Health-Care law to the masses. Mitt Romney, while giving his reaction on the Supreme Court judgment, said that he would repeal the law if elected to the presidency in the November election. He even said that there was a need to get rid of Obama if people want to get rid of Obama-care. Definitely, **Republicans would lash out at the law in their public meetings and try to invoke public anger on the issue.** Republicans believe the ruling of the Supreme Court can hamper their campaign against Obama.

(--) Health care proves: Republicans will rally against Supreme Court decisions they oppose:

Fox News Latino, 2012 6/28/2012 (“Supreme Court Upholds Health Care Reform Law in Big Win for Obama,” <http://latino.foxnews.com/latino/politics/2012/06/28/supreme-court-obama-health-care-reform-act-is-constitutional/, rwg>)

Republicans immediately cast the Supreme Court decision as a wake-up call for Americans. In what is surely to be a campaign theme for Romney going forward, the Republican National committee chairman Reince Priebus said: "We need market-based solutions that give patients more choice, not less. The answer to rising health care costs is not, and will never be, Big Government.” Democrats heralded the decision as a much needed extension of basic health care to millions of Americans without access to medical attention.

(--) Conservatives will push other branches of Congress to reverse unpopular Supreme Court decisions:

Steffi **Porter**, 2012 6/28/2012 (staff writer, “Conservative groups denounce Supreme Court ruling on ‘ObamaCare’” Porter

<http://blog.chron.com/txpotomac/2012/06/conservative-groups-denounce-supreme-court-ruling-on-obamacare/>, Accessed 7/26/2012, rwg)

Conservative opponents of "ObamaCare" were not happy to hear that the Supreme Court ruled 5-4 in favor of upholding the controversial health care law. Not just unhappy. Furious.

"Today's Supreme Court decision will do serious harm to American families," said Family Research Council President Tony Perkins. "Not only is the individual mandate a profound attack on our liberties, but it is only one section among hundreds of provisions in the law that will force taxpayers to fund abortions, violate their conscience rights, and impose a massive tax and debt burden on American families."

American Conservative Union Chairman Al Cardenas called for the law to be "thrown out."

"Today's unfortunate decision by the Supreme Court to uphold an unpopular and ill-considered law puts the American healthcare system at the mercy of Washington bureaucrats," Cardenas said in a statement. **"This law needs to be thrown out by the Congress and the President immediately,** as it exceeds federal power, asserting enormous federal control over the healthcare of every man, woman and child in America. We need a bill that that will actually solve our healthcare problems and reduce the cost — not add to the legacy of debt to our children with trillions of dollars in new spending."

(--) Liberal Supreme Court decisions quickly become fodder for the Republican Party to rally their conservative base:

Atlanta Journal-Constitution, 2005 7/10/2005; Lexis

With the retirement of Supreme Court Justice Sandra Day O'Connor, and the expected retirement of Chief Justice William Rehnquist, a court that has been unchanged since 1994 is about to take on a very different look. But it's not going to happen without a fight.

The conservative movement that has taken control of the Republican Party --- and with it the legislative and executive branches --- now sees its opportunity to remake the Supreme Court as well, clearing the last obstacle to the revolution it seeks to create in American government and culture. **To justify that makeover of the court, Republican activists have spun out an elaborate indictment of the current system, repeating it endlessly until it has taken on the aura of absolute truth in some corners.**

For instance, much of the rhetoric coming from House Majority Leader Tom DeLay, Senate Majority Leader Bill Frist and other Republican leaders has focused on what they call "judicial activism," judges who in their minds have been overly eager to impose their own personal beliefs on the political system.

AT: Decision Announced in May/June

- 1) **FIAT abuse: the plan should be decided immediately**
- A) **Key to Disad ground: we can't have uniqueness for disads if they could delay indefinitely**
- B) **Infinite regression: They could always delay until after any major event.**
- C) **Court decisions CAN be announced quickly if they need to be: Bush v. Gore proves:**

Michael C. **Dorf, 2001** (Vice Dean and Professor of Law, Columbia University School of Law, Michigan Law Review, "ELECTIONS AND DEMOCRACY: THE 2000 PRESIDENTIAL ELECTION: ARCHETYPE OR EXCEPTION?" May 2001, Lexis/Nexis, accessed 6/26/2015, rwg)

This is a fair criticism. A U.S. Supreme Court opinion relying on the Eleventh Circuit's due process rule would have been unjustifiable. Yet it would have been no more unjustifiable than the actual decision in Bush v. Gore, for the equal protection standard the majority announced also threatens to inject a federal issue into every state election. Similarly, it is no less arbitrary for a federal court to substitute its reading of state law for that of the state courts under the nominal auspices of Article II - as three Justices did in Bush v. Gore - than under the Due Process Clause. **Perhaps the majority Justices relied on Article II** and equal protection rather than due process **because of the haste with which they needed to decide the case and issue their opinion. Bush v. Gore was handed down less than two days after it was argued.** By way of comparison, even working at lightning speed, Issacharoff, Karlan, and Pildes took nearly two weeks from the date of the decision until they submitted their final manuscript to the publisher, whereas I spent a leisurely two and a half months working on this Essay, and the editors of the Michigan Law Review spent a still longer period editing it and checking citations. Given this upside-down allocation of time, it is not surprising that the Court's chosen legal theories do not survive close scrutiny.

- D) **Ignores topic specific education: turns every debate into a court capital debate instead of about the merits of the plan.**

Court Capital DA

1nc Shell

A) The Supreme Court will rule for Spokeo in Spokeo v. Robins now:

Rich **Samp**, **4/15/2015** (staff writer, "Supreme Court Has Opportunity To Halt Lawsuits By Uninjured Plaintiffs," <http://www.forbes.com/sites/wlf/2015/04/15/supreme-court-has-opportunity-to-halt-lawsuits-by-uninjured-plaintiffs/>, Accessed 6/26/2015, rwg)

Federal courts have been inundated in recent years by suits filed by plaintiffs who have suffered no injury but who allege that a federal statute provides them with "standing" to sue for alleged violations of federal law. Such lawsuits can be extremely lucrative for the plaintiffs' bar when the statute provides for an award of statutory damages (typically, \$100 to \$1,000) for each violation; by filing their suits as nationwide class actions, attorneys can often plausibly seek to recover billions of dollars. **The Supreme Court may soon make it much more difficult for such suits to survive a motion to dismiss.** The Court on Friday will consider whether to grant review in Spokeo v. Robins, a case that squarely addresses whether plaintiffs can assert Article III standing where their only "injury" is the affront to their sensibilities caused by the belief that someone is not complying federal law. **The Court has indicated a strong interest in addressing the issue; Spokeo is an appropriate vehicle for doing so and ought to be granted.**

B) A ruling in favor of Spokeo is a controversial ruling:

Christi A. **Lawson**, **4/29/2015** (staff writer, "United States: U.S. Supreme Court Accepts Review Of Robins v. Spokeo, Inc.," <http://www.mondaq.com/unitedstates/x/393448/trials+appeals+compensation/US+Supreme+Court+Accepts+Review+Of+Robins+v+Spokeo+Inc>, Accessed 6/26/2015, rwg)

The Supreme Court's acceptance of Spokeo's petition is interesting in light of the fact that the Court previously declined review of two cases with very similar issues: First National Bank of Wahoo v. Charvat, which the court declined to review, and First American Financial Corp. v. Edwards, which the Court heard in 2010, but later dismissed certiorari as "improvidently granted." **The Supreme Court's acceptance of Spokeo's petition is also interesting because it means that the high court has disregarded the recommendations of the federal government.** In October, the high court requested that the Solicitor General file a brief regarding the government's position. In response, the Solicitor General recommended that the **Court deny Spokeo's petition**, which would leave the Ninth Circuit's decision in place. The Solicitor General supported his position by stating that the public dissemination of inaccurate personal information about Robins amounted to "concrete harm" that courts have traditionally acted to redress, regardless of whether the plaintiff could demonstrate some further consequential injury.

C) Court involvement in surveillance undermines the courts institutional credibility:

Foundation for Defense of Democracies, **5/22/2012** ("The Supreme Court Enters the Surveillance Debate," <http://www.defenddemocracy.org/media-hit/the-supreme-court-enters-the-surveillance-debate/>, Accessed 7/8/2015, rwg)

To protect the nation from hostile foreign forces is the principal responsibility of the federal government. Primarily, it is the responsibility of the Executive Branch. The federal courts have held both before and after FISA's enactment that **the president is endowed by the Constitution with the power to conduct surveillance —** including electronic eavesdropping — against "foreign powers" (a term of art that includes operatives not only of foreign governments but of such sub-sovereign entities as foreign terrorist organizations). If the president has that power, it cannot be reduced by a statute — it is black-letter law that the Constitution cannot be trumped by a mere congressional enactment. **The federal courts were intended to have no national security role**, particularly when it comes to foreign threats, **both because they**

lack institutional competence in intelligence matters and, more importantly, because they are not politically accountable to the American people — national defense decisions being the most significant that a body politic makes.

D) Political capital of the court is necessary to make controversial rulings:

Grosskopf and Mondak, 1998 Profs of Poli Sci Long Island U and U of Illinois, 1998

(Anke Grosskopf, Assistant Prof of Political Science @ Long Island University, & Jeffrey Mondak, Professor of Political Science @ U of Illinois, 1998, “Do attitudes toward specific supreme court decisions matter? The impact of Webster and Texas v Johnson on Public Confidence in the Supreme Court” Political Research Quarterly, vol. 51 no 3 633-54 September 1998)

The existence of a strong link between basic values and diffuse support does not necessarily preclude a role for specific decisions, particularly when we seek to understand how support comes to change over time (e.g., Caldeira and Gibson 1992: 658-61). We believe that **any claim that the Supreme Court is fully immune to backlash against controversial decisions can be rejected on a prima facie level.** First, consider the extreme case. **Were the Supreme Court to make its occasional blockbusters—Brown v. Board of Education, Roe v. Wade, Texas v. Johnson, etc.—the norm by routinely ruling on the thorniest social questions, we see it as implausible that such actions would bring no cumulative impact on how people view the Court.** Second, the Supreme Court’s typical mode of operation suggests that **justices themselves view institutional support as an expendable political capital** (Choper 1980). That is, the Court recognizes its own political limitations, and thus **justices pick their spots carefully when approaching potentially controversial cases.** From this perspective, the apparent dominance of democratic values as a determinant of institutional support (e.g., Caldeira and Gibson 1992) means not that the Court is insulated from backlash, but that **strategic justices tread cautiously** so as **to keep backlash to a minimum.** Consequently, how and where we examine whether public response to Supreme Court decisions affects institutional support may shape what answer we find.

IMPACT

E) Victory for Spokeo is necessary to prevent billions of dollars of damage to the tech sector:

Wall Street Journal, 4/16/2015 (“Surf, Cry, Sue,” <http://www.wsj.com/articles/surf-cry-sue-1429226196>, Accessed 6/26/2015, rwg)

Trial lawyers have built an empire chasing the potentially injured and convincing them to sue. But what if a multimillion-dollar lawsuit required no injury at all? On Friday the Supreme Court will consider taking a case about whether companies can be held liable in civil court for violating a federal statute, even if no one was harmed. Under Article III of the Constitution, a plaintiff in federal court has to claim injury to have standing to sue. But over the years, especially in the area of financial regulation and privacy matters, Congress has passed statutes that allow plaintiffs to sue without having to show they were injured. Now trial lawyers are translating those developments into class actions. **In Spokeo v. Robins**, Thomas Robins claims that Spokeo, a website that culls data about people, posted information about him that isn’t true, creating the impression that he is richer and more educated than he is, and married, which he isn’t. Because of those misrepresentations, Mr. Robins has sued Spokeo in a class action, saying the mistakes upset him and made it harder for him to get a job. He says he represents a class that “consists of millions of individuals.” ENLARGE Photo: Corbis The Supreme Court has said that to meet the Article III requirement, a plaintiff has to show an “injury in fact” that is “concrete and particularized.” Hypotheticals don’t count. There is “an outer limit to the power of Congress to confer rights of action,” Justice Anthony Kennedy wrote in his concurrence in 1992’s Lujan v. Defenders of Wildlife. “[I]t would exceed those limitations if, at the behest of Congress and in the absence of any showing of concrete injury, we were to entertain citizen suits to vindicate the public’s nonconcrete interest in the proper administration of the laws.” **A federal district court dismissed Mr. Robins’s claim that he suffered an economic injury from the incorrect information, but the liberal Ninth Circuit Court of Appeals reversed.** Even if he hadn’t suffered a personal economic injury, the Ninth Circuit said, alleging a statutory violation is enough to satisfy Article III’s injury requirements. **If that decision is left standing, it will open the floodgates for the tort bar to sue for statute violations.**

Mr. Robins claims Spokeo violated the Fair Credit Reporting Act, but similar class actions are pending in federal courts alleging violations of privacy laws. The risk is acute for tech companies such as eBay, Facebook, Google and Yahoo, which have said that with a no-injury requirement they will likely face lawsuits running into the billions of dollars. The trial-lawyer agenda is not to litigate but to confront companies with such mammoth classes and astronomical legal fees that they will settle, regardless of the merit of the claim. Jay **Edelson, founder of the law firm representing Mr. Robins, told the New York Times he has wrested more than \$1 billion in settlements suing technology companies. If left to stand, the Ninth Circuit's standard could make that number look like pocket change.** The Supreme Court was poised to consider this issue in a case called First American Financial Corp. v. Edwards, but dismissed it at the last minute without deciding the merits. We hope the Justices take this one.

F) Strong tech sector key to US military dominance and solving war around the globe:

Dr. Mary L. **Good, 1996**(Chair, Undersecretary for Technology, Dept. of Commerce, Technology in the national interest, accessed via google books)

Technology and the National Defense **On the battlefield, technology can be the decisive edge.** America's technological superiority has provided our men and women in uniform the wherewithal to protect the freedom, democracy, and security of the United States. Beyond our own borders, U.S. military strength—built on a foundation of high-technology—has enabled the United States **to stand in defense of our allies, preserve the peace, deter hostilities, repel aggression, and foster fledging democracies around the globe.** During the Cold War, an arsenal of advanced weapons allowed the United States to field a technologically superior force to counter the numerically superior Soviet threat. Today, these high-technology weapons and the transportation and logistics systems that support their deployment provide the United States with the ability to undertake global military operations and conduct surgical strikes on strategic military targets—as in recent operations in Iraq and Bosnia—while minimizing the risk to U.S. soldiers and civilians. **Continued technological leadership is essential to U.S. national security, military readiness, and global influence.**

FYI on Spokeo v. Robins

At issue in this case is whether a person may bring a lawsuit when a company violates a federal privacy law. In order to invoke the jurisdiction of federal courts under Article III, a plaintiff must have "standing" to sue. The Petitioner Spokeo, Inc., argues that the case should be dismissed because the Plaintiff did not prove that the publication of inaccurate personal information in violation of the Fair Credit Reporting Act was a concrete "injury" under Article III. The U.S. Court of Appeals for the Ninth Circuit disagreed, and denied Spokeo's motion to dismiss the case for lack of jurisdiction.

Uniqueness

Uniqueness: Spokeo will win now

(--) Court will likely rule in favor of Spokeo now:

Elliot **Katz**, **5/28/2015** ("Spokeo v. Robins: The Case That Has Silicon Valley Buzzing, Even Though Plaintiffs Likely Don't Have a Leg To "Stand" On,"

<http://www.jdsupra.com/legalnews/spokeo-v-robins-the-case-that-has-75066/>, Accessed 6/29/2015, rwg)

The Ninth Circuit reversed. The Ninth Circuit ruled that Mr. Robins did have standing to sue because (1) the "violation of a statutory right is usually a sufficient injury in fact to confer standing", and (2) the FCRA does not require a showing of actual harm when a plaintiff sues for statutory damages in certain circumstances. Spokeo subsequently petitioned the Supreme Court for cert. on the standing issues, and, on April 27, 2015, Spokeo's request was granted. **In Spokeo**, the Supreme Court will decide "[w]hether Congress may confer Article III standing upon a plaintiff who suffers no concrete harm, and who therefore could not otherwise invoke the jurisdiction of federal court, by authorizing a private right of action based on a bare violation of a federal statute." In other words, can Congress authorize an individual to sue by alleging that a company violated a federal statute without also alleging that he or she has actually suffered any injury? This question affects not only cases brought under the FCRA, but other privacy-related cases as well, which are often brought under statutes passed by Congress authorizing statutory damages without requiring a plaintiff to demonstrate harm, such as the Telephone Consumer Protection Act, 47 U.S.C. § 227 et seq. and Electronic Communications Privacy Act, 18 U.S.C. § 2510, et seq. What Is The Likely Outcome? To support his position that he does have standing to sue, Robins cited Warth v. Seldin, a 1975 Supreme Court decision which states: "The actual or threatened injury required by Art. III may exist solely by virtue of statutes creating legal rights, the invasion of which creates standing." Interestingly, the Ninth Circuit quoted the above portion of Warth in its opinion holding that Robins did have Article III standing, despite the fact that six sentences later, Warth states: "Of course, Art. III's requirement remains: the plaintiff still must allege a distinct and palpable injury to himself...." Given that one of the opening lines in the Ninth Circuit's opinion was "Robins's allegations of injury were sparse", the above-quoted portion of Warth – puzzlingly absent from the Ninth Circuit opinion – may not bode well for Robins' chances before the Supreme Court. Additionally, an important footnote on the final page of the Ninth Circuit opinion states: "Because we determine that Robins has standing by virtue of the alleged violations of his statutory rights, we do not decide whether harm to his employment prospects or related anxiety could be sufficient injuries in fact." Given that Warth states a plaintiff must allege a "distinct and palpable injury to himself," **this case will most likely ultimately hinge on the Supreme Court's 2013 defendant-friendly Clapper v. Amnesty International USA decision. In Clapper, a case that is virtually always cited by defendants in motions to dismiss data breach and privacy-related lawsuits, the Supreme Court held that mere concern or fear of future harm cannot manufacture standing. Under Clapper, Mr. Robins' alleged future harm** to his employment prospects and related anxiety – similar to plaintiffs' fear that they could be harmed by a bad actor who may utilize their financial information post-data breach – **will likely not suffice to confer standing.**

(--) Spokeo will win now:

Barry **Goheen**, **6/22/2015** (Corporate Counsel, "Supreme Court Prepares to Weigh FCRA and 'Actual Injury'" <http://www.corpcounsel.com/id=1202730126796/Supreme-Court-Prepares-to-Weigh-FCRA-and-Actual-Injury#ixzz3fG4O93W5>, Accessed 7/7/2015, rwg)

The Supreme Court's grant of certiorari in Spokeo has raised hopes from the defense bar that the Court will hold that standing to sue is a constitutional issue that Congress cannot confer merely by enacting a statute that provides for penalties upon proof that the statute was violated. **Prior statements from the Court have hinted at such a holding.** See, e.g., *Raines v. Byrd*, 521 U.S. 811, 820 (1997) ("Congress cannot erase Article III's standing requirements by statutorily granting the right to sue to a plaintiff who would not otherwise have standing.").

(--) Spokeo will win now—Court took the case at the behest of tech firms:

Marisa **Kendall**, 6/22/2015 (“On SCOTUS Watch with Akin Gump's Heinke,”

<http://www.therecorder.com/id=1202729771067/On-SCOTUS-Watch-with-Akin-Gumps-Heinke?slreturn=20150529150348>, Accessed 6/29/2015, rwg)

Second, **in Spokeo v. Robins, the Supreme Court granted certiorari to decide whether Congress may confer Article III standing upon a plaintiff who suffers no concrete harm**, and who therefore could not otherwise invoke the jurisdiction of a federal court, by authorizing a private right of action based on a bare violation of a federal statute (so-called “statutory injury”). Spokeo is likely to limit the viability of class action lawsuits claiming millions of dollars in statutory damages for technical violations of federal privacy, data breach and consumer protection laws. **The Supreme Court took the case at the urging of a number of companies and groups—such as Facebook, Google, Trans Union, the U.S. Chamber of Commerce and the Consumer Data Industry Association—with a strong stake in discouraging such cases.** Spokeo could have an enormous impact on class action defense because of the number of laws providing for statutory damages, as well as the potential exposure under such statutes.

(--) Court will reverse the Ninth Circuit and rule for Spokeo now:

Terry W. **Clemans**, 7/8/2014 (executive director of the National Consumer Reporting Association, “Will SCOTUS Take Up Spokeo v. Robins and Address the No Harm, No Foul Claim?” <http://nationalmortgageprofessional.com/news/41629/will-scotus-take-spokeo-v-robins-and-address-no-harm-no-foul-claim>, Accessed 6/29/2015, rwg)

Several interested parties, including the National Consumer Reporting Association (NCRA) **have filed amicus briefs in the U.S. Supreme Court urging it to hear the case of Spokeo v. Robins and reverse the Ninth Circuit’s conclusion** that “the violation of a statutory right” in itself is “a sufficient injury in fact to confer standing” under Article III [Robins v. Spokeo Inc., 742 F.3d 409, 412 (9th Cir. 2014)]. The Ninth Circuit found that “the statutory cause of action does not require a showing of actual harm” (id.), and held that the plaintiff had sustained injury-in-fact under Article III by virtue of the bare statutory violation of the Fair Credit Reporting Act (FCRA), 15 U.S.C. § 1681 et seq. The importance of this issue has a broad impact far beyond the FCRA claim it specifically addresses. There are many federal and state statutes that provide statutory damages that arguably may be recovered in the absence of any showing of actual consumer harm. By holding that causation is effectively automatic in statutory damages cases, the Ninth Circuit’s rule makes it very easy to certify a class of plaintiffs: if a statute was violated, then every consumer was hurt. That rule raises a defendant’s exposure in class-action statutory damages cases to a level that is not survivable by most businesses. In order for a federal court to be able to hear a case, Article III of the U.S. Constitution requires a plaintiff to have standing. Basically, they need to have suffered a concrete, particularized harm. In Spokeo v. Robins, the plaintiff filed a class-action suit based on a “bare allegation” that the defendant had violated FCRA by issuing consumer reports in willful violation of that statute. Spokeo is a Web site that offers information on consumers, claiming to have searched social media, criminal records, and public filings to put together estimates of their wealth and character. The named plaintiff found his profile on Spokeo, but never lost a job or was denied credit. In fact, Spokeo’s Web site listed him as having more wealth than he actually did. The issue in the Spokeo case is whether an allegation of a willful violation, standing alone, is enough of a “harm” to justify the exercise of federal jurisdiction. This issue is particularly important under FCRA, which creates statutory damage liability for willful violations ranging from \$100 to \$1000 per consumer. Even a small consumer reporting agency issues reports on thousands of individuals per month, and a small disclosure mistake that goes unnoticed for only a couple of months could result in a liability that would eliminate the company’s ability to survive. It would also outstrip any actual harm caused by the award. This is not news to the class-action bar, which is showing an increased interest in filing these kinds of suits and is filing growing numbers of them. This Supreme Court has attempted to rein in the excesses of class-action litigation through, for example, enforcing arbitration clauses that prohibit class-action suits and tightening pleading standards so that defendants cannot be forced to endure discovery or to enter in *terrorem* settlements based on a naked claim that a violated a statute that affected the plaintiff and a few thousand of his closest friends. In fact, last year, the mortgage industry was at the center of another case important to this one, that of First American Financial v. Edwards. That case took a very similar issue involving the presence of conflicts of interest in real estate transactions. The Court dismissed that appeal as improvidently granted, meaning that a majority of them thought that the facts of First American presented a bad vehicle to decide the question presented. Spokeo, however, represents a better vehicle due to the fact that there is no question of whether or not this plaintiff was harmed (he wasn’t), and **if the Supreme Court were to review this decision, there is a good chance that they would reverse it.** As the Supreme Court, however, hears very few cases, amicus participation at the petition stage is critical. NCRA joined with the National Association of Professional

Background Screeners (NAPBS) and PreCheck, a background screening company, to retain the Washington, D.C. law firm of Meyer, Klipper & Mohr PLLC (thank you to Chris Mohr of the firm for assistance with this article) to file a friend-of-the-court brief explaining the harm that these suits are doing to this industry, and urging them to take the case.

(--) Spokeo will win now—the fact that the Court agreed to hear it proves:

Scott A. **Shaffer, 5/1/2015** (focuses his litigation practice in the areas of advertising, direct marketing, class action defense, “Supreme Court To Consider An Appeal That Could Greatly Impact TCPA Litigation” <http://www.olshanlaw.com/blogs-Advertising-Law-Blog,Supreme-Court-Appeal-TCPA>, Accessed 6/29/2015, rwg)

The district court in the Central District of California sided with Spokeo and dismissed the case. **Robins appealed to the Ninth Circuit, and prevailed.** In reversing the district court, the Ninth Circuit held that, “When, as here, the statutory cause of action does not require proof of actual damages, a plaintiff can suffer a violation of the statutory right without suffering actual damages. Of course, the Constitution limits the power of Congress to confer standing... This Constitutional limit, however, does not prohibit Congress from ‘elevating to the status of legally cognizable injuries concrete de facto injuries that were previously inadequate in law.’” **By agreeing to hear Spokeo’s appeal, the Supreme Court cast doubt on the continuing validity not only of the Ninth Circuit’s ruling,** but indirectly on a large number of TCPA cases. In nearly every TCPA case (except for possibly junk fax cases, where printer ink and toner are wasted), the recipient will have a difficult time showing an injury-in-fact from an unwanted telephone call or text message, and therefore only the statutory award is sought

Uniqueness: Spokeo Decided Next Term

(--) **Spokeo will be decided next term**

Skipease, 4/28/2015 (“Supreme Court To Hear Spokeo People Search Case,”

<http://www.skipease.com/blog/peoplesearch/spokeo-v-robins/>, Accessed 6/29/2015, rwg)

Spokeo, Inc. v. Robins will be argued and decided during the Supreme Court’s next term, which starts in October 2015 and ends in June 2016.

Uniqueness: AT: Gay Marriage Ruling

(--) Majority of Americans support same-sex marriage ruling:

Nick Gass, 6/30/2015 (staff writer, "Majority supports Obamacare, gay marriage Supreme Court decisions," <http://www.politico.com/story/2015/06/poll-obamacare-gay-marriage-supreme-court-rulings-119590.html>, Accessed 7/10/2015, rwg)

A majority of Americans support the Supreme Court's decisions last week **on** Obamacare and **same-sex marriage**, according to a new CNN/ORC poll released Tuesday. But at the same time, nearly 4 in 10 say the nation's highest court is too liberal. More than 6 in 10 Americans — 63 percent — said they support the Court's ruling that upheld government subsidies for Americans buying health insurance through federally-run exchanges in states where no such program would otherwise exist. **Asked about same-sex marriage, 59 percent said they agreed with the decision to legalize it in all 50 states.**

(--) Majority of Americans support same-sex marriage ruling:

Evan **McMurry, 6/30/2015** (staff writer, "CNN Poll: Majority Agree with SCOTUS Gay Marriage, Obamacare Rulings," <http://www.mediaite.com/online/cnn-poll-majority-agree-with-scotus-gay-marriage-obamacare-rulings/>, Accessed 7/10/2015, rwg)

More good polling news for President Barack **Obama** from CNN **today: the two major Supreme Court cases decided last week enjoy broad popularity among the public**, an early affirmation of the administration's stances on health care and same-sex marriage. A CNN/ORC poll found 63% of respondents approved of the Supreme Court's 6-3 decision to ratify the Affordable Care Act's federal subsidies against a tortured reading of the law, the biggest existential threat to the president's signature domestic legislation since the constitutional challenge over the individual mandate two years ago. **Meanwhile, 59% approved of the Supreme Court's decision to establish marriage equality as a constitutional right**, a landmark ruling in the progression of gay rights that led to apocalyptic denunciations from the right. Some clerks in southern states have refused to issue licenses to same-sex couples, citing legal ambiguities and religious objections; the popularity of the decision could pressure dissenting justices to give up the ghost.

Uniqueness: AT: Obamacare Ruling

(--) Majority of Americans support Obamacare decision

Links: Big Precedents

(--) Moving away from watershed decisions undermines the court's political capital

John C. **Yoo, 2001** Professor of law at the University of California, **2001**, [The University of Chicago Law Review, "In defense of the court's legitimacy," p. 75]

How does the Court maintain this legitimacy? According to the Casey plurality, the Court receives its public support by "making legally principled decisions under circumstances in which their principled character is sufficiently plausible to be accepted by the Nation."³⁹ In other words, **only by acting in a manner that suggests that its decisions are the product of law rather than politics can the Court maintain its legitimacy. Therefore, the Court must adhere to settled precedent, lest the public believe that the Court is merely just another political actor. "[T]o overrule under fire in the absence of the most compelling reason to reexamine a watershed decision would subvert the Court's legitimacy beyond any serious question."**⁴⁰ Without this legitimacy, the Court would be unable to perform its role as interpreter of the Constitution, which at times may require the Court to act against the popular will in favor of individual rights.

Links: Meta-Data

(--) Court strikedown of metadata is activist and puts the courts in an area that exposes their institutional legitimacy:

Paul **Mirengoff**, 12/17/2013 (“The NSA, privacy, and judicial activism,”

<http://www.powerlineblog.com/archives/2013/12/the-nsa-privacy-and-judicial-activism.php>, Accessed 7/9/2015, rwg)

Judge Leon’s response to Smith is, in essence, that things have changed considerably since 1979 when that case was decided. He cites the vast increase in the government’s surveillance capacity and changes in people’s phone usage habits. But these changes provide no sound basis for distinguishing Smith. That case rests on the view that, **because of the nature of metadata**, its collection by the government without a warrant isn’t constitutionally problematic. This true no matter the quantity of metadata the government collects. It’s possible that the Supreme Court would decide that changed circumstances warrant limiting the holding of Smith. **The Court has seen fit to limit or dispense with other old decisions in the name of striking down certain government policies intended to protect the nation from terrorism. But this isn’t something that district courts or courts of appeals are supposed to do.** John Yoo and Max Boot are right to condemn Judge Leon’s decision on this basis. **It is an egregious example of judicial activism.** I also agree with Yoo that **even the Supreme Court shouldn’t reconceive the rules of search and seizure in light of new Internet technologies.** As Yoo explains: [T]hat is the responsibility of our elected representatives. Only they can determine what society’s “reasonable expectation of privacy” is in Internet and telephone communications. **Judges are the last people to fairly claim they have their fingers on the pulse of the American people.** Only our elected representatives can properly balance existing privacy rights (if any), against the need for information to protect the nation from terrorist attack. **Judges are far too insulated and lack the expertise to make effective judgments on national-security and foreign affairs.** Unfortunately, judges — even district court judges — are too immodest and/or too power hungry to recognize this reality.

(--) Activism threatens the courts legitimacy:

ABDULLAH **BOZKURT**, 4/13/2008 (“Judicial activism’s quarrel with legitimacy and democracy,”

http://www.todayszaman.com/national_judicial-activisms-quarrel-with-legitimacy-and-democracy_139067.html, Accessed 7/9/2015, rwg)

“This is judicial activism if not a judicial coup,” says Professor Ergun Özbudun, a teacher of constitutional law at Ankara’s Bilkent University. “There is no smoking gun in the indictment filed by the chief prosecutor with the Constitutional Court,” he adds.

Judicial activism is a term adopted in the US to describe zealous judges who overstep their authority and conflict with the legislature’s power by making new law rather than interpreting existing legislation. The issue was constantly debated at the republic’s foundation, spearheaded by Alexander Hamilton in his famous “Federalist Papers” and Republican Thomas Jefferson. Hamilton argued that the judiciary would be least dangerous to political rights because it had no influence over the “sword or purse.” Jefferson, however, challenged the proposition, saying that **exalting the judiciary over the executive and legislature would disgrace the judiciary and lead to its eventual degradation.** The Jeffersonian prediction did not happen, thanks to the US Supreme Court mostly **steering clear of politics and respecting the power of the legislative and executive branches.**

(--) Striking down metadata is an example of judicial activism:

Max **Boot**, 12/17/2013 (“NSA, Metadata, and the Constitution,”

<https://www.commentarymagazine.com/2013/12/17/nsa-metadata-and-the-constitution/>, Accessed 7/9/2015, rwg)

If any evidence were needed that judicial activism is not merely a problem of the left, look at what a couple of conservative judicial activists pulled off yesterday in a case involving one of our most important national security safeguards—the NSA’s monitoring of terrorist communications. Larry Klayman is a professional plaintiff who has filed too many cases to count. (He has even gone to court against the organization he founded and then left, Judicial Watch.) He first came to public attention pursuing various far-fetched allegations against the Clintons; more recently he has been pursuing the conspiratorial “birther” claim that President Obama should be thrown out of office because he supposedly wasn’t born in this country. He has also been quoted as saying that conservatives should demand “that this president leave town, to get up, to put the Quran down, to get up off his knees, and to figuratively come out with his hands up.” **Klayman’s latest cause is the NSA’s collection of “metadata”** which has been irresponsibly revealed by Edward Snowden. This is the NSA program that collects information on which telephone numbers are in contact with each other so that links among terrorist plotters can be detected. Mind you, the NSA can’t actually listen in to the content of these communications without a court order. It can only search for patterns so that if an al-Qaeda mastermind abroad calls someone in the United States, that phone number can be tagged for further investigation. This is considerably less intrusive than the use of surveillance cameras in public places by organizations such as the New York Police Department or Macy’s which can monitor individuals’ movements—and, more to the point, it’s a lot less intrusive than the kind of data that big companies such as Amazon and Google compile on their customers, which includes their Internet browsing habits. Yet Klayman did not choose to sue the NYPD or Google—at least not that I know of. (Given his litigious nature—he doesn’t seem to have a job other than filing suits—such cases may well be pending.) He chose to sue the NSA over its collection of metadata, claiming that the NSA was infringing on his personal liberties by collecting his metadata—as if Larry Klayman were so important a personage that the NSA was actually going to devote time and resources to monitoring him. Such suits are almost as common as spam emails and about as significant. The difference in this case is that **a federal judge**, Richard J. Leon of Federal District Court for the District of Columbia, **chose to grant Klayman an injunction against the NSA.** Sort of. Leon actually stayed his own injunction in a moment of self-awareness or perhaps self-protection—because if he hadn’t done so, an appeals court undoubtedly would have.

(-- The lower court decision to strike down meta-data is activist:

Barry Friedman and Dahlia Lithwick, 12/18/2013 (professor of law at New York University School of Law, “Judge Leon’s NSA #Slatepitch,” http://www.slate.com/articles/news_and_politics/jurisprudence/2013/12/nsa_data_collection_ruling_judge_richard_leon_is_right_that_we_expect_more.html, Accessed 7/9/2015, rwg)

Buried deep in Judge Richard Leon’s breathtaking decision invalidating the NSA’s telephone metadata program is a #slatepitch. Leon concludes, contrary to the views of virtually everyone else in our digital world, that we have a greater expectation of privacy in the data we readily hand over to third-party providers today than we had back in the 1970s. As our colleague Emily Bazelon wrote Monday, “That’s the most debatable proposition in his opinion.” Debatable it is, but—like some percentage of all good Slatepitches—it’s probably also true. It had better be true. If Judge Leon’s groundbreaking opinion is to be upheld on appeal, it is crucial that he is right about this one proposition. The Fourth Amendment prohibits “unreasonable searches and seizures,” and the Supreme Court has said that if we don’t have a legitimate expectation of privacy in what the government grabs, it is not a search at all. Period. Unfortunately for Judge Leon (and for anyone else who doesn’t want all their telephone metadata vacuumed up by the NSA), long-standing Supreme Court precedents state unequivocally that is not a search for the government to collect evidence we’ve already given over to third-party providers. That’s why Judge Leon felt compelled to make a normative argument to support his conclusion. And while he is normatively correct that our expectations of privacy should be greater than they were back in the days of rotary phone booths, his claim still sounds paradoxical. The most relevant case here is the Supreme Court’s 1979 decision in *Smith v. Maryland*. In *Smith* a guy snatched a woman’s purse, and she started to get weird phone calls. So the police had the phone company install a pen register to trace her incoming calls, without obtaining a warrant, which ultimately incriminated the defendant. The Supreme Court decided that *Smith* had no reasonable expectation of privacy in the numbers he dialed from his home phone. (If that strikes you as odd, sit tight; we’ll get back to it in a moment.) No reasonable expectation of privacy means there was no search, which means there was no constitutional protection. The *Smith* decision looked to be one heck of an obstacle for Judge Leon to get around, and so he worked overtime—and not particularly successfully in the eyes of some—to distinguish the NSA’s ginormous warrantless wiretapping scheme from collecting the numbers called from just one person’s phone in *Smith*. That’s also why he went normative. Judge Leon sets up the question before him as follows: “When do present-day circumstances—the evolutions in the Government’s surveillance capabilities, citizens’ phone habits, and the relationship between the NSA and telecom companies—become so thoroughly unlike those considered by the Supreme Court thirty-four years ago that a precedent like *Smith* simply does not apply?” You guessed it—his answer to that question turns out to be “now.” Leon’s opinion is a cornucopia of facts about all the new ways we use phones, suggesting that we think—or would like to think—our information is absolutely private, way more so than back in the day (1979). The money line in Judge Leon’s opinion is this

one: "Whereas some may assume that these cultural changes will force people to 'reconcile themselves' to an 'inevitable' 'diminution of privacy that new technology entails,'"—he is quoting Justice Samuel Alito here—"I think it is more likely that these trends have resulted in a greater expectation of privacy and a recognition that society views that expectation as reasonable." That's the Slatepitch: the counterintuitive insistence that, as a society in 2013, the more we give information away to anyone and everyone, the more privacy we expect in our data. The last thing any of us reasonably expect is that the government will use some stealthy technology to invade that which we wish to keep private. And what about the fact that Americans really don't seem to care about giving all their data away? Leon writes in a footnote (it's the footnotes in his opinion that really ring the change) that it's the government's—and especially the Supreme Court's—fault: We have been conditioned by our legal regime not to care. "The experiences of many Americans—especially those who have grown up in the post-Smith, post-cell phone, post PATRIOT Act age—might well be compared to those of the 'refugee from a totalitarian country, unaware of this Nation's traditions, [who] erroneously assume that police were continuously monitoring' telephony metadata. Accordingly, their 'subjective expectations obviously could play no meaningful role in ascertaining ... the scope of Fourth Amendment protection.'" And then Judge **Leon rather dramatically concludes that because our catawampus ideas about privacy can no longer be helpful to the debate over what a reasonable expectation of privacy might look like, "a normative inquiry" is what's called for.** So there it is, sports fans. That's the moment you want to watch on instant replay. **When a Republican-appointed federal judge tells you he is going to make a "normative" determination about what reasonable expectations of privacy should be, that's a signal that he is going to step out. In some quarters that's called "judicial activism."**

Links: War on Terror Cases

(--) Active role by the judiciary in the war on terror risks judicial capital:

Stephen **Reinhardt, 2006** (Judge, U.S. Court of Appeals for the Ninth Circuit, Boston University Law Review, "THE ROLE OF THE JUDGE IN THE TWENTY-FIRST CENTURY: THE JUDICIAL ROLE IN NATIONAL SECURITY," Lexis/Nexis, Accessed 7/6/2015, rwg)

The role of judges during times of war - whether it be a traditional war or a "war on terrorism" - is essentially no different than during times of peace: it is to interpret the law to the best of our ability, consistent with our constitutionally mandated role and without regard to external pressure. Among the differences in wartime for the judiciary, however, is one that involves a principle that is essential to the proper operation of the federal courts - judicial independence. In wartime, the need for judicial independence is at its highest, yet the very concept is at its most vulnerable, imperiled by threats both within and without the judiciary.

Externally, there is pressure from the elected branches, and often the public, to afford far more deference than may be desirable to the President and Congress, as they wage wars to keep the nation safe. Often this pressure includes threats of retribution, including threats to strip the courts of jurisdiction. Internally, judges may question their own right or ability to make the necessary, potentially perilous judgments at the very time when it is most important that they exercise their full authority. This concern is exacerbated by the fact that the judiciary is essentially a conservative institution and judges are generally conservative individuals who dislike controversy, risk taking, and change.

Links: Strikedown of Other Branches

(--) Striking down actions of other branches risks court capital:

Lisa A. Kloppenberg, 2007 (Dean and Professor of Law, University of Dayton School of Law, University of Dayton Law Review, "ENACTING AND INTERPRETING STATUTES IN THE CONSTITUTION'S SHADOWS SYMPOSIUM: THE AVOIDANCE CANON: FROM THE COLD WAR TO THE WAR ON TERROR," Lexis/Nexis, Accessed 7/6/2015, rwg)

Why have federal and state courts developed avoidance canons if they pose the risks delineated above? The justifications for avoidance can be grouped into a few categories based on Justice Brandeis's famous Ashwander formulation of 1936. n13 Perhaps the most understandable and defensible justification is the proposition that federal courts should avoid unnecessary constitutional questions to promote federalism and separation of powers. Thus, to the extent Congress or a state is charged with authority in a particular substantive area, courts should carefully ensure the ability of these actors to interpret the Constitution in their work by not foreclosing options. **Judicial review that invalidates another branch's constitutional work should be a last resort due to its purportedly delicate and final nature.**

Similarly, states and other constitutional actors should be given the benefit of the doubt whenever possible, and their actions repudiated only when absolutely necessary. n14 While deference is an important and valid stance for courts in our multilayered democracy, it is not simple to apply. Additionally, executive and legislative officials may sometimes fail to protect constitutional interests of individuals, particularly in times when expedience is needed, majoritarian political pressure is extreme, or when those seeking protection are viewed as threats or enemies. The precise dictates of federalism and separation of powers are not clear, making more difficult the judgment call about whether lawsaying by a court is necessary. In addition to being vague and broad, the constitutional interests in these areas change over time in response to historical, political and social developments. For example, in recent decades, federalism issues have emerged as major areas for power struggles between the federal and state governments, businesses, and individuals, with courts delineating the scope of these powers regularly and "mediating" these struggles. n15 During the War on Terror, President George W. Bush and his advisors have advanced a broad view of executive power that is not completely shared by the Court, some legislators, and some of the polity. While avoiding constitutional issues to afford time for political battles to play out or crises to diminish may appear attractive, it entails costs for parties who must spend excessive time and expense in determining and [*353] securing protection for their constitutional rights. Additionally, a court's invocation of an avoidance mechanism does not always lead to greater deference to other constitutional actors or advance constitutional dialogue. n16 Judge Posner has characterized Professor Bickel's avoidance project as promoting a "coercive" kind of dialogue. n17 "It would be a Bickelian Court's hope that legislators' eyes would be opened by the Court's tutorial or that reenactment would flounder because of the difficulty of enacting legislation." n18 In terms of promoting dialogue, the canon affords less clarity as the Court shapes constitutional law. The Court could step away from the ruling or alter the boundaries of the danger zone identified in future cases. Professor Murchison has said the canon advances a rather "muffled" and "tentative" dialogue, with a "blend of indirection, impatience, pause and reply," but he nevertheless concludes that the canon is important and useful. n19 **A second set of justifications for avoidance** is even more troubling. These concerns **center on the pressure placed on courts resulting from constitutional adjudication.** n20 **They include a court's credibility and viability,** and are directly linked to fears for judicial independence. The Ashwander formulation arose in part as a response to the activism of the conservative U.S. Supreme Court of the Lochner era. **The fears of political reprisal and long-term credibility,** or the viability of unelected Article III judges **certainly animate the general avoidance doctrine,** as captured so well in Bickel's work on the countermajoritarian difficulty and passive virtues. n21

Links: Striking Down New Technologies

A) Court interpretation of privacy to strike down new technologies violates Separation of Powers:

Orin S. **Kerr, 2004** (Associate Professor, George Washington University Law School, Michigan Law Review, 102 Mich. L. Rev. 801, Accessed 7/7/2015, rwg)

In the fast-developing area of communications technology, **courts should be cautious not to wield the amorphous "reasonable expectation of privacy" standard, in a manner that nullifies the balance between privacy [*853] rights and law enforcement needs struck by Congress in Title III As new technologies continue to appear** in the marketplace and outpace existing surveillance law, **the primary job of evaluating their impact on privacy rights and of updating the law must remain with the branch of government designed to make such policy choices, the legislature.** Congress undertook in Title III to legislate comprehensively in this field and has shown no reluctance to revisit it. Accordingly, we must decline [the defendant]'s invitation to usher in through the Fourth Amendment a prohibition of that which Title III tells us, in no uncertain terms, Congress affirmatively permitted at the time this case arose. n309

B) Striking down actions of other branches risks court capital:

Lisa A. **Kloppenber, 2007** (Dean and Professor of Law, University of Dayton School of Law, University of Dayton Law Review, "ENACTING AND INTERPRETING STATUTES IN THE CONSTITUTION'S SHADOWS SYMPOSIUM: THE AVOIDANCE CANON: FROM THE COLD WAR TO THE WAR ON TERROR," Lexis/Nexis, Accessed 7/6/2015, rwg)

Why have federal and state courts developed avoidance canons if they pose the risks delineated above? The justifications for avoidance can be grouped into a few categories based on Justice Brandeis's famous Ashwander formulation of 1936. n13 Perhaps the most understandable and defensible justification is the proposition that federal courts should avoid unnecessary constitutional questions to promote federalism and separation of powers. Thus, to the extent Congress or a state is charged with authority in a particular substantive area, courts should carefully ensure the ability of these actors to interpret the Constitution in their work by not foreclosing options. **Judicial review that invalidates another branch's**

constitutional work should be a last resort due to its purportedly delicate and final nature.

Similarly, states and other constitutional actors should be given the benefit of the doubt whenever possible, and their actions repudiated only when absolutely necessary. n14 While deference is an important and valid stance for courts in our multilayered democracy, it is not simple to apply. Additionally, executive and legislative officials may sometimes fail to protect constitutional interests of individuals, particularly in times when expedience is needed, majoritarian political pressure is extreme, or when those seeking protection are viewed as threats or enemies. The precise dictates of federalism and separation of powers are not clear, making more difficult the judgment call about whether lawsaying by a court is necessary. In addition to being vague and broad, the constitutional interests in these areas change over time in response to historical, political and social developments. For example, in recent decades, federalism issues have emerged as major areas for power struggles between the federal and state governments, businesses, and individuals, with courts delineating the scope of these powers regularly and "mediating" these struggles. n15 During the War on Terror, President George W. Bush and his advisors have advanced a broad view of executive power that is not completely shared by the Court, some legislators, and some of the polity. While avoiding constitutional issues to afford time for political battles to play out or crises to diminish may appear attractive, it entails costs for parties who must spend excessive time and expense in determining and [*353] securing protection for their constitutional rights. Additionally, a court's invocation of an avoidance mechanism does not always lead to greater deference to other constitutional actors or advance constitutional dialogue. n16 Judge Posner has characterized Professor Bickel's avoidance project as promoting a "coercive" kind of dialogue. n17 "It would be a Bickelian Court's hope that legislators' eyes would be opened by the Court's tutorial or that reenactment would flounder because of the difficulty of enacting legislation." n18 In terms of promoting dialogue, the canon affords less clarity as the Court shapes constitutional law. The Court could step away from the ruling or alter the boundaries of the danger zone identified in future cases. Professor Murchison has said the canon advances a rather "muffled" and "tentative" dialogue, with a "blend of indirection, impatience, pause and reply," but he nevertheless concludes that the canon is important and useful. n19 **A second set of justifications for avoidance** is even more troubling. These concerns **center on the pressure placed on courts resulting from constitutional adjudication.** n20 **They include a court's credibility and viability,** and

are directly linked to fears for judicial independence. The Ashwander formulation arose in part as a response to the activism of the conservative U.S. Supreme Court of the Lochner era. **The fears of political reprisal and long-term credibility,** or the viability of unelected Article III judges **certainly animate the general avoidance doctrine,** as captured so well in Bickel's work on the countermajoritarian difficulty and passive virtues. n21

Links: Katz Precedent

(--) The Katz precedent has been the subject of carefully crafted precedent—it can't be cavalierly mixed with other rules:

George M. Dery, 2007 (Professor, California State University Fullerton, Connecticut Law Review, "Blissful Ignorance? The Supreme Court's Signal to Police in Georgia v. Randolph to Avoid Seeking Consent to Search from All Occupants of a Home," Lexis/Nexis, Accessed 6/26/2015, rwg)

In mentioning Olson in passing in order to support its holding, Randolph made an explicit connection between its "commonly held understanding" element and **Katz's "reasonable expectation of privacy" standard**.ⁿ²⁵⁰ Randolph's linkage of "reasonable expectation of privacy" and "commonly held understanding" could lead to unintended consequences. **"Reasonable expectation of privacy" is not a concept that can be cavalierly mixed with other rules, for it has been the focus of considerable Court attention and thus has been the subject of a long list of** [*77] **carefully crafted precedent**.ⁿ²⁵¹ In particular, the Court has previously determined that reasonable privacy expectations, rather than being static assessments, are subject to change by the actions of others.ⁿ²⁵² Indeed, third parties can "frustrate" a person's otherwise legitimate privacy expectations.ⁿ²⁵³ Such a situation occurred in United States v. Jacobsen, a case involving the commercial delivery service, Federal Express.ⁿ²⁵⁴

(--) Katz is a landmark that established the foundations for modern day 4th amendment jurisprudence:

Donald R. C. Pongrace, 1985 (J.D. The Washington College of Law, The American University, Summer, "A SYMPOSIUM OF CRITICAL LEGAL STUDY: STEREOTYPIFICATION OF THE FOURTH AMENDMENT'S PUBLIC/PRIVATE DISTINCTION: AN OPPORTUNITY FOR CLARITY," Lexis/Nexis, accessed 6/26/2015, rwg)

Commentators applauded the Katz decision as significantly expanding the scope of the fourth amendment's protections.ⁿ⁷⁸ Although **the decision in Katz is probably a landmark in fourth amendment doctrine**,ⁿ⁷⁹ such a status should not rest solely on a somewhat simplistic characterization of its contribution to fourth amendment jurisprudence. **Ultimately, the Court in Katz abandoned a property oriented, formalistic definition of fourth amendment privacy and replaced it with a relativistic definition characterized by the now familiar balancing approach used to protect privacy rights**.ⁿ⁷⁹ [*1206] **The decision in Katz, therefore, constitutes a clear dividing line**, albeit tardily established, **between formalist and realist fourth amendment doctrine**.ⁿ⁸⁰ Although the rhetoric of the opinion in Katz evokes images similar to those enunciated by the Court in its opinion in Boyd, the rationales of the two opinions are disparate and incomparable.

(--) Katz is a watershed Fourth Amendment decision:

Orin S. Kerr, 2004 (Associate Professor, George Washington University Law School, Michigan Law Review, 102 Mich. L. Rev. 801, Accessed 7/7/2015, rwg)

This brings us back to Katz. **Today, Katz is canonized as a landmark decision that dramatically changed Fourth Amendment law. Professor Amsterdam called it a "watershed in fourth amendment jurisprudence."**ⁿ⁹⁹ Yet a close examination of Katz suggests a plausible contrary reading: Katz did not revolutionize Fourth Amendment law, but merely reemphasized the loose property-based approach announced in Jones. Indeed, while Justice Harlan's concurrence in Katz did introduce the "reasonable expectation of privacy test," that doctrinal formulation was apparently meant merely to articulate the legal standard that the Court had been tacitly applying in past cases - cases such as Jones v. United States.

Links: 4th Amendment

(--) Bright line rules on the 4th amendment undermine court legitimacy:

Joshua **Levy, 2011** (New York University School of Law, magna cum laude, Virginia Journal of Law & Technology, "Towards a Brighter Fourth Amendment: Privacy and Technological Change," http://www.vjolt.net/vol16/issue4/v16i4_499-Levy.pdf, Accessed 7/8/2015, rwg)

Despite their advantages, bright - line rules entail significant legitimacy costs. First and foremost, they are inherently inflexible, which can lead courts to incorrect results in particular cases.¹⁴¹
Incorrect or unjust results risk severely damaging the institutional credibility of the judiciary.

¹⁴² Second, **bright - line rulemaking is legislative in nature and, therefore, risks damaging the Court's legitimacy.**¹⁴³ In order to ameliorate these costs, courts should only engage in bright - line rulemaking for uncontroversial areas that have traditionally received the highest privacy protections. **"[T]he Court has given weight to such factors as the intention of the Framers of the Fourth Amendment,** the uses to which the individual has put a location, and our societal understanding that certain areas deserve the most scrupulous protection from government invasion."¹⁴⁴ In addition to limiting themselves to traditional areas of privacy protection, courts should only adopt bright - line rules for activities that are recurring in nature, clearly understandable, and affected by rapid technological changes. The event must be recurring since developing rules entails upfront costs of scarce judicial resources, whereas standards incur costs in enforcement; so efficiency favors only promulgating rules for frequent, recurring events.¹⁴⁵ Judges will only be able to develop such rules if they can fully understand the activities at issue.¹⁴⁶ Yet, given the legitimacy costs of bright line rules, the Court should only invoke this power when "[t]o withdraw protection of this minimum expectation would be to permit police technology to erode the privacy guaranteed by the Fourth Amendment," leaving citizens "at the mercy of advancing technology."¹⁴⁷ In areas of rapid technological change, the inability (or unwillingness) of other areas of government to adequately protect privacy mollify any legitimacy costs rulemaking might entail.¹⁴⁸ **Although technological change may diminish privacy in all areas of life,**¹⁴⁹ **courts should proceed with caution given the institutional and legitimacy limitations they face.** While this may not provide protection from all areas into which the government may intrude, this Article seeks to set out a framework of bright - line Fourth Amendment rules for core areas of privacy that can later be expanded. There are two areas that satisfy all these requirements: homes and human bodies. The text of the Fourth Amendment explicitly refers to both "houses" and "persons,"¹⁵⁰ and searches involving homes and bodies are mainstays of criminal investigations and have been for years.¹⁵¹ Since all judges have bodies and live somewhere, they surely understand the privacy and security interests at stake. These interests are constantly being changed as police develop technology that can see into homes¹⁵² and even bodies.¹⁵³ Therefore, courts must proactively protect both homes and bodies with bright - line rules to ensure that their traditional Fourth Amendment protections do not become increasingly empty due to technological advancements.

Links: Controversial Decisions

(--) Controversial decisions risks the court's credibility:

Lisa A. **Kloppenber**, 2007 (Dean and Professor of Law, University of Dayton School of Law, University of Dayton Law Review, "ENACTING AND INTERPRETING STATUTES IN THE CONSTITUTION'S SHADOWS SYMPOSIUM: THE AVOIDANCE CANON: FROM THE COLD WAR TO THE WAR ON TERROR," Lexis/Nexis, Accessed 7/6/2015, rwg)

Relying on concerns about deference, foreclosure, and threats to judicial independence, **the U.S. Supreme Court has employed avoidance techniques selectively over the past three decades**, often in cases involving controversial issues or "sensitive area[s] of social policy." n27 The costs of avoiding constitutional questions are borne too often by the poor and marginalized in our society-those most in need of help in securing protections for their constitutional rights and civil liberties. For example, the Court has used avoidance techniques frequently in litigation involving dissident speech (notably the Cold War cases), civil rights claims and issues of equity for women, racial minorities, gays, lesbians, and cases involving the protection of religious minorities. n28 **Sometimes the justices write overtly about the political pressure on the courts; more often, the political controversy goes unstate**d. The decision to avoid a constitutional issue is itself a decision, and it is impossible to separate analysis of the procedural tool completely from the merits of the underlying constitutional questions. As judges determine whether it is necessary to address a constitutional issue, their views of the merits are frequently intertwined with that decision. **Political pressure on courts may influence when courts issue minimalist rulings**, affording less clarity and guidance to other constitutional actors on some of the most important issues of the day.

(--) Decisions do affect the court's political capital:

Harold **Maass**, 7/22/2013 (staff writer, "How the Supreme Court got on the bad side of everybody," <http://theweek.com/article/index/247206/how-the-supreme-court-got-on-the-bad-side-of-everybody>, Accessed 7/25/2013, rwg)

Unlike Congress or the presidency, one might expect the Supreme Court, as a nominally nonpartisan institution, to be sheltered from the public disaffection that has chipped away at the ratings of the other two branches. In reality, though, the court has often been a source of political polarization since 2000 and is hardly immune to the same political forces plaguing the other two branches. [Gallup]

Links: Upholding Precedent

(--) Ignoring legal consistency threatens the Court's legitimacy:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis, rwg

For example, **critics who claimed that the Supreme Court acted illegitimately in Bush v. Gore mostly seemed to imply that the majority acted not merely erroneously, but with a willful disregard for applicable constitutional principles.** n143 More particularly, **some thought that the majority breached the requirement that judges must apply legal principles consistently, without regard to the parties or a case's partisan impact.** n144

(--) Adherence to precedent critical to the foundations of legitimacy:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis

First, **the foundations of contemporary constitutional legitimacy - regardless of whether that term is used in a legal, sociological, or moral sense - necessarily lie in current states of affairs. If precedent is accepted as a legally valid source of authority for future decisions, then it enjoys legal legitimacy,** regardless of its relation to the original understanding of constitutional language. Nor does any tinge of moral illegitimacy sully this state of affairs. If the current constitutional regime deserves to be supported, as I believe that it does, it is because the current regime furnishes the great benefits of the rule of law and because it is reasonably just, not because we are bound by the intentions of generations now long dead.

(--) Distorting precedent weakens the judiciary:

ALBERTO GONZALES, 2/2/2007 (Federal News Service; Lexis)

Activist judges - those who on a pretense substitute their own views for the will of the legislatures - can, of course, find some rationale to support any desired outcome. They can find some quote to support their viewpoint in legislative history. Or, from a footnote in an earlier decision, they can extrapolate a new principle despite what the language of the law itself says. **But in the end, distorting history or precedent to support a pre-determined outcome weakens the Judiciary, undermines the rule of law, and harms our democracy.**

(--) Upholding precedent key to Supreme Court legitimacy:

ALBERTO GONZALES, 2007 2/2/2007 (Federal News Service; Lexis)

Judicial decisions have been obeyed historically in large part because the judgment of the federal Judiciary is respected. But it is perhaps underappreciated that **when courts apply an activist philosophy that stretches the law to suit policy preferences, they reduce the Judiciary's credibility and authority.** In contrast, **a judge who** humbly understands the role of the courts in our tripartite system of government renders decisions based on neutral principles. **He generally defers to the judgment of the political branches, and respects precedent - the collective wisdom of those who have gone before him. In so doing, that judge strengthens respect for the Judiciary, upholds the rule of law,** and permits the People - through their elected representatives - to decide the issues of the day.

(--) Court's legitimacy depends upon its adherence to legal norms:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis

In this passage, the Supreme Court invoked - sometimes alternately and sometimes simultaneously - sociological and legal concepts of legitimacy. When the Court equated its institutional legitimacy with its power and said that its power depends on acceptance, it referred to legitimacy in a sociological sense: the Court's sociological legitimacy resides in the public's acceptance of its role (institutional legitimacy) and in the public's willingness to accept judicial mandates (authoritative legitimacy). n241 As the Court recognized, however, its sociological legitimacy depends on its adherence or apparent adherence to legal [*1841] norms. If the Court did not base its decisions on legal principles, the public would lose respect for it. n242

(--) Overruling its decisions undermine the Court's legitimacy.

Thomas W. **Merrill, 1994** John Paul Professor of Law at Northwestern University School of Law, 1994, [Harvard Journal of Law and Public Policy, "A Modest Proposal for a Political Court," p. 137]

The legitimacy of the Supreme Court is widely assumed to depend on the perception that its decisions are dictated by law. This is the central thesis of the extraordinary joint opinion in Planned Parenthood v. Casey, decided by the Supreme Court at the end of the 1991 Term. The joint opinion observes that the Court's power lies in its legitimacy and that its legitimacy is "a product of the substance and perception" that it is a court of law. Thus, frequent overrulings are to be avoided, because this would "overtax the country's belief' that the Court's rulings are grounded in law.

(--) Unpopular decisions erode the Supreme Court's institutional capital:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis

n183. Compare Gibson et al., supra note 22, at 361 (concluding that "judgments of specific policies are entirely unrelated to confidence in the Court"), and Tyler & Mitchell, supra note 22, at 781 (reporting findings that views of "institutional legitimacy" and thus of whether to empower the Supreme Court to make abortion decisions were "generally unrelated to support for Court decisions"), with Anke **Grosskopf & Jeffery J. Mondak**, Do Attitudes Toward Specific Supreme Court Decisions Matter? The Impact of Webster and Texas v. Johnson on Public Confidence in the Supreme Court, 51 Pol. Res. Q. 633, 651-52 (1998) (concluding that confidence in the Supreme Court depends on perceptions of particular decisions and that unpopular decisions erode the Court's institutional capital).

(--) Legitimacy depends more on present acceptance of decisions than the legal legitimacy of decisions:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis

When we examine legitimacy debates with these three concepts in mind, striking conclusions emerge. First, the legal legitimacy of the Constitution depends more on its present sociological acceptance than on the (questionable) legality of its formal ratification.

(--) Supreme Court actively bases its decisions on perceived public opinion:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis

Only when the concepts of sociological and legal legitimacy are distinguished does Casey's provocative aspect come into focus: the majority opinion suggests that the Supreme Court is permitted and perhaps required by law to base its decisions partly on public perceptions and, in particular, on an asserted interest in preserving its own sociological legitimacy. n243

**(--)
Judges don't live in a cocoon—they respond to public opinion:**

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis

n209. See generally Friedman, supra note 167, at 2611-13 (noting that "judges do not live in a cocoon" and recognizing the incentives "to remain within the range of public opinion").

**(--)
The Court will bend to public opinion:**

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis

n210. See Robert A. Dahl, Democracy and Its Critics 190 (1989) ("The views of a majority of the justices of the Supreme Court are never out of line for very long with the views prevailing among the lawmaking majorities of the country."); Robert G. McCloskey, The American Supreme Court 224 (1960) ("It is hard to find a single historical instance when the Court has stood firm for very long against a really clear wave of public demand.").

**(--)
Controversial overrules uniquely undermine the Court's authority**

Thomas W. **Merrill, 1994** John Paul Professor of Law at Northwestern University School of Law, 1994, [Harvard Journal of Law and Public Policy, "A Modest Proposal for a Political Court," p. 137]

Especially when a controversial ruling like Roe v. Wade is involved, a decision to overrule should be avoided at all costs, because this would give rise to the perception that the Court is "surrendering to political pressure" or "over-ruling under fire." Such a perception, in turn, would lead to "loss of confidence in the judiciary." Translated, the thesis of the joint opinion is that the further a decision deviates from the Constitution, the more important it is for the Court to adhere to that decision, or else the public may conclude that the emperor is wearing no clothes.

**(--)
Current sociological acceptance is key to legitimacy:**

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis

First, the legal legitimacy of the Constitution depends much more on its present sociological acceptance (and thus its sociological legitimacy) than upon the (questionable) legality of its formal ratification. Other fundamental elements of the constitutional order, including practices of constitutional interpretation, also owe their legal legitimacy to current sociological acceptance.

Links: Unpopular Decisions Undermine Court Capital

(--) Making unpopular decisions threatens the court's capital:

Kevin **Burke**, August 23, 2013 ("How Low Public Trust Threatens the Legitimacy of Court Decisions," <http://proceduralfairnessblog.org/2013/08/23/how-low-public-trust-threatens-the-legitimacy-of-court-decisions/>, Accessed 7/8/2015, rwg)

What do these two pieces mean for judges? Both articles highlight how **the judiciary itself**, if not careful, **can contribute to the erosion of public trust in our decisions**. To be sure, the erosion of the legitimacy of judicial decisions is not entirely the fault of the Supreme Court, nor of judges in general. The media, for example, often refers to which President appointed a judge as a shorthand way to explain a decision. But that is, in part, why Ms. Greenhouse's piece is important. The Chief Justice is recognized as a brilliant man. He and every other judge in the United States know the inevitable shorthand the media will use to describe judges and to explain their decisions. And so the Chief Justice, the members of the United States Supreme Court, indeed **every judge in this country needs to be particularly sensitive to what we are doing that might either advance trust in courts or contribute to the erosion of the legitimacy of our courts**. The bottom line is: **Appearances make a difference**. There will be decisions by judges at every level of court that test the public's trust in our wisdom. **It is therefore imperative that judges act in a manner that builds a reservoir of goodwill so that people will stand by courts when a decision is made with which they disagree**. There may have been an era when trust in the wisdom and impartiality of judicial decisions could be taken as a given. But if there was such an era, we no longer live in it. Trust and legitimacy today must be earned.

(--) Legitimacy is affected by perception of the Court:

Tsai, 2005 Assistant Prof. of Law @ University of Oregon School of Law, 2005 (Robert, Iowa Law Review, March 2005; 90 Iowa L. Rev. 1095; Lexis)

These themes were played out in the contentious battle over the scope of the right to abortion. **In Planned Parenthood v. Casey, the plurality opinion transparently explored the idea that the Court's legitimacy is a "product of substance and perception."** n209 In justifying their decision to affirm the core [*1143] of Roe on stare decisis grounds, Justices Kennedy, O'Connor, and Souter found occasion to discuss Brown's legacy.

(--) Legal legitimacy rests fundamentally on societal acceptance of judicial rulings:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis

Following a well-trod jurisprudential path, n279 I have maintained that **legal legitimacy depends fundamentally on sociological legitimacy**. To repeat now familiar formulae, **the foundations of law, including constitutional law, lie in sociological embrace and acceptance of rules, norms, and interpretive practices. The Constitution is law because it is accepted as such**. Judicial precedent contrary to what otherwise would be the best interpretation of the Constitution is law for the same reason.

(--) The Court's legitimacy, institutional legitimacy, is dependent on public opinion.

John C. **Yoo, 2001** Professor of law at the University of California, 2001, [The University of Chicago Law Review, "In defense of the court's legitimacy," p. 75]

Legitimacy is a word often used in our political debate, but seldom defined precisely. We can think of institutional "legitimacy" as the belief in the binding nature of an institution's decisions.

even when one disagrees with them.¹⁰ This sociological or even psychological definition of the term is concerned with whether people will think the Court's decision in Bush v Gore was legitimate, and as a result will obey it.¹¹

**(--)
Public opinion key to the Court's legitimacy:**

John C. **Yoo, 2001** Professor of law at the University of California, **2001**, [The University of Chicago Law Review, "In defense of the court's legitimacy," p. 75]

"The Court's power lies, rather, in its legitimacy, a product of substance and perception that shows itself in the people's acceptance of the Judiciary as fit to determine what the Nation's law means and to declare what it demands."³⁸ Without the sword or purse, the Casey plurality believes, the Court's authority derives from the public's acceptance of its power to interpret the Constitution.

Link Extensions—AT: Public Won't Notice the Courts

(--) THE GENERAL PUBLIC DOESN'T MATTER—ELITES WILL PERCEIVE THE DECISION AND THEY ARE KEY

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis, rwg

To me, at least, these are jarring conclusions. **When defenders maintain that the legal legitimacy of the Supreme Court's role rests largely on public acceptance, n168 as I myself have done, we may be saying scarcely more than that the public, being little informed about the Court's practices, has not mounted a revolt. n169 The American people have allowed constitutional law to become what legal elites, especially [*1826] the Supreme Court, say that it is under interpretive standards evolved by the courts and little understood outside the legal elite.**

(--) Major decisions are picked up by the media guaranteeing perception:

Uhlmann, 2003 professor of government at Claremont Graduate University, October 2003 (Michael M., "The Supreme Court Rules www.orthodoxytoday.org/articles2/UhlmannSupremeCourt.shtm)

Under this new dispensation the Court is increasingly seen as a political institution, different in form and customs from the political branches but not essentially different in kind. And why should it not be so understood? **One can scarcely name an issue of political or moral significance on which the Court has not opined or suggested how we ought to think. That is why judicial nominations are now routinely freighted with hot political debate; and that is why the full glare of media attention now focuses on the Court whenever a major decision is pending.**

(--) Elites are key to legitimacy:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis, rwg

n285. See Friedman, supra note 128, at 1387 (observing that **"if those familiar with the Court's decisions do not believe those decisions to be socially correct, the work of judges will be seen as illegitimate"**).

(--) Even if the public doesn't notice Supreme Court decisions—elites do—their perception of the Court is closely tied to individual decisions of the Court:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis, rwg

n170. See David Adamany & Joel B. Grossman, Support for the Supreme Court as a National Policy Maker, 5 Law & Pol'y Q. 405, 407-08 (1983) (noting that **although most judicial opinions have relatively little salience with the general public, awareness goes up among elites, and "support for the Court among these elites is ... very closely correlated with their approval of specific court decisions"**).

(--) Elites are critical to how decisions are perceived:

Tsai, 2005 Assistant Prof. of Law @ University of Oregon School of Law, 2005 (Robert, Iowa Law Review, March 2005; 90 Iowa L. Rev. 1095; Lexis, rwg)

But judges do not bear all of the blame, for litigation is not the only process that affects a legal icon's vitality. How the decisions have been received by intellectual elites more generally reinforces their gestalt properties in juridic thought. Accordingly, Part V considers the influence of academic culture on these two sacred emblems. Treatment of this pair of cases mirrors the telling of religious creation stories and parables. I close by suggesting that a lasting devotion to our constitutional heritage must be made of more inspiring stuff than the combination of these two decisions.

(--) Views of political elites key to Court legitimacy

Thomas W. **Merrill, 1994** John Paul Professor of Law at Northwestern University School of Law, **1994**, [Harvard Journal of Law and Public Policy, "A Modest Proposal for a Political Court," p. 137]

Perhaps the best decisional rule for a political Court to adopt is to exercise its discretion in accordance with the emerging consensus among the dominant political elites of society. If the Court correctly anticipates the emerging consensus among those with influence, then there is little danger that its decisions will be overruled. Moreover, if powerful elites are happy with the Court, then the Court can rest assured that the Executive will enthusiastically enforce its judgments, Congress will not cut its funding, and no attempt will be made to circumscribe its jurisdiction.

**Links: AT: "ONE DECISION NOT ENOUGH TO AFFECT THE
COURT'S LEGITIMACY"**

(--) Webster and Texas v. Johnson prove: specific decisions of the Court can undermine its legitimacy:

Friedman, 2003 Professor of Law, New York University School of Law

Michigan Law Review, August 2003, 101 Mich. L. Rev. 2596; Lexis, rwg

n103. Anke Grosskopf & Jeffery J. Mondak, Do Attitudes Toward Specific Supreme Court Decisions Matter? The Impact of Webster and Texas v. Johnson on Public Confidence in the Supreme Court, 51 Pol. Res. Q. 633 (1998) (showing that **disagreement with one or both decisions of the Court, on Webster and Texas v. Johnson cases, substantially reduced confidence in the Court**); Hoekstra, supra note 78, at 97 (showing that **satisfaction or dissatisfaction with the decisions made by the Court influences subsequent evaluations of the Court**).

Links: AT: Original Decision Violated Precedent

(--) Adherence to precedent key to Court legitimacy—even if the original precedent itself is constitutionally suspect:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis

Fifth, however, as Part III argues at length, a virtual consensus exists that at least some judicial precedents suffice to ground further, future claims of legitimate judicial authority, even when those precedents were themselves erroneously decided in the first instance. Like the legal legitimacy of the Constitution, the legal legitimacy of precedent-based decisionmaking arises from sociological acceptance.

Links: AT: Courts Winners Win

(--) Court needs to save capital – controversial decisions burn capital.

Peretti, 2001 Prof PoliSci Santa Clara U, 2001

(Terri Jennings Peretti, Prof of Poli Sci at Santa Clara University, 2001, *In Defense of a Political Court*, p.152)

To the degree that **a justice** cares deeply about her policy goals, she **will be quite attentive to the degree of support and opposition among interest groups and political leaders** for those goals. She will be aware of the re— sources (e.g., commitment, wealth, legitimacy) that the relevant interest groups possess who bear the burden of both carrying forward the appropriate litigation necessary for policy success and for pressuring the other branches for full and effective implementation. Only **the policy motivated justice will care about the willingness of other government officials to comply with the Court’s decisions** or carry them out effectively. And only **the policy motivated justice will care about avoiding the application of political sanctions against the Court** that might foreclose all future policy options. The **school desegregation cases illustrate these points** quite nicely. The Court could not pursue the goal of racial integration and racial equality until there was an organized and highly regarded interest group such as the National Association for the Advancement of Colored People willing and able to help. The **Court further was required to protect that group from political attack**, as it did in NAACP v. Alabama and NAACP v. Button. **Avoidance of other decisions that might harm its desegregation efforts was also deemed necessary.** Thus, the Court had legal doctrine available to void antimiscegenation statutes, but refused to do so on two occasions.⁶⁰⁰ (Murphy notes that one justice was said to remark upon leaving the conference discussion, **"One bombshell at a time is enough."**⁶⁰¹) The Court additionally softened the blow by adopting its "deliberate speed" implementation formula. Even so, the Court still needed the active cooperation of a broad range of government officials, in all branches and at all levels of government, in order to carry out its decisions effectively. Thus, significant progress in racial integration in the southern schools did not in fact occur until Congress and the Department of Health, Education, and Welfare decided to act. **The Court further had to consider whether the political opposition that it knew would ensue would be sufficient to result in sanctions** against the Court, such as withdrawal of jurisdiction or impeachment. These considerations arose only in the process of caring deeply about the policy goal at hand—racial equality in public education. They were not a by-product of caring only about the logical or precedential consistency of an opinion or of worrying only about deriving a decision from the Framers’ intentions.

(--) Even if court capital isn’t finite, justices think it is and fears of the loss of its legitimacy cause the Court to adhere to public opinion after it angers the public:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis

(c) Measures of Sociological Legitimacy and the Limits of Judicial Power. - **The measures of sociological legitimacy commonly used by social scientists provide poor gauges of the effective limits of judicial**

[*1833] power. Indeed, excessive focus on the authoritative legitimacy of Supreme Court rulings and on the Court’s institutional legitimacy - as measured by surveys charting "diffuse support" - could prove affirmatively misleading for some purposes. Among other things, the public’s belief that the Supreme Court is a legitimate institution need not entail a view that the Justices currently are doing a good job. n207 When significant fractions of the public disagree with the Court on salient issues, they may support political candidates pledged to change the Court’s ideological balance. In recent decades, presidential candidates have repeatedly campaigned against unpopular claims of judicial authority and promised to appoint Justices whom their constituencies would regard as more right-thinking. n208 **Justices who defy aroused public opinion risk, and know that they risk, provoking a political backlash that ultimately could cause their doctrinal handiwork to collapse.** n209 **Possibly as a result of the Court’s concern for its own sociological legitimacy, it has seldom remained dramatically at odds with aroused public opinion for extended periods.** n210 **In ways that are still little understood, the Justices undoubtedly are influenced by popular political movements and by the evolving attitudes of their society.** n211

(--) Court needs to pick battles – capital is finite.

Young, Prof Law UT Austin, 2004

(Ernest A. Young, Prof of Law at UT Austin, November 2004, “The Rehnquist Court's Two Federalisms” 83 Tex. L. Rev. 1)

Whether or not Alexander Hamilton was right to call the judiciary the "least dangerous branch," ⁿ⁴⁵¹ both contemporary theory and historical experience suggest that courts' ability to defy the national political branches is not unlimited. Those limits bear on federalism doctrine in at least three respects. First, they support, at least to some extent, the notion that the judiciary has limited institutional capital. If that is true, then courts may not be able to pursue all possible doctrinal avenues at once and may, in consequence, have to choose among them. Second, these limits suggest that courts should pursue certain kinds of doctrine. In particular, they support doctrine that advances the goal of state autonomy without forcing direct confrontations by invalidating political branch actions. Finally, the limits on the judiciary's ability to confront the political branches ought to temper our expectations (or fears) of what judicial federalism doctrine can accomplish.

(--) Court needs to conserve capital.

Pacelle, Prof PoliSci Georgia Southern, 2002

(Richard L. Pacelle, Jr., Prof of Poli Sci @ Georgia Southern University, The Role of the Supreme Court in American Politics: The Least Dangerous Branch? 2002 p 162-3

The Court is supposed to be the voice of reason, charged with the creative function of articulating the durable principles of government. The normative view is that the justices should be governed by principles of constitutional law and statutory interpretation. The justices must respect the governmental structure and use reasoned principle and societal moral tradition, as well as history, the text of the Constitution, and judicial precedent as sources of inspiration. The justices need to pay attention to the broader context that Leslie Goldstein refers to as “the evolving morality of our tradition? Because the Court stands outside popular control, it should refrain from taking and deciding certain cases when it would be politically unwise.” The justices need to find the underlying meaning embedded in the plans behind the Constitution. To deny the existence of broader guiding principles is to make the Court “a naked power organ” rather than a court of law (Goldstein 1995, 277--278). In Chapter 2, I argued that since the late 1980s, the Supreme Court has begun to move away from the so-called double standard that dominated judicial decisionmaking for half a century. This move would help the Court resolve the dilemmas it faced. Part of the new role urges the Court to adopt judicial restraint when it deals with the actions of the elected branches. To do so would mitigate concerns that the Court is undemocratic. This new role also asks the Court to avoid making sweeping policy pronouncements. That would reduce concerns over the Court's institutional limitations and arguments about capacity. However, the adoption of such a role would represent an abdication of the role of the Court as a protector of minorities.

Internal Links

Internal Links: Spokeo is a controversial decision

(--) Spokeo is a controversial decision:

David L **Wallace**, 4/29/2015 (Herbert Smith Freehills LLP, 4/29/2015, "U.S. Supreme Court to weigh future of no harm class-action menace,"

<http://www.lexology.com/library/detail.aspx?g=1c7d7816-a85d-41da-af19-30a6afd36480>, Accessed 6/29/2015, rwg)

A Waterloo Moment for **Standing to Sue in Federal Courts The US Supreme Court will take up this controversial subject when it hears Spokeo, Inc. v. Robins** (No. 13-1339) during its next Term, which begins in October. The question it will decide – which will determine the future of "no harm" class actions in the federal system – is whether a person suing for a bare violation of a federal statute, who suffers no concrete harm, has standing to invoke the jurisdiction of a federal court.

(--) Issues in Spokeo are controversial:

Stephen J. **Newman**, 5/6/2015 (experience in defending class actions, Daily Journal, <http://www.stroock.com/publications/where-class-actions-belong>, Accessed 6/29/2015, rwg)

In its next term, the U.S. Supreme Court likely will address one of the most controversial issues in current class action jurisprudence: whether class litigation may be pursued by or on behalf of persons with no real-world injury, against a defendant alleged only to have violated a technical legal requirement. On April 27, the Supreme Court granted certiorari in Spokeo v. Robins, 13-1339, to address the question: "Whether Congress may confer Article III standing upon a plaintiff who suffers no concrete harm, and who therefore could not otherwise invoke the jurisdiction of a federal court, by authorizing a private right of action based on a bare violation of a federal statute."

Internals: AT: No Major Settlements vs. Tech Companies

(--) Major claims will come once the industry matures:

Ross **Todd, 5/29/2015** (staff writer, "Wave of Privacy Suits Peters Out,"

<http://www.therecorder.com/id=1202727906735/Wave-of-Privacy-Suits-Peters-Out>, Accessed 6/29/2015, rwg)

David Vladeck, a professor at Georgetown University Law Center and the former director of the Federal Trade Commission's Bureau of Consumer Protection, said that the current privacy landscape reminds him of the early days of tobacco and asbestos litigation, when plaintiffs struggled to establish harm and proximate cause. It was only through the discovery gained through early litigation failures, he says, that plaintiffs began to show the value of their claims. Vladeck said that he doesn't know if the cases "will turn 180 degrees," but he thinks there's a potential for the cases to gain value as the evidence accumulates.

Internal Links: AT: Legitimacy Resilient

(--) Legal legitimacy of the Courts always at risk because it rests on uncertain foundations:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis, rwg

Fourth, because the Constitution invites disagreement about so much, many claims about the legal legitimacy of practices under the Constitution - especially those of the courts - rest on inherently uncertain foundations.

(--) Constitutional law always rests on shifting sands of legitimacy:

Fallon, 2005 prof. of Constitutional Law @ Harvard, Harvard Law Review, April 2005, 118 Harv. L. Rev. 1787; Lexis, rwg

Finally, as should be evident already, constitutional law does not rest on a single rock of legitimacy, as many appear to assume, but on sometimes shifting sands. Realistic discourse about constitutional legitimacy must reckon with the snarled interconnections among constitutional law, its diverse sociological foundations, and the felt imperatives of practical exigency and moral right.

Internal Links: Court Capital Key to Decisions

(--) The Court is actively concerned about protecting its political capital—
justices will make decisions based on this concern:

ERIC R. **CLAEYS, 2011** (staff writer, "Obamacare and the Limits of Judicial Conservatism," <http://www.nationalaffairs.com/publications/detail/obamacare-and-the-limits-of-judicial-conservatism>, Accessed 7/25/2013, rwg)

All the same, **conservatives on the Supreme Court may worry about protecting the Court's political capital long after the public has forgotten about Obamacare. When Justice Scalia respects precedent, defers to Congress,** or refrains from construing indeterminate text, **he does so at least in part to preserve the Court's standing in relation to Congress and the president.** In Lane, he found it "ill advised" for the Court "to adopt or adhere to constitutional rules that bring us into constant conflict with a coequal branch of Government." In the 1995 case *Plaut v. Spendthrift Farm*, he indicated that he prefers "high walls and clear distinctions" in structural constitutional law because "low walls and vague distinctions will not be judicially defensible in the heat of interbranch conflict." Depending on how he reads the relevant precedents and the term "proper," Scalia (or Alito, or Roberts) may decide that the theory followed by Judges Hudson and Vinson yields walls too low and distinctions too vague. **Even if a ruling against the mandate did not provoke a crisis or a political backlash from Obamacare supporters in the short term, these conservatives might worry about its effects on interdepartmental relations over the long term.**

(--) The Court responds to backlash against its decisions by moving back in line:

Barry **Friedman and Jeffrey Rosen, 4/14/2010** ("The Battle Over the Court," <http://www.newrepublic.com/article/politics/the-battle-over-the-court>, Accessed 7/9/2015, rwg)

How will the Supreme Court respond to these attempts to enlist it in a war with the president and Congress? If history is any predictor, the justices won't be interested in a sustained assault.

As both of us have written in recent books, on the big issues, **over time, the Court tends to come into line with public opinion.** Think here of gay rights, women's rights, and abortion. And **when the Court has wandered outside the mainstream**--on issues like the death penalty or economic regulation--**it has quickly retreated after encountering resistance from the public, Congress, or the president. The Court, in other words, is very sensitive to the possibility of backlash against its actions;** and if anything, the heated reaction to its recent decision striking down campaign finance restrictions on corporations is only likely to make it more so.

(--) Justices will adapt to potential threats to its legitimacy:

Uhlmann, 2003 professor of government at Claremont Graduate University, **October** (Michael M., "The Supreme Court Rules" www.orthodoxytoday.org/articles2/UhlmannSupremeCourt.shtm, rwg)

Thanks chiefly to the Supreme Court, the Constitution is now widely understood to derive its legitimacy not from the permanent truths on which its provisions rest, but from their more or less endless capacity (as divined by the Justices) to adapt. The Court has given us a "living Constitution," by which the Court simultaneously justifies its interpretive plasticity and leaves its critics in the unenviable position of having to defend a "dead" Constitution.

(--) Justices will modify their behavior to avoid backlash from other branches:

Lawrence **Baum, 2003** Department of Political Science, Ohio State University, June **2003**

["The Supreme Court in American Politics,"

<http://arjournals.annualreviews.org/doi/full/10.1146/annurev.polisci.6.121901.085526;jsessionid=n1HzQqZJALRe>]

Another possibility is that **the justices** ordinarily give little attention to their political environment but **take protective action** when their decisions have **aroused negative reactions from other policy makers**. Justices might reason that it is a **poor strategy to depart from their most preferred positions to avoid the possibility of an unfavorable response from the other branches**. But when **conflicts actually occur, the justices retreat as a means to limit the damage**. What might be called crisis-driven strategy is analogous to the "fire alarm" form of congressional oversight over the executive branch. Compared with routine strategy, it would lead to more interventions and more confrontations, but some periods of intervention would end abruptly as the justices responded to conflicts provoked by their decisions.

Internal Links—Capital Key to Rulings

(--) Judicial capital is key to rulings.

Gibson and Caldeira, Profs of Political Science at Wash U in St. Louis and Ohio State U,
2009

(James L. Gibson, prof of PoliSci @ Wash U in St. Louis, and Gregory A. Caldeira, Prof of PoliSci @ Ohio State U, January 2009, “Confirmation Politics and The Legitimacy of the U.S. Supreme Court” *American Journal of Political Science*, Vol. 53, No. 1, January 2009, Pp. 139–155)

We reiterate our view that institutional legitimacy is an enormously important source of political capital. The conventional hypothesis is that legitimacy is significant because it contributes to acquiescence to decisions of which people do not approve (e.g., Gibson, Caldeira, and Spence 2005). We have devoted considerable effort toward investigating that hypothesis throughout the world. To the extent that we are correct in our analysis of the theory of positivity bias, we suggest here that legitimacy has an even more significant role in the political process: Citizens who extend legitimacy to the Supreme Court are characterized by a set of attitudes that frame a variety of expectations and choices. These frames provide a standing decision that is difficult to rebut in contemporary American politics. This consequence of institutional legitimacy is perhaps the most significant.

Internal Links—Precedents

(--) Precedents snowball—once the Court decides one issue in an area, it will expand:

Foundation for Defense of Democracies, 5/22/2012 (“The Supreme Court Enters the Surveillance Debate,” <http://www.defenddemocracy.org/media-hit/the-supreme-court-enters-the-surveillance-debate/>, Accessed 7/8/2015, rwg)

For the most part, the effort to “judicialize” the political realm of national defense has been confined to the disposition of enemy combatants, specifically the process due for detaining and trying them. On Monday, the Supreme Court announced that next term it will enter the fray of intelligence gathering. The justices will entertain the Lawyer Left’s predictable challenge to overseas surveillance, which now occurs under judicial auspices thanks to wrongheaded amendments enacted in 2008 to modify the ill-conceived 1978 Foreign Intelligence Surveillance Act, also known as “FISA.” **As is usual when the judges begin to flex their muscles in a new area, the first case is a camel’s nose in the tent: involving only the narrow question of “standing” — i.e., whether the plaintiff’s have a right to bring their suit** — and not the merits of their claim that Fourth Amendment principles apply to searches targeting non-Americans outside the United States.

Internal Links--Public Opinion

(--) Public opinion key to the Court's legitimacy: the Court won't stay at odds with public opinion for long:

Tom S. Clark, 2011 (The Limits of Judicial Independence, pg. 21-22, accessed via google books, 7/10/2015, rwg)

In order to protect this legitimacy, we will see, the courts—the Supreme Court in particular—often have an incentive to engage in a deeply political calculation. Because the Supreme Court wants to preserve public support for the institution, it will be unwilling to stray too far from the broad contours of what will be accepted by the American public. The irony is that in order to protect its image as a neutral, independent decision-making body, the Court must in fact pay close attention to what will be deemed acceptable by the populace and sometimes yield from any neutral perspective to avoid overstepping the bounds imposed by perceptions of what is legitimate. Therein lies the limits of judicial independence and the politics-legitimacy paradox. In order to guard its image as an apolitical decision-maker, and with it its institutional legitimacy, the Court must engage in deeply political behavior.

(--) Court capital is limited – public opinion matters

McGuire and Stimson, profs PoliSci @ UNC Chapel Hill, 2004

(Kevin T. McGuire and James T. Stimson, profs of PoliSci @ UNC Chapel Hill, November 2004, "The Least Dangerous Branch Revisited: New Evidence on Supreme Court Responsiveness to Public Preferences" THE JOURNAL OF POLITICS, Vol. 66, No. 4, November 2004, Pp. 1018–1035)

The reasons for such behavior are not terribly mysterious. The justices may well want to see their preferences reflected in policy outcomes, but that ambition would be fairly hollow if those policies, once promulgated, had no practical effect. The Court requires the cooperation of legislative and executive officials, many of whom are themselves careful auditors of mass opinion. For that reason, the members of the Court must reflect on how well their preferred outcomes will be received and supported by implementers. By no means does this imply that the Court cares about public opinion in the same ways that elected officials do, but we do think it entirely reasonable to assume that justices want their policies to be taken seriously by relevant publics. This is not just our opinion, of course. There is abundant evidence of resistance, avoidance, and downright defiance from various constituencies of the Court (Canon and Johnson 1999). It is only when popular opinion supports the Court's goals that its policies have their full effects (Rosenberg 1991). To be sure, the Constitution affords the Supreme Court institutional independence, but it in no way guarantees the prestige upon which its success is so highly dependent.

(--) Public opinion factors into court decisions.

Kramer, Prof Law NYU, 2004

(Larry D. Kramer, Prof Law @ NYU, July 2004, "Popular Constitutionalism" 92 Calif. L. Rev. 959)

We can, in a sense, view all this work on the existence and necessity of popular constitutionalism as a kind of upping the ante on legal realism. Where the realists taught us to look beyond "the rules" to what courts actually do, we now see that even this does not go far enough. We must also look beyond the courts to see how judicial rulings are absorbed, transformed, and sometimes made irrelevant. This is especially true when it comes to the Supreme Court's constitutional jurisprudence. Whether because of practical institutional limitations or a need for support from other branches or a willingness to behave strategically to preserve institutional capital or an inability to overcome deeply inscribed societal norms, the Supreme Court can never monopolize constitutional lawmaking or law

interpreting. Popular constitutionalism is, to some extent, perhaps a very great extent, inevitable and unavoidable. The question is what to make of this fact. That the Supreme Court does not fully determine the course of constitutional law is something most lawyers and judges already know - including, I am sure, the Justices of the Supreme Court. We sometimes talk or write as if we thought otherwise, but that is because most legal scholarship is about (and so mainly interested in) only the formal legal system. Aware that there are limits to this system's effectiveness, we leave them unspoken because such qualifications are beyond the problem being addressed and because we assume they will be taken for granted. Maybe this is a mistake. By declining to qualify what we say or failing to consider the fate of law beyond the courthouse, legal scholars have almost certainly overestimated the influence of judicial pronouncements and overlooked extrajudicial influences that matter. To that extent, the work of scholars like Griffin, Whittington, Galanter, Rosenberg, McCann, and others provides a useful and important corrective, a reminder that judicial lawmakers face substantial obstacles and that nonjudicial actors and activities have real significance for law and especially for constitutional law.ⁿ⁵⁶ Yet nothing in this scholarship provides a basis for criticizing or challenging even the most ambitious claims of judicial authority. Quite the contrary, evidence that courts face inherent limits in establishing and [*974] enforcing constitutional norms may simply give those who believe in the necessity of judicial supervision a reason to redouble their efforts to shut down extrajudicial interpretation. The reason is straightforward: barriers to the Supreme Court's ability to monopolize constitutional interpretation are not exogenous to beliefs about what the status of the Court's rulings ought to be.

Impacts

Impacts: Tech Sector

(--) If Spokeo loses, could cost tech companies billions of dollars:

Kate Cox, **4/27/2015** (“Supreme Court To Decide If You Can Sue When Data Aggregators Are Wrong,” <http://consumerist.com/2015/04/27/supreme-court-to-decide-if-you-can-sue-when-data-aggregators-are-wrong/>, Accessed 6/29/2015, rwg)

If Robins wins and the class action suit he’s pursuing is verified, **Spokeo could face damages of \$1000 per violation. Given how many millions of people the company aggregates records on, and how many potential errors are in every profile, that could easily be millions or billions of dollars.** So it’s easy to see why Spokeo would want to fight this all the way to the Supreme Court. But in our data-driven economy, where we the collective consumers are more often than not also the product being traded and sold, **the case also has repercussions far beyond Spokeo. Tech giants are closely watching the case. Facebook and Google between them are probably the two biggest personal data collectors and traders in the world,** and nearly all of us interact with one or both several times daily. **If they and others are going to have liability for making sure every piece of personal data they move is accurate, that would be a huge shift for them.**

(--) Spokeo v. Robins is key to the tech sector—billions or trillions of dollars are at stake:

Stephen E. Embry, **2/20/2015** (Frost, Brown & Todd attorneys, member of the Firm's class action, privacy and mass tort groups, “Robins v. Spokeo Inc: the Light at the End of the Tunnel for Rule 23 Privacy Class Actions...or the Headlights of an Oncoming Train,” Accessed 6/29/2015, rwg)

Still no word from the Supreme Court in what is the most important privacy class action and consumer case of the decade, Robins v. Spokeo Inc. The key issue in Robins is whether Article III standing can be conferred when plaintiff suffers no injury but can recover statutory imposed penalties. Article III of the U.S. Constitution requires that a plaintiff suffer an injury in fact—injury or damage that is concrete and which the law recognizes. The Supreme Court is now pondering whether to accept cert in this case that was originally decided by the 9th Circuit in February 2014. Not surprisingly, the 9th Circuit determined that such statutory penalties were sufficient without injury or damage to provide standing, joining the 6th, 10th and D.C Circuits. The 2nd and 4th Circuits have found directly to the contrary. **In Robins, the Act in question, the Fair Credit Reporting Act, imposed penalties collectible by affected consumers** of not less than \$100 or more than \$1000 per violation for publishing inaccurate personal information. Spokeo operated a website that provided users with information about individuals. Unfortunately, it published inaccurate information about Mr. Robins who brought suit on his own behalf and on behalf of a class of allegedly similarly situated individuals. **The importance of the decision facing the Supreme Court cannot be overstated.** Most privacy related statutes contain monetary penalties recoverable by affected consumers or users; it is the compounding effect of such penalties across a class of individuals that have the plaintiffs’ class action bar salivating. The Telephone Consumer Protection Act (TCPA,) the Video Privacy Protection Act, (VPPA), the Stored Communications Act, the Electronic Communications Privacy Act (ECPA) (not to mention a whole slew of more traditional consumer protection acts) are just a few of such statutes. **Based on this “no injury” concept sustained by the 9th, 6th, 10th and D.C. Circuits, plaintiffs’ attorneys have and are bringing class actions that net millions of dollars in settlements** due to the enormous exposure presented by these claims. For example, **Netflix recently faced class claims in the billions of dollars and Google in the trillions. Facebook was presented with claims of a class composed of over 3.6 million people whose statutory claims each ranged from \$2500 to \$10,000 PER VIOLATION.** The settlements of class claims brought under the TCPA are legendary: Capitol One paid \$75 million, Bank of America \$32 million, Jiffy Lube \$47 million and the list grows longer each month. The in terrorem effect of such claims makes settlement the only viable option. And yet often the only real injury is irritation and disclosure of facts that really make little difference to anyone. Perhaps sensing the importance of the question, the Supreme Court in October of last year asked the Solicitor General to weigh in after the filing of multiple amicus briefs from businesses and the technology industry. There is no deadline for the Solicitor General’s office to provide its input. **Whether this trend and practice will continue hinges almost entirely on what the**

Supreme Court decides. If it does not accept cert., then these cases will proliferate perhaps at an alarming rate as new and novel arguments will be made to fit new technology into statutes that were designed to prohibit other harms. (The VPPA for example was an outgrowth of a successful effort to obtain and then publish a list of videos rented by a Supreme Court nominee. Now it's being applied to streaming over the internet). **If the Court accepts cert and overturns Robins, then an entire practice area will vanish over night.** If it sustains the Ninth Circuit's view then Robins becomes the law of the land. Either way privacy and class action practitioners face perhaps the most significant disruptive event in their careers.

(-- Ruling for Spokeo key to tech firms:

David N. **Anthony, 4/28/2015** ("Supreme Court Grants Certiorari In Spokeo Case – Set To Address Article III Standing In Cases With No Concrete Harm," http://www.consumerfinancialserviceslawmonitor.com/2015/04/supreme-court-grants-certiorari-in-spokeo-case-set-to-address-article-iii-standing-in-cases-with-no-concrete-harm/?utm_source=feedburner&utm_medium=feed&utm_campaign=Feed%3A+ConsumerFinancialServicesLawMonitor+%28Consumer+Financial+Services+Law+Monitor%29, Accessed 6/29/2015, rwg)

Because **the Spokeo decision** could impact numerous statutory schemes outside of the Fair Credit Reporting Act, it has received significant national attention in the form of multiple amicus briefs. For example, **the Supreme Court received a brief from several technology giants**, including Facebook, eBay, and Yahoo. In their brief, they argued in favor of Spokeo, contending that a plaintiff must allege actual harm in order to have Article III standing, even if a statute is alleged to have been violated. **The risk of "no injury" class actions is particularly acute for these companies because they interact with hundreds of millions of users on a daily basis,** with many of those interactions subject to state and federal laws. According to their brief, **if an actual injury – separate and apart from an alleged statutory violation – is not a necessary precursor to a lawsuit in federal court, any of the millions of individuals who interact with these companies could bring a lawsuit alleging technical statutory violations on behalf of hundreds of millions of people,** with no accompanying actual injury. At the invitation of the Supreme Court, the United States Office of the Solicitor General also filed an amicus brief. In its brief, the United States requested the Supreme Court deny the writ of certiorari. According to the United States, the Ninth Circuit correctly decided the issue and there was no need for the Supreme Court to weigh in. The Supreme Court's grant of certiorari is contrary to the United States' position. Consumer protection statutes have created fertile ground for class action litigation. These statutes often require compliance with very technical provisions and allow for the award of statutory damages, without a showing of actual harm. This creates the potential for very large classes of plaintiffs who have not suffered any actual injuries and who often do not even know a technical statutory violation has taken place. **These large classes, coupled with the possibility of statutory damages, often create exposure in the tens or hundreds of millions of dollars. A decision in favor of Spokeo could dramatically curtail many of these "no concrete harm" class action lawsuits** due to the lack of standing of the named plaintiff.

(-- Spokeo could change the landscape of lawsuits against tech companies for years to come:

Elliot **Katz, 5/28/2015** ("Spokeo v. Robins: The Case That Has Silicon Valley Buzzing, Even Though Plaintiffs Likely Don't Have a Leg To "Stand" On," <http://www.jdsupra.com/legalnews/spokeo-v-robins-the-case-that-has-75066/>, Accessed 6/29/2015, rwg)

On April 27, 2015, **the United States Supreme Court granted certiorari in Spokeo v. Robins** and will soon decide whether a plaintiff must allege more than just the bare violation of a federal statute in order to invoke Article III jurisdiction. Some of Silicon Valley's top companies have observed in a brief to the Court in support of cert. that if the Ninth Circuit's ruling stands, "plaintiffs may pursue suits against [companies] even where they are not actually harmed by an alleged statutory violation." While single-plaintiff lawsuits are problematic, the real problem arises when these types of cases are brought as class actions, seeking "billions" in statutory damages creating an "immense pressure to settle" even the cases that may be "baseless on the

merits." Silicon Valley companies are monitoring this case carefully because of the impact it will have on data breach and privacy-related class actions, which are often brought by plaintiffs alleging violations of federal statutes that are enforced through statutory damages. It is not an understatement to say that the Supreme Court's decision could radically change the landscape for these types of class actions for years to come. Put simply, if the Supreme Court does not reverse the Ninth Circuit, it is likely that there will be a significant increase in the volume of data breach and other privacy-related lawsuits filed in moving forward. Conversely, if the Ninth Circuit is affirmed then the volume of privacy class action lawsuits may decline. If the Supreme Court's decision in *Clapper v. Amnesty International USA*, 133 S.Ct. 1138 (2013) is any indication, then the latter may be true.

Impacts—Business Confidence

A) Spokeo victory needed for business confidence:

KATE COMERFORD **TODD**, 6/16/2014 (SPOKEO , INC ., Petitioner, v. THOMAS ROBINS , INDIVIDUALLY AND ON BEHALF OF ALL OTHERS SIMILARLY SITUATED, Amicus Curiae Brief, <http://www.chamberlitigation.com/sites/default/files/scotus/files/2014/Chamber%20et%20al%20Amici%20Brief%20--%20Spokeo%20Inc.%20v.%20Robins%20%28U.S.%20Supreme%20Court%29.pdf>)

Like First American Financial Corp. v. Edwards , 132 S. Ct. 2536 (2012), which presented but did not resolve the same issue (and in which both the Chamber and the IADC participated as amici curiae), **this case presents both a danger and an opportunity. If the decision below is allowed to stand, there is a serious danger of continued erosion of the minimum requirements for standing** under Article III of the Constitution. **Such a danger is of grave concern to the business community because** (as this case illustrates) **alleged technical violations of regulatory statutes can often affect large numbers of people without actually injuring them. If,** as the Ninth Circuit held (following its precedent in Edwards) **such people can bring lawsuits without the need to demonstrate any injury** beyond the alleged statutory violation itself, **businesses will predictably be tied up in damages litigation** over harmless alleged lapses, **diverting their resources from more productive uses**. This case presents an opportunity to rein in abusive litigation over such trifles, and to restore proper constitutional limitations on no-injury lawsuits.

B) Business confidence key to the economy:

Kenneth **McCarthy**, 8/14/2013 (Senior Managing Director, Cushman Wakefield, “U.S. Economic Update - Ready for Growth,” <http://www.cushmanwakefield.com/en/research-and-insight/2013/us-economic-update-august-2013-ready-for-growth/>, Accessed 6/29/2015, rwg)

The U.S. economy continues to improve steadily. Although gross domestic product (GDP) growth has lagged, employment is increasing at a faster pace than a year ago and consumer demand is holding up surprisingly well. **The key to stronger growth will be higher levels of confidence in the business sector. Once businesses are more confident, investment spending will accelerate, as will hiring, and the economy will accelerate** from today’s 1.5% to 2.0% GDP growth rate to around 3.0% to 3.5%.

C) U.S. economic failure risks multiple scenarios for nuclear war

Khalilzad ’11 Zalmay was the United States ambassador to Afghanistan, Iraq, and the United Nations during the presidency of George W. Bush and the director of policy planning at the Defense Department from 1990 to 1992, “ The Economy and National Security”, 2-8-11, <http://www.nationalreview.com/articles/print/259024>, MCR

Today, **economic** and fiscal **trends pose the most severe** long-term **threat to the U**^{nited} **S**^{tates}’ **position as global leader**. While the United States suffers from fiscal imbalances and low economic growth, the economies of rival powers are developing rapidly. The **continuation of these two trends could lead** to a shift from American primacy toward a multi-polar global system, **leading in turn to increased geopolitical rivalry and even war among the great powers**. The current recession is the result of a deep financial crisis, not a mere fluctuation in the business cycle. Recovery is likely to be protracted. The crisis was preceded by the buildup over two decades of enormous amounts of debt throughout the U.S. economy — ultimately totaling almost 350 percent of GDP — and the development of credit-fueled asset bubbles, particularly in the housing sector. When the bubbles burst, huge amounts of wealth were destroyed, and unemployment rose to over 10 percent. The decline of tax revenues and massive countercyclical spending put the U.S. government on an unsustainable fiscal path. Publicly held national debt rose from 38 to over 60 percent of GDP in three years. Without faster economic growth and actions to reduce deficits, publicly held national debt is projected to reach dangerous proportions. If interest rates were to rise significantly, annual interest payments — which

already are larger than the defense budget — would crowd out other spending or require substantial tax increases that would undercut economic growth. Even worse, if unanticipated events trigger what economists call a “sudden stop” in credit markets for U.S. debt, the United States would be unable to roll over its outstanding obligations, precipitating a sovereign-debt crisis that would almost certainly compel a **radical retrenchment of the United States internationally**. Such scenarios **would reshape the international order**. It was the **economic devastation** of Britain and France **during World War II**, as well as the rise of other powers, that **led both countries to relinquish their empires**. In the late 1960s, British leaders concluded that they lacked the economic capacity to maintain a presence “east of Suez.” Soviet economic weakness, which crystallized under Gorbachev, contributed to their decisions to withdraw from Afghanistan, abandon Communist regimes in Eastern Europe, and allow the Soviet Union to fragment. If the U.S. debt problem goes critical, **the United States would be compelled to retrench, reducing its military spending and shedding international commitments**. We face this domestic challenge while other major powers are experiencing rapid economic growth. Even though countries such as China, India, and Brazil have profound political, social, demographic, and economic problems, their economies are growing faster than ours, and this could alter the global distribution of power. These trends could in the long term produce a multi-polar world. If U.S. policymakers fail to act and other powers continue to grow, it is not a question of whether but when a new international order will emerge. **The closing of the gap between the United States and its rivals could intensify geopolitical competition among major powers, increase incentives for local powers to play major powers against one another, and undercut our will to preclude or respond to international crises because of the higher risk of escalation**. The stakes are high. In modern history, **the longest period of peace among the great powers has been the era of U.S. leadership**. By contrast, multi-polar systems have been unstable, with their competitive dynamics resulting in frequent crises and major wars among the great powers. **Failures of multi-polar international systems produced both world wars**. American **retrenchment could have devastating consequences**. Without an American security blanket, regional powers could rearm in an attempt to balance against emerging threats. Under this scenario, **there would be a heightened possibility of arms races, miscalculation, or other crises spiraling into all-out conflict**. Alternatively, in seeking to accommodate the stronger powers, weaker powers may shift their geopolitical posture away from the United States. Either way, **hostile states would be emboldened to make aggressive moves in their regions**.

(-- Victory for Spokeo necessary to prevent a flood of cases against businesses:

KATE COMERFORD **TODD**, 6/16/2014 (SPOKEO, INC., Petitioner, v. THOMAS ROBINS, INDIVIDUALLY AND ON BEHALF OF ALL OTHERS SIMILARLY SITUATED, Amicus Curiae Brief, <http://www.chamberlitigation.com/sites/default/files/scotus/files/2014/Chamber%20et%20al%20Amici%20Brief%20--%20Spokeo%20Inc.%20v.%20Robins%20%28U.S.%20Supreme%20Court%29.pdf>)

As the Petition ably demonstrates, **the significance of the Ninth Circuit’s error reaches far beyond this particular case**. There are dozens of federal laws similar to the one at issue here, all of which could be read to authorize suit by plaintiffs who have suffered no actual, concrete, or particularized injury. See Pet. 16-18. Lower courts are deeply and intractably divided over whether such suits pass constitutional muster. See id. at 9-12. The resulting jurisprudential hodge-podge means a suit can be brought to vindicate injuries-in-law under some statutes but not others, and in some courts but not others. See id. at 9-12, 18. The need to resolve that confusion alone warrants this Court’s review. But this case is also of great practical significance—particularly to the business community. No matter their size, industry, or geographic location, businesses are subject to all manner of technical legal duties. By the Ninth Circuit’s logic, for practical purposes, injury-in-fact (and with it causation and redressability) would no longer be a required element for standing in federal courts. **With standing based solely on a technical statutory violation that could be identical for a large swath of potential plaintiffs**, the traditional class-certification hurdles of commonality and predominance could be rendered meaningless, as well. As a result, **businesses would be significantly more likely to face class actions seeking damages** (sometimes annihilating damages) for conduct that caused concrete and particularized harm to only a handful of people or to no one at all—**the kind of “frivolous lawsuits” that “essentially force corporate defendants to pay ransom to class attorneys by settling.”** S. Rep. No. 109-14, at 20 (2005) (Class Action 7 Fairness Act). This is not idle speculation: Such suits are already being

brought, and their pace is accelerating. See Pet. 12-14. This Court's review is necessary to stop these litigious opportunists who have suffered no injury—and the courts that enable them—from playing fast and loose with Article III.

Impacts: Court Clog Scenario

A) Failure to rule in favor of Spokeo leads to court clog:

Michael **Greibrok, 5/18/2015** ("Spokeo, Inc. v. Robins: A Possible Alternative Path to Standing," <http://www.freedomworks.org/content/spokeo-inc-v-robins-possible-alternative-path-standing>, Accessed 6/29/2015, rwg)

In Spokeo, the plaintiff, Thomas Robins, sued the people finder website, Spokeo, Inc., alleging that the website had shared inaccurate information about him. While there is some debate over whether the misinformation actually caused harm to Robins, he also claimed that Spokeo had violated the Fair Credit Reporting Act ("FCRA") by failing to provide him with notices. The Ninth Circuit ruled that Robins did not have to show any particularized harm, as long as he showed the defendant violated a statute that authorized a private right of action. **This decision has concerned many large companies, including tech giants Google and Facebook. They are worried that a Supreme Court decision upholding the ruling could lead to more lawsuits with no real injuries**, but where federal laws similar to FCRA were violated. **This is a legitimate concern, and a weakened standing requirement could flood courts and lead to businesses settling meritless lawsuits**, rather than going through the process of discovery and a trial.

B) Court clog crushes the economy:

Ashley **Post, 7/22/2011** (staff writer, "Frivolous lawsuits clogging U.S. courts, stalling economic growth," <http://www.insidecounsel.com/2011/07/22/frivolous-lawsuits-clogging-us-courts-stalling-eco>, Accessed 9/16/2014, rwg)

Americans' litigiousness and thirst for massive damages has been a boon to the legal profession. But **some researchers and litigation experts warn that the abundance of lawsuits—many of them frivolous—flooding U.S. courts is severely weakening the economy**. According to consulting firm Towers Watson, the direct cost of the U.S. tort system in 2009 was approximately \$250 billion, which was roughly 2 percent of the gross domestic product. The amount is double the estimated tort expenses in other countries, including the U.K. and Japan. **In May, the House Judiciary Committee held a hearing that explored excessive litigation's effect on the United States' global competitiveness**. During his testimony, Skadden Partner John Beisner explained that plaintiffs counsel engage in five types of litigation abuse that ultimately undermine economic growth: improperly recruiting plaintiffs, importing foreign claims, filing suits that piggyback off government investigations and actions, pursuing aggregate litigation and seeking third-party litigation financing. **"America's litigious nature has caused serious damage to our country's productivity and innovation. ... The root cause is that we have created incentives to sue—and to invest in litigation—instead of establishing disincentives for invoking judicial process unless absolutely necessary**. Other countries discourage litigation; we nurture it," Beisner said at the hearing. **Many litigation experts resoundingly agree with Beisner's stance on the necessity of tort reform to ameliorate the country's economy**.

C) An economic collapse causes a global nuclear war.

Aaron **Friedberg and Gabriel Schoenfeld, 2008** (prof. of politics @ Princeton & Senior editor of the Wall Street Journal) WALL STREET JOURNAL. Oct. 21, 2008. Retrieved May 17, 2014 from <http://online.wsj.com/article/SB122455074012352571.html>.
