The two figures to whom the most attention is being paid are Bob Corker, the Republican chairman of the Senate Foreign Relations Committee, and Chuck Schumer, odds on the next Democratic leader in the Senate. Schumer has a history of taking a pro-Israeli government point of view, and his going against the administration on the Iran deal would probably present it with an uphill climb. Corker is in a difficult position: a Tennessean with finely chiseled features, he seemingly wants to play the part of the responsible statesman, following in the footsteps of, say, Richard Lugar, the former Republican Senator from Indiana who was an influential leader on foreign policy. But Corker is consigned to working within a party that is now far more conservative and partisan—and unforgiving of apostates—than it was in Lugar's day. Some observers believe that Corker might not come out flatly for or against the deal, but might propose some legislative wording or maneuver that would make him not seem a knee-jerk partisan. It's quite possible that both Corker and Schumer will leave their ultimate positions on the deal unknown for some time.

When great issues are before Congress and the country, public opinion can take big swings. This is why August could be a critical month for the Iran agreement. Because the negotiators didn't finish before July 9, and because of its month-long recess, Congress has sixty days (instead of thirty) to decide on the deal. With Congress gone and the President usually on vacation for some of the time, August is supposedly a slow news period, which leaves ample room for coverage of local uprisings against members, which can then become contagious. The Clintons' health care plan took a battering in August of 1994; the Tea Party revolt against President Obama's health care plan boiled up in August of 2010, and while the plan survived, so did the Tea Party as a force.

To the extent that one can tell at this point, the political winds have been blowing, if softly and unseen, in the direction of those who support an agreement. The mood and tone on Capitol Hill have changed considerably from last winter, when backers of the nuclear negotiations had to mount a major fight to keep Congress from passing a new sanctions bill that would have sunk them. Then the talks went on so long—twenty-two months—that we got used to the spectacle of senior US officials sitting across the table from high-level Iranians. Or the two countries' respective foreign ministers taking a walk together. This was a long way from George W. Bush's putting Iran in the "axis of evil." But the deal's supporters are aware that opinion could swing back in the other direction.

As the negotiations went on, one of the opponents' tactics was to say that Obama (or Kerry) "wants a deal too badly." This got to the point where some talk show hosts and Republican pols described Obama as "desperate" for a deal. The Republicans are very good at the art of repetition: taking a talking point and saying it over and over and over again until it starts to pass as a fact. They've done so well with this that this spring my dentist told me in the strictest secrecy, off the record and all that, that his friend, a neocon Congressman, told him that Kerry wanted a deal too badly.

Dems will likely stay in line now --- Political capital solves veto override and ensures the Iran deal

Hattem 7/25/15 – congressional reporter for The Hill (Julian, Will Obama's Iran firewall hold?, The Hill, [**http://thehill.com/policy/national-security/249173-will-obamas-iran-firewall-hold](http://thehill.com/policy/national-security/249173-will-obamas-iran-firewall-hold))/JJ

President Obama is counting on House Democrats to be his last line of defense against congressional opponents of the nuclear deal with Iran. Many key players remain undecided, however, and some lawmakers are speculating that as much as half the House Democratic Caucus might be willing to buck the White House. “If [Republicans] bring before us a resolution that says ‘We hereby approve the deal,’ I think that as many as half the Democrats would vote against it,” Rep. Brad Sherman (D-Calif.), a critic of the Iran deal, said this week. Facing unified Republican opposition to the deal, the White House is working hard to get House Democrats on board. Top officials from Obama on down have been meeting personally with Democratic lawmakers in recent days, with the president even bringing some of them into the Situation Room to go over classified details. At some point in September, Congress is expected to vote on the Iran deal. A vote against the pact would prevent Obama from lifting congressional sanctions on Iran, potentially blowing up the agreement. Should a resolution against the deal pass, Obama would almost certainly veto it, setting up a final showdown in Congress. If Republicans were to override Obama in the Senate — no small task, since it would likely require at least 13 Democratic votes — the fight could come down to House Democrats. Assuming House Republicans vote in a unified bloc, Democrats could afford to lose no more than 43 members to sustain an Obama veto. But corralling 145 lawmakers to back the president on Iran won’t be easy, given the likelihood of divisive vote that many lawmakers say will be among the most consequential of their careers. “I’ve got 60 days,” Rep. Eliot Engel (N.Y.) — the top Democrat on the House Foreign Affairs Committee — said on his way out of a closed-door briefing on Capitol Hill this week, when asked about whether he backs the deal. “I’m listening, learning and reading, and I have time to make a decision.” After a Thursday morning meeting with Obama in the White House Situation Room, Rep. Adam Schiff (Calif.) — the top Democrat on the Intelligence Committee and another key undecided vote — told MSNBC that Obama is “well into the weeds on this issue” and appears intent on making the case to Democrats. “He really, I think, feels very positive about this deal and was ready to make the case to us,” Schiff said. “He’s quite unequivocal about where he thinks the merits of the agreement are.” The crucial role of the House Democrats in the Iran debate was apparent last week, when Vice President Biden trekked to Capitol Hill to meet with them mere hours after the deal was struck. Biden gave a detailed briefing on the diplomatic accord, which aims to limit Iran’s ability to obtain a nuclear bomb in exchange for the reduction of global sanctions on its oil and financial sectors. This week, Democrats appeared to be the main target of a closed-door briefing for the full House with Secretary of State John Kerry, Energy Secretary Ernest Moniz and Treasury Secretary Jack Lew. Kerry and Moniz followed up the next day with a closed-door meeting for Democrats only. The sales job has even gone international. Obama is halfway through a six-day trip to Africa. At various points during the transcontinental journey, no fewer than 17 House Democrats will join him on Air Force One — a prime opportunity for him to talk up the Iran accord face-to-face. It’s clear that many lawmakers have deep reservations about the deal. During the closed-door

briefing with Kerry and Moniz on Thursday, Democrats brought up concerns that “after 15 years, Iran will be a nuclear threshold power,” Engel said. “In many ways this doesn’t prevent Iran from becoming a nuclear power... it just postpones it,” he added. “That’s my major concern.” Sherman said Democrats inclined to vote against the Iran deal might choose not to override a veto, if it comes to that. “I could even see Democrats voting differently on passage of a resolution of disapproval and on overriding a veto of that,” Sherman said. “Because the first vote would be a symbolic vote — ‘do we approve of the deal?’ — the second vote really puts Congress at war with the president.” Rep. Jan Schakowsky (D-Ill.), a supporter of the deal, brushed off speculation that many Democrats would break rank. “I feel very optimistic that we can sustain a veto,” she said. “I say that as someone who has talked to a lot of members and collecting names.” “I feel optimistic that we will have enough.”

Iran will pass – Obama is selling the deal and Democrats are incrementally lining up behind him.

ABC 7/26 (ABC Associated Press, “Democratic Senator Leaning Toward Supporting Iran Deal”, 7/26/15, <http://abcnews.go.com/Politics/wireStory/democratic-senator-leaning-support-iran-deal-32696324>, accessed 7/26/15)//RZ

Democratic Sen. Joe Manchin of West Virginia said Sunday he is leaning toward supporting the Iranian nuclear deal because the alternative would be war.

Manchin is the latest Democrat to speak favorably of the agreement. Members of his party have started lining up to support the pact as the Obama administration works to sell it to lawmakers. Secretary of State John Kerry argued the case last week on Capitol Hill.

"I'm leaning very strongly towards that because of the options that I have," Manchin said on CBS' "Face the Nation." "The only other option is go to war, and I'm not ready to send our people into harm's way again until people in that part of the world want to clean up their own mess."

Manchin said he has spoken to leaders in four of the five countries that negotiated the Iran nuclear deal, and he said if Congress rejects it, the U.S. will be on its own and faced with going to war against Iran.

"And they all believe that this is a pathway that they should be taking; it's one they support," he said. "If we pull out, we pull out by ourselves. So I'm looking at all of the information I have to make a decision by September."

Republican critics told Kerry last week they think the U.S. failed to insist on enough restraints on Iran's nuclear program before agreeing to lift economic sanctions.

Congress has 60 days to review the agreement, which lifts economic sanctions if Iran curbs its nuclear program's capacity. The deal will take effect unless Congress blocks it, which GOP leaders who control the House and Senate hope to do.

Obama has promised to veto any effort to block the deal from taking effect, and the administration is looking for enough votes to keep Republicans from overriding a veto.

The White House is confident they can overcome the opposition's tactics and sustain the veto.

Toosi 7/22 – Foreign Affairs Correspondent Politico (Nahal, “Iran deal opponents steal tactic from Obamacare fight”, Politico, 7/22/15, <http://www.politico.com/story/2015/07/iran-deal-opponents-tactic-obamacare-fight-120486.html>, accessed 7/23/15)//RZ

The Obama administration could have dodged the potential town hall drama by reaching the deal with Iran before July 10, which would have given Congress only 30 days to review it — avoiding the recess period. White House officials are confident they will get the support they need to sustain a veto if it comes to that, but they are girding for a potentially bruising August as interest groups wage a war for public opinion over the deal, one expected to cost millions in advertising, petition drives, call-in campaigns and other efforts.

As far as town halls go, “certainly this is something we knew would be in the offing,” a senior administration official said. “That’s part of the reason we’re doing our own aggressive outreach.”

The administration has been in touch with women’s groups, peace activists, Jewish leaders and other constituencies it believes can help make its case for the deal to Congress, the official said, adding, “We’re doing this certainly in the hope and, frankly, the expectation that they will make their views on this vocal.”

The deal’s supporters say they’ve been anticipating the challenge posed by town halls and similar events, so they, too, are rallying their members to show up. The FCNL has even launched a web page that tracks lawmakers’ town hall schedules.

2nc – at: pelosi/others push

*****note --- this ev is also in the 2nc PC key block too**

Obama's political capital is a crucial variable to ensure passage

French and Bresnahan 7/27/15 – congressional reporters for Politico (Lauren and John, House Democrats Whip for Iran Deal, Politico, <http://www.politico.com/story/2015/07/house-democrats-whip-iran-deal-120642.html>)/JJ

Three days before world leaders formally unveiled an interim deal in early 2014 to slow the growth of Iran's nuclear program, two House Democrats quietly met to start discussing how they could sell a final accord — if it ever came to fruition — to a skeptical Congress.

It was Jan. 9, 2014, and Texas Rep. Lloyd Doggett and North Carolina Rep. David Price knew that without a sustained campaign from allies in Congress, it would be tough for President Barack Obama to persuade lawmakers to support the agreement over the strong objections of pro-Israel groups like the American Israel Public Affairs Committee.

“We knew we really needed to get a message going that was strongly in favor of diplomacy,” Doggett said. “And now we are in the position to go back to folks and ask what areas they have questions about. The only alternative is war.”

The deal faces a make-or-break vote this September, when Republicans will move forward with legislation to scuttle the agreement. The GOP is trying to build a veto-proof majority, and both sides, along with Obama himself, are lobbying hard for every vote, with Doggett, Price and about a half-dozen other Democrats quarterbacking the effort to keep Obama's legacy-defining diplomatic achievement afloat in the House

Since that early meeting, their campaign has developed into a more organized and formal whip operation. Instead of meeting in Price or Doggett's offices or on the House floor, the campaign to sway House Democrats to support the controversial Iran nuclear deal is now housed in the Capitol offices of Minority Leader Nancy Pelosi.

Price and Doggett have marshaled a broad array of support in the caucus, from moderates like themselves to liberals in the whip team — all the way up to Pelosi herself, who announced her strong support for the accord shortly after it was announced on July 14.

“A nuclear Iran is unacceptable to the United States, to the world and, in particular, to Israel,” the California Democrat said then.

Pelosi joins an interesting collection of advocates. Doggett and Price are far more moderate than the whip operation's other leaders. Other deal backers, such as Reps. Barbara Lee of California, Jan Schakowsky of Illinois, Peter Welch of Vermont and Keith Ellison of Minnesota, are some of Congress' most liberal members.

Buoyed by personal lobbying from Obama, members and Democratic staff say they already have the votes necessary to sustain a veto from Obama if Republicans, as expected, advance legislation to disapprove of the agreement. Obama would need close to 145 Democrats to back the deal if that happens, and senior aides have pointed to the 152 Democrats who signed an early 2015 Price-Doggett-Schakowsky letter supporting the framework of the agreement as evidence they can back the president.

But with anti-deal groups like AIPAC pouring \$20 million to \$40 million into TV advertisements blasting the deal, Democratic lawmakers said in interviews they weren't taking any chances. Shortly after Obama announced during a 7 a.m. White House news conference that negotiators in Vienna had sealed a deal, the half-dozen lead supporters in Congress touched base about re-engaging Democrats who had signed onto the letter sent earlier this year.

"We're having regular meetings and trying to find out what [lawmakers'] concerns are. Most of the members right now are going through the due diligence phase, so part of the whip operation is basically finding out what's on their mind and how can we get the information to you that you need to come to a conclusion," Welch said. "There has been a coordinated approach with the White House, and it's created a real infrastructure of common effort as we come down to the crunch."

He said Obama's chief of staff, Denis McDonough, is the group's main point of contact with the White House.

Over the August recess, there is talk of holding conference calls with members who are still weighing whether to support the deal. Those calls would connect deal experts or the lead negotiators of the accord — Secretary of State John Kerry and Energy Secretary Ernest Moniz — with any members who still have outstanding questions.

The whips are also working with pro-deal groups like J Street — a liberal pro-Israel organization — to help counter the money and energy AIPAC and anti-agreement groups are aiming at swing districts. J Street is planning to spend far less money — just over \$1 million — than AIPAC, but Schakowsky said grass-roots support could counterbalance the cash disparity.

Since the deal was announced, Pelosi has taken the reins on outreach to members — an effort the other pro-deal leaders described as critically important to bringing members on board. Meanwhile, Kerry gave a closed-door presentation to House Democrats on Thursday, and more briefings are expected from Obama administration officials before lawmakers leave on their five-week August recess on Thursday.

State Department official Wendy Sherman — who led negotiations with Tehran for the U.S. — will brief the Democratic and Republican leadership teams on Wednesday. That classified meeting will include the committee chairs and ranking members of the House's national security committees.

The whips are also working members over with a blunt political message: Come out in support now and save yourself from a painful August.

“We’re getting a lot of positive responses where it’s clear that people want to be supportive, especially as they focus on the question of what’s the alternative,” Welch said. “People are taking it quite seriously. This is an extremely momentous decision that the Congress is going to make.”

Any on-the-fence Democrat should expect AIPAC and its coalition of pro-Israel groups to use the August break to their advantage. Beyond the television and Internet ads, the group will capitalize on its national network of allies to apply consistent pressure on lawmakers to vote against the nuclear agreement.

But Schakowsky is arguing that anti-deal groups will ignore members who’ve gone on the record in support and will focus their efforts on trying to sway undecided lawmakers. Still, besides the whip team, few members have come out strongly in support of the deal.

“My sense is that our members are really working to get to yes. I feel more optimistic every day that we’ll have enough votes to override the veto if that is necessary,” the Illinois Democrat said. “We’re encouraging members who have made a decision to put out a statement. We are encouraging members to decide early to in some ways spare themselves a very aggressive summer.”

Obama’s personal outreach may be helping as well. A group of freshmen members who met with the president during a 90-minute briefing last week in the Situation Room said he is more engaged with the grueling work of lobbying than they’ve ever seen him. It’s clear that the president, the lawmakers said, deeply understands the details of the accord and is making the argument that this is the best deal for the U.S.

The president also warned the freshman lawmakers he met with last week — none of whom have committed to supporting the deal — that the White House would be closely watching their votes and no Democrat would get a pass for voting against it.

2nc – at: un vote

UN vote is irrelevant

Krepon and Campbell 7/20/15 – Co-founder of the Stimson Center AND **intern at the Stimson Center (Michael and Melanie, UN Vote Doesn't Usurp Congress on Iran, National Interest, <http://www.nationalinterest.org/feature/un-vote-doesnt-usurp-congress-iran-13374>)/JJ

The United Nations Security Council votes on Monday [July 17] on the Iranian nuclear limitation agreement. The timing of this resolution—well before the Congress votes up or down in mid-September— has been met with a wave of indignation on Capitol Hill.

Some Democrats have joined Republicans in expressing their displeasure, charging an “end run” of the Congress, disregard for its oversight role, and a violation of U.S. sovereignty. Chairman Bob Corker (R-TN) of the Foreign Relations Committee called the move “highly problematic” and “an affront to the American people.” Ranking Minority Member Ben Cardin (D-MD) told reporters that “I think it is somewhat presumptuous to take it to the UN for a vote before the Congressional review is over.”

In actuality, the Obama administration is following in the footsteps of the George H.W. Bush and George W. Bush administrations. Both went to the United Nations seeking support for military action against Saddam Hussein before going to the U.S. Congress. If this sequence is appropriate for making war, it should also be appropriate for avoiding war.

A supportive vote on the Iran deal on Monday is a foregone conclusion. The five veto-wielding, permanent members of the UN Security Council were all parties to the Iran negotiations, and all support the results. Later this fall, it's likely that there will be a vote in the UN General Assembly on this deal, which will also be approved overwhelmingly. Indeed, there may be only one negative vote, cast by the state of Israel.

These UN votes do not prejudice or violate in any way the Congress's role in considering the merits and weaknesses of the Iran agreement. Implementation of this deal will only follow the process of Congressional review negotiated between Senate Foreign Relations Committee Chairman Corker and Ranking Minority Member Cardin with the White House.

If the Congress votes, after due deliberation, to oppose the terms of this agreement, President Barack Obama has promised to veto a resolution of disapproval. Congress will then have the opportunity to override this veto. Failing this, implementation will begin, as laid out in the complex terms of the Joint Comprehensive Plan of Action agreed upon by the United States, Iran, France, Germany, Great Britain, Russia and China.

There are strong precedents for going to the United Nations before going to the Congress. Following Saddam Hussein's invasion of Kuwait on August 2, 1990, President George H.W. Bush deployed troops to Saudi Arabia to clarify that Saddam's actions would not stand. By November of that year, the Bush administration went to the U.N. Security Council to sanction military action against Iraq. On November 29, 1990, Security Council Resolution 678 was passed, which authorized the use of “all necessary means” to evict Iraq from Kuwait. Only then did President Bush ask for the Congress's support for military action. His request was made on January 8,

1991—a full month after the U.N. resolution was passed. Congress granted authorization on January 14. The United States commenced military action two days later.

President George W. Bush followed the same sequencing prior to the 2003 Iraq war. His administration first went to the UN in September, 2002 to seek authorization for the use of force against Iraq. The U.N. passed Security Council Resolution 1441, which gave Iraq one final opportunity to comply with its disarmament obligations before it would face “serious consequences.” This UN Security Council resolution was passed a full month before Congress authorized the Iraq War Resolution on October 16, 2002.

The Obama administration’s sequencing is no different from those of the George H.W. Bush administration and the George W. Bush administration. What’s different is that this UN resolution seeks to prevent a state in the Middle East from acquiring nuclear weapons by peaceful means.

2nc – at: saudis block

Saudis are on board –

Burns 7/23/15 – Associated Press (Robert, Carter Says Saudis Welcoming Iran Deal with Reservations, Military.com, <http://www.military.com/daily-news/2015/07/23/carter-says-saudis-welcoming-iran-deal-with-reservations.html>)/JJ

U.S. Defense Secretary Ash Carter says Saudi King Salman is welcoming the Iran nuclear deal but expressing reservations about how effectively it will be enforced.

Carter met with the king as well as his defense minister Wednesday in the Saudi Red Sea city of Jeddah.

Carter told reporters afterward that the king expressed reservations about how well Iranian compliance with the nuclear deal can be verified. And he expressed concern about the mechanism for reinstating international economic sanctions in the event that Iran is found to have violated the deal.

Carter said the U.S. shares those same concerns.

Saudi Arabia sees Iran as its chief regional foe and is worried about growing Iranian influence in Yemen and elsewhere in the Persian Gulf region. JIDDAH, Saudi Arabia — Saudi Arabia's King Salman and his defense minister support the Iran nuclear deal but have doubts about how effectively the historic agreement will be enforced, U.S. Defense Secretary Ash Carter said Wednesday.

The Saudis appear to have reconciled themselves to the Iran deal, judging from Carter's comments.

Carter spoke to reporters after meeting in Jiddah with the king and Defense Minister Mohammad bin Salman Al Saud.

"They both — the king and the minister of defense — reiterated their support" for the deal, Carter said. "The only reservations we discussed were ones that we clearly share, namely that we attend to verification of the agreement as it's implemented," and the use of a "snap-back" mechanism for quickly re-imposing sanctions on Iran if the Islamic Republic cheats on any part of the agreement to limit its nuclear program to peaceful pursuits.

"Those are the same issues that we know will arise" as the deal is implemented, Carter said.

Some experts say reinstating sanctions would be more difficult than the term "snap back" implies.

2nc – at: side deals

No side-deals – just hype and pc solves

Fabian and Wong 7/26/15 – congressional reporters for The Hill (Jordan and Kristina, White House launches Iran side deals counterattack, The Hill, [//JJ">http://thehill.com/policy/international/249171-white-house-launches-counterattack-against-iran-side-deal-attacks\)//JJ](http://thehill.com/policy/international/249171-white-house-launches-counterattack-against-iran-side-deal-attacks)

The Obama administration is launching a fierce counterattack against Republican arguments that so-called “side deals” between Iran and international nuclear inspectors represent a good reason to oppose the Iranian nuclear deal.

Republicans have seized upon bilateral agreements between Iran and the International Atomic Energy Agency (IAEA) to turn public opinion against the deal.

They hope that if the public rejects the agreement, it will be harder for Democrats to back the administration on votes to unwind the deal that are expected in September.

Republicans would need two-thirds majorities in the House and Senate to overcome an expected veto by President Obama.

Highlighting agreements involving Iran’s past military-related nuclear activity are meant to undercut the Obama administration’s argument that the nuclear pact built on verification, not trust of Iran.

Republicans also are using the fact that the documents are being kept secret to accuse the administration of withholding information.

As the “side deals” argument gained traction in GOP circles, administration officials stepped up their effort to fight back.

“I know there has been a suggestion by some Republicans that there are some agreements that were cut off to the side,” press secretary Josh Earnest said Wednesday. “The fact is, this is a critical part of the agreement.”

The White House also took to Twitter to rebut GOP claims.

“There’s no ‘secret’ or ‘side’ deal with Iran. Congress has everything we have on the #IranDeal” read one tweet on @TheIranDeal account, set up by the White House to sell the agreement to the public.

“Lots of misperceptions re the #IranDeal,” National Security Adviser Susan Rice tweeted. “This is a good deal that should be judged on its merits, not distortions.”

Administration officials say the Iran-IAEA agreements aren’t side deals, but standard practice in crafting arms-control pacts.

Yet the administration’s initial response to the GOP arguments was muddled.

While State Department spokesman John Kirby on Wednesday said there were no “side deals” and that the IAEA arrangements were normal, Rice described the arrangement as an agreement between Iran and the IAEA.

She hastened to add that the deals were not secret, that the administration knew their contents and were “satisfied” with them. She also pledged administration officials would hold classified briefings for lawmakers on the details.

2nc – at: uq overwhelms link

Obama's margin for error is thin—only aggressive lobbying will ensure passage

French 7/16/15 – Congress reporter for POLITICO (Lauren, Nancy Pelosi voices 'strong support' for Iran deal, Politico, <http://www.politico.com/story/2015/07/iran-deal-nancy-pelosi-supports-120224.html>)/JJ

House Democratic leaders are increasingly confident they have the votes necessary to sustain any presidential veto of GOP-backed legislation that would effectively scuttle the Iran nuclear deal.

Despite some lingering skepticism in parts of the caucus, leadership sources pointed to the 152 Democrats already on the record supporting the earlier framework of the nuclear deal as evidence that House Democrats will likely do their part to keep President Barack Obama's landmark nonproliferation deal alive.

House Minority Leader Nancy Pelosi, who wields significant influence in the caucus, on Thursday announced her "strong support" for the deal.

"A nuclear Iran is unacceptable to the United States, to the world and, in particular, to Israel," the California Democrat said. The deal is "intensifying our vigilance over every aspect of the entire Iranian nuclear program."

Keeping House Democrats on board could end up being the easiest sales pitch White House has to make when it comes to Iran.

Congressional Republicans are denouncing the deal — which would stop the growth of Iran's nuclear facilities while lifting a series of sanctions — as inadequate. Republicans are planning to move ahead with disapproval legislation after a 60-day review period — a measure Obama has already pledged to veto as it would essentially stop the accord from going forward.

That means Obama would need Democrats in both chambers to sustain his veto — or the agreement dies. In the Senate, the White House can lose no more than 12 Democrats from the 46-member caucus.

The numbers in the House are harder to pin down exactly. Despite the support of high-profile members like Pelosi and Illinois Rep. Jan Schakowsky, the margins would be close — mostly because Democrats hold so few seats.

So the White House is doing its best to avoid any surprises this fall, when the disapproval resolution is expected to start moving. Obama has already started aggressively lobbying members — a process that started before the nuclear agreement was even publicly announced.

Obama and Pelosi spoke by phone Monday night and other top Obama administration officials called Democrats who have been active on Iran shortly after the final accord was made public.

The early effort paid off with Pelosi. The California Democrat announced Thursday her "strong support" for the deal — and said she would personally lobby her fellow House Democrats to

back it. She'll join an established pro-deal whip operation in the House that's run by Schakowsky and Reps. Lloyd Doggett of Texas and David Price of North Carolina.

Schakowsky was among a group of nearly 15 Democratic lawmakers invited to the White House on Thursday for an early morning briefing on the deal. The Jewish lawmakers questioned administration officials about how much money Iran would have access to after sanctions were lifted, the timetables for inspections of Iranian nuclear sites and the details of an arms embargo.

"People felt that the administration was more than willing to spend whatever time is necessary to provide the assurances to the members and they understand that the Jewish members have a particular concern, which is a concern about the security of Israel," Schakowsky said. "There were reassurances made there too. I think in general the feeling was that not only was that session satisfactory but there is a willingness of the administration to work with us to answer the concerns."

2nc – at: thumpers --- top level

Iran is the top-priority – that’s 1NC Fabian – our ev assumes the thumpers and prices them in with Obama’s current political capital

Iran deal is top of the docket

Byrnes and Kamisar 7/15, staff writer at The Hill, (Jesse and Ben, 7/15/15, Obama defends Iran deal, The Hill, <http://thehill.com/homenews/administration/248028-obama-defends-iran-deal>)//kap

President Obama on Wednesday sought to defend his administration’s nuclear deal with Iran, suggesting it was a historic opportunity that the United States should not pass up.

“It prevents the most serious threat — Iran obtaining a nuclear weapon, which would only make the other problems Iran may cause even worse,” Obama said during a press conference.

“If we don’t choose wisely, I believe future generations will judge us harshly for letting this moment slip away,” Obama said in brief opening remarks.

Obama outlined a litany of arguments for adopting the deal, saying it cuts off Iran’s pathways to a bomb, provides “unprecedented, around-the-clock” international inspections to known sites and the entire supply chain and deters the threat of a nuclear Iran.

Negotiators working for the past two years reached an accord early Tuesday providing sanctions relief for Iran in exchange for a rollback of its nuclear program.

The deal expands the breakout time for Iran to obtain enough material to build a nuclear weapon to one year by reducing the amount of centrifuges and uranium Iran can have, limiting the reactors it can build and adding further restrictions and inspection protocols.

But critics have blasted many parts of the accord, including the intensity of inspections, saying that Iran could have up to 24 days before inspectors are allowed access to undeclared sites.

Obama hit those concerns, pushing back on the idea that the 24-day window is insufficient. He noted that the international community could vote to overrule Iran if it tries to restrict access to undeclared sites, even without the support of Russia or China, countries that have been sympathetic to Iran in the past.

“The nature of nuclear programs and facilities is such — this is something you do not hide in a closet. This is not something that you put on a dolly and wheel off somewhere,” Obama said.

“We don’t need Russia or China in order for us to get that override,” he said. “If they continue to object, we’re in a position to snap back sanctions.”

The deal with Iran, a top priority for Obama in his second term, is being met with deep skepticism from members of Congress and others in the Middle East, particularly Israel.

A significant number of lawmakers have argued that anything short of a complete dismantling of Iran's nuclear program is a failure and question terms that lift arms and ballistic missile embargoes after five and eight years, respectively. That would allow Iran to possess those weapons, despite its stated hostility to Israel, as well as its support for terrorism and other destabilizing forces in the region.

Obama countered that international law has a "number of mechanisms" to prevent illicit arms shipments by Iran and that it will be easier to check Iran's "nefarious" actions if it doesn't have a bomb.

He said he told negotiators they should press for a longer extension of the arms embargo and of ballistic missile prohibitions given concerns Iran can't be trusted. "And we got that," he said.

Congress will have 60 days to review the deal and an additional 12 days to vote on it as part of a law passed earlier this year as a compromise between Congress and the White House.

If Congress can overcome the president's veto, he won't be able to lift all of the country's sanctions against Iran, which could jeopardize the deal. But if Congress fails to scuttle the deal, either through a "no" vote or a decision not to hold a vote, Obama is authorized to move forward and abide by the terms.

Ex-Im is bipartisan

VOA 7/22/15 – Voice of America News (VOA, Obama to Pressure Congress on Ex-Im Bank, <http://www.voanews.com/content/obama-to-pressure-congress-on-ex-im-bank/2872957.html>)/JJ

President Barack Obama will meet with a group of 10 business owners at the White House Wednesday as he pushes Congress to reauthorize the charter for a government agency that assists American companies who sell their goods in foreign markets.

The charter for the Export-Import Bank expired on June 30 after the Republican House of Representatives went on a planned recess without holding a vote on the issue. The bank has strong bipartisan support on Capitol Hill, but a group of staunch conservative Republicans has criticized the agency as a form of "corporate welfare" that only helps a few large corporations that do not need government assistance.

The White House says the business owners who will meet with the president have worked with the Ex-Im Bank in the past "to expand their exports and sustain and create jobs." Supporters have also noted that rival nations such as China and Germany have similar agencies assisting their companies sell exports on the global market.

"The Export-Import Bank is a critical tool in the bipartisan trade agenda that helps U.S. businesses succeed in global markets and grow their exports. Ex-Im equips companies with financing they need to go toe-to-toe with foreign rivals, resulting in more exports and more well-paying jobs in cities and towns here in America, rather than overseas," a White House official said.

There is growing support in the Senate to attach a measure to restore the Ex-Im Bank's charter on a bill that would provide funding for the federal Highway Trust Fund, which must be approved by July 31.

Support in both chambers

Wolfgang, your author, 7/22/15 – White House reporter for the Washington Times (Ben, Obama pushes for Ex-Im Bank renewal, chides lagging Congress, Washington Times, <http://www.washingtontimes.com/news/2015/jul/22/obama-pushes-ex-im-bank-renewal-chides-congress/?page=all>)/JJ

"Reauthorizing Ex-Im has wide, bipartisan support in both chambers, and it's time for Speaker Boehner and Leader McConnell to listen to their colleagues and the American people and hold a vote on a reauthorization bill. Our businesses and our economy cannot afford to have Congress delay any longer," said Sen. Chris Coons, Delaware Democrat.

2nc Spillover Ev ***

Obama must continue spending PC and avoid any new surprises to ensure passage

French 7/16/15 – Congress reporter for POLITICO (Lauren, Nancy Pelosi voices ‘strong support’ for Iran deal, Politico, <http://www.politico.com/story/2015/07/iran-deal-nancy-pelosi-supports-120224.html>)//JJ

House Democratic leaders are increasingly confident they have the votes necessary to sustain any presidential veto of GOP-backed legislation that would effectively scuttle the Iran nuclear deal.

Despite some lingering skepticism in parts of the caucus, leadership sources pointed to the 152 Democrats already on the record supporting the earlier framework of the nuclear deal as evidence that House Democrats will likely do their part to keep President Barack Obama’s landmark nonproliferation deal alive.

House Minority Leader Nancy Pelosi, who wields significant influence in the caucus, on Thursday announced her “strong support” for the deal.

“A nuclear Iran is unacceptable to the United States, to the world and, in particular, to Israel,” the California Democrat said. The deal is “intensifying our vigilance over every aspect of the entire Iranian nuclear program.”

Keeping House Democrats on board could end up being the easiest sales pitch White House has to make when it comes to Iran.

Congressional Republicans are denouncing the deal — which would stop the growth of Iran’s nuclear facilities while lifting a series of sanctions — as inadequate. Republicans are planning to move ahead with disapproval legislation after a 60-day review period — a measure Obama has already pledged to veto as it would essentially stop the accord from going forward.

That means Obama would need Democrats in both chambers to sustain his veto — or the agreement dies. In the Senate, the White House can lose no more than 12 Democrats from the 46-member caucus.

The numbers in the House are harder to pin down exactly. Despite the support of high-profile members like Pelosi and Illinois Rep. Jan Schakowsky, the margins would be close — mostly because Democrats hold so few seats.

So the White House is doing its best to avoid any surprises this fall, when the disapproval resolution is expected to start moving. Obama has already started aggressively lobbying members — a process that started before the nuclear agreement was even publicly announced.

Obama and Pelosi spoke by phone Monday night and other top Obama administration officials called Democrats who have been active on Iran shortly after the final accord was made public.

The early effort paid off with Pelosi. The California Democrat announced Thursday her “strong support” for the deal — and said she would personally lobby her fellow House Democrats to back it. She’ll join an established pro-deal whip operation in the House that’s run by Schakowsky and Reps. Lloyd Doggett of Texas and David Price of North Carolina.

Schakowsky was among a group of nearly 15 Democratic lawmakers invited to the White House on Thursday for an early morning briefing on the deal. The Jewish lawmakers questioned administration officials about how much money Iran would have access to after sanctions were lifted, the timetables for inspections of Iranian nuclear sites and the details of an arms embargo.

“People felt that the administration was more than willing to spend whatever time is necessary to provide the assurances to the members and they understand that the Jewish members have a particular concern, which is a concern about the security of Israel,” Schakowsky said. “There were reassurances made there too. I think in general the feeling was that not only was that session satisfactory but there is a willingness of the administration to work with us to answer the concerns.”

--gridlock – generic

Reform causes gridlock – congress fights over the extent of surveillance curtailment.

Guliani 15 (Neema Singh, ACLU Legislative Counsel, “What’s Next for Surveillance Reform After the U.S.A Freedom Act”, American Civil Liberties Union, 6/3/15, <https://www.aclu.org/blog/washington-markup/whats-next-surveillance-reform-after-usa-freedom-act>, accessed 7/27/15)//RZ

By a 67-32 margin Tuesday, Congress passed the USA Freedom Act — a significant milestone in our efforts to rein in NSA surveillance. The bill marks the first time since passage of the Foreign Intelligence Surveillance Act in 1978 that Congress has taken steps to restrict — rather than expand — the government’s surveillance authority.

To be clear, the bill that passed yesterday is not as strong as we wanted. It is markedly weaker than the original version of the USA Freedom Act that the ACLU first supported in 2013, which itself left many serious surveillance abuses untouched. And while the ACLU was neutral on the version of USA Freedom that ultimately passed, we were a vocal critic of its shortcomings and supported a sunset of the provisions in an effort to advance more comprehensive reform.

Notwithstanding this, however, it is very clear that the USA Freedom Act is a historic step forward.

On the road to its passage, pro-reform advocates beat back efforts led by Senate Majority Leader Mitch McConnell (R-Ky.) to simply extend expiring Patriot Act provisions. A week before the scheduled expiration, he failed to garner enough support for even a one-day extension. Opposition came from many within his own party, with senator after senator taking the floor in support of reforming surveillance laws.

When gridlock resulted in a temporary sunset of the provisions, a majority of the Senate again refused to accede to efforts to water down the USA Freedom Act or extend the provisions.

cybersecurity – unpopular

Cybersecurity reform causes a fight – tech firms and certain senators oppose.

Risen 6/10 (Tom Risen, technology and business reporter for U.S. News and World Report, "Martin O'Malley Backs Controversial Cybersecurity Bill", 6/10/15, Martin O'Malley Backs Controversial Cybersecurity Bill, accessed 7/27/15)//RZ

The White House backs the cybersecurity legislation, which passed the House in April, but it also wants changes made in the Senate. Along with calling for amendments to limit the collection and sharing of unnecessary consumer data, the administration said giving companies too much legal protection for failing to protect consumer privacy or to act on hacker threat data "may weaken cybersecurity writ large." Senate Majority Leader Mitch McConnell, R-Ky., announced on Wednesday that he wants to expedite passage of the Senate version of the bill, called the Cybersecurity Information Sharing Act, by attaching it to the National Defense Authorization Act now on the Senate floor.

Cybersecurity professionals, however, remain convinced both pieces of legislation could damage privacy rights and endanger networks by sharing unnecessary information.

Sen. Rand Paul, R-Ky., and Sen. Bernie Sanders, I-Vt., who are both presidential candidates, reportedly oppose the Senate bill because of the similar concerns about privacy, U.S. News has learned. O'Malley noted these concerns in his op-ed when he talked about his support for the Protecting Cyber Networks Act.

"After making changes to protect consumer data and ensure the appropriate level of legal protection for companies, Congress should pass this legislation," O'Malley said in the op-ed. "We need to ensure that privacy issues are directly and adequately addressed in order to build the trust necessary for businesses and other organizations to work with the government on the safeguards we need to protect both."

House Approves Controversial Cybersecurity Bill

McConnell's move to attach cybersecurity legislation to a must-pass defense funding bill would damage the process to address privacy concerns, the Center for Democracy & Technology said in a blog post on Wednesday. The advocacy group warned that the Senate cybersecurity bill could enable the expansion of government surveillance and would not address the conduct of the National Security Agency and other agencies. The advocacy group wants the bill to discourage government conduct that could damage cybersecurity, including the stockpiling of "zero day" vulnerabilities in consumer software that could allow intelligence agencies to monitor or hack networks.

"This move would almost certainly stifle necessary debate on the privacy and civil liberties problems in the bill and thwart amendments that Senators have been crafting to address those problems," the blog post said.

A group of engineers from firms including Twitter and Cisco on April 16 sent a letter opposing the bill to House and Senate lawmakers, adding that security professionals already share threat data while complying with federal law.

"We do not need new legal authorities to share information that helps us protect systems from future attacks," the letter reads.

cybersecurity – gridlock

Cyber security bills ensure gridlock.

O'Malley 6/9 (Martin O'Malley, former governor of Maryland, "The U.S. Government – And The Next President – Needs To Take Cybersecurity Seriously", Foreign Policy, 6/9/15, <http://foreignpolicy.com/2015/06/09/the-u-s-government-and-the-next-president-needs-to-take-cybersecurity-seriously/>, accessed 7/27/15)//RZ

Last week, we learned of a massive cyberattack on U.S. government data. Likely emanating from China, the attack has compromised the personal information of 4 million current and former federal employees. This security breach might be the most significant yet to take place in our country, but it won't be the last. It signals the urgent need to advance a new agenda to improve our nation's cybersecurity.

In the face of increasingly dangerous cyberattacks, it is imperative that we overcome gridlock in Washington. The Protecting Cyber Networks Act, a bill that seeks to improve public-private information sharing to reduce cyberthreats, has stalled in the Senate. After making changes to protect consumer data and ensure the appropriate level of legal protection for companies, Congress should pass this legislation.

prisons – unpopular

Prison reform costs tons of PC – Democrats are afraid of the ‘soft on crime’ label and reform is in opposition to long-held beliefs.

Dagan and Teles 12 (David Dagan, Steven M. Teles, associate professor of political science at John Hopkins University, “The Conservative War on Prisons”, Washington Monthly, November/December 2012, http://www.washingtonmonthly.com/magazine/novemberdecember_2012/features/the_conservative_war_on_prison041104.php?page=all, accessed 7/26/15)//RZ

Such second thoughts are creating the first significant opening in years for a criminal justice overhaul. Neither Republicans nor Democrats can reform the system alone given the continuing fear of being tarred with the “soft on crime” label, said Gene Guerrero, a policy analyst at the Washington office of George Soros’s Open Society Foundations. It can only happen, he said, “if there is real leadership from both sides and if the reforms are developed and move forward on a bipartisan basis.”

Still, it’s conservatives who bring the most muscle to the job. A handful of liberal organizations have valiantly kept alive the argument for reform even through the dark days of the 1980s and ’90s—places like the American Civil Liberties Union, Open Society Foundations, and the Public Welfare Foundation. By and large, however, it is conservative institutions who now pay the most attention to criminal justice, Guerrero said. In rare cases, Democratic politicians have proved willing to take up the cause, as when Michigan Governor Jennifer Granholm directed an overhaul of that state’s parole system during her first term— though her second-term push for broader reform legislation fizzled (see Luke Mogelson, “Prison Break,” Washington Monthly, November/December 2010). But most Democrats are still terrified of appearing timid before voters and are therefore loath to lead the way. At best, they can be persuaded to go along if the right gives them cover.

The right’s belated awakening to America’s incarceration crisis may seem little more than an obvious extension of libertarian and socially conservative philosophies. But logic rarely determines how movements put together their various ideological commitments. Making and changing positions is tough, entrepreneurial political work, especially when long-held, electorally successful ideas are being called into question.

Democrats fight prison reform.

NYPPost 15 (NY Post Editorial Board, “Obama is facing the prison facts”, 7/11/15, <http://nypost.com/2015/07/11/obama-is-facing-the-prison-facts/>, accessed 7/26/15)//RZ

Because the size of the prison population is indeed a national scandal — but while there are changes to be made in the prisons and the courts, the necessary work goes much, much further.

Obama knows this — but it’s his own party, and the special interests who control it, that stand in the way of seeing that fewer Americans wind up primed for prison.

Yes, it's mainly Republicans who resist sentencing reform. But that's been changing, big time.

Just last month, the president remarked, "We've seen some really interesting leadership from some unlikely Republican legislators very sincerely concerned about making progress." That's why there's bipartisan legislation for him to get -behind.

It's a live topic in the GOP presidential race, too — a top issue for Sen. Rand Paul and others.

And Texas ex-Gov. Rick Perry, in his first big policy speech last week, noted, "Nobody gets Texans confused as being soft on crime. I believe in consequences for criminal behavior. But I also believe in second chances and human redemption."

drones – obama pushes

Obama pushes – supports drone reforms

CNN 15, leading news source on issues both domestic and international, (5/18/15, President Obama to restrict grenade launchers, military equipment from local police, <http://fox59.com/2015/05/18/president-obama-to-restrict-grenade-launchers-military-equipment-from-local-police/>)//kap

WASHINGTON (CNN – May 18, 2015) — The Obama administration on Monday moved to prohibit federal agencies from providing local cops with certain kinds of military equipment such as grenade launchers, high-caliber weapons and bayonets, in the wake of controversy over a “militarized” police response to unrest last summer in Ferguson, Missouri.

The new prohibitions are part of an executive order President Barack Obama issued for federal agencies to review the types of equipment they provide to local and state police.

Obama traveled Monday to Camden, N.J., to highlight crime reduction and community policing tactics that the administration hopes can be a model around the country. A spate of officer-involved shootings and the deaths of African-Americans in confrontations with police has made policing an issue the administration is forced to grapple with.

“We’ve seen how militarized gear can sometimes give people a feeling like there’s an occupying force as opposed to a force that’s part of the community that’s protecting them and serving them,” Obama said in Camden Monday. “It can alienate and intimidate local residents and send the wrong message.”

Agencies including the Defense, Justice, and Homeland Security departments help provide equipment to local police.

The banned list includes: tank-like armored vehicles that move on tracks, certain types of camouflage uniforms, bayonets, firearms and ammunition of .50 caliber or higher, grenade launchers, and weaponized aircraft.

The presidential order established a “controlled equipment” list, with tightened requirements before federal agencies can transfer equipment to local cops. These include riot control equipments and drones. Federal agencies will also require local police to provide more data so the government can better track equipment.

ice – obama pushes

Obama pushes for ICE reforms—the plan aligns perfectly with his ideology

Key 15, staff writer at Breitbart, (Pam, OBAMA: ICE AGENTS WILL HAVE 'A PROBLEM' IF THEY DON'T FOLLOW MY ORDERS, <http://www.breitbart.com/video/2015/02/25/obama-ice-agents-will-have-a-problem-if-they-dont-follow-my-orders/>)//kap

Wednesday on MSNBC's "Town Hall with the President," President Barack Obama said of ICE agents who do not follow his administration's stated deportation guidelines of only deporting felons, not families, "They've got a problem."

The president said, "But what I can tell you is that, until we pass a law through Congress, the executive actions that we take are not going to be permanent, they're temporary. We're now implementing a new prioritization. There are going to be some jurisdictions, and if there are individual ICE officials, or border patrol, who aren't paying attention to our new directives, they'll be answerable to the department of Homeland Security, because he's been very clear about what our priorities should be. And I've been very clear about what our priorities should be. And the — I don't know what the particular circumstances here are. But what I can tell you is, people who have signed up, for example, under my executive action in DACA, there are 700,000, 800,000 people who signed up. They haven't had problems. It's worked. So we know how to make this work. "

"Right now we've got a judge who is blocking it in working. And in the interim, until we can actually process all these applications, then what we're going to do is do what we can in terms of making sure that we're prioritizing it properly. The challenge is still going to be that not only do we have to win this legal fight, which we are appealing very aggressively, but ultimately we're still going to have to pass a law through congress. The bottom line is, Jose, that I'm using all of the legal power vested in me in order to solve this problem. And, you know, one of the things about living in a democracy is that we have separation of powers, we have Congress, we have the judicial branch. And, you know, right now, we've got some disagreements with some members of Congress, and some members of the judiciary in terms of what should be done. But what I'm confident about is ultimately this is going to get done. And the reason it's going to get done is it's the right thing to do. And it is who we are as a people.

The bottom line is that if somebody's working for ICE, and there's a policy, and they don't follow the policy, there are going to be consequences to it. So I can't speak to a specific problem. What I can talk about is what's true in the government generally. In the U.S. military when you get an order, you're expected to follow it. It doesn't mean that everybody follows the order. If they don't, they've got a problem. And the same is going to be true with respect to the policies that we're putting forward."

Obama supports measures like the plan

Harris 15, staff writer at The Latin Post, (Julia, 5/31/15, Immigration Reform News: What's Next for Obama Administration After Immigration Setback as Gov. Jeb Bush Defends His Immigration

Stance, <http://www.latinpost.com/articles/56681/20150531/immigration-reform-news-whats-next-for-obama-administration-after-immigration-setback-as-gov-jeb-bush-defends-his-immigration-stance.htm>//kap

May was the month that at least 4 million immigrants were to start receiving permission to legally stay and work under U.S. President Barack Obama's latest executive actions to limit deportations, but it isn't going to happen anytime soon. Twenty-six states sued to block Obama's plans, leaving immigrants in limbo and their stay in the U.S. just as uncertain as it has ever been.

To make matters worse, after a setback by the U.S. Fifth Circuit Court of Appeals to not remove a temporary injunction on the president's 2014 immigration executive actions, the Department of Justice (DOJ) spokesman Patrick Rodenbush said the DOJ will not seek a U.S. Supreme Court emergency appeal.

Instead, the Justice Department will put into effect the expanded Deferred Action for Childhood Arrivals (DACA) guidelines and new Deferred Action for Parental Accountability (DAPA) program, which Rodenbush said was the best way for the DOJ to help the estimated 4.9 million undocumented immigrants.

He also said the DOJ will focus on the current appeal process based "on the merits of the preliminary injunction itself," and that the 5th Circuit is expected to hear the argument the week of July 6.

Basically, the administration's plan seems to boil down to "do the best we can" under the circumstances, given the lengthy process any appeal, Supreme Court or otherwise, will take.

Expanded DAPA and DACA guidelines would provide millions of undocumented immigrants a renewable three-year stay in the U.S. pending requirements outlined by the U.S. Department of Homeland Security (DHS).

Another issue is the DHS practice of immigrant family detention. Since the summer of 2014, DHS has increased its detention practices due to an influx of undocumented immigrants. The alleged prison-like confines of the detention centers prompted 136 House of Representatives Democrats to send the DHS Secretary Jeh Johnson a letter about the issue.

"Prisons are no place for families. We must end the practice of locking up innocent mothers and their children. It does not align with our country's values, and it is downright immoral," said the Fair Immigration Reform Movement spokesperson Kica Matos.

The DHS claims its detention policies deter future migration of undocumented immigrants.

The administration deported about 360,000 immigrants in fiscal 2014, reports The New York Times. Though the number of deportations is lower this year, immigrant communities' worry that minor run-ins with law enforcement will continue tearing families apart.

The administration is taking preventative measures. Obama has proposed a new enforcement effort, the Priority Enforcement Program (PEP), which focuses on dangerous immigration

violators. He also said during an interview in December with Univision News anchor Jorge Ramos, "We have to go and train ICE workers, so that they are responding in a different way."

Meanwhile, a potential Republican presidential candidate is taking up the immigration fight. On Sunday, former Gov. Jeb Bush, R-Fla., said on CBS's "Face The Nation" that though his pro-immigration stance goes against the Republican Party grain, he is not backing down.

Bush said that immigrants need a pathway to obtain legalized status.

"People need to get a provisional work permit, pay taxes, learn English, don't commit crimes, don't receive federal government assistance and earn legal status," he said.

Regarding Obama's executive amnesty, Bush said he believes the Supreme Court will overturn it.

"I think it's unconstitutional. I've written a book about this. Simple fact is he doesn't have the authority to do what he did."

Bush claims that Obama's motivation for the executive amnesty was to "create a wedge for democrats to win elections."

immigration – obama pushes

Obama loves the plan – he pushes

Sherfinski 15, staff writer at The Washington Times, (David, 2/24/15, Obama on immigration: 'Will fight any attempt to turn back the progress we've made', The Washington Times, <http://www.washingtontimes.com/news/2015/feb/24/obama-immigration-will-fight-any-attempt-turn-back/>)//kap

In a new opinion piece, President Obama said he's confident his recent executive actions on immigration will be upheld despite a setback in the courts and reiterated his call for Congress to act on the issue.

Mr. Obama wrote in The Hill, a Capitol Hill newspaper, that resources the Department of Homeland Security dedicates to the southern border are at an all-time high, apprehensions at the border are at an all-time low, and the number of illegal immigrants living in the country has stopped increasing for the first time in decades.

He defended his 2012 deportation amnesty to so-called "Dreamers" — illegal immigrants brought to the country as children — and last year's actions that would allow millions more to apply for and obtain temporary legal status and work permits as "common-sense steps" that are legal, good for the country, and ones that follow similar steps taken by past presidents of both parties.

He said he disagreed with Judge Andrew S. Hanen's recent ruling in a "partisan" lawsuit in Texas that halted his most recent deportation amnesty, that his administration will fight the ruling "with every tool at our disposal" and that he's confident his actions will ultimately be upheld. The administration formally appealed and requested a stay of the ruling Monday.

He clarified that while the decision prevents the administration from accepting new requests under his actions announced last year, it does not impact the 2012 Deferred Action For Childhood Arrivals (DACA) program for Dreamers, and people eligible for that program can still submit an initial or renewal request.

He went on to say he's confident the steps he's taken will be implemented, but that they're no substitute for congressional action, taking a shot at Capitol Hill Republicans in making his point.

"It was my hope that a new, Republican-led Congress would seek to govern responsibly by supporting commonsense solutions to one of our country's greatest challenges, just like President Bush and Sen. John McCain tried to nearly a decade ago," he wrote. "Instead, we've seen a series of votes to deport Dreamers, young people who are American in every way except on paper. We've even heard irresponsible threats to shut down the Department of Homeland Security, the very agency tasked with securing our borders and keeping Americans safe in a time of new threats, for no reason other than partisan disagreement over my actions."

Facing an end-of-week deadline, Senate Majority Leader Mitch McConnell, Kentucky Republican, announced a standalone bill late Monday that would block the latest amnesty but leave intact

the 2012 DACA program, paving the way for the GOP to pass a short-term bill to fund the Homeland Security Department.

“It’s time to end the era of manufactured crises, put politics aside and focus on doing what’s best for America,” Mr. Obama wrote. “So while I will fight any attempt to turn back the progress we’ve made or break up families across our country, I welcome the opportunity to work with anyone who wants to build on the improvements we’ve put in place, and fix our broken immigration system once and for all.”

tsa – obama pushes

He pushes – loves TSA reforms

Kimery 15, Editor-in-Chief of Homeland Security Today, (Anthony, 1/5/15, TSA Reform Bill Signed into Law by Obama, <http://inhomelandsecurity.com/tsa-reform-bill-signed-into-law-by-obama/>)/kap

President Barack Obama signed into law the Transportation Security Acquisition Reform Act (HR 2719).

Introduced by Rep. Richard Hudson (R-NC), chairman of the House Transportation Security Subcommittee in July 2013, HR 2719 was approved unanimously by the House in December of that year. Following introduction of companion legislation by Sen. Kelly Ayotte (R-NH) and unanimous Senate passage, the legislation as amended unanimously passed the House.

“As chairman, I set out to increase transparency and accountability at TSA while keeping travelers safe and saving our tax dollars,” Hudson said in a statement. “This law is an important step that will root out the waste at TSA and increase safety by ensuring that the most effective, cost-efficient security tools are implemented. Despite Washington’s gridlock, the bipartisan support of this law shows that Republicans and Democrats can work together to solve problems.”

The Transportation Security Acquisition Reform Act introduces greater transparency and accountability for the Transportation Security Administration (TSA) spending decisions through a series of commonsense reforms.

Specifically, it requires TSA to:

Develop and share with the public a strategic 5-year technology investment plan;

Share key information with Congress on technology acquisitions, including cost overruns, delays, or technical failures within 30 days of identifying the problem;

Establish principles for managing equipment in inventory to eliminate expensive storage of unusable or outdated technologies, and

Report on its goals for contracting with small businesses.

The legislation stated that, “TSA has not consistently implemented Department of Homeland Security policies and government best practices for acquisition and procurement; TSA has only recently developed a multiyear technology investment plan, and has underutilized innovation opportunities within the private sector, including from small businesses; and has faced challenges in meeting key performance requirements for several major acquisitions and procurements, resulting in reduced security effectiveness and wasted expenditures.”

tsa – losers lose – fights plan

Obama trusts the TSA and supports its actions—Obama is stagnant on reform efforts

Fabian 6/2, staff writer at The Hill, (Jordan, 6/2/15, Obama confident in the TSA despite failure to detect explosives, The Hill, <http://thehill.com/policy/transportation/243769-obama-confident-in-tsa-despite-failure-to-detect-explosives>)//kap

President Obama has confidence in the Transportation Security Administration (TSA) despite the ease with which undercover agents were able to smuggle explosives into airports, the White House said Tuesday.

“The president does continue to have confidence that the officers of the TSA do very important work that continues to protect the American people,” press secretary Josh Earnest said.

A report released Monday found TSA employees failed to find fake explosives, weapons and other prohibited items in 95 percent of internal tests. The undercover agents successfully evaded security in 67 of 70 tests at major airports.

The report prompted Department of Homeland Security Secretary Jeh Johnson to remove the agency’s acting director, Melvin Carraway, who had led the TSA since the beginning of the year.

Earnest said the report raised "specific concerns" about security procedures, but said he expects the agency to adopt its recommendations on retraining employees and retesting screening equipment.

He added that the U.S. has a "multi-layered" security approach that protects travelers.

“The American public should feel confident traveling in airports across the country.”

The White House spokesman chastised senators for acting too slowly on the nomination of Coast Guard Vice Adm. Peter Neffenger as TSA director. He said the upper chamber has held just one hearing on his nomination since Obama picked him in April.

“We would have more confidence if we could have a more permanent, Senate-confirmed director on the job,” Earnest said.

“We would like to see Congress act more quickly to confirm him.”

Lawmakers have criticized Obama for not selecting a permanent leader for the agency more quickly. Longtime TSA director John Pistole announced he would retire in October, and the White House waited more than six months to nominate Neffenger.

Senate Majority Leader Mitch McConnell's (R-Ky.) office blamed Obama for the delayed selection of Neffenger and said the nominee has not yet responded to some written inquiries from members of the Commerce Committee.

"I understand the White House is raising some concerns about the lack of a confirmed TSA administrator. But folks, the White House is the cause of the delay," McConnell spokesman Don Stewart said in an email

Obama still supports the TSA despite recent studies—he remains complacent in a push for reform

Laing 6/3, staff writer at The Hill, (Keith, 6/3/15, TSA's competence in doubt, The Hill, [//kap">http://thehill.com/policy/transportation/243846-tsas-competence-in-doubt\)//kap](http://thehill.com/policy/transportation/243846-tsas-competence-in-doubt)

The competence of the Transportation Security Administration is being called into question after agents failed to find fake explosives and weapons in more than 60 tests at the nation's largest airports.

Acting TSA Administrator Melvin Carraway was removed from office on Tuesday, less than 24 hours after the report's findings went public, and lawmakers are demanding a broader overhaul of the agency before it's too late.

Sen. Dan Coats (R-Ind.) said the results of the undercover TSA probe were "shocking," and called for "immediate action."

"This has got to be a top-to-bottom effort looking at the trainers, how we hire them, how we train them, how they perform their jobs, looking at the equipment that's supposed to detect a lot of this stuff," Coats said on Fox News.

The TSA is coming under scrutiny, after the Homeland Security Department's inspector general (IG) documented a series of undercover stings in which agents tried to pass through security with prohibited items.

The undercover agents made it through security in nearly all the tests — 67 of 70 — including one instance where a TSA screener failed to find a fake bomb, even after the undercover agent set off a magnetometer. The screener reportedly let the agent through with the fake bomb taped to his back, having missed it during a pat-down.

The leaders of the Senate Commerce Committee expressed alarm over the findings, warning they could encourage groups like the Islamic State in Iraq and Syria (ISIS) to attempt an attack.

"Terrorist groups like ISIS take notice when TSA fails to intercept 67 out of 70 attempts by undercover investigators to penetrate airport checkpoints with simulated weapons and explosives," Sens. John Thune (R-S.D.) and Bill Nelson (D-Fla.) said in a statement.

"We expect the department to address the results of recent security tests, and what changes it will make to fill security gaps and create a culture of accountability."

The White House sought to contain the damage and reassure airline passengers it is safe to fly.

Press secretary Josh Earnest said President Obama still has confidence in the TSA, which was created to prevent the security breaches that allowed al Qaeda to take down four American airliners on Sept. 11, 2001.

“The American public should feel confident traveling in airports across the country,” he said.

Earnest said the report raised “specific concerns” about security procedures, and he expects the agency to adopt recommendations on retraining employees and retesting screening equipment.

He also sought to cast blame on the Senate, arguing lawmakers had acted too slowly on the nomination of Coast Guard Vice Adm. Peter Neffenger to be TSA director.

“We would like to see Congress act more quickly to confirm him and allow him to get on the job,” Earnest said, noting that the upper chamber had held just one hearing on Neffenger’s nomination since Obama picked him in April.

Republicans rejected any connection, noting that the president took six months to nominate a new TSA director. They also said Neffenger has not yet responded to some written inquiries from members of the Commerce Committee, which is vetting his nomination.

“I understand the White House is raising some concerns about the lack of a confirmed TSA administrator. But folks, the White House is the cause of the delay,” Don Stewart, spokesman for Senate Majority Leader Mitch McConnell (R-Ky.), said in an email.

zerodays – losers lose – fight plan

Obama will fight to maintain zero days as long as the NSA needs them

Zetter 14, an award-winning, senior staff reporter at Wired covering cybercrime, privacy, and security, writing a book about Stuxnet, a digital weapon that was designed to sabotage Iran's nuclear program, (Kim, 4/15/14, Obama: NSA Must Reveal Bugs Like Heartbleed, Unless They Help the NSA, Wired, <http://www.wired.com/2014/04/obama-zero-day/>)/kap

AFTER YEARS OF studied silence on the government's secret and controversial use of security vulnerabilities, the White House has finally acknowledged that the NSA and other agencies exploit some of the software holes they uncover, rather than disclose them to vendors to be fixed.

The acknowledgement comes in a news report indicating that President Obama decided in January that from now on any time the NSA discovers a major flaw in software, it must disclose the vulnerability to vendors and others so that it can be patched, according to the New York Times.

But Obama included a major loophole in his decision, which falls far short of recommendations made by a presidential review board last December: According to Obama, any flaws that have "a clear national security or law enforcement" use can be kept secret and exploited.

This, of course, gives the government wide latitude to remain silent on critical flaws like the recent Heartbleed vulnerability if the NSA, FBI, or other government agencies can justify their exploitation.

A so-called zero-day vulnerability is one that's unknown to the software vendor and for which no patch therefore exists. The U.S. has long wielded zero-day exploits for espionage and sabotage purposes, but has never publicly stated its policy on their use. Stuxnet, a digital weapon used by the U.S. and Israel to attack Iran's uranium enrichment program, used five zero-day exploits to spread.

Last December, the President's Review Group on Intelligence and Communications Technologies declared that only in rare instances should the U.S. government authorize the use of zero-day exploits for "high priority intelligence collection." The review board, which was convened in response to reports of widespread NSA surveillance revealed in the Edward Snowden documents, also said that decisions about the use of zero-day attacks should only be made "following senior, interagency review involving all appropriate departments."

"In almost all instances, for widely used code, it is in the national interest to eliminate software vulnerabilities rather than to use them for US intelligence collection," the review board wrote in its lengthy report (.pdf). "Eliminating the vulnerabilities — 'patching' them — strengthens the security of US Government, critical infrastructure, and other computer systems."

When the government does decide to use a zero-day hole for national security purposes, they noted, that decision should have an expiration date.

“We recommend that, when an urgent and significant national security priority can be addressed by the use of a Zero Day, an agency of the US Government may be authorized to use temporarily a Zero Day instead of immediately fixing the underlying vulnerability,” they wrote. “Before approving use of the Zero Day rather than patching a vulnerability, there should be a senior-level, interagency approval process that employs a risk management approach.”

But Obama appeared to ignore these recommendations when the report was released. A month later, when he announced a list of reforms based on the review board’s report, the issue of zero days went unaddressed.

Last week, however, after the Heartbleed vulnerability was exposed, and questions arose about whether the NSA had known about the vulnerability and kept silent about it, the White House and NSA emphatically denied that the spy agency had known about the flaw or exploited it before this year.

Following a now-disputed report from Bloomberg that the NSA had been exploiting the Heartbleed flaw for two years, the Office of the Director of National Intelligence issued a statement denying that the NSA had known about the vulnerability before it was publicly disclosed.

“If the Federal government, including the intelligence community, had discovered this vulnerability prior to last week, it would have been disclosed to the community responsible for OpenSSL,” the statement said.

Intelligence authorities also revealed that in response to the presidential review board’s recommendations in December, the White House had recently reviewed and “reinvigorated an interagency process for deciding when to share” information about zero day vulnerabilities with vendors and others so that the security holes could be patched.

“When Federal agencies discover a new vulnerability in commercial and open source software ... it is in the national interest to responsibly disclose the vulnerability rather than to hold it for an investigative or intelligence purpose,” the statement said.

The government process for deciding on whether or not to use a zero-day exploit is called the Vulnerabilities Equities Process, and the statement said that unless there is “a clear national security or law enforcement need,” the equities process is now “biased toward responsibly disclosing such vulnerabilities.”

This implies, of course, that the bias was aimed in favor of something else until now.

“If this is a change in policy, it kind of explicitly confirms that beforehand that was not the policy,” says Jason Healey, director of the Cyber Statecraft Initiative at the Atlantic Council and a former officer in the Air Force’s cyber division.

The government’s use of zero-day exploits has exploded over the last decade, feeding a lucrative market for defense contractors and others who uncover critical flaws in the software used in cell phones, computers, routers, and industrial control systems and sell information about these vulnerabilities to the government.

But the government's use of zero days for exploitation purposes has long contradicted Obama's stated policy claims that the security of the internet is a high priority for his administration.

The NSA's offense-oriented operations in the digital realm would also seem to directly oppose the agency's own mission in the defensive realm. While the NSA's Tailored Access Operations division is busy using zero days to hack into systems, the spy agency's Information Assurance Directorate is supposed to secure military and national security systems, which are vulnerable to the same kinds of attacks the NSA conducts against foreign systems. The NSA is also supposed to assist the DHS in helping to secure critical infrastructures in the private sector, a duty that is compromised if the NSA is keeping silent about vulnerabilities in industrial control systems and other critical systems in order to exploit them.

The government has used its equities process to analyze its use of zero-day exploits for the better part of a decade. That process is patterned after the approach used by the military and intelligence community in times of war to decide when information gleaned through intelligence should be exploited for military gain or kept secret to preserve intelligence capabilities.

The equities process for zero days has until now largely been focused on critical infrastructure systems — for example, the industrial control systems that manage power plants, water systems, electric grids — with the aim of giving government agencies the opportunity to state when disclosing a vulnerability to the vendor might interfere with their own ability to exploit the vulnerability. When vulnerabilities have been found in more general computing systems that could have an impact on U.S. military and other critical government systems, sources say the government has engaged in a form of limited disclosure — working on ways to mitigate the risk to critical government systems while still keeping the vulnerability secret so that it can be exploited in enemy systems.

2nc – pc key

Obama's political capital is a crucial variable to ensure passage

French and Bresnahan 7/27/15 – congressional reporters for Politico (Lauren and John, House Democrats Whip for Iran Deal, Politico, <http://www.politico.com/story/2015/07/house-democrats-whip-iran-deal-120642.html>)/JJ

Three days before world leaders formally unveiled an interim deal in early 2014 to slow the growth of Iran's nuclear program, two House Democrats quietly met to start discussing how they could sell a final accord — if it ever came to fruition — to a skeptical Congress.

It was Jan. 9, 2014, and Texas Rep. Lloyd Doggett and North Carolina Rep. David Price knew that without a sustained campaign from allies in Congress, it would be tough for President Barack Obama to persuade lawmakers to support the agreement over the strong objections of pro-Israel groups like the American Israel Public Affairs Committee.

“We knew we really needed to get a message going that was strongly in favor of diplomacy,” Doggett said. “And now we are in the position to go back to folks and ask what areas they have questions about. The only alternative is war.”

The deal faces a make-or-break vote this September, when Republicans will move forward with legislation to scuttle the agreement. The GOP is trying to build a veto-proof majority, and both sides, along with Obama himself, are lobbying hard for every vote, with Doggett, Price and about a half-dozen other Democrats quarterbacking the effort to keep Obama's legacy-defining diplomatic achievement afloat in the House

Since that early meeting, their campaign has developed into a more organized and formal whip operation. Instead of meeting in Price or Doggett's offices or on the House floor, the campaign to sway House Democrats to support the controversial Iran nuclear deal is now housed in the Capitol offices of Minority Leader Nancy Pelosi.

Price and Doggett have marshaled a broad array of support in the caucus, from moderates like themselves to liberals in the whip team — all the way up to Pelosi herself, who announced her strong support for the accord shortly after it was announced on July 14.

“A nuclear Iran is unacceptable to the United States, to the world and, in particular, to Israel,” the California Democrat said then.

Pelosi joins an interesting collection of advocates. Doggett and Price are far more moderate than the whip operation's other leaders. Other deal backers, such as Reps. Barbara Lee of California, Jan Schakowsky of Illinois, Peter Welch of Vermont and Keith Ellison of Minnesota, are some of Congress' most liberal members.

Buoyed by personal lobbying from Obama, members and Democratic staff say they already have the votes necessary to sustain a veto from Obama if Republicans, as expected, advance legislation to disapprove of the agreement. Obama would need close to 145 Democrats to back the deal if that happens, and senior aides have pointed to the 152 Democrats who signed an

early 2015 Price-Doggett-Schakowsky letter supporting the framework of the agreement as evidence they can back the president.

But with anti-deal groups like AIPAC pouring \$20 million to \$40 million into TV advertisements blasting the deal, Democratic lawmakers said in interviews they weren't taking any chances. Shortly after Obama announced during a 7 a.m. White House news conference that negotiators in Vienna had sealed a deal, the half-dozen lead supporters in Congress touched base about re-engaging Democrats who had signed onto the letter sent earlier this year.

"We're having regular meetings and trying to find out what [lawmakers'] concerns are. Most of the members right now are going through the due diligence phase, so part of the whip operation is basically finding out what's on their mind and how can we get the information to you that you need to come to a conclusion," Welch said. "There has been a coordinated approach with the White House, and it's created a real infrastructure of common effort as we come down to the crunch."

He said Obama's chief of staff, Denis McDonough, is the group's main point of contact with the White House.

Over the August recess, there is talk of holding conference calls with members who are still weighing whether to support the deal. Those calls would connect deal experts or the lead negotiators of the accord — Secretary of State John Kerry and Energy Secretary Ernest Moniz — with any members who still have outstanding questions.

The whips are also working with pro-deal groups like J Street — a liberal pro-Israel organization — to help counter the money and energy AIPAC and anti-agreement groups are aiming at swing districts. J Street is planning to spend far less money — just over \$1 million — than AIPAC, but Schakowsky said grass-roots support could counterbalance the cash disparity.

Since the deal was announced, Pelosi has taken the reins on outreach to members — an effort the other pro-deal leaders described as critically important to bringing members on board. Meanwhile, Kerry gave a closed-door presentation to House Democrats on Thursday, and more briefings are expected from Obama administration officials before lawmakers leave on their five-week August recess on Thursday.

State Department official Wendy Sherman — who led negotiations with Tehran for the U.S. — will brief the Democratic and Republican leadership teams on Wednesday. That classified meeting will include the committee chairs and ranking members of the House's national security committees.

The whips are also working members over with a blunt political message: Come out in support now and save yourself from a painful August.

"We're getting a lot of positive responses where it's clear that people want to be supportive, especially as they focus on the question of what's the alternative," Welch said. "People are taking it quite seriously. This is an extremely momentous decision that the Congress is going to make."

Any on-the-fence Democrat should expect AIPAC and its coalition of pro-Israel groups to use the August break to their advantage. Beyond the television and Internet ads, the group will capitalize on its national network of allies to apply consistent pressure on lawmakers to vote against the nuclear agreement.

But Schakowsky is arguing that anti-deal groups will ignore members who've gone on the record in support and will focus their efforts on trying to sway undecided lawmakers. Still, besides the whip team, few members have come out strongly in support of the deal.

"My sense is that our members are really working to get to yes. I feel more optimistic every day that we'll have enough votes to override the veto if that is necessary," the Illinois Democrat said. "We're encouraging members who have made a decision to put out a statement. We are encouraging members to decide early to in some ways spare themselves a very aggressive summer."

Obama's personal outreach may be helping as well. A group of freshmen members who met with the president during a 90-minute briefing last week in the Situation Room said he is more engaged with the grueling work of lobbying than they've ever seen him. It's clear that the president, the lawmakers said, deeply understands the details of the accord and is making the argument that this is the best deal for the U.S.

The president also warned the freshman lawmakers he met with last week — none of whom have committed to supporting the deal — that the White House would be closely watching their votes and no Democrat would get a pass for voting against it.

PC is key – it's all on Obama

Carney 7/22 – The Hill (Jordain, "Senate GOP launches preemptive strike against Iran pitch", The Hill, 7/22/15, <http://thehill.com/blogs/floor-action/senate/248807-senate-gop-launches-preemptive-strike-against-iran-pitch>, accessed 7/23/15)//RZ

Senate Republicans took a preemptive strike Wednesday against the Iran nuclear deal, as top administration officials prepare to storm the Capitol to sell the agreement.

Senate Majority Leader Mitch McConnell (R-Ky.) said that the Obama administration has the "burden of proof" to convince lawmakers and the American people that they should support the deal.

"The onus is on the administration to explain why a deal like this is a good one for our country," he added.

McConnell and a handful of other Senate Republicans lined up the floor Wednesday to voice their concerns about the agreement.

The comments come as Secretary of State John Kerry, Treasury Secretary Jacob Lew and Energy Secretary Ernest Moniz are expected to meet with lawmakers on Wednesday, as well as testify before the Foreign Relations Committee on Thursday.

Obama is personally lobbying and that is key

Hattem 7/27/15 – congressional reporter for The Hill (Julian, Dem poll finds broad support for Iran deal, The Hill, <http://thehill.com/policy/national-security/249244-poll-commissioned-by-dems-finds-broad-support-for-iran-deal>)//JJ

The poll was commissioned by Americans United for Change, a liberal organization.

It comes in the beginning stages of a heated lobbying blitz on Capitol Hill, where Democrats will be split between their allegiances to the White House and skepticism from critics of the deal, such as Israel.

In September, Congress will vote to block the deal, and Democrats will need to serve as a buffer against Republican opposition, which appears united. The White House has launched an aggressive campaign to sway on-the-fence Democrats, which has included personal outreach from President Obama on down.

The poll released on Monday found that 54 percent of voters support the deal, and 38 percent oppose it. However, 75 percent of Democrats say they back the deal, according to the PPP, while 54 percent of Republicans oppose it.

Among Democrats, 79 percent of voters say that a lawmaker's vote in support of the deal would not make them any less likely to support them in the future.

The survey polled 730 registered voters last week and has a margin of error of 3.6 percent.

Political capital is key to democratic support – support is increasing now

Ballhaus 7/23/15 – political and campaign finance reporter for the WSJ (Rebecca, Capital Journal Daybreak: Uptick in Support for Iran Deal, More, Washington Wire, The Wall Street Journal, <http://blogs.wsj.com/washwire/2015/07/23/capital-journal-uptick-in-democratic-support-for-iran-deal-what-attendees-at-private-clinton-events-got-for-their-money-why-iowans-like-donald-trump-congress-eyes-oil-sales-for-highway-funding/#1>)//JJ

UPTICK IN DEMOCRATIC SUPPORT FOR IRAN DEAL: The White House's efforts to sell Congress on its nuclear accord with Iran produced a small uptick in support from the administration's allies this week, though many of the Democrats key to the deal's future remained on the fence. One week after six global powers reached an agreement with Iran imposing strict limits on its nuclear program in exchange for sanctions relief, a trickle of Democratic support began to emerge for the pact in a counterweight to widespread GOP opposition.

Sen. Dick Durbin of Illinois, a member of Democratic leadership, gave the first Senate floor speech backing the accord Tuesday evening. On Wednesday, Sen. Chris Murphy (D., Conn.) advocated for a diplomatic solution in a speech at the Carnegie Endowment for International Peace, though he stopped short of saying he would vote for the deal. The nascent Democratic support came from lawmakers considered likely to back the administration's diplomatic efforts. The White House has yet to win over bellwethers in the debate, most notably Sen. Charles

Schumer of New York, who is poised to become the next Senate Democratic leader. Until recently, most Democrats had remained neutral, saying they needed time to review the details. Republicans meanwhile, immediately criticized the deal, saying it wouldn't prevent Iran from building a nuclear weapon, among other concerns. Kristina Peterson and Carol E. Lee report.

Plus: For months, Saudi Arabia and Israel have both criticized the Obama administration's nuclear talks with Iran. Now that a deal has been reached, however, the U.S. is portraying the Saudis as more accepting of the agreement.

PC key – deciding factor for undecided votes

Zengerle and Ali 7/23/15 – Reuters (Patricia and Idrees, Obama administration takes Iran nuclear deal fight public, Reuters, uk.reuters.com/article/2015/07/23/uk-iran-nuclear-congress-idUKKCN0PX0CB20150723//JJ)

U.S. lawmakers skeptical about the nuclear deal with Iran promised to press senior Obama administration officials to make more information about it public at a Senate hearing on Thursday as Congress begins its two-month review of the agreement.

Secretary of State John Kerry, Treasury Secretary Jack Lew and Energy Secretary Ernest Moniz will testify before the Senate Foreign Relations Committee, the first such public appearance by the cabinet officials since the deal was announced on July 14.

They briefed the entire Senate and House of Representatives in separate closed-door sessions on Wednesday, and administration officials have held a series of private telephone conversations and meetings with lawmakers.

Among other issues, lawmakers said they wanted more information about the timing of sanctions relief and ability to "snap back" sanctions if Iran cheats, clarity on the timing of inspections and more answers about how much money would go to Iran.

"We have leverage, but in nine months, they'll have their cash and all the sanctions will be relieved. People will be in there signing contracts, and then the leverage sort of shifts to them," said Senator Bob Corker, the Republican chairman of the Foreign Relations Committee.

Corker has said he is skeptical about the agreement, but would wait until he knows more before deciding whether to vote against the deal.

Ben Cardin, the top Democrat on the panel, said the closed-door briefing had been useful but questions remained. "There are many areas of concern that we want to get clarified," he said.

Cardin is one of many Democrats who have not yet decided how they would vote on the deal.

Under a bill President Barack Obama signed into law in May, Congress has until Sept. 17 to approve or reject the agreement, in which Iran agreed to rein in its nuclear program in exchange for sanctions relief.

With many Republicans lining up to oppose it, Obama needs to convince as many of his fellow Democrats as possible to back the deal. If a disapproval resolution passes Congress and survives

a veto, Obama would be unable to waive most of the U.S. sanctions imposed on Iran, which could cripple the nuclear pact.

Obama's pc works on Iran – key to passage

Siddiqui 7/22/15 – political reporter for Guardian, former congressional reporter for the Huffington Post (Sabrina, Obama team attempts to persuade US lawmakers to endorse Iran nuclear deal, The Guardian, <http://www.theguardian.com/world/2015/jul/23/obama-team-attempts-to-persuade-us-lawmakers-to-endorse-iran-nuclear-deal>)/JJ

Barack Obama's administration has taken its Iran sales pitch to Capitol Hill, where secretary of state John Kerry, energy secretary Ernest Moniz and treasury secretary Jack Lew sought to persuade skeptical US lawmakers that a nuclear accord agreed to by Tehran and six world powers was the best possible outcome after nearly two years of negotiations.

But there was little indication on Wednesday that the classified briefings had led to any immediate breakthroughs, with most Republicans remaining steadfast in their opposition to the deal and Democrats yet to make up their minds.

Lawmakers who attended the meetings continued to express concerns over the implementation of the agreement – chief among them whether or not Iran would be compliant with its terms – even as they described a projection of absolute confidence on the part of the Obama administration during the discussions.

“Obviously the administration folks are very adamant about what a great deal it is. They're putting on a heavy sales job as one would expect,” Texas representative Mac Thornberry, the Republican who chairs the House armed services committee, told reporters upon leaving one of the briefings. “I think it's fair to say there is bipartisan skepticism about whether Iran will meet its commitments under this deal, about whether the administration will hold them to it, and about what happens with all of Iran's other activities that concern us so much.”

Kerry, Moniz and Lew first briefed the House of Representatives and held a similar meeting with members of the Senate. Both sessions took place behind closed doors. The three cabinet members are also scheduled to testify at a hearing before the Senate foreign relations committee on Thursday, as the White House seeks to make its case for the US Congress to approve the deal.

Maryland Senator Ben Cardin, the top Democrat on the Senate foreign relations committee, said Wednesday's briefings were “extremely helpful” for lawmakers to gain more understanding of what was agreed to in Vienna last week. He also cautioned against making sweeping assumptions about the fate of the deal in Congress this early in the process.

“Today is day three of a 60-day review period,” Cardin said. “Each day we're learning more and we'll use the time we need in order to make the right decision.”

Under an agreement reached in May, Congress has 60 days to review the 159-page agreement. After that point both the House and Senate will vote on a resolution that records either their

approval or disapproval of the deal – although a two-thirds majority is needed in both chambers to override a presidential veto.

Obama has already pledged to veto any efforts to scuttle the deal and warned of grave consequences if the US does not hold up its end of the bargain. Support from Democrats will be critical for the president to maintain his veto power, with Republicans controlling both chambers of Congress and almost uniformly against the deal from the outset.

Representative Jim Himes, a Democrat from Connecticut and member of the House permanent select committee on intelligence, said the three secretaries “gave a very, very strong defense of the deal” and asked critics to look beyond simply analyzing the deal within and of itself.

“In other words, you can always dream of a better deal. But look at where we were when Iran was a nuclear threshold state before this negotiation began, and consider where the deal puts you in contrast to where we were,” Himes said after the House meeting.

Although Himes said he was still in the process of weighing the deal, he appeared to side with the administration’s rationale and put the onus on skeptics to justify their opposition.

“From my standpoint, the burden of proof given what I’ve learned so far, is on the opponents to explain why this is really a bad deal relative to where we were and why this is a bad deal relative to where we will be if the United States unilaterally walks away from it,” he said.

During the briefings, lawmakers asked wide-ranging questions of the cabinet officials, according to those in attendance. Among the issues raised were the lifting of an arms embargo, Iran’s funding of terrorism and detainment of US hostages, and whether it could be adequately verified that Iran is meeting its obligations.

Under the parameters of the deal, Iranians must eliminate 98% of their uranium stockpile and remove two-thirds of their uranium enriching centrifuges. That process, including verification of Iran’s compliance by the International Atomic Energy Agency, is expected to take six to nine months.

Kerry has repeatedly emphasized that the nuclear agreement is based on a robust verification process.

“Nothing in this agreement, nothing at all, is based on trust,” Kerry said on Sunday during an appearance on NBC’s Meet the Press. “The entire agreement is based on verification, accountability and steps we can take to respond to any violation by Iran.”

A number of Democrats on Wednesday pointed to those assurances as key to winning over their support.

“My lingering questions are really just about making sure that the inspections are as rigorous as the administration purports them to be,” Senator Chris Murphy, a Democrat from Connecticut, told reporters. “If the reality matches up with the administration’s claims, then I’ll be a supporter of the deal.”

Murphy, who also sits on the foreign relations committee, added that he expects to reach a decision in the coming weeks.

His colleague Richard Blumenthal, also a Democrat from Connecticut, shared a similar benchmark.

“My criteria for this agreement were that it be comprehensive, airtight, enduring and maybe most important, verifiable, because I think enforceability is absolutely key,” Blumenthal said. “Those criteria continue to be uppermost in my mind. I need to be sure that they have been met.”

Polling has reflected a skepticism on the part of the American people that the deal can be enforced. One poll found that while a slim majority –56% – supports the agreement, an even larger majority of 64% don’t trust Iran to abide by it. Another survey found that among the 79% of Americans who have heard about the deal, just 38% approve while 48% disapprove.

The Obama administration remains confident that history is on its side – a point they underscored, in no uncertain terms, to members of Congress on Wednesday.

“They were matter of fact, very, very sure,” Representative Brad Sherman, a Democrat from California, said. “They weren’t there to say they think they won the game 5 to 4. They were there to say they had done a spectacular job.”

2nc – political momentum key (for losers-lose link)

Obama's political current momentum is allowing him to kneecap congress

Lowry 7/24/15 – writer for the King Features Syndicate (Rich, Obama kneecaps Congress on Iran agreement, Sentinel Source, http://www.sentinelsource.com/opinion/columnists/guest/obama-kneecaps-congress-on-iran-agreement/article_7c9ed5cc-e9a0-516a-b496-d80fdba3cf3c.html)/JJ

If only President Barack Obama were as hard-nosed and clever in undermining our adversaries as he is in kneecapping the U.S. Congress, the country's strategic position might be transformed.

The Iran deal went to the United Nations Security Council for approval Monday, months before Congress will vote on it, and got unanimous approval. The U.N. vote doesn't bind Congress, but it boxes it in and minimizes it — with malice aforethought.

Republicans and Democrats in Congress issued sharply worded statements about getting preempted by Turtle Bay, although the vast international machinery that has been set in motion won't be deflected by a few sharp words from people under the misapprehension that they occupy a coequal branch of the American government. What are congressional hearings and the U.S. domestic political debate compared with the "international community"?

Shortly after the U.N. vote, President Obama urged Congress to get with the program: "There is broad international consensus around this issue," he said, adding that his "assumption is that Congress will pay attention to that broad-based consensus." In other words, follow the lead of the United Nations on a matter of utmost importance to the national interest of the United States.

Secretary of State John Kerry issued his own warning over the weekend about the dangers of going our own way: "If Congress says 'no' to this deal, then there will be no restraints on Iran. There will be no sanctions left. Our friends in this effort will desert us."

And who's responsible for that? The Obama administration cut a deal eviscerating the international sanctions regime and got it blessed by the U.N., then turns around and tells Congress it has no alternative but to assent because there will be no meaningful sanctions regime left regardless.

The agreement is written to favor business with Iran. It grandfathers in all commercial deals cut after the initial lifting of the sanctions, even in the unlikely event they are reimposed. Plus, Iran isn't going to give back its windfall of tens of billions of dollars handed to it under the agreement.

Kerry over the weekend seemed offended by the notion that Congress should get to vote before everyone else locks the Iran agreement into place: "It is presumptuous of some people to say that France, Russia, China, Germany, Britain ought to do what the Congress tells them to do." This is admirably internationalist, but Kerry is supposed to be the secretary of state of the United States, not a representative of the interests and prerogatives of its allies and adversaries.

The New York Times reports that during the negotiations, Kerry actually pushed to delay a U.N. vote until Congress reviewed the deal. How sporting of him. It must have been vestigial loyalty to the Congress he served in for several decades. Predictably, the Iranians balked (they're not fools), and so did the Russians and the Europeans. Equally predictably, Kerry resorted to his solution to most every knotty negotiating problem — he caved.

Amazingly enough, the agreement with Iran doesn't mention the U.S. Congress or its review of the deal, but specifically cites the Iranian Parliament and its role in approving the so-called additional protocol of the nuclear nonproliferation treaty. At least someone is willing to stick up for Iran's (wholly fraudulent) legislative branch.

It is President Obama's curse that he doesn't have a legislature as compliant as that of Iran's supreme leader. The president clearly disdains Congress as a body that harbors several hundred Republicans and that can only complicate his grand legacy-defining initiatives. He didn't want Congress to have a say at all over the Iran deal, but accepted the Corker bill that requires a near-impossible two-thirds vote to block it.

The administration's message to opponents is that even that supermajority would be too little, too late. Submission is the only option.

****impacts**

2nc – deal solves nukes

Deal solves Iran nuclearization – this answers all of their warrants

Mehta 7/18/15 – senior Pentagon correspondent for Defense News, citing Jeffrey Lewis, director of the East Asia Nonproliferation Program at the James Martin Center for Nonproliferation Studies, and James Acton, co-director of the Nuclear Policy Program and senior associate at the Carnegie Endowment (Aaron, Experts Praise Iran Deal, Despite Congressional Concerns, Defense News, <http://www.defensenews.com/story/defense/policy-budget/2015/07/18/experts-praise-iran-deal-despite-congressional-concerns/30261893/>)/JJ

Substantively, a general consensus quickly emerged following the July 14 unveiling of the agreement that the deal is as close to a best-case situation as reality would allow. Jeffrey Lewis, director of the East Asia Nonproliferation Program at the James Martin Center for Nonproliferation Studies, believes “the deal is excellent compared to where we are today.” “It puts a gap between [Iran’s] ability to build a bomb and actually doing it, and the gap is big enough for us to do something about it if we detect them moving toward a bomb,” Lewis said. “At the highest macro level, I think that’s fantastic.” As to critics who say a better deal should have been reached, Kingston Reif, director for disarmament and threat reduction policy at the Arms Control Association, puts it in simple terms: “A perfect deal was not attainable. “Overall, it’s a very strong and good deal, but it wasn’t negotiations that resulted in a score of 100-0 for the US,” Reif said. “That’s not how international negotiations go.” Added James Acton, co-director of the Nuclear Policy Program and senior associate at the Carnegie Endowment: “You can’t compare this to a perfect deal, which was never attainable.” Speaking July 15, Obama called the agreement “the most vigorous inspection and verification regime by far that has ever been negotiated,” something Reif agreed with fully. “The monitoring and verification regime in this deal is the most comprehensive and intrusive regime that has ever been negotiated,” Reif said. “But there is no country which would grant [total open access to all its territory], and there has never been a settlement where that has happened.” Jon Wolfsthal, senior director for arms control and nonproliferation at the US National Security Council, echoed the president by insisting that the treaty is “a very good deal that not only met, but exceeded” parameters laid out in the interim Lausanne accord from November 2013. “Limitations imposed through this agreement are for the long term. There is no sunset clause here. Limitations are permanent and we have the ability to enforce them,” he told a July 15 gathering of the Atlantic Council in Washington. An overriding concern with any Iranian nuclear deal, identified by all interviewed for this story, is the possibility of them starting up a covert nuclear program, one which inspectors possibly could miss. In theory, Tehran could keep inspectors focused on the known nuclear sites while developing weapons elsewhere. And under the treaty, Iran can deny access to inspectors of any non-negotiated site for up to 24 days, raising concerns from some that an Iranian nuclear program could be moved frequently and kept underground. If Iran refuses to allow inspectors to look at a site after 24 days, the US and its partners can reinstate the sanctions being lifted. Given past Iranian behavior and attempts to conceal key aspects of its nuclear program, Wolfsthal said US negotiators and other world powers crafted the agreement on the assumption that Tehran would try to cheat. “Our expectation is that Iran will implement the agreement, but the verification mechanism is structured to assume otherwise,” Wolfsthal

said. Obama hit back at the idea that the Iranians could develop and produce nuclear weapons without inspectors being aware of the issue, noting that inspectors will be keeping a close eye on the potential streams of nuclear material and have 24/7 access to known sites. “The nature of nuclear programs and facilities is such, this is not something you hide in a closet. This is not something you put on a dolly and kind of wheel off somewhere,” Obama said. “And, by the way, if we identify an undeclared site that we’re suspicious about, we’re going to be keeping eyes on it.” Wolfsthal noted that compared with previous agreements with North Korea, Iraq and the Moscow Treaty of 2002, which numbered a handful of pages, the treaty is meticulously detailed and annexed. “We assume they will try to cheat. But this agreement is more than 100 pages long; it’s like no nonproliferation agreement that’s ever been signed. It will prevent them from cheating.” Acton agreed the document is crafted to address such concerns, noting that “it is impossible” to hide evidence of a nuclear program within that 24-day time period. “If Iran wants a secret program, they have to procure yellow cake and centrifuge components,” Acton said. “It now can’t do that from existing facilities because they will be monitored. So then it will have to build more facilities or acquire it on the black market — creating opportunities for detection.” Joe Cirincione, president of the Washington-based Plowshares Fund, added Iran has very little, if any, room for error to hide a secret attempt at a nuclear program. “The claims about the inspection regime are particularly ridiculous to anyone who knows anything about inspecting nuclear programs. If Iran were to flush the evidence down the toilet, they’d have a radioactive toilet. And if they were to rip out the toilet, they’d have a radioactive hole in the ground. They simply won’t be able to cheat,” he said. “There is no silver bullet,” to preventing a secret Iranian program, Acton noted. “There is nothing else that could be included in this agreement that solves the problem. What it does contain is a series of provisions that significantly mitigate the chance.” In other words, while a black program may be hypothetical, it is logistically very, very difficult. And Iran was never going to allow inspectors 24/7 access to its entire territory, so the system put in place here helps create roadblocks to a secret program being spun up, Reif said. According to Wolfsthal, Washington aims to expand the funding, technological expertise and personnel it contributes to the IAEA to ensure “24/7 monitoring. “We’re providing satellite coverage, live camera feeds, radio identification, tamper seals. ... We will know whatever goes on in those facilities,” he said. Barbara Slavin, senior fellow of the Atlantic Council’s South Asia Center and host of the July 15 event, noted that Iran has abided by previous commitments put forth in the interim agreement and believes the public focus of its people will help keep the agreement on track. “This is a nation that, despite the rhetoric of its leaders, is influenced by its public.” Slavin, who has made repeated visits to Tehran, added the Iranian people aspire to turn a new page with regard to their place in the world. Congressional Challenge Ahead? Cirincione said the debate surrounding the deal needs to be broken down into three parts. “On its nuclear merits, the expert community is overwhelmingly in favor of this deal. There is not a serious debate on whether it blocks Iran from the bomb; it does,” he said.

Deal makes it impossible for Iran to covertly engage in nuclear activity

Devaney 7/19, staff writer at The Hill, (Tim, 7/19/15, Obama aide: 'Virtually impossible' for Iran to hide nuclear activity, The Hill, [//kap">http://thehill.com/policy/international/248444-energy-secretary-virtually-impossible-for-iran-to-hide-nuclear-activity\)//kap](http://thehill.com/policy/international/248444-energy-secretary-virtually-impossible-for-iran-to-hide-nuclear-activity)

One of the Obama administration's top negotiators is defending the controversial Iranian nuclear agreement from critics who say it does not go far enough to protect the West.

Under the agreement, it will be "virtually impossible" for Iran to cover up nuclear activity, Energy Secretary Ernest Moniz says.

"We are better off forever in terms of Iranian nuclear activity under this agreement than we would be without it," Moniz told "Fox News Sunday."

Moniz made the rounds on the Sunday morning political talk shows.

Critics have suggested the nuclear agreement gives Iran too much leeway to secretly build a weapon. One of the chief concerns is that investigators could be forced to wait 24 days before inspecting covert sites suspected of nuclear activity. Some fear this will give Iran enough time to hide any traces of such activity.

"You wouldn't tell a drug dealers, give them a 24-day notice," Israeli Prime Minister Benjamin Netanyahu, one of the deal's biggest critics, said. "They'd just flush the drugs down the toilet."

But Moniz said three weeks is a "reasonable" amount of time to inspect for nuclear activity.

Flushing things down the toilet "is not so simple with nuclear materials," he told ABC's "This Week." "We are very confident in our ability to detect the vestiges of any nuclear work beyond 24 days."

Eventually, inspectors would collect environmental samples.

"When environmental samples are taken and nuclear activity has taken place, it is virtually impossible to clean up that place," Moniz said on "Fox News Sunday." "You can paint the floors, you can do what you want. We feel very confident that we would find evidence of nuclear activity."

The key for western negotiators was "getting a defined timeframe" so Iran couldn't hold inspectors out for more than 24 days, Moniz said on CBS's "Face the Nation."

"The part of the agreement that is absolutely critical is the one that prevents them from having a weapon," Moniz told CNN's "State of the Union."

"There's a lot more you need for a nuclear explosive and if you look at the agreement you will see an indefinite commitment to not pursuing four major activities needed for a weapon," he added on Fox.

Moniz said the Obama administration is simply trying to clean up a mess left by the Bush administration.

"The issue of Iran having a nuclear program was already established in the previous administration," Moniz said. "Clearly, what we have done is we have dramatically limited and constrained the program."

2nc – laundry list

Deal failure triggers Middle East arms race, Israel strikes, and collapses the NPT – global nuclear war

Stevens 13 – associate editor and chief political commentator for the Financial Times (Philip, The four big truths that are shaping the Iran talks, the Financial Times, 11/14/13
<http://www.ft.com/cms/s/0/af170df6-4d1c-11e3-bf32-00144feabdc0.html>)/JJ

The who-said-what game about last weekend's talks in Geneva has become a distraction. The six-power negotiations with Tehran to curb Iran's nuclear programme may yet succeed or fail. But wrangling between the US and France on the terms of an acceptable deal should not allow the trees to obscure the forest. The organising facts shaping the negotiations have not changed. The first of these is that Tehran's acquisition of a bomb would be more than dangerous for the Middle East and for wider international security. It would most likely set off a nuclear arms race that would see Saudi Arabia, Turkey and Egypt signing up to the nuclear club. The nuclear non-proliferation treaty would be shattered. A future regional conflict could draw Israel into launching a pre-emptive nuclear strike. This is not a region obviously susceptible to cold war disciplines of deterrence. The second ineluctable reality is that Iran has mastered the nuclear cycle. How far it is from building a bomb remains a subject of debate. Different intelligence agencies give different answers. These depend in part on what the spooks actually know and in part on what their political masters want others to hear. The progress of an Iranian warhead programme is one of the known unknowns that have often wreaked havoc in this part of the world. Israel points to an imminent threat. European agencies are more relaxed, suggesting Tehran is still two years or so away from a weapon. Western diplomats broadly agree that Ayatollah Ali Khamenei has not taken a definitive decision to step over the line. What Iran has been seeking is what diplomats call a breakout capability – the capacity to dash to a bomb before the international community could effectively mobilise against it. The third fact – and this one is hard for many to swallow – is that neither a negotiated settlement nor the air strikes long favoured by Benjamin Netanyahu, Israel's prime minister, can offer the rest of the world a watertight insurance policy. It should be possible to construct a deal that acts as a plausible restraint – and extends the timeframe for any breakout – but no amount of restrictions or intrusive monitoring can offer a certain guarantee against Tehran's future intentions. By the same token, bombing Iran's nuclear sites could certainly delay the programme, perhaps for a couple of years. But, assuming that even the hawkish Mr Netanyahu is not proposing permanent war against Iran, air strikes would not end it. You cannot bomb knowledge and technical expertise. To try would be to empower those in Tehran who say the regime will be safe only when, like North Korea, it has a weapon. So when Barack Obama says the US will never allow Iran to get the bomb he is indulging in, albeit understandable, wishful thinking. The best the international community can hope for is that, in return for a relaxation of sanctions, Iran will make a judgment that it is better off sticking with a threshold capability. To put this another way, if Tehran does step back from the nuclear brink it will be because of its own calculation of the balance of advantage. The fourth element in this dynamic is that Iran now has a leadership that, faced with the severe and growing pain inflicted by sanctions, is prepared to talk. There is

nothing to say that Hassan Rouhani, the president, is any less hard-headed than previous Iranian leaders, but he does seem ready to weigh the options.

2nc – prolifer

Deal's key to the overall credibility of the entire nonprolif regime

Jeffrey M. Kaplow 15, Fellow with the University of California's Institute on Global Conflict and Cooperation and a Ph.D. candidate in political science at the University of California, San Diego, 2015, "The Days After a Deal with Iran: Implications for the Nuclear Nonproliferation Regime," http://www.rand.org/content/dam/rand/pubs/perspectives/PE100/PE135/RAND_PE135.pdf

A nuclear **agreement** with Iran would represent a success for the nonproliferation regime in several ways. Most fundamentally, a deal **offers** at least the prospect of a sustainable **resolution of the Iranian nuclear issue**. **It is hard to overstate the importance of this result for the regime as a whole**. The **Iran** nuclear case has been the central preoccupation of U.S. nonproliferation policy—and that of multilateral bodies such as the IAEA Board of Governors—for more than a decade. The unyielding emphasis on Iran has been central to U.S. efforts to mobilize broad support, first for a finding of noncompliance with the NPT, and later for robust international sanctions. But this strategy **has sidelined** discussion of **other important nonproliferation issues, including** efforts to bolster **nuclear security**, promote universal adherence to the Additional Protocol, **and find a solution to** the loophole of **NPT withdrawal**. And it has complicated relations with some states, particularly those that have been active in the Non-Aligned Movement, as the United States exerted pressure on them to support its votes on Iran in the IAEA and the United Nations.⁴ **A deal with Iran could** thus lead to a welcome turning of the page in U.S. nonproliferation efforts. Of course, a deal does not make the Iran nuclear issue go away, but it may help to put it on a more stable and sustainable footing. If Iran's nuclear program is no longer seen as a crisis, it may **allow the United States and like-minded states to act more strategically on other** important **nonproliferation issues**.[¶] A nuclear **agreement** with Iran also **would increase the credibility of the regime as a whole**. A deal sends an important message to the international community: **The nonproliferation regime** may be messy, but it **works**. Some in the nonproliferation community have spent the last several years sounding the alarm about the decline of the regime.⁵ These analysts argue that the continued pursuit of nuclear weapons by state parties to the NPT makes others more likely to violate the regime in the future. Behind this argument is the idea that **dwindling confidence in the ability of the nonproliferation regime to constrain state behavior threatens to undermine** states' **collective commitment** to forswear nuclear weapons—the fundamental agreement underlying the NPT. If a country sees others cheating and getting away with it, that country may feel less secure and thus more likely to cheat as well. By limiting Iranian nuclear ambitions, then, a deal has the potential to eliminate—or at least make less salient—a prominent example of a country that appears to be cheating and getting away with it.[¶] This effect is amplified because there are other states in the region that have felt threatened by an unconstrained Iranian nuclear effort.⁶ A deal will not completely reassure Iran's neighbors, given that their concerns over Iran run much deeper than its nuclear program and even the best deal cannot eliminate the possibility of future noncompliance, but it is possible that a nuclear agreement will calm regional nerves somewhat. If Saudi Arabia, the United Arab Emirates (UAE), and others in the region come to see a diminished threat from Iran as a consequence of a deal, **this** potentially **affects the strength of the regime as a whole**.⁷ The international community may perceive Iran's neighbors as less likely to pursue their own nuclear

weapons programs or adopt nuclear hedging strategies, which makes other countries less likely to consider weapons themselves, and so on.⁸ The ripple effects of this signal extend well beyond Iran's neighbors, to reach potential proliferants globally.

Credible regime prevents global nuclear escalation involving every major power

The Economist 3-7, "The new nuclear age," 2015,

<http://www.economist.com/news/leaders/21645729-quarter-century-after-end-cold-war-world-faces-growing-threat-nuclear>

A quarter of a century after the end of the cold war, the world faces a growing threat of nuclear conflict. Within the next few weeks, after years of stalling and evasion, Iran may at last agree to curb its nuclear programme. In exchange for relief from sanctions it will accept, in principle, that it should allow intrusive inspections and limit how much uranium will cascade through its centrifuges. After 2025 Iran will gradually be allowed to expand its efforts. It insists these are peaceful, but the world is convinced they are designed to produce a nuclear weapon. In a barnstorming speech to America's Congress on March 3rd, Binyamin Netanyahu, Israel's prime minister, fulminated against the prospect of such a deal (see article). Because it is temporary and leaves much of the Iranian programme intact, he said, it merely "paves Iran's path to the bomb". Determined and malevolent, a nuclear Iran would put the world under the shadow of nuclear war. Mr Netanyahu is wrong about the deal. It is the best on offer and much better than no deal at all, which would lead to stalemate, cheating and, eventually, the dash to the very bomb he fears. But he is right to worry about nuclear war—and not just because of Iran. Twenty-five years after the Soviet collapse, the world is entering a new nuclear age. Nuclear strategy has become a cockpit of rogue regimes and regional foes jostling with the five original nuclear-weapons powers (America, Britain, France, China and Russia), whose own dealings are infected by suspicion and rivalry. Thanks in part to Mr Netanyahu's efforts, Iran commands worldwide attention. Unfortunately, the rest of the nuclear-weapons agenda is bedevilled by complacency and neglect. The fallout from Prague After the end of the cold war the world clutched at the idea that nuclear annihilation was off the table. When Barack Obama, speaking in Prague in 2009, backed the aim to rid the world of nuclear weapons, he was treated not as a peacenik but as a statesman. Today his ambition seems a fantasy. Although the world continues to comfort itself with the thought that mutually assured destruction is unlikely, the risk that somebody somewhere will use a nuclear weapon is growing apace. Every nuclear power is spending lavishly to upgrade its atomic arsenal (see article). Russia's defence budget has grown by over 50% since 2007, and fully a third of it is devoted to nuclear weapons: twice the share of, say, France. China, long a nuclear minnow, is adding to its stocks and investing heavily in submarines and mobile missile batteries. Pakistan is amassing dozens of battlefield nukes to make up for its inferiority to India in conventional forces. North Korea is thought to be capable of adding a warhead a year to its stock of around ten, and is working on missiles that can strike the west coast of the United States. Even the Nobel peace laureate in the White House has asked Congress for almost \$350 billion to undertake a decade-long programme of modernisation of America's arsenal. New actors with more versatile weapons have turned nuclear doctrine into guesswork. Even during the cold war, despite all that game theory and brainpower, the Soviet Union and America frequently misread what the other was up to. India and Pakistan, with little experience and less contact, have virtually nothing to guide them in a

crisis but mistrust and paranoia. If weapons proliferate in the Middle East, as Iran and then Saudi Arabia and possibly Egypt join Israel in the ranks of nuclear powers, each will have to manage a bewildering four-dimensional stand-off. ¶ Worst of all is the instability. During much of the cold war the two superpowers, anxious to avoid Armageddon, were willing to tolerate the status quo. Today the ground is shifting under everyone's feet. ¶ Some countries want nuclear weapons to prop up a tottering state. Pakistan insists its weapons are safe, but the outside world cannot shake the fear that they may fall into the hands of Islamist terrorists, or even religious zealots within its own armed forces. When history catches up with North Korea's Kim dynasty, as sooner or later it must, nobody knows what will happen to its nukes—whether they might be inherited, sold, eliminated or, in a last futile gesture, detonated. ¶ Others want nuclear weapons not to freeze the status quo, but to change it. Russia has started to wield nuclear threats as an offensive weapon in its strategy of intimidation. Its military exercises routinely stage dummy nuclear attacks on such capitals as Warsaw and Stockholm. Mr Putin's speeches contain veiled nuclear threats. Dmitry Kiselev, one of the Kremlin's mouthpieces, has declared with relish that Russian nuclear forces could turn America into "radioactive ash". ¶ Just rhetoric, you may say. But the murder of Boris Nemtsov, an opposition leader, on the Kremlin's doorstep on February 27th was only the latest sign that Mr Putin's Russia is heading into the geopolitical badlands (see article). Resentful, nationalistic and violent, it wants to rewrite the Western norms that underpin the status quo. First in Georgia and now in Ukraine, Russia has shown it will escalate to extremes to assert its hold over its neighbours and convince the West that intervention is pointless. Even if Mr Putin is bluffing about nuclear weapons (and there is no reason to think he is), any nationalist leader who comes after him could be even more dangerous. ¶ Towards midnight ¶ China poses a more distant threat, but an unignorable one. Although Sino-American relations hardly look like the cold war, China seems destined to challenge the United States for supremacy in large parts of Asia; its military spending is growing by 10% or more a year. Nuclear expansion is designed to give China a chance to retaliate using a "second strike", should America attempt to destroy its arsenal. Yet the two barely talk about nuclear contingencies—and a crisis over, say, Taiwan could escalate alarmingly. In addition Japan, seeing China's conventional military strength, may feel it can no longer rely on America for protection. If so, Japan and South Korea could go for the bomb—creating, with North Korea, another petrifying regional stand-off. ¶ What to do? The most urgent need is to revitalise nuclear diplomacy. One priority is to defend the nuclear Non-Proliferation Treaty, which slows the spread of weapons by reassuring countries that their neighbours are not developing nukes. It was essential that Iran stayed in the treaty (unlike North Korea, which left). The danger is that, like Iran, signatories will see enrichment and reprocessing as preparation for a bomb of their own—leading their neighbours to enrich in turn. That calls for a collective effort to discourage enrichment and reprocessing, and for America to shore up its allies' confidence. ¶ You don't have to like the other side to get things done. Arms control became a vital part of Soviet-American relations. So it could between China and America, and between America and Putin's Russia. Foes such as India and Pakistan can foster stability simply by talking. The worst time to get to know your adversary is during a stand-off. ¶ In 1960 Albert Wohlstetter, an American nuclear strategist, wrote that, "We must contemplate some extremely unpleasant possibilities, just because we want to avoid them." So too today, the essential first step in confronting the growing nuclear threat is to stare it full in the face.

2nc – heg

Deal is critical to U.S. global leadership

Leverett, 7/13/15 --- professor of International Affairs at Penn State, served for over a decade in the U.S. government as a senior analyst at the CIA, Middle East specialist for the State Department, and as senior director for Middle East affairs at the National Security Council (Larry, “With Historic Iran Nuclear Deal Expected, Can President Obama Sell It to Congress and the Public?” http://www.democracynow.org/2015/7/13/as_historic_iran_nuclear_deal_nears, JMP)

AMY GOODMAN: Speaking on Fox News Sunday, Senate Majority Leader Mitch McConnell suggested the Obama administration will have a difficult time convincing Congress to approve a deal with Iran.

MAJORITY LEADER MITCH McCONNELL: Well, look, we already know that it’s going to leave Iran as a threshold nuclear state. We know that. It appears as if the administration’s approach to this was to reach whatever agreement the Iranians are willing to enter into. So I think it’s going to be a very hard sell, if it’s completed, in Congress.

AMY GOODMAN: The Republican majority is expected to vote against the deal and to try to convince at least 12 Democrats to join their ranks in an attempt to defeat a presidential veto. Flynt Leverett, explain what has to happen in the United States for the U.S. to approve this. What is the voting that will take place?

FLYNT LEVERETT: Yes. Both houses of Congress will have 60 days to review the agreement once it’s finalized. I think it is quite possible, if not likely, that a simple majority of members in each house will vote a so-called resolution of disapproval in regard to the agreement. At that point, President Obama has said that he would veto those resolutions of disapproval. And at this point, the White House seems pretty confident that they have the votes, at least in the Senate, and perhaps in the House, as well, to sustain President Obama’s veto. So, they are confident that if you can get to an agreement here in Vienna, that it will ultimately get through the congressional review process and will go into effect.

But obviously, during the next—you know, the 60 days following a conclusion of an agreement, the Israelis, the Saudis, their friends and allies in the American political system, others who don’t want to see this agreement go forward are going to be working very hard, trying to turn public opinion against the deal and trying to build congressional support to maximize the vote against the deal.

Public opinion polls would show that Americans are open to supporting this deal, but one of the things I really worry about is that President Obama himself has not really made the strategic case for why doing this deal and for why building a different kind of relationship with Iran is so strongly in America’s interest. He either talks about this as a kind of narrow arms control agreement, but Iran is still this very bad actor, or he talks about it in terms of it being an opportunity for Iran to rejoin the international community, as he puts it. This is not the way to sell this deal to Americans. Americans understand that what the United States has been doing in

the Middle East for the last decade and a half has actually been profoundly against American interests. It's also been very damaging to Middle Easterners. But it has been profoundly damaging to America's position in this critical part of the world and globally. President Obama has a chance here to begin to turn that around and put U.S. policy toward the Middle East on a more different and more productive trajectory, but he is going to have to make the strategic case—

AMY GOODMAN: Flynt Leverett, we're going to have to—

FLYNT LEVERETT: —spend the political capital necessary to make the strategic case.

AMY GOODMAN: We're going to have to leave it there, but we'll continue to follow this, of course.

The Iran deal is key to U.S. legitimacy

Dabashi 7/22 – Hagop Kevorkian Professor of Iranian Studies and Comparative Literature at Columbia University (Hamid, "The Iran nuclear deal and the Obama Doctrine", Aljazeera, 7/22/15, <http://www.aljazeera.com/indepth/opinion/2015/07/iran-nuclear-deal-obama-doctrine-150721104156981.html>, accessed 7/23/15)//RZ

Obama further qualifies his doctrine: "We are powerful enough to be able to test these propositions without putting ourselves at risk [...] Iran's defence budget is \$30bn. Our defence budget is closer to \$600bn. Iran understands that they cannot fight us [...] You asked about an Obama Doctrine. The doctrine is: We will engage, but we preserve all our capabilities."

Making of a proxy empire

What to his Republican opponents and neo-con detractors appears as appeasement and disengagement is actually a much smarter form of imperialism that works like a ringmaster in a circus, or perhaps a chess player would be a better metaphor, where the master player knows both the power and the weakness, the kneejerk reactions and hidden desires, of all his players and by making one smart move allows for the rest to adjust their positions and moves according to their whims, which serve the chess master's design.

Obama allows the Saudis to do their thing in Yemen, and Iranians to do what they desire in Iraq and Syria, and other Arab Gulf states to pursue their fears and anxieties in Syria, and if the world expects him to make a move on Syria he looks at Turkey and wonders why President Recep Tayyip Erdogan does not do it. This is imperialism by proxy, not by direct hard power intervention, which he uses or refrains from using judiciously.

It is in this context, that the Iran nuclear accord - if it goes smoothly through the treacherous spin of the US Congress and their conservative counterparts in Iran, will be the crowing achievement of this Obama Doctrine, the articulation of a new mode of "smart power" that seeks to manipulate the existing propensities of power politics in the region without overcommitting US military force on the ground, with the full assurance that the threat of power is far more effective than the delivery of power.

[What Obama does] is imperialism by proxy, not by direct hard power intervention, which he uses or refrains from using judiciously.

From 'soft power' to 'smart power'

In exchange for returning Iranian frozen assets and easing off the regime of sanctions against them, Obama is employing and implicating Iran into the geopolitics of the region. This is Harvard University professor Joseph Nye's notion of "smart power" par excellence, the combination of hard and soft power that enables domination and legitimacy.

According to its authors, "Smart power is neither hard nor soft - it is the skilful combination of both. Smart power means developing an integrated strategy, resource base, and tool kit to achieve American objectives" - and presidential candidate Hillary Clinton is already on board with the idea.

Obama is just a cleverer version of Bush, and chances are that Hillary Clinton will do as Obama does - and the domain of this smart power, Obama Doctrine, is far beyond Iran and its nuclear programme.

The Iranian natural gas flowing towards Europe will considerably diminish their reliance on Russian supply, and turn the Iran deal into leverage against Russia in Ukraine and elsewhere!

But among the intention of the author of any doctrine, and the text of that doctrine, and the way it is read and reversed by others, there will always be a vicious hermeneutic triangle.

Turns case---tanks US foreign policy influence writ large

Bruno, 15 [Alessandro Bruno, Will Iran and the West get a Nowruz Nuclear Deal?, March 22, 2015, <http://www.geopoliticalmonitor.com/will-iran-and-the-west-get-a-nowruz-nuclear-deal/>]

Both Rouhani and Obama are at a crossroads and both are having to gamble in a challenge unlike any other in the past few decades. The challenge is as much a part of the negotiation process itself as in dealing with the many domestic and regional obstacles. Prime Minister Benjamin Netanyahu delivered a dramatic speech to convince a Republican and almost treasonous Congress, considering the affront on President Obama's authority, to prevent in any way an American understanding with the Iranians. In short, the head of a foreign government, just days ahead of an election at home – which he would win – has launched a new challenge to the American president on his home turf. Such an unprecedented event has proven to be very disruptive in relations between Washington and Tel Aviv. It may backfire on Netanyahu, who will now start his fourth term as prime minister with a decidedly unfriendly White House, which has nothing to lose. President Obama may well be tempted to secure an agreement with Iran even faster than before, conceding Iran what it wants most, which is an immediate halt to the sanctions.

Rouhani cannot sign anything without a clear commitment on this point. Such is the mandate he has from Supreme Leader Ali Khamenei, the regime hardliners, the Revolutionary Guards or Pasdaran, the conservative clergy but also, and more importantly, all moderate forces as well, especially those that led the 'green' revolt of 2009. Moderates and pragmatists agree on this

point. The Iranian regime, while religious in inspiration, is also highly nationalistic, which is what has kept Iranians remarkably united in the face of severe hardships from war to embargo. No Iranian, whether he identifies with Khamenei or the greens or the left wing Tudeh, would accept a humiliating arrangement. For his part, President Obama has staked his political and historical legacy on a deal with Iran; it is too late for him to withdraw without losing face and credibility – which would be very damaging to the United States and its ability to influence international events far beyond the Middle East from Bogota to Beijing. Iran has much to lose as it is engaged addressing problems in Iraq and Syria, and in Iran itself it is balancing the internal economic situation with oil prices continuing to fall and world reserves increasing.

2nc – democracy

Iran deal paves the way for democratization

Hashemi 6/28/15 - PhD, University of Toronto MA, Norman Paterson School of International Affairs, Carleton University BA (Honors), University of Western Ontario. (Nader, "HOW A NUCLEAR DEAL HELPS DEMOCRACY IN IRAN", The Cairo Review of Global Affairs, June 18, 2015, <http://www.aucegypt.edu/GAPP/Cairoreview/Pages/articleDetails.aspx?aid=835//DM>)

Most of the debate in the West on the Iran nuclear deal has focused on questions related to Western security interests in the Middle East. Will a deal ultimately prevent Iran from obtaining a nuclear weapon? Will it significantly inhibit a nuclear arms race in the region? How will Israel and the Gulf Cooperation Countries be affected, and to what extent will Iran be able to expand its regional influence after the lifting of sanctions? Almost ignored in this discussion, however, are the effects that a nuclear accord might have on internal Iranian politics and society. Specifically, how might a final nuclear agreement between Iran and the West influence the prospects for democracy and democratization within the Islamic Republic? June 2009 is a key reference point in the struggle for democracy within Iran. Fearing a return of the reformists to power, the Iranian regime falsified the presidential election results that would have removed Mahmoud Ahmadinejad from the presidency. As a result, a nonviolent mini-revolt known as the Green Movement demanded a vote recount, greater political transparency, and more broadly the democratization of Iran. Protests rocked the country for six months before they were violently suppressed. According the Commander of the Islamic Revolutionary Guard Corps, the Green Movement posed a greater threat to the internal stability of the Islamic Republic than the eight-year Iran-Iraq war. As a result of this event, Iran's post-revolutionary social contract lay in tatters. Until this point, Iran's clerical leaders were able to carefully manage public demands for political change and factional rivalry via an electoral process that though never "free" was perceived to be "fair," in the sense that the integrity of the ballot box was guaranteed. After the stolen election of 2009 and the ensuing crackdown, this consensus no longer existed. The base of support of the Islamic Republic narrowed considerably as a deep crisis of political legitimacy set in. Six years have passed, however, since this critical moment in Iran's post-revolutionary history. While the legacy of the Green Movement continues to haunt the Islamic Republic, in recent years a set of political developments, at the international, regional, and domestic levels, have coalesced to limit the prospects for political change and to bolster authoritarianism in Iran. Collectively, these developments have closed the door for democratization in the short term. If the social and political conditions that produced them were to change, however, these doors to democratization could be reopened. At the international level, Iran's dispute with the Permanent Member of the United Nations Security Council and Germany (P5+1) has negatively affected the prospects for democracy in several ways. The broad sanctions placed on Iran have had a greater impact on ordinary Iranians than they have had on the regime. In particular, civil society and the middle class, which forms the core support base for the democratic opposition, have borne the brunt of Iran's collapsing economy. Rather than focus on political organizing, a focus on simple survival has taken priority. It is precisely for this reason that some of the most vociferous defenders of a nuclear deal with the West are Iranian civil society and human rights activists. Secondly, Iran's ruling oligarchy has successfully deployed a nationalist narrative to

justify its nuclear policy internally. Tensions with the West are portrayed through the long history of foreign intervention in Iran. Iranians have been told by their rulers that once again Western powers are bullying Iran, threatening to bomb them, and applying a double standard in attempting to dictate Iran's internal energy policy. These arguments have resonated across the ideological spectrum. Today many secular Iranians who wouldn't ordinarily support the Islamic Republic, make an exception when comes the nuclear impasse with the West for reasons of national pride. Thus, by casting itself as the defender of national sovereignty, Iran's leadership has benefited from the nuclear standoff with the West. In the aftermath of a nuclear agreement, the manipulation of this issue to boost the regime's legitimacy will be a far more difficult task. This point has been indirectly acknowledged by the editor of Shargh, a leading reformist newspaper, who has noted that if "there's less tension internationally, there'll be more stability internally," implying that a nuclear deal would help create better social conditions for democratization. A set of regional events has also indirectly bolstered authoritarianism in Iran. The post-Arab Spring regional chaos, marked by sectarianism, the rise of the Islamic State in Iraq and Syria, the spread of salafi-jihadism, and the collapse of Libya, Syria, Iraq, and now Yemen, have scared Iranians away from demanding political change. As one Iranian blogger has noted "people now think twice about taking action to change the system because they know change might result in a disaster." These regional events have reinforced a preexisting Iranian disdain for violence and revolutionary change. Iranian political culture has been deeply scarred by the upheavals of the 1979 revolution, the bloody Iran-Iraq war and the post-September 11 chaos that engulfed neighboring Iraq and Afghanistan in the aftermath of the American occupations. Prominent reformist journalist and Green Movement supporter Saeed Leylaz, who was sentenced to prison after the 2009 events, aptly summarizes how recent regional chaos has reduced demands for political change. Reflecting the new temper among Iranian democrats, he now takes the position that "if we want to emphasize our own points of view over those of our competitors within the system, the result will be another Syria." All of this has shaped domestic Iranian politics in negative ways for democratization. In 2015, several trends are now discernible. The first trend is unrelenting state repression. The crackdown that followed Green Movement protests has been ongoing and arguably the level of suppression is greater today than it was in 2009. The hardline-controlled Iranian judiciary continues to hand out heavy sentences to civil society activists, censorship and executions are at record levels, and women and minorities are subject to ongoing harassment, marginalization, and discrimination. In a recent press conference that coincided with the second anniversary of his election, President Rowhani admitted that since coming to power there has been "little opening" for advancing his campaign promise to increase social and political freedoms. He blamed right wing "pressure groups" for this, while reminding his supporters to be patient because "changes cannot take place overnight." The second trend pertains to the ongoing and deepening crisis of legitimacy facing the Islamic Republic. This is the Iranian regime's Achilles Heel. While foreign crises help direct attention away from it, this dominant feature of Iranian politics fundamentally shapes state-society relations today. Evidence of this legitimation crisis is abundant. For example, in February, the Iranian judiciary suddenly banned Iranian media from publishing comments by or images of former reformist President Mohammad Khatami. Why a two-time president, who occupied the second highest office in the country for eight years, suddenly posed a threat to political order is a revealing question. Part of the answer lies in the fact that as a reformist

politician and Green Movement supporter, Khatami remains a popular and influential figure. With parliamentary elections scheduled for 2016, Iran's clerical elite are starting to panic. There is great fear that the control of the parliament could be lost to reformist parties. In fact, Ali Saeedi, Supreme Leader Ali Khamenei's special representative to the Iranian Revolutionary Guard Corps, openly acknowledged this fear in a recent speech. Likewise, the head of the powerful Guardian Council, Ahmad Jannati, went a step further and announced that when it comes the ideological screening of candidates for parliament "those who have a (ideological) background that is unknown and after investigation this still remains unclear, the Guardian Council does not have the right to approve them." In other words, there is an assumption that every Iranian citizen is guilty (of regime disloyalty) until proven innocent. At the level of society, there is irrefutable evidence of Iranians displaying behaviors and pursuing lifestyles that explicitly reject that values and norms of the Islamic Republic. Widespread secularization exists, especially among young people and among the sizeable urban and middle classes. This is most visible in terms of avoiding the key Islamic rituals of prayer and fasting. The Ministry of Health recently announced that 150 alcohol treatment centers would be opening in Iran in response to a growing societal epidemic. This is noteworthy because the Islamic Republic officially bans the production, sale and consumption of alcohol. After the 1979 revolution, there was a major attempt to construct a new Iranian Muslim citizen that rejected Western and secular values. The colossal failure of this project is hard to miss. Even the supreme leader has publicly acknowledged that the Islamic Republic faces a crisis of legitimacy. During the last presidential election, fearing a low voter turnout, he appealed to Iranians to turn up at the ballot box including those who "for whatever reason [do] not support the regime of the Islamic Republic." He instead appealed to their sense of (secular) nationalism arguing that a high voter turnout would send a strong message to Iran's enemies. In a more recent speech on the anniversary of the death of Ayatollah Khomeini, the supreme leader expressed a fear of liberal values penetrating Iran. He specifically chastised those who were distorting Khomeini's legacy by claiming he was "liberal-minded, which under no conditions existed in his political, intellectual and cultural behavior." A nuclear deal could help put Iran back on the road to democratization. One of the most controversial aspects of the tentative agreement is the sunset clause. This is the provision that states that for fifteen years Iran will have a limited nuclear program under strict international inspection but after this time period, these restrictions will be lifted. Western critics have pointed to this clause to argue that this "paves Iran's path to the bomb"—all the country has to do is wait out the clock. Ignored in this debate, however, is that in the coming fifteen years, the Islamic Republic will face increasing challenges from within society that will affect its future political stability and possibly its political trajectory. The biggest challenge will be the likely death of the supreme leader, who turns 76 in July. Given the enormous power his office wields and the fact there is no senior cleric with sufficient political and religious authority that can replace him, the inevitable departure of Ali Khamenei will produce an enormous internal crisis for Islamic Republic. When this will happen and how it might play out is unknown, but Khamenei's passing will create a unique crisis of governance that democratic forces will be able to exploit. Thus, over the medium term, Iran's democratic prospects seem brighter. Not only is there a long tradition of democratic activism stretching back to over one hundred years, but the preconditions for democracy that social scientists generally agree upon, already exist in Iran. To wit: high levels of socio-economic modernization (literacy, mass communications, and a

modern economy), a suitable class structure (the existence of a sizeable middle class), and a proper political culture (norms, habits, and values that are democracy-enhancing). Equally important are the demographic numbers that are favorable to democratization. Specifically, young people now constitute the majority of Iran's population. They are highly educated, globally connected, politically secular and deeply alienated from Islamist rule, and what's more, they desire substantive gradual, non-violent political change.

The deal boosts US-European relations despite Israel's anger

Fabian 7/14, staff writer at The Hill, (Jordan, 7/14/15, Obama discusses Iran nuke deal with Netanyahu, Obama discusses Iran nuke deal with Netanyahu, The Hill, [//kap">http://thehill.com/homenews/administration/247852-obama-discusses-iran-nuke-deal-with-netanyahu\)//kap](http://thehill.com/homenews/administration/247852-obama-discusses-iran-nuke-deal-with-netanyahu)

President Obama on Tuesday phoned Israeli Prime Minister Benjamin Netanyahu to discuss the nuclear agreement with Iran.

Obama told Netanyahu that the deal “will verifiably prevent Iran from obtaining a nuclear weapon while ensuring the peaceful nature of Iran’s nuclear program going forward,” according to a White House statement.

He argued the deal would benefit Israel’s security by cutting of Teheran’s path to a nuclear bomb, but said the agreement “will not diminish our concerns regarding Iran's support for terrorism and threats toward Israel.”

The deal places limits on Teheran’s nuclear program for at least a decade in exchange for lifting billions of dollars worth of international sanctions.

Netanyahu has been one of Obama’s staunchest critics for brokering an agreement to curb Iran’s nuclear program.

On Thursday, the Israeli leader called the agreement “a historic mistake for the entire world.”

“In every area that was supposed to prevent Iran from gaining the capacity to arm itself with nuclear weapons, far-reaching concessions were made,” he added. “In addition, Iran will receive hundreds of billions of dollars which it can use as a means to fuel its terror machine, its aggression and its expansionism in the Middle East and around the world.”

Speaking in the East Room of the White House earlier Tuesday, Obama addressed concerns long held by Netanyahu and others in Israel.

He said he shares Israel’s concerns about Iran’s threats against the Jewish state and its sponsorship of groups, such as Hamas and Hezbollah, which have launched attacks against Israel.

“But that is precisely why we are taking this step -- because an Iran armed with a nuclear weapon would be far more destabilizing and far more dangerous to our friends and to the world,” Obama said.

Obama also phoned European heads of state involved in brokering the nuclear agreement with Iran.

Obama made separate calls to British Prime Minister David Cameron, French President Francois Hollande, German Chancellor Angela Merkel, and European foreign policy chief Federica Mogherini soon after the deal was finalized on Tuesday morning.

The leaders praised the deal as a “historic solution that will verifiably prevent Iran from obtaining a nuclear weapon by cutting off all of the potential pathways to a bomb while ensuring the peaceful nature of Iran’s nuclear program going forward,” the White House said in a statement.

The leaders pledged to maintain close coordination as the deal is implemented.

In addition to the European powers, the U.S. was joined in the negotiations by Russia and China. The White House has not yet said if Obama has spoken to Russian President Vladimir Putin or Chinese President Xi Jinping.

2nc – terrorism

Deal solves terrorism

Parsi 6/30/15 - Trita Parsi is the founder and current president of the National Iranian American Council, author of Treacherous Alliance and A Single Roll of the Dice. (Trita, "Iran's nuclear talks: Five reasons why a deal would be good for the U.S.", CNN, June 30, 2015, <http://www.cnn.com/2015/06/30/opinions/iran-nuclear-talks-parsi//DM>)

(CNN)The criticism of the pending nuclear deal between Iran and world powers is intensifying. Opponents of the deal will spend millions of dollars on ads pushing the U.S. public and Congress to kill the deal in the next few days. But while a fortune already has been spent on nit-picking the ongoing talks, virtually nothing has been invested in developing an alternative, viable solution to limit Iran's nuclear activities. The reality is that the opponents of the deal don't have a solution, they only have criticism. And for many, the real value of the nuclear deal has been lost amid the barrage of condemnation surrounding the talks. Americans doubt talks will prevent Iranian nuclear weapon It's worthwhile to remind ourselves why this deal is so important -- and why it would be a strategic mistake of Iraq War proportions to let this opportunity slip out of our hands. Preventing the bomb ... The two first objectives the deal would achieve are paramount: firstly, it will prevent an Iranian nuclear bomb; secondly, it will prevent a disastrous war with Iran. The limitations and inspections regime the deal would impose on the Iranian nuclear program will make it virtually impossible for Tehran to build a bomb. Were it to choose to go down that path, it would get caught almost instantaneously thanks to the new high-tech inspection instruments that will be installed at Iranian nuclear facilities. In addition, if evidence arises that Iran has begun nuclear activities at undeclared sites, then Iran will be obliged to provide access to those sites as well. No other option comes even close to this deal when it comes to closing off all of Iran's paths to a bomb. Military action in particular is far inferior -- and far more risky. ... And a disastrous war Moreover, the deal will prevent a war with Iran -- particularly important given that the absence of a solution to the nuclear standoff has caused the U.S. and Iran to gravitate towards a military confrontation. If the talks fail -- or are undermined -- Iran's nuclear program would unshackle, enabling Tehran to inch closer to a weapons option. That in turn, would increase the risk of an Israeli or American attack on Iranian targets, even though bombing the country's nuclear facilities would at best only slow the program a few years. The Iranians would hit back and soon enough, and the U.S. would be embroiled in yet another war in the Middle East with no end in sight. No wonder the Iran deal has broad support among the U.S. public. Unleashing Iran's moderates Third, the deal will help unleash Iran's vibrant, young (the median age is 28!) and moderate society, which is continuously pushing Iran in a democratic direction. The deal enjoys solid support among the Iranian public as well as among Iranian civil society leaders, partly because they believe the deal "would enable political and cultural reforms." America benefits if the democratic aspirations of the Iranian people are increasingly met, because a more democratic Iran is a more moderate Iran. What's the deal with the Iran nuclear negotiations? This is particularly important at a time when the violent winds of religious radicalism are ravaging the Middle East and beyond. America is in desperate need of an injection of political moderation in the region. An Iran that moves towards democracy could provide that. A boost in the fight against ISIS Fourth, ISIS and other

jihadist groups threaten both Iran and the U.S. Yet coordination and collaboration between the two against these violent terrorist organizations has been minimal because neither side has the political ability to expand coordination until the nuclear dispute has been settled first. A well-placed Iranian source told me recently that in a post-deal environment, Iran is ready to put in 40,000-60,000 ground troops to eliminate ISIS over the next three years. Ideally, the U.S. would provide air support, he explained. The source made clear the commitment would not be a quid pro quo to get a nuclear deal. Iran nuclear talks: 'Security of the world is at stake' If true, this would be the first commitment of ground troops by any state in the region to take on ISIS. But even short of this, Iran has already provided more support in the fight against ISIS than any of America's actual allies. There is near-consensus that airstrikes alone will not defeat ISIS. Ground troops are needed, but who will provide them? The American public is certainly not in the mood for putting more troops on the ground in Iraq. The Iraqi army has proven desperately inadequate. The nuclear deal may help square this circle. Deal gives America more options Last but not least, the nuclear deal can help provide America with more options in the region in the sense that it reduces America's reliance on authoritarian Arab states such as Saudi Arabia -- which, despite being a key U.S. ally, has played a central role in spreading Islamic radicalism and jihadism. As Jeremy Shapiro and Richard Sokolsky recently pointed out, the Iran deal is not about getting into bed with Tehran. But it can be used to get out of bed with the Saudis. And with that, America's hands will be freer to truly deal with and defeat the threat of Islamic radicalism fomented by the Salafists in the Saudi kingdom. U.S., allies and Iran plan to miss June 30th nuclear talks deadline Former Chairman of the Joint Chiefs of Staff Admiral Mike Mullen put it best: "We need to re-examine all of the relationships we enjoy in the region, relationships primarily with Sunni-dominated nations. Detente with Iran might better balance our efforts across the sectarian divide." In the coming weeks, emotions will run high in the debate over the Iran deal. It will be critical to distinguish between the minutia and the truly essential. At historic moments like this, it is the bigger picture that counts.

--at: next prez rescinds

Next prez can't rescind it – this card is awesome

Pace 7/18/15 – AP White House Correspondent (Julie, Scuttling Iran deal might not be easy for next president, Seattle PI, [//JJ">http://www.seattlepi.com/news/texas/article/Scuttling-Iran-deal-might-not-be-easy-for-next-6392212.php">//JJ](http://www.seattlepi.com/news/texas/article/Scuttling-Iran-deal-might-not-be-easy-for-next-6392212.php)

Unhappy with President Barack Obama's nuclear deal with Iran? Republicans running for the White House are vowing to rescind the agreement, some on their first day in office.

But it may not be that easy.

If Iran lives up to its obligations, a new president could face big obstacles in turning that campaign promise into U.S. policy. Among them: resistance from longtime American allies, an unraveling of the carefully crafted international sanctions, and damage to U.S. standing with the rest of the world, according to foreign policy experts.

"The president does not have infinite ability to get other countries to go along with them," said Jon Alterman, director of the Middle East program at the Center for Strategic and International Studies. "One of the consequences is the United States would be increasingly isolated at a time when Iran is increasingly integrated with the rest of the world."

Both Obama and Republicans know firsthand the difficulties of dismantling major policies, a task that only gets harder the longer a policy has been in place.

After more than six years in office, Obama has failed to achieve his promise to shutter the Guantanamo Bay prison, despite signing an executive order authorizing its closure on his first day in office. And more than five years after Obama's health care overhaul became law, Republicans have been unable to find a legal or legislative means for repealing the sweeping measure.

While some elements of the nuclear accord don't go into effect immediately, the centerpiece of the agreement is expected to be implemented quickly. If Iran curbs its nuclear program as promised, it will receive billions of dollars in relief from international sanctions.

To Republican presidential candidates, rolling back that quid pro quo would be a top priority if they were to win the White House.

Wisconsin Gov. Scott Walker says he would "terminate the bad deal with Iran on day one" and work to persuade allies to reinstate economic sanctions lifted under the deal. Former Texas Gov. Rick Perry concurred, saying one of his first actions in office would be to "invalidate the president's Iran agreement."

Jeb Bush, the former Florida governor, said that while he would consult with allies about the deal on his first day in office, he was inclined to "move toward the abrogation of it." Florida Sen. Marco Rubio told The Associated Press he would withdraw from a deal even if allies objected.

The next president has no legal obligation to implement the nuclear agreement, which is a political document, not a binding treaty.

But if there's no sign Iran is cheating, it's unlikely the European allies, who spent nearly two years negotiating alongside the U.S., would be compelled to walk away and reinstate sanctions. And it's nearly impossible to imagine Russia and China, which partnered with the U.S, Britain, France and Germany in the talks, following a GOP president's lead.

"Shattering something like this with the British and the French and the Germans — that has consequences," said Ilan Goldenberg, a senior fellow at the Center for a New American Security and former Obama State Department official. "A new president isn't going to want to lead off like that."

To be sure, a U.S. president with a friendly Congress could unilaterally reinstate American sanctions on Iran. But the economic impact would be far less if other countries didn't follow Washington's lead.

Beyond Europe's interests, the White House says U.S. partners in Asia, including Japan and South Korea, will also likely have boosted their financial ties and oil purchases with Iran by the time a new president takes office in January 2017.

Republican president won't roll back the deal – no incentive and it's just a campaigning ploy.

Siddiqui 7/21 – political reporter for Guardian (Sabrina, "Why Republican promises to scrap Iran nuclear deal may not be met", The Guardian Washington, 7/21/15, <http://www.theguardian.com/world/2015/jul/21/iran-nuclear-deal-why-republican-promises-scrap-may-not-be-met>, accessed 7/23/15)//RZ

How much international support there would be if the US walked away from the deal and called for the restoration of sanctions would be a critical factor in any new administration's assessment of how to proceed, said Robert Einhorn, a senior fellow at the Brookings Institution who served on the US delegation to the Iran nuclear negotiations from 2009 to 2013.

"If the assessment was that no one would follow the US in striking the sanctions, that would be a factor arguing against walking away ... If Iran is complying with the deal and is not making trouble in the region, then the administration may well find it may not have support," he said. "On the other hand, if Iran is dragging its feet and compliance problems have arisen, that would make it much easier for a new president to walk away from the deal."

Einhorn also expressed doubts that a Republican president, for all of the bluster among the current crop of candidates, would actually turn his back on an agreement if it appeared to be working.

"Whatever candidates may say today, his administration will take a look at the situation prevailing at the time. It won't rely exclusively on what was said a year and a half earlier," he said.

Bush has conceded as much in recent days, pointing out in what was seen as a thinly veiled shot at Walker that a day-one promise to rescind US support for the deal would be impractical.

“One thing that I won’t do is just say, as a candidate: ‘I’m going to tear up the agreement on the first day.’ That’s great, that sounds great but maybe you ought to check in with your allies first, maybe you ought to appoint a secretary of state, maybe secretary of defence, you might want to have your team in place, before you take an act like that,” Bush told reporters after a town hall in Carson City, Nevada, on Friday.

He later expanded upon those comments amid criticism from some on the right that he was weakening his position, reiterating his belief that the deal must be revoked – but again taking a more nuanced approach that acknowledged the role that must be played by US allies in order for a new round of sanctions to be impactful.

“As president I would begin immediately to responsibly get us out of this deal, with a comprehensive strategy that is responsive to the conditions at the time and confronts Iran’s continued pursuit of a nuclear weapons capability, its support for terrorism and instability, its ballistic missile proliferation, and its horrific human rights record,” Bush said in a statement to the Weekly Standard.

“Such a strategy will require a new national security team that is committed to rebuilding our defences and restoring our alliances, starting with our relationship with Israel. It will require sustained diplomatic efforts to put significant financial, diplomatic, and military pressure on Iran to change its behavior. And because of the massive sanctions relief provided by this terrible deal, the impact of unilateral US sanctions will be limited and it will be important to work with our allies to reimpose multilateral sanctions and pressure.”

Rubio took an opposing view during an interview with CNN on Sunday when asked what he would do as president if allies refused to go along with the US.

“Our foreign policy as a nation is not subject to what China wants to do or Russia wants to do or the EU wants to do or anybody wants to do,” he said. “We have our own foreign policy. It needs to be in the national security interests of the United States.”

But in charting its own course of action, irrespective of whether Iran was complying with the deal or not, the US might only be inflicting harm upon itself.

“The US would be in a situation where it would presumably then say we’d reimpose sanctions which would only hurt, for the most part, US businesses, which would then turn on whichever administration,” said George Perkovich, vice-president for studies at the Carnegie Endowment for International Peace.

Pushback from the business community, which traditionally favours Republicans, would be especially salient. Perkovich, an expert on Iran who focuses on nuclear strategy and nonproliferation, added that the US acting alone to dismantle the deal would also do little to change Iran’s behaviour if they’re already complying with the agreement and not beholden to similar threats from other supporters of the agreement.

If anything, he said, it could backfire and energise moves by other countries to become less dependent on the US financial system.

“The only thing that it could accomplish is to make Republican primary voters feel better that their candidates are expressing their fears and passions,” Perkovich said. “One of these people might get elected ... the question will be, do they feel like they’re obligated to do something just because they said it at this moment.”

Polling at this particular moment finds that a slim majority of Americans, at 56%, supports the Iran deal but remains sceptical that it will succeed.

Views differ sharply when broken down by party affiliation, offering further rationale for Republican candidates blasting the agreement - just four in 10 Republicans support it, while 54% are opposed. Democrats, on the other hand, support the deal by a 69 to 25% margin.

Obama, for his part, projected confidence last week that history was on his side as far as how the deal would ultimately be viewed – as would efforts to squander it.

“If we don’t choose wisely, I believe future generations will judge us harshly for letting this moment slip away,” he said.

--at: u.s. not key

U.S. compliance is key to overall effectiveness of the deal – backing out would prompt Iran to respond in kind.

CBS 7/17 ("Iran deal set to become international law", 7/17/2015, CBS news, <http://www.cbsnews.com/news/un-security-council-vote-iran-nuclear-deal-resolution-us-congress-objections/>, accessed 7/19/15)//RZ

With all five veto-wielding permanent members of the Security Council involved in the marathon Iran negotiations, the resolution's adoption Monday was almost certain.

The resolution implements an intricate deal that places restrictions on Iran's nuclear program while allowing relief from sanctions that the country's leaders say have hurt its economy.

Monday's vote will come despite calls from some U.S. lawmakers to delay Security Council approval until Congress reviews the deal.

CBS News foreign affairs analyst Pamela Falk says the resolution will make the Iran nuclear deal international law, but will delay its official implementation for 90 days, to allow for the U.S. Congress' consideration.

Falk explained that while Congress cannot block the implementation of the deal, if the legislative body votes against it and has enough votes to override a promised veto from President Obama, it is not clear what would happen next.

A U.S. official told CBS News that American law doesn't "trump" U.N. resolutions, but if Congress were to vote against the measure -- and garner enough votes to override a presidential veto -- lawmakers could stop U.S. sanctions being lifted, which could prompt Iran to declare the U.S. as non-compliant with the terms of the deal and to back out.

If U.S. lawmakers were to decide after Monday's vote that they wanted changes to the terms of the agreement, it would essentially be too late, because it would require the Security Council to propose a new resolution -- and there would likely be little appetite for such deliberations among the other negotiating partners.

The chairman of the Senate's foreign relations committee, Bob Corker, on Thursday wrote a letter to President Obama saying, "We urge you to postpone the vote at the United Nations until after Congress considers this agreement."

But the chief U.S. negotiator in the Iran talks, Wendy Sherman, rejected that idea Thursday.

She told reporters: "It would have been a little difficult when all of the (countries negotiating with Iran) wanted to go to the United Nations to get an endorsement of this, since it is a product of the United Nations process, for us to say, 'Well, excuse me, the world, you should wait for the United States Congress.'"

Sherman said the council resolution allows the "time and space" for a congressional review before the measure actually takes effect.

2nc – at: deal bad

Only a risk the deal is net-better – Iran already has the ability that their turn relies on

Zengerle and Spetalnick 7/23/15 – political reporters for Reuters (Patricia and Matt, Kerry: critics of Iran deal spinning 'fantasy,' urges approval, Reuters, [//JJ](http://www.reuters.com/article/2015/07/23/us-iran-nuclear-congress-idUSKCN0PX0D920150723)

U.S. Secretary of State John Kerry on Thursday mounted a furious counterattack against critics of the Iran nuclear deal, telling skeptical lawmakers it would be fantasy to think the United States could simply "bomb away" Tehran's atomic know-how.

Testifying before Congress for the first time since world powers reached the landmark accord with Iran last week, America's top diplomat was confronted head-on by Republican accusations that Iranian negotiators had "fleeced" and "bamboozled" him.

The vitriolic exchanges on Capitol Hill reflected a hardening of positions as Congress opened a 60-day review of the deal considered crucial to its fate.

Iranian hardliners are also trying to undermine the pact, and U.S. ally Israel has condemned it as a dire security threat.

Kerry insisted that critics of the deal, which curbs Iran's nuclear program in return for sanctions relief, are pushing an unrealistic alternative that he dismissed as a "sort of unicorn arrangement involving Iran's complete capitulation."

"The fact is that Iran now has extensive experience with nuclear fuel cycle technology," Kerry told the Senate Foreign Relations Committee. "We can't bomb that knowledge away. Nor can we sanction that knowledge away."

Kerry said that if Congress rejects the agreement reached in Vienna, "the result will be the United States of America walking away from every one of the restrictions we have achieved and a great big green light for Iran to double the pace of its uranium enrichment."

"We will have squandered the best chance we have to solve this problem through peaceful means," he said.

The United States, Russia, China, Britain, France, Germany and the European Union signed the deal with Iran. Washington suspects Tehran of having worked in the past to build nuclear weapons but Iran says its program is peaceful.

Reject their evidence – its hyperbolic media garbage

Cirincione 7/6/15 - President of the Ploughshares Fund, a public grant-making foundation focused on nuclear weapons policy and conflict resolution. (Joseph, "Overwhelming Expert

Consensus Favors Agreement with Iran”, Payvand, July 6, 2015,
<http://www.payvand.com/news/15/jul/1034.html//DM>)

Media Blind Spot The media rarely portrays this expert consensus in the coverage of the Iran negotiations. This is not to say that the nuclear policy experts are uniform in their views. There are nuances and shades of agreement. And several genuine non-proliferation experts have strong, principled disagreements with the proposed Iran deal. Some outright oppose it. They, however, represent a minority faction in the field. The overwhelming majority of experts favor the deal. The media portrayal of expert opinion is driven partially by the custom to “balance” expert views in stories, so that pro and con are evenly represented—even if this gives a false depiction of the overall expert opinion. It is also driven by the desire to make news. Conflict grabs attention; agreement is boring. “If it bleeds, it leads” guides not just the local nightly news but often the front page of The New York Times. Some reporters, for instance, used a recent letter from a bipartisan group of experts to generate headlines that former top officials of the Obama administration were condemning the Iran deal. This, even though several of these former officials, including Bob Einhorn, Gary Samore, and Gen. James Cartwright, had already signed letters in support of the agreement. Einhorn felt compelled to write a rebuttal of this media misrepresentation, explaining that the signers, including several former Republican security officials such as Bush national security advisor Stephen Hadley, were not challenging the administration’s negotiating positions or asking them to adopt new and more demanding postures. Rather, he wrote, The significance of the statement is that this diverse, bipartisan group was able to come together on a number of reasonable and achievable recommendations for concluding an agreement that would serve U.S. interests and the interests of U.S. friends in the Middle East. Unlike some recommendations made by other groups and individuals, these contained no “poison pills” designed to complicate or even sabotage the negotiations.

Try-or-die for the deal – veto-override is the worst case scenario

Dennis 7/17/15 – White House correspondent for Roll Call (Steven, Iran Gets Everything for Free if Congress Overrides Deal, White House Says, Roll Call, <http://blogs.rollcall.com/white-house/white-house-iran-deal-congress-united-nations//JJ>)

White House Press Secretary Josh Earnest warned Iran would get what it wants even if Congress overrides the Iran nuclear deal.

“Iran will get all of the benefits of this deal without having to give up anything,” Earnest said Friday.

He predicted the international economic sanctions would collapse and Iran would get the economic benefits it has sought anyway — and noted that even if American sanctions stay in place Iran has far more at stake economically with sanctions from other countries around the world.

“The problem is Iran is going to get all that money and the United States doesn’t get anything for it,” he said, predicting Iran would get sanctions relief from the international community even

if they don't reduce their stockpile, centrifuges or all-but-dismantle their plutonium-producing reactor.

A vote to kill the deal is a "vote to allow Iran to get off scot-free and to get all the sanctions relief."

--at: prolif

Deal doesn't lead to proliferation – no incentive, NPT, 123 agreement, and the US nuclear umbrella

Indyk 6/11/15 - executive vice-president of the Brookings Institution in Washington D.C., and a former US ambassador to Israel. (Martin, "Why deal with Iran could be good for the Middle East", Khaleej Times, June 11, 2015, http://www.khaleejtimes.com/kt-article-display-1.asp?xfile=data/opinion/2015/June/opinion_June20.xml§ion=opinion//DM)

In the coming months, Congress is likely to have to make a choice: either endorse an agreement that removes sanctions but should ensure a nuclear weapons-free Iran for at least ten-to-fifteen years; or reject the agreement, which would leave Iran three months from a nuclear weapon under eroding sanctions. In making that choice, Congress will need to take into account that the Iranian nuclear deal will have profound ripple effects across the troubled Middle East region. The nuclear agreement was never intended to deal with the likely consequences of the sanctions relief—namely a monetary windfall for the government in Tehran. There is every reason to believe that at least some of this windfall will enhance the capacity of problematic Iranian forces such as the Iranian Revolutionary Guard Corps (IRGC) and problematic proxies like Hezbollah, the Assad regime and Shia militias in Iraq. But the possible regional implications of the deal are not sufficiently negative to justify opposing it. Indeed, given the turmoil now engulfing the Middle East, ensuring a nuclear weapons-free Iran for at least a decade—and tight monitoring of its nuclear programme for much longer than that—will help remove a primary source of tension and may foster greater cohesion in dealing with the other sources of conflict and instability there. In the end, the agreement buys a breathing space of at least 10 years. That's worth having as long as the inspection, monitoring and snap-back provisions are credible and the time is used effectively to contain and roll-back Iran's nefarious hegemonic ambitions. Moreover, whatever its other negative implications, the deal is not likely to trigger a nuclear arms race. It is unlikely that Saudi Arabia will actually embark on building an enrichment capability with its requirements for a significant scientific establishment. For 30 years, while Iran developed its ambitious nuclear programme unconstrained, its Saudi arch-rival did not feel any need to do the same. Why would it do so now when serious constraints will be placed on Iran's nuclear programme? Egypt and Jordan are certainly talking about starting nuclear programmes, but they are both signatories to the Non-Proliferation Treaty. All three Arab states would have to submit to the same intrusive inspections that Iran has accepted if they are to get the nuclear cooperation they will need. The UAE has signed a 123 agreement, in which it commits never to acquire enrichment capacity. And Turkey, as a Nato ally, already enjoys the cover of an American nuclear umbrella under Article 5 of the Treaty.

Iran deal cuts off Iran's pathway to a bomb

Kimball 6/25/15 - Executive Director Arms Control Association Washington. (Daryl, "Benefits of a Nuclear Deal With Iran", The New York Times, June 26, 2015, <http://www.nytimes.com/2015/06/27/opinion/benefits-of-a-nuclear-deal-with-iran.html//DM>)

Alan J. Kuperman makes a number of flawed assumptions in asserting that the Iran nuclear deal would extend Iran's "breakout time" by only one month. A wide range of scientific experts,

along with the technical teams of the Western governments, agree that a deal would increase the time it would take Iran to amass enough bomb-grade uranium for one bomb from the current two to three months to at least 12 months. The agreement will require Iran to disconnect and remove some 14,000 centrifuges and put them under the seal of the International Atomic Energy Agency. Only 5,060 first-generation machines would be allowed to enrich uranium to low levels. Mr. Kuperman assumes that Iran could immediately reassemble, reinstall and recalibrate the excess centrifuges — but it would take many months, if not years, to achieve such a feat. And inspectors would detect any such activity within days. Mr. Kuperman also assumes that the agreement would allow Iran to keep large amounts of its uranium stockpile in solid form. But under the agreement, Iran must verifiably reduce its current stockpile of 8,700 kilograms of low-enriched uranium gas to no more than 300 kilograms, in any form. The Iran deal should be judged based on the facts. And the facts are clear: This deal would verifiably cut off Iran's pathways to a bomb.

Deal solves Middle East instability – zero risk of offense

Feffer 7/19/15 – author and currently co-director of Foreign Policy in Focus at the Institute for Policy Studies (John, Iran agreement: Is Obama Channeling Nixon?, The Corner, <http://www.thecorner.eu/world-economy/obama-channeling-nixon/47044/>)//JJ

One of the greatest moments of US diplomacy in the 20th century was President Richard Nixon's opening to China. It was a surprise, a breathtaking opportunity and a true game-changer.

It was also one of the strangest political matches of all time. A president who had established his political bona fides as an anti-communist crusader shocked everyone by establishing relations with a communist state led by one of the world's most ruthless politicians (in a century densely populated by such tyrants). China in the early 1970s was still in the thrall of the Cultural Revolution, and the increasingly senescent Mao Zedong was a most unlikely partner for Nixon's diplomatic effort.

But Nixon's secretary of state, Henry Kissinger, displayed an often-appalling pragmatism. He didn't care if Mao was chin deep in the blood of his own victims (tens of millions from the Great Leap Forward through the Cultural Revolution). The secretary of state wanted to use China as a chess piece to maneuver the Soviet Union into a corner. Playing Moscow and Beijing off one another was Kissinger's gambit to control the board and ultimately checkmate his communist opponents.

Throughout its history, the United States has frequently made alliances of convenience in order to achieve larger goals. During World War II, it partnered with Joseph Stalin against Adolf Hitler. In Chile, it collaborated with Augusto Pinochet against Salvador Allende. And from Franklin D. Roosevelt on, it allied with the House of Saud against the prospect of prohibitive oil prices. Communism, military dictatorship, theocracy—the United States cooperated with these very different systems in order to pursue its own ends.

The recent nuclear agreement with Iran, the culmination of months of laborious negotiation, could represent this century's equivalent of Nixon's détente with China. Of course, US President Barack Obama and Iranian President Hassan Rouhani are by no means the odd bedfellows that Mao and Nixon represented. They are both centrists disposed to compromise. The deal they've pushed for has been the culmination of visible negotiations, not the kind of secret back-channel conversations that Kissinger favored. And perhaps most importantly, the Iran deal rather narrowly focuses on nuclear non-proliferation.

But the accord with Iran has the potential to be a game-changer that alters the geopolitical chessboard. For that to happen, however, deal supporters still have to overcome domestic opposition (particularly in the US). Then the more visionary leaders in Iran, the United States and Europe have to use the agreement as the foundation stone of an entirely new set of relationships that can alter the political landscape of the Middle East and beyond.

What's the Deal with the Deal?

In the agreement signed this week between Iran and the P5+1 (the permanent five of the UN Security Council plus Germany), Iran has agreed to freeze its nuclear program in exchange for the lifting of economic sanctions. Iran will render its plutonium program—the heavy water reactor at Arak—inoperable, and it will maintain a moratorium on building new heavy water reactors for 15 years. Also for that period, it will ship out all spent fuel.

In terms of the uranium path to a bomb, Iran has agreed to dismantle two-thirds of its centrifuges and will reduce the amount of its stockpiled enriched uranium by 98%. In this way, Iran will not have enough material to build a single nuclear weapon. The “break out time”—the time necessary to build such a weapon—will be expanded from several months to one year.

Iran will receive sanctions relief only after it has begun to comply with the agreement. If Iran fails to comply, the sanctions will “snap back.” The only sanctions lifted will be the ones connected to Iran’s nuclear activities.

The International Atomic Energy Agency (IAEA) will monitor the agreement, and it will even have access to military sites such as the Parchin complex. The monitoring will be 24/7. Iran has also agreed to deliver information related to the “possible military dimensions” of its program going back in time.

The agreement is truly comprehensive, at least in regard to nuclear matters, and it should satisfy the skeptics. But, of course, many skeptics are not interested in the details of the agreement. Most of them, like Senator Lindsey Graham, denounced the deal without even reading it.

The Noisy Ideologues

Iranian politics is well-stocked with noisy ideologues who advocate for perpetual war against the West. Even Ayatollah Ali Khamenei recently talked about the importance of continuing to struggle against the “arrogance” of the United States, deal or no deal. However, given that Khamenei must have supported the negotiations and the deal—he is the supreme leader, after all—his rhetoric was more likely a sop thrown to the hard-liners.

Meanwhile, the more concerted opposition to rapprochement is in the US, where a noisy clique of well-funded pundits and politicians inveigh against the inherent evil of Iran. They will not tolerate anything that resembles what Republican hard-liners routinely label “appeasement.” As Senator Tom Cotton put it, “Iran is an anti-American, terrorism-sponsoring outlaw regime.”

Opposition to the negotiations with Iran has generally fallen into two categories. The much smaller group consists of those who, like physicist David Albright, are reluctant to call themselves critics and genuinely worry whether the agreement will work (will the inspection protocols be sufficient, will the “break-out time” be meaningfully expanded and so on).

The much larger group of opponents simply doesn’t want to negotiate with Iran at all. They are categorically opposed to the country’s system (much as the anti-communist critics of Nixon’s détente with China were categorically opposed to the Chinese system).

For this second group, there can be no better agreement until and unless Iran capitulates entirely, which could happen only if an entirely different set of leaders took over in Tehran (monarchists, for instance, or the quasi-terrorists of Mujahideen-e Khalq). But there is little

chance of this happening in Iran, just as there was no likelihood that a group of closet democrats could have seized power in Beijing in the 1970s.

Of course, there are factions in Iran today just as there were factions within the Chinese Communist Party in Mao's later years. But these different political groupings were not (in China) and are not (in Iran) interested in revolutionary system change. No viable political force in Iran, for instance, challenges the sovereign right of the country to pursue a civilian nuclear program or, for that matter, the position of the ayatollahs as supreme rulers. Big surprise: How many legitimate political forces in the United States advocate for the abrogation of the constitution, the abolition of capitalism or the unilateral dissolution of the entire nuclear arsenal?

The dream of "regime change" and the dream of a "perfect agreement" are really the same dreams, and they are both illusory. American politicians need a refresher course on the meaning of diplomacy (hint: it involves compromise) and on world systems (key takeaway: there's a variety of different types of states and the world is not converging on the American political model). Only compared to the infantile know-nothingism of Tom Cotton, the Republican presidential hopefuls and their deep-pocketed supporters does the Machiavellian cunning Kissinger displayed with China begin to look like something approximating wisdom.

The Quiet Pragmatists

In place of the Soviet communism of the 1970s, the US faces a resurgent Sunni radicalism in the Middle East. This radicalism ranges from the relatively benign Salafism of Qatar and the considerably less benign Salafism of Saudi Arabia to the more anti-Western manifestations of the al-Nusra Front, al-Qaeda and the Islamic State.

Obama can be just as ruthlessly pragmatic as Kissinger (just look at Washington's policy toward Egypt and the Sisi regime). His overall chess strategy, however, is to reduce the influence of Sunni radicalism. Much as Beijing was a rival version of communism, Iran offers a rival version of Islam. Put simply, the US needs Iran's help to checkmate the Islamic State and its ilk. China was ushered back into the international community as part of the campaign to isolate the Soviet Union. So, too, will opening the door for Iran strengthen the hands of a Shiite counterforce.

Critics of Iran worry about a resurgence of Shiite radicalism under the auspices of Iran's Revolutionary Guard, Hezbollah and the Badr Brigades in Iraq. But as Iran acquires more of a stake in the international community, the likelihood of its continuing to play a destabilizing role in the region will diminish. One signal that this process has already begun is the restraining role Tehran tried to play in discouraging the Houthis from seizing power in Yemen.

Another scenario is more probable. The states of the region, regardless of their confessional leanings, will team up against non-state actors, including the Islamic State, its pretensions to sovereignty notwithstanding. If you believe that Iran working together with both Israel and Saudi Arabia sounds highly improbable, think again.

The US opening to China initially enraged Japan and South Korea because they didn't know about the secret talks. The event has gone down in history as the "Nixon shock" in Japan (coupled with the later announcement that the US was going off the gold standard). In South Korea, strongman Park Chung Hee groused that "the United States has long been trying to reach

a rapprochement with Red China, but China has not changed.” Park’s timing was off. China would change—after the opening.

But once they overcame their anger at being excluded from the talks, Japan and South Korea saw the enormous benefits that came from political and economic ties to China. Normalization of relations between Beijing and both Tokyo and Seoul eventually helped to make Northeast Asia an economic powerhouse in the world.

Israel and the Gulf monarchies, like South Korea and Japan, have been aghast at Washington’s high-stakes diplomacy. But they too could eventually see the advantages of the new regional order—but only if a parallel process of pragmatic evolution takes place in all the countries concerned. Iran has been moving in that direction since the election of Rouhani. Israeli Prime Minister Binyamin Netanyahu remains the chief obstacle to a sane politics in Israel, but he may well prove the biggest loser, politically, if the Iran deal succeeds. The Gulf monarchies, Saudi Arabia chief among them, must also embark on a long-delayed process of political liberalization that will provide more voice for domestic Shiite oppositions.

For the Middle East to prosper, it must somehow transcend the current sectarian conflicts. It must overcome the Sunni-Shiite split much as East Asia managed to overcome the communist-capitalist divide (with China, though not yet with North Korea). This is not to say that the Sunnis will lie down with the Shiites like the lion and the lamb. But they have to work out a functional modus operandi that translates confessional discord into a more benign political and economic competition.

With the Iran deal, we have stepped away from the precipice of war. But it’s only a few steps. And plenty of voices in Congress continue recklessly to urge “full steam ahead.” To put the precipice truly behind us, we have to push the Iran deal through Congress. And then the hard work really begins of turning a narrow nuclear agreement into the game-changer that the Middle East so desperately needs.

If it could happen at the hands of Nixon and Mao over 40 years ago, surely it can happen again with more sensible leaders in charge of the process.

--at: funds terror/ME heg

Iran won't direct wealth toward regional domination – Rouhani is more invested in domestic stability.

Barnes 7/21 – Bonner Means Baker Research Fellow at Rice University's Baker Institute for Public Policy (Joe, "Getting Real About the Iran Deal", The Hill, 7/21/15, <http://thehill.com/blogs/pundits-blog/international/248597-getting-real-about-the-iran-deal>, accessed 7/23/15)//RZ

Moreover, the idea that Iran will use increased revenues to dominate the Persian Gulf is, to put it mildly, farfetched.

First, much of the money generated by sanctions relief will surely go for domestic purposes. Iranian President Hassan Rouhani has staked his political reputation on economic growth. Unless sanctions relief brings real benefits to average Iranians, he may face a sharp political backlash. In addition, at least some of the additional revenue will be spent in placating those — like elements of the Revolutionary Guard — who are opposed to closer ties to the West.

Second, Iran's strategic situation is far less advantageous than many suggest. It is no Persian Empire reborn, poised to exert rule over the Persian Gulf and Levant. It is, rather, a relatively weak power that spends far less on its military than do its Sunni rivals (notably Saudi Arabia) to the south, possesses a modest capacity for force protection and faces, in the United States, a potential adversary that would crush it were Tehran foolhardy enough to offer a conventional challenge.

This is not to say we should be sanguine about Iranian foreign policy in the Middle East. As noted, Iranian interests run counter to U.S. ones in places like Lebanon and, to a lesser extent, Syria. Iran — the most populous country in the Persian Gulf, proudly nationalistic and keen to play a more salient international role — remains a potential source of instability in a region of long-term U.S. strategic interest. In terms of human rights, Tehran's policies are unsavory, even odious, though no worse, it should be noted, than any number of U.S. allies in the Middle East.

Nonetheless, we should not let exaggerated worries about Iran's regional ambitions or real (if often selective) revulsion at Tehran's domestic policies blind us to the advantages of the Iranian nuclear deal. For all its imperfections, the agreement makes it far more difficult for Iran to acquire nuclear weapons. This aligns both with our specific concerns about a nuclear Iran and our broader nonproliferation policies in the Middle East and elsewhere.

The United States is not in a position to solve "the Iran problem." As our experience in Iraq reminds us, even invasion and occupation cannot do that. Washington can, however, manage our relations with Iran in ways that, on balance, advance our interests. The Iranian nuclear deal reflects this reality. It has the potential of diminishing one major area of dispute between Tehran and Washington. Perhaps the agreement will lead to a less contentious overall relationship. Let us hope so. But even if the nuclear deal doesn't lead to more normal bilateral relations, it still deserves support on its own narrow but important merits. The Iran nuclear agreement isn't perfect. But neither is the world.

--at: Hezbollah

Hezbollah inevitable or deal solves

JTA 7/25/15 – political writer for Haaretz (Obama: Iran will fund Hezbollah with or without sanctions, Haaretz, <http://www.haaretz.com/news/diplomacy-defense/1.667699>)/JJ

U.S. President Barack Obama said that Iran is determined to finance the Hezbollah even under sanctions.

Obama was asked in a BBC interview posted Friday about critics of the Iran nuclear deal who said that the regime will accelerate its troublemaking in the region once sanctions free up \$100-150 billion.

“The challenge that we’ve had, when it comes to Hezbollah, for example, aiming rockets into Israel, is not a shortage of resources,” Obama said in the interview about the possibility that funds made available to Tehran because of the deal would go to Iran’s proxies, including Hezbollah.

Israeli Prime Minister Benjamin Netanyahu has predicted a ramping up of Iran-backed hostilities as a result of the sanctions relief for nuclear restrictions deal reached July 14 between Iran and six major powers led by the United States.

“Iran has shown itself to be willing, even in the midst of real hardship, to fund what they consider to be strategy priorities,” Obama said. “The challenge is us making sure that we’ve got the interdiction capacity, the intelligence, that we are building a much stronger defense against some of these proxy wars and asymmetric efforts. And we’ve sent a clear message to the Iranians. We are settling the Iran deal, but we still have a big account that we’re going to have to work. Hopefully some of it diplomatically, if necessary some of it militarily.”

Politics -Samford

Iran Politics Shell

A) Republicans currently lack the votes to override Obama's Iran deal.

Eli Lake, (staff writer) COLUMBIA DAILY HERALD, Apr. 27, 2015. Retrieved Apr. 29, 2015 from <http://columbiadailyherald.com/opinion/columns/boehner-says-congress-cannot-override-veto-iran-deal>

The top-ranking Republican in Congress privately acknowledged this weekend that his party doesn't have enough votes to overcome a veto of any resolution disapproving the nuclear-weapons deal President Barack Obama hopes to reach with Iran. Speaking at an off-the-record event Saturday at the Republican Jewish Coalition's meeting in Las Vegas, House Speaker John Boehner told the audience that he didn't expect that more than two-thirds of Congress would vote to overturn a veto from Obama if Congress voted against a nuclear deal, according to four people who were inside the room for the private talk.

B) The plan drains political capital (insert specific OR)...

Bipartisan support exists for domestic surveillance in Congress.

John Sides, (Associate Professor in the Department of Political Science at George Washington University) June 6, 2013. Retrieved Apr. 29, 2015 from <http://themonkeycage.org/2013/06/06/could-there-finally-be-a-backlash-against-domestic-surveillance/>

Congress is complicit too. And so my guess is that members of Congress will not rush to demand that the NSA stand down. Certainly that was Rand Paul's experience after his filibuster against drones. (Remember that?) Undoubtedly, there is concerted opposition among civil libertarians to much of our "national security state," and much concern among journalists about the investigations of the AP and Rosen. And I don't mean to suggest that there is no reason for concern. (This is not a post about the merits or demerits of the government's actions.) But the presence of a fairly sturdy bipartisan elite consensus on domestic surveillance—whether it is motivated by partisanship (Republicans defended Bush, Democrats defend Obama) or by a sincere belief in the value of the policy—makes it hard to imagine that revelations about the NSA-Verizon agreement will lead to dramatic changes in policy.

C) Obama's political capital is critical to keeping Congress from over-riding his Iran policy.

Michael A. Memoli, (staff writer) LOS ANGELES TIMES, Mar. 11, 2015. Retrieved Apr. 29, 2015 from <http://www.latimes.com/world/middleeast/la-fg-obama-republicans-iran-20150311-story.html#page=1>

The White House has had to expend significant political capital to keep Democrats in line, the Republican aide noted, and may be nearing the limits of Obama's ability to do so on Iran. White House Press Secretary Josh Earnest said the president has always envisioned a role for Congress and consulted extensively with members on the negotiations. But "to essentially throw sand in the gears," he added, was not "the role that our Founding Fathers envisioned for Congress to play when it comes to foreign policy." Inadvertently, the GOP's willingness to cross boundaries has helped keep Democrats backing the president. On Tuesday, Senate Democrats echoed party leaders' comments harshly criticizing Republicans' recent actions. "All these events of the last few weeks suggest the possibility, a sad possibility, of a Senate that will elevate partisan political division over careful and constructive deliberation even on the most critical security issues that affect the security of our country and the world," Sen. Tim Kaine (D-Va.) said on the Senate floor. The aggressive Republican moves on foreign policy have, however, provided a convenient rallying point for party leaders as their new congressional majorities have repeatedly stumbled in attempts to advance a domestic agenda. The next question before them is when — and whether — lawmakers should vote to approve a deal with Iran. Senate Foreign Relations Committee Chairman Bob Corker (R-Tenn.), who is sponsoring the legislation requiring congressional ratification of any Iran deal, is working to secure the 67 votes he would need to override a presidential veto. The bill would require Obama to submit any comprehensive agreement to Congress for a possible vote of approval or disapproval within 60 days. The president would be barred from waiving or suspending sanctions during that time.

D) Congressional support is key to a successful nuclear deal with Iran.

Zach Beauchamp, (B.A.s in Philosophy and Political Science from Brown University) Nov. 6, 2014. Retrieved Apr. 29, 2015 from <http://www.vox.com/2014/11/6/7164283/iran-nuclear-deal-congress>

The key point here is that Congress gave Obama that power — which means they can take it back. "You could see a bill in place that makes it harder for the administration to suspend sanctions," Ken Sofer, the Associate Director for National Security and International Policy at the Center for American Progress (where I worked for a little under two years, though not with Sofer directly), says. "You could also see a bill that says the president can't agree to a deal unless it includes the following things or [a bill] forcing a congressional vote on any deal." Imposing new sanctions on Iran wouldn't just stifle Obama's ability to remove existing sanctions, it would undermine Obama's authority to negotiate with Iran at all, sending the message to Tehran that Obama is not worth dealing with because he can't control his own foreign policy. So if Obama wants to make a deal with Iran, he needs Congress to play ball.

E) A failed deal with Iran triggers a war with Iran:

Zach Beauchamp, (B.A.s in Philosophy and Political Science from Brown University) Nov. 6, 2014. Retrieved Apr. 29, 2015 from <http://www.vox.com/2014/11/6/7164283/iran-nuclear-deal-congress>

"I'm not really sure they're going to be willing to take on a fight about an Iran sanctions bill," Sofer concludes. "I'm not really sure that the Democrats who support [a deal] are really fully behind it enough that they'll be willing to give up leverage on, you know, unemployment insurance or immigration status — these bigger issues for most Democrats." So if the new Republican Senate prioritizes destroying an Iran deal, Obama will have to fight very hard to keep it — without necessarily being able to count on his own party for support. And the stakes are enormous: if Iran's nuclear program isn't stopped peacefully, then the most likely outcomes are either Iran going nuclear, or war with Iran. The administration believes a deal with Iran is their only way to avoid this horrible choice. That's why it's been one of the administration's top priorities since day one. It's also why this could become one of the biggest legislative fights of Obama's last two years.

F) A war with Iran will go nuclear.

Philip Stevens (associate editor and chief political commentator for the Financial Times), FINANCIAL TIMES, Nov. 14, 2013, Retrieved Apr. 29, 2015 from <http://www.ft.com/cms/s/0/af170df6-4d1c-11e3-bf32-00144feabdc0.html>

The first of these is that Tehran's acquisition of a bomb would be more than dangerous for the Middle East and for wider international security. It would most likely set off a nuclear arms race that would see Saudi Arabia, Turkey and Egypt signing up to the nuclear club. The nuclear non-proliferation treaty would be shattered. A future regional conflict could draw Israel into launching a pre-emptive nuclear strike. This is not a region obviously susceptible to cold war disciplines of deterrence.

Uniqueness (No Sanctions on Iran Now)

(-- Sanctions on Iran won't pass now:

NIV ELIS, (staff writer), Feb. 9, 2015. Retrieved Apr. 30, 2015 from <http://www.jpost.com/Israel-Elections/Lapid-PMs-US-row-hurts-ability-to-influence-Iran-deal-391486>

Israel would be in a better position to improve the impending nuclear deal between Tehran and the West if Prime Minister Benjamin Netanyahu had not harmed relations with the US, Yesh Atid leader Yair Lapid told The Jerusalem Post on Wednesday. "If things were as they used to be in the relationship between Israel and the United States, we would be able to make some impact and change this deal for the better of Israel," Lapid said in an interview for the Jerusalem Post Election Arena, available in full on JPost.com. Ties between the prime minister and US President Barack Obama, which have never been warm, hit a nadir when Netanyahu accepted an invitation from House Speaker John Boehner, a Republican, to address a joint session of Congress on the Iran issue. The White House was not consulted, and the speech was seen as a move to undermine the negotiations. Asked how Israel should handle the prospect of a nuclear agreement, Lapid said, "You should do it quietly, not poking the United States president in the chest." Because of the speech, an Iran sanctions bill sponsored by Sens. Bob Menendez (D-New Jersey) and Mark Kirk (R-Illinois) lost bipartisan support. The administration and its European partners had warned that passage of such a bill would collapse negotiations altogether. Yet Lapid threw his support behind the now-defunct sanctions bill, saying that it was "everything we hoped for," because it put "extra sanctions on Iran in the right moment." "If not for this speech, the Kirk-Menendez bill would have been served to the Congress, and even if it was vetoed by the president, I think Israel with AIPAC would have been able, along with our friends on the Hill, to even overthrow a veto, getting two-thirds of the votes," Lapid said.

No veto proof majority now--

Saeed Kamali Dehghan, 2/3/2015 (staff writer, "Iran could halt nuclear agreement with west if US imposes further sanctions," <http://www.theguardian.com/world/iran-blog/2015/feb/03/iran-could-halt-nuclear-agreement-over-us-sanctions>, Accessed 2/19/2015, rwg)

In Washington, a bipartisan bill co-authored by senator Robert Menendez, a Democrat, and senator Mark Kirk, a Republican, seeks further sanctions on Iran if the ongoing negotiations fail to reach a comprehensive agreement by the end of June. The Kirk-Menendez bill will authorize new sanctions only in the event of talks collapsing. Obama made clear in his State of the Union address last month that he will veto the bill if it passes Congress because, he said, it will only jeopardise the chance to end the nuclear stalemate with Tehran through diplomacy. Advertisement "New sanctions passed by this Congress, at this moment in time, will all but guarantee that diplomacy fails – alienating America from its allies, making it harder to maintain sanctions, and ensuring that Iran starts up its nuclear programme again," he said. "It doesn't make sense. And that's why I will veto any new sanctions bill that threatens to undo this progress." Since Obama's warning, a number of Democrats, who are supporting the bill, have said they will wait until at least the end of March before voting in favour of the proposed legislation. Without the help of the Democrats, the bill will fail to gather a veto-proof majority.

Iran's top priority but Obama's political capital holds off override now

Everett, 1/21/15 (Burgess, "Democratic Iran hawks hesitate on overriding Obama; Obama's overtures to Senate Democrats complicate matters for Republicans working on sanctions bills," http://www.politico.com/story/2015/01/iran-senate-democrats-barack-obama-114467.html?hp=r1_4, JMP)

Republicans are eager to rumble with the White House over sanctions on Iran, but they may have trouble getting President Barack Obama's Democratic critics to go along. A day after Obama vowed to veto any bill that could jeopardize nuclear talks with Tehran, Republicans were working on two pieces of legislation that could move in conjunction with Israeli Prime Minister Benjamin Netanyahu's address to Congress on Feb. 11. But it quickly became clear that Republicans have a problem: Senate Democrats who might not like Obama's policies on Iran but may not be ready to override their president, especially after the forceful arguments he made in the State of the Union. In interviews Wednesday, several Democrats who had supported a previous version of Iran legislation sponsored by Sen. Mark Kirk (R-Ill.) said they are reconsidering their positions. Meanwhile, a previous version of an Iran bill offered by Sen. Bob Corker (R-Tenn.) did not have any Democratic co-sponsors. Last week, at the Senate Democratic retreat in Baltimore, Obama forcefully made a case against further Iran legislation. He did the same thing Tuesday night in front of millions of Americans, saying he would veto any sanctions legislation because it would "all but guarantee that diplomacy fails." Obama's words appear to be sinking in. "I'm considering very seriously the very cogent points that he's made in favor of delaying any congressional action," said Sen. Richard Blumenthal (D-Conn.). "I'm talking to colleagues on both sides of the aisle. And I think they are thinking, and rethinking, their positions in light of the points that the president and his team are making to us." Asked if he's spoken directly to Obama about Iran, Blumenthal said: "The president and his staff are in touch with all of us." Sen. Mark Warner (D-Va.) said he is actively weighing the president's position against Warner's own belief that Congress needs to keep pressure on Iran. Even the hawkish Sen. Robert Menendez (D-N.J.), who said Wednesday that the administration's comments sound "like talking points straight from Tehran," was noncommittal on whether he would again co-sponsor Iranian sanctions legislation that he once led. "I have no idea yet," Menendez said. The issue, said Sen. Chuck Schumer of New York, is one of timing. While Democrats and Republicans alike want to be tough on Iran, the president's party is more open to giving Obama some breathing room. "There's overwhelming support to toughen up the sanctions," said Schumer, a member of Democratic leadership who co-sponsored sanctions legislation last year. "The question is when. At times in the past the president asked for a little time, until March. That's something people are looking at." Kirk's bill would impose new sanctions if diplomatic talks fall apart or Iran violates an interim deal. Corker's would allow Congress an up-or-down vote to reject or approve any final deal between the U.S. and its allies and Iran. Sources familiar with the process in both chambers said Republicans have made no final decision on which bill will provide the base for the legislation. Another option is merging versions of the two bills, though Corker doubted that would happen. The House is also working on new sanctions legislation. A decision is expected in the near future, with a vote perhaps as early as February, given the support Iran legislation enjoys from Senate Majority Leader Mitch McConnell (R-Ky.) and House Speaker John Boehner (R-Ohio). On the GOP bill to approve the Keystone XL oil pipeline, Obama swiftly came out with a veto threat because it was clear not enough Democrats in Congress would vote to override him. That's not the case for Iran: Sixty senators publicly supported sanctions legislation in the last Congress, but it was widely believed that more Democrats would have voted for the bill if it had come to the floor. Senate Minority Whip Dick Durbin (D-Ill.) said the vote would be a nail-biter if it were held today. But he expects enough Democrats to have Obama's back to reject an override, whether on tightening sanctions or requiring congressional

approval for a nuclear deal. "If I had to be pushed, I'd guess there's at least 34 that would say: 'This is premature, we should wait,'" Durbin said in an interview. "If there's anything that we would do that would jeopardize the negotiations, I think many Democrats would oppose it." Republicans think Democrats are bluffing and will be unable to oppose hardline legislation on Iran, whatever form it takes. But they acknowledge that **it's a tricky calculus to get to 67 votes when the president is leaning so hard on Democrats to hold the line**, which might require legislation quite different from what's been proposed so far. "At some point, we're going to get to the magic 67 and be able to override this veto," said Senate Majority Whip John Cornyn (R-Texas). "We're in the process of figuring out what that would look like to command the broadest possible support in the Senate. And then we'll have that debate with the president." Of course, the **GOP may have further problems getting to 67 thanks to** defections from Sens. Rand **Paul** (R-Ky.) and Jeff **Flake** (R-Ariz.), who have stayed away from new sanctions legislation. "While negotiations are going on, I worry that we will fracture our coalition," Flake said of Western nations that have coordinated on Iran negotiations and sanctions. "I want to keep that coalition together." Secretary of State John **Kerry aims to have a framework for a deal by March, so the race is on in the Senate** to beat him to the punch. The Banking Committee postponed its vote on the Kirk bill this week but will move swiftly next week with a hearing Tuesday, a classified briefing from the administration on Jan. 28 **and a committee vote Jan. 29**, Chairman Richard Shelby (R-Ala.) said. **Corker is also ramping up** activity — he held a hearing on Iran on Wednesday and is moving toward developing a new draft bill.

(--) Democrats are backing down—bill won't pass over Obama's veto now:

Fox News, 1/27/2015 ("Senate Dems back down on Iran, say won't support sanctions bill yet," <http://www.foxnews.com/politics/2015/01/27/senate-dems-back-down-on-iran-say-wont-support-sanctions-bill-yet/>, Accessed 2/19/2015, rwg)

A group of Senate Democrats on Tuesday eased off their push for new Iran sanctions, potentially taking the wind out of the bipartisan effort to muscle through the legislation in the face of a President Obama veto threat. In a reversal, Sen. Bob Menendez, D-N.J., announced at a Senate committee hearing that he and his Democratic colleagues had written to Obama telling him they would hold off on supporting legislation that he helped write. The bill was co-authored by Republican Illinois Sen. Mark Kirk.

Not enough Democrats to override an Obama veto now:

Fox News, 1/27/2015 ("Senate Dems back down on Iran, say won't support sanctions bill yet," <http://www.foxnews.com/politics/2015/01/27/senate-dems-back-down-on-iran-say-wont-support-sanctions-bill-yet/>, Accessed 2/19/2015, rwg)

The pushback from Menendez and his colleagues could stall the legislation. The Senate banking committee, which held Tuesday's hearing, is still set to consider and vote on the bill on Thursday. Asked for comment on Menendez' announcement, an aide to Kirk said only that the bill would be introduced "shortly" and has "broad bipartisan support." **But if enough Democrats peel off, it could deprive the 54-seat Republican majority of the 60 votes needed to pass the legislation. At the least, supporters likely would not have the two-thirds majority needed to override a presidential veto.** The change-up could, for now, end up averting -- or delaying -- a

looming veto showdown between Congress and Obama. In his State of the Union address, Obama bluntly threatened to veto any bill that could disrupt nuclear talks.

Sanctions won't pass now because of Obama's lobbying—you should evaluate uniqueness through the lens of political capital:

Burgess Everett, 1/27/2015 (staff writer, "Dems give Obama 2 months to reach Iran deal," <http://www.politico.com/story/2015/01/iran-nuclear-deal-sanctions-bob-menendez-114632.html>, Accessed 1/30/2015, rwg)

President Barack Obama's exhaustive lobbying effort with Capitol Hill Democrats is paying off: The party is giving him major breathing room to finish nuclear negotiations with Iran. Senate Democrats, led by Iran hawk Robert Menendez of New Jersey, said Tuesday that they will give Obama two months to reach a deal on the country's nuclear program before they vote for new sanctions. At the same time, House progressives are urging their colleagues to hold off on moving any legislation that would tighten economic penalties on Iran. Menendez led a group of at least 10 Senate Democrats who told the president in a letter Tuesday morning that they will not support final passage of a sanctions bill until March 24. That will allow the U.S. and other Western powers time to reach a framework for a deal scaling down Iran's nuclear program. Obama has said he will veto a sanctions bill if it comes to his desk while negotiators race to reach a deal, arguing that even the conditional sanctions bill being led by Sen. Mark Kirk (R-Ill.) would disrupt the fragile talks.

Iran sanctions bill won't pass now—Obama opposition is key:

Kara Rowland, 1/29/2015 (staff writer, "Senate panel approves Iran sanctions bill, Dems prepare to hit pause," <http://www.foxnews.com/politics/2015/01/29/senate-panel-poised-to-vote-on-iran-sanctions-bill-as-dems-prepare-to-hit-pause/>, Accessed 1/30/2015, rwg)

The Senate banking committee advanced the bill on an 18-4 vote, with six Democrats voting for it. The legislation would impose additional sanctions on Iran if international negotiators fail to reach a deal on the country's nuclear program by June 30. Sponsors of the Nuclear Weapon Free Iran Act of 2015 have argued the measure is necessary to keep pressure on Tehran as well as ensure that Congress has a say on any final agreement. "The president and other officials have said that Congress should not interfere, that a deal is close, that the situation is delicate, and that an attempt to legislate any additional sanctions may give Iran an excuse to walk away from the negotiating table," committee Chairman Richard Shelby said at a Tuesday hearing. "It has been my experience that if a party is negotiating in good faith and with the intent to reach an agreement, they will seek common ground, not an excuse to walk away." Senators on both sides of the aisle share the Alabama Republican's sentiment -- seven Democrats are cosponsoring the legislation. But a decision by Democratic supporters to yield to White House pressure leaves the bill short of the votes needed to pass the full chamber for now. Democrats have said they'll withhold support until after March 24, the deadline by which negotiators hope to have a political framework agreement in place. After that, Democrats plan to reassess whether the sanctions bill is needed.

(--) Obama winning the fight—he's using political capital to convince the Democrats not to vote for the bill:

Jonathan Tobin, 1/27/2015 (staff writer, "Is Obama Winning the Fight Against More Iran Sanctions?" <https://www.commentarymagazine.com/2015/01/27/obama-winning-fight-iran-sanctions/>, Accessed 2/1/2015, rwg)

Yesterday, **backers of increased sanctions on Iran** scored an important victory when Senator Chuck Schumer, the third-ranking Democrat in the Senate pledged that he would back the bill being circulated by Republican Mark Kirk. The bill, which would effectively shut down Iran's oil trade if the current nuclear negotiations fail, already has enough votes to pass in the Senate as well as in the House of Representatives. But it needs significant Democratic support in order to override President Obama's threatened veto of the legislation. But, as Politico reports, **the full-court press against the bill being carried out by the White House is having an impact on the Democratic caucus**, even among those who backed the same bill last year. Though the GOP's gain of nine seats last November should have improved the chances of success, **it appears that pressure from Obama is causing even some stalwart friends of Israel to drop out or to express reluctance to vote against the administration. If this trend continues, the president may get the blank congressional check he needs to pursue a policy of détente with Tehran** that will effectively allow it to become a threshold nuclear power.

Support for sanctions is weakening now

Ben-Ami, 1/23/15 --- president and founder of J Street, which advocates for a two-state resolution to the Israeli-Palestinian conflict (Jeremy, "Iranian sanctions support weakening," <http://chicago.suntimes.com/other-views/7/71/316331/iranian-sanctions-support-weakening>, JMP)

This week's surprise announcement that Israeli Prime Minister Benjamin **Netanyahu will visit Washington** to address a joint session of Congress has been framed as yet another showdown between the current Israeli government and the White House, in particular, over their dueling strategies on how to prevent a nuclear-armed Iran. But **when the prime minister arrives** in the United States, **he will encounter a broad public consensus that supports the diplomatic approach advanced by the U.S. administration** as the best means to keep Iran from acquiring nuclear weapons, and opposes legislating new sanctions while negotiations are ongoing. Indeed, **within 24 hours of President Obama's State of the Union address, it became clear that there is far less support for new sanctions than** some observers perhaps **expected**. In his speech, the President rightly touted the positive effect of the November 2013 interim agreement with Iran, which rolled back some of the most concerning aspects of Iran's nuclear program, and noted that world powers now have a chance to negotiate a final agreement that would ensure that Iran does not acquire nuclear weapons. But he warned that he would not hesitate to veto any new sanctions bill, which would "all but guarantee that diplomacy fails — alienating America from its allies; and ensuring that Iran starts up its nuclear program again." In a matter of hours, the President's sentiments were echoed by former Secretary of State Hillary Clinton, who called new sanctions "a very serious, strategic error," and by top Congressional Democrats like Minority Leader Nancy Pelosi and Senator Barbara Boxer. And in the Washington Post, the

foreign affairs chiefs of the European Union, the United Kingdom, Germany and France wrote together that “rather than strengthening our negotiating position, new sanctions legislation at this point would set us back.” Reports even emerged on Wednesday night that officials from the Israeli intelligence agency Mossad may have gotten involved, informing the White House and Members of Congress that new sanctions would cause the Iran talks to collapse. **The strong case against new sanctions appears to be making a difference** on Capitol Hill, **where a crop of alternative bills is now emerging with more bipartisan support.** That the sanctions bills are **struggling to get off the ground is significant.** Not long ago, when Iran still refused to negotiate, sanctions legislation regularly passed the Senate with overwhelming bipartisan support. But today, **more and more** lawmakers **understand that these negotiations have changed the equation.** While there may come a time in the future when more sanctions become necessary — if talks fail, or if Iran violates a final deal — moving forward with legislation at this time would be dangerous and counterproductive to our interests. It would also give the staunchest Iranian hardliners exactly what they want. Just as these negotiations have challenged our own politics, Deputy Secretary of State Tony Blinken testified this week that “Iran is not immune to politics, either.” Current Iran sanctions succeeded in bringing Iran to the negotiating table, delaying the possibility of military confrontation and creating an opening for a diplomatic resolution of this crisis. This has pitted moderates who support a deal, like Iranian President Hassan Rouhani, against more conservative rivals who are looking for any excuse to kill the talks. How this political struggle plays out may very well depend on the clear choices facing Congressional lawmakers in the coming weeks. As President Obama and others have argued, **we don’t yet know whether these negotiations with Iran will produce a deal. But we do know what will happen if they fail:** Iranian **hardliners will grow stronger,** Iran will resume and even expand its most concerning nuclear activities, and **the Middle East will inch closer to a war** that would put Israel and other allies in jeopardy. That risk alone makes this diplomacy worth it, and makes efforts to sabotage it with new sanctions all the more irresponsible.

Democrats are increasingly reluctant to rebuke Obama:

Burgess Everett and Manu Raju, 1/22/2015 (staff writers, “Republicans stuck between two paths on Iran,” <http://www.politico.com/story/2015/01/republicans-iran-114521.html>, Accessed 1/30/2015, rwg)

Republicans are clashing over the best strategy for confronting President Barack Obama over his attempts to strike a nuclear deal with Iran, as GOP leaders try to build enough Democratic support to override a threatened veto. **Adding to the murkiness is a heightened Democratic reluctance to rebuke their president** and mixed messages from the Israelis about what exactly they want Congress to do on Iran.

Democrats aren’t on board with sanctions yet:

Burgess Everett and Manu Raju, 1/22/2015 (staff writers, “Republicans stuck between two paths on Iran,” <http://www.politico.com/story/2015/01/republicans-iran-114521.html>, Accessed 1/30/2015, rwg)

While Republicans sort out exactly what to do, Democrats are sitting back and mulling Obama’s veto threat. Though Kirk said Sen. Richard Blumenthal (D-Conn.) is prepared to co-sponsor his sanctions bill, Blumenthal’s office said that’s not yet decided. And a Democratic source watching

the Iran negotiations closely said no other Democrats are yet committed to backing the sanctions bill, although Kirk's office is working to match seven expected GOP supporters on Monday with an equal number of Democrats. It's going to be a tough task. To the president's party, timing is everything. The administration has set a March deadline for having a framework of a deal with Iran, and Obama's veto threat has Democrats reluctant to defy an emboldened president. On Thursday, White House chief of staff Denis McDonough made clear that the White House opposes both GOP approaches on Iran. "Rather than apply additional sanctions now or to have Congress try in some kind of unprecedented way [to] insert itself as the decider on this deal, we think that we ought to be given the space to make this deal permanent," McDonough told POLITICO's Mike Allen. That means that whatever passes Congress is likely to run into a veto and require 67 votes in the Senate to override Obama. Democrats are struggling to compute how either GOP proposal gets there. Each bill is likely to have its own group of Democratic detractors — and if the two bills are combined, it might push the vast majority of Democrats to vote it down.

No override now, but continued PC is key

Wong, 1/15/15 (Kristina, "Expert: Obama to veto new Iran sanctions,"

<http://thehill.com/policy/defense/229718-expert-obama-near-certain-to-veto-new-iran-sanctions>, JMP)

"If the Congress passes a new sanctions bill that the administration considers damaging to prospects for negotiations, President Obama is very likely to veto it," wrote Robert Einhorn, former State Department adviser for nonproliferation and arms control, in the National Interest on Wednesday.

"Senior administration officials would then go into overdrive in finding the 34 Senate votes necessary to sustain the veto," wrote Einhorn, a senior fellow at the Brookings Institution.

Einhorn predicted that some Democrats will vote to override the veto, but it is "likely that the administration will have the votes to sustain the veto and prevent legislation potentially damaging to the negotiations from being enacted."

"While the Republican-controlled Congress will undoubtedly give the administration a tough time, it is likely that President Obama will be able, without legislative interference, to continue negotiating an agreement that he believes is in the U.S. interest," Einhorn wrote.

Sens. Robert Menendez (D-N.J.) and Mark Kirk (R-Ill.) are preparing to introduce a new bill that would impose sanctions on Iran if it walks away from international negotiations to limit its nuclear program, or if it violates any agreement reached by a June 30 deadline.

The senators completed the proposed legislation this week, and plan to introduce the bill before a deal is reached, Bloomberg reported. The Obama administration opposes the bill, and any legislation that could scuttle a deal with Iran to prevent its development of a nuclear weapon.

House members overwhelmingly passed an earlier version of the bill in 2013, but a bill in the Senate was held up by then-Majority Leader Harry Reid (D-Nev.), out of deference to the White House.

The president pledged in his 2014 State of the Union address to veto any Iran sanctions bill that Congress sent to him.

New Majority Leader Mitch McConnell (R-Ky.) has promised to bring the legislation, which has the backing of a majority of senators, for a vote this year.

Earlier this week, the **White House reiterated its "strong opposition** to additional sanctions legislation that could derail the negotiations and isolate the United States from our international coalition."

Obama can swing key senators. This ev is the best to analyze vote counts.

Diamond, 1/9/15 (Jeremy, "New Congress, new nuclear showdown over Iran,"

<http://www.cnn.com/2015/01/09/politics/iran-sanctions-fight-republican-congress/>, JMP)

Washington (CNN) Iranian and American negotiators preparing to square off in Geneva next week over Iran's nuclear ambitions will also be eying another showdown brewing in Washington.

One year after a Republican-led coalition in the Senate came up just short of a deal, GOP lawmakers are poised to wield their new power in the Senate to push a bill authorizing additional sanctions against Iran. But the new 54-member **majority doesn't guarantee that Republicans can muster the 67** votes they need **to override** a presidential veto, **and the fight is already underway for the** votes that could fill the **gap**.

With fewer than two months until diplomats' March 1 framework agreement deadline, and **expecting the White House to start knocking on swing senators' doors, supporters know the clock is ticking to pass a sanctions** bill they say will ratchet up pressure on Iran. **But** for opponents of additional sanctions, the ticking is more like a time bomb as **a sanctions bill will torpedo negotiations and set the U.S. on a path to war** with Iran, they claim.

For Sen. Mark Kirk, the Republican half of the Kirk-Menendez sanctions bill he has pushed for the last three years, the sooner a sanctions bill hits the Senate floor, the better -- both politically and policy-wise.

"If the Senate was allowed to vote tomorrow, I would be able to get two-thirds," Kirk said Sunday in a phone interview. "Now is the time to put pressure on Iran especially with oil prices so low. We are uniquely advantaged at this time to shut down this nuclear program."

Sen. Lindsey Graham (R-South Carolina), another major proponent of the legislation, told CNN last month the Kirk-Menendez bill "will come up for a vote in January," a pledge he made the same day to Israeli Prime Minister Benjamin Netanyahu in a meeting in Jerusalem.

Kirk said he backed that timing but insisted that it depends on Senate Majority Leader Mitch McConnell. A McConnell spokesman called the legislation "a priority," but said there isn't yet a schedule for a sanctions bill.

Republicans have been clamoring for additional sanctions on Iran, but with control of Congress in their hands, Republican lawmakers will also have to own the consequences of sanctions legislation -- which the President, State Department and Iranian officials have warned could derail negotiations.

"We have long believed that Congress should not consider any new sanctions while negotiations are underway, in order to give our negotiators the time and space they need to fully test the current diplomatic opportunity. New sanctions threaten the diplomatic process currently underway," a senior administration official told CNN.

The Kirk-Menendez bill that died in the Senate last year would reimpose sanctions on Iran if Obama couldn't certify that Iran doesn't finance terror groups that have attacked Americans and would keep Iran from maintaining low-level nuclear enrichment in a final deal, just a few terms that are much stricter than the current framework for negotiations between Iran and the P5+1 world powers.

Those congressional provisions are "poison pills," according to Dylan Williams, head of government affairs at J Street, a group that bills itself as pro-Israel. It lobbied heavily on the issue last year and is ramping up for another forceful push.

"All of these things are poison pills, far from the clean sanctions, just-if-things-go-wrong idea," Williams said. "We know that many if not most of the people pushing for legislation don't want diplomacy to work."

J Street challenges the Israel lobby from within

Kirk has already been working with Sen. Bob Menendez, of New Jersey, his Democratic partner on the bill, to rework some of its language -- changes that could potentially draw more Democratic support. The pair are still working on final language for the bill, which drew 59 cosponsors last year, though Kirk said he is working to stave off as many changes as possible -- "The more changes, the worse," he said.

The Illinois Republican expects a high-profile challenge from the White House and its allies, but he will be getting his own backup from some Capitol Hill heavyweights: the American-Israel Public Affairs Committee, or AIPAC, which typically spends more than \$2.5 million a year on lobbying, according to the Center for Responsive Politics.

"I think they're pretty damned strong. This would be the No. 1 thing for them," Kirk said of AIPAC.

Intense lobbying from AIPAC could help the sanctions supporters win back the four Democrats who joined 13 others in cosponsoring the sanctions bill last year, but later backtracked their support.

Sens. Kirsten Gillibrand of New York, Joe Manchin of West Virginia, Richard Blumenthal of Connecticut and Chris Coons of Delaware rejected the idea of moving forward amid negotiations after the White House and allies made its push on Capitol Hill to keep the measure from a floor vote.

"I did not sign it with the intention that it would ever be voted upon or used upon while we were negotiating," Manchin said on MSNBC after Obama talked about Iran in his State of the Union address. "I signed it because I wanted to make sure the president had a hammer if he needed it and showed them how determined we were to do it and use it if we had to."

After talks failed to materialize into an agreement by the November 2014 deadline, some Democrats have started to lose patience with the stop-and-stall pace of negotiations with Iran and are facing pressure from groups like AIPAC to support a sanctions bill, though the White House insists the negotiations have yielded tangible results: rolling back Iran's nuclear program during negotiations.

But even if Kirk, Menendez and their allies can pressure those four Democrats into signing on, they will need to pull three more Senate Democrats who didn't cosponsor the bill last year to secure the 15 Democrats needed to override a presidential veto.

And they won't just be targeted by AIPAC. A coalition of dove organizations is already putting the gears in motion for what they expect to be the toughest battle yet on this issue, and while they're clear-eyed about the uphill climb they face, they dismiss the overconfident stride of pro-sanctions leaders.

These groups will look to paint any new sanctions as a step onto the warpath with Iran and show wary Democrats that they have the grassroots backing to stave off attacks from groups like AIPAC.

Clinton defends Obama on Iran talks

More than 400 faith leaders and activists traveled to D.C. in late November to lobby Congress against the sanctions in a day of action organized by the Friends Committee on National Legislation, a Quaker-founded organization, and the group plans to drive its 50,000 supporters to flood Congress with calls and letters in the weeks ahead.

"The real trick that we have to do is really to make that opposition -- both in the public and that opposition on the Hill -- to really make it become public and to amplify those voices," said Kate Gould, the group's lead lobbyist on the issue. "Because right now you hear from, it's Lindsey Graham and (Marco) Rubio, who are very confident in their prognosis and have made it sound like it's inevitable that these sanctions will pass with a veto-proof majority."

To accomplish that, FCNL has worked with other groups like J Street and about 70 other groups in an expanding coalition opposing the sanctions in an effort to paint the debate not as a benchmark for support for Israel, but rather what Gould calls a "wider, anti-war issue" that resonates with a war-weary public.

Their ev is just a reason Obama must remain strong to lobby Congress

Wong, 1/19/15 (Kristina, "Iran fight tests Obama's clout,"

<http://thehill.com/policy/defense/229998-iran-fight-tests-obamas-clout>, JMP)

Supporters of Iran sanctions legislation are betting they can secure the 67 Senate votes needed to override a veto from President Obama.

Sens. Robert Menendez (D-N.J.) and Mark Kirk (R-Ill.) are moving quickly to bring their bill to the floor, defying warnings from administration officials who say the legislation could blow up the negotiations with Iran over its nuclear program.

"We have a fighting chance of getting strong, overwhelming support as we have in the past," a senior congressional aide said Monday.

The Senate Banking, Housing and Urban Affairs Committee is planning to debate and vote on the sanctions bill Thursday. While it's not clear when the bill could come up for a floor vote, senators say Majority Leader Mitch McConnell (R-Ky.) wants to act on it "very quickly."

White House officials vehemently oppose the legislation, fearing it could sink the chances of reaching a long-term deal to dismantle Iran's nuclear program.

Proponents of the sanctions bill have taken issue with the White House's arguments, noting that the punishments would only take effect if Iran walked away from the talks or violated the terms of a deal.

The White House might have to exert heavy pressure on Senate Democrats when the Iran bill hits the Senate floor.

If all 54 Senate Republicans voted for the sanctions bill, they would need only 13 Democrats to secure a veto-proof majority. Twelve Democrats, including Menendez, co-sponsored an earlier version of the legislation and still serve in the Senate.

The legislative fight has stoked tensions between Obama and Menendez, the ranking member of the Foreign Relations Committee, who was angered by the president's move last year to ease travel and trade restrictions on Cuba.

The two men had a "forceful" exchange during a Senate Democratic retreat Friday, with Obama reportedly urging senators against actions for short-term political gain, according to The New York Times. Menendez reportedly stood up and said he took "personal offense."

Supporters of the sanctions bill stopped short of predicting victory but said they are moving forward with a veto-proof majority in mind.

"We're going for a law. ... We've had longstanding bipartisan engagement on this issue," the aide said, pointing to four previous instances when Congress has passed sanctions legislation with more than enough votes to overcome a veto.

Both sides of the debate agree it will be a close fight, with all eyes on the Democrats who are likely to break with the White House.

Sen. Bob Casey Jr. (D-Pa.) an original co-sponsor of sanctions legislation, told Bloomberg last week he supports “moving forward” on the bill before the June 30 deadline for finishing the talks.

Casey and three other Democratic co-sponsors of the original bill recently sounded a hawkish tone on Iran sanctions, voicing concerns that the regime has been violating the sanctions already in place.

“As we continue our diplomatic efforts, it is vitally important that existing U.S. sanctions continue to be strictly enforced,” wrote Casey and Sens. Charles Schumer (D-N.Y.), Richard Blumenthal (D-Conn.) and Kirsten Gillibrand (D-N.Y.) in a Jan. 2 letter to Treasury Secretary Jack Lew.

Schumer, a strong backer of the Menendez-Kirk bill and strong supporter of Israel, has previously whipped votes for the sanctions bill.

Sen. Ben Cardin (D-Md.), another original co-sponsor, said Sunday he also supports imposing sanctions but was vague on what timing he would prefer.

The senior congressional aide said proponents are not taking any Democratic votes for granted, regardless of whether a senator has backed sanctions legislation in the past.

“The votes are what count at the end of the day. And, unlike last year, it’s a certainty that senators will vote on Iran soon,” the aide said.

It isn’t certain that the sanctions bill would get unanimous support from Republicans.

Sen. Lindsey Graham (R-S.C.) said Sunday on NBC’s “Meet the Press” he would agree to table the bill if Obama agrees to let Congress approve or disapprove of any deal.

Obama will win battle over Iran sanctions and prevent veto override

Nakashima, 1/21/15 --- national security reporter for The Washington Post (Ellen, “Administration and lawmakers clash over Iran policy,”

http://www.washingtonpost.com/world/national-security/administration-and-lawmakers-clash-over-iran-policy/2015/01/21/e8be448a-a1a2-11e4-9f89-561284a573f8_story.html, JMP)

The determination of a group of bipartisan lawmakers to pass measures they believe will raise pressure on Iran escalates a high-stakes battle with the Obama administration. The White House has warned that new sanctions will scuttle hopes of reaching an agreement with Iran and unravel an international coalition enforcing existing sanctions.

But members of Congress, including Obama’s nominal Democratic allies on foreign policy, expressed no willingness on Wednesday to cede the issue of how to best deal with Iran in the run-up to the July deadline for the talks.

Sen. Bob Corker (R-Tenn.), chairman of the Foreign Relations Committee, wants the administration to submit any final deal to Congress for approval. Other key lawmakers want legislation that would impose a series of escalating penalties should the talks fail. Still others suggested a nonbinding resolution stating Congress's intent to impose crippling sanctions if negotiations fail. Whatever the approach, members from both sides of the aisle are insisting on a role in shaping the outcome of the talks, pushing back against the administration's appeal to give diplomacy room to work.

"Over the past 18 months, we have been moving closer to their [the Iranians'] positions on all key elements," said Sen. Robert Menendez, the ranking Democrat on the Foreign Relations Committee, at a testy three-hour hearing. "The more I hear from the administration in its quotes, the more it sounds like talking points that come straight out of Iran."

Administration officials insisted that further sanctions or other pressure would only risk undermining the diplomatic effort by the world powers. "I know the intent is to further increase pressure on Iran and, in so doing, strengthen the hand of our negotiators," Deputy Secretary of State Antony J. Blinken said. But, he said, the administration believes that additional sanctions are unnecessary at this time and "risk unraveling" the current sanctions regime. "Iran is well aware that the sword of Damocles hangs over its head," he said. "It needs no new sanctions."

Menendez has drafted legislation with Republican Sen. Mark Kirk of Illinois, who sits on the Banking Committee, that would not impose sanctions for the duration of the talks. But if the negotiations fail, the bill would reimpose sanctions lifted in the interim and escalate them in a series of steps.

The **high emotions** on display during the hearing **suggest** that **both sides are girding for an all-out effort** on the issue. As the hearing proceeded, on the other side of the Capitol, aides to House Speaker John A. Boehner (R-Ohio) announced that he is inviting Israel Prime Minister Benjamin Netanyahu to address a joint session of Congress on Feb. 11 on the threats posed by Iran and radical Islam. Netanyahu has been skeptical of the talks and has taken the position that any agreement should not leave Iran as a "nuclear threshold" country, one that could move to acquire nuclear weapons quickly.

"Clearly, there's a majority in Congress in support of additional sanctions," said Robert Einhorn, a senior fellow at the Brookings Institution and a former member of the U.S. team negotiating with Iran. "But whether they have the 67 votes to override a veto is another story. **The administration will go all out to gain** the necessary **34 votes** to sustain a veto."

Even Corker admits

Zengerle, 1/15/15 (Patricia, "Despite White House Warnings, Congress Will Push Ahead With Iran Sanctions," http://www.huffingtonpost.com/2015/01/14/iran-sanctions_n_6474642.html, JMP)

WASHINGTON, Jan 14 (Reuters) - Republican and Democratic U.S. lawmakers will press ahead with a plan for more sanctions on Iran, the chairman of the Senate Foreign Relations Committee said on Wednesday, despite White House warnings that they risked derailing nuclear talks.

Lawmakers, who say they fear Obama administration negotiators may not take a hard enough line with Tehran, are also at work on a separate bill to have Congress approve any final agreement on Iran's nuclear program, Senator Bob Corker, the chairman, told Reuters in an interview.

"There's continual efforts to try to figure out a way for Congress to play a role to strengthen whatever final deal may occur," the Tennessee Republican senator said.

Republican Senator Mark Kirk and Democratic Senator Robert Menendez are finalizing a bill for tougher sanctions on Iran if there is no final nuclear deal by June 30.

The Senate Banking Committee is due to hold a hearing on Iran sanctions on Tuesday, said Corker, a member also of that panel.

Kirk and Menendez introduced a sanctions bill in December 2013, but it did not come up for a vote in the Senate, then controlled by President Barack Obama's fellow Democrats, who lost control of the chamber because of big losses in November elections.

The White House has insisted passage of a sanctions bill now - even one that would impose new restrictions only if there is no deal by the deadline - could prompt Iran to back out of the nuclear talks with six world powers.

Although Republicans now hold a 54-46 seat majority in the Senate, Corker said he did not know if there would be enough votes - 67 - needed in the Senate to override an Obama veto of any Iran legislation.

UQ: Republicans Will Push Sanctions Now

(--) Republicans will push sanctions now—sanctions threaten the entire deal:

Trita Parsi, & Tyler Cullis, 2/13/2015 (staff writers, “How Congress Can Learn to Stop Scuttling and Love the Iran Nuke Talks,” <http://foreignpolicy.com/2015/02/13/how-congress-can-learn-to-stop-scuttling-and-love-the-iran-nuke-talks/>, Accessed 2/19/2015, rwg)

Now that President Barack Obama has promised to veto any legislation that imposes new sanctions on Iran, a clash between the White House and Congress seems inevitable. Republican congressional leaders have vowed to push ahead with new sanctions, despite the potential costs to the international effort to assure that Iran’s nuclear program is exclusively peaceful. Those opposed to diplomacy with Iran have even upped the ante, inviting Israeli Prime Minister Benjamin Netanyahu to address a joint session of Congress on March 3, where he will inevitably denounce Obama’s diplomacy with Iran. The dispute between the White House and the hard-line factions on Capitol Hill seems intractable — and may even derail efforts at reaching an agreement in the ongoing talks with Iran completely. It doesn’t have to be this way. There is a solution that can satisfy both the White House and Congress and serve broader U.S. interests. It may sound crazy, but Congress could actually take a bold move that would allow it to get everything that Congress members claim to want in the negotiations, while actually helping to move along, rather than just scuttle, the talks. Two major sets of hurdles remain in the talks with Iran: one concerning the size and scope of the country’s future enrichment capacity, the other the pace at which U.S. and other international sanctions are lifted. To get the Iranians to move on the first hurdle, Washington needs to take action to address the second. The greatest problem facing the talks with Iran is a lack of confidence and good faith. The Iranians have insisted repeatedly that the United States remove its most major sanctions at the front end of any nuclear deal, citing the fickle nature of Congress and the uncertainty that the next administration will honor the agreement. Understandably, Washington has rejected this demand, believing that sanctions preserve U.S. leverage throughout the duration of a nuclear deal and thus should only be removed gradually and in tandem with Iran fulfilling its nuclear-related obligations. Bridging this gap by offering more sanctions relief or threatening more sanctions may be futile. The problem is not that Tehran doubts Washington’s commitment to imposing more sanctions. The problem is, instead, that the Iranians doubt Obama’s ability to follow through on the promise of sanctions relief already on the table due to the tensions between the White House and Congress that are clearly visible from Tehran. The problem is, instead, that the Iranians doubt Obama’s ability to follow through on the promise of sanctions relief already on the table due to the tensions between the White House and Congress that are clearly visible from Tehran. The less confidence the Iranians have that the American side can uphold its end of an agreement, the more likely the Iranians will hold back from making the key compromises necessary to seal a deal and resolve the decade-old nuclear dispute. Only increasing the credibility of the sanctions relief already offered can actually bridge this gap.

(--) Congress will push for sanctions on Iran:

Jennifer Rubin, 2/10/2015 (staff writer, “The Iran deadline is not a deadline,” <http://www.washingtonpost.com/blogs/right-turn/wp/2015/02/10/the-iran-deadline-is-not-a-deadline/>, Accessed 2/19/2015, rwg)

There seems to be no limit to the administration's "flexibility," that is, no bottom line on any significant issue. "There has always been a fear that these talks would go on endlessly while Iran continues its march to a nuclear weapon," a source at a pro-Israel group remarked. "But Congress is getting increasingly impatient and prepared to act on new sanctions if this deadline is not observed." We would hope so.

UQ: Deal Now

Negotiations are succeeding—Iran’s nuclear capability is decreasing because of negotiations:

Daniel Larison, 1/29/2015 (staff writer, “Cotton’s Dishonest Attack on Diplomacy with Iran,” <http://www.theamericanconservative.com/larison/cottons-dishonest-attack-on-diplomacy-with-iran/>, Accessed 1/30/2015, rwg)

Iran may not be peaceful, but it is a regime that desires its own preservation and acts accordingly. It is as rational an actor as any other authoritarian state with which the U.S. has had dealings over the decades. To assert that it is not a rational actor requires us to ignore over three decades of self-interested behavior by this regime. Cotton portrays the negotiations with Iran as an “endless series of concessions,” which is either misinformed or dishonest. Since Cotton is not a stupid or poorly-informed person, I have to assume it is the latter. **The U.S. has conceded almost nothing in these talks.** Acknowledging that Iran can continue limited enrichment gives away very little, since Iran has been able to operate without any limitations for a decade before the interim agreement was negotiated. In return for agreeing to minimal Iranian enrichment, **Iran’s nuclear program has been significantly constrained and Iran is now farther away from the ability to build a nuclear weapon than it was a year and a half ago. The U.S. has gained far more from the interim agreement so far than Iran has, and Iran has given up far more than the U.S.** and the other members of the P5+1 have. Cotton’s presentation of this advantageous arrangement as “appeasement” is so thoroughly misleading that it discredits everything else he has to say. His insistence on “complete nuclear disarmament” of Iran (i.e., the abolition of Iran’s nuclear program) is totally unrealistic, and if it became U.S. policy it would commit our government to wage a new and costly war.

Even if there is no final deal—continuing to talk is necessary to prevent war:

Jeremy Diamond, 1/26/2015 (staff writer, “Why the Iran sanctions fight is a big deal,” <http://www.cnn.com/2015/01/26/politics/iran-sanctions-negotiations-explainer/>, Accessed 1/30/2015, rwg)

If talks fall apart, the U.S. and the international community would lose the access it's gained to monitor most of Iran's nuclear facilities and Iran would no longer be constrained to a uranium enrichment threshold, as it has under the terms of the current negotiations. That's why many argue that even if negotiations don't result in a deal, the status quo is better than the alternative. Failed talks would send Iran's nuclear program underground, so to speak, and sound alarm bells in Israel, the U.S. and other Western countries. Israel has already made clear it's willing to do anything it takes to prevent Iran from obtaining a nuclear weapon and promised to act unilaterally if necessary. Obama has insisted the U.S. would not be on an "immediate war footing" if negotiations fail, but he and other U.S. leaders have said nuclear Iran isn't an option. And Saudi Arabia and its Gulf neighbors also won't stand idly by if their top geopolitical foe works to attain a nuclear bomb.

(--) Talks reaching a make or break point now:

David Ignatius, 2/9/2015 (“Proceed with caution on Iran diplomacy,” <http://www.washingtonpost.com/opinions/proceed-with-caution-on-iran->

diplomacy/2015/02/09/35a601e4-b0a7-11e4-854b-a38d13486ba1_story.html, Accessed 2/19/2015, rwg)

The likelihood that the Iran negotiations are reaching a make-or-break point was reinforced by President Obama on Monday when he told reporters: “I don’t see a further extension being useful” if the Iranians don’t agree by late March to a framework that shows the world “that they’re not pursuing a nuclear weapon.” The seeming impasse raises an unpleasant but essential question: What should the United States and Iran do if the talks fail? My answer would be that, at least initially, both sides would be wise to do nothing. It’s like a labor negotiation where both parties conclude that it’s in their interest to keep working by the old rules even after a contract has expired.

Diplomacy with Iran better than an unchecked Iranian nuclear weapon:

Edward-Isaac Dove and Burgess Everett, 2/10/2015 (staff writers, “Impatience grows on Iran,” <http://www.politico.com/story/2015/02/iran-nuclear-deal-115073.html>, Accessed 2/19/2015, rwg)

Many observers believe Obama has staked too much on completing a diplomatic opening to Iran — a country once seen as a member of the “axis of evil” — to back out of the talks now. Reaching a deal that dismantled Iran’s nukes and brought it out of its international isolation could become a key piece of his presidential legacy just as President Nixon restored diplomatic relations with communist China. Moreover, since Iran has frozen its program as talks continue, further delays may be seen as preferable to letting Iran return to pursuing a nuclear bomb unchecked.

Diplomacy is working now—most dangerous parts of Iran’s program have been resolved:

Ali Vaez, 1/28/2015 (staff writer, “Why new Iran sanctions bid has split Washington,” <http://america.aljazeera.com/articles/2015/1/28/why-new-iran-sanctions-bid-has-split-washington.html>, Accessed 2/19/2015, rwg)

The Joint Plan of Action (JPOA, the interim deal reached in November 2013) has already resulted in a verifiable scaling back of Iran’s nuclear activities: It has diluted and oxidized Iran’s entire stockpile of 20 percent enriched uranium and frozen the most worrisome aspects of Tehran’s nuclear program. U.N. nuclear inspectors, on the ground around the clock, have provided monthly certification that Iran has fulfilled its commitments. Some Iranian leaders have warned that new sanctions could end the JPOA, restoring the dynamic of sanctions escalating in tandem with increases in Iran’s nuclear capability.

Diplomacy is comparatively more likely to avoid war even if imperfect

Johns, 1/22/15 - Johns serves on the Council for a Livable World Advisory Board and is a former deputy assistant defense secretary (John, “Avoid new sanctions now and keep Iran’s nuclear program in check” The Hill, <http://thehill.com/blogs/congress-blog/homeland-security/230271-avoid-new-sanctions-now-and-keep-irans-nuclear-program>)

While the politics, slogans and sound bites usually rule the day in Washington, the president reminded Congress that he doesn’t have to run for office again. Instead, his diplomatic efforts

with six world powers and Iran are in pursuit of a historic opportunity to increase our national and global security without yet another war. In spite of steady diplomatic progress to deny Iran a nuclear weapon, some hardliners in Congress are seeking to scuttle any deal. Indeed, Republicans—and a few Democrats—have said they wish to pass a new sanctions bill in the coming weeks while the talks are ongoing – a risky move that experts say will most likely derail this delicate diplomatic process. From the facts on the ground perspective, considerable progress has been made over the past year in rolling back Iran’s nuclear program. To begin with, the interim agreement froze the program in place. Since then, Iran’s nuclear stockpile has been sharply reduced. Iran has agreed to an internationally monitored cap on the enrichment of uranium. Nuclear sites that were previously off-limits are now subject to international inspections and the frequency of inspections have been increased overall. The diplomatic record has similarly demonstrated results. In addition to the historic interim agreement, in September 2013, presidents Obama and Rouhani had the first direct conversation between US and Iranian heads of state in 35 years. And for almost an entire year, the US and its allies have remained united with Russia and China in pursuing a diplomatic outcome while enforcing strict economic sanctions on Iran – despite the fact that these countries often have differing perspectives and international agendas. The bottom line is that Iran is significantly further away from a nuclear weapon today than it was one year ago. What’s more, these results reflect a surprising turnabout from the preceding decade in which Iran’s capabilities grew steadily while the major powers were divided on how to respond. Granted, the election of Rouhani has made an enormous difference. His predecessor Mahmoud Ahmadinejad staked his political career on confrontation with the West, but Ahmadinejad’s policies brought nothing but ruin to the Iranian economy. In response, Rouhani ran on a platform committed to improving relations with the West and won in a landslide. Though these are all very positive developments, we still have a long way to go. Decades of hostility and mistrust won’t change overnight. We’d be fools not to proceed with great caution and make sure that every aspect of any agreement is fully verifiable. However, those who want to torpedo the critical progress that has been made are using tough talk that simply doesn’t line up with the facts. To begin with, there are those who are demanding another round of sanctions despite the fact that neither our allies, nor our own negotiating team, nor the Russians or Chinese, support such a move. Indeed, another round of sanctions would most likely split the international coalition that has been critical to success and principally benefit the Iranian hardliners who are most vocally opposed to Rouhani’s overtures to the West. Even more fancifully, some have argued that the US should be prepared to “force” China and Russia to support further sanctions. This may sound tough, but it is utterly implausible. Even more unrealistic are those agitating for military strikes. Serious national security professionals understand that only a negotiated outcome is realistic. Michael Hayden, the former CIA director and NSA chief, noted that in the Bush administration, “The consensus was that [attacking Iran] would guarantee that which we are trying to prevent — an Iran that will spare nothing to build a nuclear weapon.” As the president said last night, “There are no guarantees that negotiations will succeed, and I keep all options on the table to prevent a nuclear Iran. But new sanctions passed by this Congress, at this moment in time, will all but guarantee that diplomacy fails—alienating America from its allies; and ensuring that Iran starts up its nuclear program again.” We must prevent Iran from obtaining nuclear weapons. The best chance at doing so is to support the president’s challenging, but necessary, diplomatic talks that

continue to make steady progress and yield verifiable results. Having started negotiations, the United States should finish them. Reaching a deal will not only restrain the Iranian nuclear program, but could help restrain others in the future. As frustrating as it is, Congress is going to have to summon the patience to let diplomacy work. Applying additional sanctions may feel cathartic for congressmen like Sen. Rubio, but only a deal can end the Iranian nuclear program.

UQ: AT: UQ overwhelms link/no veto proof majority

Uniqueness doesn't overwhelm the link: there is a chance of a veto-proof majority:

Jeremy Diamond, 1/26/2015 (staff writer, "Why the Iran sanctions fight is a big deal," <http://www.cnn.com/2015/01/26/politics/iran-sanctions-negotiations-explainer/>, Accessed 1/30/2015, rwg)

What's different now? **The November midterm election changed the dynamics** -- Republicans snagged the Senate majority and **Iran sanctions were suddenly back on the table, handing advocates a pretty easy path to 60 votes and even a chance of reaching a veto-proof majority.**

Possibility for a veto-proof majority exists:

Nation, 1/13/2015 ("Don't Let Congress Kill Negotiations with Iran," <http://www.thenation.com/blog/194793/dont-let-congress-kill-negotiations-iran>, Accessed 1/30/2015, rwg)

Around this time last year, after thousands of people contacted Congress, Senator Harry Reid decided not to bring a similar bill up for a vote. But **with the Republicans in power and with the possibility that enough Democrats could join them to form a veto-proof majority,** it is even more crucial that we speak up now.

Links

Links: Surveillance General

(--) Bipartisan support for NSA surveillance:

1064. John Sides, (Associate Professor in the Department of Political Science at George Washington University) June 10, 2013, Accessed Apr. 29, 2015 from <http://themonkeycage.org/2013/06/10/partisanship-in-everything-views-of-the-nsas-domestic-surveillance/>

The shifting views of Democrats and Republicans between 2006 and 2013 is reminiscent of many other trends noted on this blog—such as in views of Ben Bernanke. But there's one way in which these results show how there isn't partisanship in everything. Note that in the 2013 poll, there are only muted partisan differences in views of the NSA's surveillance program. As I noted last week, there is bipartisan support for this program at the elite level, and unsurprisingly the public reflects this consensus.

(--) Fears of terrorism mean efforts to reform domestic spying operations will face political resistance.

Jay Symopoulos, (staff writer), Apr. 1, 2015. Retrieved Apr. 29, 2015 from <http://thefreethoughtproject.com/patriot-act-killer-congress-surveillance-state-repeal-act/>

A similar bill was introduced in 2013 but didn't garner any traction as typical militarist talking heads in Congress feigned fear over reforming the nation's domestic spying operations claiming it would endanger U.S. national security.

Many strong senators will defend government spying programs:

Medha Chandorkar, (staff writer), June 8, 2013. Retrieved Apr. 29, 2015 from <http://mic.com/articles/47023/nsa-prism-program-obama-spying-scandal-elicits-bipartisan-voices-pro-and-con>

Several senators are defending the administration. Both Democrats and Republicans on the Senate Committee on Intelligence have stated that the monitoring is entirely legal, legitimized by legislation like the PATRIOT Act and institutions like the Foreign Intelligence Surveillance Court. Senator Dianne Feinstein (D-Calif.) explained that Congress receives regular briefings on the seven-year-long program, implying that it was successful at uncovering terrorist plots. Fellow committee member Senator Chambliss (R-Ga.) added that the program is used to gather information “only on bad guys.” Even Senator Lindsey Graham (R-S.C.) proudly flaunted his status as a Verizon customer, stating that he was “glad” such work was being done to protect U.S. national security.

Government spying receives bipartisan support:

Medha Chandorkar, (staff writer), June 8, 2013. Retrieved Apr. 29, 2015 from <http://mic.com/articles/47023/nsa-prism-program-obama-spying-scandal-elicits-bipartisan-voices-pro-and-con>

Well, first of all, the spying itself is a bipartisan effort. The White House's main response to these allegations thus far has been to remind the American people (and perhaps Congress itself) that the Hill is just as complicit in these activities as the president. As Senator Feinstein noted, Congress has had full knowledge of this spying, and so far, it has done absolutely nothing to stop it. Regardless of whether or not they find it ethical, by defending it as a public virtue, congressional representatives are saving their own hides just as much as the administration's.

Congress is unconcerned about the harms to civil liberties from domestic surveillance:

John Sides, (Associate Professor in the Department of Political Science at George Washington University) June 6, 2013. Retrieved Apr. 29, 2015 from <http://themonkeycage.org/2013/06/06/could-there-finally-be-a-backlash-against-domestic-surveillance/>

What would create more of a public anxiety would be a concerted pushback from Congress against the NSA, and especially a bipartisan pushback. As I wrote regarding drone attacks, real public concern about civil liberties is most likely to arise when elected leaders express concern. But instead of a bipartisan pushback, I am seeing more evidence of a bipartisan shrug. Diane Feinstein and Saxby Chambliss—hardly peas in a pod—lead the Senate Intelligence Committee, and they're pretty sanguine: The leaders of the Senate Intelligence Committee said Thursday that there's nothing unusual about a reported program allowing the National Security Agency to obtain Verizon phone records...The story goes on to cite Jeff Merkley, who does express concern. But note that he seems to be asking only for more information about FISA court opinions, not arguing that the program is obviously problematic on its face. Even John Boehner, someone who rarely passes up the chance to take on the president, had remarkably little to say as well. (Ellipsis in original).

Links: Bulk Collection of Phone Data

(--) **The Senate supports bulk collection of phone data:**

NBC NEWS, Nov. 18, 2014. Retrieved Apr. 29, 2015 from <http://www.nbcnews.com/tech/security/bill-overhaul-nsa-surveillance-dies-senate-n251321>

The U.S. Senate has blocked a bill to end bulk collection of American phone records by the National Security Agency. The measure was President Barack Obama's signature proposal to rein in domestic surveillance. Tuesday's vote was largely along party lines, with most Democrats supporting the bill and most Republicans voting to kill it. The Republican-controlled House had previously passed a version of the bill. The revelation that the spying agency had been collecting and storing domestic phone records since shortly after the terrorist attacks of Sept. 11, 2001, was among the most significant by Edward Snowden, a former agency network administrator who last year leaked secret NSA documents to journalists. Several prominent tech companies, including Google, Microsoft, Facebook and Apple, had lobbied the Senate to pass the legislation, which sponsors named the U.S.A. Freedom Act.

Links: AT: Snowden controversy creates a backlash

(--) **Snowden controversy will not create a backlash against surveillance:**

John Sides, (Associate Professor in the Department of Political Science at George Washington University) June 6, 2013. Retrieved Apr. 29, 2015 from <http://themonkeycage.org/2013/06/06/could-there-finally-be-a-backlash-against-domestic-surveillance/>

There has been a lot of conversation about Glenn Greenwald's story showing that National Security Agency is regularly collecting information about millions of phone calls from Verizon. Marc Ambinder provides some useful background here. So is this news—perhaps combined with the government's investigations of the Associated Press and Fox's James Rosen—enough to spark a broader backlash against the government's domestic surveillance? I am skeptical, for two reasons. For one, most Americans do not express much anxiety about domestic surveillance. In a recent article (gated), political scientists Samuel J. Best, Brian S. Krueger, and Shanna Pearson-Merkowitz reported the results of a 2007 survey in which they explicitly asked whether Americans were anxious, worried, or scared about “the government monitoring the activities of people like you.” Only about 30% of Americans said that they were “somewhat” or “very” anxious, worried, or scared. Best and colleagues note that this is more than some commentators and scholars have suggested. The question, though, is whether it is “enough” to engender a backlash. I have not seen comparable questions asked in more recent surveys, but my guess is that there is not a great deal more anxiety.

Links: FISA

Bipartisan support for a strong FISA role:

Jeffrey Brand, (Dean, Center for Law and Global Justice, San Francisco School of Law), HARVARD NATIONAL SECURITY JOURNAL, 2015, 20.

By 2008, the perfect storm roiled to a peak when, with overwhelming bipartisan support, Congress passed the FISA Amendments Act (FAA), 79 which eliminated many of the specificity requirements needed to obtain a warrant under the FISA regime in its initial incarnation. Moreover, the FAA for the first time defined an “international wire communication” to include communications where an “end point is in the United States,” thereby subjecting U.S. citizens to its reach. The amendment led the Congressional Research Service to conclude that FISA now “provides a mechanism for the domestic acquisition without a court order, of communications that persons in the United States, including citizens, would be a party to. Prior to the enactment of Section 702, such acquisitions would require a court order in all but emergency situations.

Links: Democrats

Democrats in favor of government spying:

Jared Metzker, (staff writer), July 27, 2013. Retrieved Apr. 29, 2015 from <http://original.antiwar.com/jared-metzker/2013/07/26/poll-shows-voter-bi-partisan-split-mirrors-house-vote-on-nsa/>

Party allegiances apparently mean little in the U.S. when it comes to the debate over domestic government surveillance. A study released this morning by the Pew Research Center, a major U.S. polling agency, revealed that 57 percent of Democrats approve of government spying, along with 44 percent of Republicans.

Links: Electronic Privacy Act

The electronic privacy act amendments will be a politically tough fight:

Joe Wolverton, (J.D.), NEW AMERICAN, Apr. 27, 2013. Retrieved Apr. 29, 2015 from <http://www.thenewamerican.com/usnews/congress/item/15231-senate-committee-passes-bill-restricting-wireless-e-mail-searches>

Updating the Electronic Communications Privacy Act is an essential step to protect Americans' Fourth Amendment rights. Chairman Leahy led the original effort to pass ECPA back in 1986, and I am very happy to join with him here to provide these essential updates. For centuries, Americans sent some of their most personal correspondence to each other through the U.S. Postal Service. It is well settled that government agencies should not have warrantless access to such private correspondence. Modern technology has evolved to the point where third party storage and "cloud computing" are now the norm. Many people use Google, Yahoo, and other remote services to host and coordinate electronic communications. Due to the conflicts of older legislation and modern technology, private email correspondence over 180 days old is not afforded full Fourth Amendment protection. Today, we finally move to change that. Advocates of the purpose of the legislation recognized the progress made by the Senate Judiciary Committee in restoring the right of people to be free from unwarranted searches and seizures of even their electronic communication. "For the first time since the creation of the World Wide Web, Congress has made it clear that all private communications online require a search warrant based on probable cause," said ACLU attorney Christopher Calabrese, as quoted in the Guardian (UK). "This important step forward would mean that police are held to the same standard whether they search someone's house or their inbox." On its website, the ACLU praised the support of groups from across the political spectrum. After the vote, messages of support poured in from libertarians, consumer groups, privacy advocates, civil rights organizations, groups such as the Americans for Tax Reform and the Heritage Foundation, librarians, tech policy groups, media trade groups, Internet industry organizations, and more. Such a robust coalition of "strange bedfellows" is rare in Washington, and it was this diversity that convinced the powerful Senate Judiciary Committee that the time had come for an update. Of course, there were those lawmakers who pushed to maintain the status quo and preserve the power currently given to law enforcement and intelligence agencies to skirt around the Constitution. As reported by the Guardian: Senator Chuck Grassley (R-Iowa) said that his fellow senators were setting aside the concerns of law enforcement officials. "Instead it seems a growing distrust of government is driving a significant amount of public opinion these days," he said. Grassley claimed the email debate was part of a wider concern among the public about government accountability, gun rights and civil liberties. Grassley said Congress would be "abdicating our responsibilities" if it did not take into consideration the concerns of regulators and law enforcement.

The Electronic Communications Privacy Act will be a tough fight:

Dominic Rushe, (staff writer) THE GUARDIAN, Apr. 25, 2013. Retrieved Apr. 29, 2015 from <http://www.theguardian.com/world/2013/apr/25/senate-committee-ecpa-email-search>

A bipartisan committee voted on Thursday to advance a bill to clamp down on warrantless government searches of email and other private electronic information. The bill seeks to modify the 1986 Electronic Communications Privacy Act (ECPA) and require government and law enforcement agencies to get a judge's approval in most cases in order to access electronic communications. A vote is now expected next month, but while the bill has cross-party support law officials, regulators and some senators are pushing for amendments to weaken its impact.

Links: Surveillance on the Web

Senator Grassley will oppose measures to decrease surveillance on the web:

Dominic Rushe, (staff writer) THE GUARDIAN, Apr. 25, 2013. Retrieved Apr. 29, 2015 from <http://www.theguardian.com/world/2013/apr/25/senate-committee-ecpa-email-search>

"For the first time since the creation of the World Wide Web, Congress has made it clear that all private communications online require a search warrant based on probable cause," said Christopher Calabrese, legislative counsel at the American Civil Liberties Union's Washington legislative office. "This important step forward would mean that police are held to the same standard whether they search someone's house or their inbox." Senator Chuck Grassley said that his fellow senators were setting aside the concerns of law enforcement officials. "Instead it seems a growing distrust of government is driving a significant amount of public opinion these days," he said. Grassley claimed the email debate was part of a wider concern among the public about government accountability, gun rights and civil liberties. Grassley said Congress would be "abdicating our responsibilities" if it did not take into consideration the concerns of regulators and law enforcement.

Grassley is a uniquely powerful Senator:

Sarah Mimms, (staff writer) NATIONAL JOURNAL, Jan. 21, 2015. Retrieved Apr. 29, 2015 from <http://www.nationaljournal.com/congress/grassley-lynch-hearing-will-be-gop-forum-to-hit-obama-on-immigration-20150121>

Grassley's chairmanship of the powerful Judiciary Committee could give him an additional spotlight, and potentially additional scrutiny, as he prepares for reelection in 2016. Luckily for Grassley, his state just elected conservative Sen. Joni Ernst, and the senior senator is low on the totem pole of Democratic targets this cycle, with purple-state Republicans in Illinois, New Hampshire, Pennsylvania, and Wisconsin providing much richer targets. But, Grassley said, that hasn't stopped Democrats from tracking him for "two or three years" now.

Links: Spying on Muslims

(--) Demonizing Muslims is still a political winner:

Dima Ansari, (staff writer) July 30, 2014. Retrieved Apr. 29, 2015 from http://www.upi.com/Top_News/US/2014/07/30/Survey-shows-partisan-divide-in-attitudes-toward-Arabs-Muslims/3881406669473/

"For a part of the American electorate demonizing Muslims and Arabs is still a political winner," said Matthew Duss, a policy analyst at the Center for American Progress, a liberal-leaning think tank.

(--) Media exaggerations feed negative stereotypes of Muslims:

Dima Ansari, (staff writer) July 30, 2014. Retrieved Apr. 29, 2015 from http://www.upi.com/Top_News/US/2014/07/30/Survey-shows-partisan-divide-in-attitudes-toward-Arabs-Muslims/3881406669473/

Experts at the institute event agreed the media play a role in conflating one-dimensional perceptions of Arabs and Muslims -- and that is where most Americans derive their views. "The story plays out [as] be afraid of these people, they're dark, they're dangerous, and that, then has a component back here in terms of how it filters back to the public," Duss said.

(--) Spying on Muslims generates no political backlash:

Ben Smith, (staff writer) June 6, 2013. Retrieved Apr. 29, 2015 from <http://www.buzzfeed.com/bensmith/how-americans-got-used-to-surveillance#.ai9xWrGEK>

Last March, after the 9/11 moment had passed, the Associated Press turned up a different domestic spying program: The New York Police Department had been infiltrating the homes, businesses, and communities of New Yorkers of Muslim descent without, it appeared, any specific cause. The NYPD denials, and subsequent leaked documents, made the story worse. And the New York story, too, sank like a stone, even in one of America's most liberal cities: There was little public pressure on Mayor Michael Bloomberg to roll back the secret program. Even a Pulitzer Prize for his critics didn't dislodge Police Commissioner Ray Kelly from his place as one of the city's most popular leaders, now the subject of a last minute draft effort for mayor. You could make the case that these two episodes, in Washington and New York, showed two things: First, the government can spy on Muslim citizens — or any specific person or group it says is associated with terrorism — without fear of broader public disapproval. Second, the government felt it had reason to fear a public backlash over spying indiscriminately on the broad public, even in the course of looking for terrorists.

(--) It would be politically difficult to ban surveillance of Muslims:

Ben Smith, (staff writer) June 6, 2013. Retrieved Apr. 29, 2015 from <http://www.buzzfeed.com/bensmith/how-americans-got-used-to-surveillance#.ai9xWrGEK>

This moment is, most of all, a test of that aphorism politicians will quote to almost any end, the one that begins (at least in one version) "First they came for the Communists, and I said nothing." The tolerance of widespread surveillance of Muslims helped build a government apparatus, and the legal underpinnings of it, are now used much more widely than many Americans are comfortable with. The political path to rolling it back isn't clear.

Links: Republicans

Even modest reforms to spying will be opposed by Republicans:

Matt Sledge, (staff writer), HUFFINGTON POST, Mar. 13, 2015. Retrieved Apr. 29, 2015 from http://www.huffingtonpost.com/2015/03/13/patriot-act-nsa_n_6839850.html

Some reform groups opposed legislation sponsored by Sen. Patrick Leahy (D-Vt.) last year on the grounds that it would not have limited non-telephone spy programs. But Senate Republicans filibustered even that bill's more modest reforms in November, setting a probable ceiling for changes in this Congress.

Links: Ending Warrantless Searches

(--) Political opposition exists to ending warrantless searches:

Matt Sledge, (staff writer), HUFFINGTON POST, Mar. 13, 2015. Retrieved Apr. 29, 2015 from http://www.huffingtonpost.com/2015/03/13/patriot-act-nsa_n_6839850.html

Last year Massie and Lofgren co-sponsored an amendment that would have ended warrantless searches of the content of Americans' communications with foreign NSA targets. The measure passed the House, surprising even Massie, but failed to make it through a House-Senate conference committee.

Links: Immigration

(--) Conservatives strongly support immigration surveillance measures:

Seth Freed Wessler, (staff writer), Jan. 28, 2013. Retrieved Apr. 29, 2015 from <http://www.colorlines.com/articles/senate-takes-first-step-immigration-bi-partisan-plan>

To accommodate conservatives who have long demanded increased border security before agreeing to a path to citizenship, the framework states clearly that the process to gain permanent immigration status will begin only "[o]nce the enforcement measures have been completed." Those measures include new security on the border in the form of drones and surveillance and additional border guards sent to the areas between border crossing checkpoints. "

Drone surveillance is popular in Congress:

Lucas Eaves, (staff writer), June 12, 2013. Retrieved Apr. 29, 2015 from <http://ivn.us/2013/06/12/immigration-reform-will-mean-more-border-drones/>

Despite growing discontent among American citizens over not only the use of drones abroad, but on American soil, Congress is extremely likely to go forward with plans to increase drone surveillance. Many Republicans will not accept an immigration reform bill without more border security and considering the Obama administration's position on the use of drones, they are unlikely to be challenged on that issue.

Congress strongly favors immigration enforcement:

FOX NEWS LATINO, Jan. 7, 2013. Retrieved Apr. 29, 2015 from <http://latino.foxnews.com/latino/politics/2013/01/07/obama-administration-spent-18-billion-on-immigration-enforcement-last-year/>

"Today, immigration enforcement can be seen as the federal government's highest criminal law enforcement priority, judged on the basis of budget allocations, enforcement actions and case volumes," MPI Senior Fellow Doris Meissner, a co-author of the report, said in a statement released with the report Monday. Proponents of more lenient immigration policies assailed the heavy emphasis on enforcement. "Congress has been a one-trick pony: enforcement first and enforcement only," said Frank Sharry, head of America's Voice, which advocates for an immigration reform that would include a path to legalization for undocumented immigrants. "But we can't enforce our way to a sensible, modernized immigration system."

Republicans favor border security:

FOX NEWS LATINO, Jan. 7, 2013. Retrieved Apr. 29, 2015 from <http://latino.foxnews.com/latino/politics/2013/01/07/obama-administration-spent-18-billion-on-immigration-enforcement-last-year/>

Republican lawmakers have widely criticized the policy changes, routinely describing them as "backdoor amnesty." Many of those same lawmakers have said the border needs to be secured before reform can be taken up.

Links: Drone Surveillance

Drone surveillance is incredibly popular in Congress:

THE PIONEER LOG, Feb. 16, 2012. Retrieved Apr. 29, 2015 from <http://piolog.squarespace.com/opinion/2012/2/16/the-future-is-now-the-drone-surveillance-over-the-us-is-rapi.html>

This week, Congress passed a bill that went largely unnoticed, but which signifies a fundamental change in the nature of American privacy. The bill demands increased research and development in the domestic unmanned aircraft sector, which is at present virtually non-existent. The bill has led many industry regulators to predict that as many as 30,000 surveillance drones will share civilian airspace by 2020 after they begin taking to the air in 2015. These drones are to be unarmed and are intended to be primarily at the disposal of local, state, and federal law enforcement agencies, although private companies will be able to get permits to launch their own. When one considers the implications, it becomes more and more baffling that the bill passed so easily through the House and Senate and is expected to be approved by the President in short order.

Links: Secure Data Act

NEWS CENTRAL, Feb. 9, 2015. Retrieved Apr. 29, 2015 from <http://newscentral.exsees.com/item/e4242b9644b988c62172a7974962e5d0-c0ea497f23d5a0e1870a2c2a08206218>

Previous bills have passed Congress seeking to limit the power and authority of agencies like the National Security Agency. However, the final products were severely watered down versions of the initial legislation. Even extensively supported bills such as the previous Secure Data Act failed to get anywhere in both chambers of Congress.

Links: Repealing the Patriot Act

Repealing the Patriot Act is a political non-starter:

Jay Symopoulos, (staff writer), Apr. 1, 2015. Retrieved Apr. 29, 2015 from <http://thefreethoughtproject.com/patriot-act-killer-congress-surveillance-state-repeal-act/>

The bill would completely repeal the Patriot Act, the sweeping national security law passed in the days after Sept. 11, 2001, as well as the 2008 FISA Amendments Act, another spying law that the NSA has used to justify collecting vast swaths of people's communications through the Internet. It would also reform the secretive court that oversees the nation's spying powers, prevent the government from forcing tech companies to create "backdoors" into their devices and create additional protections for whistleblowers. The bill is looked at by congressional watchers as a non-starter, as there are far too many congressional leaders on both sides of the aisle in Congress that have strong interests in the Military/Intelligence Industrial Complex.

A2 “Winners Win”

Winners-win empirically false for Obama

Klein, 10/10/14 (Ezra, “Obama ditched a key campaign promise. And it saved his presidency,” <http://www.vox.com/2014/10/10/6953889/paul-krugman-obama-historic-success, JMP>)

Hate Obama or love him, on this, Krugman is clearly correct. **Obama has passed more major legislation** than perhaps any president since Lyndon Johnson — and, at least as of yet, there's no Vietnam War to mar his legacy. The history of the Obama administration will be hard to write, as so many of its chapters will demand their own books (indeed, some, like the stimulus, have already gotten them). Most crucially, Obamacare itself looks headed for success — and that, plus preventing the financial crisis from turning into another Great Depression, is a legacy in itself. That said, Obama's greatest successes — and his most serious failures — lie in the dense mass of his first two years. This is the time, in Krugman's telling, before Obama grokked the nature of the Republican opposition and “began dealing with it realistically.” I think the story there is more complicated — and more interesting. From 2009 to 2010, Obama, while seeking the post-partisan presidency he wanted, established the brutally partisan presidency he got. Virtually **every achievement** Krugman recounts — the health-care law, the Dodd-Frank financial reforms, the financial rescue, the stimulus bill — passed in these first two years when Democrats held huge majorities in congress. And every item on the list **passed over screaming** Republican **opposition**. The first two years of the Obama administration are the story of Obama being haunted by his promises of a postpartisan presidency, and choosing, again and again, to pass bills at the cost of worsening partisanship. The irony of Obama's presidency As Reid Cherlin, a former Obama administration staffer, put it, “[T]hey have managed over six years to accomplish much of what Obama promised to do, even if accomplishing it helped speed the process of partisan breakdown.” The engine of Obama's political rise, going all the way back to his 2004 keynote at the Democratic National Convention, was that the conflictual nature of politics was the product of the people who knew no politics other than conflict. The central irony of Obama's presidency is he proved himself wrong. Obama promised to reform the health-care system and regulate the financial sector by fixing American politics. Instead, he did it by breaking American politics further. The candidate who ran for office promising to heal Washington's divisions became the most divisive president since the advent of polling: [graph omitted] It's not just partisanship. Obama ran as the scourge of special interests. “We can't keep playing the same Washington game with the same Washington players and expect a different result,” he said. “Because it's a game that ordinary Americans are losing. It's a game where lobbyists write check after check and Exxon turns record profits, while you pay the price at the pump, and our planet is put at risk.” Lobbyists still write their checks in Obama's Washington. The health-reform bill got done by cutting side deals with pharmaceutical companies and insurers. Dodd-Frank got done by cutting side deals with auto dealers and mutual funds. The Obama administration has put no political capital behind major campaign-finance reforms or, really, any other ideas that would fundamentally change how Washington works. It's the same old Washington game with the same old Washington players — but Obama, when he had his big congressional majorities, managed to secure a different result. **Obama** spent his first two years keeping many of his policy promises by sacrificing his central political promise. That wasn't how it felt to the administration at the time. They **thought** that **success would build momentum**; that

change would beget change. Obama talked of the "muscle memory" Congress would rediscover as it passed big bills; he hoped that achievements would replenish his political capital rather than drain it. In this, the Obama administration was wrong, and perhaps naive. They overestimated their ability to convert the raw exercise of political power into more political power. It was a mistake, but not a very postpartisan one. And, as a theory, it was the one they needed to build their legacy — a legacy, at this point, that even their early critics admire.

(--) Obama believes the link

Robert Kuttner, senior fellow, Demos, "Obama Has Amassed Enormous Political Capital, But He Doesn't Know What to Do with It," *Alternet*, 4—28—09,
www.alternet.org/economy/138641/obama_has_amassed_enormous_political_capital,_but_he_doesn%27t_know_what_to_do_with_it/

We got a small taste of what a more radical break might feel like when Obama briefly signaled with the release of Bush's torture memos that he might be open to further investigation of the Bush's torture policy, but then backtracked and quickly asked the Democratic leadership to shut the idea down. Evidently, Obama's political self wrestled with his constitutional conscience, and won. Civil libertarians felt a huge letdown, but protest was surprisingly muted. Thus the most important obstacle for seizing the moment to achieve enduring change: Barack Obama's conception of what it means to promote national unity. Obama repeatedly declared during the campaign that he would govern as a consensus builder. He wasn't lying. However, there are two ways of achieving consensus. One is to split the difference with your political enemies and the forces obstructing reform. The other is to use presidential leadership to transform the political center and alter the political dynamics. In his first hundred days, Obama has done a little of both, but he defaults to the politics of accommodation.

(--) Winners win is wrong -- Obama votes neg

Jackie Calmes, *NYTimes*, 11/12/12, In Debt Talks, Obama Is Ready to Go Beyond Beltway, mobile.nytimes.com/2012/11/12/us/politics/legacy-at-stake-obama-plans-broader-push-for-budget-deal.xml

That story line, stoked by Republicans but shared by some Democrats, holds that Mr. Obama is too passive and deferential to Congress, a legislative naïf who does little to nurture personal relationships with potential allies - in short, not a particularly strong leader. Even as voters re-elected Mr. Obama, those who said in surveys afterward that strong leadership was the most important quality for a president overwhelmingly chose Mr. Romney.¶ George C. Edwards III, a leading scholar of the presidency at Texas A & M University who is currently teaching at Oxford University, dismissed such criticisms as shallow and generally wrong. Yet Mr. Edwards, whose book on Mr. Obama's presidency is titled "Overreach," said, "He didn't understand the limits of what he could do."¶ "They thought they could continuously create opportunities and they would succeed, and then there would be more success and more success, and we'd build this

advancing-tide theory of legislation," Mr. Edwards said. "And that was very naïve, very silly. Well, they've learned a lot, I think." ¶ "Effective leaders," he added, "exploit opportunities rather than create them." ¶ The budget showdown is an opportunity. But like many, it holds risks as well as potential rewards. ¶ "This election is the second chance to be what he promised in 2008, and that is to break the gridlock in Washington," said Kenneth M. Duberstein, a Reagan White House chief of staff, who voted for Mr. Obama in 2008 and later expressed disappointment. "But it seems like this is a replay of 2009 and 2010, when he had huge majorities in the House and Senate, rather than recognizing that 'we've got to figure out ways to work together and it's not just what I want.'" ¶ For now, at least, Republican lawmakers say they may be open to raising the tax bill for some earners. "We can increase revenue without increasing the tax rates on anybody in this country," said Representative Tom Price, Republican of Georgia and a leader of House conservatives, on "Fox News Sunday." "We can lower the rates, broaden the base, close the loopholes." ¶ The challenge for Mr. Obama is to use his postelection leverage to persuade Republicans - or to help Speaker John A. Boehner persuade Republicans - that a tax compromise is in their party's political interest since most Americans favor compromise and higher taxes on the wealthy to reduce annual deficits. ¶ Some of the business leaders the president will meet with on Wednesday are members of the new Fix the Debt coalition, which has raised about \$40 million to urge lawmakers and their constituents to support a plan that combines spending cuts with new revenue. That session will follow Mr. Obama's meeting with labor leaders on Tuesday. ¶ His first trip outside Washington to engage the public will come after Thanksgiving, since Mr. Obama is scheduled to leave next weekend on a diplomatic trip to Asia. Travel plans are still sketchy, partly because his December calendar is full of the traditional holiday parties. ¶ Democrats said the White House's strategy of focusing both inside and outside of Washington was smart. "You want to avoid getting sucked into the Beltway inside-baseball games," said Joel Johnson, a former adviser in the Clinton White House and the Senate. "You can still work toward solutions, but make sure you get out of Washington while you are doing that." ¶ The president must use his leverage soon, some Democrats added, because it could quickly wane as Republicans look to the 2014 midterm elections, when the opposition typically takes seats from the president's party in Congress.

(--) History's on our side—past wins by Obama drained his capital:

Todd Eberly, 1/21/2013 ("The presidential power trap,"

[http://articles.baltimoresun.com/2013-01-21/news/bs-ed-political-capital-](http://articles.baltimoresun.com/2013-01-21/news/bs-ed-political-capital-20130121_1_political-system-party-support-public-opinion/2)

[20130121_1_political-system-party-support-public-opinion/2](http://articles.baltimoresun.com/2013-01-21/news/bs-ed-political-capital-20130121_1_political-system-party-support-public-opinion/2), Accessed 1/24/2013, rwg)

Barack Obama's election in 2008 seemed to signal a change. Mr. Obama's popular vote majority was the largest for any president since 1988, and he was the first Democrat to clear the 50 percent mark since Lyndon Johnson. The president initially enjoyed strong public approval and, with a Democratic Congress, was able to produce an impressive string of legislative accomplishments during his first year and early into his second, capped by enactment of the Patient Protection and Affordable Care Act. But with each legislative battle and success, his political capital waned. His impressive successes with Congress in 2009 and 2010 were accompanied by a shift in the public mood against him, evident in the rise of the tea party movement, the collapse in his approval rating, and the large GOP gains in the 2010 elections, which brought a return to divided government.

(-- Declines in political capital outweigh the effect of winning:

Marissa Silber, 2007 (Political Science PhD Student @ Univ. of Florida and Interim professor of political science @ Samford University, "WHAT MAKES A PRESIDENT QUACK?" Accessed at http://74.125.155.132/scholar?q=cache:bbkJmVQ3SJMJ:scholar.google.com/+%22political+capital%22+%22finite%22+resources+president&hl=en&as_sdt=80000000)

Important to the discussion of political capital is whether or not it can be replenished over a term. If a President expends political capital on his agenda, can it be replaced? Light suggests that "capital declines over time – public approval consistently falls: midterm losses occur" (31). Capital can be rebuilt, but only to a limited extent. The decline of capital makes it difficult to access information, recruit more expertise and maintain energy. If a lame duck President can be defined by a loss of political capital, this paper helps determine if such capital can be replenished or if a lame duck can accomplish little. Before determining this, a definition of a lame duck President must be developed.

(-- Health care empirically denies: Obama got a win, but it didn't help him pass anything through Congress.

(-- Any bump in political capital from wins is slight and fleeting—we'll win the link outweighs:

Mark Blumenthal, 1/6/2011 (staff writer, "Obama Gets Modest Lame-Duck Poll Bump" http://www.huffingtonpost.com/2011/01/06/obama-lame-duck-poll-bump-real-but-modest_n_805469.html)

Did President Obama get a bump in the polls after the successes of the congressional lame-duck session? While only a handful of pollsters have updated their job-approval numbers since the holidays, those who have seem to be showing movement in Obama's favor, though the change is slight and may be fleeting.

(-- Backlash when Obama tries to regain capital

Goldberg 10(Jonah, Syndicated Journalist, February 26, "A Hidden Cost of the Health-Care Summit", [http://www.nationalreview.com/corner/195494/hidden-cost-health-care-summit/jonah-goldberg\)jn](http://www.nationalreview.com/corner/195494/hidden-cost-health-care-summit/jonah-goldberg)jn)

It seems that I wasn't alone in finding Obama increasingly un-charming as the event unfolded yesterday. Even Dana Milbank notes that Obama ultimately came across as a bit of a condescending, well, jerk. Here's Michael Gerson: "President Obama, as usual, was fluent, professorial and occasionally prickly. Some are impressed by the president's informed, academic manner. Others (myself included) find an annoying condescension in Obama's never-ending seminar." Obama's habit of deciding what is a serious point and what are mere "talking points," started out seeming like an attempt at fairness but ultimately revealed itself to be one of the more grating aspects of his personality and his philosophy (It's worth noting that many points become talking points because they are such good points!). After awhile, it seemed Obama deemed many talking points to be illegitimate simply because they were inconvenient to his argument. This is not news to certain people who have greater immunity to his charms. Obama has a very thin skin when it comes to disagreement. He has a Fox News obsession. At campaign-style events, Obama has insisted that he doesn't want to "hear any talk" from the people who "created this mess" or some such. Remember his call for a "new declaration of independence not just in our nation, but in our own lives — from ideology and small thinking, prejudice and bigotry."

Translation: Ideological objections to what I want to do are akin to bigotry and stupidity. I think one of the great explanations for the mess the Obama administration is in — the whole cowbell dynamic — is that he, his advisers, and many of his fans in the press cannot fully grasp or appreciate the fact that he is not as charming to everyone else as he is to them (or himself). Hence, they think that the more he talks, the more persuasive he will be. Every president faces a similar problem which is why, until Obama, every White House tried to economize the deployment of the president's political capital. **The Obama White House strategy is almost the rhetorical version of its Keynesianism, the more you spend, the bigger the payoff. The hidden cost of this strategy is that the more he talks the more pronounced or noticeable this tendency becomes for the average American. Eventually, it could come to define him.** Presidents — all presidents — get caricatured eventually because certain **traits become more identifiable over time.** That's one reason why parodies of presidents on Saturday Night Live get more convincing and funnier at the end of their terms — everyone can recognize the traits and habits by then. **The more instances where Obama grabs all of the attention while acting like an arrogant college professor — particularly as memories of Bush fade — the more opportunities the White House creates where people can say, "Hey, I finally figured out what bugs me about this guy."** Not long after that, it becomes a journalistic convention, a staple of late-night jokes and basis of SNL parodies.

(--) GOP blocks bills- no spillover

Gvosdev 10(Nikolas, World Politics Review Columnist, November 19, "The Realist Prism: Hard Realities, Hard Choices for Obama", <http://www.worldpoliticsreview.com/articles/7096/the-realist-prism-hard-realities-hard-choices-for-obama>)jn

It is very likely that come the end of November, after a busy month traveling to Asia and Europe, President Barack Obama will have emerged with few decisive victories to burnish his image after the "shellacking" he took in the midterm elections. Instead, Obama and his team will have to adjust to some hard realities. Though the new Congress will not be seated until January 2011, we are already seeing changes in the political climate in Washington that will test the administration's ability to show, both to Americans and to other governments, that the executive branch is still in the driver's seat when it comes to setting U.S. foreign-policy priorities. As Dimitri Trenin observed in charting the likely demise of the New START treaty, "Partisanship in Washington has reached a new level, infecting not just longstanding domestic policy disputes, but also foreign policy and national security issues." There will be no Vanderbergian moment for the president over the next two years. Josh Rogin quotes an anonymous Republican Capitol Hill staffer as declaring, "You are going to see more aggressiveness to push an agenda and not to defer to the administration." **Even in areas where we can expect some agreement between congressional Republicans and the White House, such as passing the free trade agreement for Colombia, the GOP will do everything in its power to prevent Obama from claiming any sort of success for his administration. ...**

(--) Wins don't generate capital

Nicholas and Hook 10(Peter and Janet, Tribune Washington Bureau, July 30, "Obama the Velcro president", <http://articles.latimes.com/2010/jul/30/nation/la-na-velcro-presidency-20100730>)jn

Through two terms, Reagan eluded much of the responsibility for recession and foreign policy scandal. **In less than two years, Obama has become ensnared in blame.** Hoping to better insulate Obama, White House aides have sought to give other Cabinet officials a higher profile and additional public exposure. They are also crafting new ways to explain the president's policies to a skeptical public. But Obama remains the colossus of his administration — to a point where trouble anywhere in the world is often his to solve. The president is on the hook to repair the Gulf Coast oil spill disaster, stabilize Afghanistan, help fix Greece's ailing economy and do right by Shirley Sherrod, the Agriculture Department official fired as a result of a misleading fragment of videotape. **What's not sticking to Obama is a legislative track record that his recent predecessors might envy.**

Political dividends from passage of a healthcare overhaul or a financial regulatory bill have been fleeting. Instead, voters are measuring his presidency by a more immediate yardstick: Is he creating enough jobs? So far the verdict is no, and that has taken a toll on Obama's approval ratings. Only 46% approve of Obama's job performance, compared with 47% who disapprove, according to Gallup's daily tracking poll. "I think the accomplishments are very significant, but I think most people would look at this and say, 'What was the plan for jobs?'" said Sen. Byron L. Dorgan (D-N.D.). "The agenda he's pushed here has been a very important agenda, but it hasn't translated into dinner table conversations." Reagan was able to glide past controversies with his popularity largely intact. He maintained his affable persona as a small-government advocate while seeming above the fray in his own administration. Reagan was untarnished by such calamities as the 1983 terrorist bombing of the Marines stationed in Beirut and scandals involving members of his administration. In the 1986 Iran-Contra affair, most of the blame fell on lieutenants. Obama lately has tried to rip off the Velcro veneer. In a revealing moment during the oil spill crisis, he reminded Americans that his powers aren't "limitless." He told residents in Grand Isle, La., that he is a flesh-and-blood president, not a comic-book superhero able to dive to the bottom of the sea and plug the hole. "I can't suck it up with a straw," he said. But as a candidate in 2008, he set sky-high expectations about what he could achieve and what government could accomplish.

(--) Victories build opposition

Purdum 10 (Todd, Award winning journalist for the NYT, Vanity Fair Columnist, December 20, "Obama Is Suffering Because of His Achievements, Not Despite Them", <http://www.vanityfair.com/online/daily/2010/12/obama-is-suffering-because-of-his-achievements-not-despite-them.html>)jn

With this weekend's decisive Senate repeal of the military's "Don't Ask, Don't Tell" policy for gay service members, can anyone seriously doubt Barack Obama's patient willingness to play the long game? Or his remarkable success in doing so? In less than two years in office—often against the odds and the smart money's predictions at any given moment—Obama has managed to achieve a landmark overhaul of the nation's health insurance system; the most sweeping change in the financial regulatory system since the Great Depression; the stabilization of the domestic auto industry; and the repeal of a once well-intended policy that even the military itself had come to see as unnecessary and unfair. So why isn't his political standing higher? Precisely because of the raft of legislative victories he's achieved. Obama has pushed through large and complicated new government initiatives at a time of record-low public trust in government (and in institutions of any sort, for that matter), and he has suffered not because he hasn't "done" anything but because he's done so much—way, way too much in the eyes of his most conservative critics. With each victory, Obama's opponents grow more frustrated, filling the airwaves and what passes for political discourse with fulminations about some supposed sin or another. Is it any wonder the guy is bleeding a bit? For his part, Obama resists the pugilistic impulse. To him, the merit of all these programs has been self-evident, and he has been the first to acknowledge that he has not always done all he could to explain them, sensibly and simply, to the American public.

(--) Misspending political capital undermines capital:

RYAN 9. [1-18 -- Selwyn Professor of Social Science at the Sir Arthur Lewis Institute of Social and Economic Studies, University of West Indies. Ph.D. in Political Science from Cornell, http://www.trinidadexpress.com/index.pl/article_opinion?id=161426968]

Like many, I expect much from Obama, who for the time being, is my political beast of burden with whom every other politician in the world is unfavourably compared. As a political scientist, I however know that given the structure of American and world politics, it would be difficult for him to deliver half of what he has promised, let alone all of it. Reality will force him to make

many "u" turns and detours which may well land him in quick sand. Obama will, however, begin his stint with a vast accumulation of political capital, perhaps more than that held by any other modern leader. Seventy-eight per cent of Americans polled believe that his inauguration is one of the most historic the country will witness. Political capital is, however, a lumpy and fast diminishing asset in today's world of instant communication, which once mispent, is rarely ever renewable. The world is full of political leaders like George Bush and Tony Blair who had visions, promised a lot, and probably meant well, but who did not know how to husband the political capital with which they were provided as they assumed office. They squandered it as quickly as they emptied the contents of the public vaults. Many will be watching to see how Obama manages his assets and liabilities register. Watching with hope would be the white young lady who waved a placard in Obama's face inscribed with the plaintive words, "I Trust You." Despite the general optimism about Obama's ability to deliver, many groups have already begun to complain about being betrayed. Gays, union leaders, and women have been loud in their complaints about being by-passed or overlooked. Some radical blacks have also complained about being disrespected. Where and when is Joshua going to lead them to the promised land, they ask? When is he going to pull the troops out of Iraq? Civil rights groups also expect Obama to dis-establish Guantanamo as soon as he takes office to signal the formal break with Dick Cheney and Bush. They also want him to discontinue the policy which allows intelligence analysts to spy on American citizens without official authorisation. In fact, Obama startled supporters when he signalled that he might do an about-turn and continue this particular policy. We note that Bush is signalling Obama that keeping America safe from terrorists should be his top priority item and that he, Bush, had no regrets about violating the constitutional rights of Americans if he had to do so to keep them safe. Cheney has also said that he would do it again if he had to. The safety of the republic is after all the highest law. Other groups-sub-prime home owners, workers in the automobile sector, and the poor and unemployed generally all expect Obama to work miracles on their behalf, which of course he cannot do. Given the problems of the economy which has not yet bottomed out, some promises have to be deferred beyond the first term. Groups, however, expect that the promise made to them during the campaign must be kept. Part of the problem is that almost every significant social or ethnic group believes that it was instrumental in Obama's victory. White women felt that they took Obama over the line, as did blacks generally, Jews, Hispanics, Asians, rich white men, gays, and young college kids, to mention a few of those whose inputs were readily recognisable. Obama also has a vast constituency in almost every country in the world, all of whom expect him to save the globe and the planet. Clearly, he is the proverbial "Black Knight on a White Horse." One of the "realities" that Obama has to face is that American politics is not a winner-take-all system. It is pluralistic vertically and horizontally, and getting anything done politically, even when the President and the Congress are controlled by the same party, requires groups to negotiate, bargain and engage in serious horse trading. No one takes orders from the President who can only use moral or political suasion and promises of future support for policies or projects. The system was in fact deliberately engineered to prevent overbearing majorities from conspiring to tyrannise minorities. The system is not only institutionally diverse and plural, but socially and geographically so. As James Madison put it in Federalist No 10, one of the foundation documents of republicanism in America, basic institutions check other basic institutions, classes and interests check other classes and interests, and regions do the same. All are grounded in

their own power bases which they use to fend off challengers. The coalitions change from issue to issue, and there is no such thing as party discipline which translated, means you do what the leader say you do. Although Obama is fully aware of the political limitations of the office which he holds, he is fully aware of the vast stock of political capital which he currently has in the bank and he evidently plans to enlarge it by drawing from the stock held by other groups, dead and alive. He is clearly drawing heavily from the caparisoned cloaks of Lincoln and Roosevelt. Obama seems to believe that by playing the all-inclusive, bipartisan, non-ideological card, he can get most of his programmes through the Congress without having to spend capital by using vetoes, threats of veto, or appeals to his 15 million strong constituency in cyberspace (the latent "Obama Party").

(--) WINNERS WIN NOT TRUE FOR OBAMA.

GALSTON 10. [William, Senior Fellow, Governance Studies, Brookings, "President Barack Obama's First Two Years: Policy Accomplishments, Political Difficulties" Brookings Institute -- Nov 4]

Second, the administration believed that success would breed success—that the momentum from one legislative victory would spill over into the next. The reverse was closer to the truth: with each difficult vote, it became harder to persuade Democrats from swing districts and states to cast the next one. In the event, House members who feared that they would pay a heavy price if they supported cap-and-trade legislation turned out to have a better grasp of political fundamentals than did administration strategists.

(--) WINNERS DON'T WIN ON CONTROVERSIAL ISSUES – THE HILL IS TOO POLARIZED.

MANN 10. [Thomas, Senior Fellow, Governance Studies, "American Politics on the Eve of the Midterm Elections" Brookings Institute -- November]

That perception of failure has been magnified by the highly contentious process by which Obama's initiatives have been adopted in Congress. America has in recent years developed a highly polarised party system, with striking ideological differences between the parties and unusual unity within each. But these parliamentary-like parties operate in a governmental system in which majorities are unable readily to put their programmes in place. Republicans adopted a strategy of consistent, unified, and aggressive opposition to every major component of the President's agenda, eschewing negotiation, bargaining and compromise, even on matters of great national import. The Senate filibuster has been the indispensable weapon in killing, weakening, slowing, or discrediting all major legislation proposed by the Democratic majority.

(--) WINNERS LOSE FOR OBAMA – LOSES THE SPIN GAME.

BAKER 10. [Peter, foreign policy reporter, author of Kremlin Rising: Vladimir Putin and Russian Counter-Revolution, "Education of a President" New York Times]

But it is possible to win the inside game and lose the outside game. In their darkest moments, White House aides wonder aloud whether it is even possible for a modern president to succeed, no matter how many bills he signs. Everything seems to conspire against the idea: an implacable opposition with little if any real interest in collaboration, a news media saturated with triviality

and conflict, a culture that demands solutions yesterday, a societal cynicism that holds leadership in low regard. Some White House aides who were ready to carve a new spot on Mount Rushmore for their boss two years ago privately concede now that he cannot be another Abraham Lincoln after all. In this environment, they have increasingly concluded, it may be that every modern president is going to be, at best, average. "We're all a lot more cynical now," one aide told me. The easy answer is to blame the Republicans, and White House aides do that with exuberance. But they are also looking at their own misjudgments, the hubris that led them to think they really could defy the laws of politics. "It's not that we believed our own press or press releases, but there was definitely a sense at the beginning that we could really change Washington," another White House official told me. " 'Arrogance' isn't the right word, but we were overconfident." The biggest miscalculation in the minds of most Obama advisers was the assumption that he could bridge a polarized capital and forge genuinely bipartisan coalitions. While Republican leaders resolved to stand against Obama, his early efforts to woo the opposition also struck many as halfhearted. "If anybody thought the Republicans were just going to roll over, we were just terribly mistaken," former Senator Tom Daschle, a mentor and an outside adviser to Obama, told me. "I'm not sure anybody really thought that, but I think we kind of hoped the Republicans would go away. And obviously they didn't do that." Senator Dick Durbin, the No. 2 Democrat in the upper chamber and Obama's ally from Illinois, said the Republicans were to blame for the absence of bipartisanship. "I think his fate was sealed," Durbin said. "Once the Republicans decided they would close ranks to defeat him, that just made it extremely difficult and dragged it out for a longer period of time. The American people have a limited attention span. Once you convince them there's a problem, they want a solution." Gov. Ed Rendell of Pennsylvania, though, is among the Democrats who grade Obama harshly for not being more nimble in the face of opposition. "B-plus, A-minus on substantive accomplishments," he told me, "and a D-plus or C-minus on communication." The health care legislation is "an incredible achievement" and the stimulus program was "absolutely, unqualifiedly, enormously successful," in Rendell's judgment, yet Obama allowed them to be tarnished by critics. "They lost the communications battle on both major initiatives, and they lost it early," said Rendell, an ardent Hillary Clinton backer who later became an Obama supporter. "We didn't use the president in either stimulus or health care until we had lost the spin battle."

(--) STATISTICALLY -- WINS DON'T INFLUENCE FUTURE LEGISLATION.

Bond & Fleisher 96 [Jon R. and Richard. professor in Political Science - Texas A&M and Professor in Political Science. Fordham "The President in Legislation" p.223]

Presidency-centered variables, however, provide an even weaker explanation of presidential success. We found little support for the thesis that the weakness of legislative parties increases the importance of presidential skill or popularity for determining presidential success on roll call votes. Our analysis reveals that presidents reputed to be highly skilled do not win consistently more often than should be expected given the conditions they faced. Similarly, presidents reputed to be unskilled do not win significantly less often than expected. The analysis of presidential popularity reveals that the president's standing in the polls has only a marginal impact on the probability of success or failure.

(--) Contentious debate ensures plan is not perceived as a victory

Mann, Brookings Governance Studies senior fellow, 10

[Thomas, Brookings, November, "American Politics on the Eve of the Midterm Elections", http://www.brookings.edu/articles/2010/11_midterm_elections_mann.aspx, accessed 6-20-11]

The well-documented successes of the financial stabilisation and stimulus initiatives are invisible to a public reacting to the here and now, not to the counterfactual of how much worse it might have been. The painfully slow recovery from the global financial crisis and Great Recession have led most Americans to believe these programmes have failed and as a consequence they judge the President and Congress harshly. HIGHLY POLARISED That perception of failure has been magnified by the highly contentious process by which Obama's initiatives have been adopted in Congress. America has in recent years developed a highly polarised party system, with striking ideological differences between the parties and unusual unity within each. But these parliamentary-like parties operate in a governmental system in which majorities are unable readily to put their programmes in place. Republicans adopted a strategy of consistent, unified, and aggressive opposition to every major component of the President's agenda, eschewing negotiation, bargaining and compromise, even on matters of great national import. The Senate filibuster has been the indispensable weapon in killing, weakening, slowing, or discrediting all major legislation proposed by the Democratic majority.

(--) Political capital is finite – a win on one issue doesn't spill over

Gangale, 2005 San Francisco State political science lecturer, 5

(Thomas, poli sci lecturer @ SF State, 1/23/5, "To Amend or Not to Amend", <http://pweb.jps.net/~gangale/opsa/ps2/ToAmendOrNotToAmend.htm>) JPG

Abolishing the Electoral College is somewhat of a progressive issue in that it is based on the principle of "one person, one vote." However, more than anything it is a "large states vs. small states" issue, and that is why it is a perennial loser. The reality is that there are many more Idahos and Nebraskas than there are Californias and New Yorks, and since a small state has as many votes in the US Senate as a large state, any proposal to do away with the Electoral College cannot hope to win the required two-thirds majority. It is destined to defeat. Even worse, the issue pits progressive states large and small against each other, weakening progressive solidarity. If you fight someone tooth-and-nail on one issue, it's hard to muster any more than lukewarm support on another issue on which you agree. Political capital is like ammunition: use too much of it up in an unwise action, and you have to wait to be resupplied. Meanwhile, your forces may be in disarray and vulnerable to a counterstrike. Abolishing the Electoral College isn't the only constitutional amendment that's being bandied about this year. There's also talk of an amendment to ban gay marriage.

(--) Turn: Jamming through liberal agenda items will undermine Obama politically:

Frank Burke, 1/3/11 (staff, American Thinker, " The Lamest Duck of All ",
http://www.americanthinker.com/2011/01/the_lamest_duck_of_all.html)

Anyone doubting that the area inside the Washington, D.C. Beltway combines the more surreal elements of the Emerald City of Oz and Wonderland's rabbit hole need only to listen to the pundits -- including some conservatives -- discussing the lame-duck Congress's successes and Obama's move to the center. For those of us outside the Charmed Circle, the situation appears quite different. In reality, there is nothing new here. The lame-duck Congress was the same body that advanced the agenda responsible for the most significant political defeat in modern times. Like petulant adolescents, angered at the public's rejection of their superior wisdom, they proceeded to vote against the voters. The fact that the Reid/Pelosi nexus chose to steamroll an uncommonly large number of liberal agenda items within a short time should come as no surprise. Rather than a measure of accomplishment, the quantity was clearly a sign of desperation, as were the compromises reached on the extension of the Bush tax cuts and the fund for 9/11 responders. What seems to have been lost in all the excitement is an appreciation of the likely long-term effects of the initiatives in question. If one thing has remained constant throughout the Obama administration, it is the ascendancy of emotionalism over reason and the concomitant failure to anticipate the end results of actions. Examples of this began virtually on the first day with the executive order to close the facility at Guantánamo Bay. Without any plan, it was not long before reality set in. Two years later, it has been realized that it will not be possible to close Guantánamo or to offload the terrorists to other countries. Closely related to this was the decision to try Khalid Sheikh Mohammed and others in New York. Once the consequences were realized, the situation devolved into an embarrassing stalemate. The stimulus package, with its complement of shovel-ready jobs, failed to create new opportunities, and what's more, a large proportion of it remains unused. With little planning as to how or where to spend the money to create the most jobs, the public saw billions in funding go to earmarks and frivolous projects. Of all the singular negative accomplishments of the first two years, none surpasses ObamaCare. Written and assembled by disparate special interest groups within the Democratic Party, the program has proven to be everything its detractors said -- overly expensive, unworkable, and destructive to the health care system. The fact that leading Democrat supporters, including select corporations and unions, have petitioned for and received exemptions indicates the lack of thought that went into this badly cobbled mess. Other initiatives including Cash for Clunkers and the seizure of the automotive industry likewise contributed to the Republican victories of 2010. A closer examination of the items enacted in the lame duck session and their likely long-term results show a far different picture from the ones visualized by the pundits and Obama himself. Some examples: The preservation of the Bush tax cuts for two years, and the extension of unemployment insurance for thirteen months. Even if recovery results in a better employment picture, it is probable that there will still be a significant percentage of unemployed thirteen months from now. At that time, with a Republican-dominated House, it is very unlikely that there will be yet another extension of unemployment insurance. Hopefully, the Republicans will be able to link any benefits to retraining. Also, given this package, the Bush tax cuts will be set to expire shortly after the 2012

election. Obama has promised his liberal base that he will not countenance any further extension of "tax cuts for the wealthy." In that circumstance, he will be faced with the possibility of championing a massive tax increase on the public as he attempts to be reelected. The repeal of Don't Ask, Don't Tell. Justification for the repeal of DADT was supposedly a Pentagon study, despite the finding that military people on the front lines were not in favor of it. What was likewise ignored was the results of another joint U.S. and British study regarding sexual practices among Afghan natives. This study indicates that in Afghan society, where women are largely out of bounds except through marriage, homosexuality and pedophilia have become rampant among Afghan security forces. This has resulted in a great deal of discomfort on the part of American and British troops. Again, with no plan, we are left without a definition of what openly gay means. Will gay service members be identified in some way, and will their names be made public? How will this impact their situation in those Muslim countries where homosexuality can be punished by death? Once again, an emotional cause has resulted in an unplanned situation that could prove most dangerous to gay service personnel. The 9/11 responders bill. Hailed as a great victory, this bill was enacted with a dollar figure roughly fifty percent less than the originally requested amount. While few would question that those who suffered injury as a result of rescue or cleanup efforts should be compensated, other inquiries have gone unanswered -- especially by Chuck Schumer and Kirstin Gillibrand, the senators largely responsible for pushing the measure. What about those who have already received aid from other sources? Further, how was the dollar number arrived at? Would it not have made more sense to establish a lesser figure that could be replenished as needed? Are the individuals affected with health problems going to be placed in a special program, or will they be served by ObamaCare? The New START (Strategic Arms Reduction Treaty). The administration's actions have done more than Vladimir Putin to strengthen the hand of the old Soviet Union. Virtually nothing was done when Georgia was invaded. Then, the administration was cowed into abandoning our plans for a missile defense system that would cover our allies in Poland and the Czech Republic. Now we have a treaty that severely limits our capability to provide a missile defense shield for ourselves and our allies. We are assured that despite the wording in the preamble, the administration still reserves the right to construct missile defense systems. The Russians disagree. Where is the plan? There has been no adequate explanation. Clearly, the desperation of the Obama administration does not signal any real move "to the center." **What was done for political expediency and to acquire attractive press coverage will likely be undermined with subsequent subterfuge,** much as the ObamaCare death panels and Cap and Trade have resurfaced through cabinet-level regulations. **As time passes** and the reality of unprogrammed implementation sets in, **the emotional overdrive that propelled so many of the lame-duck initiatives will devolve into anger, disappointment, lawsuits, and further declines in popularity.**

(--) Wins only build long-term capital

Purdum 10, Columnist for Vanity Fair, (Todd, "Obama Is Suffering Because of His Achievements, Not Despite Them," 12-20 www.vanityfair.com/online/daily/2010/12/obama-is-suffering-because-of-his-achievements-not-despite-them.html)

With this weekend's decisive Senate repeal of the military's "Don't Ask, Don't Tell" policy for gay service members, can anyone seriously doubt Barack Obama's patient willingness to play the long game? Or his remarkable success in doing so? In less than two years in office—often against the odds and the smart money's predictions at any given moment—Obama has managed to achieve a landmark overhaul of the nation's health insurance system; the most sweeping change in the financial regulatory system since the Great Depression; the stabilization of the domestic auto industry; and the repeal of a once well-intended policy that even the military itself had come to see as unnecessary and unfair. So why isn't his political standing higher? Precisely because of the raft of legislative victories he's achieved. Obama has pushed through large and complicated new government initiatives at a time of record-low public trust in government (and in institutions of any sort, for that matter), and he has suffered not because he hasn't "done" anything but because he's done so much—way, way too much in the eyes of his most conservative critics. With each victory, Obama's opponents grow more frustrated, filling the airwaves and what passes for political discourse with fulminations about some supposed sin or another. Is it any wonder the guy is bleeding a bit? For his part, Obama resists the pugilistic impulse. To him, the merit of all these programs has been self-evident, and he has been the first to acknowledge that he has not always done all he could to explain them, sensibly and simply, to the American public. But Obama is nowhere near so politically maladroit as his frustrated liberal supporters—or implacable right-wing opponents—like to claim. He proved as much, if nothing else, with his embrace of the one policy choice he surely loathed: his agreement to extend the Bush-era income tax cuts for wealthy people who don't need and don't deserve them. That broke one of the president's signature campaign promises and enraged the Democratic base and many members of his own party in Congress. But it was a cool-eyed reflection of political reality: The midterm election results guaranteed that negotiations would only get tougher next month, and a delay in resolving the issue would have forced tax increases for virtually everyone on January 1—creating nothing but uncertainty for taxpayers and accountants alike. Obama saw no point in trying to score political debating points in an argument he knew he had no chance of winning. Moreover, as The Washington Post's conservative columnist Charles Krauthammer bitterly noted, Obama's agreement to the tax deal amounted to a second economic stimulus measure—one that he could never otherwise have persuaded Congressional Republicans to support. Krauthammer denounced it as the "swindle of the year," and suggested that only Democrats could possibly be self-defeating enough to reject it. In the end, of course, they did not. Obama knows better than most people that politics is the art of the possible (it's no accident that he became the first black president after less than a single term in the Senate), and an endless

cycle of **two steps forward, one step back**. So he just keeps putting one foot in front of the other, confident that he can get where he wants to go, eventually. The **short-term results are** often **messy and confusing**. Just months ago, gay rights advocates were distraught because Obama wasn't pressing harder to repeal "Don't Ask, Don't Tell." Now he is apparently paying a price for his victory because some Republican Senators who'd promised to support ratification of the START arms-reduction treaty—identified by Obama as a signal priority for this lame-duck session of Congress—are balking because Obama pressed ahead with repealing DADT against their wishes. There is a price for everything in politics, and Obama knows that, too.

(--) Health care proves

Dan Lashof, 2010 director, Climate Center, NRDC, "Coulda, Shoulda, Woulda: Lessons from Senate Climate Fail," Natural Resources Defense Council, 7—28—10, http://switchboard.nrdc.org/blogs/dlashof/coulda_shoulda_woulda_lessons.html

Lesson 2: Political capital is not necessarily a renewable resource. Perhaps the most fateful decision the Obama administration made early on was to move healthcare reform before energy and climate legislation. I'm sure this seemed like a good idea at the time. Healthcare reform was popular, was seen as an issue that the public cared about on a personal level, and was expected to unite Democrats from all regions. White House officials and Congressional leaders reassured environmentalists with their theory that success breeds success. A quick victory on healthcare reform would renew Obama's political capital, some of which had to be spent early on to push the economic stimulus bill through Congress with no Republican help. Healthcare reform was eventually enacted, but only after an exhausting battle that eroded public support, drained political capital and created the Tea Party movement. Public support for healthcare reform is slowly rebounding as some of the early benefits kick in and people realize that the forecasted Armageddon is not happening. But this is occurring too slowly to rebuild Obama's political capital in time to help push climate legislation across the finish line.

Links: AT: Done by Executive Agency/Not Obama

(--) The President takes blame for actions they personally did not take—it is assumed the president is responsible for virtually everything:

Dennis M. Simon, 2007* (Professor of Political Science @ SMU, “Public Expectations of the President,” faculty.smu.edu/dsimon/AMPres07Up/SimonExpectations.doc *based on the URL and the fact that no footnote is after 2007, we believe this is the accurate date of this article –RG)

The Consequences of Performance-Based Expectations. Broadly speaking, there are three types of consequences associated with these expectations. First, performance-based expectations help us understand fluctuations in public support for presidents, both within and across administrations. Essentially, **presidents are held accountable for a broad range of events and conditions in the real world** (Gronke and Newman 2003). **As economic manager, presidents are expected to insure prosperity and are held accountable for the state of the economy; as foreign policy leaders, presidents are expected to maintain peace and national security;** as domestic policy initiators, **presidents are expected to be innovators who formulate an agenda and effectively act to secure its passage and implementation** (Ostrom and Simon, 1985; Edwards, 1983). In addition to the image-based expectation of honesty, **presidents are also expected to maintain integrity or probity within their administrations** (Newman 2003; 2002).

(--) More evidence, the President gets blame for everything:

Dennis M. Simon, 2007* (Professor of Political Science @ SMU, “Public Expectations of the President,” faculty.smu.edu/dsimon/AMPres07Up/SimonExpectations.doc *based on the URL and the fact that no footnote is after 2007, we believe this is the accurate date of this article –RG)

In effect, performance-based expectations establish a basic rule of the game – **presidents are blamed for bad outcomes. Recessions, prolonged military conflict, scandals and other adverse events exact a toll on the president’s approval rating, his future effectiveness,** and the electoral fortunes of his party (e.g., Jacobson 2004, 151-206; Simon, Ostrom, and Marra 1991). Herein lays the trap of the textbook presidency. In the face of adverse outcomes and events in the real world, **these expectations lead to a conclusion that a president did not exercise his authority and power in a competent manner** (Peffley 1989). **Seldom is the question raised as to whether presidents have, in fact, sufficient power and authority to meet these expectations.** One prominent example is the expectation of prosperity that flows from the president’s role of economic manager. A realistic view of the office would emphasize that presidential influence over fiscal policy is restricted by the power of the purse granted to congress and that, on matters of monetary policy, the Federal Reserve Board is a regulatory agency independent of the executive branch. In fact, recent case studies demonstrate that the Federal Reserve Board is more likely to influence presidential economic policy than vice versa (Woodward 2000; 1994).

(--) The president will get the blame for executive agency actions—people overestimate the actual governmental responsibility of the president:

Michael A. Fitts, 1996 (Professor of Law, University of Pennsylvania Law School). University of Pennsylvania Law Review. January 1996, 144 U. Pa. L. Rev. 827, "THE PARADOX OF POWER IN THE MODERN STATE: WHY A UNITARY, CENTRALIZED PRESIDENCY MAY NOT EXHIBIT EFFECTIVE OR LEGITIMATE LEADERSHIP"

This Article takes issue with some important elements of this analysis. I argue that the structural changes that appear to enhance the power of the president under public choice approaches and unitary executive principles can, at the same time, actually undermine the president's reputation, his ability to resolve conflicts, and ultimately, his political strength. As a result, formal attempts to strengthen the presidency may have "diminishing marginal returns" and perhaps even negative effects, at least in some contexts. The reasons are complicated but straightforward: the individuality, centrality, and visibility of the "personal unitary presidency," which is seen as an advantage in terms of collective choice and public debate, can be a disadvantage when it comes to conflict resolution and public assessment. By using the term "mediating conflict," I refer to the way in which a political leader or institution overcomes the social and political costs of resolving distributional and symbolic disputes. Due to his singularity and enhanced visibility, a unitary, centralized president may be less able to mediate many of these conflicts. At the same time, he[sic/she] may be politically evaluated more often under personal (rather than institutional) criteria and subjected to an overassessment of government responsibility and error. This combination of effects can undermine not only the popularity and perceived competence - what I will call "legitimacy" - of the person who holds the office, but indirectly, the president's political influence as well. What the institution of the presidency seems to gain in strategic power from its centralization in a single visible individual, it may lose, at least in some contexts, as a result of the normative political standards applied to individuals.

(--) PRESIDENCY IS THE FOCAL POINT OF POLITICS – PRESIDENT GETS THE CREDIT OR THE BLAME, DESERVED OR NOT

Rosati 4. [Jerel A., University of South Carolina Government and International Studies professor THE POLITICS OF UNITED STATES FOREIGN POLICY, 2004, p. 80]

Given the popular image of presidential power, presidents receive credit when things are perceived as going well and are blamed when things go badly. Unfortunately, American politics and the policy process are incredibly complex and beyond considerable presidential control. With so many complex issues and problems to address – the debt problem, the economy, energy, welfare, education, the environment, foreign policy – this is a very demanding time to be president. As long as presidential promises and public expectations remain high, the president's job becomes virtually an impossible task. Should success occur, given the lack of presidential power, it is probably not by the president's own design. Nonetheless, the president – the person perceived to be the leader of the country – will be rewarded in terms of public prestige, greater power, and reelection (for him or his successor). However, if the president is perceived as unsuccessful – a failure – this results not only in a weakened president but one the

public wants replaced, creating the opportunity to challenge an incumbent president or his heir as presidential nominee.

(--) Obama is the Velcro president – gets the blame for everything:

Nicholas and Hook 10. (Peter and Janet, Staff Writers – LA Times, “Obama the Velcro president”, LA Times, 7-30, <http://articles.latimes.com/2010/jul/30/nation/la-na-velcro-presidency-20100730/3>)

If Ronald Reagan was the classic Teflon president, Barack Obama is made of Velcro. Through two terms, Reagan eluded much of the responsibility for recession and foreign policy scandal. In less than two years, Obama has become ensnared in blame. Hoping to better insulate Obama, White House aides have sought to give other Cabinet officials a higher profile and additional public exposure. They are also crafting new ways to explain the president's policies to a skeptical public. But Obama remains the colossus of his administration — to a point where trouble anywhere in the world is often his to solve. The president is on the hook to repair the Gulf Coast oil spill disaster, stabilize Afghanistan, help fix Greece's ailing economy and do right by Shirley Sherrod, the Agriculture Department official fired as a result of a misleading fragment of videotape. What's not sticking to Obama is a legislative track record that his recent predecessors might envy. Political dividends from passage of a healthcare overhaul or a financial regulatory bill have been fleeting. Instead, voters are measuring his presidency by a more immediate yardstick: Is he creating enough jobs? So far the verdict is no, and that has taken a toll on Obama's approval ratings. Only 46% approve of Obama's job performance, compared with 47% who disapprove, according to Gallup's daily tracking poll. "I think the accomplishments are very significant, but I think most people would look at this and say, 'What was the plan for jobs?' " said Sen. Byron L. Dorgan (D-N.D.). "The agenda he's pushed here has been a very important agenda, but it hasn't translated into dinner table conversations." Reagan was able to glide past controversies with his popularity largely intact. He maintained his affable persona as a small-government advocate while seeming above the fray in his own administration. Reagan was untarnished by such calamities as the 1983 terrorist bombing of the Marines stationed in Beirut and scandals involving members of his administration. In the 1986 Iran-Contra affair, most of the blame fell on lieutenants. Obama lately has tried to rip off the Velcro veneer. In a revealing moment during the oil spill crisis, he reminded Americans that his powers aren't "limitless." He told residents in Grand Isle, La., that he is a flesh-and-blood president, not a comic-book superhero able to dive to the bottom of the sea and plug the hole. "I can't suck it up with a straw," he said. But as a candidate in 2008, he set sky-high expectations about what he could achieve and what government could accomplish. Clinching the Democratic nomination two years ago, Obama described the moment as an epic breakthrough when "we began to provide care for the sick and good jobs to the jobless" and "when the rise of the oceans began to slow and our planet began to heal." Those towering goals remain a long way off. And most people would have preferred to see Obama focus more narrowly on the "good jobs" part of the promise. A recent Gallup poll showed that 53% of the population rated unemployment and the economy as the nation's most important problem. By contrast, only 7% cited healthcare — a single-minded focus of the White House for a full year. At every turn, Obama makes the argument that he has improved lives in concrete ways. Without the steps he took, he says, the economy would be in worse shape and more people

would be out of work. There's evidence to support that. Two economists, Mark Zandi and Alan Blinder, reported recently that without the stimulus and other measures, gross domestic product would be about 6.5% lower. Yet, Americans aren't apt to cheer when something bad doesn't materialize. Unemployment has been rising — from 7.7% when Obama took office, to 9.5%. Last month, more than 2 million homes in the U.S. were in various stages of foreclosure — up from 1.7 million when Obama was sworn in. "Folks just aren't in a mood to hand out gold stars when unemployment is hovering around 10%," said Paul Begala, a Democratic pundit. **Insulating the president** from bad news **has proved impossible**. Other White Houses have tried doing so with more success. Reagan's Cabinet officials often took the blame, shielding the boss. But the Obama administration is about one man. **Obama is the White House's chief spokes[sic person]man, policy pitchman, fundraiser and negotiator. No Cabinet secretary has emerged as an adequate surrogate**. Treasury Secretary Timothy F. Geithner is seen as a tepid public speaker; Energy Secretary Steven Chu is prone to long, wonky digressions and has rarely gone before the cameras during an oil spill crisis that he is working to end. So, more falls to Obama, reinforcing the Velcro effect: **Everything sticks to him**. He has opined on virtually everything in the hundreds of public statements he has made: nuclear arms treaties, basketball star LeBron James' career plans; Chelsea Clinton's wedding. Few audiences are off-limits. On Wednesday, he taped a spot on ABC's "The View," drawing a rebuke from Democratic Pennsylvania Gov. Edward G. Rendell, who deemed the appearance unworthy of the presidency during tough times. "Stylistically he creates some of those problems," Eddie Mahe, a Republican political strategist, said in an interview. "His favorite pronoun is 'I.' **When you position yourself as being all things to all people**, the ultimate controller and decision maker with the capacity to fix anything, **you set yourself up to be blamed** when it doesn't get fixed or things happen." A new White House strategy is to forgo talk of big policy changes that are easy to ridicule. Instead, aides want to market policies as more digestible pieces. So, rather than tout the healthcare package as a whole, advisors will talk about smaller parts that may be more appealing and understandable — such as barring insurers from denying coverage based on preexisting conditions. But at this stage, **it may be late in the game to downsize** either **the president** or his agenda. Sen. Richard J. Durbin (D-Ill.) said: "The man came in promising change. He has a higher profile than some presidents because of his youth, his race and the way he came to the White House with the message he brought in. **It's naive to believe he can step back and have some Cabinet secretary be the face** of the oil spill. The buck stops with his office."

**(--)
OBAMA WILL GET THE BLAME FOR ALL POLICIES PASSED – THE HILL IS TOO POLARIZED FOR ANY BLAME DEFLECTION.**

Politico 9. [2-13-09 -- <http://www.politico.com/news/stories/0209/18827.html>]

The Washington climate, which led to a party-line vote on the stimulus, has big political implications: It means that Obama will have sole ownership -- whether that means credit or blame -- for all the massive changes in government he envisions over the coming year.

**(--)
PRESIDENTS ARE THE FOCAL POINT OF POLITICS – THEY GET THE CREDIT/BLAME.**

CNN, 2002 Late Edition with Wolf Blitzer 4/28/02

Bruce Morton, Cnn Correspondent: **Networks will often air whatever the president says, even if he's praising the Easter Bunny.** Blitzer: Competing for face time on the cable news networks. Stay with us. Blitzer: Welcome back. Time now for Bruce Morton's essay on the struggle for balanced coverage on the cable networks. Morton: The Democrats have written the three cable news networks -- CNN, Fox and MSNBC -- complaining that the Bush administration gets much more coverage than elected Democrats. They cite CNN, which they say, from January 1 through March 21, aired 157 live events involving the Bush administration, and 7 involving elected Democrats. Fox and MS, they say, did much the same thing. The coverage gap is certainly real, for several reasons. First, since September 11, the U.S. has been at war in Afghanistan, so the president has been an active commander in chief. And covering the war, networks will often air whatever the president says, even if he's praising the Easter Bunny. Plus, the White House press secretary's briefing, the Pentagon's, maybe the State Department's. Why not? It's easy, it's cheap, the cameras are pooled, and in war time, the briefings may make major news. You never know. But **there's a reason for the coverage gap that's older than Mr. Bush's administration. In war or peace, the president is a commanding figure** -- one man to whose politics and character and, nowadays, sex life, endless attention is paid. **Congress is 535 people. What it does is complicated, compromises on budget items done in private, and lacks the drama** of the White House. There's a primetime TV show about a president. None about the Congress. If a small newspaper has one reporter in Washington, he'll cover two things, the local congressional delegation and, on big occasions, the White House. So the complaining Democrats have a point, **but it's worth remembering that coverage of a president, while always intense, isn't always positive. You could ask the Clintons. 9 Presidents will always get more coverage than Congresses. They're sexier. But it won't always be coverage they like.**

Links: Executive Orders

Executive Orders are perceived as bypassing Congress and create great political controversy:

Marybeth P. Ulrich, July 2004, U.S. Army War College Guide to National Security Policy and Strategy, Presidential Leadership and National Security Policymaking

Executive orders have mainly been used in three areas: to combat various forms of discrimination against citizens, to increase White House control over the executive branch, and to maintain secrets. **When Congress perceives that executive orders are taken to bypass Congress on controversial issues, they may elicit great political controversy and be a source of conflict between the two branches. Even the prospect of an executive order being issued can erupt in major political controversy as was the case with President Clinton's proposal to lift the ban on gays serving in the military.**

There was no question that the president had the legitimate authority to issue such an order as Truman had done to integrate the armed forces in 1948, but **the political backlash was so strong in 1993 that Clinton abandoned the idea in order to salvage his domestic agenda before Congress.**

(--) Unpopular XOs have political consequences and spark massive congressional and public backlash:

Risen 2004 [Clay, Managing editor of Democracy: A Journal of Ideas, M.A. from the University of Chicago "The Power of the Pen: The Not-So-Secret Weapon of Congress-wary Presidents" The American Prospect, July 16, http://www.prospect.org/cs/articles?article=the_power_of_the_pen]

The most effective check on executive orders has proven to be political. **When it comes to executive orders, "The president is much more clearly responsible,"** says Dellinger, who was heavily involved in crafting orders under Clinton. "Not only is there no involvement from Congress, but **the president has to personally sign the order."** Clinton's **Grand Staircase-Escalante National Monument executive order** may have helped him win votes, but it also **set off a massive congressional and public backlash.** Right-wing Internet sites bristled with comments about "dictatorial powers," and Republicans warned of an end to civil liberties as we know them. "President Clinton is running roughshod over our Constitution," said then-House Majority Leader Dick Armey. Indeed, **an unpopular executive order can have immediate--and lasting--political consequences.** In 2001, for example, **Bush proposed raising the acceptable number of parts per billion of arsenic in drinking water.** It was a bone he was trying to toss to the mining industry, and it would have overturned Clinton's order lowering the levels. But **the overwhelmingly negative public reaction forced Bush to quickly withdraw his proposal--and it painted him indelibly as an anti-environmental president.**

(--) Executive orders turn the President into a lightning rod

Cooper 97 [Phillip, Professor of Poli Sci @ University of Vermont, Administration and Society, Lexis]

Interestingly enough, **the effort to avoid opposition from Congress or agencies can have the effect of turning the White House itself into a lightning rod. When an administrative agency takes action under its statutory authority and responsibility, its opponents generally focus their conflicts as limited disputes aimed at the agency involved. Where the White House employs an executive order, for example, to shift critical elements of decision**

making from the agencies to the executive office of the president, **the nature of conflict changes and** the focus shifts to 1600 Pennsylvania Avenue or at least to the executive office buildings. The saga of the OIRA battle with Congress under regulatory review orders and the murky status of the Quayle Commission working in concert with OIRA provides a dramatic case in point. The nature and focus of conflict is in some measure affected by the fact that executive orders take administrative action outside the normal rules of administrative law. And although there are tensions in that field of law, the fact is that it has been carefully developed over time with the intention of accommodating the needs of administration and the demands for accountability by agencies filled with unelected administrators who make important decisions having the force of law in the form of rules and administrative adjudications. On one hand, administrative law requires open, orderly, and participative decision processes, but it also creates significant presumptions in favor of administrative agencies. The courts provide legal support in the form of favorable decisions as well as assisting agencies in enforcement through orders enforcing subpoena and other investigative authority while also ordering compliance with agency decisions once the investigations and decision processes are complete. Administrative law also provides a vehicle for integrating administrative decisions having the force of law with the larger body of law and policy. **The use of executive orders to confound or circumvent normal administrative law is counterproductive and ultimately dysfunctional.**

Links: Flip Flops

(-- Flip-flops kill the agenda - it's the most destructive political label in America

Rainey, 8 (6/25/08 (James, Staff @ LA Times, "ON THE MEDIA: Candidates Show Lack of Leadership on Iraq," Daily Herald, http://www.heraldextra.com/component/option,com_contentwire/task/view/id,61544/Itemid,53/)

The Iraq experts I interviewed agreed that **one of the most problematic barriers to a real debate is -- as author and journalist George Packer said -- a culture that has "made flip-flopper the most feared label in American politics."** They could point to another politician, fact averse but stalwart, who took too long to adapt once it became clear Iraq was going sideways. "It seems **in America you are stuck with the position you adopted, even when events change, in order to claim absolute consistency,**" Packer said. "That can't be good."

(-- Flip-flops are politically devastating

The Dallas Morning News, 1 (4/16/2001 (lexis))

A high number of **flip-flops can bleed a president dry,** they added, especially one who campaigned for a "responsibility era" in contrast to the scandal-ridden Clinton era. **"His stock-in-trade more than anything else is, 'This is a guy who keeps his commitments, even when it's painful,' "** said Norman **Ornstein, a resident scholar at the American Enterprise Institute.**

Democrats said the coal companies applied pressure to Bush, forcing a decision they say ignores the threat of global warming. In mocking Bush's prior campaign pledge, many cited the chemical formula for carbon dioxide, CO₂. "The president and his team have really made a 180-degree turn on their position here, suggesting now that CO₂ is somehow A-OK," said Sen. Joe Lieberman, D-Conn., who ran against Bush as the Democratic candidate for vice president. Sen. Hillary Rodham Clinton, D-N.Y., wife of Bush's predecessor, called it "a promise made and a promise broken." "In less than eight weeks in office, President Bush has gone from CO₂ to 'see you later,' " Hillary Clinton said. During a campaign speech in Saginaw, Mich., on Sept. 29, Bush outlined a clean air strategy targeting four pollutants. "With the help of Congress, environmental groups and industry, we will require all power plants to meet clean air standards in order to reduce emissions of sulfur dioxide, nitrogen oxide, mercury, and carbon dioxide within a reasonable period of time," Bush said. And since his inauguration, Bush's Environmental Protection Agency chief, Christie Whitman, has publicly backed the carbon dioxide restrictions. But late Tuesday, he sent a letter to Republican senators saying he was still committed to new emission standards on the first three items. "I do not believe, however, that the government should impose on power plants mandatory emissions reductions for carbon dioxide, which is not a 'pollutant' under the Clean Air Act," Bush wrote. Critics said broken promises are especially troublesome for Bush, who promised a more straightforward approach than his predecessor. During an Oct. 26 speech titled "Responsible Leadership," Bush told supporters in Pittsburgh that "in a responsibility era, government should trust the people." "And in a responsibility era, people should also be able to trust their government," Bush said. Ornstein said it may be hard for Bush to make those kind of comments in the future. "Now his opponents are going to jump up and say, 'Oh yeah?' " Ornstein said. "This is going to be used against him." White House aides said they believe most voters will understand the circumstances behind the decision. They cited

a recent Energy Department study saying that capping carbon dioxide emissions would escalate the shift from coal to natural gas for electricity generation, thus boosting prices. "It's better to protect the consumer and avoid worsening the energy crisis," White House spokesman Ari Fleischer said. If Bush has any doubt how much damage a broken promise can do, he needs only to ask his father, President George Bush, who hurt himself by reversing his nationally televised "read my lips, no new taxes" pledge. The younger Bush's carbon dioxide pledge came in an energy policy speech, and most of the attention at the time was devoted to his proposal to drill for oil in an Alaska wildlife refuge. Thomas E. Patterson, a professor of government and the press at the Harvard University's John F. Kennedy School of Government, said the damage done to Bush depends on what happens in the future. He likened broken campaign promises to "razor cuts." "If you only have a few of them, they really can get lost in everything else that's going on," Patterson said. "It's the accumulation of these razor cuts that starts the real bleeding."

(--) FLIP FLOPS KILL THE AGENDA.

Fitts 96 (Michael A., University of Pennsylvania Law Review, January, Lexis)

Centralized and visible power, however, becomes a double-edged sword, once one explores the different ways in which unitariness and visibility can undermine an institution's informal influence, especially its ability to mediate conflict and appear competent. In this context, the visibility and centralization of the presidency can have mixed effects. As a single visible actor in an increasingly complex world, the unitary president can be prone to an overassessment of responsibility and error. He also may be exposed to a normative standard of personal assessment that may conflict with his institutional duties. At the same time, the modern president often does not have at his disposal those bureaucratic institutions that can help mediate or deflect many conflicts. Unlike members of Congress or the agencies, he often must be clear about the tradeoffs he makes. Furthermore, a president who will be held personally accountable for government policy cannot pursue or hold inconsistent positions and values over a long period of time without suffering political repercussions. In short, the centralization and individualization of the presidency can be a source of its power, as its chief proponents and critics accurately have suggested, as well as its political illegitimacy and ultimate weakness.

Links: Focus Links

OBAMA'S AGENDA IS FINITE – FOCUS IS KEY – PLAN DERAILS THE AGENDA.

CSMonitor 9. [March 12 – lexis]

The Obama administration itself has not hidden the fact that it sees a limited window to enact its agenda, almost like a game of "beat the clock." As long as Obama's job approval ratings are comfortably high - currently in the 60s in major polls - he has the political capital to address the pent-up demand for change that is inevitable when the opposition party takes over from an unpopular previous administration. But, there's only so much a White House and Congress can accomplish, given the deliberative nature of the process, and even members of Obama's own party are raising warning flags about the magnitude of the new president's agenda.

PRESIDENTIAL FOCUS IS KEY TO GETTING THE AGENDA – PLAN IS A SURPRISE DERAILING THE AGENDA

GOMES 8. [11-10 Jim, columnist, "A climate plan in peril?" Boston Globe -- http://www.boston.com/lifestyle/green/articles/2008/11/10/a_climate_plan_in_peril/]

A budget out of balance and a populace more worried about the economic present than our atmospheric future does not bode well for global warming emerging as a top-tier issue in the early days of the new administration. An agenda crowded with critical items - an economy in recession, wars in Iraq and Afghanistan, the continuing mortgage meltdown, healthcare - awaits our newly elected leaders. There are only so many priorities that an administration and Congress can focus on, and they will need to make choices on how to use their initial honeymoon period and their finite supply of political capital.

PRESIDENTIAL FOCUS KEY AGENDA – PLAN TRADES OFF.

ANDRES 00. [Gary, president for legislative affairs in the Bush Administration, Presidential Studies Quarterly, September -- lexis]

The constraint of "time" is another trade-off the White House must manage. Members of Congress regularly criticize the White House for only being able to focus on one single issue at a time, a trait common to the White House legislative office that routinely works this way during major legislative battles, focusing its attention to winning a key vote on the House or Senate floor, and disposing of it before moving on to another project. Congress, with its diverse committee system and decentralized power structure, processes a variety of issues simultaneously. A typical legislative day might find two or three key issues on the floor, leadership meetings about the agenda for the following week, and a half a dozen critical markups in committees. Given all the issues Congress can present to the president and the limited number of hours in a day or week, it is critical how the White House prioritizes. The

White House must decide which issues to get involved with and which to ignore or delegate to others within the administration. The resolution of these choices and the trade-offs ultimately shape the White House-congressional agenda.

Focus key to passing the president's agenda.

EDWARDS AND BARRETT 00. [George & Andrew, distinguished professor of political science @ A&M, assistant lecturer/PhD Candidate in political science @ A&M, Polarized Politics: Congress and the President in a Partisan Era, ed Bond and Fleisher p 110]

In addition, the White House wants to ensure that its proposals compete favorably with other proposals on the agenda. If presidents cannot focus Congress's attention on their priority programs, the programs will get lost in the complex and overloaded legislative process. Moreover, presidents and their staff have the time and energy to lobby effectively for only a few bills at a time, and the president's political capital is inevitably limited. As a result, presidents wish to focus on advancing their own initiatives rather than opposing or modifying the proposals of others. Thus, the White House not only wants its initiatives to be on the congressional agenda but also prefers to have fewer congressional initiatives with which it must deal.

IL's: Political Capital Key

(--) Extend our Beauchamp evidence—Obama's political capital is key to staving off Democratic support for the bill.

(--) Obama's political capital is key to block passage of the bill—Democrats are key:

Daniel Pipes, 2/12/2015 (president of the Middle East Forum, "Why the (toothless) Iran sanctions bill matters," <http://www.washingtontimes.com/news/2015/feb/12/daniel-pipes-why-toothless-iran-sanctions-bill-mat/>, Accessed 2/19/2015, rwg)

Nearly all the 54 Republican U.S. Senators will vote in favor of the Kirk-Menendez bill requiring sanctions on Iran if the P5+1 negotiations fail. President Obama has promised to veto it. Now, the Senate is gearing up for a high-drama vote; will Democrats provide the 13 to 15 votes needed for a veto-proof majority? Lost in the shuffle is a little-noticed section of the bill that, if passed, guts it. The "Draft of Nuclear Weapon Free Iran Act of 2015," posted on the website of Sen. Mark Kirk (Republican of Illinois) contains a "Waiver of Sanctions." Designed to win the support of skittish Democrats, it also undermines the bill's goal of forcing Obama's hand in the negotiations. Section 208 bears quotation in full: The President may waive the application of any sanction pursuant to a provision of or amendment made by this title for a 30-day period, and may renew the waiver for additional 30-day periods, if the President, before the waiver or renewal, as the case may be – (1) certifies to the appropriate congressional committees that – (A) the waiver or renewal, as the case may be, is in the national security interest of the United States; (B) the waiver or renewal, as the case may be, is necessary to and likely to result in achieving a long-term comprehensive solution with Iran; and (C) Iran is not making further progress on its nuclear weapons program and is in compliance with all interim agreements with respect to that program; and (2) submits to the appropriate congressional committees a comprehensive report on the status of the negotiations toward a long-term comprehensive solution that includes an assessment of the likelihood of reaching that solution and the time frame anticipated for achieving that solution. What's the point, one might ask, of the pro-sanctions side struggling so hard to attain a veto-proof majority when Obama can negate its provisions at will? Indeed, he has already made statements along the very lines the bill requires, notably in his State of the Union (SOTU) address in January, when he (falsely) claimed that "for the first time in a decade, we've halted the progress of its nuclear program and reduced its stockpile of nuclear material." On the other side, why does the White House expend so much political capital stopping this bill when it could let it pass and then kill it by invoking the waiver?

(--) Obama will prevent Congress from tanking the deal but sustained capital is key

Stephen Collinson, Journalist, "Will Congress kill an Iran nuclear deal?" 11-12-14, CNN, <http://www.cnn.com/2014/11/12/politics/iran-congress/>

Veto Obama would be sure veto any legislation that could threaten the agreement. But Republicans could draw on skeptical Democrats to get closer to a veto proof majority of 67 Senate votes. An official with a prominent pro-Israel policy group in Washington added: "It is not a question of doing the math. The precise change is in the leader's office. That now enables

sanctions legislation to move forward." But other sources doubt that if it really came to it, there would be enough Democrats to challenge the president's veto and risk being accused of trashing a deal the rest of the world has embraced. But they admit the numbers are tightening. Jim Walsh, a research associate at Massachusetts Institute of Technology (MIT), who is an expert on Iranian nuclear diplomacy, predicted a fierce political battle. "There will definitely be a fight. It will be a hard fight, but I think it will be a fight that the president can win because the consequences of failure are high," he said. The White House has already won one skirmish over Iran. Last year, critics sought to derail an interim nuclear deal, but failed largely because Democratic Senate Majority leader Harry Reid blocked sanctions bills. Republican Senate Obama will not have that safety net in the new Republican Senate which convenes in January and backers of an agreement fear even the threat of tougher action. Dylan Williams, director of Government Affairs for J Street, a left-leaning pro-Israel group said new sanctions would "guarantee" a fracturing of the international coalition against Iran. Even if opponents fail to overcome a veto, Congress could still stir up the kind of trouble that could embolden hardline opponents of President Hassan Rouhani who argue Washington can never be trusted to stick to its commitments. And a deal could not survive as "temporary" forever -- eventually Congress would have to act. "It is clear there is a significant problem," said Trita Parsi, founder of the National Iranian American Council, which advocates dialogue between Washington and Tehran. "At the end of the day, the president needs to lift sanctions through Congress in order to make a deal possible." The politics on Iran are getting trickier for Obama by the day. Republicans are outraged at reports last week that he wrote to Iran's Supreme Leader Ali Khamenei, days before the Ayatollah issued a barrage of tweets slamming the "barbaric, wolflike and infanticidal regime" in Israel. Meanwhile, a report by the UN's nuclear watchdog body last week suggested Tehran may have violated an interim nuclear deal by feeding natural uranium gas into one of its centrifuges. Iran was also accused of blocking existing inspections to its nuclear plants. Political hardball The White House has already shown it is ready to play political hardball over Iran, warning last year that anyone who opposes the deal is effectively backing a march to war with Iran. Obama is also at odds over Iran with Israeli Prime minister Benjamin Netanyahu, who views the prospect of an Iranian bomb as an existential threat to the Jewish state. Netanyahu warned in a video address to Jewish Federations leaders on Tuesday that it was obvious Iran wanted to remove sanctions and it should be "equally obvious" that it is not prepared to dismantle its nuclear program in return. The White House argues Israel's demand for a complete dismantling of Iran's nuclear infrastructure is impractical. Instead, it wants the deal between the permanent five members of the UN Security Council, Germany and Iran to lengthen the period of time it would take Tehran to dash towards a bomb. "We will not let Iran get a nuclear weapon. Period. We mean it," Vice President Joe Biden said in Washington Monday as negotiators from Iran, the US and Europe toiled in Oman to bridge gaps on a deal ahead of a final round of talks in Vienna next week. Several key players could determine how the row over an Iran deal plays out on Capitol Hill. Incoming Senate Foreign Relations Committee Chairman Bob Corker, R-Tennessee, has voiced skepticism about Obama's Iran diplomacy but has been more pragmatic than other critics on sanctions.

(--) Other issues will trade-off with Obama's ability to persuade Democrats on Iran.

Zach Beauchamp, (B.A.s in Philosophy and Political Science from Brown University) Nov. 6, 2014. Retrieved Apr. 29, 2015 from <http://www.vox.com/2014/11/6/7164283/iran-nuclear-deal-congress>

This could be one of the biggest fights of Obama's last term. It's true that Obama could veto any Congressional efforts to blow up an Iran deal with sanctions. But a two-thirds vote could override any veto — and, according to Sofer, an override is entirely within the realm of possibility. "There are plenty of Democrats that will probably side with Republicans if they try to push a harder line on Iran," Sofer says. For a variety of reasons, including deep skepticism of Iran's intentions and strong Democratic support for Israel, whose government opposes the negotiations, Congressional Democrats are not as open to making a deal with Iran as Obama is. Many will likely defect to the GOP side out of principle. The real fight, Sofer says, will be among the Democrats — those who are willing to take the administration's side in theory, but don't necessarily think a deal with Iran is legislative priority number one, and maybe don't want to open themselves up to the political risk. These Democrats "can make it harder: you can filibuster, if you're Obama you can veto — you can make it impossible for a full bill to be passed out of Congress on Iran," Sofer says. But it'd be a really tough battle, one that would consume a lot of energy and lobbying effort that Democrats might prefer to spend pushing on other issues.

Presidential weakness allows Congress to impose veto proof majority on sanctions:

Lawrence J. Haas, 12/16/2014 (senior fellow at the American Foreign Policy Council, "The Last Line of Defense," <http://www.usnews.com/opinion/blogs/world-report/2014/12/16/congress-is-last-line-of-defense-against-obamas-bad-iran-nuclear-deal>, Accessed 1/2/2015, rwg)

In the weeks to come, look for Congress to seriously consider imposing a strict deadline for the talks, establishing "sanctions-in-waiting" that would take effect if talks collapse, limiting Obama's authority to lift sanctions, and forcing the administration to bring a final deal to Congress for approval. In an environment of presidential weakness and congressional skepticism, Obama may even be hard-pressed to prevent Congress from adopting such legislation with veto-proof majorities in both chambers.

Obama is aggressively lobbying against sanctions:

Kara Rowland, 1/29/2015 (staff writer, "Senate panel approves Iran sanctions bill, Dems prepare to hit pause," <http://www.foxnews.com/politics/2015/01/29/senate-panel-poised-to-vote-on-iran-sanctions-bill-as-dems-prepare-to-hit-pause/>, Accessed 1/30/2015, rwg)

Sens. Bob Menendez, D-N.J., and Chuck Schumer, D-N.Y., both of whom signed onto the letter, voted for the sanctions bill in committee Thursday so the measure would be on the floor and ready for consideration if talks fail. The administration, which has aggressively lobbied against even conditional sanctions, says the threat alone of further action is enough to keep Iran at the table.

(--) It requires political capital to stave off Congress – otherwise the deal collapses

Winsor, 10/2/14 (Ben, "A Coalition Is Working Furiously Behind The Scenes To Support Obama's Iran Talks," <http://www.businessinsider.com/rag-tag-iran-coalition-backing-diplomacy-2014-10>, JMP)

Since November 2013, the Obama administration has engaged with Iran in tense, drawn-out nuclear negotiations which optimists hope could bring an end to decades of hostility and mistrust. Throughout it all, Congress has threatened to play the spoiler, with a tough sanctions bill passing the House and looming in the Senate which would almost certainly scuttle the fragile talks over the Iranian nuclear program. Now, as the deadline for the end of the talks approaches, a coalition of legislators, advocacy groups, and White House officials are working to hold Congress back from the brink of thwarting what they see as a historic window of opportunity. They're fighting against legislators and conservative groups like The Heritage Foundation and The Free Enterprise Institute who are pushing for the US to take a hawkish stance. Legislators, led by Minnesota Congressman Keith Ellison, have been maneuvering quietly behind the scenes in Congress to keep the talks alive. At the same time, officials from the White House have been leaning heavily on Senate Democrats to refrain from bringing a sanctions bill to the floor. On the outside, a diverse range of pro-diplomacy groups, led by organisations like the National Iranian American Council (NIAC) and the liberal Jewish organization J Street, have found a common cause and rallied together to lobby for restraint. Even the Quakers are energized. "This is a do-or-die moment, either we succeed, or we go in a much more negative direction," said NIAC co-founder Trita Parsi at the group's annual conference last weekend. Parsi sees the negotiations as a historic moment during a narrow window of opportunity. Presidents on both sides have sunk significant time and energy into the talks and Parsi believes the current leadership in both countries is more likely to make a deal than those who came before — or might come after. "The next president, whatever political party they're in, is not going to spend precious political capital battling Congress... [Obama] is the guy," Parsi said. Supporters fear that failure of the talks could trigger increased sanctions, the rise of hardliners in Iran, and relations spiraling toward military confrontation.

(--) Obama convincing congress to hold off on sanctions

Klapper & Lee, 12/5/14 (Bradley & Matthew, "In selling job to Congress, US officials list nuclear concessions they say Iran has made,"

<http://www.usnews.com/news/politics/articles/2014/12/05/us-officials-list-irans-concessions-in-nuke-talks>, JMP)

WASHINGTON (AP) — The Obama administration is telling members of Congress it has won significant concessions from Iran for extending nuclear talks, including promises by the Islamic republic to allow snap inspections of its facilities and to neutralize much of its remaining uranium stockpile. Those terms are included in a document that U.S. officials say represents the terms for a seven-month extension in nuclear negotiations between world powers and Iran, agreed to when the last deadline of Nov. 24 passed without an accord. A copy was obtained by The Associated Press. The authenticity of the document was confirmed by three U.S. officials and congressional aides familiar with closed-doors discussions in recent days that have included top U.S. nuclear negotiator Wendy Sherman and Jake Sullivan, formerly Vice President Joe Biden's national security adviser. The officials have been presenting the Iranian concessions to lawmakers in the hopes of convincing them to support the extension and hold off on new economic sanctions that could derail the diplomatic effort. There is no proof Tehran has agreed to or will follow through on the steps outlined, and negotiators representing world powers and Iran offered few specifics on their progress when they agreed to extend negotiations until July.

No signed agreement emerged from that understanding, but administration officials say Iran accepted important limits on its nuclear program in the discussions last month. The officials weren't authorized to speak publicly on the sensitive negotiations and insisted on anonymity. The U.S. says Iran will further limit its development of new technology for enriching uranium that could be used for energy generation, as Tehran says is its objective, or for use in a nuclear warhead, which Washington and its international partners fear may be Iran's ultimate intent. It also seems to patch up what critics of last year's interim nuclear agreement described as loopholes on Iran's research and development of advanced centrifuges. For one centrifuge model Iran has been working on, the U.S. says Tehran won't be able to pursue the industrial-scale operation needed for any "breakout" effort toward producing enough material for a nuclear weapon. For other models in the pipeline, Iran won't be permitted to feed the centrifuges with uranium gas or begin testing on a cascade level, which are needed steps in their development. Iran also has agreed to turn 35 kilograms of higher-enriched uranium oxide stocks into fuel, making it unusable in the event Iran tries to secretly reach nuclear weapons capacity. That amounts for almost half of Iran's remaining stockpile of material that could in theory be converted into a form that is close to weapons-grade uranium. In addition, the administration says Iran will grant international inspectors expanded access to its centrifuge production facilities, allowing the U.N. nuclear agency to double the amount of visits it makes to sites and to undertake unannounced or "snap" inspections. The monitoring aims to deter Iran from producing centrifuges for any covert facility. Lastly, Iran will refrain from any other forms of enrichment, including through the use of laser technology. Last year's agreement halted Iran's progress on its gas centrifuge program, but U.S. officials feared the Iranians could experiment with other technology designed to do the same thing. Iran has attempted laser enrichment in the past, the U.S. believes, but now has committed to refrain from exploring it any further. It's unclear how Congress is receiving the message. Many **lawmakers are decrying the stalemate** in negotiations and what they perceive as wide concessions by the U.S. and its partners for few steps by Iran to dismantle its nuclear program. **Several** Democrats and Republicans in the Senate **are threatening new sanctions** designed to pressure Iran into caving in the nuclear talks. The House voted overwhelmingly for new sanctions 17 months ago. However, President Barack **Obama has threatened to veto any new sanctions legislation** while American diplomats continue their push for an accord that would set multiyear limits on Iran's nuclear progress in exchange for an easing of the international sanctions that have crippled the Iranian economy. Senate **hawks are still trying to build a veto-proof majority of 67 votes** with Republicans set to assume the majority next month.

Goldsmith 10/21/14 (Jack, Henry L. Shattuck Professor at Harvard Law School, where he teaches and writes about national security law, presidential power, cybersecurity, international law, internet law, foreign relations law, and conflict of laws, "Some Implications of President Obama's Plans to Sidestep Congress on Iranian Sanctions," <http://www.lawfareblog.com/2014/10/some-implications-of-president-obamas-plans-to-sidestep-congress-on-iranian-sanctions/>)

There are many different statutory sanctions against Iran, and **Congress's most recent word** – from 2012 – **tightens and narrows the President's authority to waive the sanctions**. Without

getting into the details, it nonetheless appears that the President can waive most if not all sanctions against Iran for the remaining two years of his term if he is willing to make the requisite findings. **If he does so**, what are the implications for any nuclear deal with Iran? Answer: **The deal will be tenuous**. The fact that the President does not think he can get Congress on board for any deal with Iran signals to Iran that any deal would be with the President alone, and would last only as long as his waiver authority – i.e. two more years. The deal could last longer, as it did with the last major unilateral presidential deal with Iran, the 1981 Algiers Accords that effectuated the release of the hostages. In the transition between the Carter and Reagan administrations in January 1981 some in Congress and the press questioned whether President Reagan should honor the deal that Carter struck with Iran through Algerian intermediaries. President Reagan did honor it, of course, and the courts upheld his and Carter's actions. But the situation with Iran today is different than 1981. Among other differences, (1) Congress appears more skeptical of this deal-to-be than it did of the deal in 1981, (2) President Reagan and Congress faced powerful financial incentives to stand by the deal struck by President Carter (namely, the ability of American firms to recover property expropriated by Iran) that are not present in the current negotiation, and (3) Congress's consent is probably necessary to make any deal now with Iran work over the medium term in a way that it was not necessary to make the deal work in 1981. The bottom line, then, is that **any deal struck by President Obama with Iran will probably appear to the Iranians to be**, at best, **short-term and tenuous**. And so **we can probably expect**, at best, **only a short-term and tenuous commitment from Iran in return**. Here we can see the underappreciated benefits that accrue when the President succeeds in winning congressional approval for a foreign policy deal (whether it is a treaty, a congressional-executive agreement, or something short of those things). **To win such approval the President must expend political capital and convince** the American people and its representatives about the value of the deal. The expenditure of presidential capital signals the importance of the deal to the President. **If he succeeds in winning approval from Congress, that approval credibly conveys that the nation**, as opposed to a particular president, **is behind the deal**. **The negotiating partner thus receives** meaningful information about the depth of the United States' (as opposed to the President's) commitment, which makes possible (but does not guarantee) **a deeper and more meaningful commitment** by the negotiating partner. Vladimir Putin understood this when he rejected President Bush's handshake deal on nuclear weapons reduction and insisted instead on ratification of what became the Treaty of Moscow, which significantly cut U.S. and American nuclear weapons arsenals.

(--) Iran negotiations will succeed now – Obama's PC is key to prevent Congress from derailing them.

Hassibi, Non-Resident Fellow with the Nuclear Security Working Group and a doctoral candidate with the Research Group in International Politics at the University of Antwerp, 10-20-14 (Navid, "On Iran: Congress, Please Step Aside," <http://nationalinterest.org/feature/iran-congress-please-step-aside-11497?page=show>, accessed 10-20-14, CMM)

While Secretary of State John **Kerry**, Foreign Minister Mohammad Javad **Zarif** and High Representative Catherine **Ashton** gathered last week **to kick-start** a new round of **negotiations** between the so-called P5+1 and Iran in efforts to meet a looming November 24 deadline to reach a comprehensive nuclear agreement, **one** particular **actor has been** implicitly **threatening**

to sabotage the entire process—the U.S. Congress. Considering Congress’s dismal approval ratings, and polls indicating that a large majority of Americans favor making a nuclear deal with Iran, Congress is hardly representing the majority of the American people on the issue of a nuclear deal with Iran and is towing a tough line seemingly intent on derailing any prospective breakthrough on the nuclear issue. Earlier this month, over 350 members of the U.S. House of Representatives signed and sent a letter to Secretary Kerry expressing concern over Iran’s missed deadline for the International Atomic Energy Agency’s (IAEA) investigation into prior possible military dimensions (PMD) to Iran’s nuclear program. Essentially, the letter asserts that information on PMD is necessary to assess Iran’s current and future nuclear activity, which, as duly noted by Paul Pillar in the National Interest, is an assertion that lacks logic and is an issue likely being pursued by congressional opponents of a nuclear agreement, precisely because it will be a “deal killer”. This is but the most recent example of some lawmakers on Capitol Hill trying to derail a nuclear agreement with Iran. Some legislators have suggested terms for the comprehensive agreement with which Iran would find impossible to agree, such as the complete dismantlement of its uranium-enrichment program. Indeed, both chambers of Congress have repeatedly moved to undermine the negotiating process with tough Netanyahu-like rhetoric since negotiations with Iran under the Rouhani era began over a year ago. The Obama administration has thus far been successful at pushing back against congressional derailment efforts. The White House successfully thwarted congressional efforts earlier this year at enacting additional sanctions that would have been in contrary to the terms of the interim Joint Plan of Action (JPOA) signed last November. However, it seems that some in Congress have resumed their pursuit of additional measures against Iran. This past summer, Senate Republicans Bob Corker, Lindsey Graham, John McCain and Marco Rubio introduced the Iran Nuclear Negotiations Act of 2014 that would require the White House to submit any agreement for Senate review. Also this summer, Senators Marco Rubio and Mark Kirk tabled the Iran Human Rights Accountability Act of 2014 into the Senate, which would impose additional sanctions on Iran, among other things. The Obama administration is thus far relying on Senate Democrats to block attempts by the Republicans to act on Iran. To satisfy the inclination toward sanctions by some lawmakers and other opponents of a nuclear deal, the administration has adopted additional restrictive measures within existing sanctions legislation; an act that is not within the spirit of the JPOA but well within its legal framework. Unfortunately for supporters of a nuclear deal, Capitol Hill’s role in the entire process is critical, particularly as it relates to sanctions relief. Since the mid-1990s, Congress has legislated seven acts targeting Iran’s energy, financial and trade sectors. Many of these sanctions can be temporarily waived by the president for a period of 180 days to a year, depending on the statute. The president cannot remove sanctions passed by Congress through an executive order. The repeal or amendment of the congressionally enacted sanction must follow the same legislative process all bills must undergo to be passed and signed into law. While sanctions relief within a mutually agreed timeline will surely be part of a comprehensive agreement, should the president fail to convince Congress to repeal legislated sanctions against Iran, the president will likely rely on the semi-annual renewal of waivers. Although this might not be attractive to Iranian negotiators due to uncertainties surrounding future U.S. presidents and their willingness to waive sanctions, the United States can provide assurances that it will honor its commitment to provide sanctions relief by including such language in a United Nations Security Council resolution codifying the terms of the

comprehensive agreement, mandating the United States, the other members of the P5+1 and UN members at large not to adopt sanctions against Iran, so long as Tehran remains compliant, with validation from the IAEA, with the terms of the comprehensive agreement. This will provide future U.S. presidents the legal impetus and authority to continue providing waivers to legislated sanctions or risk violating international law and face possible legal recourse. Of course, Congress can pass a bill barring the president from providing waivers and override the presidential veto that would likely follow with two-thirds majority of each house, but such a scenario is uncommon and has not occurred since President George W. Bush's final two years in office. To be safe, the president will need the help of Congress if a comprehensive agreement is reached to repeal sanctions. In this regard, Democrats must retain a majority in the Senate to continue blocking derailment efforts by Iran hawks. The White House can also opt to negotiate with a hostile Republican leadership, although this would seem unlikely given indications suggesting the president's lack of appetite in doing so. Alternatively, President Obama can lambast legislators much like he did last fall/winter when lawmakers tried to pass additional sanctions after the JPOA was signed. The Obama administration significantly lobbied Congress by sending delegations led by Vice President Joe Biden and Secretary Kerry, and also invited committee staffers and legislators to the White House for special briefings. This was done in concert with public statements by the president and others in the administration who opposed further sanctions. To be sure, the upcoming midterm elections could be telling in how the Obama administration chooses to engage Congress on Iran, particularly if Republicans win a majority in the Senate. Nevertheless, a historic opportunity exists for the United States, the other members of the P5+1 and Iran to peacefully resolve the long-standing nuclear dispute, potentially opening the door to cooperation on other regional issues and a new era of relations with Iran. To this end, Congress must work to be part of the solution, not the problem.

(--) Obama is holding off a Congressional vote – that's key to sustaining negotiations

SANGER, NYT, 10-19-14 (David, "Obama Sees an Iran Deal That Could Avoid Congress," <http://www.nytimes.com/2014/10/20/us/fear-of-ebola-closes-schools-and-shapes-politics.html?rref=politics&module=ArrowsNav&contentCollection=Politics&action=swipe®ion=FixedRight&pgtype=article>, accessed 10-20-14, CMM)

No one knows if the Obama administration will manage in the next five weeks to strike what many in the White House consider the most important foreign policy deal of his presidency: an accord with Iran that would forestall its ability to make a nuclear weapon. But the White House has made one significant decision: If agreement is reached, President Obama will do everything in his power to avoid letting Congress vote on it. Even while negotiators argue over the number of centrifuges Iran would be allowed to spin and where inspectors could roam, the Iranians have signaled that they would accept, at least temporarily, a "suspension" of the stringent sanctions that have drastically cut their oil revenues and terminated their banking relationships with the West, according to American and Iranian officials. The Treasury Department, in a detailed study it declined to make public, has concluded Mr. Obama has the authority to suspend the vast majority of those sanctions without seeking a vote by Congress, officials say. But Mr. Obama cannot permanently terminate those sanctions. Only Congress can take that step. And even if Democrats held on to the Senate next month, Mr. Obama's advisers have concluded they would

probably lose such a vote. “We wouldn’t seek congressional legislation in any comprehensive agreement for years,” one senior official said. White House officials say Congress should not be surprised by this plan. They point to testimony earlier this year when top negotiators argued that the best way to assure that Iran complies with its obligations is a step-by-step suspension of sanctions — with the implicit understanding that the president could turn them back on as fast as he turned them off. “We have been clear that initially there would be suspension of any of the U.S. and international sanctions regime, and that the lifting of sanctions will only come when the I.A.E.A. verifies that Iran has met serious and substantive benchmarks,” Bernadette Meehan, the spokeswoman for the National Security Council, said Friday, referring to the International Atomic Energy Agency. “We must be confident that Iran’s compliance is real and sustainable over a period of time.” But many members of Congress see the plan as an effort by the administration to freeze them out, a view shared by some Israeli officials who see a congressional vote as the best way to constrain the kind of deal that Mr. Obama might strike. Ms. Meehan says there “is a role for Congress in our Iran policy,” but members of Congress want a role larger than consultation and advice. An agreement between Iran and the countries it is negotiating with — the United States, Britain, France, Germany, Russia and China — would not be a formal treaty, and thus would not require a two-thirds vote of the Senate. The chairman of the Senate Foreign Relations Committee, Senator Robert Menendez, the New Jersey Democrat, said over the weekend that, “If a potential deal does not substantially and effectively dismantle Iran’s illicit nuclear weapons program, I expect Congress will respond. An agreement cannot allow Iran to be a threshold nuclear state.” He has sponsored legislation to tighten sanctions if no agreement is reached by Nov. 24. A leading Republican critic of the negotiations, Senator Mark S. Kirk of Illinois, added, “Congress will not permit the president to unilaterally unravel Iran sanctions that passed the Senate in a 99 to 0 vote,” a reference to the vote in 2010 that imposed what have become the toughest set of sanctions. Such declarations have the Obama administration concerned. And they are a reminder that for a deal to be struck with Iran, Mr. Obama must navigate not one negotiation, but three. The first is between Mr. Obama’s negotiators and the team led by Mohammad Javad Zarif, the savvy Iranian foreign minister. The second is between Mr. Zarif and forces in Tehran that see no advantage in striking a deal, led by many in the Iranian Revolutionary Guard Corps and many of the mullahs. The critical player in that effort is Ayatollah Ali Khamenei, who has reissued specific benchmarks for an accord, including Iran’s eventual expansion of its uranium enrichment program by nearly tenfold. And the third is between Mr. Obama and Congress. Mr. Zarif, in an interview last summer, said that Mr. Obama “has a harder job” convincing Congress than he will have selling a deal in Tehran. That may be bluster, but it may not be entirely wrong. Many of the details of the negotiations remain cloaked. The lead negotiator, Wendy Sherman, the under secretary of state for political affairs and a leading candidate to become the State Department’s No. 2 official next month, struck a deal with congressional leaders that enables her to avoid public testimony when the negotiations are underway. Instead, she conducts classified briefings for the key congressional committees. But it is clear that along with the fate of Iran’s biggest nuclear sites — Natanz and Fordow, where uranium fuel is enriched, and a heavy-water reactor at Arak that many fear will be able to produce weapons-grade plutonium — the negotiations have focused intently on how sanctions would be suspended. To the Americans, the sanctions are their greatest leverage. For many ordinary Iranians, they are what this negotiation is all about: a chance to boost the

economy, reconnect with the world and end Iran's status as a pariah state. For that reason, many think Mr. Obama's best option is to keep the negotiations going if a deal is not reached by the deadline, a possibility both Iranian and Russian officials have floated. "Between now and 2017 Obama's goal is to avert an Iranian bomb and avert bombing Iran," said Karim Sadjadpour of the Carnegie Endowment for International Peace. "If Congress feels obliged to pass additional sanctions, the best way to do it would be to create a deterrent — basically to say if you recommence activities Iran has halted, here are new sanctions." But Mr. Obama is feeling pressure as well. Some cracks are appearing in the sanctions regime. In the spring, the administration was alarmed to see a spike in Chinese purchases of Iranian oil, seeming to undercut the sanctions. More recently the figures have declined again. Nonetheless they are the subject of behind-the-scenes talks between American and Chinese officials. And the Iranians want far more than a suspension of American-led sanctions: They are also pressing for an end to United Nations Security Council resolutions that bar "dual use" exports that have civilian uses but also could be used in nuclear and missile programs; those resolutions give the United States and its allies a legal basis for demanding inspections of shipments to Iran that could be part of a covert program.

(--) Obama will successful hold off sanctions and a vote on the deal now

WSJ, 10-14-14 ("Obama, Congress and Iran; The White House denies the Senate a say on a Tehran arms deal.," proquest, accessed 10-19-14, CMM)

Lost in the chaos of the Middle East is that the United States and Iran are fast approaching next month's deadline to strike a deal on Tehran's nuclear program. This has been teed up for years as the crown jewel of President Obama's foreign-policy legacy. On current course, it's more likely to end up as another setback to U.S. security. President Obama's insistence on consulting largely with himself on the world's most complex issues is well known. Most troublesome for the outcome with Iran is his rejection of needed support from Congress. The Administration is currently leaning on Democrats in the Senate to block an attempt by Republicans to give Congress a say on any Iran accord. In late July, Bob Corker, Lindsey Graham, Marco Rubio and John McCain--the GOP's strongest voices on foreign policy--introduced the "Iran Nuclear Negotiations Act of 2014." The bill compels the Administration to submit any agreement for Senate review within three days of completion. If Iran walks away from the table without a deal, the sanctions waived last November would be immediately reimposed. The bill also puts in place a quick mechanism to reimpose sanctions in case Iran cheats on a deal. Both provisions are sensible safeguards. Unlike previous sanctions legislation, this effort has failed to get a single Democratic co-sponsor. New Jersey Sen. Robert Menendez, the otherwise hawkish Chairman of the Foreign Relations Committee, has refused to mark up the bill. Democratic skeptics on Iran say they're holding their political powder to look closely at a final agreement. But by then the White House will be turning up the heat on Democrats to support what Mr. Obama will portray as his signature diplomatic achievement. In his first Inaugural address, President Obama extended a hand to Tehran's mullahs, and the interim nuclear deal struck last November was the first concrete step toward that goal. Iran froze work on advanced centrifuges, and the U.S. and European Union rolled back some economic sanctions. The two sides were supposed to strike a final agreement by July but extended talks to Nov. 24. Throughout the negotiations, however, the Obama Administration has gone out of its way to weaken the U.S. negotiating

hand. Earlier this year, the White House twisted arms in the Senate to abandon a bipartisan bill, co-sponsored by 60 of the chamber's 100 legislators, that put in place stronger sanctions against Iran in case those talks failed. Despite Mr. Obama's opposition, the Senate had led the push to hit Iran's economy harder, forcing the regime to the table. Noting Iran's opposition to this year's sanctions bill, Administration officials said they wanted to send a goodwill gesture to Tehran. As the summer deadline extension showed, the Iranians offered nothing in return.

**(--)
Obama's lobbying is key to turn the tide against the bill:**

Dmitriy Shapiro, 2/11/2014 ("Behind-the-scenes dealings may undermine Iran sanctions effort," <http://www.jns.org/latest-articles/2014/2/11/behind-the-scenes-dealings-may-undermine-iran-sanctions-effort#.UwZhXM51DJU>, Accessed 2/21/2014, rwg)

As it stands right now, legislative action on the matter is in the Senate in the form of the Mendendez-Kirk bill, S. 1881. Last month, the Obama administration began lobbying the bipartisan bill's Democratic sponsor, efforts which appear to have successfully turned the tide in the White House's favor.

**(--)
Pressure from the White House is key to getting members of Congress to back off the measure:**

Elad Benari, 2/7/2014 (staff writer, "AIPAC Backs Down from Support of New Iran Sanctions,"

<http://www.israelnationalnews.com/News/News.aspx/177217#.UwZhFM51DJU>, Accessed 2/21/2014, rwg)

The new sanctions bill has been gaining momentum in Congress in recent weeks. 59 of the 100 senators, including 16 of Obama's fellow Democrats, signed on as co-sponsors to it. The bill would impose new restrictions on Iran if talks on a permanent deal falter. Reid, however, has repeatedly declined to say when it might be voted on.¶ The Huffington Post noted that AIPAC's latest statement shows that it has completely reversed course on the issue. For months, the group had been lobbying lawmakers hard to push the Iran sanctions bill, even launching an attack on one of its biggest allies, Rep. Debbie Wasserman Schultz (D-Fla.), for not supporting it.¶ Only in recent weeks has AIPAC begun backing off in the face of resistance from the White House and key Democratic lawmakers, including Reid, the report noted.

**(--)
Obama pressure is key to preventing sanctions against Iran:**

Arshin Adib-Moghaddam, 2/19/2014 (Chair of the Centre for Iranian Studies at the London Middle East Institute, "Renewed Iranian-American Relations Stabilize World Politics," <http://www.payvand.com/news/14/feb/1129.html>, Accessed 2/20/2014, rwg)

Q: Iran and the P5+1 group have reached an agreement on the date for starting the implementation of the Joint Plan of Action, and the plan entered into force as of January 20, 2014. Following this development, the US Congress has stopped efforts aimed to escalate unilateral sanctions against Iran. What goal did the new Congress bill for the escalation of sanctions against Iran was pursuing and what developments have forced its proponents to withdraw from their previous position? Do you think that the US senators will finally give the go-

ahead to the imposition of new sanctions against Iran?¶ A: When it comes to contentious international issues such as Iran or Palestine for that matter, an influential section of the US Congress does not act in independence of Israeli interests. That must be the starting point of the analysis. While there is no inevitability about that dependency, i.e. the US Congress does not automatically yield to the demands of pro-Israeli lobbying organizations, the linkages are salient enough to have an impact on US foreign policies. In the case of Iran, AIPAC and other lobbying groups have been at the forefront of an aggressive campaign to escalate sanctions against Iran and it is well known that they have access to enough congressmen to influence the foreign policy of the government. In this sense they are a part of a “deep state within the US state” which does not necessarily act in accordance with US national interest, but the interest of Israel. This is my disagreement with the Chomskyan analysis of the relationship between Israel and the United States. Chomsky sees Israel as the Trojan Horse of US strategic interests in West Asia and North Africa. For me Israel is a liability to those preferences, a hurdle rather than a facilitator. The Obama administration has to balance the various poles of America’s power structures and so far it has done an excellent job in that regard. The fact that congress has been disciplined is down to his administration and their supporters who made a decisive and persuasive case for diplomacy. This is an important departure from previous administrations. A moment of rare political audacity.

**(--)
Pressure from Obama is key to keeping Democrats from jumping on board the Iran sanctions legislation:**

DONNA CASSATA, 1/21/2014 (staff writer, “Dems signal willingness to wait on Iran sanctions,” http://www.denverpost.com/breakingnews/ci_24957275/senate-dems-divided-over-new-iran-sanctions, Accessed 1/22/2014, rwg)

WASHINGTON—Under pressure from the Obama administration, Senate Democrats who favor a new batch of sanctions on Iran signaled a willingness to hold off on levying penalties to give diplomatic negotiations a chance. Majority Leader Harry Reid, D-Nev., made clear that a vote on a package of penalties pushed by Sens. Bob Menendez, D-N.J., and Mark Kirk, R-Ill., wouldn't occur anytime soon despite a call for a vote from Republican leader Mitch McConnell and a daunting number of backers for the legislation—59. "We're going to wait and see how this plays out," Reid told reporters on Tuesday. Obama has argued that a new round of penalties would derail sensitive talks with Tehran, and Reid ensured no Senate votes late last year during debate on a defense policy bill. The administration has faced a tougher task trying to persuade the growing number of more than a dozen Democrats who have signed onto the Menendez-Kirk legislation.

**(--)
Political capital will be key to Obama easing sanctions on Iran:**

Michael Martinez, 9/20/2013 (staff writer, “Iran's president begins 'charm offensive,' but will Obama buy it?” <http://www.cnn.com/2013/09/20/world/us-iran-relations/>, Accessed 10/16/2013, rwg)

To keep hard-liners at bay, Rouhani now must deliver something -- namely, economic relief as Iran strains under global sanctions -- or his critics will prevail as they did against Obama in 2009

when his own venture on U.S.-Iran diplomacy foundered, one analyst said.¶ "Now the roles are reversed: Rouhani needs to strike a deal quickly," said Trita Parsi, president of the National Iranian American Council who's authored "A Single Roll of the Dice: Obama's Diplomacy with Iran."¶ Next week's U.N. General Assembly meeting "could be quite decisive," Parsi said.¶ "That's going to be the moment where the two sides have to invest the political capital needed. Otherwise it will go nowhere. It's going to be costly politically to strike a deal. There's going to be critics on both sides," Parsi said. "There is a need for a huge dose of political will to be injected into the process."¶ But Elliott Abrams, a senior fellow at the Council on Foreign Relations, said Obama shouldn't meet with Rouhani during the U.N. gathering, though shaking hands in a corridor would be appropriate.

(--) Current efforts to stall the bill in the Senate have been successful:

Ali Gharib, 12/18/2013 (a Foreign Policy blog, "Exclusive: Top Senate Democrats Break with White House and Circulate New Iran Sanctions Bill,"
http://thecable.foreignpolicy.com/posts/2013/12/18/exclusive_top_senate_democrats_break_with_white_house_and_circulate_new_iran_sanctions, Accessed 1/22/2014, rwg)

Critics of imposing new sanctions fear that the bill will violate either the spirit or the letter of the Joint Plan of Action signed in Geneva. The interim deal allows some flexibility, mandating that "the U.S. administration, acting consistent with the respective roles of the President and the Congress, will refrain from imposing new nuclear-related sanctions." Administration officials have mounted a so-far successful effort to stall new sanctions in the Senate. (The House overwhelmingly passed new sanctions in the summer.) Previous rumors of a bill in the Senate were said to contain a six-month delay that would prevent the legislation from taking effect while talks continued, but this iteration of the legislation doesn't contain that kind of fail-safe. Asked this month by Time what would happen if a bill, even with a delay, passed Congress, Iran's Foreign Minister Javad Zarif said, "The entire deal is dead."

(--) Obama needs to mollify the Democrats to get them to support easing of Iran sanctions:

Warner, 11/14/13 – chief foreign affairs correspondent for PBS (Margaret, "As negotiators ready for Iran talks, Obama asks Congress not to step up pressure" PBS News Hour,

http://www.pbs.org/newshour/bb/world/july-dec13/iran_11-14.html, Accessed 1/22/2014, rwg)

Margaret, behind the scenes, it seem like what is the president is trying to do, as he was with health care today, is mollify the Democrats. MARGARET WARNER: That is one of his main problems, Gwen. There's strong sentiment on the Hill to step up pressure on Iran during these talks. And it's coming not just from Republicans, but from some leading Democrats, like Foreign Affairs Committee Chairman Bob Menendez. The two scenarios are, they would either impose new sanctions, or, as Senator Bob Corker, Republican, wants to do, strip the president of his

ability to waive even existing sanctions under existing law. The administration says, if that happens, President Obama will have nothing left to deal on Geneva next week. His negotiators won't, because even the modest easing they're proposing, that they proposed last week, say, unblocking some funds that is Iranian money held in foreign accounts, he can't do if his hands are tied on the waivers. So that's why you saw a full-court press this week, Vice President Biden, Secretary Kerry up on the Hill in private briefings.

Internals: Congressional Support Key

Congressional support is key to any deal with Iran.

Zach Beauchamp, (B.A.s in Philosophy and Political Science from Brown University) Nov. 6, 2014. Retrieved Apr. 29, 2015 from <http://www.vox.com/2014/11/6/7164283/iran-nuclear-deal-congress>

But if he does reach a deal, and Congress doesn't like the terms, then they'll be able to kill it by passing new sanctions legislation, or preventing Obama from temporarily waiving the ones on the books. And make no mistake — imposing new sanctions or limiting Obama's authority to waive the current ones would kill any deal. If Iran can't expect Obama to follow through on his promises to relax sanctions, it has zero incentive to limit its nuclear program. "If Congress adopts sanctions," Iranian Foreign Minister Javad Zarif told Time last December, "the entire deal is dead."

(--) US failure to abide by the deal collapses international support and the ability to coerce Iran.

Zach Beauchamp, (B.A.s in Philosophy and Political Science from Brown University) Nov. 6, 2014. Retrieved Apr. 29, 2015 from <http://www.vox.com/2014/11/6/7164283/iran-nuclear-deal-congress>

Moreover, it could fracture the international movement to sanction Iran. The United States is far from Iran's biggest trading partner, so it depends on international cooperation in order to ensure the sanctions bite. If it looks like the US won't abide by the terms of a deal, the broad-based international sanctions regime could collapse. Europe, particularly, might decide that going along with the sanctions is no longer worthwhile. "Our ability to coerce Iran is largely based on whether or not the international community thinks that we are the ones that are being constructive and [Iranians] are the ones that being obstructive," Sofer says. "If they don't believe that, then the international sanctions regime falls apart."

Internals: Democrats are Key

Democrats are key:

Kristina Wong, 1/29/2015 (staff writer, "Iran sanctions bill passes Senate panel"
<http://thehill.com/policy/defense/231130-iran-sanctions-bill-passes-senate-panel>, Accessed 1/30/2015, rwg)

"Congress should have the collective patience to wait until the end of June to see whether our negotiators can resolve the nuclear issue with Iran through diplomacy," Brown said. "Once that is determined, Congress and the president will unquestionably join hands in applying greater pressure," he added. The passage of the bill in committee, however, is a sign that Democrats are running out of patience. With 54 Republicans in the Senate, Democratic support of the bill is necessary to reach a veto-proof majority of 67 votes.

Democrats are key to the legislation:

Kara Rowland, 1/29/2015 (staff writer, "Senate panel approves Iran sanctions bill, Dems prepare to hit pause," <http://www.foxnews.com/politics/2015/01/29/senate-panel-poised-to-vote-on-iran-sanctions-bill-as-dems-prepare-to-hit-pause/>, Accessed 1/30/2015, rwg)

"Should Iran refuse a reasonable deal or cheat on its current commitments under the [agreement], the Senate and House could impose additional measures in a matter of hours. The administration would strongly support such action," Tony Blinken, deputy secretary of state, told senators Tuesday. "Iran is well aware that an even sharper sword of Damocles hangs over its head. It needs no further motivation." The move by Democrats like Menendez to hit the pause button is more than a symbolic victory for the administration; contentious legislation requires 60 votes to pass the full Senate, meaning that Republicans would need to keep their own caucus of 54 together and pick up six Democrats to advance the measure. An additional seven Democrats would be needed to override a threatened presidential veto.

Internals: AT: Hirsh/Political Capital Doesn't Exist

(--) Hirsh doesn't say political capital doesn't exist just that it's complex—prefer the specificity of our scenario:

Michael Hirsh, 2/7/2013 (staff writer, "There's No Such Thing as Political Capital,"

<http://www.nationaljournal.com/magazine/there-s-no-such-thing-as-political-capital-20130207>, Accessed 2/22/2013, rwg)

The point is not that "political capital" is a meaningless term. Often it is a synonym for "mandate" or "momentum" in the aftermath of a decisive election—and just about every politician ever elected has tried to claim more of a mandate than he actually has. Certainly, Obama can say that because he was elected and Romney wasn't, he has a better claim on the country's mood and direction. Many pundits still defend political capital as a useful metaphor at least. "It's an unquantifiable but meaningful concept," says Norman Ornstein of the American Enterprise Institute. "You can't really look at a president and say he's got 37 ounces of political capital. But the fact is, it's a concept that matters, if you have popularity and some momentum on your side."¶ The real problem is that the idea of political capital—or mandates, or momentum—is so poorly defined that presidents and pundits often get it wrong. "Presidents usually over-estimate it," says George Edwards, a presidential scholar at Texas A&M University. "The best kind of political capital—some sense of an electoral mandate to do something—is very rare. It almost never happens. In 1964, maybe. And to some degree in 1980." For that reason, political capital is a concept that misleads far more than it enlightens. It is distortionary. It conveys the idea that we know more than we really do about the ever-elusive concept of political power, and it discounts the way unforeseen events can suddenly change everything. Instead, it suggests, erroneously, that a political figure has a concrete amount of political capital to invest, just as someone might have real investment capital—that a particular leader can bank his gains, and the size of his account determines what he can do at any given moment in history.¶ Naturally, any president has practical and electoral limits. Does he have a majority in both chambers of Congress and a cohesive coalition behind him? Obama has neither at present. And unless a surge in the economy—at the moment, still stuck—or some other great victory gives him more momentum, it is inevitable that the closer Obama gets to the 2014 election, the less he will be able to get done. Going into the midterms, Republicans will increasingly avoid any concessions that make him (and the Democrats) stronger.

(--) Political capital and winning depend on picking the right issues—we'll prove they picked the wrong issues & immigration reform is the right one:

Michael Hirsh, 2/7/2013 (staff writer, "There's No Such Thing as Political Capital,"

<http://www.nationaljournal.com/magazine/there-s-no-such-thing-as-political-capital-20130207>, Accessed 2/22/2013, rwg)

And then there are the presidents who get the politics, and the issues, wrong. It was the last president before Obama who was just starting a second term, George W. Bush, who really revived the claim of political capital, which he was very fond of wielding. Then Bush promptly

demonstrated that he didn't fully understand the concept either.¶ At his first news conference after his 2004 victory, a confident-sounding Bush declared, "I earned capital in the campaign, political capital, and now I intend to spend it. That's my style." The 43rd president threw all of his political capital at an overriding passion: the partial privatization of Social Security. He mounted a full-bore public-relations campaign that included town-hall meetings across the country.¶ Bush failed utterly, of course. But the problem was not that he didn't have enough political capital. Yes, he may have overestimated his standing. Bush's margin over John Kerry was thin—helped along by a bumbling Kerry campaign that was almost the mirror image of Romney's gaffe-filled failure this time—but that was not the real mistake. The problem was that whatever credibility or stature Bush thought he had earned as a newly reelected president did nothing to make Social Security privatization a better idea in most people's eyes. Voters didn't trust the plan, and four years later, at the end of Bush's term, the stock-market collapse bore out the public's skepticism. Privatization just didn't have any momentum behind it, no matter who was pushing it or how much capital Bush spent to sell it.¶ The mistake that Bush made with Social Security, says John Sides, an associate professor of political science at George Washington University and a well-followed political blogger, "was that just because he won an election, he thought he had a green light. But there was no sense of any kind of public urgency on Social Security reform. It's like he went into the garage where various Republican policy ideas were hanging up and picked one. I don't think Obama's going to make that mistake.... Bush decided he wanted to push a rock up a hill. He didn't understand how steep the hill was. I think Obama has more momentum on his side because of the Republican Party's concerns about the Latino vote and the shooting at Newtown." Obama may also get his way on the debt ceiling, not because of his reelection, Sides says, "but because Republicans are beginning to doubt whether taking a hard line on fiscal policy is a good idea," as the party suffers in the polls.

**(--)
Ideology doesn't outweigh – presidential success dictates votes—prefer our evidence, it's peer reviewed and more qualified:**

Lebo, Associate Professor, Stony Brook University, 2010 (Matthew J. Lebo, Associate Professor, Department of Political Science, Stony Brook University, and Andrew O'Geen, PhD Candidate, Department of Political Science, Stony Brook University, Journal of Politics, "The President's Role in the Partisan Congressional Arena" forthcoming, google)

Keeping this centrality in mind, we use established theories of congressional parties to model the president's role as an actor within the constraints of the partisan environment of Congress. We also find a role for the president's approval level, a variable of some controversy in the presidential success literature. Further, we are interested in both the causes and consequences of success. We develop a theory that views the president's record as a key component of the party politics that are so important to both the passage of legislation and the electoral outcomes that follow. Specifically, theories of partisan politics in Congress argue that cross-pressured legislators will side with their parties in order to enhance the collective reputation of their party (Cox and McCubbins 1993, 2005), but no empirical research has answered the question: "of what are collective reputations made?" We demonstrate that it is the success of the president – not parties in Congress – that predicts rewards and punishments to parties in Congress. This allows us to neatly fit the president into existing theories of party competition in

Congress while our analyses on presidential success enable us to fit existing theories of party politics into the literature on the presidency.

(--) Capital determines agenda above all else

Light 99 – Senior Fellow at the Center for Public Service (Paul, *the President's Agenda*, p. 34)

In chapter 2, I will consider just how capital affects the basic parameters of the domestic agenda. Though the internal resources are important contributors to timing and size, capital remains the critical factor. That conclusion will become essential in understanding the domestic agenda. **Whatever the President's personal expertise**, character, or skills, **capital is the most important resource**. In the past, presidential scholars have focused on individual factors in discussing White House decisions, personality being the dominant factor. Yet, given low levels in presidential capital, **even the most positive and most active executive could make little impact**. A president can be skilled, charming, charismatic, a veritable legislative wizard, but **if he does not have the basic congressional strength, his domestic agenda will be severely restricted – capital affects both the number and the content of the President's priorities**. Thus, **it is capital that determines whether the President will have the opportunity to offer a detailed domestic program**, whether he will be restricted to a series of limited initiatives and vetoes. Capital sets the basic parameters of the agenda, determining the size of the agenda and guiding the criteria for choice. Regardless of the President's personality, **capital is the central force behind the domestic agenda**.

Internal Links: Popularity key to political capital

(--) Obama's popularity will give him political influence in his second term:

Andrew Dugan, 1/11/2013 (staff writer, "U.S. Presidents Typically Less Popular in Second Term," <http://www.gallup.com/poll/159809/presidents-typically-less-popular-second-term.aspx>, Accessed 1/24/2013, rwg)

Obama is now slightly more popular than he typically was through most of his first term; consequently, he may have a heightened amount of influence as he begins to pursue his next-term agenda. New presidential terms are difficult -- regardless of the size of the re-election victory -- as Obama himself admitted recently when he cautioned he was "more than familiar with all the literature about presidential overreach in second terms." Yet, setbacks and opprobrium need not permanently derail a president, as Reagan's and Clinton's presidencies show.

(--) Popularity key to political capital:

Arturo Lopez-Levy, 11/24/2012 (staff writer, "The Latin American Gorilla," <http://www.theepochtimes.com/n2/opinion/the-latin-american-gorilla-318169.html>, Accessed 1/23/2013, rwg)

The popularity of a re-elected president tends to increase in the first year of the second term, providing Obama with more political capital. Additionally, the next discussion of immigration reform will occur in the context of modest Democratic gains in both Houses of Congress, and a Republican Party that has been criticized for obstructionism, bias, and a resistance to compromise.

(--) Public opinion is key to the president's political capital

Barrett and Eshbaugh-Soha, '7

(Andrew W. & Matthew, March, Political Research Quarterly, Vol. 60, No. 1, "Presidential Success on the Substance of Legislation", University of North Texas, pp. 100-112, Stable URL: <http://www.jstor.org/stable/4623810>, Accessed: 7-15-10)

Public attitudes also should influence the president's bargaining position. Despite evidence to the contrary (Bond and Fleisher 1990; Collier and Sullivan 1995), presidents, White House staff, and legislators believe that public approval is important to the president's success in Congress (Edwards 1997; Neustadt 1960; Rivers and Rose 1985). Theoretically, public support will improve the president's bargaining position as members of Congress will not want to risk alienating their constituents by opposing a popular president's policy preferences. Therefore, we hypothesize that the higher his level of approval, the more a final statute will reflect the president's policy preferences.

(--) Public opinion polls influence presidential agenda

Sparrow, '8 (Bartholomew H., University of Texas at Austin government professor, "Who Speaks for the People? The President, the Press, and Public Opinion in the United States", 10-13-8, Presidential Studies Quarterly, Volume 38, Issue 4, Pages 578-592, Wiley InterScience, accessed 7-8-9)

Public opinion serves as a metric of presidential leadership with respect to presidential approval ratings. Presidents and their advisors use public opinion not as an absolute guide, but rather for tactical purposes, and instrumentally, for reaching particular political ends (Jacobs and Shapiro 2000). In general, political analysts conceive of public opinion as a channel or guide for policy makers, boundaries beyond which they cannot go but which also offer leeway in terms of the exact path policy makers take. Public opinion serves as a "permissive limit" for policy makers (Almond 1950; Key 1961; Sobel 2001).

(--) Popularity is key to congressional leverage

Spitzer 93 [Robert, professor of political science at the University of New York State, President and Congress, pg 65]

Three observations about the relationship between Presidents and the people warrant mention here. First, the link between the President's public standing and the President's influence in Congress is indisputably important but also more complex than the above examples suggest. When the President's standing is high, members of Congress are likely to interpret this positive support as either direct or indirect evidence of a popular mandate for the President. Fearing a popular backlash, Congress is less likely to buck presidential preferences under these conditions. Moreover, some members of Congress accept as a matter of principle that Presidents with a popular mandate are entitled, by virtue of that mandate to have their programs enacted. Continued public approval is a sign of success (or, to be more precise, perceived success); declining public approval signals an ebbing mandate.

(--) Public key to agenda – frustrations affect Congress

George 10 (Bill George - professor of management practice at Harvard Business School – 1/26, Business Week "An Agenda Disrupted: Obama After Year One"
http://www.businessweek.com/managing/content/jan2010/ca20100126_350258.htm ty)

Most pressing of all for Obama's second-year agenda is the deepening jobs crisis. Twenty-five million Americans—17.3% of the workforce—lack full-time jobs. While the massive stimulus bill saved some jobs, it did virtually nothing to create new ones. This November, absent a major jobs revival, voters' frustrations are likely to be directed at the party in power, further weakening the President's ability to lead an increasingly dysfunctional Congress. At the outset of his second year, Obama faces a choice. Obama the Politician would fan the flames of populist anger to solidify his base. Obama the Leader would follow in the footsteps of President Clinton—who also faced failed health-care reform—and pivot to the political center to address the nation's most pressing problems, starting with job creation. For the sake of our nation's health, let's hope that Obama the Leader will prevail in the year ahead.

Impacts

Impact Overview

Disad outweighs and turns the case:

- A) **Time-Frame** the negotiations with Iran are going on **RIGHT NOW**—the plan risks scuttling them by enacting new sanctions on Iran.
- B) **Magnitude:** Our Stevens evidence indicates several scenarios for nuclear war in the Middle East.
- C) **Probability: Middle East war uniquely likely to escalate—outweighs other escalation risks:**

James Russell 2009 (James, Senior Lecturer in the Department of National Security Affairs – Naval Postgraduate School, “Strategic Stability Reconsidered: Prosepects for Nuclear War and Escalation in the Middle East,” ifri.org/downloads/PP26_Russell_2009.pdf)

Strategic stability in the region is thus undermined by various factors: (1) asymmetric interests in the bargaining framework that can introduce unpredictable behavior from actors; (2) the presence of non-state actors that introduce unpredictability into relationships between the antagonists; (3) incompatible assumptions about the structure of the deterrent relationship that makes the bargaining framework strategically unstable; (4) perceptions by Israel and the United States that its window of opportunity for military action is closing, which could prompt a preventive attack; (5) the prospect that Iran’s response to pre-emptive attacks could involve unconventional weapons, which could prompt escalation by Israel and/or the United States; (6) the lack of a communications framework to build trust and cooperation among framework participants. **These systemic weaknesses** in the coercive bargaining framework **all suggest that escalation by any the parties could happen either on purpose or as a result of miscalculation or the pressures of wartime circumstance. Given these factors, it is disturbingly easy to imagine scenarios under which a conflict could quickly escalate in which the regional antagonists would consider the use of chemical, biological, or nuclear weapons. It would be a mistake to believe the nuclear taboo can somehow magically keep nuclear weapons from being used in the context of an unstable strategic framework.** Systemic asymmetries between actors in fact suggest a certain increase in the probability of war – a war in which escalation could happen quickly and from a variety of participants. **Once such a war starts, events would likely develop a momentum all their own and decision-making would consequently be shaped in unpredictable ways. The international community must take this possibility seriously, and muster every tool at its disposal to prevent such an outcome,** which would be an unprecedented disaster for the peoples of the region, **with substantial risk for the entire world.**

Impacts: AT: Impact Defense

(--) Their impact defense is uniqueness for our disad --- failure to reach a deal will radically alter the status quo and spur instability across the Middle East

Garrett, Rohde & Wright, 12/28/14 (Major Garrett – host, David Rohde – investigative reporter for Reuters, Robin Wright – Fellow at Woodrow Wilson Center, “Face the Nation Transcripts December 28, 2014: Sullenberger, Bratton, Giuliani, Klain, Hillenbrand,” <http://www.cbsnews.com/news/face-the-nation-transcripts-december-28-2014-sullenberger-bratton-giuliani-klain-hillenbrand/>, JMP)

GARRETT: Iran is a significant player in all of our geopolitical conversations. It is against ISIS, though we don't acknowledge it. They're there. We're also working on a nuclear arms agreement. What are the prospects for that? And how do you think Iran will factor into all of the foreign policy conversation in the new year? WRIGHT: For first time in 35 years, Iran and the United States are on the same page at the same time. And I think both countries really do want a deal, the question has always been whether the conservative ayatollahs in Iran could buy in to a deal with the United States. I think it is possible. Is it probable? It's hard to tell. But it is clear that the United States and Iran also share a lot of interests in the Middle East today, particularly in Iraq where they both are concerned about the spread of ISIS, and in broader way the disintegration of the borders defined a century ago. Will the Middle East implode? It's not just the threat of ISIS, it's the threat that the conflict will have rippling repercussion across the Middle East, affect everything from demographics of the country to the price of oil and affect whole region for not just years to come but decades to come. GARRETT: David, sthe sense at the White House is if there is no agreement but there's a continuation of the status quo that is not a bad deal. How do you view it? ROHDE: There's a big question mark about it. And the question is, really, how is congress going to view it and how will Israel view it? There are critical elections coming up in Israel. And if the Israelis start lobbying against extending this deal, the sort of status quo, that is going to be a problem. If there's new sanction enacted by the U.S. congress that sort of makes it harder for the Iranians to compromise. They don't want to lose face in all of this. This is a huge issue for the Obama administration in 2015 if they can get this Iran deal or not. If they fail it's a very dangerous situation. Iran has helped push rebels there to take large parts of Yemen. That's unstable. They have got very large influence in Lebanon. And, you know, I talked to senior State Department official and they said, you know, Iranians are positioned to create havoc in many places including for U.S. forces in Iraq. So, watch this spring whether this deal happens or not. It's a huge issue for the administration.

Impacts: Escalation

(--) Uncontrollable escalation – draws-in every superpower, specifically US, Russia, and China – only scenario that rises to the level of extinction

Reuveni, 10 – professor in the School of Public and Environmental Affairs at Indiana University (Rafael, “Unilateral strike could trigger World War III, global depression” Gazette Xtra, 8/7, - See more at: <http://gazettextra.com/news/2010/aug/07/con-unilateral-strike-could-trigger-world-war-iii-/#sthash.ec4zqu8o.dpuf>)

A unilateral Israeli strike on Iran’s nuclear facilities would likely have dire consequences, including a regional war, global economic collapse and a major power clash. For an Israeli campaign to succeed, it must be quick and decisive. This requires an attack that would be so overwhelming that Iran would not dare to respond in full force. Such an outcome is extremely unlikely since the locations of some of Iran’s nuclear facilities are not fully known and known facilities are buried deep underground. All of these widely spread facilities are shielded by elaborate air defense systems constructed not only by the Iranians but also the Chinese and, likely, the Russians as well. By now, Iran has also built redundant command and control systems and nuclear facilities, developed early warning systems, acquired ballistic and cruise missiles and upgraded and enlarged its armed forces. Because Iran is well-prepared, a single, conventional Israeli strike—or even numerous strikes—could not destroy all of its capabilities, giving Iran time to respond. Unlike Iraq, whose nuclear program Israel destroyed in 1981, Iran has a second-strike capability comprised of a coalition of Iranian, Syrian, Lebanese, Hezbollah, Hamas, and, perhaps, Turkish forces. Internal pressure might compel Jordan, Egypt and the Palestinian Authority to join the assault, turning a bad situation into a regional war. During the 1973 Arab-Israeli War, at the apex of its power, Israel was saved from defeat by President Nixon’s shipment of weapons and planes. Today, Israel’s numerical inferiority is greater, and it faces more determined and better-equipped opponents. After years of futilely fighting Palestinian irregular armies, Israel has lost some of its perceived superiority—bolstering its enemies’ resolve. Despite Israel’s touted defense systems, Iranian coalition missiles, armed forces, and terrorist attacks would likely wreak havoc on its enemy, leading to a prolonged tit-for-tat. In the absence of massive U.S. assistance, Israel’s military resources may quickly dwindle, forcing it to use its alleged nuclear weapons, as it had reportedly almost done in 1973. An Israeli nuclear attack would likely destroy most of Iran’s capabilities, but a crippled Iran and its coalition could still attack neighboring oil facilities, unleash global terrorism, plant mines in the Persian Gulf and impair maritime trade in the Mediterranean, Red Sea and Indian Ocean. Middle Eastern oil shipments would likely slow to a trickle as production declines due to the war and insurance companies decide to drop their risky Middle Eastern clients. Iran and Venezuela would likely stop selling oil to the United States and Europe. From there, things could deteriorate as they did in the 1930s. The world economy would head into a tailspin; international acrimony would rise; and Iraqi and Afghani citizens might fully turn on the United States, immediately requiring the deployment of more American troops. Russia, China, Venezuela, and maybe Brazil and Turkey—all of which essentially support Iran—could be tempted to form an alliance and openly challenge the U.S. hegemony. Russia and China might rearm their injured Iranian protege overnight, just

as Nixon rearmed Israel, and threaten to intervene, just as the U.S.S.R. threatened to join Egypt and Syria in 1973. President Obama's response would likely put U.S. forces on nuclear alert, replaying Nixon's nightmarish scenario. Iran may well feel duty-bound to respond to a unilateral attack by its Israeli archenemy, but it knows that it could not take on the United States head-to-head. In contrast, if the United States leads the attack, Iran's response would likely be muted. If Iran chooses to absorb an American-led strike, its allies would likely protest and send weapons but would probably not risk using force. While no one has a crystal ball, leaders should be risk-averse when choosing war as a foreign policy tool. If attacking Iran is deemed necessary, Israel must wait for an American green light. A unilateral Israeli strike could ultimately spark World War III.

(--) **Iran war escalates**

Jeffrey White, defense fellow, Washington Institute for Near East Policy, "What Would War with Iran Look Like," AMERICAN INTEREST, July/August 2011, <http://www.the-american-interest.com/article-bd.cfm?piece=982>

A U.S.-Iranian war would probably not be fought by the United States and Iran alone. Each would have partners or allies, both willing and not-so-willing. Pre-conflict commitments, longstanding relationships, the course of operations and other factors would place the United States and Iran at the center of more or less structured coalitions of the marginally willing. A Western coalition could consist of the United States and most of its traditional allies (but very likely not Turkey, based on the evolution of Turkish politics) in addition to some Persian Gulf states, Jordan and perhaps Egypt, depending on where its revolution takes it. Much would depend on whether U.S. leaders could persuade others to go along, which would mean convincing them that U.S. forces could shield them from Iranian and Iranian-proxy retaliation, or at least substantially weaken its effects. Coalition warfare would present a number of challenges to the U.S. government. Overall, it would lend legitimacy to the action, but it would also constrict U.S. freedom of action, perhaps by limiting the scope and intensity of military operations. There would thus be tension between the desire for a small coalition of the capable for operational and security purposes and a broader coalition that would include marginally useful allies to maximize legitimacy. The U.S. administration would probably not welcome Israeli participation. But if Israel were directly attacked by Iran or its allies, Washington would find it difficult to keep Israel out—as it did during the 1991 Gulf War. That would complicate the U.S. ability to manage its coalition, although it would not necessarily break it apart. Iranian diplomacy and information operations would seek to exploit Israeli participation to the fullest. Iran would have its own coalition. Hizballah in particular could act at Iran's behest both by attacking Israel directly and by using its asymmetric and irregular warfare capabilities to expand the conflict and complicate the maintenance of the U.S. coalition. The escalation of the Hizballah-Israel conflict could draw in Syria and Hamas; Hamas in particular could feel compelled to respond to an Iranian request for assistance. Some or all of these satellite actors might choose to leave Iran to its fate, especially if initial U.S. strikes seemed devastating to the point of decisive. But their involvement would spread the conflict to the entire eastern Mediterranean and perhaps beyond, complicating both U.S. military operations and coalition diplomacy.

(--) **Escalates, extinction**

Mahdi Nazemroaya, Research Associate, Centre for Research on Globalization, "The Next World War: The 'Great Game' and The Threat of Nuclear War," Global Research, 1—10—11, <http://www.globalresearch.ca/the-next-world-war-the-great-game-and-the-threat-of-nuclear-war/22169?print=1>

Any **attack on Iran will** be a joint operation between Israel, the U.S., and NATO. Such an attack **will escalate into a major war**. The U.S. could attack Iran, but can not win a conventional war. General Yuri Baluyevsky, the former chief of the Russian Armed Forces General Staff and Russian deputy defence minister, even publicly came forward in 2007 to warn that an attack on Iran would be a global disaster and unwinnable for the Pentagon. [97]¶ Such a **war** against Iran and its allies in the Middle East **would lead to** the **use of nuclear weapons** against Iran as the only means to defeat it. Even Saddam Hussein, who during his day once commanded the most powerful Arab state and military force, was aware of this. In July 25, 1990, in a meeting with April C. Glaspie, the U.S. ambassador in Baghdad, Saddam Hussein stated: "But you know you [meaning the U.S.] are not the ones who protected your friends during the war with Iran. I assure you, had the Iranians overrun the region, the American troops would not have stopped them, except by the use of nuclear weapons." [98]¶ The diabolically unthinkable is no longer a taboo: the use of nuclear weapons once again against another country by the U.S. military. This will be a violation of the NPT and international law. Any nuclear attack on Iran will have major, long-term environmental impacts. A nuclear attack on Iran will also contaminate far-reaching areas that will go far beyond Iran to places such as Europe, Turkey, the Arabian Peninsula, Central Asia, Pakistan, and India.¶ Within the **NATO alliance** and amongst U.S. **allies a consensus has been** underway **to legitimize** and normalize **the idea of using nuclear weapons**. This consensus aims at paving the way for a nuclear strike against Iran and/or other countries in the future. This groundwork also includes the normalization of Israeli nukes.¶ Towards the end of 2006, Robert Gates stated that Israel has nuclear weapons, which was soon followed by a conveniently-timed slip of the tongue by Ehud Olmert stating that Tel Aviv possessed nuclear weapons. [99] Within this framework, Fumio Kyuma, a former Japanese defence minister, during a speech at Reitaku University in 2007 that followed the statements of Gates and Olmert, tried to publicly legitimize the dropping of atom bombs by the U.S. on Japanese civilians. [100] Because of the massive public outrage in Japanese society, Kyuma was forced to resign his post as defence minister. [101]¶ **The Uncertain Road Ahead: Armageddon at Our Doorstep? The March into the Unknown Horizon...**¶ According to the Christian Science Monitor, Beijing is a barometre on whether Iran will be attacked and it seems unlikely by the acceleration in trade between China and Iran. [102] Still **a major war in the Middle East** and an even more dangerous global war with the use of nuclear weapons **should not be ruled out**. The globe is facing a state of worldwide military escalation. **What is looming** in front of humanity **is the possibility of** an all-out nuclear war and the **extinction** of most life on this planet as we know it.

Impacts: Sanctions Legislation = War

New sanctions tank the talks and risk war:

Burgess Everett, 1/27/2015 (staff writer, "Dems give Obama 2 months to reach Iran deal," <http://www.politico.com/story/2015/01/iran-nuclear-deal-sanctions-bob-menendez-114632.html>, Accessed 1/30/2015, rwg)

Separately, House Democrats are also pushing their colleagues not to enact Iran sanctions. Reps. Keith Ellison of Minnesota, Raúl Grijalva of Arizona and Barbara Lee of California sent a letter Tuesday to the chairmen and ranking members of the Senate Banking Committee and the House Foreign Affairs Committee, arguing that new sanctions would derail the talks. "Enacting new sanctions legislation now undermines the efforts of the P5+1 and is contrary to a peaceful solution," the lawmakers wrote in a letter obtained by POLITICO. "Given the sensitive timing, Congressional action should reflect support for a negotiated settlement over the Iranian nuclear dispute rather than pushing legislation that could take us off the negotiating track and escalate towards war."

Failure of Iran deal is war with Iran:

Lawrence Wilkerson, 2/18/2015 (adjunct professor of government and public policy at the College of William and Mary, "Op-Ed: Iran vote: Some in Congress aim to kill diplomacy," http://www.richmond.com/opinion/their-opinion/guest-columnists/article_ee8b5615-1e9f-5cbf-bd26-2a2c11528a6e.html, Accessed 2/19/2015, rwg)

And if Congress votes down the final Iran deal, what's Plan B? With diplomacy dead, all that's left on the table is the most unattractive option in dealing with the Iranian nuclear issue: military action. Make no mistake: The same people who got us into war with Iraq have been calling for war with Iran for years. Graham himself declared the negotiations "over" more than two years ago, and in 2013, the senator from my home state of South Carolina pushed an authorization for the use of military force against Iran. I know what Graham wants: war.

Sanctions cause war:

Joseph Triscari, 1/30/2015 ("Menendez push for more sanctions on Iran undermines Obama's goal," http://www.nj.com/opinion/index.ssf/2015/01/letter_menendez_push_for_more_sanctions_on_iran_un.html, Accessed 1/30/2015, rwg)

I am upset with Sen. Bob Menendez's (D-N.J.) insistence to proceed with a bill imposing more sanctions on Iran in the midst of ongoing negotiations ("Menendez challenges Obama on Iran sanctions," Jan. 21). That would do more to strengthen the position of Iranian conservatives opposed to the current discussions than to any "moderates" trying to move Iran toward a negotiated settlement. Moreover, his actions provide political cover to the new Republican majority in Congress, which is only too happy to embrace "bipartisanship" as a bludgeon to beat back any and all of the president's foreign policy initiatives. Taken in tandem with Rep. John Boehner's invitation to Israeli Prime Minister Benjamin Netanyahu to address both chambers of Congress, it is clear this is an orchestrated Republican attempt to scuttle the Iranian negotiations. Is the alternative then to plunge into another war in the Middle East at the cost of

American lives and treasure with the predictable result of creating more anti-American extremists?

Sanctions necessary to prevent war in the Middle East:

Nation, 1/13/2015 (“Don't Let Congress Kill Negotiations with Iran,” <http://www.thenation.com/blog/194793/dont-let-congress-kill-negotiations-iran>, Accessed 1/30/2015, rwg)

The US, our allies, and Iran are once again at the negotiating table working out a comprehensive agreement that could prevent a nuclear-armed Iran and help avert a disastrous war of choice in the Middle East. But while they work, hawks in the Senate are threatening to introduce new sanctions that could sabotage these crucial negotiations.

A) New sanctions blow up the negotiations with Iran:

David McCabe, 12/2/2014 (staff writer, “Rice: New sanctions would 'blow up' Iran nuclear talks,” <http://thehill.com/policy/international/225759-rice-new-sanctions-would-blow-up-iran-talks>, Accessed 1/2/2015, rwg)

Placing additional sanctions on Iran would “blow up” negotiations over the country’s nuclear program, national security adviser Susan Rice said Tuesday. “The P5+1 would fracture, the international community would blame the United States rather than Iran for the collapse of the negotiations, and the Iranians would conclude that there’s little point in pursuing this process at the negotiating table,” Rice said at a conference hosted by The Wall Street Journal.

B) Deal Failure = War with Iran

Ben Windsor, “A Coalition Is Working Furiously Behind the Scenes to Support Obama’s Iran Talks,” BUSINESS INSIDER 10—2—14, <http://www.businessinsider.com/rag-tag-iran-coalition-backing-diplomacy-2014-10>, Accessed 1/2/2015, rwg)

Since November 2013, the Obama administration has engaged with Iran in tense, drawn-out nuclear negotiations which optimists hope could bring an end to decades of hostility and mistrust. Throughout it all, Congress has threatened to play the spoiler, with a tough sanctions bill passing the House and looming in the Senate which would almost certainly scuttle the fragile talks over the Iranian nuclear program. Now, as the deadline for the end of the talks approaches, a coalition of legislators, advocacy groups, and White House officials are working to hold Congress back from the brink of thwarting what they see as a historic window of opportunity. They're fighting against legislators and conservative groups like The Heritage Foundation and The Free Enterprise Institute who are pushing for the US to take a hawkish stance. Legislators, led by Minnesota Congressman Keith Ellison, have been maneuvering quietly behind the scenes in Congress to keep the talks alive. At the same time, officials from the White House have been leaning heavily on Senate Democrats to refrain from bringing a sanctions bill to the floor. On the outside, a diverse range of pro-diplomacy groups, led by organisations like the National Iranian American Council (NIAC) and the liberal Jewish organization J Street, have found a common cause and rallied together to lobby for restraint. Even the Quakers are

energized. “This is a do-or-die moment, either we succeed, or we go in a much more negative direction,” said NIAC co-founder Trita Parsi at the group’s annual conference last weekend. Parsi sees the negotiations as a historic moment during a narrow window of opportunity. Presidents on both sides have sunk significant time and energy into the talks and Parsi believes the current leadership in both countries is more likely to make a deal than those who came before — or might come after. “The next president, whatever political party they’re in, is not going to spend precious political capital battling Congress... [Obama] is the guy,” Parsi said. Supporters fear that failure of the talks could trigger increased sanctions, the rise of hardliners in Iran, and relations spiraling toward military confrontation.

C) Extinction

John Scales Avery, Associate Professor, University of Copenhagen,” COUNTERCURRENTS, 11—5—13, <http://www.countercurrents.org/avery061113.htm>

Despite the willingness of Iran's new President, Hassan Rouhani to make all reasonable concessions to US demands, Israeli pressure groups in Washington continue to demand an attack on Iran. But such an attack might escalate into a global nuclear war, with catastrophic consequences. As we approach the 100th anniversary World War I, we should remember that this colossal disaster escalated uncontrollably from what was intended to be a minor conflict. There is a danger that an attack on Iran would escalate into a large-scale war in the Middle East, entirely destabilizing a region that is already deep in problems. The unstable government of Pakistan might be overthrown, and the revolutionary Pakistani government might enter the war on the side of Iran, thus introducing nuclear weapons into the conflict. Russia and China, firm allies of Iran, might also be drawn into a general war in the Middle East. Since much of the world's oil comes from the region, such a war would certainly cause the price of oil to reach unheard-of heights, with catastrophic effects on the global economy. In the dangerous situation that could potentially result from an attack on Iran, there is a risk that nuclear weapons would be used, either intentionally, or by accident or miscalculation. Recent research has shown that besides making large areas of the world uninhabitable through long-lasting radioactive contamination, a nuclear war would damage global agriculture to such a extent that a global famine of previously unknown proportions would result. Thus, nuclear war is the ultimate ecological catastrophe. It could destroy human civilization and much of the biosphere. To risk such a war would be an unforgivable offense against the lives and future of all the peoples of the world, US citizens included.

(--) Collapse of talks leads to war between Iran and Israel:

Julian Borger, 12/31/2014 (staff writer, “A nuclear deal with Iran would mean a less volatile world,” <http://www.theguardian.com/commentisfree/2014/dec/31/nuclear-deal-iran-cuba-proliferation>, Accessed 1/2/2015, rwg)

These gaps remain substantial, but none of the parties involved can walk away from the table. A collapse of talks would lead to a slide back to the edge of conflict between Iran and Israel; the latter has vowed to launch military strikes rather than allow the former to build a bomb. It could

also trigger a wave of proliferation across the region and beyond as other countries hedge their bets.

(-- New sanctions bill closes the window for negotiations:

Julian Borger, 1/1/2015 ("The year ended on unexpected high note for diplomacy," <http://www.dawn.com/news/1154458/the-year-ended-on-unexpected-high-note-for-diplomacy>, Accessed 1/2/2015, rwg)

In the end, neither side blinked. Unable to agree or walk away, they gave themselves a seven-month extension. However, delay will strengthen hard-line opposition to compromise, particularly in Washington, where a Republican-dominated Congress will convene on Jan 6. That provides a hard political deadline. A new sanctions bill could kill the negotiations, and a diplomatic window will close, perhaps for many years.

(-- The sanctions legislation will spiral into a Middle East war:

Jon Perr, 12/24/2013 (B.A. in Political Science from Rutgers University, "Senate sanctions bill could let Israel take U.S. to war against Iran," <http://www.dailykos.com/story/2013/12/24/1265184/-Senate-sanctions-bill-could-let-Israel-take-U-S-to-war-against-Iran#>, Accessed 1/22/2014, rwg)

As 2013 draws to close, the negotiations over the Iranian nuclear program have entered a delicate stage. But in 2014, the tensions will escalate dramatically as a bipartisan group of Senators brings a new Iran sanctions bill to the floor for a vote. As many others have warned, that promise of new measures against Tehran will almost certainly blow up the interim deal reached by the Obama administration and its UN/EU partners in Geneva. But Congress' highly unusual intervention into the President's domain of foreign policy doesn't just make the prospect of an American conflict with Iran more likely. As it turns out, the Nuclear Weapon Free Iran Act essentially empowers Israel to decide whether the United States will go to war against Tehran. On their own, the tough new sanctions imposed automatically if a final deal isn't completed in six months pose a daunting enough challenge for President Obama and Secretary of State Kerry. But it is the legislation's commitment to support an Israeli preventive strike against Iranian nuclear facilities that almost ensures the U.S. and Iran will come to blows. As Section 2b, part 5 of the draft mandates: If the Government of Israel is compelled to take military action in legitimate self-defense against Iran's nuclear weapon program, the United States Government should stand with Israel and provide, in accordance with the law of the United States and the constitutional responsibility of Congress to authorize the use of military force, diplomatic, military, and economic support to the Government of Israel in its defense of its territory, people, and existence. Now, the legislation being pushed by Senators Mark Kirk (R-IL), Chuck Schumer (D-NY) and Robert Menendez (D-NJ) does not automatically give the President an authorization to use force should Israel attack the Iranians. (The draft language above explicitly states that the U.S. government must act "in accordance with the law of the United States and the constitutional responsibility of Congress to authorize the use of military force.") But there should be little doubt that an AUMF would be forthcoming from Congressmen on both sides of the aisle. As Lindsey Graham, who with Menendez co-sponsored a similar, non-binding "stand with Israel" resolution in March told a Christians United for Israel (CUFI) conference in July: "If nothing changes in Iran, come September, October, I will present a

resolution that will authorize the use of military force to prevent Iran from developing a nuclear bomb." Graham would have plenty of company from the hardest of hard liners in his party. In August 2012, Romney national security adviser and pardoned Iran-Contra architect Elliott Abrams called for a war authorization in the pages of the Weekly Standard. And just two weeks ago, Norman Podhoretz used his Wall Street Journal op-ed to urge the Obama administration to "strike Iran now" to avoid "the nuclear war sure to come." But at the end of the day, the lack of an explicit AUMF in the Nuclear Weapon Free Iran Act doesn't mean its supporters aren't giving Prime Minister Benjamin Netanyahu de facto carte blanche to hit Iranian nuclear facilities. The ensuing Iranian retaliation against to Israeli and American interests would almost certainly trigger the commitment of U.S. forces anyway. Even if the Israelis alone launched a strike against Iran's atomic sites, Tehran will almost certainly hit back against U.S. targets in the Straits of Hormuz, in the region, possibly in Europe and even potentially in the American homeland. Israel would face certain retaliation from Hezbollah rockets launched from Lebanon and Hamas missiles raining down from Gaza. That's why former Bush Defense Secretary Bob Gates and CIA head Michael Hayden raising the alarms about the "disastrous" impact of the supposedly surgical strikes against the Ayatollah's nuclear infrastructure. As the New York Times reported in March 2012, "A classified war simulation held this month to assess the repercussions of an Israeli attack on Iran forecasts that the strike would lead to a wider regional war, which could draw in the United States and leave hundreds of Americans dead, according to American officials." And that September, a bipartisan group of U.S. foreign policy leaders including Brent Scowcroft, retired Admiral William Fallon, former Republican Senator (now Obama Pentagon chief) Chuck Hagel, retired General Anthony Zinni and former Ambassador Thomas Pickering concluded that American attacks with the objective of "ensuring that Iran never acquires a nuclear bomb" would "need to conduct a significantly expanded air and sea war over a prolonged period of time, likely several years." (Accomplishing regime change, the authors noted, would mean an occupation of Iran requiring a "commitment of resources and personnel greater than what the U.S. has expended over the past 10 years in the Iraq and Afghanistan wars combined.") The anticipated blowback? Serious costs to U.S. interests would also be felt over the longer term, we believe, with problematic consequences for global and regional stability, including economic stability. A dynamic of escalation, action, and counteraction could produce serious unintended consequences that would significantly increase all of these costs and lead, potentially, to all-out regional war.

(--) Capital now is key to keep congress at bay and to prevent war

Michael Crowley and Burgess Everett, Journalists, "Republicans seek to thwart deal", 11-12-14, POLITICO, <http://www.politico.com/story/2014/11/how-republicans-plan-to-thwart-obamas-iran-talks-112805.html>

Two weeks before a crucial diplomatic deadline, newly victorious Republicans in Congress are plotting to derail one of Barack Obama's few remaining chances for a second-term policy legacy: a nuclear deal with Iran. The Obama administration's interim agreement with Tehran expires on Nov. 24. But Senate Republicans don't plan to wait until they take power in January to rattle the nuclear talks. On Thursday, a day after returning to Washington, they will seek a vote on legislation requiring that Congress approve any deal. Democrats, who still control the Senate, are likely to quash the move. But it's an early illustration of Republican plans to confound the

president's nuclear diplomacy, which the GOP sees as dangerously weak toward Tehran's anti-American Islamic regime. "The Hill has a lot of power to make things miserable for the president," said Mark Dubowitz, executive director of the Foundation for the Defense of Democracies and a critic of the nuclear talks who consults closely with Congress on Iran legislation. The White House has spent months beating back congressional action on Iran, including toughened sanctions on the longtime U.S. foe, which is presumed to be pursuing a nuclear weapon. New pressure on the Iranians could drive them from the negotiating table, say Obama officials — and lead the United States to war. Though some Democrats support such measures — a proposal threatening stiffer sanctions won 60 Senate co-sponsors in the last Congress, including 15 Democrats — Senate Majority Leader Harry Reid has kept them bottled up. "That situation will be different in the new Congress," said a Republican aide, noting that the incoming Senate leader, Mitch McConnell, won't comply with White House pleas the way Reid did. The role Republicans play will depend on the course of the ongoing nuclear talks. An interim deal struck in Geneva last November by the U.S. and five other world powers — Russia, China, France, Great Britain and Germany — expires on Nov. 24. That deal froze the progress of Iran's nuclear program in return for limited sanctions relief. Over the weekend, Secretary of State John Kerry and other U.S. officials met with Iranian officials in Oman. Their goal is to strike a long-term deal lifting sanctions in return for restrictions that would prevent Tehran from easily building an atomic bomb. But the Oman session seemed to achieve little; a planned press conference with the participants was canceled. "As best I can tell, [there was] no progress," said Gary Samore, a former Obama White House aide who handled the Iranian nuclear portfolio and is now president of United Against a Nuclear Iran. Obama officials say it's still possible that a long-term deal will be reached by Nov. 24. But Samore and other experts expect the interim deal, which was already extended once in July, will be extended again into 2015. Either way, a Republican Congress will have its say come January. "I want to start [the Iran] discussion Thursday, and hopefully we'll bring the bill up," said Republican Sen. Lindsey Graham of South Carolina. "But in the event we do not, I hope Sen. McConnell will make sanctions and the [Iran Nuclear Negotiations Act] must-dos in the new Congress." Introduced in July, the Iran Nuclear Negotiations Act would require an up-or-down vote by Congress on any final agreement with Iran. Many Republicans expect any deal to make too many concessions to Iran, and agree with Israeli Prime Minister Benjamin Netanyahu that the Iranians should be barred from maintaining a uranium enrichment program — something Tehran almost certainly will not agree to. A no vote wouldn't actually void an Iran pact, however, because a nuclear deal wouldn't constitute a formal treaty and therefore would not require Senate ratification. But if the Senate were to vote against a nuclear agreement, the legislation would re-impose any sanctions suspended by such a deal. If such a move were to survive a presidential veto, it would effectively kill an agreement with Iran. If the interim nuclear deal is extended with few or no new concessions by Iran, sources say Republicans are likely to take up legislation similar to a Senate bill sponsored last year by Foreign Relations Committee Chairman Robert Menendez and Sen. Mark Kirk, the one that drew 60 co-sponsors. That bill threatened new sanctions should Iran violate the interim agreement, or if it abandons the negotiations. "If it's just a simple extension with a couple of bells and whistles, like they did [in July], I expect Congress to move forward with a new bill similar to Menendez-Kirk," said Dubowitz. "For the administration to actually get an extension without that they would have to come back with a partial deal — but a meaningful partial deal."

Republicans say they have other ways to complicate Obama's deal making with Tehran, including by denying funding to offices that would implement any deal with the Iranians. Even before last week's Republican electoral sweep, **tensions were growing between the White House and the Hill over Iran** policy. Members of both parties have long complained that Obama officials, who regularly brief Hill leaders privately about the Iran talks, have provided them with only limited and opaque information about the talks. Last week's revelation by The Wall Street Journal that Obama recently sent a secret letter to Iran's Supreme Leader, Ayatollah Ali Khamenei, left many members fuming. The friction also spiked after The New York Times reported in mid-October that Obama officials were designing an Iran deal that would rely heavily on executive authority to suspend many of the U.S.-imposed sanctions that have stunted Iran's economy. Administration officials say the president has that power, although only Congress can permanently lift sanctions it has passed. A State Department spokeswoman called the premise of the Times story "wrong." But a Democratic staffer who has been briefed by senior officials called the idea "very real." And senior Republicans already concerned that Obama would cut a soft deal with Iran are determined not to be sidelined. A senior administration official argued that Secretary of State John Kerry would not cut a deal with Iran that couldn't be defended against critics, noting that any comprehensive agreement would also require the approval of America's negotiating partners. As the administration has in the past, the official also again raised the idea that opponents of a deal with Iran were in effect choosing a path of dangerous confrontation. "You're going to vote no — what's that a vote for? So you think we should go to war?"

(--) Bill kills the talks and drags the US into war with Iran:

SHELDON RICHMAN, 12/29/2013 (staff writer, "Congress Must Not Cede Its War Power to Israel," <http://www.counterpunch.org/2013/12/27/congress-must-not-cede-its-war-power-to-israel/>, Accessed 1/22/2014, rwg)

The bill, whose other principal sponsors are Sen. Robert Menendez (D-NJ) and Sen. Mark Kirk (R-IL), has a total of 26 Senate cosponsors. If it passes when the Senate reconvenes in January, it could provoke a historic conflict between Congress and President Obama, whose administration is engaged in negotiations with Iran at this time. Aside from declaring that the U.S. government should assist Israel if it attacks Iran, **the bill would also impose new economic sanctions on the Iranian people**. Obama has asked the Senate not to impose additional sanctions while his administration and five other governments are negotiating with Iran on a permanent settlement of the nuclear issue. A six-month interim agreement is now in force, one provision of which prohibits new sanctions on Iran. "The [Menendez-Schumer-Kirk] bill allows Obama to waive the new sanctions during the current talks by certifying every 30 days that Iran is complying with the Geneva deal and negotiating in good faith on a final agreement," Ali Gharib writes at Foreign Policy magazine. That would effectively give Congress the power to undermine negotiations. As Iran's foreign minister, Javad Zarif, told Time magazine, **if Congress imposes new sanctions, even if they are delayed for six months, "The entire deal is dead. We do not like to negotiate under duress."** Clearly, **the bill is designed to destroy the talks with Iran**, which is bending over backward to demonstrate that its nuclear program has no military aims. Netanyahu and Israel's American supporters in and out of Congress loathe the prospect of an American-Iranian rapprochement after 34 years of U.S.-Israeli covert and proxy war against Iran, whose 1979

Islamic revolution followed a quarter-century of brutality at the hands of a U.S.-backed monarch. The Israeli government, AIPAC, and the Republicans and Democrats who do their bidding in Congress are on record opposing any agreement that would leave intact Iran's ability to enrich uranium, even at low levels for peaceful civilian purposes. But insisting that Iran cease all enrichment of uranium is equivalent to obliterating any chance of a peaceful settlement with Iran and making war more likely. That's what this bill is all about. **Americans should refuse to let Congress give Israel the power to drag the United States into war.** American and Israeli intelligence agencies say repeatedly that Iran has no nuclear-weapons program. Though Iran champions the Palestinians, who live under Israeli occupation, it has not threatened Israel, which, remember, is itself a nuclear power. But even if Iran were a threat to Israel, that would not warrant letting any foreign government dictate when we go to war.

(--) New sanctions risk a war:

David W. Kearns, 1/19/2014 (Assistant Professor, St. John's University, "The Folly of New Iran Sanctions," http://www.huffingtonpost.com/david-w-kearn/the-folly-of-new-iran-san_b_4619522.html, Accessed 1/22/2014, rwg)

The current sanctions bill in the Senate is not about providing President Obama and Secretary Kerry with greater leverage in the negotiations. The Iranian delegation has made clear that it views any such sanctions as an indication of bad faith that will wreck the process and undo any progress made to this point. With the interim agreement set to go into effect next week, this is clearly not the time for the Senate to usurp the authority of the commander-in-chief and his chief diplomat. Taking their respective rationales at face value, the Democratic members of the Senate supporting the sanctions legislation may have good intentions to provide a stronger "bad cop" to Secretary Kerry's "good cop" in Geneva. This is short-sighted. **New sanctions will not only play into the narrative of hard-liners in Iran who don't want agreement, it will also isolate the United States from its negotiating partners and likely cripple the cohesive united front that has seemingly emerged throughout the talks.** In doing so, it is most likely to fulfill the wishes of hardliners in Israel and the United States that simply don't want an agreement and refuse to take any "yes" for an answer. However, **with a failure of negotiations, military conflict is much more likely.**

(--) Successful negotiations are needed to stop a new war in the Middle East:

David W. Kearns, 1/19/2014 (Assistant Professor, St. John's University, "The Folly of New Iran Sanctions," http://www.huffingtonpost.com/david-w-kearn/the-folly-of-new-iran-san_b_4619522.html, Accessed 1/22/2014, rwg)

Nonetheless, this debate has effectively been made moot by official U.S. and Israeli policies. The clear commitment of the Obama administration to thwart Tehran from acquiring a nuclear weapon has been in place for some time. Containment is not an option, and **military force will ostensibly be used to prevent an Iranian nuclear weapon from becoming operational. Despite this commitment, the Israeli government has consistently expressed its willingness to act alone to stop an Iranian bomb even without U.S. support.** While hardliners in Tel Aviv and Washington may not agree, these are both credible threats that the regime in Tehran must take seriously.

Thus, the situation confronting Iran and the world is either the peaceful negotiated solution to the nuclear question, or the high likelihood of another destructive, costly war in a region already torn apart by conflict.

(-- New sanctions bill would lead to war with Iran:

Nathan Guttman, 1/21/2014 (staff writer, "Debbie Wasserman Schultz Squeezed Hard as Iran Sanctions Fight Heats Up," <http://forward.com/articles/191261/debbie-wasserman-schultz-squeezed-hard-as-iran-san/>, Accessed 1/22/2014, rwg)

Iran has threatened to walk out of the current talks if the Senate bill passes. And the administration, which sees the bill's language as contrary to its own negotiating goals, has used the harshest of terms to describe the damage the bill could cause. Its passage, said White House Jay Carney could lead to "a march to war" as the only alternative to collapsed talks.

(-- New legislation gives Israel a green light to start a war against Iran:

Jon Perr, 12/24/2013 (B.A. in Political Science from Rutgers University, "Senate sanctions bill could let Israel take U.S. to war against Iran," <http://www.dailykos.com/story/2013/12/24/1265184/-Senate-sanctions-bill-could-let-Israel-take-U-S-to-war-against-Iran#>, Accessed 1/22/2014, rwg)

At the heart of the clash between Congressional hawks and President Obama is a disagreement over the so-called "red line" for Tehran. In the United States and in Israel alike, Obama has said the United States will not allow Iran to obtain an actual nuclear weapon. But most of his Republican foes and some of his Democratic allies have sided with Bibi Netanyahu in demanding Iran never possess a "nuclear weapons capability." That bottom line on Iranian nuclear know-how wouldn't just scuttle the interim deal and ongoing negotiations with Tehran, as the Obama administration and 10 Democratic Senate committee chairmen have warned. By the standard, an American war with Iran would be almost a foregone conclusion. And if Chuck Schumer, Bob Menendez, John McCain, Lindsey Graham and over 30 other Senators get their way, Israel may well have a green light to start it.

(-- New sanctions scuttle the deal and lead to war:

William Davnie, 1/5/2014 (staff writer, "Iran sanctions bill threatens progress; pressure is on Franken, Klobuchar," <http://www.startribune.com/opinion/commentaries/238660021.html>, Accessed 1/22/2014, rwg)

The historic Geneva deal to limit Iran's nuclear program is scheduled to go into effect later this month. Once it does, the world will be farther away from a devastating war and a nuclear-armed Iran. As U.S. Rep. Betty McCollum, D-Minn., rightly pointed out, "this initial deal is a triumph for engagement and tough diplomacy." However, the U.S. Senate could reverse that progress through a vote on new sanctions as early as this week, putting the United States and Iran on a collision course toward war.

(-- Sanctions legislation leads to a new Middle East conflict:

Robert Merry, 12/31/2013 (staff writer, "MERRY: Obama may buck the Israel lobby on Iran,"

<http://www.washingtontimes.com/news/2013/dec/31/merry-obama-may-buck-the-israel-lobby-on-iran/>, Accessed 1/22/2014, rwg)

That's what the brewing confrontation between Mr. Obama and the Israel lobby comes down to — war and peace. Mr. Obama's delicate negotiations with Iran, whatever their outcome, are designed to avert another U.S. war in the Middle East. The Menendez-Schumer-Kirk initiative is designed to kill that effort and cedes to Israel America's war-making decision in matters involving Iran, which further increases the prospects for war. It's not even an argument about whether the United States should come to Israel's aid if our ally is under attack, but whether the decision to do so and when that might be necessary should be made in Jerusalem or Washington.

(--) The bill commits the US to support Israel in attacking Iran:

Robert Merry, 12/31/2013 (staff writer, "MERRY: Obama may buck the Israel lobby on Iran,"

<http://www.washingtontimes.com/news/2013/dec/31/merry-obama-may-buck-the-israel-lobby-on-iran/>, Accessed 1/22/2014, rwg)

Further, the legislation contains language that would commit the United States to military action on behalf of Israel if Israel initiates action against Iran. This language is cleverly worded, suggesting U.S. action should be triggered only if Israel acted in its "legitimate self-defense" and acknowledging "the law of the United States and the constitutional responsibility of Congress to authorize the use of military force," but the language is stunning in its brazenness and represents, in the view of Andrew Sullivan, the prominent blogger, "an appalling new low in the Israeli government's grip on the U.S. Congress." While noting the language would seem to be nonbinding, Mr. Sullivan adds that "it's basically endorsing the principle of handing over American foreign policy on a matter as grave as war and peace to a foreign government, acting against international law, thousands of miles away."

(--) New sanctions bill causes war with Iran:

Ben Armbruster, 1/6/2014 (staff writer, "Security Experts Ask Senators To Pull Back Iran Sanctions Bill," <http://thinkprogress.org/security/2014/01/06/3122551/crocker-experts-senate-iran-sanctions-bill/>, Accessed 1/22/2014, rwg)

A group of national security experts and American foreign policy luminaries sent a letter on Monday to the primary co-sponsors of an Iran sanctions bill asking them to reconsider the measure, saying it jeopardizes the ongoing negotiations with Tehran over its nuclear program and could bring the United States closer to war with Iran. After various avenues to put forth Iran sanctions measures recently failed, Sens. Robert Menendez (D-NJ) and Mark Kirk (R-IL) introduced the stand-alone bill late last month. Nearly 50 senators — mostly Republicans — have signed on as co-sponsors, but the chairs of 10 Senate committees recently wrote to Senate Majority Harry Reid (D-NV) slamming the bill and asking him not to move forward with it. The White House has said it will veto the bill if it passes. In the letter sent to Menendez and Kirk on Monday, the group of experts — which includes former U.S. Ambassador to Iraq and Afghanistan Ryan Crocker, former U.S. Ambassador to Israel and Egypt Daniel Kurtzer, William H. Luers, the former Ambassador to Venezuela and Czechoslovakia, and Jessica Tuchman Mathews,

the President of the Carnegie Endowment for International Peace — say their bill “will threaten the prospects for success in the current negotiations and thus present us and our friends with a stark choice — military action or living with a nuclear Iran.” Crocker et al note that attacking Iran would not prevent it from developing nuclear weapons and would most likely give the Iranians the justification to decide to seek them — “the very thing the U.S. hopes to prevent,” they write.

(--) Sanctions bill moves the US closer to war:

Timothy Gardner, 1/6/2014 (staff writer, “Iran sanctions bill opposed by Obama gains Senate backers,” <http://www.reuters.com/article/2014/01/06/us-usa-sanctions-iran-idUSBREA0516E20140106>, Accessed 1/22/2014, rwg)

A bipartisan group of nine senior foreign policy experts urged Menendez and Kirk not to pass the new sanctions, saying the penalties could potentially move the United States closer to war. Ryan Crocker, a former ambassador to Iraq and Afghanistan, and Thomas Pickering, former Ambassador to Israel, India and the United Nations, were among signers of a letter to the senators that said a sanctions bill, even if it took effect in six months, would call into question Washington's good faith and possibly isolate the United States among the countries holding talks with Iran. The bill gives the administration up to a year to pursue a diplomatic track, which backers say would not violate terms of the interim deal. On oil exports, the new bill seeks to cut sales at least 30 percent within a year and to zero within two years, if Iran breaks the deal or a comprehensive deal is not reached. Since 2012, U.S. and European sanctions have cut Iran's oil sales by more than 1 million barrels per day, costing the country billions of dollars a month and driving up inflation.

(--) Success of the Geneva accord takes war against Iran off the table:

Ryan Costello, 12/19/2013 (Policy Fellow with the National Iranian American Council, “To Boost Leverage with Iran, Give Obama a Sanctions Kill Switch,” <http://nationalinterest.org/commentary/boost-leverage-iran-give-obama-sanctions-kill-switch-9591>, Accessed 1/22/2014, rwg)

The initial nuclear agreement with Iran represents a historic break in the cycle of escalation between our two countries. If it leads to a comprehensive deal, we could permanently take war and an Iranian nuclear weapon off the table. There's only one catch: the agreement requires that we abstain from imposing new sanctions on Iran, and many in Congress are still working to pass new sanctions.

(--) Geneva accord stops the march to war:

SEN. CARL LEVIN and SEN. BARBARA BOXER, 12/18/2013 (“Now's No Time for New Iran,” <http://www.politico.com/magazine/story/2013/12/nows-no-time-for-new-iran-sanctions-101303.html>, Accessed 1/22/2014, rwg)

And this agreement offers hope of something greater. It offers the chance to end our confrontation with Iran peacefully—instead of a status quo that offers no alternative to ending Iran's march toward a nuclear weapon short of military action. The past few months have made clear that the Iranian people want to change their country's anti-Western outlook and to end its

pariah status. So we have an obligation to test the willingness of Iran's leaders to give up the possibility of acquiring a nuclear weapon. And if they fail that test, everything is still on the table.

(--) Failure of negotiations causes a war with Iran:

Paul McGeough, 1/5/2014 (staff writer, "US, Iranian hardliners work to give war a chance," <http://www.smh.com.au/comment/us-iranian-hardliners-work-to-give-war-a-chance-20140104-30amw.html>, Accessed 1/23/2014, rwg)

Hence there's a conclusion being drawn in some quarters that the Senate push is calculated to make agreement impossible. And, because the senators are opposed to a nuclear Iran, the only conclusion to be drawn is that they want to force President Barack Obama's hand on the military option. There was no surprise then that this "tit" by the American senators was met with a "tat" from their Iranian counterparts - hardliners who oppose the interim deal and anything that looks like concessions by Iran to the international community. So they have drafted their own legislation to be debated in the Iranian parliament, calling for any new sanctions to be met by an escalation in Iran's uranium enrichment to a near bomb-grade level of 60 per cent. In both countries, we have influential rejectionists who rely on each other to make their worst prognostications believable. Neither side is interested in a diplomatic solution. Citing the respective attitudes to Israel, Bill Keller portrays this self-serving dynamic in his blog for The New York Times: "To the Iranian hard core, Israel is a nuclear-armed interloper and America's conjoined infidel twin; to their American counterparts, Israel's values and interests are inextricable from our own and Benjamin Netanyahu is a more trustworthy defender of our security than Barack Obama." Keller draws a dismal, scary conclusion: "A failure of negotiations would delight both of them - American hawks because Israel could get on with the business of bombing; Iranian hawks because there's nothing like an attack by the infidels to unify a fractious public behind an authoritarian regime."

Impacts: AT: Bill is Watered Down

Even a watered down sanctions bill tanks the talks:

Jeremy Diamond, 1/26/2015 (staff writer, "Why the Iran sanctions fight is a big deal," <http://www.cnn.com/2015/01/26/politics/iran-sanctions-negotiations-explainer/>, Accessed 1/30/2015, rwg)

Senate staffers and their bosses have stripped away the most divisive provisions, though stronger language could always get added to the new, watered-down bill as it winds its way through the legislative process. But even in its current form, Obama is urging Congress to stand down. Negotiators argue any measure from Congress would threaten to unravel the fragile international coalition they believe is the world's best shot at peacefully ending Iran's nuclear program. The Iranians could feel like threatened or bullied by sanctions legislation, prompting them to ditch the negotiating table. And then, they can blame the U.S. Congress for undoing a potential deal -- a blame game many countries would buy.

Impacts: Sanctions Kill Deal

New sanctions against Iran kills the talks:

Saeed Kamali Dehghan, 2/3/2015 (staff writer, "Iran could halt nuclear agreement with west if US imposes further sanctions," <http://www.theguardian.com/world/iran-blog/2015/feb/03/iran-could-halt-nuclear-agreement-over-us-sanctions>, Accessed 2/19/2015, rwg)

Iran's parliament is considering a bill requiring the government led by Hassan Rouhani, the president, to halt implementation of the interim nuclear agreement with the west if the US imposes further sanctions. The bill is a retaliatory plan designed by hardline Iranian MPs in case US Congress passes its proposed legislation for fresh sanctions against Tehran, which Barack Obama has promised to veto. Parliamentarians in Iran voted overwhelmingly on Tuesday in favour of a motion to fast-track examining the bill, which aims "to protect the nuclear rights and achievements of Iranian people". It was not clear when exactly they will vote on the bill itself. Under the Iranian proposal, if the US Congress approves new sanctions, the Iranian government will immediately be obliged to stop implementing the November 2013 nuclear agreement, known as the Joint Plan of Action. Under such a circumstance, Rouhani's government will also have to step up the country's enrichment programme and continue with the development of the heavy water reactor at Arak, which are both subject to limits under the existing interim deal. Legislatures in both countries are trying to set their own conditions as diplomats continue talks.

New sanctions ratchet up the hardliners and kill the deal:

Ali Vaez, 1/28/2015 (staff writer, "Why new Iran sanctions bid has split Washington," <http://america.aljazeera.com/articles/2015/1/28/why-new-iran-sanctions-bid-has-split-washington.html>, Accessed 2/19/2015, rwg)

Bolster Iran's hard-liners? New sanctions imposed by Washington at this stage will be seized upon by a substantial faction of the Iranian leadership that mistrusts Western intentions and opposes any concessions on the nuclear issue. If such measures are passed over the objections of the White House, they will exacerbate Iranian doubts in Obama's ability to deliver on sanctions relief that would be part of a final nuclear deal. And just as backers of new sanctions measures say their goal is to boost U.S. leverage in talks with Iran, many in Tehran believe that expanding its nuclear work creates leverage for Iran. In a prospective retaliatory move, 205 members of Iran's parliament are preparing legislation that would authorize the government to dramatically ratchet up uranium-enrichment levels in the event of new U.S. sanctions.

(-- New sanctions kill a deal:

Paul Richter, 12/6/2014 (staff writer, "New Iran sanctions? Congress may hold off," http://seattletimes.com/html/nationworld/2025183129_congresssanctionsxml.html, Accessed 1/2/2015, rwg)

It had been widely expected that if the negotiations failed to yield a deal by the deadline, Congress would step in with new sanctions on the theory that the penalties could force the Islamic Republic to give ground. But experts and administration officials have argued that such a

step could drive Iran away from the negotiating table, or convince many nations that the United States, not Iran, is to blame if the talks fail. That could undermine the current sanctions by encouraging oil-purchasing nations to increase purchases of Iranian petroleum.

(--) Lack of sanctions legislation necessary for talks to continue:

Iran Focus, 1/2/2015 ("Veto-Proof Sanctions on Iran,"

http://www.iranfocus.com/en/index.php?option=com_content&view=article&id=29988:veto-proof-sanctions-on-ira&catid=34&Itemid=128, Accessed 1/2/2015, rwg)

There is support for increasing sanctions on Iran in the new Republican-controlled US Congress to override veto threats by President Obama according to news reports. The Obama administration and other global powers are in negotiation with Tehran to convince the regime to give up its nuclear program. All the while, the White House has tried to make sure no law is passed in the US Congress for more sanctions so talks can continue unhindered.

(--) New sanctions undermines international unity:

Justin Sink, 11/24/2014 (staff writer, "White House: New sanctions on Iran would be

'counterproductive'" <http://thehill.com/policy/international/225205-wh-new-iran-sanctions-would-be-counterproductive>, Accessed 1/2/2015, rwg)

Additional sanctions recommended by lawmakers frustrated by the second consecutive delay in nuclear talks with Iran would be "counterproductive," the White House insisted Monday. "The concern that we have is that layering on additional sanctions could leave some of our partners with the impression that this sanctions regime is more punitive in nature than anything else, and that could cause some cracks in that international coordination to appear," White House press secretary Josh Earnest said. "And that would therefore undermine the point of the sanctions regime in the first place." Earnest added that allies would believe that the U.S. was simply "more interested in punishing" Iran than striking a deal, and that the administration could lose "buy-in" on the talks with additional penalties.

Impacts: Iran Prolif Module

A) Geneva agreement rolls back Iran's nuclear program:

Shemuel Meir, 12/22/2013 (associate researcher at the Jaffee Center, "An important year for Iran nuclear talks: What Israel got wrong,"

<http://972mag.com/the-nuclear-deal-with-iran-what-really-happened-in-geneva/84149/>, Accessed 1/22/2014, rwg)

The nuclear agreement with Iran, known as the "Joint Plan of Action," which was signed in Geneva on November 24 between Iran and the superpowers is a great American diplomatic achievement with positive implications for Israel's security. The agreement limits Iran's capability to enrich uranium and begins to "roll back" those elements of Iran's nuclear program that possess dangerous military potential. This is an agreement that has moved Iran off the nuclear weapons path and imposed on it strict and intrusive supervision. But that's not the picture that was presented to the Israeli public.

B) Iranian prolif risks a Middle East nuclear war—deterrence will break down:

Phillip Stephens, 11/14/13 – columnist for the Financial Times (Phillip, Financial Times, "The four big truths that are shaping the Iran talks" <http://www.ft.com/intl/cms/s/0/af170df6-4d1c-11e3-bf32-00144feabdc0.html#axzz2kkvx15JT>

The first of these is that Tehran's acquisition of a bomb would be more than dangerous for the Middle East and for wider international security. It would most likely set off a nuclear arms race that would see Saudi Arabia, Turkey and Egypt signing up to the nuclear club. The nuclear non-proliferation treaty would be shattered. A future regional conflict could draw Israel into launching a pre-emptive nuclear strike. This is not a region obviously susceptible to cold war disciplines of deterrence.

(--) Sanctions bill just makes Iranian prolif more likely:

BRADLEY KLAPPER, 1/9/2014 (staff writer, "Obama, Congress Locked in Iran Sanctions Dispute," <http://abcnews.go.com/Politics/wireStory/obama-congress-locked-iran-sanctions-dispute-21471744?singlePage=true>, Accessed 1/22/2014, rwg)

UNREALISTIC GOALS: The sanctions bill in Congress insists Iran halt all uranium enrichment, a demand long ceded by U.S., European and other negotiators. In Geneva, world powers implicitly recognized Iran's ability to enrich at levels below what is needed to produce weapons-grade material. By making the complete end to enrichment a requirement for any final deal, the administration fears Congress is setting the bar so high that diplomacy cannot succeed. That would make two worrying scenarios more likely: Iran acquiring nuclear weapons or the U.S. being forced to resort to military action.

(--) Sanctions bill makes Iranian proliferate more likely:

Colin H. Kahl, 12/31/2013 (former NDT finalist, associate professor in Georgetown University's Edmund A. Walsh School of Foreign Service, "The Danger of New Iran Sanctions,"

<http://nationalinterest.org/commentary/the-danger-new-iran-sanctions-9651>, Accessed 1/22/2014, rwg)

The legislation defies a request by the Obama administration and ten Senate committee chairs to stand down on sanctions while negotiations continue. It also flies in the face of an unclassified intelligence assessment that new sanctions "would undermine the prospects for a successful comprehensive nuclear agreement with Iran." Proponents of the bill note that the proposed sanctions would only come into force if Iran violates the Geneva agreement or fails to move toward a final deal, and would not kick in for months. But the White House warns that enshrining new economic threats in law now runs counter to the spirit of the Geneva pledge of no new sanctions during negotiations, and risks empowering Iranian forces hoping to scuttle nuclear talks. The legislation also defines congressionally acceptable parameters for a final deal that Iran experts almost universally believe are unachievable, namely the requirement that Iran completely dismantle its uranium enrichment program. For these reasons, the administration believes the bill represents a poison pill that could kill diplomacy, making a nuclear-armed Iran or war more likely.

(--) New sanctions only accelerate Iranian proliferation:

Colin H. Kahl, 12/31/2013 (former NDT finalist, associate professor in Georgetown University's Edmund A. Walsh School of Foreign Service, "The Danger of New Iran Sanctions,"

<http://nationalinterest.org/commentary/the-danger-new-iran-sanctions-9651>, Accessed 1/22/2014, rwg)

The Senate bill could also lead to provocative Iranian counter-reactions at an extraordinarily delicate moment for diplomacy. Indeed, nearly one hundred hardline Iranian parliamentarians have already drafted legislation that would mandate escalating enrichment to the nearly-bomb-grade 60 percent level if more U.S. sanctions are imposed. Given thirty-five years of distrust between Tehran and Washington, it would not take much perceived bad faith by either party to reverse the modicum of confidence built at Geneva. It is difficult to imagine negotiations surviving such a tit-for-tat retaliatory cycle.

(--) Sanctions relief key to getting Iran to give up the bomb:

Laicie Heeley, 6/3/2013 (Center for Arms Control and Nonproliferation, "Are Sanctions on Iran Working?" http://armscontrolcenter.org/assets/pdfs/REPORT_-_Are_Sanctions_On_Iran_Working_-_June_3.pdf, Accessed 10/16/2013, rwg)

However, Iran has not halted its nuclear development: Iran has not yet acceded to the desired limits on its nuclear program – it has continued to enrich uranium to levels close to weapons-grade, and it has proceeded with the upgrading and expansion of nuclear facilities. This continued progress suggests that sanctions alone are unlikely to convince Iran to

change course ¶ : robust negotiations in which incentives (including sanctions relief) ¶ are offered to Iran will be necessary to ¶ persuad ¶ e Iran to comply with international ¶ demands.

(--) New Congressional sanctions would devastate diplomacy with Iran:

Mark Landler, 10/11/2013 (staff writer, "On Iran Talks, Congress Could Play 'Bad Cop'" <http://www.nytimes.com/2013/10/11/world/middleeast/on-iran-talks-congress-could-play-bad-cop.html>, Accessed 10/16/2013, rwg)

WASHINGTON — When Iranian diplomats sit down in Geneva next Tuesday with the United States and five other world powers for a new round of talks about Iran's nuclear program, Congress will not have a seat at the table. But that does not mean it will not have a voice. ¶ With a tough, new Iran sanctions bill teed up in the Senate, following the overwhelming passage of similar legislation by the House in July, lawmakers are poised to do one of two things: They could tighten the screws on Iran's leaders in a way that helps produce a nuclear deal. Or they could foul up delicate diplomacy at a crucial moment. ¶ The Senate banking committee, under pressure from Secretary of State John Kerry, agreed to put a brief pause on its bill to avoid spoiling the first bargaining session in Geneva. But the committee's chairman, Senator Tim Johnson, Democrat of South Dakota, has told the Obama administration he plans to move forward with the bill in coming weeks. ¶ That sets up the prospect of Congress voting for draconian new sanctions against Iran just as the West is forming a judgment about whether Iran's new president, Hassan Rouhani, is serious about reaching an agreement that would ease concerns about Iran's nuclear ambitions enough for the United States to lift existing sanctions. ¶ "We know the sanctions are starting to take a toll on the regime," said Senator Mark S. Kirk, an Illinois Republican and Iran hawk, who has sponsored bills to cut off Iran's access to international financing. "This is the moment to ratchet up the pressure, not dial it back." ¶ It is not the first time that Congress has played the heavy in the diplomatic dance between the United States and Iran. On several occasions in recent years, it has passed legislation — sometimes over the objections of the White House — that has forced President Obama to be tougher than he might otherwise have been on the Iranian government. ¶ This time, though, Capitol Hill's influence looks to be more important, and less predictable. ¶ Although Mr. Rouhani was elected with a mandate to negotiate relief from sanctions, there is a deep latent hostility to diplomacy among hard-liners in Iran. Some Iran watchers worry that if Congress were to pass new sanctions prematurely, it could provoke a conservative backlash in Tehran that would doom the new leader's efforts. ¶ "These negotiations are going to be tremendously complex," said Cliff Kupchan, an Iran expert at the Eurasia Group, a risk consulting firm. "The ultimate train wreck would result from Congress moving forward on this sanctions bill before diplomacy has a chance to produce results."

(--) Loosening sanctions on Iran key to ending its drive for nuclear weapons:

Rachel Maddow, 9/20/2013 (tv journalist, "When crises become opportunities," <http://www.msnbc.com/rachel-maddow-show/when-crises-become-opportunities?lite=>, Accessed 10/16/2013, rwg)

Meanwhile, Iranian President Hasan Rouhani has a new op-ed in the Washington Post arguing that the United States and the rest of the world “must work together to end the unhealthy rivalries and interferences that fuel violence and drive us apart” through a policy of “constructive engagement.”¶ The New York Times added that Iranian leaders, “seizing on perceived flexibility in a private letter from President Obama, have decided to gamble on forging a swift agreement over their nuclear program with the goal of ending crippling sanctions.”¶ David Sanger summarized the bigger picture nicely.¶ Only two weeks after Washington and the nation were debating a unilateral military strike on Syria that was also intended as a forceful warning to Iran about its nuclear program, President Obama finds himself at the opening stages of two unexpected diplomatic initiatives with America’s biggest adversaries in the Middle East, each fraught with opportunity and danger.¶ Without much warning, diplomacy is suddenly alive again after a decade of debilitating war in the region. After years of increasing tension with Iran, there is talk of finding a way for it to maintain a face-saving capacity to produce a very limited amount of nuclear fuel while allaying fears in the United States and Israel that it could race for a bomb.¶ The surprising progress has come so suddenly that a senior American diplomat described this week’s developments as “head spinning.”

(--) Iran will scale back nuclear activities to achieve sanctions relief:

Louis Charbonneau, 10/16/2013 (“U.S. says talks intense, serious after Iran hints at atomic concessions,” <http://www.reuters.com/article/2013/10/16/us-iran-nuclear-idUSBRE99F0G820131016>, Accessed 10/16/2013, rwg)

(Reuters) - The United States described two days of nuclear negotiations with Iran as the most serious and candid to date after Western diplomats said Tehran hinted it was ready to scale back sensitive atomic activities to secure urgent sanctions relief.

(--) Sanctions wind down can build trust with Iran:

REUTERS, 10/16/2013 (“Hawkish US Congress holds key to easing Iran sanctions,” <http://www.jpost.com/Iranian-Threat/News/Hawkish-US-Congress-holds-key-to-easing-Iran-sanctions-328831>, Accessed 10/16/2013, rwg)

The sanctions Washington would likely wind down first are morsels such as easing restrictions on medical supplies, travel and the sale of spare airplane parts and service for US-built aircraft in Iran.¶ “Many of these are low impact, they are not going to turn Iran's economy around,” said Greg Theilmann, a fellow at the Arms Control Association, and a former top intelligence official at the State Department.¶ “But it's important to at least know there are a number of things that can be done to show US bona fides if the Iranians show that they are willing to take significant steps in the direction of what the US and other parties say they have to do,” he said.

(--) Iran is seeking sanctions relief in negotiations now:

MICHAEL R. GORDON, 10/16/2013 (staff writer, “Iran Talks Called Substantive; More Discussions Scheduled,” <http://www.nytimes.com/2013/10/17/world/middleeast/iran-nuclear-talks.html>, Accessed 10/16/2013, rwg)

Another major issue for the next round is how fast to ease economic sanctions that have battered the Iranian economy. Mr. Zarif emphasized that he hoped the West would take a “balanced” approach, an apparent allusion to Iranian demands for a quick easing of tough sanctions. In contrast, American officials have said they want to maintain major sanctions until all of the United States’ top demands are met. ¶ Striking a balance between Iran’s demand for relief and the United States’ desire to constrain the Iranian program will not be easy. Given advances in Iran’s nuclear program, some experts say, it is no longer sufficient for Iran to agree to a moratorium on the enrichment of uranium to 20 percent for some sanctions to be eased — a step Iran’s Fars News Agency reported Tehran was willing to take for six months. Rather, they say, limitations should also be imposed on the number of centrifuge machines Iran can possess and Iran should stop work on a plant that would produce plutonium, which also can be used in a weapon. ¶ “I do think that there is some convergence this round on the idea of having near-term, interim measures in place while negotiations go forward on the details of a comprehensive deal,” said Robert Einhorn, a senior fellow at the Brookings Institution who has served at the State Department as a senior adviser on proliferation issues. ¶ “A key challenge will be to reach agreement on an interim measure that balances the P5-plus-1 desire to halt advances in Iran’s nuclear program with Iran’s desire for early sanctions relief,” he added. Despite the many obstacles, American officials highlighted the positive tone of the meeting just ended, saying that the United States team had offered friendly advice to Mr. Zarif about how to deal with the back pain that plagued him this week.

Impacts: Iran Prolif Bad

(-- Iranian prolif risks a prolif snowball and nuclear war:

Eric S. Edelman, 2011 (Distinguished Fellow at the Center for Strategic and Budgetary Assessments, "The dangers of NATO a nuclear Iran: the limits of containment," Foreign Affairs, Jan-Feb. 2011, Accessed via General Onefile, 10/16/2013, rwg)

The reports of the Congressional Commission on the Strategic Posture of the United States and the Commission on the Prevention of Weapons of Mass Destruction Proliferation and Terrorism, as well as other analyses, have highlighted the risk that a nuclear-armed Iran could trigger additional nuclear proliferation in the Middle East, even if Israel does not declare its own nuclear arsenal. Notably, Algeria, Bahrain, Egypt, Jordan, Saudi Arabia, Turkey, and the United Arab Emirates--all signatories to the Nuclear Nonproliferation Treaty (NPT)--have recently announced or initiated nuclear energy programs. Although some of these states have legitimate economic rationales for pursuing nuclear power and although the low-enriched fuel used for power reactors cannot be used in nuclear weapons, these moves have been widely interpreted as hedges against a nuclear-armed Iran. The NPT does not bar states from developing the sensitive technology required to produce nuclear fuel on their own, that is, the capability to enrich natural uranium and separate plutonium from spent nuclear fuel. Yet enrichment and reprocessing can also be used to accumulate weapons-grade enriched uranium and plutonium--the very loophole that Iran has apparently exploited in pursuing a nuclear weapons capability.¶ Developing nuclear weapons remains a slow, expensive, and difficult process, even for states with considerable economic resources, and especially if other nations try to constrain aspiring nuclear states' access to critical materials and technology. Without external support, it is unlikely that any of these aspirants could develop a nuclear weapons capability within a decade.¶ There is, however, at least one state that could receive significant outside support: Saudi Arabia. And if it did, proliferation could accelerate throughout the region. Iran and Saudi Arabia have long been geopolitical and ideological rivals. Riyadh would face tremendous pressure to respond in some form to a nuclear-armed Iran, not only to deter Iranian coercion and subversion but also to preserve its sense that Saudi Arabia is the leading nation in the Muslim world. The Saudi government is already pursuing a nuclear power capability, which could be the first step along a slow road to nuclear weapons development. And concerns persist that it might be able to accelerate its progress by exploiting its close ties to Pakistan. During the 1980s, in response to the use of missiles during the Iran-Iraq War and their growing proliferation throughout the region, Saudi Arabia acquired several dozen CSS-2 intermediate-range ballistic missiles from China. The Pakistani government reportedly brokered the deal, and it may have also offered to sell Saudi Arabia nuclear warheads for the CSS-2s, which are not accurate enough to deliver conventional warheads effectively.¶ There are still rumors that Riyadh and Islamabad have had discussions involving nuclear weapons, nuclear technology, or security guarantees. This "Islamabad option" could develop in one of several different ways. Pakistan could sell operational nuclear weapons and delivery systems to Saudi Arabia, or it could provide the Saudis with the infrastructure, material, and technical support they need to produce nuclear

weapons themselves within a matter of years, as opposed to a decade or longer. Not only has Pakistan provided such support in the past, but it is currently building two more heavy-water reactors for plutonium production and a second chemical reprocessing facility to extract plutonium from spent nuclear fuel. In other words, it might accumulate more fissile material than it needs to maintain even a substantially expanded arsenal of its own.¶ Alternatively, Pakistan might offer an extended deterrent guarantee to Saudi Arabia and deploy nuclear weapons, delivery systems, and troops on Saudi territory, a practice that the United States has employed for decades with its allies. This arrangement could be particularly appealing to both Saudi Arabia and Pakistan. It would allow the Saudis to argue that they are not violating the NPT since they would not be acquiring their own nuclear weapons. And an extended deterrent from Pakistan might be preferable to one from the United States because stationing foreign Muslim forces on Saudi territory would not trigger the kind of popular opposition that would accompany the deployment of U.S. troops. Pakistan, for its part, would gain financial benefits and international clout by deploying nuclear weapons in Saudi Arabia, as well as strategic depth against its chief rival, India.¶ The Islamabad option raises a host of difficult issues, perhaps the most worrisome being how India would respond. Would it target Pakistan's weapons in Saudi Arabia with its own conventional or nuclear weapons? How would this expanded nuclear competition influence stability during a crisis in either the Middle East or South Asia? Regardless of India's reaction, any decision by the Saudi government to seek out nuclear weapons, by whatever means, would be highly destabilizing. It would increase the incentives of other nations in the Middle East to pursue nuclear weapons of their own. And it could increase their ability to do so by eroding the remaining barriers to nuclear proliferation: each additional state that acquires nuclear weapons weakens the nonproliferation regime, even if its particular method of acquisition only circumvents, rather than violates, the NPT.¶ N-PLAYER COMPETITION¶ Were Saudi Arabia to acquire nuclear weapons, the Middle East would count three nuclear-armed states, and perhaps more before long. It is unclear how such an n-player competition would unfold because most analyses of nuclear deterrence are based on the U.S.-Soviet rivalry during the Cold War. It seems likely, however, that the interaction among three or more nuclear-armed powers would be more prone to miscalculation and escalation than a bipolar competition. During the Cold War, the United States and the Soviet Union only needed to concern themselves with an attack from the other. Multipolar systems are generally considered to be less stable than bipolar systems because coalitions can shift quickly, upsetting the balance of power and creating incentives for an attack.¶ More important, emerging nuclear powers in the Middle East might not take the costly steps necessary to preserve regional stability and avoid a nuclear exchange. For nuclear-armed states, the bedrock of deterrence is the knowledge that each side has a secure second-strike capability, so that no state can launch an attack with the expectation that it can wipe out its opponents' forces and avoid a devastating retaliation. However, emerging nuclear powers might not invest in expensive but survivable capabilities such as hardened missile silos or submarine-based nuclear forces. Given this likely vulnerability, the close proximity of states in the Middle East, and the very short flight times of ballistic missiles in the region, any new nuclear powers might be compelled to "launch on warning" of an attack or even, during a crisis, to use their nuclear forces preemptively. Their governments might also

delegate launch authority to lower-level commanders, heightening the possibility of miscalculation and escalation. Moreover, if early warning systems were not integrated into robust command-and-control systems, the risk of an unauthorized or accidental launch would increase further still. And without sophisticated early warning systems, a nuclear attack might be unattributable or attributed incorrectly. That is, assuming that the leadership of a targeted state survived a first strike, it might not be able to accurately determine which nation was responsible. And **this uncertainty, when combined with the pressure to respond quickly, would create a significant risk that it would retaliate against the wrong party, potentially triggering a regional nuclear war.**

(--) Iranian proliferators won't be peaceful—it risks an Iranian-Israeli nuclear war:

Eric S. Edelman, 2011 (Distinguished Fellow at the Center for Strategic and Budgetary Assessments, "The dangers of NATO a nuclear Iran: the limits of containment," Foreign Affairs, Jan-Feb. 2011, Accessed via General Onefile, 10/16/2013, rwg)

What to do about Iran's nuclear program is one of the most vexing foreign policy challenges confronting the Obama administration. This debate is increasingly characterized both by growing pessimism about whether the international community's diplomatic efforts and economic sanctions can prevent Iran from acquiring nuclear weapons and by guarded optimism that the consequences a nuclear-armed Iran are manageable. **Writing in these pages last spring, James Lindsay and Ray Takeyh, both of the Council on Foreign Relations, maintained that the United States could contain Iran even if it developed a nuclear arsenal** by establishing clear "redlines" that Tehran would not be allowed to cross without risking some type of retaliation. For example, if Iran used its nuclear weapons, transferred them to a third party, invaded its neighbors, or increased its support for terrorist groups such as Hamas and Hezbollah, the United States would be compelled to respond, although the measures it chose to adopt would not be specified in advance. This argument reflects the public position of many senior U.S. and European officials, as well as a number of prominent academics and defense intellectuals.¶ **Yet this view is far too sanguine. Above all, it rests on the questionable assumptions that possessing nuclear weapons induces caution and restraint, that other nations in the Middle East would balance against Iran rather than bandwagon with it, that a nuclear-armed Iran would respect new redlines even though a conventionally armed Iran has failed to comply with similar warnings, and that further proliferation in the region could be avoided. It seems more likely that Iran would become increasingly aggressive once it acquired a nuclear capability, that the United States' allies in the Middle East would feel greatly threatened and so would increasingly accommodate Tehran, that the United States' ability to promote and defend its interests in the region would be diminished, and that further nuclear proliferation, with all the dangers that entails, would occur. The greatest concern in the near term would be that an unstable Iranian-Israeli nuclear contest could emerge, with a significant risk that either side would launch a first strike on the other despite the enormous risks and costs involved.** Over the longer term, Saudi Arabia and other states in the Middle East might pursue their own nuclear capabilities, raising the possibility of a highly unstable regional nuclear arms race.

(--) Iranian prolifer risks a Middle Eastern nuclear war:

Eric S. Edelman, 2011 (Distinguished Fellow at the Center for Strategic and Budgetary Assessments, "The dangers of NATO a nuclear Iran: the limits of containment," Foreign Affairs, Jan-Feb. 2011, Accessed via General Onefile, 10/16/2013, rwg)

Given Israel's status as an assumed but undeclared nuclear weapons state, **the most immediate consequence of Iran's crossing the nuclear threshold would be the emergence of an unstable bipolar nuclear competition in the Middle East.** Given Israel's enormous quantitative and **qualitative advantage in nuclear weapons**--its arsenal is estimated to consist of anywhere from 100 to more than 200 warheads, possibly including thermonuclear weapons--Tehran might fear a disarming preventive or preemptive strike. During a crisis, then, **the Iranian leadership might face a "use them or lose them" dilemma with respect to its nuclear weapons and resolve it by attacking first.** ¶ **For their part, Israeli leaders might also be willing to strike first,** despite the enormous risks. Israel's small size means that even a few nuclear detonations on its soil would be devastating; Iran's former president Ali Akbar Hashemi Rafsanjani was exaggerating only slightly when he claimed that "even one nuclear bomb inside Israel will destroy everything." Iran's nuclear arsenal is likely to be small at first and perhaps vulnerable to a preventive attack. Moreover, even if current and future Israeli missile defenses could not stop a full-scale premeditated attack by ballistic missiles, they might be effective against any retaliation Iran might launch if it were hit first. And the willingness to execute a preventive or preemptive strike when confronting a serious threat is a deeply ingrained element of Israel's strategic culture, as Israel demonstrated in its attacks against Egypt in 1956 and 1967, against Iraq's nuclear program in 1981, and against a suspected Syrian nuclear site in 2007. On the one occasion that Israel absorbed the first blow, in 1973, it came perilously close to defeat. In short, the early stages of an Iranian-Israeli nuclear competition would be unstable.

(--) Iranian prolifer risks a cascade of Middle East proliferation:

Eric S. Edelman, 2011 (Distinguished Fellow at the Center for Strategic and Budgetary Assessments, "The dangers of NATO a nuclear Iran: the limits of containment," Foreign Affairs, Jan-Feb. 2011, Accessed via General Onefile, 10/16/2013, rwg)

Even if Iran and Israel managed to avoid a direct conflict, Iran's nuclear weapons would remain a persistent source of instability in the Middle East. Tehran would almost certainly attempt to expand the size of its arsenal to enhance the survivability of its nuclear weapons. To that end, it would have a strong incentive to adopt the North Korean model of proliferation: negotiating with the international community while continuing to expand its stockpile. Tehran could also deflect international pressure to disarm by offering to relinquish its arsenal if Israel did so as well, exploiting the desire of U.S. President Barack Obama and other Western leaders to make progress toward a world without nuclear weapons. As Iran's arsenal became larger and its fear of retaliation declined, however, it might be increasingly willing to engage in more subtle but still dangerous forms of aggression, including heightened support for terrorist groups or coercive diplomacy. ¶ **Meanwhile, if Iran acquires nuclear weapons, Israel might face internal**

and external pressures to abandon its posture of nuclear opacity, that is, its policy of refusing to confirm or deny that it has nuclear weapons. Internal pressure would come from those who believe that declaring Israel's arsenal is necessary to deter an attack by Iran. External pressure would come from those who view an Israeli declaration as the first step toward regional nuclear disarmament. But if Israel did abandon its policy of nuclear opacity, cooperation between Israel and its Arab neighbors would be far more difficult, and a containment strategy against Iran would thus be more challenging to implement. Such a disclosure might also encourage other states in the region to pursue their own nuclear weapons programs. Although most of Israel's neighbors have been willing to accept its undeclared nuclear weapons program so far, the combination of a nuclear-armed Iran and an openly nuclear-armed Israel could alter their calculations--due to a heightened sense of threat, a desire for prestige, domestic pressure, or all three.

(--) Prolif risks extinction:

Taylor '02 (Stuart Jr., Senior Writer with the National Journal and contributing editor at Newsweek, Legal Times, September 16, L/N)

< The truth is, no matter what we do about Iraq, if we don't stop proliferation another five or ten potentially unstable nations may go nuclear before long, making it ever more likely that one or more bombs will be set off on our soil by terrorists or terrorist governments. Even an airtight missile defense will be useless against a nuke hidden in a truck, a shipping container, or a boat.

Unless we get serious about stopping proliferation, we are headed for "a world filled with nuclear-weapons states where every crisis threatens to go nuclear," where "the survival of civilization truly is in question from day to day," and where "it would be impossible to keep these weapons out of the hands of terrorists, religious cults, and criminal organizations," So writes Ambassador Thomas Graham Jr., a moderate Republican who served as a career arms-controller under six presidents and led the successful Clinton administration effort to extend the Nuclear Nonproliferation Treaty.

(--) Iranian prolif will cause Saudi prolif—this causes a cascade of proliferation:

Eric S. Edelman, 2011 (Distinguished Fellow at the Center for Strategic and Budgetary Assessments, "The dangers of NATO a nuclear Iran: the limits of containment," Foreign Affairs, Jan-Feb. 2011, Accessed via General Onefile, 10/16/2013, rwg)

There is, however, at least one state that could receive significant outside support: Saudi Arabia. And if it did, proliferation could accelerate throughout the region. Iran and Saudi Arabia have long been geopolitical and ideological rivals. Riyadh would face tremendous pressure to respond in some form to a nuclear-armed Iran, not only to deter Iranian coercion and subversion but also to preserve its sense that Saudi Arabia is the leading nation in the Muslim world. The Saudi government is already pursuing a nuclear power capability, which could be the first step along a slow road to nuclear weapons development. And concerns persist that it might be able to

accelerate its progress by exploiting its close ties to Pakistan. During the 1980s, in response to the use of missiles during the Iran-Iraq War and their growing proliferation throughout the region, Saudi Arabia acquired several dozen CSS-2 intermediate-range ballistic missiles from China. The Pakistani government reportedly brokered the deal, and it may have also offered to sell Saudi Arabia nuclear warheads for the CSS-2s, which are not accurate enough to deliver conventional warheads effectively.¶ There are still rumors that Riyadh and Islamabad have had discussions involving nuclear weapons, nuclear technology, or security guarantees. This "Islamabad option" could develop in one of several different ways. Pakistan could sell operational nuclear weapons and delivery systems to Saudi Arabia, or it could provide the Saudis with the infrastructure, material, and technical support they need to produce nuclear weapons themselves within a matter of years, as opposed to a decade or longer. Not only has Pakistan provided such support in the past, but it is currently building two more heavy-water reactors for plutonium production and a second chemical reprocessing facility to extract plutonium from spent nuclear fuel. In other words, it might accumulate more fissile material than it needs to maintain even a substantially expanded arsenal of its own.¶ Alternatively, Pakistan might offer an extended deterrent guarantee to Saudi Arabia and deploy nuclear weapons, delivery systems, and troops on Saudi territory, a practice that the United States has employed for decades with its allies. This arrangement could be particularly appealing to both Saudi Arabia and Pakistan. It would allow the Saudis to argue that they are not violating the NPT since they would not be acquiring their own nuclear weapons. And an extended deterrent from Pakistan might be preferable to one from the United States because stationing foreign Muslim forces on Saudi territory would not trigger the kind of popular opposition that would accompany the deployment of U.S. troops. Pakistan, for its part, would gain financial benefits and international clout by deploying nuclear weapons in Saudi Arabia, as well as strategic depth against its chief rival, India.¶ The Islamabad option raises a host of difficult issues, perhaps the most worrisome being how India would respond. Would it target Pakistan's weapons in Saudi Arabia with its own conventional or nuclear weapons? How would this expanded nuclear competition influence stability during a crisis in either the Middle East or South Asia? Regardless of India's reaction, any decision by the Saudi government to seek out nuclear weapons, by whatever means, would be highly destabilizing. It would increase the incentives of other nations in the Middle East to pursue nuclear weapons of their own. And it could increase their ability to do so by eroding the remaining barriers to nuclear proliferation: each additional state that acquires nuclear weapons weakens the nonproliferation regime, even if its particular method of acquisition only circumvents, rather than violates, the NPT.

Impacts: AT: Iran will be deterred

A nuclear Iran can't be deterred:

Eric S. Edelman, 2011 (Distinguished Fellow at the Center for Strategic and Budgetary Assessments, "The dangers of NATO a nuclear Iran: the limits of containment," Foreign Affairs, Jan-Feb. 2011, Accessed via General Onefile, 10/16/2013, rwg)

If Iran did acquire nuclear weapons, would a containment strategy preserve stability in the Middle East? Some analysts, including Lindsay and Takeyh, argue that although Iran can be aggressive at times, it also regulates its behavior to avoid provoking retaliation. Since the regime is sensitive to costs, the logic goes, it recognizes the dangers of escalation; hence, containment would work. Other analysts argue that Iran's antagonism toward the United States and Israel is so strong and so central to its leaders' legitimacy that Tehran will become more hostile once it has a nuclear arsenal, regardless of the consequences.¶ The truth probably lies somewhere in between. Tehran may not be irrationally aggressive, but its leadership structure and decision-making are opaque. Its rhetoric toward the United States, Israel, and the Arab nations is often inflammatory. And its hostile behavior--including its support for proxies such as Hezbollah, its efforts to subvert its neighbors, and its provocative naval maneuvers in the Persian Gulf--could easily trigger a crisis. In short, it is unclear how a nuclear-armed Iran would weigh the costs, benefits, and risks of brinkmanship and escalation and therefore how easily it could be deterred from attacking the United States' interests or partners in the Middle East.

(--) Extended deterrence vs. Iran will fail:

Eric S. Edelman, 2011 (Distinguished Fellow at the Center for Strategic and Budgetary Assessments, "The dangers of NATO a nuclear Iran: the limits of containment," Foreign Affairs, Jan-Feb. 2011, Accessed via General Onefile, 10/16/2013, rwg)

In sum, any U.S. effort to implement an extended deterrence regime in the Middle East in order to contain a nuclear Iran and stem proliferation in the region would face very serious challenges. Given the magnitude of those challenges, the United States must redouble its efforts to prevent Iran from acquiring nuclear weapons while also taking steps that will bolster its credibility if containment becomes necessary because Iran has acquired nuclear weapons.

Impacts: AT: Have to Be Able to Threaten Force

(--) Deal with Iran doesn't take the use of force off the table:

Laicie Heeley, 2/20/2014 (staff writer, "Progress With Iran as Negotiations Continue in Vienna," <http://www.truth-out.org/opinion/item/21966-progress-with-iran-as-negotiations-continue-in-vienna>, Accessed 2/21/2014, rwg)

While there is some room to negotiate, a final agreement will seek to ensure that any scenario in which Iran should choose to reverse its path would allow the international community sufficient time for action, including military force. Former US nuclear negotiator Robert Einhorn suggested in October that a final deal must "sufficiently limit" Iran's ability "to suddenly abandon constraints, kick out inspectors, disable monitoring equipment and use existing enrichment facilities to produce enough weapons-grade uranium for one or more nuclear weapons - and to do these things before the international community can take effective action to stop them."

Impacts: AT: Sanctions Can Be Waived

(--) Waivers won't solve:

Trita Parsi, 2/18/2014 (President of the National Iranian American Council, "US-Iran deal: Compromise is key," <http://www.aljazeera.com/indepth/opinion/2014/02/us-iran-deal-compromise-key-201421845935181913.html>, Accessed 2/21/2014, rwg)

Going forward, Obama will face severe difficulties offering relief on key sanctions such as those on oil and banking, since these are controlled by Congress. ¶ Obama can temporarily waive Congressional sanctions, but the utility of waivers is questionable due to the proportionality principle established in the Istanbul talks in the spring of 2012. ¶ Reversible Western concessions, the Istanbul talks established, will have to be exchanged for reversible Iranian measures and vice versa. To extract irreversible concessions, similarly irreversible measures have to be offered. ¶ Sanctions waivers are fundamentally reversible. They usually last only six months and have to be actively renewed by the president - including by whoever occupies the White House after 2016.

(--) Waiver isn't enough to get Iran on board:

Trita Parsi, 2/18/2014 (President of the National Iranian American Council, "US-Iran deal: Compromise is key," <http://www.aljazeera.com/indepth/opinion/2014/02/us-iran-deal-compromise-key-201421845935181913.html>, Accessed 2/21/2014, rwg)

Moreover, for the deal to be sellable in Iran, economic relief must be real and come early. International companies are unlikely to return to the Iranian market simply based on sanctions being temporarily waived. They will, as they do elsewhere, demand stability. Consequently, waivers won't be enough. Iran's economy won't get the boost that would justify the nuclear compromises demanded of Iran. In short, neither the Iranian elite nor the public will go for it, Iran's negotiators will argue.

(--) Even passing the bill destroys diplomacy with Iran:

William Davnie, 1/5/2014 (staff writer, "Iran sanctions bill threatens progress; pressure is on Franken, Klobuchar," <http://www.startribune.com/opinion/commentaries/238660021.html>, Accessed 1/22/2014, rwg)

However, in an open rebuke of the White House, the intelligence community and the 10 Senate committee chairs who cautioned against new sanctions, Sens. Robert Menendez, D-N.J.; Chuck Schumer, D-N.Y., and Mark Kirk, R-Ill., have introduced a bill (S. 1881) to impose new oil and financial sanctions on Iran. Supporters of this measure stress that new sanctions would take effect only if Iran violates the Geneva agreement or fails to move toward a final deal at the end of the six-month negotiation period. And some dismiss this congressional threat as toothless, given President Obama's vow to veto any sanctions legislation. But simply passing these sanctions would dangerously escalate tensions with Iran. U.S. Rep. Keith Ellison, D-Minn., put it

best: “New sanctions stand to kill any hope for diplomacy.” Already, anti-Geneva-deal counterparts in Iran’s parliament have responded with their own provocation, introducing legislation to require Iran to enrich near weapons grade if the United States imposes new sanctions. Like the Senate sanctions bill, the Iranian parliament’s legislation would have a delayed trigger. Like the Senate bill, the mere introduction of this reckless legislation isn’t a violation of the letter of the Geneva agreement per se. But both bills risk restarting the vicious cycle of confrontation that has defined the U.S.-Iran relationship for decades.

(--) Even though the sanctions are suspended, they kill diplomacy:

BRADLEY KLAPPER, 1/9/2014 (staff writer, “Obama, Congress Locked in Iran Sanctions Dispute,” <http://abcnews.go.com/Politics/wireStory/obama-congress-locked-iran-sanctions-dispute-21471744?singlePage=true>, Accessed 1/22/2014, rwg)

BAD FAITH: As part of the interim deal, the U.S. promised Iran no new nuclear-related economic penalties for six months. A new round of sanctions, even though conditionally suspended, may stop short of breaking the agreement but could push Iran to quit negotiations — or issue its own threats of future action. Neither response serves U.S. national interests, administration officials say. America’s international partners, who’ve invested years trying to resolve the crisis peacefully, could also blame Washington and question U.S. laws against investing in Iran. New sanctions, Secretary of State John Kerry told Congress last month, “could lead our international partners to think that we’re not an honest broker.”

(--) Even though the sanctions don’t go into effect immediately, sanctions risk a war:

Ryan Costello, 12/19/2013 (Policy Fellow with the National Iranian American Council, “To Boost Leverage with Iran, Give Obama a Sanctions Kill Switch,” <http://nationalinterest.org/commentary/boost-leverage-iran-give-obama-sanctions-kill-switch-9591>, Accessed 1/22/2014, rwg)

This stance puts Menendez and others in open opposition to the president and our nation’s negotiators. As the White House has made clear, if Congress passes new sanctions—even if they include waivers to delay implementation—both Iran and the international community would see the United States as violating the terms and faith of the agreement. After the deal collapses, Iran would once again have an unconstrained nuclear program, we would lose our unprecedented inspections regime, and the U.S. and Iran would be back on a pathway to war.

(--) New bill limits Obama’s ability to waive the sanctions:

Ali Gharib, 12/18/2013 (a Foreign Policy blog, “Exclusive: Top Senate Democrats Break with White House and Circulate New Iran Sanctions Bill,” http://thecable.foreignpolicy.com/posts/2013/12/18/exclusive_top_senate_democrats_break_with_white_house_and_circulate_new_iran_sanctions, Accessed 1/22/2014, rwg)

In accordance with goals laid out frequently by hard-liners in Congress and the influential lobbying group the American Israel Public Affairs Committee, the bill sets tough conditions for a final deal, should one be reached with Iranian negotiators. Among those conditions is a

provision that only allows Obama to waive new sanctions, even after a final deal has been struck, if that deal bars Iran from enriching any new uranium whatsoever. The bill states Obama may not waive sanctions unless the United States and its allies "reached a final and verifiable agreement or arrangement with Iran that will ... dismantle Iran's illicit nuclear infrastructure, including enrichment and reprocessing capabilities and facilities." (Congress could also block Obama's waivers by passing a "joint resolution of disapproval" against a final deal.)

(-- Flexibility from Obama is key to ending the nuclear standoff with Iran:

Rachel Maddow, 9/20/2013 (tv journalist, "When crises become opportunities," <http://www.msnbc.com/rachel-maddow-show/when-crises-become-opportunities?lite=>, Accessed 10/16/2013, rwg)

There are some awfully significant – and promising – parallels here with the U.S. standoff with Iran. Obama has been clear that he wants Iran to give up its rogue uranium-enrichment program and submit to the kind of rigorous inspections that would guarantee that its nuclear program is peaceful. He's also been clear that the United States is using severe economic sanctions to coerce Tehran to cooperate and that it would use military force if necessary. The implicit (and sometimes explicit) message to Iran has been: If you abandon your enrichment program, we'll make it worth your while by easing off. ¶ Here's where the parallel with Syria is really important: Iranian leaders distrust the United States deeply and fear that Obama would betray them by not holding up his end of the bargain. That's been a major hurdle to any U.S.-Iran nuclear deal. But seeing Assad's deal with Obama work out (so far) sends the message to Iran that it can trust the United States. It also sends the message that making concessions to the United States can pay off. Iran's supreme leader has been talking a lot lately about flexibility and diplomacy toward the West. So it's an ideal moment for Obama to be demonstrating flexibility and diplomacy toward the Middle East.

(-- Waivers risk a Congressional backlash:

REUTERS, 10/16/2013 ("Hawkish US Congress holds key to easing Iran sanctions," <http://www.jpost.com/Iranian-Threat/News/Hawkish-US-Congress-holds-key-to-easing-Iran-sanctions-328831>, Accessed 10/16/2013, rwg)

But even waivers could risk a backlash from Congress, at a time when Obama already has his hands full with fiscal fights with Republicans that have brought the United States to the brink of a debt default. ¶ Pressuring Iran is one of the rare issues both Democrats and Republicans agree upon and powerful pro-Israel lobbying groups hold great sway among lawmakers from both parties who worry Obama will give up too much in the current nuclear talks.

Impacts: AT: Iran Will Cheat

(--) Iran isn't cheating now

Peter Bader, 12/19/2014 (staff writer, "Iran honors nuclear deal with powers, IAEA report shows," <http://www.reuters.com/article/2014/12/19/us-iran-nuclear-iaea-idUSKBN0JX1GM20141219>, Accessed 1/2/2015, rwg)

(Reuters) - Iran has continued to meet commitments under an interim nuclear agreement with six world powers, a confidential U.N. agency report showed, though Tehran temporarily halted conversion work that makes higher-grade uranium less suitable for bombs. The monthly update by the International Atomic Energy Agency (IAEA), seen by Reuters, said Iran was not enriching uranium above a fissile concentration of 5 percent, far below the 90 percent level needed for atomic arms. It also said Iran had not made "any further advances" to its activities at two enrichment facilities and an unfinished heavy water reactor.

(--) Accusations of cheating are false:

Muhammad Sahimi, 12/24/2014 (Professor of Chemical Engineering & Materials Science and the NIOC Chair in Petroleum Engineering at the University of Southern California, "US Iran Hawks Try to Sabotage Nuclear Deal," <http://nationalinterest.org/feature/us-iran-hawks-try-sabotage-nuclear-deal-11920>, Accessed 1/2/2015, rwg)

Dubowitz also states a discredited story. Specifically, he refers to "cheating" by Iran after the November 2013 Geneva Accord was signed. What is the alleged cheating about? The IAEA had reported that Iran "had 'intermittently' been feeding natural uranium gas into a single so-called IR-5 centrifuge at a research facility." IR-5 is a more advanced version of Iran's currently operating centrifuges. David Albright, head of the Institute for Science and International Security in Washington, had interpreted it as "cheating" by Iran. The reality is that the Geneva Accord and its Joint Plan of Action permit Iran to continue its research on more advanced centrifuges. Iran's obligation, which it has lived by, is not installing such centrifuges. After this was pointed out, Albright retreated, declaring that the test was in violation of the "spirit" of the Accord. Who is moving whose goalposts, again?

(--) Iran isn't cheating on the deal:

Jon Greenberg, 12/31/2014 (staff writer, "Stephen Hayes: Iran cheated on the interim nuclear deal," <http://www.politifact.com/punditfact/statements/2014/dec/31/stephen-hayes/hayes-iran-cheated-interim-nuclear-deal/>, Accessed 1/2/2015, rwg)

We decided to check whether Iran was caught cheating on the interim agreement. Hayes told us he had two violations in mind. The one most tightly tied to Iran's nuclear program had to do with Iran's work with a new model of centrifuge. Centrifuges are key to enriching uranium and enriched uranium is key to making a bomb. The other violation had to do with Iran selling more oil than it is allowed. In our research, we found a third possible violation involving Iran buying parts for its heavy water reactor in Arak. What we discovered is that while Iran isn't squeaky clean, no point is definitively in violation of the interim agreement. Importantly, the International Atomic Energy Agency has reported no violations with the Joint Plan of Action.

(--) Iran isn't cheating on the interim agreement:

Jon Greenberg, 12/31/2014 (staff writer, "Stephen Hayes: Iran cheated on the interim nuclear deal," <http://www.politifact.com/punditfact/statements/2014/dec/31/stephen-hayes/hayes-iran-cheated-interim-nuclear-deal/>, Accessed 1/2/2015, rwg)

Adam Mount, a nuclear security fellow at the Council on Foreign Relations, said as far as anyone can tell, the interim agreement has achieved what it set out to do. "There is no publicly available evidence that Iran has violated the terms of the Joint Plan of Action," Mount said. "Progress on the Iranian nuclear program is frozen and in some of the most important areas, it has been rolled back."

(--) Iran isn't cheating on the nuclear deal:

Jon Greenberg, 12/31/2014 (staff writer, "Stephen Hayes: Iran cheated on the interim nuclear deal," <http://www.politifact.com/punditfact/statements/2014/dec/31/stephen-hayes/hayes-iran-cheated-interim-nuclear-deal/>, Accessed 1/2/2015, rwg)

Hayes said Iran had been caught cheating on the interim deal to rein in Iran's nuclear program, called the Joint Plan of Action. First, the International Atomic Energy Agency has reported no violations with the Joint Plan of Action. That said, there are some actions by Iran that certainly cut near the boundaries of the terms of the agreement. Iran has worked with a new kind of centrifuge that, while perhaps not a formal violation, does seem to contradict the United States' understanding of the deal, an expert told us. When confronted on the matter, Iran stopped its work. Also, there is some question about the amount of oil Iran is exporting. But an expert said we just don't have enough information to determine whether that constitutes a violation of the agreement or not. Hayes said we caught Iran cheating. You can say some allege that, and you can say there's some evidence that might suggest that. But we found no hand in the cookie jar. As such, we rate this claim Mostly False.

(--) Interim agreement includes rigid inspection requirements:

SEN. CARL LEVIN and SEN. BARBARA BOXER, 12/18/2013 ("Now's No Time for New Iran",

<http://www.politico.com/magazine/story/2013/12/nows-no-time-for-new-iran-sanctions-101303.html>, Accessed 1/22/2014, rwg)

The interim agreement includes inspection requirements unprecedented in their scope and stringency. For the first time, the deal gives international inspectors broad, intrusive and frequent access to Iran's nuclear facilities. For this reason alone—the ability to monitor Iran's nuclear program more closely than ever before—this initial agreement is a clear improvement over the status quo. And it doesn't just allow us to keep a closer eye on the Iranian nuclear program. For the first time, it halts, and to an extent rolls back, that program.

(--) Verification solves

Meir, 12/22/13 - Shemuel Meir is a former IDF analyst in the Strategic Planning Department and associate researcher at the Jaffee Center for Strategic Studies at Tel Aviv University ("An important year for Iran nuclear talks: What Israel got wrong" <http://972mag.com/the-nuclear-deal-with-iran-what-really-happened-in-geneva/84149/>)

In his answer to General Yadin, President Obama explained that theoretically, Iran could have “the breakout capability.” But in practical terms, the strict limitations on its low-level enrichment program and the intrusive IAEA monitoring provide a good guarantee that Iran would not have a “breakout capability.” According to the agreement, Iran will be placed under a “unique and unprecedented” verification and monitoring mechanism. Already in the first stage, IAEA monitors will be given access on a daily basis to the centrifuge sites, to the facilities for the production and storage of centrifuges (that until today were “off limits” to the IAEA). In this way, Iran undertakes already in the first stage some elements of the “Additional Protocol” (based on the lessons learned from Saddam Hussein’s clandestine program) which permits intrusive snap inspections at short notice, including at undeclared suspected sites which will prevent the possibility of secret stockpiling of fissile material for a bomb going unperceived by the inspectors. This will prevent the possibility of a clandestine route to nuclear weapons. It is worth remembering that to date, Iran is the most monitored country in the world – inspectors are permanently and continually in place in Iran, video cameras broadcast directly to the IAEA headquarters in Vienna. The US intelligence effort through satellites recall operations over Soviet territory during the Cold War. The satellite coverage is more than photography and includes the collection and interpretation of activities on the basis of samples of material released into the atmosphere. In addition, there is the NSA tracking of signals. In the nuclear context, tight monitoring is the best confidence-building measure. The second point explicitly emphasized by President Obama in his speech at the Saban Forum was that the North Korean model was not applicable to Iran and that there is no room for comparison between the two cases. President Obama emphasized the fact (based on intelligence material) that when the U.S. entered into negotiations with North Korea – the latter already had fissile material for nuclear weapons. North Korea had never been a full member of the NPT. It entered the treaty in an irregular and late manner, withdrew in 2003 and carried out its first nuclear explosion in 2006. The huge difference between Iran and North Korea can be found on the declarative level: North Korea according to its constitution is “a state armed with nuclear weapons” while Iran is an NPT country which, in the Geneva Agreement, has reaffirmed that it will not develop nuclear weapons. President Obama thus put an end to the North Korea spin. At Saban Forum, President Obama tried to signal (with admirable tact) to Israeli leaders that the prevalent concept according to which “there is nothing new in Iran” should be reexamined. That the importance of the political change in Iran should not be underestimated. President Rouhani’s sweeping electoral victory reflects a change of direction in Iran. An understanding of the global reality of the NPT regime (no to nuclear weapons, yes to civil nuclear programs) and the reality of the new Iran – these explain what happened in Geneva. The explanation is not to be found in an imagined US. naiveté. President Shimon Peres, who recently said in public that Iran is not an enemy state, seems to share President Obama’s assessment.

Impacts: Sanctions Bad/Diplomacy Works

Impacts: AT: Sanctions Good

(--) Sanctions didn't bring Iran to the negotiating table:

Muhammad Sahimi, 12/24/2014 (Professor of Chemical Engineering & Materials Science and the NIOC Chair in Petroleum Engineering at the University of Southern California, "US Iran Hawks Try to Sabotage Nuclear Deal," <http://nationalinterest.org/feature/us-iran-hawks-try-sabotage-nuclear-deal-11920>, Accessed 1/2/2015, rwg)

We see this unfortunate dynamic in an article this month by Mark Dubowitz, Executive Director of the Foundation for Defense of Democracies, published in the National Interest. Dubowitz's main premise is that it was the economic sanctions imposed by the United States and its allies that brought Iran to the negotiation table, and only more economic sanctions will induce it to surrender. The premise is false. While the sanctions did play a role, they were not the most important reason, or even one of the primary ones. Iran is negotiating because that is what it has wanted—contrary to Dubowitz's assertion that "Iran does not appear to be ready to compromise."

(--) We'll control uniqueness on the sanctions debate: Negotiations are working now—Iran is taking concrete steps to roll back its nuclear program:

Anita Kumar, 1/21/2014 (staff writer, "Iran sanctions eased; uranium work curbed,"

http://www.dispatch.com/content/stories/national_world/2014/01/21/iran-sanctions-eased-uranium-work-curbed.html, Accessed 1/22/2014, rwg)

WASHINGTON — Iran has started suspending some of its uranium enrichment as part of a deal between Tehran and world powers to rein in the nation's nuclear program in return for the lifting of some economic sanctions, an international watchdog says. Negotiators for the nations said they will begin working on a longer-term, more-comprehensive agreement. "These actions represent the first time in nearly a decade that Iran has verifiably enacted measures to halt progress on its nuclear program and roll it back in key respects," White House spokesman Jay Carney said in a statement. "Taken together, these concrete actions represent an important step forward."

(--) New sanctions UNDERMINE, not enhance US negotiating posture:

Ben Armbruster, 1/6/2014 (staff writer, "Security Experts Ask Senators To Pull Back Iran Sanctions Bill," <http://thinkprogress.org/security/2014/01/06/3122551/crocker-experts-senate-iran-sanctions-bill/>, Accessed 1/22/2014, rwg)

The letter's signatories share that concern and address the argument that lawmakers often make when pushing more sanctions now: the threat of harsh penalties will strengthen the U.S.'s negotiating position. "To the contrary," the letter says, "Iranian leaders are more likely to see such Congressional action as a violation of the spirit and perhaps the letter of the Joint Plan of Action of November 24, 2013, and to harden rather than soften their negotiating position." They note that Iranian parliamentarians have already introduced a measure to enrich nearly weapons-grade uranium in response to the Menendez-Kirk bill. "This kind of tit-for-tat spiral threatens to undermine any possibility of curtailing Iran's nuclear program," they write. "Should the U.S. Congress decide it must unilaterally seek to add even more burdens now on this

complicated and critical process, it is unlikely that the goals of our negotiations can be achieved," they write, warning that "our other negotiating partners (UK, France, Germany, Russia, and China) would be displeased and would conclude that the US is no longer proceeding in good faith in accord with the Joint Plan of Action. This bill could lead to an unraveling of the sanctions regime that the U.S. and its partners have so patiently built."

**(--)
The status quo is the best of both worlds—maintains the stick of sanctions while not empowering the hardliners in Iran:**

BRADLEY KLAPPER, 1/9/2014 (staff writer, "Obama, Congress Locked in Iran Sanctions Dispute," <http://abcnews.go.com/Politics/wireStory/obama-congress-locked-iran-sanctions-dispute-21471744?singlePage=true>, Accessed 1/22/2014, rwg)

TIMING: The Obama administration says the point of sanctions was to pressure Iran into negotiating limits on its nuclear program. Now that Iran is doing that, U.S. officials say fresh sanctions are pointless and perhaps counterproductive as the world tests Iran. Congress, they warn, is providing ammunition to Iranian hardliners who want to undermine Rouhani's more moderate approach. Billions of dollars in U.S. sanctions remain in force already. And if Iran cheats or diplomacy fails, more sanctions could always come then. "There is no need for new sanctions legislation, not yet," Obama said at his year-end news conference.

(--) Their sanctions good literature mis-reads the current political situation in Iran:

Colin H. Kahl, 12/31/2013 (former NDT finalist, associate professor in Georgetown University's Edmund A. Walsh School of Foreign Service, "The Danger of New Iran Sanctions,"

<http://nationalinterest.org/commentary/the-danger-new-iran-sanctions-9651>, Accessed 1/22/2014, rwg)

Sanctions hawks disagree, arguing that the legislation will enable, not thwart, diplomatic progress. "Current sanctions brought Iran to the negotiating table," Senator Robert Menendez, the bill's leading champion, contends, "and a credible threat of future sanctions will require Iran to cooperate and act in good faith at the negotiating table." But this logic badly misreads the historical effect of sanctions on Iranian behavior and under-appreciates the role played by Iran's fractious domestic politics. A careful look at Iranian actions over the past decade suggests that economic pressure has sometimes been effective, but only when it aligns with particular Iranian political dynamics and policy preferences. And once domestic Iranian politics are factored in, the lesson for today's sanctions debate is clear: the threat of additional sanctions, at this critical juncture, could derail negotiations toward a peaceful solution. In the fall of 2003, under Iran's reformist president Mohammad Khatami and his lead nuclear negotiator, national-security adviser Hassan Rouhani, the so-called E-3 (Britain, France, and Germany) persuaded Tehran to voluntarily suspend its uranium enrichment activities. Iran also agreed to implement the Nuclear Non-Proliferation Treaty Additional Protocol, allowing International Atomic Energy Agency (IAEA) inspectors more expansive access to Iranian nuclear facilities. According to the 2007 U.S. National Intelligence Estimate and a November 2011 IAEA report, the Iranian regime previously halted its organized effort to design a nuclear warhead. François Nicoullaud, the French ambassador to Iran during this period, suggested that Rouhani may have played a key role in convincing Supreme Leader Ayatollah Ali Khamenei to order the halt to Iran's weaponization work.

(--) New sanctions won't cause Iran to capitulate:

Alireza Nader, 1/23/2014 (senior international policy analyst at the nonprofit, nonpartisan RAND Corporation, "Why New Sanctions on Iran Won't Work," <http://nationalinterest.org/commentary/why-new-sanctions-iran-wont-work-9753>, Accessed 1/22/2014, rwg)

Supporters of more sanctions may assume that Iran is on its knees, and that only a bit more tightening of the screws could lead Khamenei and company to cry "uncle." And perhaps the Iranian regime would then agree to dismantle its entire program, the prosanctions crowd reasons. Some may also assume that added sanctions will change Iran's behavior – including its support of terrorist groups like Hezbollah – in tandem with resolving the nuclear issue. But while the Iranian regime is under great pressure, it is nowhere near collapse. Oil exports may be down and inflation up, but the economic system in Iran still functions, albeit poorly. And it was not just sanctions that damaged Iran's economy; former president Mahmoud Ahmadinejad's inept management was also to blame.

(-- More pressure/more concessions linkage is false:

Colin H. Kahl, 12/31/2013 (former NDT finalist, associate professor in Georgetown University's Edmund A. Walsh School of Foreign Service, "The Danger of New Iran Sanctions,"

<http://nationalinterest.org/commentary/the-danger-new-iran-sanctions-9651>, Accessed 1/22/2014, rwg)

Iran's behavior over the last decade clearly shows that there is no inevitable or linear causal relationship between applying "more pressure" and obtaining "more concessions," as many sanctions advocates claim. Sometimes, as was the case in the 2003-2005 period, the threat of sanctions motivated nuclear compromise; but at other times (2006 to mid-2013), the actual imposition of sanctions appeared to have the opposite effect. There is little doubt that the economic deprivations produced by crippling sanctions—worsened by profound mismanagement under Ahmadinejad—compounded popular dissatisfaction with the regime and played a role in Rouhani's recent election. And sanctions certainly influenced the Iranian regime's apparent willingness to move toward nuclear accommodation in Geneva. But there is also little doubt that had Jalili become president, as some Western analysts predicted, Tehran's nuclear intransigence would have continued despite the same level of economic hardship. History thus suggests that external economic pressure matters, but the balance of domestic political forces in Iran matters at least as much—and it is the interaction between the two that matters most of all. The Islamic Republic's authoritarian political system is not nearly as static or monolithic as many casual observers assume. Rather, it is an arena for contestation between competing political actors and interests—and the winners of these battles can have considerable influence over the ultimate course Iran takes. To be sure, Supreme Leader Khamenei is the most powerful actor in the Iranian government, and he is the ultimate decider on the nuclear issue. But he is not omnipotent or unmovable. More often than not, Khamenei stays above the political fray, waiting to weigh in on controversial decisions until he has assessed the domestic power balance and the direction the political winds are blowing.

(-- Evidence Filter: Their evidence is from neo-conservative hacks—trust the factual view of the Geneva accord:

Shemuel Meir, 12/22/2013 (associate researcher at the Jaffee Center, "An important year for Iran nuclear talks: What Israel got wrong,"

<http://972mag.com/the-nuclear-deal-with-iran-what-really-happened-in-geneva/84149/>, Accessed 1/22/2014, rwg)

The Prime Minister's Office (PMO) and the security establishment dictated the tone of the public discourse that followed. From the PMO's overreaction ("a bad deal") and the majority of editorial columns appearing in Israeli newspapers, it appeared that Iran would not even for a moment stop its race to a nuclear bomb, and that Israel has been abandoned. All the spins and the incorrect interpretations have obscured the facts of what really happened in Geneva. The Israeli discourse has seen an overwhelming use of metaphors – "Munich 1938" "existential threat", "the centrifuges keep spinning," "it is all tactics and Iran is dragging its feet" – rather than facts and the media has taken to using headlines from the field of nuclear strategy and technology unaccompanied by accurate explanations or contexts.

(-- New sanctions jeopardize any final deal with Iran:

Ben Armbruster, 1/6/2014 (staff writer, "Security Experts Ask Senators To Pull Back Iran Sanctions Bill," <http://thinkprogress.org/security/2014/01/06/3122551/crocker-experts-senate-iran-sanctions-bill/>, Accessed 1/22/2014, rwg)

The interim agreement reached between Iran, the U.S. and its international partners in Geneva last November significantly reined in Iran's nuclear program in exchange for modest sanctions relief (most polls show that Americans support this first step deal). But Obama administration officials and Iran experts believe that passing new sanctions on Iran now — even those with a delayed trigger as the Menendez-Kirk bill mandates — would violate the terms of Geneva's Joint Plan of Action, thus jeopardizing any final deal with Iran.

(-- Sanctions relief key to solving Iranian proliferation—sanctions alone are ineffective:

Laicie Heeley, 6/3/2013 (Center for Arms Control and Nonproliferation, "Are Sanctions on Iran Working?" http://armscontrolcenter.org/assets/pdfs/REPORT_-_Are_Sanctions_On_Iran_Working_-_June_3.pdf, Accessed 10/16/2013, rwg)

Iran has continued to defy international demands, but has exhibited some openness to a negotiated compromise that includes sanctions relief. Iran has not yet halted its nuclear program or agreed to a compromise, but there are some indications that it is becoming more open to doing so. Iranian officials have signaled that they could be willing to halt the most problematic parts of their nuclear development, but have emphasized that they require sanctions relief in exchange. For sanctions to be effective in bringing about this compromise, the path to sanctions relief must be much clearer, and the West must be willing to lift sanctions step by step. The sanctions on Iran are a complex, overlapping set of measures that will be difficult to lift in the timely, sequential way that a compromise would require. To date, a clear path forward for how sanctions will be lifted in exchange for certain concessions by Iran apparently has not been put forth. The complexity and inflexibility of the existing set of sanctions makes it difficult to credibly use the promise of sanctions relief as a bargaining tool when negotiating with Iran.

(--) Sanctions only empower the hardliners in Iran:

Laicie Heeley, 6/3/2013 (Center for Arms Control and Nonproliferation, "Are Sanctions on Iran Working?" http://armscontrolcenter.org/assets/pdfs/REPORT_-_Are_Sanctions_On_Iran_Working_-_June_3.pdf, Accessed 10/16/2013, rwg)

However, sanctions have had important unintended consequences, including empowering the existing regime, while weakening more moderate, pro-Western Iranians who could be allies of the United States in the future. Paradoxically, economic woes have allowed the government to take greater control over the economy, and to use patronage, favors, and other methods to shield regime allies from the pain of sanctions. On the other hand, those hit hardest by the sanctions seem to be precisely those who otherwise would support a more moderate government in Iran, and who look favorably on the U.S. Reducing the economic and political power that such groups wield is not in the U.S.' long-term interests as it looks to eventually pursue a normalized relationship with Iran.

(--) Iran shields itself from the effects of sanctions:

Laicie Heeley, 6/3/2013 (Center for Arms Control and Nonproliferation, "Are Sanctions on Iran Working?" http://armscontrolcenter.org/assets/pdfs/REPORT_-_Are_Sanctions_On_Iran_Working_-_June_3.pdf, Accessed 10/16/2013, rwg)

However, state controls allow the government to minimize sanctions' impact: To manage the fallout from rising prices, the state has implemented currency controls that shield its main political base from the effect of sanctions. The Iranian government has created a separate exchange rate for basic goods, in effect blunting the impact of the devalued rial for the lower classes, who are a key support base (see also "Political Impact," below)

(--) Iran sidesteps effective sanctions:

Laicie Heeley, 6/3/2013 (Center for Arms Control and Nonproliferation, "Are Sanctions on Iran Working?" http://armscontrolcenter.org/assets/pdfs/REPORT_-_Are_Sanctions_On_Iran_Working_-_June_3.pdf, Accessed 10/16/2013, rwg)

Sidestepping sanctions through third parties: Iran has been able to make up for some of its losses in oil revenue by selling through middlemen, using a paperless ('hawala') payment system, and relying on smuggling networks. 11 Other methods of "sidestepping" include blending various fuels to disguise the origin, and refocusing on fuel oil and other commodities to make up for decreased revenues from crude oil. 12 Over the years, Iran has used Dubai as a middleman through which to obtain American consumer goods, and has refocused on trade with Asia to adapt to sanctions.

(--) Current sanctions policy is ineffective against Iran:

Laicie Heeley, 6/3/2013 (Center for Arms Control and Nonproliferation, "Are Sanctions on Iran Working?" http://armscontrolcenter.org/assets/pdfs/REPORT_-_Are_Sanctions_On_Iran_Working_-_June_3.pdf, Accessed 10/16/2013, rwg)

There are two main reasons that an increased emphasis on sanctions could be impeding a negotiated solution. First, existing sanctions overlap with one another in complex ways, which means it will be difficult to start rolling them back, even if Iran does start to make the desired concessions. As a result, Iranians have started to doubt whether negotiating will result in the meaningful sanctions relief they want. 22 Second, and more importantly in the long term, many sanctions have been imposed on Iran for actions unrelated to nuclear proliferation, such as support for terrorist groups and human rights abuses. 23 This means that making concessions on its nuclear program is unlikely to help Iran get the full relief from sanctions it seeks. From Iran's perspective, there may be no useful alternative to waiting out the sanctions and continuing its nuclear development to increase its bargaining power. For sanctions to serve as a true tool of leverage, sanctioning nations need to be able to credibly promise that they will lift sanctions if they get what they want, which is a key weakness of current Iran policy. According to the International Crisis Group, under the current "Spider Web" of sanctions, the international community has given up the "nimbleness" it needs to make sanctions an effective tool at the negotiating table. 2

Impacts: Sanctions Undercut Diplomacy

(--) New sanctions undercut diplomacy:

DONNA CASSATA, 1/21/2014 (staff writer, "Dems signal willingness to wait on Iran sanctions," http://www.denverpost.com/breakingnews/ci_24957275/senate-dems-divided-over-new-iran-sanctions, Accessed 1/22/2014, rwg)

"I'm a strong supporter of the current sanctions and I'm very willing to vote for additional sanctions if negotiations falter, but right now we're in the midst of the first serious discussion with them in a very long time about ending their quest for nuclear weapons," Sen. Tim Kaine, D-Va., who chairs the Foreign Relations subcommittee on the Middle East. Sen. Bill Nelson, D-Fla., said Secretary of State John Kerry has told Congress that new sanctions would undercut the negotiations and added, "I believe the secretary of state." Not all Republicans are on board. Sen. Rand Paul, R-Ky., said he is still looking at the legislation.

(--) New sanctions would derail negotiations with Iran:

Jim Lobe, 12/27/2013 (staff writer, "Iran sanctions bill: Big test of Israel lobby power," <http://www.arabamericannews.com/news/index.php?mod=article&cat=World&article=8046>, Accessed 1/22/2014, rwg)

WASHINGTON - This week's introduction by a bipartisan group of 26 senators of a new sanctions bill against Iran could result in the biggest test of the political clout of the Israel lobby here in decades. The White House, which says the bill could well derail ongoing negotiations between Iran and the U.S. and five other powers over Tehran's nuclear program and destroy the international coalition behind the existing sanctions regime, has already warned that it will veto the bill if it passes Congress in its present form.

(--) New sanctions will sabotage existing negotiations:

Robert Merry, 12/31/2013 (staff writer, "MERRY: Obama may buck the Israel lobby on Iran,"

<http://www.washingtontimes.com/news/2013/dec/31/merry-obama-may-buck-the-israel-lobby-on-iran/>, Accessed 1/22/2014, rwg)

It is nearly impossible to avoid the conclusion that the Senate legislation is designed to sabotage Mr. Obama's delicate negotiations with Iran (with the involvement also of the five permanent members of the U.N. Security Council and Germany) over Iran's nuclear program. The aim is to get Iran to forswear any acquisition of nuclear weapons in exchange for the reduction or elimination of current sanctions. Iran insists it has a right to enrich uranium at very small amounts, for peaceful purposes, and Mr. Obama seems willing to accept that Iranian position in the interest of a comprehensive agreement.

(--) Sanctions bill will kill the deal:

Timothy Gardner, 1/6/2014 (staff writer, "Iran sanctions bill opposed by Obama gains Senate backers," <http://www.reuters.com/article/2014/01/06/us-usa-sanctions-iran-idUSBREA0516E20140106>, Accessed 1/22/2014, rwg)

The Obama administration has insisted the bill would damage delicate talks being held between Iran and world powers over the nuclear program, which Tehran says is for peaceful purposes. Iranian Foreign Minister Mohammad Zarif has said a new sanctions law would kill the interim agreement.

(--) Sanctions bill kills the Geneva deal:

Bob Egelko, 12/26/2013 (staff writer, "Feinstein, Boxer side with Obama in Iran sanctions dispute," <http://blog.sfgate.com/nov05election/2013/12/26/feinstein-boxer-side-with-obama-in-iran--dispute/>, Accessed 1/22/2014, rwg)

The bill would impose additional economic sanctions if Iran either fails to comply with the terms of the six-month agreement or, more significantly, refuses to dismantle its entire uranium enrichment program within a year. Another provision would require the United States to provide economic and military support if Israel was "compelled to take military action in legitimate self-defense" against what the bill describes as Iran's nuclear weapons program. The bipartisan measure has 26 cosponsors, led by Senate Foreign Relations Committee Chairman Robert Menedez, D-N.J., and Sen. Mark Kirk, R-Ill. Another cosponsor is the Senate's third-ranking Democrat, Chuck Schumer of New York. "A credible threat of future sanctions will require Iran to cooperate and act in good faith at the negotiating table," Menendez said in a statement. But Rouhani said the legislation, if passed, would be a deal-breaker, and Obama has promised to veto it if it reaches his desk. Last week, 10 Senate Democratic committee chairs sent a letter to Majority Leader Harry Reid, D-Nev., urging him to keep the bill from coming to a vote. The signers included Feinstein, chairwoman of the Intelligence Committee, Boxer, head of Environment and Public Works, and Sen. Tim Johnson of South Dakota, whose Banking Committee would normally hear the bill. The letter cited a recent U.S. intelligence assessment that concluded new sanctions "would undermine the prospects for a successful comprehensive nuclear agreement with Iran."

(--) New sanctions collapse negotiations

Gharib, 12/18/13 (Ali, The Cable – a Foreign Policy blog, "Exclusive: Top Senate Democrats Break with White House and Circulate New Iran Sanctions Bill" http://thecable.foreignpolicy.com/posts/2013/12/18/exclusive_top_senate_democrats_break_with_white_house_and_circulate_new_iran_sancti)

Critics of imposing new sanctions fear that the bill will violate either the spirit or the letter of the Joint Plan of Action signed in Geneva. The interim deal allows some flexibility, mandating that "the U.S. administration, acting consistent with the respective roles of the President and the Congress, will refrain from imposing new nuclear-related sanctions." Administration officials have mounted a so-far successful effort to stall new sanctions in the Senate. (The House overwhelmingly passed new sanctions in the summer.) Previous rumors of a bill in the Senate were said to contain a six-month delay that would prevent the legislation from taking effect while talks continued, but this iteration of the legislation doesn't contain that kind of fail-safe. Asked this month by Time what would happen if a bill, even with a delay, passed Congress, Iran's Foreign Minister Javad Zarif said, "The entire deal is dead."

"The law as written comes close to violating the letter [of the Geneva agreement] since the sanctions go into effect immediately unless the administration immediately waives them," said Colin Kahl, who stepped down in 2011* as the Pentagon's top Mideast policy official. "There is no question the legislation violates the spirit of the Geneva agreement and it would

undoubtedly be seen by the Iranians that way, giving ammunition to hard-liners and other spoilers looking to derail further progress."

Though a fact-sheet circulating with the new bill says it "does not violate the Joint Plan of Action," critics allege it would mark a defeat for the administration and the broader push for a diplomatic solution to the Iran crisis.

"It would kill the talks, invalidate the interim deal to freeze Iran's nuclear program, and pledge U.S. military and economic support for an Israel-led war on Iran," said Jamal Abdi, the policy director for the Washington-based National Iranian American Council, a group that supports diplomatic efforts to head off the Iranian nuclear crisis. "There is no better way to cut Iranian moderates down, empower hardliners who want to kill the talks, and ensure that this standoff ends with war instead of a deal."

The bill would in effect set up a direct confrontation with the White House, which is negotiating a final deal with Tehran that would allow for continued Iranian enrichment capabilities. According to the agreement, the comprehensive deal would "involve a mutually defined enrichment program" with strict curbs. In a forum this month at the Brookings Institution, Obama dismissed the possibility that Tehran would agree to a deal that eliminated Iran's entire nuclear program or its domestic enrichment capabilities.

"If we could create an option in which Iran eliminated every single nut and bolt of their nuclear program, and foreswore the possibility of ever having a nuclear program, and, for that matter, got rid of all its military capabilities, I would take it," Obama said. "That particular option is not available." Asked again about not allowing any Iranian enrichment, Obama quipped, to laughter from the audience, "One can envision an ideal world in which Iran said, 'We'll destroy every element and facility and you name it, it's all gone.' I can envision a world in which Congress passed every one of my bills that I put forward. I mean, there are a lot of things that I can envision that would be wonderful."

Alireza Nader, an Iran analyst at the RAND Corporation, agreed dismantling Iran's entire nuclear program would be "pretty unrealistic." He added such an aim would be moving "backward": "The Geneva agreement basically states that if Iran is more transparent regarding its nuclear program and intentions, then it can be met with sanctions relief. That's the goal: transparency."

Nader said that diplomacy required flexibility from both sides, something the legislation doesn't seem to contain. "When you have these kinds of bills, it shows that there are those in the U.S. who don't want to be flexible," he said.

(--) New sanctions would kill the deal and risk an Israeli war against Iran:

Ali Gharib, 12/18/2013 (a Foreign Policy blog, "Exclusive: Top Senate Democrats Break with White House and Circulate New Iran Sanctions Bill,"

<http://thecable.foreignpolicy.com/posts/2013/12/18/>

exclusive_top_senate_democrats_break_with_white_house_and_circulate_new_iran_sancti, Accessed 1/22/2014, rwg)

Though a fact-sheet circulating with the new bill says it "does not violate the Joint Plan of Action," critics allege it would mark a defeat for the administration and the broader push for a diplomatic solution to the Iran crisis. "It would kill the talks, invalidate the interim deal to freeze Iran's nuclear program, and pledge U.S. military and economic support for an Israel-led war on Iran," said Jamal Abdi, the policy director for the Washington-based National Iranian American Council, a group that supports diplomatic efforts to head off the Iranian nuclear crisis. "There is no better way to cut Iranian moderates down, empower hardliners who want to kill the talks, and ensure that this standoff ends with war instead of a deal." The bill would in effect set up a direct confrontation with the White House, which is negotiating a final deal with Tehran that would allow for continued Iranian enrichment capabilities. According to the agreement, the comprehensive deal would "involve a mutually defined enrichment program" with strict curbs. In a forum this month at the Brookings Institution, Obama dismissed the possibility that Tehran would agree to a deal that eliminated Iran's entire nuclear program or its domestic enrichment capabilities.

Impacts: Sanctions Empower Hardliners

(--) New sanctions legislation collapses Iranian hardline support for the deal— collapsing the agreement:

Robert Merry, 12/31/2013 (staff writer, “MERRY: Obama may buck the Israel lobby on Iran,”

<http://www.washingtontimes.com/news/2013/dec/31/merry-obama-may-buck-the-israel-lobby-on-iran/>, Accessed 1/22/2014, rwg)

However, the Senate measure, sponsored by Sens. Robert Menendez, New Jersey Democrat; Charles E. Schumer, New York Democrat; and Mark Kirk, Illinois Republican, would impose potent new sanctions if the final agreement accords Iran the right of peaceful enrichment. That probably would destroy Mr. Obama’s ability to reach an agreement. Iranian President Hasan Rouhani already is under pressure from his country’s hard-liners to abandon his own willingness to seek a deal. The Menendez-Schumer-Kirk measure would undercut him and put the hard-liners back in control.

(--) New sanctions will undermine Rouhani:

Ben Armbruster, 2/18/2014 (staff writer, “Bipartisan Expert Group Says New Iran Sanctions Will Undermine Diplomacy,”

<http://thinkprogress.org/world/2014/02/18/3300741/iran-project-sanctions-diplomacy/#>, Accessed 2/21/2014, rwg)

Many, like Sen. Patrick Murphy (D-CT), have argued that placing new sanctions on Iran will undermine relative moderate Iranian President Hassan Rouhani, who supports a diplomatic approach with the U.S. The Iran Project agrees. “It is very difficult to imagine that the sanctions bill would do anything but undermine Rouhani, as he attempts to steer Iran on a different path. This is an assessment shared not only by Iran experts, and Iranian expats who have opposed the regime, but also by Israeli military intelligence, which has concluded that Rouhani may represent a fundamental shift in Iranian politics.”¶ “[I]t is difficult to escape the conclusion that a new sanctions bill would increase the probability of war, even if it does not guarantee such an outcome,” the report says.

(--) New sanctions only empower the hardliners against Rouhani:

Colin H. Kahl, 12/31/2013 (former NDT finalist, associate professor in Georgetown University’s Edmund A. Walsh School of Foreign Service, “The Danger of New Iran Sanctions,”

<http://nationalinterest.org/commentary/the-danger-new-iran-sanctions-9651>, Accessed 1/22/2014, rwg)

What does all this mean for the current debate in the Senate over new Iran sanctions? It means that any member of Congress truly committed to a diplomatic outcome should recognize America’s acute interest to ensuring that Iranian moderates maintain their fragile momentum within Iran’s political system. The Revolutionary Guard and other hardliners are already fighting

a rearguard action against the Geneva agreement, with a war of words breaking out in recent weeks between Zarif and the Guards' top commander, Major General Mohammad Jafari, over the course of Iran's nuclear and foreign policy. These same forces would undoubtedly seize on Congressional legislation threatening new sanctions and demanding de facto nuclear surrender as the latest example of American perfidy, using it to rebut Rouhani's claim that an accommodation with the West that protects core Iranian interests is possible. Hardliners have consistently argued that Iranian compromise is just a prelude to greater U.S. pressure. Khamenei suspects this too. Threatening new sanctions in the immediate aftermath of the first meaningful Iranian concessions in a decade, as the proposed Senate legislation does, risks validating that view.

(-- New sanctions only undermine Rohani:

Alireza Nader, 1/23/2014 (senior international policy analyst at the nonprofit, nonpartisan RAND Corporation, "Why New Sanctions on Iran Won't Work," <http://nationalinterest.org/commentary/why-new-sanctions-iran-wont-work-9753>, Accessed 1/22/2014, rwg)

The U.S. Senate is considering new sanctions against Iran, despite the Geneva agreement between Tehran and the P5+1 (United States, UK, France, Russia, China, and Germany) that started on Jan. 20. For the first time in a decade, Iran has agreed to freeze its nuclear program, and take important steps to constrain its ability to create nuclear weapons, such as eliminating or converting its stockpile of 20 percent enriched uranium. The new sanctions bill under consideration by the U.S. Senate, which calls for a deal that will "dismantle Iran's illicit nuclear program," appears to have strong support. Indeed, the measure's backers believe sanctions brought the Iranian negotiators to the table and produced the current U.S. success in Geneva. This is only partially correct. Sanctions did play a role in facilitating the Geneva agreement, but the election of Hassan Rouhani as Iran's president was also a key factor. And as Rouhani seeks to resolve Iran's nuclear confrontation with the world, new sanctions can only upset the delicate balance he is seeking to establish and maintain at home.

(-- Imposition of new sanctions undermines Rouhani's approach to Khamenei:

Alireza Nader, 1/23/2014 (senior international policy analyst at the nonprofit, nonpartisan RAND Corporation, "Why New Sanctions on Iran Won't Work," <http://nationalinterest.org/commentary/why-new-sanctions-iran-wont-work-9753>, Accessed 1/22/2014, rwg)

Rouhani's diplomatic track has earned the support of more powerful figures such as Supreme Leader Ayatollah Ali Khamenei because it has the potential to produce positive results for the regime, especially the lifting of sanctions. But the imposition of sanctions after the Geneva deal only demonstrates to Khamenei, and also possibly Rouhani, that Iranian concessions will be met with more pressure. It is then logical for the Iranian regime to become less flexible, especially if there is no release valve for this new pressure.

(--) Key Iranian political figures support the current deal:

Jason Rezaian, 1/20/2014 (staff writer, "U.S., Europe lift some Iran sanctions under nuclear deal," http://www.washingtonpost.com/world/middle_east/iran-says-it-has-halted-most-sensitive-uranium-enrichment-program/2014/01/20/6c078bd6-81d7-11e3-a273-6ffd9cf9f4ba_story.html, Accessed 1/22/2014, rwg)

Despite the intensified conservative backlash, the agreement is supported by many key Iranian political figures, as well as many ordinary Iranians who hope that an easing of sanctions will ease economic woes that have reached deep into the Iranian middle class.

(--) Sanctions embolden hardliners and kill the deal:

SEN. CARL LEVIN and SEN. BARBARA BOXER, 12/18/2013 ("Now's No Time for New Iran ,"

<http://www.politico.com/magazine/story/2013/12/nows-no-time-for-new-iran-sanctions-101303.html>, Accessed 1/22/2014, rwg)

Media reports have suggested that Congress intends to pass legislation soon that would impose additional sanctions on Iran. That would run the risk of derailing efforts toward a peaceful resolution, and risk the unity we have achieved with the world community that has been so crucial to our progress to date. Fortunately, many in Congress, us included, believe that we must test this window of opportunity, to see whether Iran's new President Hassan Rouhani can deliver on the promise of a comprehensive solution that closes Iran's path to a nuclear weapon. As staunch supporters of Israel, we understand the dire risk to our Israeli allies should Iran cross the nuclear threshold. If Iran does not follow through on this opening or if in the end the regime is not willing to rejoin the community of nations, then we should impose even more crippling sanctions, and make clear that all potential options, including the use of military force, remain available. But we shouldn't pass legislation now that would endanger negotiations that most people and countries want to succeed. Such congressional action now could bolster the efforts of Iran's militants to kill the deal.

(--) New sanctions only empower the hardliners & risk war:

Alireza Nader, 11/5/2013 (senior international policy analyst at the nonprofit, nonpartisan RAND Corporation, "Pause on additional Iran sanctions crucial to negotiations," <http://thehill.com/opinion/op-ed/189371-pause-on-additional-iran-sanctions-crucial-to-negotiations>, Accessed 1/22/2014, rwg)

Rouhani's election and, more importantly, Iran's dire economic condition are the reasons for Tehran's new approach. Some have taken this to mean that more sanctions are needed. However, just because Tehran is seeking to ease the pressure brought on by the sanctions that exist today does not mean that it will yield to new sanctions tomorrow. Rouhani has a limited mandate to solve the nuclear crisis and lift sanctions. However, more radical elements of the Iranian political system, marginalized for now, are waiting for him to fail. They believe that the American government is either duplicitous or will be unable to deliver a deal. New sanctions would confirm their view and further their goals of ending negotiations and sidelining Rouhani. New sanctions passed before a true test of Iran's intentions could result in a bleak future: a risky

and costly war with Iran with no guarantee of success, or the acceptance of an increasingly embittered, isolated, repressive and nuclear capable Islamic Republic.

(--) Rouhani has a window of opportunity against hard-line adversaries now:

Michael Martinez, 9/20/2013 (staff writer, "Iran's president begins 'charm offensive,' but will Obama buy it?" <http://www.cnn.com/2013/09/20/world/us-iran-relations/>, Accessed 10/16/2013, rwg)

Earnest did acknowledge how Rouhani now enjoys a window of opportunity against his hard-line adversaries at home, but Iran must "demonstrate their seriousness of purpose" and show "their nuclear program is for exclusively peaceful means."

Impacts: Can Trust Rouhani

(--) Rouhani is a pragmatist and will back down:

Dalia Dassa Kaye, 12/18/2014 (director of the Center for Middle East Public Policy and a senior political scientist at the nonprofit, nonpartisan RAND Corporation, "Back to the Basics," <http://www.usnews.com/opinion/blogs/world-report/2014/12/18/an-iran-nuclear-deal-is-still-possible-and-heres-why>, Accessed 1/2/2015, rwg)

1) Why did the Iranians come to the table? The Iranians didn't come to the negotiating table because they are anxious to give up the possibility of becoming a nuclear power. In fact, polling shows the majority of Iranians support Iran's right to nuclear energy and large numbers support an effort to obtain nuclear weapons. But **what's changed is that a new Iranian leadership came to power with the election of President Hassan Rouhani in June 2013, and they think Iran is paying too high a price for its nuclear program.** Rouhani is certainly no moderate – unabated repression continues since the brutal crackdown of the opposition Green movement in 2009. But **Rouhani and his key advisers appear to be pragmatic. They understand that the economic sanctions Iran has endured because of its nuclear pursuits threaten the stability of the Islamic Republic itself.**

(--) Rouhani has the backing of Khamenei on the nuclear negotiations:

Dalia Dassa Kaye, 12/18/2014 (director of the Center for Middle East Public Policy and a senior political scientist at the nonprofit, nonpartisan RAND Corporation, "Back to the Basics," <http://www.usnews.com/opinion/blogs/world-report/2014/12/18/an-iran-nuclear-deal-is-still-possible-and-heres-why>, Accessed 1/2/2015, rwg)

Rouhani is not the ultimate decision-maker in Iran; that honor goes to the country's supreme leader, Ayatollah Ali Khamenei. But it appears **Rouhani has had the backing of the supreme leader in the nuclear negotiations. And like Rouhani, Khamenei is almost certainly concerned about the domestic pressures building in Iran, especially from the country's majority youth population.** Iran's leaders may be failing their people in a variety of ways, but **one skill they have perfected is survival, and a nuclear deal is now looking like a good way to bolster support at home by offering the hope of economic relief.**

(--) Rouhani's victory represents sweeping change in Iran:

Shemuel Meir, 12/22/2013 (associate researcher at the Jaffee Center, "An important year for Iran nuclear talks: What Israel got wrong,"

<http://972mag.com/the-nuclear-deal-with-iran-what-really-happened-in-geneva/84149/>, Accessed 1/22/2014, rwg)

At Saban Forum, President Obama tried to signal (with admirable tact) to Israeli leaders that the prevalent concept according to which “there is nothing new in Iran” should be reexamined. That the importance of the political change in Iran should not be underestimated. President Rouhani’s sweeping electoral victory reflects a change of direction in Iran. An understanding of the global reality of the NPT regime (no to nuclear weapons, yes to civil nuclear programs) and the reality of the new Iran – these explain what happened in Geneva. The explanation is not to be found in an imagined US. naiveté. President Shimon Peres, who recently said in public that Iran is not an enemy state, seems to share President Obama’s assessment.

(--) Rouhani is trustworthy:

Mark Leonard, 10/15/2013 (staff writer, “On Iran, Obama’s bigger challenge is with his allies,” <http://blogs.reuters.com/mark-leonard/2013/10/15/on-iran-obamas-bigger-challenge-is-with-his-allies/>, Accessed 10/16/2013, rwg)

Rouhani’s stated goals seem straightforward: reversing the crippling sanctions in Iran to improve the economic situation and elevating his country’s international standing. Javier Solana — Europe’s former top diplomat who opened nuclear talks with Rouhani when Rouhani was Iran’s chief nuclear negotiator — told me that Rouhani “is a rational person who you can do business with.” Since coming to power, Rouhani has taken steps to change the mood. He appointed the intelligent and western-friendly Mohammad Javad Zarif to the foreign ministry, wresting control of the nuclear dossier from the country’s Supreme National Security Council and handing it to Zarif’s foreign ministry. Most intriguingly, he appointed Ali Shamkhani, an Iranian war hero of Arab origin, to be head of the Security Council.

(--) The best gamble is to believe Rouhani:

David Rohde, 9/19/2013 (staff writer, “Iran’s offer is genuine — and fleeting,” <http://www.reuters.com/article/2013/09/19/us-irans-offer-idUSBRE98I18B20130919>, Accessed 10/16/2013, rwg)

The best bet is to gamble that Rouhani is what he says — a moderate trying to outflank his country’s conservatives. Not rewarding the bold public steps he has taken will undermine Rouhani’s fleeting authority in Iran.¶ If there is a lesson from Afghanistan and Iraq, it is that U.S. military force allows nationalists to blame foreigners for trying to change their nation. Conservatives in Iran will use an American military action to bolster their own standing and discredit moderates.¶ In the long-term, it is far more effective to have an Iranian moderate battle an Iranian hardliner than an American soldier. In the end, it is Iranians who will discredit their nation’s theocracy, not foreigners.

Impacts: AT: Khamenei, not Rouhani, is in charge

(--) Iran's leadership will let Rouhani roll back the nuclear program:

Colin H. Kahl, 12/31/2013 (former NDT finalist, associate professor in Georgetown University's Edmund A. Walsh School of Foreign Service, "The Danger of New Iran Sanctions,"

<http://nationalinterest.org/commentary/the-danger-new-iran-sanctions-9651>, Accessed 1/22/2014, rwg)

In this clash of perspectives, Khamenei appears closer to the hardliners' camp. But Khamenei is also concerned about the legitimacy and survival of the system as a whole, which was badly damaged by the rigged 2009 elections and the mishandling of foreign and economic policy during Ahmadinejad's tenure. Rouhani's sweeping election victory thus mattered not only because of the new president's own preferences, but because the election itself signaled to Khamenei that some policy shift was required in order to maintain domestic legitimacy. Anxious to shore up the system, Khamenei appears willing to give Rouhani a chance to resolve the nuclear impasse, but only so long as the president and his negotiating team do not cross the leader's red lines, especially as it relates to defending Iran's asserted right to enrichment. If Rouhani can maintain sufficient elite consensus, Khamenei may ultimately agree to meaningfully roll back Iran's program as an act of "heroic flexibility" to relieve the economic pressure created by sanctions. But he will not support total capitulation. Given the significant financial investment—estimated to be at least \$100 billion—and political capital the regime has expended to master uranium enrichment, the supreme leader will not agree to completely dismantle Iran's program as many in Congress demand. Indeed, Khamenei probably fears such a humiliation more than he fears economic collapse or targeted military strikes against his nuclear facilities. If Khamenei senses Rouhani and Zarif are headed in that direction, he will likely pull the rug out from under continued negotiations, regardless of U.S. threats to escalate the pressure further. And cognizant of this fact, Iranian hardliners will seize on any sign that Rouhani is being suckered by the West to try to sway the leader's decision.

Impacts: Deal Solves

(--) First steps toward comprehensive deal are happening now:

Paul Richter, 1/20/2014 (staff writer, "Iran halts part of uranium enrichment efforts; West loosens sanctions," <http://www.latimes.com/world/la-fg-iran-nuclear-20140121,0,1256493.story>, Accessed 1/22/2014, rwg)

TEHRAN — Iran suspended part of its uranium enrichment efforts Monday and the U.S. and European Union began loosening some economic sanctions, the first concrete steps toward a comprehensive deal to end the long confrontation over Tehran's nuclear ambitions.

(--) Deal allows the opportunity to reach a diplomatic solution over Iran sanctions:

Paul Richter, 1/20/2014 (staff writer, "Iran halts part of uranium enrichment efforts; West loosens sanctions," <http://www.latimes.com/world/la-fg-iran-nuclear-20140121,0,1256493.story>, Accessed 1/22/2014, rwg)

U.S. officials hailed the start of the deal, saying it offered an opportunity to reach a diplomatic solution to the long impasse with Iran over the nuclear program. At the same time, they stressed that the administration was approaching the upcoming negotiations on a long-term deal with "eyes open." Critics, including Israel, say Iran is using the talks to buy time and loosen international sanctions.

Impacts: Sanctions Kill Unity

(--) New sanctions destroy unity against Iran:

Ben Armbruster, 1/6/2014 (staff writer, "Security Experts Ask Senators To Pull Back Iran Sanctions Bill," <http://thinkprogress.org/security/2014/01/06/3122551/crocker-experts-senate-iran-sanctions-bill/>, Accessed 1/22/2014, rwg)

The White House has been lobbying Congress against passing new sanctions. Secretary of State John Kerry told a House Panel last month that it would be "gratuitous in the context of this situation." "If we appear to be going off on our own tangent and do whatever we want we will potentially lose their support for the sanctions themselves because we don't just enforce them by ourselves, we need their help," Kerry said, referring the U.K, France, China, Russia and Germany. "I don't want to threaten the unity that we currently have with respect to this approach particularly when it doesn't cost us a thing to go through this process knowing that we could put sanctions in place additionally in a week and we would be there with you seeking to do it. I don't want to give the Iranians public excuse to flout the agreement."

(--) New round of sanctions will undermine international unity against Iran:

Ken Thomas, 10/17/2013 (staff writer, "Defying Obama, Senators urge tougher Iran sanctions," <http://www.timesofisrael.com/defying-obama-senators-urge-tougher-iran-sanctions/>, Accessed 10/16/2013, rwg)

And the Obama administration is worried countries may ignore sanctions they deem excessive, undercutting international unity against Iran. Officials also have expressed concern that moving too quickly with additional sanctions packages also could undermine Rouhani with hardliners in his own country and not give him adequate chance to prove his seriousness in the nuclear talks.

Impacts: AT: North Korea Proves Softline Fails

(--) Iran situation is radically distinct from North Korea:

Shemuel Meir, 12/22/2013 (associate researcher at the Jaffee Center, "An important year for Iran nuclear talks: What Israel got wrong,"

<http://972mag.com/the-nuclear-deal-with-iran-what-really-happened-in-geneva/84149/>, Accessed 1/22/2014, rwg)

The second point explicitly emphasized by President Obama in his speech at the Saban Forum was that the North Korean model was not applicable to Iran and that there is no room for comparison between the two cases. President Obama emphasized the fact (based on intelligence material) that when the U.S. entered into negotiations with North Korea – the latter already had fissile material for nuclear weapons. North Korea had never been a full member of the NPT. It entered the treaty in an irregular and late manner, withdrew in 2003 and carried out its first nuclear explosion in 2006. The huge difference between Iran and North Korea can be found on the declarative level: North Korea according to its constitution is "a state armed with nuclear weapons" while Iran is an NPT country which, in the Geneva Agreement, has reaffirmed that it will not develop nuclear weapons. President Obama thus put an end to the North Korea spin

Impacts: AT: Terrorism Turn/Sanctions Stop Iran Support of Terrorists

(--) Iran won't abandon Hezbollah even under new sanctions pressure:

Alireza Nader, 1/23/2014 (senior international policy analyst at the nonprofit, nonpartisan RAND Corporation, "Why New Sanctions on Iran Won't Work," <http://nationalinterest.org/commentary/why-new-sanctions-iran-wont-work-9753>, Accessed 1/22/2014, rwg)

But Khamenei is not likely to grant Iranians more freedom because he feels economic pressure. And he is not going to abandon Hezbollah, which is a pillar of Iranian power in the Middle East. For the regime, political liberalization and abandoning Hezbollah are just as bad as more sanctions, if not worse. Positive change in Iran will take time, and that change will flow from the Iranian people, and perhaps some of their leaders. Endlessly punishing the regime without a workable strategy may make for good politics at home, but it is not likely to achieve America's long-term objectives.

(--) Geneva offers a better chance to solve the terrorism issue than new sanctions:

Alireza Nader, 1/23/2014 (senior international policy analyst at the nonprofit, nonpartisan RAND Corporation, "Why New Sanctions on Iran Won't Work," <http://nationalinterest.org/commentary/why-new-sanctions-iran-wont-work-9753>, Accessed 1/22/2014, rwg)

Geneva provides a good framework to resolve the Iranian nuclear challenge. And it will buy the United States time to address Iran's human-rights abuses and its support for terrorism. But these objectives are best addressed one at a time. Sanctions may have had an important effect on negotiations, but it is U.S. diplomacy that will ultimately win the day.

Impacts: Turn Case Modules

Impacts: Cartels

Continued sanctions spur Hezbollah-cartel cooperation—bigger internal link

Trumpet 13—official website of the Philadelphia Trumpet news magazine (“Sanctions on Iran Bringing Terror Closer to the U.S.”,

<http://www.thetrumpet.com/article/10246.19.0.0/sanctions-on-iran-bringing-terror-closer-to-the-us, dml>)

Curtailed funding from embargoed Iran to its terrorist proxies may be causing Hezbollah to partner with Mexican drug cartels to raise funds for potential attacks in the United States.

The economic sanctions that have been slapped on Iran for its nuclear weapons program have caused Tehran to cut back its funding to Hezbollah, according to the Israeli military. U.S. officials say Hezbollah operatives in Mexico are enhancing their cooperation with murderous drug cartels, like Los Zetas, in the northern districts bordering the U.S. in order to minimize dependency on Iranian funding.

In an article titled “Hezbollah’s Cocaine Jihad,” Ynetnews writes:

Western intelligence agencies have been able to gather ample evidence suggesting that the drug cartels in Mexico—which are the de facto rulers of the northern districts bordering the U.S.—are in cahoots with Islamic terror organizations, which are eager to execute attacks against American, Israeli, Jewish and western targets; but most of all, the Islamic terror groups are eager to make money, so they can fund their nefarious aspirations.

Hezbollah is helping the cartels in weapons and explosives production. The terror entity is also training drug lords to build elaborate tunnels under the U.S.-Mexico border, much akin to the maze of tunnels running under the Gaza-Egypt border. These tunnels would be mutually beneficial to both syndicates. The cartels would use them to smuggle humans, drugs and weapons, and Hezbollah would use them for its own terrorist activities in the United States. In 2009, the Department of Homeland Security caught wind of an al Qaeda recruiter’s boasts of the ease with which these tunnels could be used to bring terror to the U.S. on a scale that would “make 9/11 look like peanuts.”

Impacts: Economy

(-- Deal key to the global economy:

Dr. Nasser H. Saidi, 1/3/2014 (advisor to central banks, "Why Détente With Iran Is a Historic Game Changer," http://www.huffingtonpost.com/dr-nasser-h-saidi/us-detente-with-iran-game-changer_b_4476864.html, Accessed 1/22/2014, rwg)

A \$1.3 trillion investment opportunity in Iraq and Iran As a result of more than two decades of sanctions, Iran has not had access to modern technology and investment, and achieved lower overall levels of investment. With détente Iran will need to catch up and raise investment by up to 15 percent to 20 percent of GDP (or about US\$60 to US\$80 billion) for at least 10 years. Hence, as a conservative estimate, Iran will be opening investment opportunities of some \$600 to \$800 billion over the coming decade ranging from core infrastructure, agriculture, oil and gas, industry and housing among other. Next door, Iraq's reconstruction will require investment of the order of \$700 billion. Détente with Iran and resulting stabilization in Iraq would mean infrastructure and reconstruction expenditures of some \$1.3 trillion, a major boon and boost to the region's economies and for the global economy.

(-- Nuclear Iran destroys the world economy:

Jewish Voice, 2/18/2015 ("Sen. Schumer to Vote for New Iran Sanctions if No Agreement Signed by March 24th,"

http://jewishvoicenyc.com/index.php?option=com_content&view=article&id=10162:sen-schumer-to-vote-for-new-iran-sanctions-if-no-agreement-signed-by-march-24th&catid=110:national&Itemid=293, Accessed 2/19/2015, rwg)

He added, "A nuclear Iran could send weapons to Saudi oil fields, destroying them and sending the world economy into chaos, and could poison our atmosphere. A nuclear Iran would further destabilize an already-volatile region, and fuel more aggressive support of Iranian-backed terror organizations. To those who say Iran is not going to use a weapon, I say: if there is only a 10 percent chance Iran uses a nuclear weapon, it is vital we prevent it."

(-- War against Iran devastates the world economy:

Jon Perr, 12/24/2013 (B.A. in Political Science from Rutgers University, "Senate sanctions bill could let Israel take U.S. to war against Iran," <http://www.dailykos.com/story/2013/12/24/1265184/-Senate-sanctions-bill-could-let-Israel-take-U-S-to-war-against-Iran#>, Accessed 1/22/2014, rwg)

The Pentagon's 2012 war-gaming in a simulation called "Internal Look" served to reinforce for U.S. military officials "the unpredictable and uncontrollable nature of a strike by Israel, and a counterstrike by Iran." As for the impact on the global economy, in November, the Federation of American Scientists estimated that a U.S. campaign of air strikes would cost \$700 billion; a full-scale invasion could have a total impact of \$1.7 trillion.

(-- Middle East war derails economy:

David Rohde, 9/19/2013 (staff writer, "Iran's offer is genuine — and fleeting," <http://www.reuters.com/article/2013/09/19/us-irans-offer-idUSBRE98I18B20130919>, Accessed 10/16/2013, rwg)

For both Obama and Rouhani, the stakes are enormous. They face an increasingly chaotic Middle East. The war in Syria is metastasizing into a regional Sunni-Shia clash. Western sanctions have left Iran's economy's in ruins. And a Middle East conflagration could derail a tepid American economic recovery.

Impacts: EU Relations

(--) Nuclear deal with Iran bolsters US-EU relations:

Raf Sanchez, 12/29/2014 (staff writer,

<http://www.telegraph.co.uk/news/worldnews/middleeast/iran/11316496/Barack-Obama-Iran-could-be-a-successful-regional-power-if-it-agrees-to-a-nuclear-deal.html>, Accessed 1/2/2015, rwg)

A breakthrough that eventually leads to restored relations between the US and Iran would be generally welcomed in Europe. Britain announced in June that it was re-opening its embassy in Tehran.

Impacts: Hegemony

(--) New sanctions crush US hegemony & lead to a war with Iran:

David W. Kearns, 1/19/2014 (Assistant Professor, St. John's University, "The Folly of New Iran Sanctions," http://www.huffingtonpost.com/david-w-kearn/the-folly-of-new-iran-san_b_4619522.html, Accessed 1/22/2014, rwg)

While the momentum seems to have stalled, the movement in the United States Senate this week to pass a bill raising new sanctions on Iran threatened to undermine the negotiations for a long-term, comprehensive solution to the nuclear issue, just as the interim agreement negotiated in Geneva is planned to go into effect. What was particularly unusual was the bipartisan nature of the support for a bill. Led by Senate Foreign Relations Committee Chairman Robert Menendez (D-NJ), as many as sixteen Democratic Senators had cosponsored the bill, moving it close to a 60-vote "filibuster proof" margin, which (after likely passage in the House) would force a veto by President Obama. The timing of the legislation is curious because of the delicate nature of the negotiations and the ongoing diplomacy between the United States and its partners and Iran. Hardliners on all sides are skeptical of any deals, but unlike past negotiations, the stakes this time seem much higher. Well-meaning intentions aside, any legislation that precipitates an Iranian walkout and a collapse of the negotiations will likely be viewed by friends and adversaries alike as a major failure by the United States. However, unlike past instances, the probability of war has significantly increased.

(--) New sanctions turn credibility & hegemony:

Alireza Nader, 11/5/2013 (senior international policy analyst at the nonprofit, nonpartisan RAND Corporation, "Pause on additional Iran sanctions crucial to negotiations," <http://thehill.com/opinion/op-ed/189371-pause-on-additional-iran-sanctions-crucial-to-negotiations>, Accessed 1/22/2014, rwg)

New sanctions under consideration by Congress could lead to a weakening of the overall U.S. position. First, Rouhani could lose his mandate to continue negotiations. Second, Iran could begin to undermine the international coalition that has created the harshest peacetime sanctions in history. Rouhani, weakened at home but still respected abroad, could persuade major Iranian oil buyers such as China, India, Japan and even European that Iran attempted to negotiate in good faith but was rebuffed by the United States. Third, Iran could successfully cause a split between the group. China and Russia might believe that Congress wants regime change in Iran instead of a diplomatic solution. Germany, which has close business ties with Iran, could become unhappy about its economic sacrifices. And even the U.K. and France could begin to doubt U.S. intentions. Congress deserves credit for pressuring the Iranian regime, but it should pause the march toward new sanctions to give the negotiations a chance. Current sanctions against Iran are effective, and new sanctions can always be imposed if Iran does not budge. A smart approach toward Iran does not only entail creating pressure but using it correctly, and for the right goals.

(--) New sanctions only undermine US credibility:

Alireza Nader, 1/23/2014 (senior international policy analyst at the nonprofit, nonpartisan RAND Corporation, "Why New Sanctions on Iran Won't Work," <http://nationalinterest.org/commentary/why-new-sanctions-iran-wont-work-9753>, Accessed 1/22/2014, rwg)

The imposition of new sanctions will only make the job of American negotiators more difficult, and perhaps even damage U.S. credibility among the other P5+1 members. The United States, and not Iran, could be viewed as the more intransigent party, winning Tehran more sympathy from Russia and China, which are both itching for sanctions to end. The rest of the world is watching the nuclear drama carefully, and not only the actions of Iran, but also those of the world's remaining superpower. China and Russia signed on to sanctions in order to resolve the nuclear issue peacefully. They do not like the idea of sanctions being used to influence the foreign policies of "rogue" states opposed to U.S. ambitions and to punish authoritarian regimes similar to their own. Iran and Russia are on the same side in Syria, and may become even closer now that Rouhani is president (Ahmadinejad was too openly critical of Moscow). New U.S. sanctions could actually bolster Iran's standing among other world powers such as Russia. After all, Rouhani can claim, with justification, that he engaged the United States in good faith, but was only met with more punishment. Iran may then have an easier time convincing other countries that the time has come to loosen the sanctions regime.

(--) Iran nuclearization kills U.S. hegemony and credibility

Daremlum 2011

Jaime, Hudson Institute Senior Fellow and directs the Center for Latin American Studies, Iran Dangerous Now, Imagine It Nuclear, http://www.hudson.org/index.cfm?fuseaction=publication_details&id=8439

What would it mean if such a regime went nuclear? Let's assume, for the sake of argument, that a nuclear-armed Iran would never use its atomic weapons or give them to terrorists. Even under that optimistic scenario, Tehran's acquisition of nukes would make the world an infinitely more dangerous place. For one thing, it would surely spark a wave of proliferation throughout the Greater Middle East, with the likes of Turkey, Egypt, and Saudi Arabia - all Sunni-majority Muslim countries - going nuclear to counter the threat posed by Shiite Persian Iran. For another, it would gravely weaken the credibility of U.S. security guarantees. After all, Washington has repeatedly said that the Islamic Republic will not be permitted to get nukes. If Tehran demonstrated that these warnings were utterly hollow, rival governments and rogue regimes would conclude that America is a paper tiger. Once Tehran obtained nuclear weapons, it would have the ultimate trump card, the ultimate protection against outside attack. Feeling secure behind their nuclear shield, the Iranians would almost certainly increase their support for global terrorism and anti-American dictatorships. They would no longer have to fear a U.S. or Israeli military strike. Much like nuclear-armed North Korea today, Iran would be able to flout international law with virtual impunity. If America sought to curb Iranian misbehavior through economic sanctions, Tehran might well respond by flexing its muscles in the Strait of Hormuz. As political scientist Caitlin Talmadge explained in a 2008 analysis, "Iranian closure of the Strait of Hormuz tops the list of global energy security nightmares. Roughly 90 percent of all Persian Gulf

oil leaves the region on tankers that must pass through this narrow waterway opposite the Iranian coast, and land pipelines do not provide sufficient alternative export routes. Extended closure of the strait would remove roughly a quarter of the world's oil from the market, causing a supply shock of the type not seen since the glory days of OPEC." Think about that: **The world's leading state sponsor of terrorism has the ability to paralyze the global economy, and, if not stopped, it may soon have nuclear weapons.** As a nuclear-armed Iran steadily expanded its international terror network, the Western Hemisphere would likely witness a significant jump in terrorist activity. Tehran has established a strategic alliance with Venezuelan leader Hugo Chávez, and it has also developed warm relations with Chávez acolytes in Bolivia, Ecuador, and Nicaragua while pursuing new arrangements with Argentina as an additional beachhead in Latin America. Three years ago, the U.S. Treasury Department accused the Venezuelan government of "employing and providing safe harbor to Hezbollah facilitators and fundraisers." More recently, in July 2011, Peru's former military chief of staff, Gen. Francisco Contreras, told the Jerusalem Post that "Iranian organizations" are aiding and cooperating with other terrorist groups in South America. According to Israeli intelligence, the Islamic Republic has been getting uranium from both Venezuela and Bolivia. Remember: Tehran has engaged in this provocative behavior without nuclear weapons. Imagine how much more aggressive the Iranian dictatorship might be after crossing the nuclear Rubicon. It is an ideologically driven theocracy intent on spreading a radical Islamist revolution across the globe. As the Saudi plot demonstrates, no amount of conciliatory Western diplomacy can change the fundamental nature of a regime that is defined by anti-Western hatred and religious fanaticism.

Impacts: Laundry List of Countries

(--) Deal key to stabilize Iraq, Afghanistan, Pakistan, and Syria

Dr. Nasser H. Saidi, 1/3/2014 (advisor to central banks, "Why Détente With Iran Is a Historic Game Changer," http://www.huffingtonpost.com/dr-nasser-h-saidi/us-detente-with-iran-game-changer_b_4476864.html, Accessed 1/22/2014, rwg)

We are at a potential cusp, a transformational moment in the Gulf and the Middle East where détente with Iran could radically change the geopolitics and economics of the region. The opportunity should not be missed. Iran was headline news last month after the P5+1 (shorthand for U.S.) reached a deal whereby Iran agreed to curb some of its nuclear activities in return for a promised USD 7 billion in sanctions relief. In a deal agreed for a six-month timeframe and reflecting the current balance of power between the negotiating parties, Iran agreed to halt enrichment of uranium above 5 percent purity, neutralize its stockpile of uranium enriched to near 20 percent purity, stop building its stockpile of 3.5 percent enriched uranium, forswear "next generation centrifuges," shut down its plutonium reactor and allow extensive new inspections of its nuclear facilities. Concessions Iran "won" included suspension of international sanctions on Iran's exports of oil, gold and cars, which could yield USD 1.5 billion in revenue, unfreezing USD 4.2 billion in revenue from oil sales and releasing tuition-assistance payments from the Iranian government to Iranian students enrolled abroad. Following the announcement, Iran's official missions hogged the limelight as did the GCC Summit's leaders applauding Iran's "new direction," though its communiqué also voiced concern over Iran's plans to build more nuclear power plants on the Gulf, saying these "threaten the environmental system and water security." The issue is not the nuclear dossier but Iran's geo-strategic role. The current focus of negotiations is on Iran's nuclear capability and sanctions. It will take time and confidence-building measures to overcome suspicion, mistrust and three decades of deep freeze in relations. On both sides, hardliners and losers from détente (notably Israel and Saudi) will actively attempt to derail negotiations. However, the opportunity and overture offered by the election of Hassan Rouhani should not be missed. A new path must be chosen. The ultimate purpose and objective lies not in the nuclear dossier but in defining Iran's future geo-strategic role in the Gulf, Middle East and South East Asia. It is about Iran's active participation in healing long-standing open wounds, including the cancer of the Israeli-Palestinian impasse. Only a Pax Americana-Irania can lead to a stabilization of Iraq, Afghanistan and Pakistan, and prevent Syria from turning into a failed state with destabilizing spillovers into neighboring countries, notably weak Lebanon and Jordan. The Iran détente stakes are high. A large dividend from détente would result from reduced military expenditures, of "swords into plowshares" across the Middle East. In 2012, the Middle East countries spent more than USD 132 billion in military spending, the highest percentage of GDP in the world (with Saudi leading at 8.9 percent of GDP, Oman 8.4 percent and Israel 6.2 percent). Freeing up economically sterile military expenditure and re-orienting spending for investment in human capital, infrastructure, R&D, economic and social development projects and regional public goods would lead to much-needed job creation, increase productivity growth and raise real incomes for the young generations of a region that has witnessed too much violence, wars, death and destruction. A new path must be chosen.

Impacts: Middle East War

A) Détente with Iran solves Middle East conflict:

Dr. Nasser H. Saidi, 1/3/2014 (advisor to central banks, "Why Détente With Iran Is a Historic Game Changer," http://www.huffingtonpost.com/dr-nasser-h-saidi/us-detente-with-iran-game-changer_b_4476864.html, Accessed 1/22/2014, rwg)

A GCC6+1 is needed: A new path and a new vision **Détente with Iran would be a game changer leading to a deep transformation of the geo-strategic, political and economic geography of the Gulf and the Middle East. The stakes are high.** The GCC countries -- in this case led by the UAE -- should seize the opportunity to reap the economic and financial benefits from the opening of trade, investment, development and reconstruction opportunities. The creation of a "GCC6+1" framework could create an official platform for dialogue, consultation and open negotiations on a wide set of issues including security, economic and financial relations. **With the appropriate vision, the Gulf could become a zone of peace, stability and prosperity where the peoples of the region could fructify their vast human, energy, natural and financial resources. The alternative is increased militarization, tension and mistrust and growing risk of conflict.** It is clear which option is beneficial for our region.

B) Middle East war risks extinction

James Russell 2009 (James, Senior Lecturer in the Department of National Security Affairs – Naval Postgraduate School, "Strategic Stability Reconsidered: Prosepects for Nuclear War and Escalation in the Middle East," ifri.org/downloads/PP26_Russell_2009.pdf)

Strategic stability in the region is thus undermined by various factors: (1) asymmetric interests in the bargaining framework that can introduce unpredictable behavior from actors; (2) the presence of non-state actors that introduce unpredictability into relationships between the antagonists; (3) incompatible assumptions about the structure of the deterrent relationship that makes the bargaining framework strategically unstable; (4) perceptions by Israel and the United States that its window of opportunity for military action is closing, which could prompt a preventive attack; (5) the prospect that Iran's response to pre-emptive attacks could involve unconventional weapons, which could prompt escalation by Israel and/or the United States; (6) the lack of a communications framework to build trust and cooperation among framework participants. **These systemic weaknesses in the coercive bargaining framework all suggest that escalation by any the parties could happen either on purpose or as a result of miscalculation or the pressures of wartime circumstance. Given these factors, it is disturbingly easy to imagine scenarios under which a conflict could quickly escalate in which the regional antagonists would consider the use of chemical, biological, or nuclear weapons. It would be a mistake to believe the nuclear taboo can somehow magically keep nuclear weapons from being used in the context of an unstable strategic framework.** Systemic asymmetries between actors in fact suggest a certain increase in the probability of war – a war in which escalation could happen quickly and from a variety of participants. **Once such a war starts, events would likely develop a momentum all their own and decision-making would consequently be shaped in unpredictable ways. The international community must take this possibility seriously, and muster every tool at its disposal to prevent such an outcome, which would be an unprecedented disaster for the peoples of the region, with substantial risk for the entire world.**

(-- Failed diplomacy in Iran causes a Middle East war:

Mark Leonard, 10/15/2013 (staff writer, "On Iran, Obama's bigger challenge is with his allies," <http://blogs.reuters.com/mark-leonard/2013/10/15/on-iran-obamas-bigger-challenge-is-with-his-allies/>, Accessed 10/16/2013, rwg)

With the possibility of bilateral meetings between the U.S. and Iran in Geneva, and supported by the U.S.-Russian deal on chemical weapons in Syria, there is a tantalizing prospect that the Iranian regime could become a partner to the U.S., rather than a rival.¶ It is too early to know if Iranian President Hassan Rouhani is able to deliver, but as diplomats gather in Geneva for U.N. talks, it is not hard to see why President Obama would invest so much hope in a deal. A former Democratic congressman who knows Obama well explained to me that, like healthcare on the domestic front, it would be a bold, game-changing initiative. And, like healthcare, an alliance with Iran eluded President Bill Clinton.¶ Obama recognizes that there is the danger of a full-blown regional sectarian conflict in the Middle East. If diplomacy fails with Iran, Obama could find himself remembered as the president who took the United States into two new Middle East Wars — in Iran and Syria — rather than the one who ended two wars in Afghanistan and Iraq.

(-- Iran's nuclear ambitions risk a Middle East war:

Louis Charbonneau, 10/16/2013 ("U.S. says talks intense, serious after Iran hints at atomic concessions," <http://www.reuters.com/article/2013/10/16/us-iran-nuclear-idUSBRE99F0G820131016>, Accessed 10/16/2013, rwg)

The joint statement, read out by European Union foreign policy chief Catherine Ashton, said Iran's Foreign Minister Mohammad Javad Zarif "presented an outline of a plan as a proposed basis for negotiation" and the talks were "substantive and forward looking," without elaborating.¶ Zarif, who is also Iran's chief negotiator, said Tehran looked to a new era in diplomatic relations after a decade of tension, in which concerns about the Islamic state's nuclear ambitions fuelled fears of a new war in the Middle East.

(-- American-Iranian rivalry is fueling instability in the Middle East:

David Rohde, 9/19/2013 (staff writer, "Iran's offer is genuine — and fleeting," <http://www.reuters.com/article/2013/09/19/us-irans-offer-idUSBRE98118B20130919>, Accessed 10/16/2013, rwg)

Despite the risks, however, now is the time for Obama and Rouhani to launch the first direct negotiations between Iran and the United States since the 1979 Iranian hostage crisis. From Iran's pursuit of nuclear weapons to the conflict in Syria, the American-Iranian rivalry is helping fuel instability in the region.

Impacts: Oil Prices

(--) Deal decreases world oil prices:

Dr. Nasser H. Saidi, 1/3/2014 (advisor to central banks, “Why Détente With Iran Is a Historic Game Changer,” http://www.huffingtonpost.com/dr-nasser-h-saidi/us-detente-with-iran-game-changer_b_4476864.html, Accessed 1/22/2014, rwg)

Détente with Iran means lower oil prices Globally, détente with Iran would mean a lowering of tensions and risk of disruption of oil supplies through the Straits of Hormuz -- substantially cutting the \$10-\$15 risk premium built into world oil prices -- and would also result in increased oil exports from Iraq and Iran, putting further downward pressure on oil prices. Lower oil prices would contribute positively to the nascent global economic recovery, though the Gulf oil exporters would suffer from a fall in oil export and budget revenues. Similarly, access to international banking and capital markets would be restored for Iran and the sovereign risk premium would decline for all countries, lowering the cost of capital and finance. There would be two other important medium and longer-term implications. One, OPEC governance, strategy and role would need to change to accommodate growing oil production from Iran and Iraq and pressure from shale oil. Two, détente would allow the build-up of pipelines and energy infrastructure from China, Kazakhstan to Iran, Afghanistan to Pakistan and India. Given its geography, Iran would be the lynchpin linking the oil rich Gulf with Asia and China along the 'New Silk Road'.

Impacts: Proliferation

Failure of the deal leads to widespread prolif:

David Ignatius, 2/9/2015 ("Proceed with caution on Iran diplomacy," http://www.washingtonpost.com/opinions/proceed-with-caution-on-iran-diplomacy/2015/02/09/35a601e4-b0a7-11e4-854b-a38d13486ba1_story.html, Accessed 2/19/2015, rwg)

What would a collapse of the talks mean for a Middle East that is already wildly unstable? Iranians seem convinced that, with the rise of the terrorist Islamic State, the United States needs Iran's help in Iraq. But the counterargument could also be made: Iran has chaos on its borders; a rupture in the talks would leave it fighting multiple enemies, with no reliable allies. Iran must also reckon with the dangerous prospect that Saudi Arabia, Egypt and perhaps Turkey would begin their own bomb-making programs, in a post-negotiation world.

(-- New sanctions risk Iran prolif:

William Davnie, 1/5/2014 (staff writer, "Iran sanctions bill threatens progress; pressure is on Franken, Klobuchar," <http://www.startribune.com/opinion/commentaries/238660021.html>, Accessed 1/22/2014, rwg)

For the first time in a decade, the Geneva deal presses pause on Iran's nuclear program, and presses the rewind button on some of the most urgent proliferation concerns. In exchange, the United States has committed to pause the expansion of its sanctions regime, and in fact rewind it slightly with limited sanctions relief. Imposing new sanctions now would be just as clear a violation of the Geneva agreement as it would be for Iran to expand its nuclear program. That's why the Obama administration has committed to vetoing any such measures and has warned that torpedoing the talks underway could put our country on a march toward war. A recent, unclassified intelligence assessment concurred with the White House's caution, asserting that new sanctions "would undermine the prospects for a successful comprehensive nuclear agreement with Iran."

(-- Iranian prolif leads to a prolif cascade in the Middle East:

David W. Kern, 1/19/2014 (Assistant Professor, St. John's University, "The Folly of New Iran Sanctions," http://www.huffingtonpost.com/david-w-kearn/the-folly-of-new-iran-san_b_4619522.html, Accessed 1/22/2014, rwg)

More pessimistic observers disagree and take much less comfort in the history of proliferation. The historical record, including the evidence of risky crisis-initiation behavior between the two Superpowers paints a less sanguine picture. More importantly, looking at the modern Middle East, an Iranian bomb would potentially transform regional security dynamics. Given the region's geography and its particular vulnerability to nuclear attack, Israel (an undeclared nuclear power) would be on high-alert for any Iranian move. Other actors like Saudi Arabia may seek to acquire their own nuclear deterrent, leading to further proliferation within a region which is already flush with radical terrorist organizations operating across various troubled

states. It seems implausible that Tehran's leaders could ever believe that the delivery of a nuclear weapon on Israeli soil by Hezbollah, rather than missile would somehow go unattributed or unpunished, but the introduction of an Iranian nuclear weapons program into a region that is already so tumultuous conjures particularly grim scenarios.

**(--)
Deal with Iran stops proliferation:**

Trend News Agency, 1/2/2015 ("A nuclear deal with Iran would mean a less volatile world: UK daily," <http://en.trend.az/iran/nuclearp/2349445.html>, Accessed 1/2/2015, rwg)

A report in Wednesday's issue of The Guardian newspaper has urged the Obama Administration to strike a deal with Iran over its nuclear program, saying that a nuclear deal with Iran would mean a less volatile world, IRNA reported. "There will be no greater diplomatic prize in 2015 than a comprehensive nuclear deal with Iran. In its global significance, it would dwarf the US detente with Cuba, and not just because there are seven times more Iranians than Cubans. This deal will not be about cash machines in the Caribbean, but about nuclear proliferation in the most volatile region on Earth," comments Julian Borger in his opinion column.

Impacts: Syria Module

A) Successful Iranian diplomacy solves the Syria crisis:

Mark Leonard, 10/15/2013 (staff writer, "On Iran, Obama's bigger challenge is with his allies," <http://blogs.reuters.com/mark-leonard/2013/10/15/on-iran-obamas-bigger-challenge-is-with-his-allies/>, Accessed 10/16/2013, rwg)

In talks this week, Zarif called for a road map for a nuclear deal within a year by tying confidence measures on the nuclear program to a progressive lifting of sanctions and diplomatic hostilities. He has hinted at a willingness to restrict the amount of highly-enriched uranium in Iran and other measures to reassure the world that Iran will not be able to develop nuclear weapons. If there is progress in the talks, it would open the possibility for a normalization of the relationship between Iran and the U.S. and move toward a political solution on Syria.

B) Conflict in Syria escalates to a major regional war – draws in the US and Russia

Peter Goodspeed, 2011 National Post, 12/14/2011, "Peter Goodspeed: Power shifts push Mideast closer to war," <http://fullcomment.nationalpost.com/2011/12/14/peter-goodspeed-middle-east-on-the-brink-of-war/>

As Syrian dictator Bashar al-Assad clings to power with the quiet backing of regional powers Iran and Russia, the Middle East may be sliding slowly into war. Squeezed between the rebellions of a bloody Arab Spring and growing fears of a possible military response to Iran's growing nuclear threat, the region is becoming increasingly unstable. "I would be very surprised if it turned into a Russian-American war, but this could be a Mid-East war: Hezbollah, Hamas, Iran, Syria, Israel all having at each other," said Jack Granatstein, military historian and senior research fellow at the Canadian Defence and Foreign Affairs Institute. Ramazan Gözen, an international relations expert at Abant İzzet Baysal University wrote this week in the Turkish newspaper Zaman, "A process of steadily sharpening polarization is being experienced ... [and] it does not bode well.... In short, the polarization over Syria and Iran can turn into an uncontrollable conflict between the polarized countries and their supporters." Related Syrian government like 'dead men walking': U.S. State Department Thirteen killed as Syrian rebels clash with Assad forces Syrian death toll climbs past 5,000 as protests give way to insurgency Iran ready to begin nuclear work deep inside underground mountain bunker: sources Russia and the United States are bracing for a naval confrontation, unprecedented since the Cold War, in the eastern Mediterranean, just off the coast of Syria. Iran, worried over a possible pre-emptive strike against its nuclear facilities, has threatened to attack NATO's new missile defence shield in Turkey if it is attacked by either Israel or the United States. It has also said it will soon stage a navy drill to practise closing the Strait of Hormuz, through which 40% of the world's oil travels. . Turkey's Foreign Minister, Ahmet Davutoglu, has raised the possibility of a Turkish military incursion into Syria to create safety zones for refugees, if Mr. Assad doesn't stop killing civilians. Syria responded last weekend by staging a massive live-fire military exercise, near the north-central desert town of Palmyra, that, according to Syrian state TV, was designed to test "the capabilities and readiness of missile systems to respond to any possible aggression." On Tuesday, under the headline "U.S. troops surround Syria on the eve of invasion?" the online Russian news channel RT.com reported U.S. troops withdrawn from Iraq are secretly being transferred to northern Jordan and taking up positions opposite Syrian tank formations along the border. There have been reports NATO forces in Turkey may be training Syrian dissidents, while also helping prepare Turkish troops for any possible military intervention. The headquarters of NATO's air command for southern Europe has been located in Izmir Air Base, 320 kilometres southwest of Istanbul, since 2004. Turkey, the only Muslim member of NATO, hosts up to 24 major NATO bases on its territory and went to the brink of war with Syria as recently as 1998 in a dispute over Syria's support for Kurdish terrorist attacks inside Turkey. As tensions have increased between the two countries, with Turkey cutting trade and imposing financial sanctions, Syria has infuriated Turkey by re-establishing relations with the separatist Kurdistan Workers' Party (PKK). But it is Russia, Syria's main arms supplier and old Cold War ally, that has raised the stakes of any possible military confrontation. Along with China, the Russians have repeatedly blocked UN Security Council action against Syria and sought to protect Mr. Assad's regime from the type of UN

resolution that allowed NATO troops to intervene in Libya and help depose dictator Muammar Gaddafi. Recently, Russian diplomats met with Syrian opposition leaders in an unsuccessful attempt to persuade them to hold peace talks with the Syrian government. Russia has also tried to convince Mr. Assad to accept an Arab League plan to allow international observers into Syria. On Tuesday, just as UN officials accused Syria of killing more than 5,000 people in the last nine months, Russia's Foreign Minister, Sergei Lavrov, angrily accused the West of taking an "immoral" stance on Syria by punishing Mr. Assad, while refusing "to raise the pressure on the armed extremist flank of the [Syrian] opposition." Mr. Lavrov insisted Syrian dissidents are using a "Libyan scenario" as a template for regime change and are deliberately trying to provoke a humanitarian crisis in the hopes of triggering foreign intervention. Russia has had strong ties with Syria since Soviet times, and supplies Damascus with most of its weapons. Syria is also Russia's sole conduit for influence in the Middle East and provides Moscow with the only port its navy can use in the Mediterranean. The port Tartus is rapidly becoming a focal point for a potential conflict. Russia sent three guided missile frigates, reportedly loaded with anti-aircraft and anti-ship missiles for Syria, there in late November. In an echo of the Cold War, the Russian ships were briefly shadowed by the U.S. Navy's nuclear aircraft carrier USS George H.W. Bush and its naval strike force. Now, the U.S. Sixth Fleet is said to be cruising off the Syrian coast, awaiting the arrival of Russia's only aircraft carrier, the Admiral Kuznetsov, which is scheduled to arrive in Tartus with a strike force of its own next week. The flagship of the Russian fleet, accompanied by several destroyers, will rendezvous with the three Russian frigates and elements of Russia's Black Sea fleet for exercises off the coast of Syria. This unexpected show of Russian naval power, the most demonstrative since the fall of the Soviet Union, may be designed to reassure Syria of Moscow's continued support. But it could also complicate any possible foreign intervention in Syria and serves as a warning to the United States and NATO that they won't be able to duplicate the no-fly zone they established over Libya. The arrival of the Russian navy off the coast of Syria may also be intended to reassure Iran of Moscow's continued interest, just as it fears a possible attack by Israel or the United States. "The fight in Syria today is two contests in one," said Michael Doran of Washington's Brookings Institute. "It is a struggle between Syrians over the nature of their government and society, but it is also a regional rivalry between Iran and its adversaries."

C) US-Russia conflict in the Middle East goes nuclear

LaRouche 12-9-2011 (Lyndon LaRouche, political activist & economist, author of multiple books on economics & politics, Norman Bailey, formerly with the National Security Council, described LaRouche's staff as one of the best private intelligence services in the world, 12-9-11, "Why Obama has to go: to risk thermonuclear war is clinically insane," Executive Intelligence Review, <http://www.larouchepub.com/eiw/public/2011/eirv38n48-20111209/index.html>)

"What's happened is, the U.S. forces in the Eastern Mediterranean, and in the Persian Gulf region, especially naval forces, in particular, are positioned for launching a thermonuclear war. The name of the game, of course, is what we're going to do to Syria, what we're going to Iran, but if you look at the forces in the area, that makes no sense. Then you look at other aspects of it, and you know that now the Russians are in on the thing, in defending Syria, in particular, against this atrocity, and you realize that we're on the edge of actually going to thermonuclear war. "What happened was, of course, and I don't know how much, or how well this is known, but our leading general officers, advisors, and so forth, who advise us on our security, have opposed any action by Obama of this type. So therefore, that is, in that degree, tied up. But, what's hanging out there, is, at any moment, a war could start. "Now, this war will be a war with thermonuclear weapons. That's the fact. The idea that this is only Syria and Iran is nonsense. What we have positioned in the Gulf area, and in the Eastern Mediterranean, is the capability for thermonuclear war, and nothing else. Our allies, including the British, do not have the depth of weapons capability for doing something like this. Only the United States, and only the thermonuclear warfare capability of the United States, could actually conduct such a war. It would be a war against the entirety of Asia, and other places."

Nuclear deal with Iran helps moderate Syria:

Dalia Dassa Kaye, 12/18/2014 (director of the Center for Middle East Public Policy and a senior political scientist at the nonprofit, nonpartisan RAND Corporation, "Back to the Basics," <http://www.usnews.com/opinion/blogs/world-report/2014/12/18/an-iran-nuclear-deal-is-still-possible-and-heres-why>, Accessed 1/2/2015, rwg)

The administration has tried hard to "delink" the nuclear issue from other serious problems. American officials have long been concerned that Iran has a hand in just about every crisis in the Middle East, especially in Syria and Iraq. Consequently, it will undoubtedly be easier to engage Iran over other regional issues if the United States is not in a continuing standoff over the nuclear issue. Consider, for instance, Iran's support of Syrian President Bashar Assad. There may not be any state with more leverage over Assad than Iran, so any resolution of that bloody conflict might require some cooperation with Iran, whether the United States likes it or not.

Iran Impacts--War

(--) Iran-US relations are a conflict dampener- prevent global wars

Adib-Moghaddam 14 – London Middle East Institute Centre for Iranian Studies chair

[Arshin, MPhil and PhD, Reader in Comparative Politics and International Relations at SOAS, University of London, interviewed by Firouzeh Mirrazavi, " Renewed Iranian-American Relations Stabilize World Politics – Interview," Eurasia Review, 2-16-14, www.eurasiareview.com/16022014-renewed-iranian-american-relations-stabilize-world-politics-interview/, accessed 2-19-14]

I am in no doubt that renewed Iranian-American relations will have a stabilizing effect on world politics in general. The two countries have merging interests and ultimately they are actors that can deliver. One of the reasons why the foreign policy of both countries was not effective in the different strategic theatres that you have mentioned is exactly because there was no dialogue to align them where necessary. This region needs peace and stability. The human suffering of the last decades is unbearable. The threat of al-Qaeda continues to be real and urgent. Iran and the United States must sit on the same table in order to deliberate about how to bring about a security architecture that will outlaw, once and for all, the use of force in the region. It is central that this is not pursued in exclusion of other regional actors. Iran and the United States will continue to disagree on a range of issues, certainly Palestine, Hezbollah, Bahrain etc., but I do not see any reason why these differences could not be negotiated within a diplomatic context. Certainly, they are not more serious than the differences that the United States has with China.

(--) Collapse of talks leads to Middle East war & proliferation:

Trend News Agency, 1/2/2015 ("A nuclear deal with Iran would mean a less volatile world: UK daily," <http://en.trend.az/iran/nuclearp/2349445.html>, Accessed 1/2/2015, rwg)

According to Julian Borger, these gaps remain substantial, but none of the parties involved can walk away from the table. "A collapse of talks would lead to a slide back to the edge of conflict between Iran and Israel; the latter has vowed to launch military strikes rather than allow the former to build a bomb. It could also trigger a wave of proliferation across the region and beyond as other countries hedge their bets."

Iran Impacts: Prolif

(--) Iran deal and relaxation of sanctions is key to prevent global proliferation and instability leading to nuclear conflict.

Philip Stephens, journalist, "The Four Big Truths that Are Shaping the Iran Talks," FINANCIAL TIMES, 11—14—13, <http://www.ft.com/intl/cms/s/0/af170df6-4d1c-11e3-bf32-00144feabdc0.html>, accessed 9-2-14.

The first of these is that Tehran's acquisition of a bomb would be more than dangerous for the Middle East and for wider international security. It would most likely set off a nuclear arms race that would see Saudi Arabia, Turkey and Egypt signing up to the nuclear club. The nuclear non-proliferation treaty would be shattered. A future regional conflict could draw Israel into launching a pre-emptive nuclear strike. This is not a region obviously susceptible to cold war disciplines of deterrence. The second ineluctable reality is that Iran has mastered the nuclear cycle. How far it is from building a bomb remains a subject of debate. Different intelligence agencies give different answers. These depend in part on what the spooks actually know and in part on what their political masters want others to hear. The progress of an Iranian warhead programme is one of the known unknowns that have often wreaked havoc in this part of the world. Israel points to an imminent threat. European agencies are more relaxed, suggesting Tehran is still two years or so away from a weapon. Western diplomats broadly agree that Ayatollah Ali Khamenei has not taken a definitive decision to step over the line. What Iran has been seeking is what diplomats call a breakout capability – the capacity to dash to a bomb before the international community could effectively mobilise against it. The third fact – and this one is hard for many to swallow – is that neither a negotiated settlement nor the air strikes long favoured by Benjamin Netanyahu, Israel's prime minister, can offer the rest of the world a watertight insurance policy. It should be possible to construct a deal that acts as a plausible restraint – and extends the timeframe for any breakout – but no amount of restrictions or intrusive monitoring can offer a certain guarantee against Tehran's future intentions. By the same token, bombing Iran's nuclear sites could certainly delay the programme, perhaps for a couple of years. But, assuming that even the hawkish Mr Netanyahu is not proposing permanent war against Iran, air strikes would not end it. You cannot bomb knowledge and technical expertise. To try would be to empower those in Tehran who say the regime will be safe only when, like North Korea, it has a weapon. So when Barack Obama says the US will never allow Iran to get the bomb he is indulging in, albeit understandable, wishful thinking. The best the international community can hope for is that, in return for a relaxation of sanctions, Iran will make a judgment that it is better off sticking with a threshold capability. To put this another way, if Tehran does step back from the nuclear brink it will be because of its own calculation of the balance of advantage. The fourth element in this dynamic is that Iran now has a leadership that, faced with the severe and growing pain inflicted by sanctions, is prepared to talk. There is nothing to say that Hassan Rouhani, the president, is any less hard-headed than previous Iranian leaders, but he does seem ready to weigh the options. Seen from this vantage point – and in spite of the inconclusive outcome – Geneva can be counted a modest success. Iran and the US broke the habit of more than 30 years and sat down to talk to each other. Know your enemy is a first rule of diplomacy – and of intelligence. John Kerry has his detractors but, unlike his predecessor Hillary Clinton, the US secretary of state understands that serious diplomacy

demands a willingness to take risks. The Geneva talks illuminated the shape of an interim agreement. Iran will not surrender the right it asserts to uranium enrichment, but will lower the level of enrichment from 20 per cent to 3 or 4 per cent. It will suspend work on its heavy water reactor in Arak – a potential source of plutonium – negotiate about the disposal of some of its existing stocks of enriched uranium, and accept intrusive international inspections. A debate between the six powers about the strength and credibility of such pledges is inevitable, as is an argument with Tehran about the speed and scope of a run down of sanctions.

(--) Iran proliferates = war in the Middle East:

Dalia Dassa Kaye, 12/18/2014 (director of the Center for Middle East Public Policy and a senior political scientist at the nonprofit, nonpartisan RAND Corporation, "Back to the Basics," <http://www.usnews.com/opinion/blogs/world-report/2014/12/18/an-iran-nuclear-deal-is-still-possible-and-heres-why>, Accessed 1/2/2015, rwg)

Successive U.S. administrations – Republican and Democratic – have worried about Iran's nuclear ambitions and the possibility that an Iranian bomb could spark a regional arms race and increase the possibility of war in an already volatile region. But the Obama administration has been particularly vocal in putting the prevention of an Iranian bomb by negotiations at the top of its foreign policy priorities. A deal with Iran that would disable it from converting nuclear energy into a weapons program would be a major victory for President Barack Obama.

Iran Impacts: Structural Violence

(--) **Sanctions are structural violence**

Muhammad Sahimi, Professor, University of Southern California and Eskandar Sadeghi-Boroujerdi, former researcher, Oxford Research Group, "The Unfolding Human Catastrophe in Iran," ALJAZEERA, 10—28—12, <http://www.aljazeera.com/indepth/opinion/2012/10/20121023101710641121.html>

Apart from the vague and shifting red lines which continue to afflict the thick fog of Western national security rhetoric vis-a-vis Iran, not a single word was uttered by either men about the plight and suffering of the Iranian people who have had no role in the decisions made by the Islamic Republic's leaders. But, the fact is that the sanctions, exacerbated by government incompetence, have the potential to give rise to a major human catastrophe. The lack of sensitivity to the plight of ordinary Iranians was - at least on the President's part - surprising, because when his administration together with the European Union began imposing sanctions on Iran, they promised the world that the sanctions will be "smart" and "targeted". The world was promised that the sanctions will not hurt millions of ordinary Iranians who go about their daily lives and, in fact, oppose many of their government's policies. But, the sanctions are now in full force, and are hurting the same people who we were told were not meant to be their target, in what is yet another case of "collateral damage" inflicted by Western policy towards Iran, and its disenfranchised people who have lost control over their destiny at both home and abroad. In fact, there are very strong indications that a human catastrophe could emerge whose scale poses as much a threat as an outright military attack. The supposedly "smart" and "targeted" sanctions have been increasingly expanded to all areas, even if they are not part of the official sphere of sanctions. This is intentional, even if Western leaders tell us otherwise. To avoid criticisms of the type that they were confronted with after they imposed all-encompassing sanctions on Iraq in the 1990s, the US and its EU allies have imposed sanctions on Iran's Central Bank and practically all other Iranian banks that are involved in commercial transactions with the outside world. Since these banks open lines of credit for imports, and provide financial guarantees for commerce with the outside world, it has become very difficult, if not impossible, to import vital goods and products into the country, even those that absolutely have nothing to do with the military, or oil, or the nuclear programme. In effect, this is the type of sanctions imposed on Iraq, but in a supposedly more "humanitarian" way. An area that has been hit very hard is the pharmaceutical sector. Although Iran produces a large part of the medicines and drugs that its population needs, based on the generic versions of brand-named pharmaceuticals, it is still unable to produce the most advanced drugs that have come to the market over the past 10 to 15 years that deal with a variety of serious illnesses, simply because their generic versions are not yet available. As a result, Iran must still import a significant amount of drugs every year to address the needs of the Iranian people when dealing with such illnesses as leukaemia, AIDS, and others. But, the sanctions imposed on Iran's banks and financial institutions have effectively prevented Iran from importing the necessary drugs and the associated chemicals. At the same time, as Iran's oil exports continue to decrease due to the sanctions strain on the country's resources, it becomes increasingly difficult to pay for the expensive imported drugs, even if a

way can be found for importing them. As a pharmacist in Tehran said, "The warehouses for pharmaceuticals are empty because we cannot import what we need due to the sanctions, and even if we could, we do not have the resources to pay for them due to the sanctions." As a result, **the shortage of drugs has all the makings of a human catastrophe**. According to recent estimates as many as 6 **million** patients **are** currently being **affected** by the impact of sanctions on the import and manufacture of medications inside Iran. This has prompted many of Iran's healthcare professionals to raise their voices, and begin protesting the impending danger they're witnessing before their eyes. The board of directors of the Iranian Haemophilia Society recently informed the World Federation of Haemophilia (IFH) that the lives of tens of thousands of children are being endangered by the lack of proper drugs as a consequence of international economic sanctions imposed on Iran. According to the letter that the Society's board sent to the IFH, while the export of drugs to Iran has not been banned, the sanctions imposed on the Central Bank of Iran and the country's other financial institutions have severely disrupted the purchase and transfer of medicines. Describing itself as a non-political organisation that has been active for 45 years, the Society condemned [FA] the "inhumane and immoral" US and EU sanctions and appealed to international organisations for help. Some statistics are very telling. Tens of thousands of Iranian boys and young men are haemophilic and need certain drugs that must be imported. Many of them may need surgery for a variety of reasons, but in the absence of proper drugs for their haemophilia illness, the surgeries cannot be performed, because the bleeding could not be stopped. Several credible reports from Iran indicate that surgeries for all haemophilic patients have been cancelled, and at least a few have already died. There are about 37,000 Iranians with MS, a debilitating disease that can be controlled only with advanced medications; otherwise, the patients will die. In fact, three members of one of our extended families in Iran are afflicted with multiple sclerosis. Furthermore, given that even under the best medical conditions 40,000 Iranians lose their lives to cancer every year, and that it has been predicted by many medical experts that Iran will have a "cancer tsunami" by 2015 as every year 70,000 to 80,000 new cases of cancer are identified in Iran, the gravity of the situation becomes even more perilous. Fatemeh Hashemi, head of Iran's Charity Foundation for Special Diseases, which cares for the needs of patients with life-threatening diseases, including a variety of cancers in adult patients as well as children, heart diseases, lung problems, multiple sclerosis (MS), and thalassemia, recently wrote a letter to United Nations' Secretary-General Ban Ki-moon. The Foundation has been a highly successful nonpolitical organisation that, in addition to Iran, has also served many people in Iraq and Afghanistan, and whose work has been recognised by the UN. In her letter Hashemi said that she leads an organisation "with 6 million patients and, hence, in contact with 30 per cent of Iran's total population". Emphasising the non-political nature of her organisation and her letter, Hashemi added: "Although drugs have not been sanctioned, due to the impossibility of paying for the imported drugs through the banking system, the heavy shadow of the sanctions is felt in the health sector. Not only has importing drugs been disrupted, importing the raw chemicals [for the drugs that Iran does produce] has also been disrupted... As a human activist, I call on humanity's conscience to pay attention to the fact that, despite the claims by those that have imposed the sanctions, **their pressure is having its destructive effect on the life and health of the people**." Hence, the supposedly "smart" and "targeted" sanctions that were not going to hurt the ordinary Iranians have been inflicting significant damage on the Iranian people. The net result is that shortage of drugs for

patients with serious and life-threatening illnesses is becoming chronic in Iran, and is reaching hazardous levels. Meanwhile, recent reports indicate that two large plants that produce drugs for a variety of illnesses have also been closed. The reason is that it has become essentially impossible to import the chemical compounds used in the production of the drugs, due to the sanctions imposed on Iran's financial institutions that deal with the outside world. The world must recognise that in certain respects **the path taken by the United States and its allies is eerily similar to what was done to Iraq in the 1990s**. The United Nation's UNICEF estimated that the sanctions imposed on Iraq **caused the death of up to 500,000 Iraqi children**. Given that Iran's population is three times that of Iraq, **if the sanctions imposed on Iran last several years - as they did with Iraq - the number of dead resulting from them could be larger than that of Iraq**. Moreover, given that Iran still imports a significant amount of wheat, rice and other food products, if the sanctions drag on, not only could hundreds of thousands of Iranians die due to shortage of drugs and medical goods, the **shortage of food could also become very significant**. It should also be noted, if only in passing, that sanctions did not change the policy of Saddam Hussein's regime. Thus, after causing the death of hundreds of thousands of Iraqi children, those who had been jockeying for war with Iraq all along argued that the sanctions had failed, and "regime change" was the only alternative. As we now know Iraq did not have weapons of mass destruction, nor was it trying to produce them. Iran also does not have nuclear weapons yet, but Western policy has the power to change the Iranian leadership's calculus and make it seem like the only viable option remaining with the power to guarantee regime survival. In sum, comprehensive sanctions not only killed thousands in Iraq, but they eventually laid the path to war. One key difference in the case of Iran is of course that one of its few lifelines to the outside world is still China, which depends on Iranian energy to abet its ongoing economic expansion, hardly a commendable development for those supporting human rights and entertaining hopes of democratisation in the Islamic Republic. The sanctions have arguably failed to meaningfully shift the stance of Iran's Revolutionary Guards and the Supreme Leader Ayatollah Ali Khamenei, who most recently emphasised that the Islamic Republic is prepared to negotiate and has in fact never left the negotiating table, but will not be cowed into submission. So, if, for instance, Iran is expected to forgo 19.75 per cent uranium enrichment and close the underground Fordow enrichment facility, two of the P5+1's key demands at the Baghdad and Moscow talks, there must be some form of quid pro quo. Without one, there is no incentive for Iran to cooperate in an atmosphere already severely afflicted by a longstanding deficit of trust. There have been rumblings and rumours of possible sanctions relief after the US presidential election but nothing tangible as of yet. There are many voices within Iran that have called on the leadership to find a compromise with the West. The US and its allies can make such voices stronger and louder if they offer to lift some of the sanctions, or at least have exceptions that allow Iran's financial system to be involved in the import of vital goods and products with no military or nuclear applications, such as drugs and food stuffs. It may be useless to preach to the Obama administration about the human, moral, and ethical toll of its policy toward Iran, given that the President has in many respects perpetuated the destructive Middle East policy of George W Bush, which in Iran's case has been even tougher and more damaging to the livelihood of the Iranian people. But, **the emerging catastrophe will be an ethical and moral problem for the West for decades to come, a catastrophe** that is being created simply because Western governments appear to blindly pursue crippling sanctions against Iran as an end in themselves, as opposed to

a means by which to further the diplomatic process. Given the tragic history of the US intervention in Iran in the past, it is be prudent to rethink the consequences of such blind sanctions, and their effect on the thinking of the Iranian people about the US - a largely pro-US population in one of the most turbulent areas in the world that has been known for its hostility towards the United States and its perceived negative impact in much of the region.

******* Answers to: Theory Arguments Against
Politics*******

AT: Non-Intrinsic: Pass the Plan and Do your scenario

Intrinsicness is illegitimate and a voting issue:

- 1) Decimates disad ground: allows them to just wish away the impact to any disad.**
- 2) Makes the AFF not topical: The intrinsicness answer is not topical, proves the resolution alone is inadequate to solve and is a reason to vote negative.**
- 3) Beggars the question of political capital—political capital is an intrinsic resource of Obama: if we prove the plan trades off with that, it is an intrinsic disad.**
- 4) Makes the AFF a moving target: NEG needs a fixed target to shoot at in order to promote clash and in-depth education**
- 5) Politics is core negative disad ground—mentioned in the topic paper and literature is AFF biased—NEG needs the politics disad to offset.**
- 6) Debating politics is educational—teaches us about how government functions and about relevant pieces of legislation of the day—their argument wishes politics disads away.**

AT: "Say No"

- 1) Counter-interpretation: Judge should act as an independent agent assessing whether or not the plan should be done. Judge shouldn't operate as an individual member of Congress—if the plan would drain away from Obama's ability to pass other legislation, it is a bad idea.**
- 2) Argument makes zero sense: Politicians consider political consequences of actions—an individual representative could vote no BECAUSE of the political consequences of the plan.**
- 3) Process can't be distinguished from substance: Whether the plan is a good idea in part depends on whether or not it is the right time to do the plan.**
- 4) Politics is core negative disad ground—mentioned in the topic paper and literature is AFF biased—NEG needs the politics disad to offset.**
- 5) Debating politics is educational—teaches us about how government functions and about relevant pieces of legislation of the day—they wish the disad away.**

AT: Plan is Bottom of the Docket

This is self-serving and a voting issue:

- 1) Counter-interpretation: the plan should happen at the nearest available opportunity—which means moving it to the top of the docket.**
- 2) Alternative interpretation allows for delays around any disad: they can delay until the economy recovers, we pull out of Iraq, etc. destroys negative disad ground.**
- 3) Their interpretation destroys uniqueness debates: delaying off into the future means we can't debate issues in their current context.**
- 4) We aren't being absurd: we aren't saying the plan has to happen Sunday night or in the middle of a break—we're saying the plan has to happen in the current political context so we can debate it.**
- 5) Bottom of the docket means the plan will be pushed off forever—their inherency evidence says the plan is unlikely to happen and will be de-prioritized—vote negative on presumption.**
- 6) Not reciprocal: only destroys negative disad ground.**

Presidential Powers Addendum

UQ – Pres Powers Low

Pres Powers low – Obama is restricting his own authority – ISIS proves

Peter Baker 2/11 (“Obama’s Dual View of War Powers Seeks Limits and Leeway”, 2/11/15, <http://www.nytimes.com/2015/02/12/us/obama-war-authorization-congress.html>)

In seeking authorization for his six-month-old military campaign against the Islamic State terrorist group, President Obama on Wednesday did something that few if any of his predecessors have done: He asked Congress to restrict the ability of the commander in chief to wage war against an overseas enemy. The proposed legislation Mr. Obama sent to Capitol Hill would impose a three-year limit on American action that has been conducted largely from the air and, while allowing Special Operations commandos and other limited missions, would rule out sustained, large-scale ground combat. It would also finally repeal the expansive 2002 congressional measure that authorized President George W. Bush’s war in Iraq. But even as Mr. Obama proposed some handcuffs on his power, he left behind the key to those shackles should he or his successor decide they are too confining. While his draft resolution would rescind the 2002 authority, it would leave in place a separate measure passed by Congress in 2001 authorizing the president to conduct a global war against Al Qaeda and its affiliates. With the still the law of the land, Mr. Obama and the next president would retain wide latitude to order military operations in the name of fighting terrorism.

UQ – Pres Powers High

Presidential Powers high now – JCPOA

Larry Klayman 7/31 (American public interest lawyer and former Justice Department attorney, “GOP in Congress abandon Constitution for Iran 'treaty'”, 7/31/15, <http://www.wnd.com/2015/07/gop-in-congress-abandon-constitution-for-iran-treaty/>)
Now, it is true that our Congress worried that Obama would not submit his JCPOA to Congress for any consideration at all. He would just say it isn't a treaty. So Republicans sold their birthright and my and your constitutional rights for a slimy “pot of stew.” If official Washington studied the Constitution, they might have passed a law defining the word “treaty” pursuant to the “necessary and proper” clause. A law defining Obama's agreement as a treaty requiring ratification would have addressed their supposed concerns. Or they could have claimed after the fact that a non-treaty agreement has no effect and challenge it as meaningless. Is Obama's JCPOA with Iran a treaty? It is widely believed that the president can enter into non-treaty agreements. But nothing in the Constitution says that. If an agreement is binding upon the United States, then it has to be ratified as a treaty. Testimony in the Senate Foreign Relations Committee, July 30, 2015, by legal expert Juan Zarate and others clarified that the JCPOA purports to actually restrict, restrain and limit the exercise of national powers with regard to Iran. Because it purports to be binding on our country, it is a treaty requiring ratification to have effect. (See video at C-SPAN's website.) As bad as the issues are, the fact that our public officials care so little for the procedures and substance of our Constitution is alarming. Obama's JCPOA “treaty” with Iran will wreak “catastrophic havoc” across the Middle East, even according to Prince Bandar bin Sultan, Saudi Arabia's ambassador to the United States for nearly 25 years, in an Arabic-language op-ed, as the Washington Post reported. But congressional Republicans' disregard for our Constitution will in the end be seen for what it is: a traitorous and unconstitutional sellout of my rights and those of all Americans for their cynical political ends. The end result could be a Second Holocaust affecting not just the Middle East, but also the entire world, this one at the hands of Obama's radical Muslim brothers in Tehran, who are now poised to use nuclear weapons for blackmail and to grow by force a worldwide Islamic caliphate.

Pres Powers high now – Obama new economic policy overstretches authority and decks the economy

Eric Peterson 7/15 (policy analyst for Americans for Prosperity, “Obama works overtime on executive overreach”, 7/15/15, <http://thehill.com/blogs/congress-blog/the-administration/247928-obama-works-overtime-on-executive-overreach>)
President Obama famously vowed last year to use his “pen and phone” to push his divisive and controversial agenda forward, declaring his intention to unilaterally sidestep Congress and pushing the limits of executive authority. And in recent months, the President has made good on his threat, issuing edicts affecting everything from energy policy, health care and even labor rules. Last week, Obama took out his pen once again, ordering an increase in the threshold for overtime pay – once again without consulting lawmakers or seeking the approval of Congress. Under the president's sweeping proposal, all salaried workers earning under \$50,400 would be eligible for overtime pay if they work more than 40 hours a week. While Obama has predictably touted his proposal as a way to ensure “fair pay,” workers and the small businesses that employ them will be among the most negatively impacted. While backers of Obama's proposal suggest

his executive action will result in pay increases for 5 million workers, his own Labor Department (the agency charged with implementing the new rules) estimates that only about one-fifth that number will see any tangible benefit – and even that could be an overestimate. Moreover, mandating higher overtime pay carries with it serious economic risks. The most likely response by employers to Obama’s order, as seen in a recent study examining the effects of 2004 regulatory changes in overtime pay, are pay cuts. Since many employers are in no position to simply absorb the costs of these artificially-mandated higher wages, they will be forced to consider more draconian options to comply – such as scaling back compensation levels, or simply closing up shop. In lower paying jobs, employers may simply slash hours instead of reducing wages -- leaving less in the pockets of those who can least afford pay cuts. Even Obama’s own Department of Labor projects reduced wages and hours as the most likely outcome. In short, the potential result of Obama’s latest overreach will be cutbacks in employee schedules, greater pressure on struggling small businesses, and shrinking paychecks for some of America’s most vulnerable workers. Another looming question surrounding the controversial order is if Obama will exempt the White House and Congress from this expensive mandate. It’s well known around Washington that recent graduates and often unpaid interns make significant contributions to the day-to-day operations of the West Wing and Capitol Hill.

Recent bills prove Obama thwarting Congress- executive authority high now

Timothy Cama 7/10 (“Obama to announce three new national monuments Friday”, 7/10/15, <http://thehill.com/policy/energy-environment/247478-obama-to-create-3-new-protected-areas>)

Congressional Republicans have repeatedly accused Obama of thwarting Congress and local communities in creating national monuments. The House has voted multiple times to restrict Obama’s authority under the Antiquities Act and require congressional votes for most monuments. Most recently, the House voted on Wednesday to adopt an amendment sponsored by Rep. Crescent Hardy (R-Nev.) to add certain transparency and local input requirements for monument designations. It was attached to the spending bill for the Interior Department and Environmental Protection Agency, which Republican leaders decided to shelve Thursday.

Obama has too much power now – regulations skirt legislative processes

Christinia Crippes 8/1 (political journalist at Waterloo Cedar Falls Courier, “Paul tells crowd he wants to lessen power of presidency”, August 1st, 2015, http://muscatinejournal.com/news/local/paul-tells-crowd-he-wants-to-lessen-power-of-presidency/article_7688d45d-d3fe-5e22-95fc-a246840ae5ba.html)

“I’ve told people if I am elected president -- or I guess, better yet, when I am elected president -- I will do something extraordinary, I won’t try to grab up more power, I will try to give power back to the people and to the states, respectively,” Paul said during a 25-minute speech to a crowd of more than 50 people at the Sullivan Brothers Convention Center.

He said the worst thing Democratic President Barack Obama has done during his tenure is to further the collapse of the separation of powers, pointing in particular to the administration putting in place regulations that have not gone through the legislative process.

Paul also spent time discussing the issue that he says disqualifies Democratic presidential candidate and front-runner Hillary Clinton from succeeding Obama, the terrorist attacks in Benghazi, Libya that killed four Americans in 2012.

“Look, by not providing adequate security, by not defending our embassies, it should forever preclude you from holding higher office,” he said he told Clinton at a hearing on Benghazi.

No I/L to Pres Powers

No Impact to presidential powers – empirics prove every single president has used to same powers

James Gawron 7/28 (Electrical Engineering first at RPI, “The Case Against Obama: Why John Yoo is Wrong”, July 28th 2015, <https://ricochet.com/the-case-against-obama-why-john-yoo-is-wrong/>)

Today, conservatives disagree with President Obama’s use of these constitutional reservoirs of power to reach for the mirage of a rapprochement with Iran. But those same powers have served presidents from Lincoln, who invoked broad executive power to fight the Civil War and free the slaves, to FDR, who brought the nation into the war against the Axis powers, to Truman and Reagan, who, respectively, oversaw the Cold War at its beginning and toward its end. The next president will need those powers again when he or she quickly turns policy toward Iran in the opposite direction. In the next weeks, conservatives will have ample opportunity to persuade the American people against the Iran deal on its merits. Presidential candidates will explain the steps they will take to undo the damage that Obama has inflicted on our national security. But they will make a serious mistake if they seek the short-term political end of defeating the Iran deal by crippling the Presidency’s long-term powers to defend the nation.

Link

XO

Executive Orders rely on vague interpretations of the Constitution and different statutes - justifies increased presidential powers.

Powell '14 - Senior Fellow at the Cato Institute, (Jim, January 30, 2014, "How President Obama Could Be Swept Away With His Executive Orders That Defy Congress And The Courts", Forbes, <http://www.forbes.com/sites/jimpowell/2014/01/30/how-president-obama-could-be-swept-away-with-his-executive-orders-that-defy-congress-and-the-courts/>)

Apparently President Obama has become convinced that he can make magic with that pen he keeps talking about, the one he plans to use for signing executive orders to revive his beleaguered presidency. Executive orders are irresistible, because a president doesn't have to propose anything, debate the issues, endure hearings or solicit votes. An executive order can be issued in a few minutes — behind closed doors and away from bright lights.

Paul Begala, who was an advisor to President Bill Clinton, reportedly remarked, "Stroke of the pen, law of the land, kinda cool."

What about the Constitution? It describes presidential power broadly. There isn't anything in the Constitution that authorizes an executive order or limits what a president can do with it. Executive orders arise from "implied constitutional and statutory authority," the Congressional Research Service reported. "If issued under a valid claim of authority and published in the Federal Register, executive orders may have the force and effect of law."

Many executive orders are in a twilight zone of dubious constitutional legitimacy if not open defiance of the Constitution, especially when they amount to lawmaking without congressional approval.

Presidents have made extravagant claims with their executive orders, as Harry Truman did when he issued executive order 10340 that directed the Secretary of Commerce to stop a steelworkers strike by seizing privately-owned steel mills. Truman insisted that a prolonged strike would impair the government's ability to fight his undeclared "police action" in Korea. Truman's Solicitor General Philip B. Perlman declared that Article II, Section 2 of the Constitution "constitutes a grant of all the executive powers of which the Government is capable."

The case came before the Supreme Court as *Youngstown Sheet & Tube Co. v. Sawyer*, 343 U.S. 579 (1952). Justice Robert Jackson — like Truman, a Democrat — was incredulous at the administration's position. He said, "The example of such unlimited executive power that must have most impressed the forefathers was the prerogative exercised by King George III. The description of its evils in the Declaration of Independence leads me to doubt that they were creating their new Executive in his image. Continental European examples were no more appealing. And, if we seek instruction from our own times, we can match it only from the executive powers in those governments we disparagingly describe as totalitarian. I cannot accept the view that the clause is a grant in bulk of all conceivable executive power."

Justice Hugo Black, another Democrat, wrote the majority opinion invalidating the seizures. Black explained that an executive order (1) "must stem either from an act of Congress or from the Constitution itself" and (2) an executive order is on dubious ground if it's "incompatible with the express or implied will of Congress."

There have been thousands of executive orders, so it's hard for government to keep track of them all, and it has been even harder for ordinary citizens. Until the early 20th century, executive orders were generally undocumented. They were addressed to a particular government agency which had the only copy. Nobody seemed to know how many executive

orders there were. As late as the 1930s, there was an account, published in the New York Times, claiming that “there are no readily available means of ascertaining the true texts and history of the thousand or more executive orders issued since March 4, 1933.”

In 1974, the Senate Committee on National Emergencies and Delegated Emergency Powers was surprised to discover that “Since March 9, 1933, the United States has been in a state of declared national emergency. There are now in effect four presidentially-proclaimed states of national emergency. In addition to the national emergency declared by President Roosevelt [during the Great Depression], there are also the national emergency proclaimed by President Truman on December 16, 1950, during the Korean conflict, and the states of national emergency declared by President Nixon on March 23, 1970 and August 15, 1971.”

The committee report continued, “These proclamations give force to 470 provisions of Federal law, delegating to the President extraordinary powers, ordinarily exercised by the Congress, which affect the lives of American citizens in a host of all-encompassing manners...The President may seize property, organize and control the means of production, seize commodities, assign military forces abroad, institute martial law, seize and control all transportation and communication, regulate the operation of private enterprise, restrict travel, and in a plethora of particular ways, control the lives of all Americans.”

President Obama’s admirers like to talk about the wonderful things can be done with executive orders, but the historical record has been mixed. Some have been fine, while many have backfired badly.

Presidents use XO’s to expand executive responsibilities.

Mayer ’99 - Associate professor of political science at the University of Wisconsin-Madison, (Kenneth R., May, 1999, “Executive Order and Presidential Power,” <http://users.polisci.wisc.edu/kmayer/Professional/Executive%20Orders%20and%20Presidential%20Power.pdf>)

Executive orders are important to presidents, and their use reflects much more than simple administrative routines or random noise. Presidents use them to make substantive policy, exercise emergency powers, strengthen their control over executive branch agencies and administrative processes, emphasize important symbolic stances, and maintain their electoral and governing coalitions. Their use varies in predictable ways in accordance with substantive changes in political context.

The president’s power to make policy through executive orders has grown along with, and has reinforced, the expansion of executive branch responsibilities. Some of this authority has been delegated to the president by Congress, but presidents have also simply assumed unilateral policymaking powers, especially in national security and foreign policy matters (Koh 1990; Fisher 1995). The expansion of the executive branch and the institutionalization of the presidency has provided the president with increased power over policy implementation and administrative procedures. One proponent of this “Administrative Presidency” thesis is Moe (1985, 1993, 1995; see also Nathan 1983; Durant 1992), who argues that presidents have a substantial reservoir of authority that allows them to make many substantive decisions on their own. Even within the narrower confines of their executive authority, presidents can make significant policy choices. “They can organize and direct the presidency as they see fit, create public agencies, reorganize them, move them around, coordinate them, impose rules on their behavior, put their own people in top positions, and otherwise place their structural stamp on the executive branch” (Moe 1993, 366).

Courts

Courts defer to the executive - confidence and resources increase presidential powers.

Waxman '09 - law professor at Columbia University, Senior fellow for Law and Foreign Policy at the Council on Foreign Relations, (Matthew C., "Can Courts Be 'Trusted' in National Security Crises?", Foundation for Law, Justice and Society, <http://www.fljs.org/sites/www.fljs.org/files/publications/Waxman.pdf>)/HH

Scholars such as Bruce Ackerman and Geoffrey Stone have observed that judges, like the other government branches and the public, are susceptible to public panic, and are cautious about taking decisions that might undermine security. Rather than serving as guardians of liberty during emergencies and wartime, courts are likely to show too much deference to the political branches, at least until the moment of maximum perceived peril passes (Ackerman 2006: 60–63; Stone 2004: 542–57).

As noted above, courts have on occasion rejected emergency executive assertions, but this is more the exception than the norm. Historically, courts have tolerated significant executive liberty infringements during wartime or emergencies, especially when expanded powers are sanctioned by Congress.

During the post-World War I 'Red Scare', the Supreme Court upheld criminal convictions against individuals spreading anti-draft leaflets. '[W]hen a nation is at war', wrote Justice Oliver Wendell Holmes, 'many things that might be said in time of peace are such a hindrance to its effort that their utterance will not be endured so long as men fight, and that no Court could regard them as protected by any constitutional right' (Schenck v. United States 1919). During World War II, the Supreme Court upheld curfew and internment orders against individuals of Japanese descent (Hirabayashi v. United States 1943; Korematsu v. United States 1944). It is often only after the moment of perceived danger passes that courts roll back expansive executive powers.

Some of the same structural features of courts that arguably weaken their ability to assess security threats and measures also weaken their ability to enforce limits on emergency powers. Courts' jurisdiction even to consider the merits of such legal issues is generally limited to specific 'cases and controversies' brought by parties who can allege a concrete harm at the time their lawsuit is adjudicated. Decentralized courts operated by generalist judges are slow to acquire the expertise, and therefore confidence, to challenge executive assertions. Lacking their own investigatory powers, they rely heavily on government submissions in evaluating claims of necessity.

Perhaps as a result of these limitations, courts often incline toward enforcing institutional constraints on executive emergency actions, rather than ruling them out altogether (Issacharoff and Pildes 2004). That is, they look to whether Congress has authorized or consented to executive programmes. Such institutional requirements sometimes serve as a brake on arrogation of state powers, but sometimes it merely reinforces them, when politics favour aggressive government crackdown, perhaps against minority or dissident groups, precisely the moments that civil libertarians believe court intervention is most necessary.

Impact

PP Bad – Economy

Obama economic policy hurts the middle class-key to the economy

Roth 1/20 (Diana Furchtgott-Roth, former chief economist of the U.S. Department of Labor, directs Economics21 at the Manhattan Institute, “How Obama’s Tax Hikes Actually Hurt the Middle Class”, <http://www.thefiscaltimes.com/2015/01/20/How-Obama-s-Tax-Hikes-Actually-Hurt-Middle-Class>, 1/20/15, 8/1/15, MEM)

Higher capital gains taxes would reduce economic activity, especially financing for private companies, innovators, and small firms getting off the ground. Taxes on U.S. investment would be higher compared with taxes abroad, so some investment capital is likely to move offshore. There are good reasons for taxing capital gains and dividends at lower rates than earned income. First, dividend income has been taxed before at the corporate level. The statutory federal corporate tax rate is 35 percent, although effective tax rates vary by firm, depending on the amount of plant and equipment purchased, among other factors. The tax is taken out of gains distributed to shareholders. If a company pays dividends out of net income, then a 35 percent corporate tax rate plus a 28 percent individual tax rate on dividends adds up to a total federal tax rate on dividends of 53 percent—and state and local taxes can add an additional 13 percent, as is the case in California. Second, capital gains have a lower tax rate to encourage the risk taking involved in investment. Investors supply the financial capital essential for investments that spur innovation, improve productivity, and expand capacity. It is beneficial for the government to encourage this risk taking and tax the proceeds of capital at a lower rate. Returns from capital are not the same as getting a weekly paycheck, where the amount is predictable and will not vanish if the market tanks. Finally, a portion of capital gains comes from inflation, because many people hold on to capital for years before selling it. Rather than calculating the inflationary gains from each stock, Congress taxes those gains at a lower rate. Higher taxes on capital gains are likely to result in fewer realizations—in other words, fewer sales of capital assets—and less investment in capital. Historically, increases in capital gains taxes have been associated with declines in revenues from capital gains, and vice versa, because those who hold capital can choose when to time their gains.

PP Bad – Climate Change

Obama bipolar approach to climate change prevents any effective change

Cousins 7/13 (Farron Cousins, bachelor's degree in Political Science from the University of West Florida, the executive editor of The Trial Lawyer magazine, the world's number one source for accurate, became a member of American MENSA, fact based information regarding global warming misinformation campaigns, "Obama's Bipolar Approach To Energy And Climate Change", <http://www.desmogblog.com/2015/06/13/obama-s-bipolar-approach-energy-and-climate-change>, 7/13/5, 8/1/15, MEM)

But seven years later, President Obama's stance on offshore drilling has clearly changed. Rather than worrying about the immediate economic impacts, and certainly without considering the environmental impacts, President Obama has proposed opening up previously off-limits areas of the Atlantic coast for oil drilling; he has increased the number of offshore oil drilling operations in the Gulf of Mexico (after he presided over the single largest environmental disaster ever to take place in the Gulf); and he's even allowed the fracking industry to operate in near secrecy in the Gulf of Mexico. It seems like every action the president has taken to combat climate change has been met by an equal attempt to appease the dirty energy industry. And this is all occurring at the same time that the President has ramped up his tough talk about the need to combat climate change in order to protect future generations of Americans. Unfortunately for Obama's legacy, climate change is not an issue that can be addressed in a way that makes every side happy. You cannot give handouts to the dirty energy industry while trying to combat climate change, so you're going to make some folks unhappy. That's the job of the president — to put the needs of the people over the profits of private corporations. But in this case, like in so many other areas, President Obama is so afraid of a fight that he is willing to let the planet burn because he can't make up his mind on which side he actually wants to take.

Executive powers suck at climate change- 8 reasons

Adler 2/15 (Ben Adler, Columbia Journalism Review covers environmental policy and politics for Grist, with a focus on climate change, energy, and cities, Wesleyan University, "8 ways Obama sucks on climate", <http://grist.org/climate-energy/8-ways-obama-sucks-on-climate/>, 2/15/15, 8/1/15, MEM)

But many of the administration's moves, including a string of recent actions by federal agencies under Obama's control, show this conventional wisdom to be false. Here are the president's top eight climate failings, many of them from just the three months since the midterm elections: 1. Opening more federal land and water to offshore oil and gas drilling. The Obama administration just keeps handing out leases to drain fossil fuels from our public lands and waters. Three weeks ago, the Bureau of Ocean Management announced plans to open up a previously off-limits portion of the mid-Atlantic coast to oil and gas exploration, along with parts of the Arctic Ocean and the Gulf of Mexico. The White House frequently brags about how oil and gas extraction, on both public and private lands, has risen under Obama. The number of operating oil and gas rigs in the U.S. rose 18 percent from January 2009 to April 2014, the White House proudly noted last year, and in 2013, the "Bureau of Land Management (BLM) held 30 separate oil and gas lease sales, offering 5.7 million acres for lease by industry, the most in a decade." 2. Selling off public coal deposits at a loss. During his time in office, Obama has sold a staggering 2.2 billion tons of coal from publicly owned land, according to a report put out last year by Greenpeace. That coal

will lead to 3.9 billion metric tons of carbon pollution — more than a year of emissions from the entire European Union. And the BLM isn't even charging market rate for the leases, let alone factoring in climate costs. The coal leases have only brought in \$2.3 billion in revenue, while the CO2 pollution from burning all that coal will cause societal damages ranging from \$52 billion to \$530 billion, according to the government's own figures on the social cost of carbon. Obama is not required to shower fossil fuel industries with this charity. "He could order the secretary of interior to stop leasing, that's something we're advocating Obama should do," says Marissa Knodel, climate campaigner at Friends of the Earth. "That would be the kind of bold, true climate leadership that we need." 3. Promoting fracking Obama touts natural gas as a cleaner bridge fuel to get us from coal to renewables. That's problematic for a number of reasons. One of them is that the current natural gas boom is made possible by the rampant deployment of fracking technology, which has adverse environmental and health impacts on neighboring communities, due to the release of volatile organic compounds into the air, along with gas and mysterious chemicals from fracking fluids into water sources. Natural gas companies point to the dearth of data linking fracking to water pollution or long-term health effects — a problem which has not been helped by EPA abandoning at least three studies of fracking's effect on drinking water. Meanwhile, the administration promised to make rules governing fracking on federal land that would set the highest possible environmental standards and provide a good example for states and voluntary industry efforts. But, after the oil and gas industry whined about the initial proposed rules, Interior released the a weakened revised proposal in 2013. As The Hill reported, "concessions to the oil-and-gas industry ... include allowing drillers to use an existing, industry-favored database called 'FracFocus' to meet the rules' chemical disclosure requirements — a tool that critics call too weak." Green groups and congressional climate hawks like Sen. Ed Markey (D-Mass.) criticized the proposal as ineffectual. Letting frackers pollute their neighbors' air and water is just another way of subsidizing fossil fuel production. We're currently awaiting the soon-to-be-finalized rule. 4. Allowing more gas and oil exports Supposedly, Obama's "all-of-the-above" energy policy exists to serve up cheap energy to U.S. consumers. But the administration has been willing to loosen export restrictions so that it can instead serve foreign consumers — at a higher cost to the climate. Last year, the admin streamlined the process for approving export terminals for liquefied natural gas, even though LNG has a much larger carbon footprint than regular natural gas due to the energy needed to freeze, ship, and regassify it. Communities in coastal areas where terminals are proposed also worry about threats to aquatic life and the potential for terrorist attacks. The Cove Point terminal proposal in Maryland, for example, was approved last year over strong objections from environmentalists. The White House is now working with Sen. John Hoeven (R-N.D.) on a bill to expedite LNG terminal approval. The administration is also chipping away at the long-standing ban on exporting crude oil. In December, the Department of Commerce approved a series of industry requests to export a specific type of light oil, and last year the U.S. allowed more than twice as much crude oil to be exported to Canada as in 2013. Energy Secretary Ernest Moniz has suggested that it's time to reexamine the oil export ban altogether. Allowing more exports of oil and gas encourages American companies to drill more. 5. Proposing weak rules on methane leaks Last month, the EPA proposed for the first time ever to regulate methane leaks from oil and gas operations — a great idea, as such leaks account for roughly 3 percent of U.S. greenhouse gas emissions. But it turns out those rules won't be nearly as far-reaching as they could and should be, as they would apply only to new wells and pipelines, leaving thousands of existing sources of leakage untouched. One study last year projected that nearly 90 percent of methane emissions from the oil and gas sector in 2018 would come from sources that were already operating in 2011 — and all of those sources could just keep on leaking under the EPA's

proposal. That's why most of the leading environmental groups strongly criticized the plan.

6. Regulating coal ash like banana peels In December, the Obama administration squandered an excellent opportunity to clean up one of the dirtiest aspects of coal burning, and to make coal-power producers pay more of the true cost of doing business, thereby making wind and solar more cost-competitive. The EPA was tasked with developing rules for disposal of coal ash, a byproduct of coal burning that's laden with toxic heavy metals such as arsenic and lead. Over 100 million tons of this crap are produced in the U.S. every year, and often it's simply dumped into a hole in the ground, sometimes right next to a water source, as power plants are often next to rivers. Green groups want EPA to label coal ash as hazardous waste, in order to subject it to more rigorous disposal regulations. Instead, in the rule that was finalized in December, EPA is treating coal ash as "solid waste," which has lighter requirements. By going easy on coal plants' conventional pollution, the administration makes it easier for coal plants to spew climate pollution too.

7. Going soft on ozone pollution Perhaps no issue better illustrates the Obama administration's worst impulses as industry toadies than the saga of the ozone standards. Ground-level ozone — the bad kind of ozone, better known as smog — is created by chemical byproducts of industrial processes, like nitrogen oxide from fossil fuel combustion. It causes respiratory ailments such as asthma and can lead to premature death. The George W. Bush administration failed to tighten smog rules to the level recommended by EPA scientists, as you might expect — but then in Obama's first term, his administration did the same thing, for fear of angering big business ahead of the 2012 election. Last year the EPA reviewed the rules again. The current allowable level of ozone in the air is 75 parts per million, and the EPA's scientific advisory committee recommended lowering that to 60 to 70 ppm, while health and environmental advocates say it should be set at 60. The EPA is proposing 65 to 70, and when the rules are finalized, they're likely to be at the high end of that range — an improvement, but still kind of wussy. Again, this would mean going easy on fossil fuel interests, letting them continue to impose the costs of their pollution on society.

8. Counting chopped-down trees as "clean energy" The EPA is threatening to incentivize burning down our forests for energy. In implementing the Clean Power Plan to reduce CO2 emissions from power plants, it will matter enormously how the EPA calculates the CO2 emissions from different energy sources — and there are troubling signs on that front. As Politico's Michael Grunwald recently reported, "A November 19 EPA policy memo suggests that the administration intends to treat electricity produced from most forest and farm products as carbon-free." The E.U. made this same mistake, incorrectly assuming that burning trees for energy is carbon-neutral. Now, as a result, American forests are being chopped down to provide "renewable" energy to Europe. The rationale is that if you plant a new tree to replace the felled one, you do not lose a carbon sink, but the science is not that simple, plus the whole process of drying and shipping wood pellets creates carbon emissions. As The Huffington Post's Kate Sheppard reports, a group of climate scientists, engineers, and ecologists just sent a letter to EPA Administrator Gina McCarthy arguing that using biomass for energy would increase emissions. It's not yet clear whether the EPA will treat biomass as carbon neutral, but it is clear that environmentalists cannot assume the Obama administration will implement even its most important rules with the best available science. Time after time, the Obama administration encourages fossil fuel exploitation, no matter the cost to taxpayers in terms of the Treasury or the climate. And when it comes to regulating polluters, the results are too often soft rules that fall short of environmentalists' hopes, or no rules at all. Even the most moderate of green organizations have criticized some of Obama's recent moves.

PP Bad - War

The expansion of presidential war powers has the been the legal framework that caused foreign policy fiascos like the interventions in Vietnam, Iraq, Panama, and Libya

McClain 10' "Daniel, "The imperial presidency and interventionism,"

http://epublications.marquette.edu/cgi/viewcontent.cgi?article=1000&context=jablonowski_award, undergraduate at Marquette university this paper won the award for best historical research paper of an undergraduate at Marquette"

Schlesinger says of the Cold War-era presidency, "The imperial presidency was essentially the creation of foreign policy. A combination of doctrines and emotions – belief in permanent and universal crisis, fear of communism, faith in the duty and right of the United States to intervene swiftly in every part of the world – had brought about an unprecedented centralization of decisions over war and peace in the presidency."²⁵ This essay has briefly chronicled the development of the imperial presidency and its supremacy in the conduct of American foreign relations, but the discussion does not end there. While the rhetoric of the Cold 22 Mills, Nicolaus, "Leaving Iraq," *Dissent*, Spring 2009, 16. 23 Irons, Peter, *War Powers* (New York: Henry Hold & Co.), 218. 24 Fisher, Louis, *Presidential War Power* (Kansas: University Press of Kansas), 208. 25 Schlesinger, Arthur, *The Imperial Presidency* (Boston: Houghton Mifflin), 208. McClain 15 War and the War on Terror have justified in the name of democracy our country's various exercises in interventionism in places such as Korea, Vietnam, Panama, and Iraq, these foreign escapades have actually often been conducted in the pursuit of less idealized interests such as geopolitical and economic concerns. A history of the imperial presidency and its foreign policy is most useful for exposing the flaws and abuses inherent in the centralization of power over war and peace in the hands of the president. Such a history will show that the U.S. Congress, instead of actively asserting its Constitutional prerogatives, has been largely submissive in allowing the presidency to appropriate increased war powers.²⁶ The current status and future of the imperial presidency are unclear. President George W. Bush and his administration continued to operate within its framework in the War on Terror and in the invasion of Iraq. With Bush's departure from office, and the removal from power of the final generation of Cold War leadership that persisted in the Bush administration, there is hope that the Cold War-era imperialist presidency will give way to a presidential style more appropriate to the increasingly multilateral and shrinking world. Thus far, President Barack Obama's foreign policy seems to be geared, at least in its rhetoric and diplomatic overtures, towards turning away from the United States' arbitrary, interventionist past. However, it is a certainty that both the people and politicians of the United States still perceive our nation as the world's foremost superpower and share a nationalist desire to see America promote her interests and values on the global stage, making an abandonment of the imperial presidency and its costly interventionism much harder to accomplish. When will America decide to rid herself of the burden of empire?

PP Bad- Precedent

A unilateral president is a threat to democracy it is not about the individual policies but what they could justify

Turley 14' "Jonathan, "A Question of Power: The Imperial Presidency", <http://www.legion.org/magazine/222394/question-power-imperial-presidency>, Jonathan Turley is an American lawyer, legal scholar, writer, commentator, and legal analyst in broadcast and print journalism. He is currently a professor of law at The George Washington University Law School"

When James Madison shaped a new constitutional system for the United States, he and his fellow framers had one overriding fear: tyranny. They wanted to divide power between three branches and create lines of separation that prevented the concentration of power in any single branch. The framers based their ideas on an understanding of human nature – and human weakness. They tried to create a system in which ambition would check ambition. However, they knew that citizens can be distracted or deceived into giving up their very freedom. Madison warned future generations that "if Tyranny and Oppression come to this land, it will be in the guise of fighting a foreign enemy." The framers knew how effective fear can be to induce citizens to give up their liberties. Recent years have proven them once again prophetic in their warnings. To this day, many Americans misunderstand the separation of powers as simply a division of authority between three branches of government. In fact, it was intended as a protection not of institutional but of individual rights, by preventing any branch from assuming enough power to become tyrannical. No branch is supposed to have enough power to govern alone. Once power becomes concentrated in the hands of a president, citizens are left only with the assurance that such unchecked power will be used wisely – a Faustian bargain the framers repeatedly warned us never to accept. Benjamin Franklin said it best when he warned that "they who would give up essential Liberty, to purchase a little temporary Safety, deserve neither Liberty nor Safety." Despite these warnings, many people have embraced largely unchecked presidential powers under the assurance that the rising security state will keep them safe. The shift of power to the presidency certainly did not start with President Barack Obama. To the contrary, this trend has been gaining ground for decades. But it has accelerated under Obama, who has succeeded to a degree that would have made Richard Nixon blush. Indeed, Obama may be the president Nixon always wanted to be. I do not believe that Obama is (or wants to be) a tyrant. However, his unilateral actions are redrawing the lines of separation in our system in a way that I believe could prove destabilizing and even dangerous in the future. While the "imperial presidency" has been discussed as a danger in our country since its founding, it is a term most associated with Nixon. Presidents such as Andrew Jackson and Franklin Delano Roosevelt showed similar tendencies. Often, war is cited as the reason for extraconstitutional action, such as Abraham Lincoln's suspension of habeas corpus. "Imperial presidency" is not a term that reflects an actual royal ambition or the suspension of term limits. Rather, it refers to a model of the presidency that allows for a wide array of unilateral actions and largely unchecked powers. What is fascinating is that Nixon was largely unsuccessful in accomplishing this dream of a presidency with robust and largely unlimited powers. Indeed, many of the unchecked powers claimed by Nixon became the basis for articles in his impeachment and led to his resignation on Aug. 9, 1974. Four decades ago, Nixon was halted in his determined effort to create an imperial presidency with unilateral powers and privileges. But in 2013, Obama wields those very same powers openly and without serious opposition. -Surveillance. Nixon's use of warrantless

surveillance was cited as one of his greatest abuses and led to the creation of the special Foreign Intelligence Surveillance Court. Obama, however, has expanded warrantless surveillance programs to a degree that dwarfs anything Nixon imagined, including initiating a program that captured communications of virtually every U.S. citizen. -War. Nixon's impeachment included the charge that he evaded Congress' sole authority to declare war by invading Cambodia. Obama went even further in the Libyan war, declaring that he alone defines what is a "war" for the purposes of triggering the constitutional provisions on declarations of Congress. That position effectively converts the entire provision in Article I, Section 8 of the Constitution ("Congress shall have power to ... declare War") into a discretionary power of the president. -Kill lists. Nixon ordered a burglary to find evidence to use against Daniel Ellsberg, who leaked the Pentagon Papers, and was accused of a secret plot to have the White House "plumbers" "incapacitate" him in a physical attack. People were outraged. Yet Obama has asserted the right to kill any U.S. citizen without a charge, let alone conviction, based on his sole authority. Internal documents state that he has a right to kill a citizen even when he lacks "clear evidence (of) a specific attack" being planned. -Reporters/whistle-blowers. Nixon was known for his attacks on whistleblowers, using the Espionage Act of 1917 to bring a rare criminal case against Ellsberg. He was vilified for this abuse of the law, but Obama has brought twice as many such prosecutions as all prior presidents combined. Nixon was accused of putting a few reporters under surveillance. The Obama administration has admitted to putting Associated Press reporters, as well as a Fox reporter, under surveillance. -Obstruction of Congress. Nixon was cited for various efforts to obstruct or mislead congressional investigators. The Obama administration has repeatedly refused to give evidence sought by oversight committees in a variety of scandals. In one case, Congress voted to move forward with criminal contempt charges against Attorney General Eric Holder, which Holder's own Justice Department blocked. In another case, Director of National Intelligence James Clapper lied before Congress on the surveillance programs, and later said that he offered the least untruthful statement he could think of. The Obama administration, however, refuses to investigate Clapper for perjury, let alone fire him. Recently, the administration was accused of searching Senate computers in an investigation of the CIA and trying to intimidate congressional investigators. These examples are simply those connected with the growing internal security state. Other characteristics of an imperial presidency are equally evident, particularly in the repeated circumvention of Congress in ordering unilateral changes to federal law or suspending federal laws. While many hail Obama for not taking "no" for an answer from Congress in areas such as health care and immigration reform, they may rue the day another president uses the same powers to negate environmental or anti-discrimination laws. It has long been said that one of the scariest statements is, "Trust us, we're from the government." The deep American distrust for such a claim was shared by the framers, who rejected a government based on assurances of the best intentions. Madison famously warned, "If men were angels, no government would be necessary." In other words, we have a government that refuses to accept promises of good behavior or motivations from politicians. Time and time again, Obama has returned to the theme that there is nothing to worry about in surveillance or wars or even the killing of citizens because he promises to use the powers wisely. The administration has been particularly adept in creating internal "committees" to suggest some form of due process before citizens are vaporized or other unchecked powers are used by the president. Since the president creates these committees and appoints their members out of his own authority, he can simply ignore their recommendations. It is little more than the promise of best intentions – the very promise the framers warned us never to accept from our government. In the end, we have accepted the lure of personality over principle in allowing the expansion of these powers. Obama will not be our last president, but these powers are unlikely

to be voluntarily surrendered by his successors. There is a radical change occurring in our system, and we may be at a critical constitutional tipping point in the establishment of an imperial presidency in the coming years. The danger of this concentration of authority is made more acute by the failure of federal courts to perform their vital function in confining the branches to their constitutional spaces. Federal courts in the past few decades have maintained an increasing position of avoidance in separation-of-powers cases, leaving it to the political branches to fight over turf. Courts now routinely block litigants, including members of Congress, from even being heard on constitutional violations. Years ago, I represented Democratic and Republican members (both conservative and liberal) challenging the Libyan war. They were denied even a hearing. Congress has proved equally passive, if not inert. Democrats have remained silent in the face of policies that challenge core values of privacy and war, as did Republicans under George W. Bush. That interbranch tension envisioned by Madison has gradually dissipated. Individual ambition of politicians has replaced institutional ambition, leaving many to curry favor with the White House as legislative powers are drained away by an increasingly powerful president. As that power increases, there is more pressure on politicians to yield in new areas. This downward spiral may have reached its ultimate expression this year. Framers such as Madison would have been mortified by the scene from the most recent State of the Union address. Obama appeared before a joint session of Congress (and members of the Supreme Court) to announce that he intended to go it alone in achieving his policy goals, refusing to yield to the actions of Congress. One would have expected an outcry, or at least stony silence, from a branch that was being told it would be circumvented. Instead, there was rapturous applause that bordered on a collective expression of institutional self-loathing. Obama has made it clear that he simply will not take “no” for an answer. When Congress recently refused to pass the DREAM Act to change immigration laws to protect potentially millions of deportable individuals, he simply ordered the very same measures on his own authority. The same unilateral measures were ordered in health care, drug enforcement, online gambling and other areas. The failure of Congress to consent to executive demands was followed by the same measures being ordered on the basis of Obama’s inherent authority. Under this approach, Congress is being reduced to an almost decorative element in governance – free to approve but not to block presidential demands. While Congress clearly retains powers, its members are increasingly finding that discretionary funds and powers blunt efforts to change government programs. Even Congress’ power of the purse has become discretionary with the president. When Congress resisted demands of the president on health care, Obama simply shifted \$454 million in funds from the purpose mandated by Congress to his own purpose. When he decided not to consult with Congress on the Libyan war, he simply spent roughly a billion dollars on a war neither declared nor funded by Congress. Such circumvention – and the new presidential powers – create a perfect storm within the Madisonian system. It raises the very prospect the framers thought they blocked through the separation of powers: a president who can effectively rule alone. We often refer to ourselves as the “land of the free,” as if that status were self-evident. We rarely ask ourselves what those freedoms are and how they have been abridged. Our self-image can border on self-delusion when we take stock of the status of many rights. We have learned of a massive surveillance program in which every citizen has had telephonic and email data captured by the government. Every citizen has been warned that the president may kill them on his own authority without a charge, let alone a conviction. We have a secret court that approves thousands of secret searches every year and a federal court system that increasingly allows the use of secret evidence. We have a new Obama-era law, the National Defense Authorization Act, that allows for the indefinite detention of people by the government and, while exempted from mandatory detention, allows for such detention of citizens. We still

have a detention center at Guantanamo Bay, established by George W. Bush, just over our border to avoid the jurisdiction of U.S. courts. It allows the president to choose who gets a real trial, who gets a legally dubious military tribunal, or who gets no trial at all. While seeking to close the facility, Obama has continued to assert the right to send people to military tribunals on his sole authority – thereby stripping them of core legal protections. While the erosion of freedoms in the United States has occurred with nary a whimper of regret in this country, it has not gone unnoticed abroad. The United States is now widely viewed as a hypocrite on the subject of human rights and civil liberties. This year, our nation fell to 46th in the world on press freedoms (behind the former Soviet republics of Lithuania and Latvia as well as Romania, Poland, Czechoslovakia, Ghana, South Africa and El Salvador), according to a recent study by Reporters Without Borders. Another study this year counts the United States as an “enemy of Internet freedom” with countries such as Iran, China and North Korea. When the full mosaic of new governmental powers is considered, and the full array of rights curtailed in the United States, we are left with a disturbing question of self-identity. We more often seem to define ourselves by what we are not than by what we are. In the summer of 1787, a telling moment occurred after a crowd gathered around Independence Hall to learn what type of government had been created for the new nation. When Benjamin Franklin walked out of the Constitutional Convention, Elizabeth Powel could wait no longer. Franklin was one of the best known of the framers working on the new U.S. Constitution. Powel ran up to Franklin and asked, “Well, Doctor, what have we got, a republic or a monarchy?” Franklin turned to her and said what are perhaps the most chilling words uttered by any framer: “A republic, Madam, if you can keep it.” It may be that it is not the presidency that has changed. We have changed. As a nation, we seem to have grown almost bored with rights like privacy and due process. We have been passive and pedestrian in watching the rise of an uber-presidency. We no longer view ourselves as directing our government, but as merely bystanders watching matters outside our control. Worse yet, we seem to have lost not just our identity but even our interest in governance. It was a republic when Franklin was stopped by Powel. I am not sure that most citizens today would even have stopped him to ask. “Democracy ... soon wastes, exhausts and murders itself,” John Adams once said. “There was never a democracy yet that did not commit suicide.” What is truly sad is that if one of the greatest republics in history did die, it is not clear if anyone would even notice its passing. - See more at: <http://www.legion.org/magazine/222394/question-power-imperial-presidency#sthash.tBrc1dwq.dpuf>

An increase of Prez powers is bad, even if the policies being done now are good the increase in power means the next president could easily change them

Hacker et al' 13 “ Jacob, and oona Hathaway, “Deware an unchecked president”, <http://articles.latimes.com/2013/dec/08/opinion/la-oe-hacker-presidential-power-20131208>, Jacob S. Hacker is a professor of political science and director of the Institution for Social and Policy Studies at Yale. Oona A. Hathaway is a professor of law and director of the Center for Global Legal Challenges at Yale Law School.”

In the face of congressional gridlock, President Obama has started taking more and more matters into his own hands. In recent months, he has announced new gun control measures, put in place limited immigration reform and made fixes to the Affordable Care Act — all without Congress. Many liberals who once worried about presidential overreach have applauded his robust use of presidential power. Yet the president's increasing unilateralism shouldn't be cause for celebration. Bypassing Congress means bypassing democratic checks. It also means giving up on government's ability to effectively address serious long-term challenges. The solution to a

dysfunctional Congress isn't an unchecked executive; it's a Congress that actually works. A first step in that direction was taken recently with the banning of filibusters for executive branch nominees and federal judges below the Supreme Court. YEAR IN REVIEW: Washington's 5 biggest 'fails' of 2013 The filibuster is not part of our nation's constitutional design. To the contrary, the framers rejected supermajority requirements except in limited circumstances, such as impeaching the president and ratifying treaties. Alexander Hamilton wrote in Federalist No. 22 that if "a pertinacious minority can control the opinion of a majority," there would be "tedious delays; continual negotiation and intrigue; contemptible compromises of the public good." As a result, the government would often be "kept in a state of inaction." Sound familiar? However, the framers certainly wouldn't have approved of the president responding to this "state of inaction" by simply going around Congress and exercising unilateral powers. When President George W. Bush was in office, Democrats criticized his go-it-alone approach — his insistence, for example, that he could launch military attacks without Congress' blessing, or unilaterally tighten restrictions on the use of stem cells in federally funded research. But the last five years have shown that many on the left are willing to turn a blind eye to unchecked executive action when a Democrat is in the White House. YEAR IN REVIEW: Highs and lows from Obama's roller-coaster year It's no mystery why. Congress has proved a graveyard for serious action on almost every issue. Obama, a professor of constitutional law who once criticized executive unilateralism, has acted alone mainly because it's the only way he can get anything done. But while Democrats have the presidency now, they won't hold it forever. In the meantime, they're feeding a beast that will be extremely difficult to control in the future. And the policy achievements could prove ephemeral. Anything Obama can achieve alone, a successor can potentially undo. Worse, the Democratic embrace of unilateralism feeds the cycle of dysfunction. It strips responsibility from Congress, removing whatever is left of the incentive for compromise. And some things near and dear to the hearts of Democrats, such as improving our anemic economy, simply can't be achieved through executive fiat. Republicans should also want to fix the status quo. The political branch where they're strongest is increasingly weak, and things are only going to get worse. After all, even if filibuster reform applies only to judicial and presidential nominees, it will substantially increase the power of the man in the Oval Office they love to hate. He will find it much easier to fill vacancies in the executive branch and federal courts with appointees who will carry out and legally protect executive initiatives. That's bad for Republicans and the republic. So what can be done? First, end the filibuster for good — for everything. As we just saw, the majority of the Senate has the power to do this. Yes, the filibuster gives every senator enhanced power to grind government to a halt. But that very same power makes each senator part of an institution that is growing more unpopular and irrelevant by the day. Second, fix the broken budget process. The federal government should run on last year's budget if Congress can't agree on a new one. That would end the opportunities for endless hostage-taking and prevent costly shutdowns. (And while we're at it, it is well past time to eliminate the redundant debt-ceiling vote, which has caused so much havoc.) Third, bring transparency to lobbying and campaign donations, and pursue efforts to reduce candidates' reliance on big donors and powerful lobbyists. Congress won't be truly accountable to the people until the pull of narrow, wealthy interest groups and intense party activists is weakened. The hard part, of course, isn't coming up with sensible reforms in these areas (and we've merely hinted at an agenda). It's getting Congress to put them in place. No one should expect a short or easy struggle. But maybe the only thing the parties can agree on is that the president should not be governing the country alone. If so, there's a chance filibuster reform could be just the start.

Obama's executive actions are distinct for 3 reasons, he can alter his own legislation, prevent legislative action, and the surveillance state

Pollak 13' "Joel, three ways Obama's executive orders are the worst of any president, <http://www.breitbart.com/big-government/2014/02/04/ruth-marcus-obama-executive-order/>, Joel Barry Pollak is an American political commentator and author. As of 2012, he is the editor-in-chief and in-house counsel for Breitbart.com."

Ruth Marcus of the Washington Post is the latest to defend President Barack Obama's use—past, present, and future—of executive orders to circumvent Congress. She argues that his "push-the-envelope moves" are "within the bounds of the modern presidency." Marcus is not alone here: others have pointed out that Obama has used fewer executive orders than his predecessors, forgetting that constitutionality is what matters, not quantity. Complaints about executive orders, Marcus suggests, are just "politics dressed up in constitutional clothing, to be put on and off depending on which party holds the White House." I can say with confidence, as someone who never voted for George W. Bush and resented his expansion of the executive, that Obama is in another league entirely. There are three basic ways in which Obama's behavior exceeds that of any his predecessors. The first is that Obama is using executive orders and actions to alter his own legislation. It's one thing to claim that you are forced to act because Congress will not. It's quite another thing to re-write the law after Congress has done what you asked—and after you have offered, time and time again, to entertain formal amendments to the legislation. Obama has simply invoked executive authority to cover up his own errors. That's unprecedented. The second way in which Obama's abuse of executive power is different is that he has done it to prevent the legislature from acting. It is now widely acknowledged that the president issued his "Dream Act by fiat" in 2012 not just because Congress wouldn't pass his version of immigration reform, but to outflank Sen. Marco Rubio (R-FL)80% , who was preparing his own version, embarrassing Obama among Latino voters. Such pettiness is rare. The third way in which Obama's behavior is unusual is that he commands sweeping executive power on some issues while arguing, on other issues, that he has no power to act. The president's recent speech about the NSA surveillance programs is a prime example of such self-contradiction. There is no constitutional doctrine behind the president's executive orders, actions, and omissions: there is just pure, cynical political expediency. A final note. Marcus, like other apologists for President Obama's power grabs, compares his actions to those of President Abraham Lincoln when he issued the Emancipation Proclamation. It is an absurd comparison, one chosen to flatter Obama's failing pseudo-heroic image. If anything, Obama's executive excesses tend to make us less free. He is not governing in the tradition of Lincoln, but that of Woodrow Wilson—and doing far worse.

Presidential Powers -MSDI

1NC

1NC

Surveillance is part of presidential powers to fight wars—any interference in surveillance disrupts this power—wide presidential discretion is key

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

The present circumstances that support recognition of **the President's inherent constitutional authority to conduct the NSA activities** are considerably **stronger** than were the circumstances at issue in the earlier courts of appeals cases that recognized this power. All of the cases described above addressed inherent executive authority under **the foreign affairs power to conduct surveillance in a** peacetime context. The courts in these cases therefore had no occasion even to consider the fundamental authority of the President, **as Commander in Chief**, to gather intelligence in the context of an ongoing armed conflict in which the United States already had suffered massive civilian casualties and in which the intelligence gathering efforts at issue were specifically designed to thwart further armed attacks. Indeed, intelligence gathering **is particularly important in the current conflict, in which the enemy attacks largely through clandestine activities and** which, as Congress recognized, **"pose[s] an unusual and extraordinary threat,"** AUMF pmb. Among the President's most basic constitutional duties is the duty to protect the Nation from armed attack. **The Constitution gives him all necessary authority to fulfill that responsibility.** The courts thus have long acknowledged the President's inherent authority to take action to protect Americans abroad, see, e.g., *Durand v. Hollins*, 8 F. Cas. 111, 112 (C.C.S.D.N.Y. 1860) (No. 4186), and to protect the Nation from attack, see, e.g., *The Prize Cases*, 67 U.S. at 668. See generally *Ex parte Quirin*, 317 U.S. 1, 28 (1942) (recognizing that the President has authority under the Constitution "to direct the performance of those functions which may constitutionally be performed by the military arm of the nation in time of war," including "important incident[s] to the conduct of war," such as "the adoption of measures by the military command . . . to repel and defeat the enemy"). As the Supreme Court emphasized in the *Prize Cases*, if the Nation is invaded, the President is "bound to resist force by force"; "[h]e must determine what degree of force the crisis demands" and need not await congressional sanction to do so. *The Prize Cases*, 67 U.S. at 670; see also *Campbell v. Clinton*, 203 F.3d 19, 27 (D.C. Cir. 2000) (Silberman, J., concurring) ("[T]he *Prize Cases* . . . stand for the proposition that the President has independent authority to repel aggressive acts by third parties even without specific congressional authorization, and courts may not review the level of force selected."); *id.* at 40 (Tatel, J., concurring) ("[T]he President, as commander in chief, **possesses emergency authority to use military force to defend the nation from attack without obtaining prior congressional approval.**"). Indeed, **"in virtue of his rank as head of the forces, [the President] has certain powers and duties with which Congress cannot interfere."** *Training of British Flying Students in the United States*, 40 Op. Att'y Gen. 58, 61 (1941) (Attorney General Robert H. Jackson) (internal quotation marks omitted). In exercising his constitutional powers, **the President has wide discretion**, consistent with the Constitution, **over the methods of gathering intelligence** about the Nation's enemies in a time of armed conflict.

Presidential discretion is key to resolve modern threats

ALBERTO R. GONZALES 2014 Alberto R. Gonzales was the 80th United States Attorney General, appointed in February 2005 by President George W. Bush, becoming the highest-ranking Hispanic-American in Executive Branch government to date. “ADVISING THE PRESIDENT: THE GROWING SCOPE OF EXECUTIVE POWER TO PROTECT AMERICA”, (http://www.harvard-jlpp.com/wp-content/uploads/2015/05/Gonzales_Final.pdf)//EG

Much of the debate over the exercise of executive power in the national security context arises in those circumstances where the President arguably has neither express constitutional nor express congressional authority. In these situations, presidents have relied upon an inherent or implied authority under the Constitution, emanating from their Commander in Chief power to protect and defend America.¹²⁷ As the Supreme Court has recognized, the President is considered the “sole organ” of the United States in foreign affairs.¹²⁸ The Court held in *United States v. Curtiss-Wright Export Corp.* that the President is uniquely positioned to act decisively and quickly in the field of international relations and especially in times of war, given the delicate nature of intelligence and negotiations with foreign sovereigns.¹²⁹ Although the Constitution says relatively little about the national security powers of the executive, I am unaware of any serious widespread disagreement that the President has some inherent authority. However, there is serious disagreement as to the scope of that authority.¹³⁰ Unfortunately, the courts have been inconsistent in the development and application of a framework to help resolve the question.¹³¹ From my study of history, the default position throughout American history appears to be that the President has inherent power do what he needs to do to protect our country, subject to examination after the fact by Congress, the media, historians, and the American people. The President’s inherent authority to take action appears to be even more widely accepted when such action is against non-citizens outside the boundaries of the United States. Given the growing magnitude of today’s threats, I believe this default position will remain true as we move into the future.

Presidential power is key to solve rogue states, and turns every case impact

Matthew C Waxman, law professor at Columbia University and author who held several positions during the George W. Bush administration. He is also currently a Fellow at the Hoover Institution on War, Revolution and Peace, 2014, *Yale Law Journal* “The Power to Threaten War”

The President’s power to threaten force is almost certainly at least as broad as his power to use it. One way to think about it is that the power to threaten force is a lesser-included element of presidential war powers; the power to threaten to use force is simply a secondary question, the answer to which is bounded by the primary issue of the scope of presidential power to actually use it. If one interprets the President’s defensive war powers very broadly, to include dealing with aggression against not only U.S. territories but also its distant interests and allies,⁴⁹ then it is easy to conclude that the President can also therefore take steps that stop short of actual armed intervention to deter or prevent such aggression. If, however, one interprets the President’s powers narrowly—for example, to include only limited unilateral authority to repel attacks against U.S. territory⁵⁰—then one might extend objections to excessive presidential power to include the President’s unilateral threats of armed intervention. Since the turn of the twenty-first century, major U.S. security challenges have included non-state terrorist threats,

the proliferation of nuclear and other weapons of mass destruction (WMD), and rapidly changing power balances in East Asia, and the United States has accordingly been reorienting but retaining its strategic reliance on threatened force. The Bush Administration's "preemption doctrine" was premised on the idea that some dangerous actors—including terrorist organizations and some states seeking WMD arsenals—are undeterrable, so the United States might have to strike them first rather than waiting to be struck.¹⁰⁹ On one hand, this was a move away from reliance on threatened force: "The inability to deter a potential attacker, the immediacy of today's threats, and the magnitude of potential harm that could be caused by our adversaries' choice of weapons, do not permit" a reactive posture.¹¹⁰ Yet the very enunciation of such a policy—that "[t]o forestall or prevent such hostile acts by our adversaries, the United States will, if necessary, act preemptively"¹¹¹—was intended to persuade those adversaries and their supporters to alter their policies that the United States regarded as destabilizing and threatening. Although the Obama Administration pulled back from this rhetoric and placed greater emphasis on international institutions, it has continued to rely on threatened force as a key pillar of its strategy with regard to deterring adversaries (such as aggressive Iranian moves), intervening in humanitarian crises (as in Libya), and reassuring allies.¹¹² With regard to East Asia, for example, the credible threat of U.S. military force is a significant element of U.S. strategy for deterring Chinese and North Korean aggression as well as reassuring other Asian powers of U.S. protection, to avert a destabilizing arms race.¹¹³ In justifying possible military force against Syria in response to its government's use of chemical weapons, President Obama emphasized the credible threat of U.S. military action as necessary to dissuade states and terrorist organizations from acquiring or using WMD.¹¹⁴

Rogue states cause nuclear war

Colonel Scott A. Enold, 2-4-2009, United States Air Force, USAWC CLASS OF 2009, Colonel Stephen Weiler Department of Command, Leadership, and Management, This SRP is submitted in partial fulfillment of the requirements of the Master of Strategic Studies Degree, The U.S. Army War College, Accessed online via google, /Bingham-MB

Where nuclear proliferation is concerned, there are significant issues that surround rogue states. After the collapse of the Berlin Wall and the disintegration of the Soviet Union, there was an emergence of rogue states. As the Soviet Union crumbled, their ability to police the countries under their control diminished as well. With the demise of the Soviet Union, came the demise of a "watch dog" type nation that kept the proliferation activities of the countries under its control. This simultaneously kept terrorist organizations at bay as well, albeit through extreme state measures. As a result, the global terrorist threat increased.¹⁶ Since the fall of the Soviet Union the bipolar balance of power has shifted to a multipolar balance, the international security environment has undergone a profound transformation. The Evil Empire of the Reagan years disappeared. However, with that disappearance came the uncertainty and danger of weapons of mass destruction proliferation.¹⁷ Rogue states are actively pursuing nuclear weapon capabilities and other weapons of mass destruction. Weapons of mass destruction are considered to be weapons designed to kill large numbers of people with the intent of making a violent statement. They are also known as weapons of indiscriminate destruction, weapons of mass disruption, and weapons of catastrophic effect. It is important for a potential enemy to understand that if a nuclear weapon or any weapon of mass destruction is employed, the end

result may be of no benefit to their cause.¹⁸ Rogue states are linked to sponsoring terrorist and other criminal activities. Rogue states present a diplomatic challenge to the world and particularly of the United States. Generally speaking, they are ruled by authoritarian or totalitarian regimes that severely restrict what those in the West would regard as basic human freedoms and rights. They are generally hostile to the West and its allies like Japan and South Korea in the East, and are often accused of sponsoring terrorism or of seeking to acquire or develop weapons of mass destruction.¹⁹ 7 In a world that is dominated by balance of power, diplomacy and politics, the rogue states are determined to obtain weapons of mass destruction (up to and including nuclear capabilities).²⁰ Their reasons for this pursuit include, but are not limited to, possession of weapons that could counter a potential attack from the United States and to justify leadership's legitimacy and recognition among the country's populous.²¹ For the United States, this determination to pursue nuclear weapon technology represents a great threat. Rogue states are not bound by either international law or rational behavior. Therefore, there is a strong likelihood that rogue states might use weapons of mass destruction against any member of the international community, especially against the United States. However, a significant planning and preparation effort would need to occur in order to execute such an event.²² As this situation continues and rogue states continue to develop a network for proliferation, the world security environment has become more dynamic and more complex. United States safety and homeland security are more questionable. Global safety and security is more questionable now than during the Cold War era. ²³

Uniqueness

UQ – Pres Powers High Now

There is unprecedented executive surveillance authority now

Dustin Volz, 12-11-2014, staff correspondent for National Journal covering tech policy. His work has previously appeared in The Washington Post, The Center for Public Integrity, and The Arizona Republic, "Congress Quietly Bolsters NSA Spying in Intelligence Bill," nationaljournal, <http://www.nationaljournal.com/tech/congress-quietly-bolsters-nsa-spying-in-intelligence-bill-20141211>, Accessed: 7-2-2015, /Bingham-MB

December 11, 2014 Congress this week quietly passed a bill that may give unprecedented legal authority to the government's warrantless surveillance powers, despite a last-minute effort by Rep. Justin Amash to kill the bill. Amash staged an aggressive eleventh-hour rally Wednesday night to block passage of the Intelligence Authorization Act, which will fund intelligence agencies for the next fiscal year. The Michigan Republican sounded alarms over recently amended language in the package that he said will for the first time give congressional backing to a controversial Reagan-era decree granting broad surveillance authority to the president. The 47-page intelligence bill was headed toward a voice vote when Amash rose to the House floor to ask for a roll call. Despite his efforts—which included a "Dear Colleague" letter sent to all members of the House urging a no vote—the bill passed 325-100, with 55 Democrats and 45 Republicans opposing. The provision in question is "one of the most egregious sections of law I've encountered during my time as a representative," Amash wrote on his Facebook page. The tea-party libertarian, who teamed up with Rep. John Conyers last year in an almost-successful bid to defund the National Security Agency in the wake of the Snowden revelations, warned that the provision "grants the executive branch virtually unlimited access to the communications of every American." The measure already passed the Senate by unanimous consent on Tuesday, and it is now on its way to the White House, where President Obama is expected to sign it. The objections from Amash and others arose from language in the bill's Section 309, which includes a phrase to allow for "the acquisition, retention, and dissemination" of U.S. phone and Internet data. That passage, they warn, will give unprecedented statutory authority to allow for the surveillance of private communications that currently exists only under a decades-old presidential decree, known as Executive Order 12333. "If this hadn't been snuck in, I doubt it would have passed," said Rep. Zoe Lofgren, a California Democrat who voted against the bill. "A lot of members were not even aware that this new provision had been inserted last-minute. Had we been given an additional day, we may have stopped it."

None of the NSA reforms impact this authorization

**Note this card is talking about Obama's proposed reforms in summer 2014, these were the reforms that were implemented in the USA freedom act 2015

Dustin Volz, 12-11-2014, staff correspondent for National Journal covering tech policy. His work has previously appeared in The Washington Post, The Center for Public Integrity, and The Arizona Republic, "Congress Quietly Bolsters NSA Spying in Intelligence Bill," nationaljournal, <http://www.nationaljournal.com/tech/congress-quietly-bolsters-nsa-spying-in-intelligence-bill-20141211>, Accessed: 7-2-2015, /Bingham-MB

Lofgren, however, noted that the language was "the exact opposite of what the House passed this summer." She was referring to an amendment she championed that would have required the NSA to obtain a warrant before reading Americans' private messages that were collected through a program intended to target foreigners. "Congress is authorizing something very questionable constitutionally," Lofgren added. A tech-industry lobbyist added: "The language is broad, and depending on how it is implemented, does little to help restore the public's lack of trust in U.S. government surveillance programs." Backers of the section argue it would actually limit to five years the amount of time communications data could be kept at intelligence agencies, certain exceptions permitting. But it is generally acknowledged that such data is already rarely kept beyond five years, which Amash characterized as a trade-off that "provides a novel statutory basis for the executive branch's capture and use of Americans' private communications." "The provisions in the intel authorization appear to be an attempt by Congress to place statutory restrictions on the retention of information collected under Executive Order 12333, which is not subject to court oversight, has not been authorized by Congress, and raises serious privacy concerns," said Neema Guliani, legislative counsel with the American Civil Liberties Union. "However, these restrictions are far from adequate, contain enormous loopholes, and notably completely exclude the information of non-U.S. persons." Executive Order 12333 is not as widely known as the controversial Section 215 of the USA Patriot Act—which allows for the mass collection of domestic phone metadata. Like Section 702 of the Foreign Intelligence Surveillance Act, 12333 is intended to target foreign surveillance, although an unknown amount of U.S. data is "incidentally" tracked, particularly for citizens living overseas or those that communicate with foreigners. But the order, which was issued by President Reagan in 1981 and twice amended by President George W. Bush, earned a burst of attention this summer when former State Department official John Napier Tye wrote extensively about it in the Washington Post. "Executive Order 12333 contains nothing to prevent the NSA from collecting and storing all such communication—content as well as metadata— provided that such collection occurs outside the United States in the course of a lawful foreign intelligence investigation," Tye wrote. "No warrant or court approval is required, and such collection never need be reported to Congress. None of the reforms that Obama announced earlier this year will affect such collection."

UQ – Flex Now

2001 AUMF still gives the president broad flex for NSA activities

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

The AUMF places the President at the zenith of his powers in authorizing the NSA activities. Under the tripartite framework set forth by Justice Jackson in *Youngstown Sheet & Tube Co. v. Sawyer*, 343 U.S. 579, 635-38 (1952) (Jackson, J., concurring), Presidential authority is analyzed to determine whether the President is acting in accordance with congressional authorization (category I), whether he acts in the absence of a grant or denial of authority by Congress (category II), or whether he uses his own authority under the Constitution to take actions incompatible with congressional measures (category III). Because of the broad authorization provided in the AUMF, the President's action here falls within category I of Justice Jackson's framework. Accordingly, the President's power in authorizing the NSA activities is at its height because he acted "pursuant to an express or implied authorization of Congress," and his power "includes all that he possesses in his own right plus all that Congress can delegate." *Id.* at 635.

UQ – AT: USA Freedom Act

NSA was balanced—ensures counter terror flexibility still

Michael D. Shear, 6-3-2015, In Pushing for Revised Surveillance Program, Obama Strikes His Own Balance," New York Times, <http://www.nytimes.com/2015/06/04/us/winning-surveillance-limits-obama-makes-program-own.html>, Accessed: 6-8-2015, /Bingham-MB

"He weighs the balance every day," she said. The compromise on collections of telephone records may end up being too restrictive for the president's counterterrorism professionals, as some Republicans predict. Or, as others vehemently insisted in congressional debate during the past week, it may leave in place too much surveillance that can intrude on the lives of innocent Americans. Either way, Mr. Obama's signature on the law late Tuesday night ensures that he will deliver to the next president a method of hunting for terrorist threats despite widespread privacy concerns that emerged after Edward J. Snowden, a former N.S.A. contractor, revealed the existence of the telephone program. "He owned it in 2009," said Michael V. Hayden, a former N.S.A. director under President George W. Bush, who oversaw the surveillance programs for years. "He just didn't want anyone to know he owned it." Jameel Jaffer, the deputy legal director of the American Civil Liberties Union, called the USA Freedom Act "a step forward in some respects," but "a very small step forward." He said his organization would continue to demand that the president and Congress scale back other government surveillance programs. "Obama has been presented with this choice: Are you going to defend these programs or are you going to change them?" Mr. Jaffer said. "Thus far, we haven't seen a lot of evidence that the president is willing to spend political capital changing those programs." In the case of the telephone program, Mr. Obama's preferred compromise was originally the brainchild of his N.S.A. officials, who embraced it as a way to satisfy the public's privacy concerns without losing the agency's ability to conduct surveillance more broadly. In the lead-up to last week's congressional showdown, Mr. Obama and his national security team insisted that broad surveillance powers were vital to tracking terrorist threats, while admitting that the new approach to data collection would not harm that effort. White House officials said Mr. Obama was comfortable that history would show that he struck the right balance. "To the extent that we're talking about the president's legacy, I would suspect that that would be a logical conclusion from some historians," said Josh Earnest, the president's press secretary. Mr. Earnest said the compromise addressed anxiety about privacy but still gave the government access to needed records.

NSA is a win for Obama—they were the reforms that he wants

Michael D. Shear, 6-3-2015, In Pushing for Revised Surveillance Program, Obama Strikes His Own Balance," New York Times, <http://www.nytimes.com/2015/06/04/us/winning-surveillance-limits-obama-makes-program-own.html>, Accessed: 6-8-2015, /Bingham-MB

Now, **after successfully badgering Congress into reauthorizing the program**, with new safeguards the president says will protect privacy, **Mr. Obama has left little question that he owns it**. The new surveillance program created by the USA Freedom Act will end more than a decade of bulk collection of telephone records by the National Security Agency. But it will make records already held by telephone companies available for broad searches by government officials with a court order. **"The reforms** that have now been enacted **are exactly the reforms the president called**

for over a year and a half ago,” said Lisa Monaco, the president’s top counterterrorism adviser. She called the bill the product of a “robust public debate” and said the White House was “gratified that the Senate finally passed it.”

Links

Link – Expansive Surveillance Power

Expansive Presidential Powers is necessary to respond to modern threats— expansive surveillance is part of the authority to use all necessary and proper force

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

On September 14, 2001, in its first legislative response to the attacks of September 11th, Congress gave its express approval to the President's military campaign against al Qaeda and, in the process, confirmed the well-accepted understanding of the President's Article II powers. See AUMF § 2(a).³ In the preamble to the AUMF, Congress stated that "the President has authority under the Constitution to take action to deter and prevent acts of international terrorism against the United States," AUMF pmb., and thereby acknowledged the President's inherent constitutional authority to defend the United States. This clause "constitutes an extraordinarily sweeping recognition of independent presidential constitutional power to employ the war power to combat terrorism." Michael Stokes Paulsen, *Youngstown Goes to War*, 19 Const. Comment. 215, 252 (2002). This striking recognition of presidential authority cannot be discounted as the product of excitement in the immediate aftermath of September 11th, for the same terms were repeated by Congress more than a year later in the Authorization for Use of Military Force Against Iraq Resolution of 2002. Pub. L. No. 107-243, pmb., 116 Stat. 1498, 1500 (Oct. 16, 2002) ("[T]he President has authority under the Constitution to take action in order to deter and prevent acts of international terrorism against the United States . . ."). In the context of the conflict with al Qaeda and related terrorist organizations, therefore, Congress has acknowledged a broad executive authority to "deter and prevent" further attacks against the United States. The AUMF passed by Congress on September 14, 2001, does not lend itself to a narrow reading. Its expansive language authorizes the President "to use all necessary and appropriate force against those nations, organizations, or persons he determines planned, authorized, committed, or aided the terrorist attacks that occurred on September 11, 2001." AUMF § 2(a) (emphases added). In the field of foreign affairs, and particularly that of war powers and national security, congressional enactments are to be broadly construed where they indicate support for authority long asserted and exercised by the Executive Branch. See, e.g., *Haig v. Agee*, 453 U.S. 280, 293-303 (1981); *United States ex rel. Knauff v. Shaughnessy*, 338 U.S. 537, 543-45 (1950); cf. *Loving v. United States*, 517 U.S. 748, 772 (1996) (noting that the usual "limitations on delegation [of congressional powers] do not apply" to authorizations linked to the Commander in Chief power); *Dames & Moore v. Regan*, 453 U.S. 654, 678-82 (1981) (even where there is no express statutory authorization for executive action, legislation in related field may be construed to indicate congressional acquiescence in that action). Although Congress's war powers under Article I, Section 8 of the Constitution empower Congress to legislate regarding the raising, regulation, and material support of the Armed Forces and related matters, rather than the prosecution of military campaigns, the AUMF indicates Congress's endorsement of the President's use of his constitutional war powers. This authorization transforms the struggle against al Qaeda and related terrorist organizations from what Justice Jackson called "a

zone of twilight,” in which the President and the Congress may have concurrent powers whose “distribution is uncertain,” *Youngstown Sheet & Tube Co. v. Sawyer*, 343 U.S. 579, 637 (1952) (Jackson, J., concurring), into a situation in which the President’s authority is at its maximum because “it includes all that he possesses in his own right plus all that Congress can delegate,” *id.* at 635. With regard to these fundamental tools of warfare—and, as demonstrated below, warrantless electronic surveillance against the declared enemy is one such tool—the AUMF places the President’s authority at its zenith under *Youngstown*. It is also clear that the AUMF confirms and supports the President’s use of those traditional incidents of military force against the enemy, wherever they may be—on United States soil or abroad. The nature of the September 11th attacks—launched on United States soil by foreign agents secreted in the United States—necessitates such authority, and the text of the AUMF confirms it. The operative terms of the AUMF state that the President is authorized to use force “in order to prevent any future acts of international terrorism against the United States,” *id.*, an objective which, given the recent attacks within the Nation’s borders and the continuing use of air defense throughout the country at the time Congress acted, undoubtedly 11 contemplated the possibility of military action within the United States. The preamble, moreover, recites that the United States should exercise its rights “to protect United States citizens both at home and abroad.” *Id.* pmb1. (emphasis added). To take action against those linked to the September 11th attacks involves taking action against individuals within the United States. The United States had been attacked on its own soil—not by aircraft launched from carriers several hundred miles away, but by enemy agents who had resided in the United States for months. A crucial responsibility of the President—charged by the AUMF and the Constitution—was and is to identify and attack those enemies, especially if they were in the United States, ready to strike against the Nation. The text of the AUMF demonstrates in an additional way that Congress authorized the President to conduct warrantless electronic surveillance against the enemy. The terms of the AUMF not only authorized the President to “use all necessary and appropriate force” against those responsible for the September 11th attacks; it also authorized the President to “determine[]” the persons or groups responsible for those attacks and to take all actions necessary to prevent further attacks. AUMF § 2(a) (“the President is authorized to use all necessary and appropriate force against those nations, organizations, or persons he determines planned, authorized, committed, or aided the terrorist attacks that occurred on September 11th, 2001, or harbored such organizations or persons”) (emphasis added). Of vital importance to the use of force against the enemy is locating the enemy and identifying its plans of attack. And of vital importance to identifying the enemy and detecting possible future plots was the authority to intercept communications to or from the United States of persons with links to al Qaeda or related terrorist organizations. Given that the agents who carried out the initial attacks resided in the United States and had successfully blended into American society and disguised their identities and intentions until they were ready to strike, the necessity of using the most effective intelligence gathering tools against such an enemy, including electronic surveillance, was patent. Indeed, Congress recognized that the enemy in this conflict poses an “unusual and extraordinary threat.” AUMF pmb1.

Link – FISA

Interpreting FISA to give the president broad flexibility is critical to warfighting

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

The President's exercise of his constitutional authority to conduct warrantless wartime electronic surveillance of the enemy, as confirmed and supplemented by statute in the AUMF, is fully consistent with the requirements of the Foreign Intelligence Surveillance Act ("FISA").⁵ FISA is a critically important tool in the War on Terror. The United States makes full use of the authorities available under FISA to gather foreign intelligence information, including authorities to intercept communications, conduct physical searches, and install and use pen registers and trap and trace devices. While FISA establishes certain procedures that must be followed for these authorities to be used (procedures that usually involve applying for and obtaining an order from a special court), FISA also expressly contemplates that a later legislative enactment could authorize electronic surveillance outside the procedures set forth in FISA itself. The AUMF constitutes precisely such an enactment. To the extent there is any ambiguity on this point, the canon of constitutional avoidance requires that such ambiguity be resolved in favor of the President's authority to conduct the communications intelligence activities he has described. Finally, if FISA could not be read to allow the President to authorize the NSA activities during the current congressionally authorized armed conflict with al Qaeda, FISA would be unconstitutional as applied in this narrow context.

Link – NSA Surveillance

NSA surveillance is part of presidential authority, sole commander and chief power is critical to flexibility

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

As **the President** has explained, since shortly after the attacks of September 11, 2001, he has **authorized the National Security Agency (“NSA”) to intercept international communications** into and out of the United States of persons linked to al Qaeda or related terrorist organizations. The purpose of these intercepts is to establish an early warning system to detect and prevent another catastrophic terrorist attack on the United States. This paper addresses, in an unclassified form, the legal basis for the NSA activities described by the President (“NSA activities”). SUMMARY On September 11, 2001, the al Qaeda terrorist network launched the deadliest foreign attack on American soil in history. Al Qaeda’s leadership repeatedly has pledged to attack the United States again at a time of its choosing, and these terrorist organizations continue to pose a grave threat to the United States. In response to the September 11th attacks and the continuing threat, the President, with broad congressional approval, has acted to protect the Nation from another terrorist attack. In the immediate aftermath of September 11th, the President promised that “[w]e will direct every resource at our command—every means of diplomacy, every tool of intelligence, every tool of law enforcement, every financial influence, and every weapon of war—to the destruction of and to the defeat of the global terrorist network.” President Bush Address to a Joint Session of Congress (Sept. 20, 2001). **The NSA activities are an indispensable aspect of this defense of the Nation.** By targeting the international communications into and out of the United States of persons reasonably believed to be linked to al Qaeda, these activities provide the United States with an early warning system **to help avert the next attack.** For the following reasons, the NSA activities are lawful and consistent with civil liberties. **The NSA activities are supported by the President’s well-recognized inherent constitutional authority as Commander in Chief and sole organ for the Nation in foreign affairs to conduct warrantless surveillance of enemy forces for intelligence purposes to detect and disrupt armed attacks on the United States. The President has the chief responsibility under the Constitution to protect America from attack, and the Constitution gives the President the authority necessary to fulfill that solemn responsibility.** The President has made clear that **he will exercise all authority available to him,** consistent with the Constitution, to protect the people of the United States.

Link – Surveillance

Warrantless surveillance is a fundamental presidential power and tool for warfighting

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

WARRANTLESS ELECTRONIC SURVEILLANCE AIMED AT INTERCEPTING ENEMY COMMUNICATIONS HAS LONG BEEN RECOGNIZED AS A FUNDAMENTAL INCIDENT OF THE USE OF MILITARY FORCE The history of warfare—including the consistent practice of Presidents since the earliest days of the Republic—demonstrates that **warrantless intelligence surveillance against the enemy is a fundamental incident of the use of military force, and** this history **confirms the statutory authority provided by the AUMF. Electronic surveillance is a fundamental tool of war** that must be included in any natural reading of the AUMF’s authorization to use “all necessary and appropriate force.” As one author has explained: **It is essential** in warfare for a belligerent **to be as fully informed as possible about the enemy**—his strength, his weaknesses, measures taken by him and measures contemplated by him. **This applies** not only to military matters, but . . . **anything which bears** on and is material to **his ability to wage** the **war** in which he is engaged. The laws of war recognize and sanction this aspect of warfare. Morris Greenspan, *The Modern Law of Land Warfare* 325 (1959) (emphases added); see also Memorandum for Members of the House Permanent Select Comm. on Intel., from Jeffrey H. Smith, Re: Legal Authorities Regarding Warrantless Surveillance of U.S. Persons 6 (Jan. 3, 2006) (“Certainly, the collection of intelligence is understood to be necessary to the execution of the war.”). Similarly, article 24 of the Hague Regulations of 1907 expressly states that “the employment of measures necessary for obtaining information about the enemy and the country [is] considered permissible.” See also L. Oppenheim, *International Law* vol. II § 159 (7th ed. 1952) (“War cannot be waged without all kinds of information, about the forces and the intentions of the enemy To obtain the necessary information, it has always been considered lawful to employ spies”); Joseph R. Baker & Henry G. Crocker, *The Laws of Land Warfare* 197 (1919) (“Every belligerent has a right . . . to discover the signals of the enemy and . . . to seek to procure information regarding the enemy through the aid of secret agents.”); cf. J.M. Spaight, *War Rights on Land* 205 (1911) (“[E]very nation employs spies; were a nation so quixotic as to refrain from doing so, it might as well sheathe its sword for ever. . . . Spies . . . are indispensably necessary to a general; and, other things being equal, that commander will be victorious who has the best secret service.”) (internal quotation marks omitted). In accordance with these well-established principles, the Supreme Court has consistently recognized the President’s authority to conduct intelligence activities. See, e.g., *Totten v. United States*, 92 U.S. 105, 106 (1876) (recognizing President’s authority to hire spies); *Tenet v. Doe*, 544 U.S. 1 (2005) (reaffirming *Totten* and counseling against judicial interference with such matters); see also *Chicago & S. Air Lines v. Waterman S.S. Corp.*, 333 U.S. 103, 111 (1948) (“The President, both as Commander-in-Chief and as the Nation’s organ for foreign affairs, has available intelligence services whose reports neither are not and ought not to be published to the world.”); *United States v. Curtiss-Wright Export Corp.*, 299 U.S. 304, 320 (1936) (The President “has his confidential sources of

information. He has his agents in the form of diplomatic, 14 consular, and other officials.”). Chief Justice John Marshall even described the gathering of intelligence as a military duty. See *Tatum v. Laird*, 444 F.2d 947, 952-53 (D.C. Cir. 1971) (“As Chief Justice John Marshall said of Washington, ‘A general must be governed by his intelligence and must regulate his measures by his information. It is his duty to obtain correct information’”) (quoting Foreword, U.S. Army Basic Field Manual, Vol. X, circa 1938), rev’d on other grounds, 408 U.S. 1 (1972). The United States, furthermore, has a long history of wartime surveillance—a history that can be traced to George Washington, who “was a master of military espionage” and “made frequent and effective use of secret intelligence in the second half of the eighteenth century.” Rhodri Jeffreys-Jones, *Cloak and Dollar: A History of American Secret Intelligence* 11 (2002); see generally *id.* at 11-23 (recounting Washington’s use of intelligence); see also *Haig v. Agee*, 471 U.S. 159, 172 n.16 (1981) (quoting General Washington’s letter to an agent embarking upon an intelligence mission in 1777: “The necessity of procuring good intelligence, is apparent and need not be further urged.”). As President in 1790, Washington obtained from Congress a “secret fund” to deal with foreign dangers and to be spent at his discretion. Jeffreys-Jones, *supra*, at 22. The fund, which remained in use until the creation of the Central Intelligence Agency in the mid-twentieth century and gained “longstanding acceptance within our constitutional structure,” *Halperin v. CIA*, 629 F.2d 144, 158-59 (D.C. Cir. 1980), was used “for all purposes to which a secret service fund should or could be applied for the public benefit,” including “for persons sent publicly and secretly to search for important information, political or commercial,” *id.* at 159 (quoting Statement of Senator John Forsyth, Cong. Debates 295 (Feb. 25, 1831)). See also *Totten*, 92 U.S. at 107 (refusing to examine payments from this fund lest the publicity make a “secret service” “impossible”). The interception of communications, in particular, has long been accepted as a fundamental method for conducting wartime surveillance. See, e.g., Greenspan, *supra*, at 326 (accepted and customary means for gathering intelligence “include air reconnaissance and photography; ground reconnaissance; observation of enemy positions; interception of enemy messages, wireless and other; examination of captured documents; . . . and interrogation of prisoners and civilian inhabitants”) (emphasis added). Indeed, since its independence, the United States has intercepted communications for wartime intelligence purposes and, if necessary, has done so within its own borders. During the Revolutionary War, for example, George Washington received and used to his advantage reports from American intelligence agents on British military strength, British strategic intentions, and British estimates of American strength. See Jeffreys-Jones, *supra*, at 13. One source of Washington’s intelligence was intercepted British mail. See Central Intelligence Agency, *Intelligence in the War of Independence* 31, 32 (1997). In fact, Washington himself proposed that one of his Generals “contrive a means of opening [British letters] without breaking the seals, take copies of the contents, and then let them go on.” *Id.* at 32 (“From that point on, Washington was privy to British intelligence pouches between New York and Canada.”); see generally Final Report of the Select Committee to Study Governmental Operations with respect to Intelligence Activities (the “Church Committee”), S. Rep. No. 94-755, at Book VI, 9-17 (Apr. 23, 1976) (describing Washington’s intelligence activities). 15 More specifically, warrantless electronic surveillance of wartime communications has been conducted in the United States since electronic communications have existed, i.e., since at least the Civil War, when “[t]elegraph wiretapping was common, and an important intelligence source for both sides.” G.J.A. O’Toole, *The*

Encyclopedia of American Intelligence and Espionage 498 (1988). Confederate General J.E.B. Stuart even “had his own personal wiretapper travel along with him in the field” to intercept military telegraphic communications. Samuel Dash, et al., *The Eavesdroppers* 23 (1971); see also O’Toole, *supra*, at 121, 385-88, 496- 98 (discussing Civil War surveillance methods such as wiretaps, reconnaissance balloons, semaphore interception, and cryptanalysis). Similarly, there was extensive use of electronic surveillance during the Spanish-American War. See Bruce W. Bidwell, *History of the Military Intelligence Division, Department of the Army General Staff: 1775-1941*, at 62 (1986). When an American expeditionary force crossed into northern Mexico to confront the forces of Pancho Villa in 1916, the Army “frequently intercepted messages of the regime in Mexico City or the forces contesting its rule.” David Alvarez, *Secret Messages* 6-7 (2000). Shortly after Congress declared war on Germany in World War I, President Wilson (citing only his constitutional powers and the joint resolution declaring war) ordered the censorship of messages sent outside the United States via submarine cables, telegraph, and telephone lines. See Exec. Order No. 2604 (Apr. 28, 1917). During that war, wireless telegraphy “enabled each belligerent to tap the messages of the enemy.” Bidwell, *supra*, at 165 (quoting statement of Col. W. Nicolai, former head of the Secret Service of the High Command of the German Army, in W. Nicolai, *The German Secret Service* 21 (1924)). As noted in Part I, on May 21, 1940, President Roosevelt authorized warrantless electronic surveillance of persons suspected of subversive activities, including spying, against the United States. In addition, on December 8, 1941, the day after the attack on Pearl Harbor, President Roosevelt gave the Director of the FBI “temporary powers to direct all news censorship and to control all other telecommunications traffic in and out of the United States.” Jack A. Gottschalk, “Consistent with Security”. . . . A History of American Military Press Censorship, 5 *Comm. & L.* 35, 39 (1983) (emphasis added). See Memorandum for the Secretaries of War, Navy, State, and Treasury, the Postmaster General, and the Federal Communications Commission from Franklin D. Roosevelt (Dec. 8, 1941). President Roosevelt soon supplanted that temporary regime by establishing an office for conducting such electronic surveillance in accordance with the War Powers Act of 1941. See Pub. L. No. 77-354, § 303, 55 Stat. 838, 840-41 (Dec. 18, 1941); Gottschalk, 5 *Comm. & L.* at 40. The President’s order gave the Government of the United States access to “communications by mail, cable, radio, or other means of transmission passing between the United States and any foreign country.” *Id.* See also Exec. Order No. 8985, § 1, 6 Fed. Reg. 6625, 6625 (Dec. 19, 1941). In addition, the United States systematically listened surreptitiously to electronic communications as part of the war effort. See Dash, *Eavesdroppers* at 30. During World War II, signals intelligence assisted in, among other things, the destruction of the German U-boat fleet by the Allied naval forces, see *id.* at 27, and the war against Japan, see O’Toole, *supra*, at 32, 323-24. In general, signals intelligence “helped to shorten the war by perhaps two years, reduce the loss of life, and make inevitable an eventual Allied victory.” Carl Boyd, *American Command of the Sea Through Carriers, Codes, and the Silent Service: World War II and Beyond* 27 (1995); see also Alvarez, *supra*, at 1 (“There can be little doubt that signals intelligence contributed significantly to the 16 military defeat of the Axis.”). Significantly, not only was wiretapping in World War II used “extensively by military intelligence and secret service personnel in combat areas abroad,” but also “by the FBI and secret service in this country.” Dash, *supra*, at 30. In light of the long history of prior wartime practice, the NSA activities fit squarely within the sweeping terms of the AUMF. The use of signals intelligence to identify and pinpoint the enemy is a

traditional component of wartime military operations—or, to use the terminology of Hamdi, a “fundamental and accepted . . . incident to war,” 542 U.S. at 518 (plurality opinion)—employed to defeat the enemy and to prevent enemy attacks in the United States. Here, as in other conflicts, the enemy may use public communications networks, and some of the enemy may already be in the United States. Although those factors may be present in this conflict to a greater degree than in the past, neither is novel. Certainly, both factors were well known at the time Congress enacted the AUMF. Wartime interception of international communications made by the enemy thus **should be understood**, no less than the wartime detention at issue in Hamdi, **as one of the basic methods of engaging and defeating the enemy that Congress authorized in approving “all necessary and appropriate force” that the President would need to defend the Nation.** AUMF § 2(a) (emphasis added). *** Accordingly, **the President has the authority to conduct warrantless electronic surveillance against the declared enemy of the United States** in a time of armed conflict. That authority derives from the Constitution, and is reinforced by the text and purpose of the AUMF, the nature of the threat posed by al Qaeda that Congress authorized the President to repel, and the long-established understanding that **electronic surveillance is a fundamental incident of the use of military force.** **The President’s power in authorizing the NSA activities is at its zenith** because he has acted “pursuant to an express or implied authorization of Congress.” *Youngstown*, 343 U.S. at 635 (Jackson, J., concurring).

Surveillance is a fundamental Commander in Chief power of the president to protect national security—it’s a primary responsibility of the president to make all decisions on warrantless surveillance

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

As Congress expressly recognized in the AUMF, “the President has authority under the Constitution to take action to deter and prevent acts of international terrorism against the United States,” AUMF pmb., especially in the context of the current conflict. Article II of the Constitution vests in the President all executive power of the United States, including the power to act as Commander in Chief of the Armed Forces, see U.S. Const. art. II, § 2, and authority over the conduct of the Nation’s foreign affairs. As the Supreme Court has explained, “[t]he President is the sole organ of the nation in its external relations, and its sole representative with 6 foreign nations.” *United States v. Curtiss-Wright Export Corp.*, 299 U.S. 304, 319 (1936) (internal quotation marks and citations omitted). In this way, the Constitution grants the President inherent power to protect the Nation from foreign attack, see, e.g., *The Prize Cases*, 67 U.S. (2 Black) 635, 668 (1863), and to protect national security information, see, e.g., *Department of the Navy v. Egan*, 484 U.S. 518, 527 (1988). To carry out these responsibilities, the President must have authority to gather information necessary for the execution of his office. The Founders, after all, intended the federal Government to be clothed with all authority necessary to protect the Nation. See, e.g., *The Federalist No. 23*, at 147 (Alexander Hamilton) (Jacob E. Cooke ed. 1961) (explaining that the federal Government will be “cloathed with all the powers requisite to the complete execution of its trust”); *id.* No. 41, at 269 (James Madison) (“Security against foreign danger is one of the primitive objects of civil society The powers requisite

for attaining it must be effectually confided to the federal councils.”). Because of the structural advantages of the Executive Branch, the Founders also intended that the President would have the primary responsibility and necessary authority as Commander in Chief and Chief Executive to protect the Nation and to conduct the Nation’s foreign affairs. See, e.g., *The Federalist* No. 70, at 471-72 (Alexander Hamilton); see also *Johnson v. Eisentrager*, 339 U.S. 763, 788 (1950) (“this [constitutional] grant of war power includes all that is necessary and proper for carrying these powers into execution”) (citation omitted). Thus, it has been long recognized that the President has the authority to use secretive means to collect intelligence necessary for the conduct of foreign affairs and military campaigns. See, e.g., *Chicago & S. Air Lines v. Waterman S.S. Corp.*, 333 U.S. 103, 111 (1948) (“The President, both as Commander-in-Chief and as the Nation’s organ for foreign affairs, has available intelligence services whose reports are not and ought not to be published to the world.”); *Curtiss-Wright*, 299 U.S. at 320 (“He has his confidential sources of information. He has his agents in the form of diplomatic, consular and other officials.”); *Totten v. United States*, 92 U.S. 105, 106 (1876) (President “was undoubtedly authorized during the war, as commander-in-chief . . . to employ secret agents to enter the rebel lines and obtain information respecting the strength, resources, and movements of the enemy”). In reliance on these principles, a consistent understanding has developed that the President has inherent constitutional authority to conduct warrantless searches and surveillance within the United States for foreign intelligence purposes. Wiretaps for such purposes thus have been authorized by Presidents at least since the administration of Franklin Roosevelt in 1940. See, e.g., *United States v. United States District Court*, 444 F.2d 651, 669-71 (6th Cir. 1971) (reproducing as an appendix memoranda from Presidents Roosevelt, Truman, and Johnson). In a Memorandum to Attorney General Jackson, President Roosevelt wrote on May 21, 1940: You are, therefore, authorized and directed in such cases as you may approve, after investigation of the need in each case, to authorize the necessary investigation agents that they are at liberty to secure information by listening devices directed to the conversation or other communications of persons suspected of subversive activities against the Government of the United States, including suspected spies. You are requested furthermore to limit these investigations so conducted to a minimum and limit them insofar as possible to aliens. *Id.* at 670 (appendix A). President Truman approved a memorandum drafted by Attorney General Tom Clark in which the Attorney General advised that “it is as necessary as it was in 1940 to take the investigative measures” authorized by President Roosevelt to conduct electronic surveillance “in cases vitally affecting the domestic security.” *Id.* Indeed, while FISA was being debated during the Carter Administration, Attorney General Griffin Bell testified that “the current bill recognizes no inherent power of the President to conduct electronic surveillance, and I want to interpolate here to say that this does not take away the power [of] the President under the Constitution.” Foreign Intelligence Electronic Surveillance Act of 1978: Hearings on H.R. 5764, H.R. 9745, H.R. 7308, and H.R. 5632 Before the Subcomm. on Legislation of the House Comm. on Intelligence, 95th Cong., 2d Sess. 15 (1978) (emphasis added); see also *Katz v. United States*, 389 U.S. 347, 363 (1967) (White, J., concurring) (“Wiretapping to protect the security of the Nation has been authorized by successive Presidents.”); cf. Amending the Foreign Intelligence Surveillance Act: Hearings Before the House Permanent Select Comm. on Intelligence, 103d Cong. 2d Sess. 61 (1994) (statement of Deputy Attorney General Jamie S. Gorelick) (“[T]he Department of Justice believes, and the case law supports, that the President has inherent authority to conduct

warrantless physical searches for foreign intelligence purposes . . .”). The courts uniformly have approved this longstanding Executive Branch practice. Indeed, every federal appellate court to rule on the question has concluded that, even in peacetime, the President has inherent constitutional authority, consistent with the Fourth Amendment, to conduct searches for foreign intelligence purposes without securing a judicial warrant. See *In re Sealed Case*, 310 F.3d 717, 742 (Foreign Intel. Surv. Ct. of Rev. 2002) (“[A]ll the other courts to have decided the issue [have] held that the President did have inherent authority to conduct warrantless searches to obtain foreign intelligence information We take for granted that the President does have that authority and, assuming that is so, FISA could not encroach on the President’s constitutional power.”) (emphasis added); accord, e.g., *United States v. Truong Dinh Hung*, 629 F.2d 908 (4th Cir. 1980); *United States v. Butenko*, 494 F.2d 593 (3d Cir. 1974) (en banc); *United States v. Brown*, 484 F.2d 418 (5th Cir. 1973). But cf. *Zweibon v. Mitchell*, 516 F.2d 594 (D.C. Cir. 1975) (en banc) (dictum in plurality opinion suggesting that a warrant would be required even in a foreign intelligence investigation).

Surveillance is a fundament part of the presidential war powers

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

In the Authorization for Use of Military Force enacted in the wake of September 11th, Congress confirms and supplements the President’s constitutional authority to protect the Nation, including through electronic surveillance, in the context of the current post-September 11th armed conflict with al Qaeda and its allies. The broad language of the AUMF affords the President, at a minimum, discretion to employ the traditional incidents of the use of military force. The history of the President’s use of warrantless surveillance during armed conflicts demonstrates that the NSA surveillance described by the President is a fundamental incident of the use of military force that is necessarily included in the AUMF.

Link – Surveillance 4th Gen War

Surveillance is critical to executive speed—essential to fight modern warfare

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

The President has acknowledged that, to counter this threat, he has authorized the NSA to intercept international communications into and out of the United States of persons linked to al Qaeda or related terrorist organizations. The same day, the Attorney General elaborated and explained that in order to intercept a communication, there must be “a reasonable basis to conclude that one party to the communication is a member of al Qaeda, affiliated with al Qaeda, or a member of an organization affiliated with al Qaeda.” Press Briefing by Attorney General Alberto Gonzales and General Michael Hayden, Principal Deputy Director for National Intelligence, available at <http://www.whitehouse.gov/news/releases/2005/12/20051219-1.html> (Dec. 19, 2005) (statement of Attorney General Gonzales). The purpose of these intercepts is to establish an early warning system to detect and prevent another catastrophic terrorist attack on the United States. The President has stated that the NSA activities “ha[ve] been effective in disrupting the enemy, while safeguarding our civil liberties.” President’s Press Conference. The President has explained that the NSA activities are “critical” to the national security of the United States. Id. Confronting al Qaeda “is not simply a matter of [domestic] law enforcement”—we must defend the country against an enemy that declared war against the United States. Id. To “effectively detect enemies hiding in our midst and prevent them from striking us again . . . we must be able to act fast and to detect conversations [made by individuals linked to al Qaeda] so we can prevent new attacks.” Id. The President pointed out that “a two- minute phone conversation between somebody linked to al Qaeda here and an operative overseas could lead directly to the loss of thousands of lives.” Id. The NSA activities are intended to help “connect the dots” between potential terrorists. Id. In addition, the Nation is facing “a different era, a different war . . . people are changing phone numbers . . . and they’re moving quick[ly].” Id. As the President explained, the NSA activities “enable[] us to move faster and quicker. And that’s important. We’ve got to be fast on our feet, quick to detect and prevent.” Id. “This is an enemy that is quick and it’s lethal. And sometimes we have to move very, very quickly.” Id. FISA, by contrast, is better suited “for long-term monitoring.” Id.

Link – Tech

Presidents have power to use technology to protect citizens

Richard Henry Seamon, Hastings Constitutional Law Quarterly, Spring 2008

President George W. Bush responded to revelations that his administration conducted warrantless electronic surveillance of American citizens by stating, "As President and Commander in Chief, I have the constitutional responsibility and the constitutional authority to protect our country ... So, consistent with U.S. law and the Constitution, I authorized the interception of international communications of people with known links to Al Qaida.... President Bush attempted to defend this statement one month later by stating, "[O]ther Presidents have used the same authority I've had, to use technology to protect the American people." This latter statement is certainly accurate, though its truth is both eerie and unsettling. Most notably, the argument that authorization for the warrantless surveillance is provided directly from the constitutional powers granted to the President harkens back to President Richard M. Nixon's statement that, "It's quite obvious that there are certain inherently government activities, which, if undertaken by the sovereign in protection of the interests of the nation's security are lawful, but which if undertaken by private persons, are not."

Link – Terrorism

Presidents have played a crucial role in the war on terror

The White House, 1-12-2009, "THE BUSH RECORD," No Publication, <http://georgewbush-whitehouse.archives.gov/infocus/bushrecord/factsheets/9-11.html>

Following the attacks of September 11, 2001, **President Bush** recognized the threat posed by terrorists and **took action to protect Americans and defeat violent extremism. Because of the actions taken by President Bush, America is safer, more secure, and winning the War on Terror.** Seven years later: ***50 million people have been liberated, and two totalitarian regimes have been removed;** ***The al Qaeda network has been weakened;** ***We have not experienced another attack on American soil;** ***Our military has been transformed to meet the challenges of the 21st century;** ***We have expanded our intelligence capabilities to confront today's enemy;** and ***We have created new and essential institutions needed to wage the War on Terror, including the Department of Homeland Security and Office of the Director of National Intelligence.**

Obama is fighting the war on terror

TOM CURRY, NATIONAL AFFAIRS WRITER, NBC NEWS, Nbc Politics, June, 6, 2013, "Obama continues, extends some Bush terrorism policies ," NBC News, http://nbcpolitics.nbcnews.com/_news/2013/06/06/18804146-obama-continues-extends-some-bush-terrorism-policies?lite

President Barack Obama has continued to pursue some of the same anti-terrorism policies as the Bush administration, and, in at least one instance, expanded upon them. In the clearest example, **Obama has authorized more than 300 overseas drone strikes against suspected terrorists** as president – that's compared to an estimate of roughly 50 such strikes under President George W. Bush – even as Obama has proposed new restrictions governing the policy.

Obama is utilizing his power as commander in chief to fight terror

TOM CURRY, NATIONAL AFFAIRS WRITER, NBC NEWS, Nbc Politics, June, 6, 2013, "Obama continues, extends some Bush terrorism policies ," NBC News, http://nbcpolitics.nbcnews.com/_news/2013/06/06/18804146-obama-continues-extends-some-bush-terrorism-policies?lite

In overseas operations, both **Bush and Obama have relied on power as commander in chief** and the 2001 congressional authorization to use force. Harvard University law professor Jack Goldsmith – who served as a key Justice Department official in the Bush administration – said last year that Obama's first term began with high expectations of a break with Bush terrorism policies. But, Goldsmith said, **Obama continued many of Bush's policies,** partly because once he became president, **he was** no longer merely a critic but **now the person entirely responsible for ensuring the safety of the nation** and saw the threats differently. Goldsmith also said that as a candidate in 2008 Obama had campaigned against the Bush policies of 2003 and 2004, but those policies – such as conduct of military commissions -- had been reformed by the time Bush finished his term in January 2009. "The late Bush administration policies were dramatically different from than the early Bush administration policies and Barack Obama admitted this... in March of 2009," Goldsmith said. **The most visible continuation and expansion of Bush's strategy**

has been in his use of unmanned aerial weapons, or drones, to kill suspected terrorists in Yemen, Somalia and Pakistan. According to testimony in April before the Senate Judiciary Committee by Peter Bergen, the director of the National Security Studies Program at the New America Foundation, the CIA drone program began under Bush “with one strike in Yemen in 2002, and then a smattering of strikes in Pakistan between 2004 and 2007 before a more sustained campaign in 2008. During his two terms in office, Bush authorized a total of 48 strikes in Pakistan.” But Bergen said that upon taking office in 2009, Obama “almost immediately made drones one of his key national security tools. By mid-April 2013, he had already authorized 307 strikes in Pakistan, six times more than the number of strikes carried out during President Bush’s entire eight years in office.” During the Bush administration, Bergen said, “the drone campaign appeared to put emphasis on killing significant members of al Qaeda but under Obama, it underwent a quiet and largely unheralded shift to focus increasingly on killing Taliban foot soldiers.” On searches of telecommunications data, Obama as a candidate in 2008 disappointed some of his supporters by voting for an addition to the 1978 Foreign Intelligence Surveillance Act, which revised surveillance rules in terrorism cases and granted immunity to telecommunications companies that participated in Bush’s warrantless surveillance program. In a statement to supporters in 2008, Obama acknowledged that the legal immunity for telecom firms “potentially weakens the deterrent effect of the law and removes an important tool for the American people to demand accountability for past abuses.”

Link – Warrantless Surveillance

Warrantless surveillance is an executive power that is necessary for the ability to protect national security

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

In the specific context of the current armed conflict with al Qaeda and related terrorist organizations, Congress by statute has confirmed and supplemented the President's recognized authority under Article II of the Constitution to conduct such warrantless surveillance to prevent further catastrophic attacks on the homeland. In its first legislative response to the terrorist attacks of September 11th, Congress authorized the President to "use all necessary and appropriate force against those nations, organizations, or persons he determines planned, authorized, committed, or aided the terrorist attacks" of September 11th in order to prevent "any future acts of international terrorism against the United States." Authorization for Use of Military Force, Pub. L. No. 107-40, § 2(a), 115 Stat. 224, 224 (Sept. 18, 2001) (reported as a note to 50 U.S.C.A. § 1541) ("AUMF"). History conclusively demonstrates that warrantless communications intelligence targeted at the enemy in time of armed conflict is a traditional and fundamental incident of the use of military force authorized by the AUMF. The Supreme Court's interpretation of the AUMF in Hamdi v. Rumsfeld, 542 U.S. 507 (2004), confirms that Congress in the AUMF gave its express approval to the military conflict against al Qaeda and its allies and thereby to the President's use of all traditional and accepted incidents of force in this current military conflict—including warrantless electronic surveillance to intercept enemy communications both at home and abroad. This understanding of the AUMF demonstrates Congress's support for the President's authority to protect the Nation and, at the same time, adheres to Justice O'Connor's admonition that "a state of war is not a blank check for the President," Hamdi, 542 U.S. at 536 (plurality opinion), particularly in view of the narrow scope of the NSA activities.

Spills Overs

Spills over to destabilize all presidential war powers.

Heder '10

(Adam, J.D., magna cum laude, J. Reuben Clark Law School, Brigham Young University, "THE POWER TO END WAR: THE EXTENT AND LIMITS OF CONGRESSIONAL POWER," St. Mary's Law Journal Vol. 41 No. 3, <http://www.stmaryslawjournal.org/pdfs/Hederreadytogo.pdf>)

This constitutional silence invokes Justice Rehnquist's oftquoted language from the landmark "political question" case, *Goldwater v. Carter*.¹²¹ In *Goldwater*, a group of senators challenged President Carter's termination, without Senate approval, of the United States' Mutual Defense Treaty with Taiwan.¹²² A plurality of the Court held,¹²³ in an opinion authored by Justice Rehnquist, that this was a nonjusticiable political question.¹²⁴ He wrote: "In light of the absence of any constitutional provision governing the termination of a treaty, . . . the instant case in my view also 'must surely be controlled by political standards.'"¹²⁵ Notably, Justice Rehnquist relied on the fact that there was no constitutional provision on point. Likewise, **there is no constitutional provision on whether Congress has the legislative power to limit, end, or otherwise redefine the scope of a war.** Though Justice Powell argues in *Goldwater* that the Treaty Clause and Article VI of the Constitution "add support to the view that the text of the Constitution does not unquestionably commit the power to terminate treaties to the President alone,"¹²⁶ the same cannot be said about Congress's legislative authority to terminate or limit a war in a way that goes beyond its explicitly enumerated powers. There are no such similar provisions that would suggest Congress may decline to exercise its appropriation power but nonetheless legally order the President to cease all military operations. Thus, the case for deference to the political branches on this issue is even greater than it was in the *Goldwater* context. Finally, the Constitution does not imply any additional powers for Congress to end, limit, or redefine a war. The textual and historical evidence suggests the Framers purposefully declined **to grant Congress such powers.** And as this Article argues, granting Congress this power would be inconsistent with the general war powers structure of the Constitution. Such a reading of the Constitution **would unnecessarily empower Congress and tilt the scales heavily in its favor.** More over, **it would strip the President of his Commander in Chief authority to direct the movement of troops** at a time **when the Executive's expertise is needed.**¹²⁷ And fears that the President will grow too powerful are unfounded, given the reasons noted above.¹²⁸ In short, the Constitution does not impliedly afford Congress any authority to prematurely terminate a war above what it explicitly grants.¹²⁹ Declaring these issues nonjusticiable political questions would be the most practical means of balancing the textual and historical demands, the structural demands, and the practical demands that complex modern warfare brings. Adjudicating these matters would only lead the courts to engage in impermissible line drawing — lines that would both confuse the issue and add layers to the text of the Constitution in an area where the Framers themselves declined to give such guidance.

Spills-over to collapse prez powers

Klukowski 11 (Kenneth, Research Fellow, Liberty University School of Law; Fellow and Senior Legal Analyst, American Civil Rights Union; National-Bestselling Author. George Mason University School of Law, J.D. 2008; University of Notre Dame, B.B.A. 1998, "MAKING EXECUTIVE

VI. CONCLUSION Most controversies between Congress and the White House over information are decided more by politics than by law, and so a settlement is usually reached favoring the party with the public wind to its back. n348 Questions of law should not be decided in that fashion. Therefore, **the reach and scope of executive privilege should be settled** by the courts in such situations, **so that the President's power is not impaired** whenever the political wind is in the President's face and at his opponents' backs, or the President is inappropriately shielded when political tides flow in his favor. While the best outcome in any interbranch dispute is the political branches reaching a settlement, "such compromise may not always be available, or even desirable." n349 It is not desirable where **it sets a precedent that degrades one of the three branches of government. If one branch of government demands something to which it is not constitutionally entitled** and that the Constitution has fully vested in a coequal branch, **the vested branch should not be required to negotiate** on the question. Negotiation usually involves compromise. **This negotiation would often result in one branch needing to cede to the other, encouraging additional unconstitutional demands in the future.** Though this may perhaps be a quicker route to a resolution, **it disrupts the constitutional balance in government.** As the Supreme Court has recently explained, "convenience and efficiency are not the primary objectives--or the hallmarks--of democratic government." n350 President Reagan declared that "you aren't President; you are temporarily custodian of an institution, the Presidency. And you don't have any right to do away with any of the prerogatives of that institution, and one of those is executive privilege. And this is what was being attacked by the Congress." n351 Thus, **any White House has the obligation to fight to protect executive privilege**, and the courts should draw the line to preserve that constitutional prerogative. Likewise, there are times when it is the President who is refusing to give Congress its due under the Constitution, where Congress must assert its prerogatives for future generations. Conversely, where confidentiality is not warranted, courts must ensure public disclosure and accountability.

Even small incursions on presidential authority threaten the unitary executive

Calabresi and Yoo 2008 [Stephen G., Law Professor at Northwestern; Christopher S., professor of Law, Communication, and Computer and Information Science at the University of Pennsylvania Law School, and founding director of the Center for Technology, Innovation, and Competition, *The Unitary Executive: Presidential Power From Washington to Bush*, Yale University Press, 2008, p.9 //wyo-sc]

Second, we believe that President George W. Bush and **all future presidents should recognize the existence of a strong, internal, executive branch precedent, established over the entire history of our republic, whereby all forty-three presidents have always resisted serious incursions on the principle of the unitary executive.** For this reason, President Clinton was right **to let the independent counsel law expire** without his support in June 1999, **and** President George W. Bush was right to insist on broad removal power over the newly created **Department of Homeland Security. Future presidents should veto statutes presented to them that infringe upon the unitariness of the executive,** and they should enforce such statutes as are already on the books with the greatest circumspection.

Broad Authorization Key

Broad warfighting authorization key—limiting to specific authorizations hampers flexibility

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

The conclusion of five Justices in Hamdi that the AUMF incorporates fundamental “incidents” of the use of military force makes clear that the absence of any specific reference to signals intelligence activities in the resolution is immaterial. See Hamdi, 542 U.S. at 519 (“[I]t is of no moment that the AUMF does not use specific language of detention.”) (plurality opinion). Indeed, given the circumstances in which the AUMF was adopted, it is hardly surprising that Congress chose to speak about the President’s authority in general terms. The purpose of the AUMF was for Congress to sanction and support the military response to the devastating terrorist attacks that had occurred just three days earlier. Congress evidently thought it neither necessary nor appropriate to attempt to catalog every specific aspect of the use of the forces it was authorizing and every potential preexisting statutory limitation on the Executive Branch. Rather than engage in that difficult and impractical exercise, Congress authorized the President, in general but intentionally broad terms, to use the traditional and fundamental incidents of war and to determine how best to identify and engage the enemy in the current armed conflict.

Congress’s judgment to proceed in this manner was unassailable, for, as the Supreme Court has recognized, even in normal times involving no major national security crisis, “Congress cannot anticipate and legislate with regard to every possible action the President may find it necessary to take.” Dames & Moore, 453 U.S. at 678. Indeed, Congress often has enacted authorizations to use military force using general authorizing language that does not purport to catalogue in detail the specific powers the President may employ. The need for Congress to speak broadly in recognizing and augmenting the President’s core constitutional powers over foreign affairs and military campaigns is of course significantly heightened in times of national emergency. See *Zemel v. Rusk*, 381 U.S. 1, 17 (1965) (“[B]ecause of the changeable and explosive nature of contemporary international relations . . . Congress—in giving the Executive authority over matters of foreign affairs—must of necessity paint with a brush broader than that it customarily wields in domestic areas.”).

Congressional Support Key

The POTUS has a critical role and a constitutional responsibility to protect American citizens – And congress should support him.

Jack Spencer, Vice President, the Institute for Economic Freedom and Opportunity, 10-2-2002, "Presidential Authority in the War on Terrorism: Iraq and Beyond," Heritage Foundation, <http://www.heritage.org/research/reports/2002/10/presidential-authority-in-the-war-on-terrorism-iraq-and-beyond>

The President of the United States has no greater responsibility than protecting the American people from threats, both foreign and domestic. He is vested by the Constitution with the authority and responsibility to accomplish this essential task. In taking his oath of office, the President swears to "preserve, protect, and defend the Constitution of the United States," the Preamble of which makes providing for the "common defense" a top priority. Congress must now make its voice heard on a key issue of national security and bring to a vote support for President George W. Bush's strategy for pursuing the war on terrorism in the way that he, as commander in chief, deems necessary. As the nature of the threats to the United States changes, so must the nation's approach to its defense. To fulfill his constitutional responsibility, the President must have the flexibility to address these threats as they emerge; and, given the proliferation of weapons of mass destruction by nations hostile to America, in an increasing number of cases, this may require applying military power before the United States or its interests are struck. In situations where the evidence demonstrates overwhelmingly that behavioral trends, capability, and motives all point to imminent threat, it may be necessary for the President to attack preemptively.

Surveillance Restrictions Spill Over

Restrictions on surveillance spillover to hamper presidential warfighting

US DOJ, 1-19-2006, LEGAL AUTHORITIES SUPPORTING THE ACTIVITIES OF THE NATIONAL SECURITY AGENCY DESCRIBED BY THE PRESIDENT, Department of Justice Briefing, <http://www.justice.gov/sites/default/files/opa/legacy/2006/02/02/whitepaperonnsalegalauthorities.pdf> /Bingham-MB

Even if there were ambiguity about whether FISA, read together with the AUMF, permits the President to authorize the NSA activities, the canon of constitutional avoidance requires reading these statutes in harmony to overcome any restrictions in FISA and Title III, at least as they might otherwise apply to the congressionally authorized armed conflict with al Qaeda. Indeed, were FISA and Title III interpreted to impede the President's ability to use the traditional tool of electronic surveillance to detect and prevent future attacks by a declared enemy that has already struck at the homeland and is engaged in ongoing operations against the United States, the constitutionality of FISA, as applied to that situation, would be called into very serious doubt. In fact, if this difficult constitutional question had to be addressed, FISA would be unconstitutional as applied to this narrow context. Importantly, the FISA Court of Review itself recognized just three years ago that the President retains constitutional authority to conduct foreign surveillance apart from the FISA framework, and the President is certainly entitled, at a minimum, to rely on that judicial interpretation of the Constitution and FISA.

Flex Key to Fight Wars

Surveillance key to flexibility in warfighting

Colonel Steven C. Williamson, 3-29-2009, Steven Metz, PhD Strategic Studies Institute, From Fourth Generation Warfare to Hybrid War, U.S. Army War College, Online via google, /Bingham-MB

Leaders, staffs, and conventional forces must be more capable of performing across the spectrum of military operations. To do so, the force needs a command and control structure that is net-centric with built-in redundancies. There must be a larger investment in intelligence, surveillance, and reconnaissance assets, particularly human intelligence capabilities. Also, the nation must be able to collect and fuse information from a wider variety of sources and establish systems to share intelligence across services, the government, and with partners. Added to these capabilities, the military, in order to address the wide variety of future threats, must develop a greater precision targeting and engagement capability while ensuring a high level of protection for its forces, supporting civilians, partners, and U.S. citizens. The force necessary to provide these capabilities must be a balanced and versatile force, not a single-mission force.⁹⁷ The military should accelerate the growth of its special operations forces and the transformation of its general purpose forces to a professional, more agile, “multi-purpose” force with flexibility and credible combat power, able to conduct conventional and irregular, and to perform partner security force assistance, reconstruction, stabilization, and peacekeeping simultaneously. This enhanced force must be capable of operating independently at increasingly lower echelons, with or without support from civilian agencies.⁹⁸

Flexibility in warfare is key to fight modern wars

Colonel Steven C. Williamson, 3-29-2009, Steven Metz, PhD Strategic Studies Institute, From Fourth Generation Warfare to Hybrid War, U.S. Army War College, Online via google, /Bingham-MB

In the late 1980s, Fourth Generation Warfare (4GW) theorists began to recognize a shift in warfare which they assumed was both in the character and nature of war. Their ideas and publications triggered a captivating dialogue on how warfare was changing. This debate helped prompt the U.S. military to recognize the change and begin its transformation. However, over the ensuing years, a number of military thinkers and strategists demonstrated that the 4GW theorists did not get it all right. They set the stage for a generation of subsequent theorists to follow with their own predictions of future warfare. Frank Hoffman entered the scene near the end of the future war debate. He compellingly argued that warfare is converging, blending into a hybrid form, wherein adversaries will use all capabilities at their disposal. The key to success in such a period of change and persistent conflict is an agile strategic approach that relies on a wide array of capabilities. Accordingly, the U.S. must review and adjust its national strategies, warfighting concepts, and force structures. The nation must be able to adaptively and effectively combine these new capabilities to prevail in the hybrid conflicts that will dominate the near to midterm.

Presidential Flexibility Best—Ensures Decisions Made for the Good of the Nation, Not the Next Election

Tushnet 2005, Mark V., Professor Tushnet, who graduated from Harvard College and Yale Law School and served as a law clerk to Justice Thurgood Marshall, specializes in constitutional law and theory, including comparative constitutional law. "Controlling Executive Power in the War on Terrorism" (2005). Georgetown Law Faculty Publications and Other Works. Paper 554. (<http://scholarship.law.georgetown.edu/facpub/554>)/EG

Defenders of the separation-of-powers mechanism make both a positive and a negative case.⁹ The positive case rests on the classic "ambition counteracting ambition" theory articulated in The Federalist Papers.¹⁰ Congress and the President stand in structural opposition to each other, with each side alert to possible "power grabs" by the other that would threaten - simultaneously - the people's liberties and the prerogatives and power of the opposing branch." In addition, the people influence the President and Congress differently, with members of the House of Representatives concerned that their constituents might turn them out of office if they fail to challenge presidential initiatives that the people believe threaten their liberties, the President having a nationwide constituency more sensitive than smaller and more parochial constituencies to national security concerns, and the Senate free to deliberate about what good policy would be without concern for short-run political disadvantage. ¹² The separation-of-powers mechanism rejects executive unilateralism, but identifies no enduring substantive limitations on what the President and Congress may do; the only limitations are those worked out in the interactions between the President and Congress. ¹³

AT: Congress Solves

Presidential powers are the only way to minimize threats posed by foreign agents and powers- congressional powers can only reduce domestic threats

Richard Henry Seaman, 2007, "Domestic Surveillance for International terrorists: presidential powers and 4th amendment limits" 469-470

Precedent establishes that Congress has some regulatory power in this matter, but the precedent leaves the scope of that power unclear. The relevant precedent includes FISA itself, which was supported by Presidents Carter and Ford as a legitimate regulation of the President's power. Unfortunately, this legislative precedent has no direct analog in Supreme Court precedent. The Supreme Court has said that Congress can regulate electronic surveillance in the United States to investigate national security threats posed by domestic organizations. The Court has not addressed congressional regulation of surveillance of threats to national security posed by foreign agents and powers. Though not addressing that specific issue, the Court has recognized that Congress has significant power over foreign relations-power that stems from, among other places, its power over foreign commerce and certain national defense matters. On the other hand, the Court has recognized that the President, too, has significant power over foreign affairs, including matters of foreign intelligence, which exists independently of Congress's power. Precedent does not establish to what extent the President's power is not only independent but also "plenary"--meaning not reducible by Congress.

Only Presidential powers can implement a defensive attack— history shows that it minimizes threat more effectively and efficiently

Richard Henry Seaman, 2007, "Domestic Surveillance for International terrorists: presidential powers and 4th amendment limits" 469-470

Though not providing clear guidance, history and precedent suggest that the President has congressionally irreducible power to "repel sudden attacks" on the country. In The Prize Cases, for example, the Court upheld President Lincoln's power to blockade southern ports in the days after the Confederacy's attack on union forces at Fort Sumter.⁹⁰ The Court made clear this power did not depend on legislative authorization, stating: "If a war be made by invasion of a foreign nation, the President is not only authorized but bound to resist force by force. He does not initiate the war, but is bound to accept the challenge without waiting for any special legislative authority. . . . 'He must determine what degree of force the crisis demands.'" Significantly, The Prize Cases was a 5-to-4 decision, with the four dissenters concluding that, because Congress had not declared war, "the President had no power to set on foot a blockade." The Court's decision, in substance and voting alignment, implies at most a narrow power in the President to take defensive measures in response to attacks on the country-and one that may exist without "special legislative authority" but that does not necessarily exist when it contradicts legislative authority.

Press Powers Key

In times of national emergency, only presidential powers solve

Richard Henry Seaman, 2007, "Domestic Surveillance for International terrorists: presidential powers and 4th amendment limits" 474-477

More recently, two Justices in *Hamdi v. Rumsfeld* recognized a similar, but broader, emergency power to respond to threats to national security.⁹⁴ In *Hamdi*, Justice Souter (joined by Justice Ginsburg) dissented from a decision upholding the detention of an asserted enemy combatant who is also a U.S. citizen.⁹⁵ Justice Souter concluded that an Act of Congress barred the detention.⁹⁶ He suggested, however, that the executive branch might be able to detain a citizen, even in violation of the statute, "in a moment of genuine emergency, when the Government must act with no time for deliberation." The plurality did not address this issue because it held—contrary to Justice Souter's dissent (but in basic agreement with Justice Thomas' dissent)—that the detention in that case was authorized by federal statute. The *Hamdi* dissent implies that the President's power to take action "incompatible with the expressed or implied will of Congress" (the third situation identified by Justice Jackson's *Youngstown* concurrence) may include the power to take immediate action to respond to a "genuine emergency" threatening national security. Furthermore, the *Hamdi* dissent did not limit its implication of presidential power to situations involving an actual attack. Indeed, even before *Hamdi* many commentators believed that the President's power encompasses taking defensive measures necessary to thwart imminent attacks.

President Power is the only way to respond to fast, intelligent threats

William, Marshal, Professor of Law at University of North Carolina and a writer for the Boston University Law Review, 2008, "ELEVEN REASONS WHY PRESIDENTIAL POWER INEVITABLY EXPANDS AND WHY IT MATTERS"

Presidential power also has increased because of the exigencies of decision making in the modern world. At the time of the founding, it would take weeks, if not months, for a foreign government to attack American soil. In the twenty-first century, the weapons of war take only seconds to arrive. The increased speed of warfare necessarily vests power in the institution that is able to respond the fastest – the presidency, not the Congress.⁷⁹ Consequently, the President has unparalleled ability to direct the nation's political agenda.⁸⁰ The power that comes with being the first to act, moreover, does not end when the immediate emergency is over. Decisions made in times of emergency are not easily reversed; this is particularly true in the context of armed conflict. The President's commitment of troops inevitably creates a "rally round the flag" reaction that reinforces the initial decision.⁸¹ As Vietnam and now Iraq have shown, Congress is likely to be very slow in second-guessing a President's decision that places soldiers' lives in harm's way. That Congress would use its powers (as opposed to its rhetoric) to directly confront the President by cutting off military appropriations seems fanciful.

Impacts

2NC Impact Calc

**Presidential power solves rogue state acquisition and use of nuclear weapons—
outweighs the aff**

**Timeframe—speed and flexibility are key to solve threats—they arise quickly in
modern war—that's Gonzales and Waxman**

Magnitude,—larger than any other threat

Yoo 5

John, Professor of Law, University of California at Berkeley School of Law, Failed States, Int'l Colloquium, Online

Failed states pose perhaps the most dangerous threat to both American national security and international peace and stability. Failed states have served as the incubator of international terrorist groups, such as the al Qaeda organization that attacked the United States on September 11, 2001, or as trans-shipments points for illicit drugs, human trafficking, or the proliferation of weapons of mass destruction technologies. In Somalia, Rwanda, Haiti, and the former Yugoslavia, failed states have produced the catastrophic human rights disasters. Since the end of World War II, far more lives have been lost due to internal wars than international armed conflicts, and many of the former have occurred in failed states. Military intervention in response, often led by the United States and its allies, incurs high costs in terms of money, material, and lives. Finding a comprehensive and effective solution to these challenges of terrorism, human rights violations, or poverty and lack of economic development requires some answers to the problem of failed states.

Probability—they are irrational and will pursue nukes

And, rogue nations are the greatest modern threat

John R. Bolton '03, Under Secretary for Arms Control and International Security Remarks to the Conference of the Institute for Foreign Policy Analysis and the Fletcher Schools International Security Studies Program Washington, DC December 2, 2003(<http://www.au.af.mil/au/awc/awcgate/sa99/14.pdf>)/EG

The possession of WMD by rogue states poses several risks. One risk is that they may use these weapons to coerce their neighbors. Another risk is that WMD may allow rogues to deter outside intervention. This would permit them to conduct conventional aggression against neighbors. This risk will increase if rogues achieve conventional force superiority over their neighbors. Rogue states with WMD are less likely to directly challenge U.S. forces. U.S. nuclear forces and conventional strike capabilities are overpowering. Instead, rogue states may increasingly use asymmetric strategies to challenge U.S. military power in indirect but potentially effective ways. Such strategies may attempt to find a way to prevent U.S. forces from being used at all, or at least prevent them from being used effectively.

The impact turns the case—Waxman says it accesses every major impact [insert aff specific analysis]

And, pres powers solve terrorism and prolif—that's Waxman

Terrorism triggers full scale war

Hellman '8 (Martin E. Hellman* * Martin E. Hellman is a member of the National Academy of Engineering and Professor Emeritus at Stanford University. His current project applies risk analysis to nuclear deterrence)

Nuclear proliferation and the specter of nuclear terrorism are creating additional possibilities for triggering a nuclear war. If an American (or Russian) city were devastated by an act of nuclear terrorism, the public outcry for immediate, decisive action would be even stronger than Kennedy had to deal with when the Cuban missiles first became known to the American public. While the action would likely not be directed against Russia, it might be threatening to Russia (e.g., on its borders) or one of its allies and precipitate a crisis that resulted in a full-scale nuclear war. Terrorists with an apocalyptic mindset might even attempt to catalyze a full-scale nuclear war by disguising their act to look like an attack by the U.S. or Russia.

Prolif risks massive nuclear wars

Victor Utgoff, Deputy Director, Strategy, Forces and Resources Division, Institute for Defense Analyses, SURVIVAL, Summer 2002, ASP.

In sum, widespread proliferation is likely to lead to an occasional shoot-out with nuclear weapons, and that such shoot-outs will have a substantial probability of escalating to the maximum destruction possible with the weapons at hand. Unless nuclear proliferation is stopped, we are heading toward a world that will mirror the American Wild West of the late 1800s. With most, if not all, nations wearing 'nuclear six-shooters' on their hips, the world may even be a more polite place than it is today, but every once in a while we will all gather on a hill to bury the bodies of dead cities or even whole nations.

Rogue Nations

Only strong president can solve rogue nations and other existential threats

John Yoo '06, 4-24-2006, "Energy in the Executive: Re-examining Presidential Power in the Midst of the War on Terrorism," Heritage Foundation,
(<http://www.heritage.org/research/reports/2006/04/energy-in-the-executive-reexamining-presidential-power-in-the-midst-of-the-war-on-terrorism>)//EG

Congressional participation does not automatically, or even consistently, produce desirable results in war decision-making. Critics of presidential war powers exaggerate the benefits of declarations or authorizations of war. What also often goes unexamined are the potential costs of congressional participation: delay, inflexibility, and lack of secrecy. Legislative deliberation may breed consensus in the best of cases, but it also may inhibit speed and decisiveness. In the post-Cold War era, the United States is confronting several major new threats to national security: the proliferation of WMD, the emergence of rogue nations, and the rise of international terrorism. Each of these threats may require pre-emptive action best undertaken by the President and approved by Congress only afterwards. Take the threat posed by the al-Qaeda terrorist organization. Terrorist attacks are more difficult to detect and prevent than those posed by conventional armed forces. Terrorists blend into civilian populations and use the channels of open societies to transport personnel, material, and money. Despite the fact that terrorists generally have no territory or regular armed forces from which to detect signs of an impending attack, weapons of mass destruction allow them to inflict devastation that once could have been achievable only by a nation-state. To defend itself from this threat, the United States may have to use force earlier and more often than was the norm during the time when nation-states generated the primary threats to American national security. In order to forestall a WMD attack, or to take advantage of a window of opportunity to strike at a terrorist cell, the executive branch needs flexibility to act quickly, possibly in situations where congressional consent cannot be obtained in time to act on the intelligence. By acting earlier, perhaps before WMD components have been fully assembled or before an al-Qaeda operative has left for the United States, the executive branch might also be able to engage in a more limited, more precisely targeted, use of force. Similarly, the least dangerous way to prevent rogue nations from acquiring weapons of mass destruction may depend on secret intelligence gathering and covert action rather than open military intervention. Delay for a congressional debate could render useless any time-critical intelligence or windows of opportunity.

Presidential Flexibility is critical to preserving national security solves rogue nations and terrorism

(John Yoo, Analyst, 4-24-2008, "Energy in the Executive: Re-examining Presidential Power in the Midst of the War on Terrorism," Heritage Foundation,
<http://www.heritage.org/research/reports/2006/04/energy-in-the-executive-reexamining-presidential-power-in-the-midst-of-the-war-on-terrorism>)//Colt45

Critics of these conflicts want to upend long practice by appeals to an "original understanding" of the Constitution. But the text and structure of the Constitution, as well as its application over the last two centuries, confirm that the President can begin military hostilities without the

approval of Congress. The Constitution does not establish a strict war-making process because the Framers understood that war would require the speed, decisiveness, and secrecy that only the presidency could bring. "Energy in the Executive," Alexander Hamilton argued in the Federalist Papers, "is a leading character in the definition of good government. It is essential to the protection of the community against foreign attacks."^[4] And, he continued, "the direction of war most peculiarly demands those qualities which distinguish the exercise of power by a single hand."^[5] Rather than imposing a fixed, step-by-step method for going to war, the Constitution allows the executive and legislative branches substantial flexibility to shape the decision-making process for engaging in military hostilities. Indeed, given rogue states' increasing ability to procure weapons of mass destruction (WMD), and the rise of al-Qaeda and international terrorism, maintaining this flexibility is critical to preserving American national security.

Credibility

Presidential powers key to preserve international credibility

Ganesh, Sitarman, 2014, Assistant Professor of Law at Vanderbilt Law School and a Senior Fellow at the Center for American Progress, "Harvard Law review forum: "Credibility and Powers"

As a justification for the use of military force, the preservation of credibility is ubiquitous in foreign policy. President Clinton thought that if the United States failed to uphold its commitments in Somalia after the Black Hawk Down incident, then "[o]ur own credibility with friends and allies would be severely damaged. Our leadership in world affairs would be undermined . . ." President Reagan argued that if the United States failed to confront guerrillas in Central America, "our credibility would collapse." Years earlier, President Truman said that defeat in Korea "would be an open invitation to new acts of aggression elsewhere."⁷ For decades during the Cold War, credibility arguments were prominent in game theory analyses of deterrence, arms control, and U.S.-Soviet relations.⁸ More recently, political scientists have turned to serious study of credibility. These studies call into question the use of credibility arguments in the context of military threats.

Terrorism

The executive branch must be allowed to combat the war on terror

Li, Zheyao, 2009 Li worked for New York City Law Department, Georgetown University Law Center, Willkie Farr & Gallagher LLP Education Georgetown University Law Center War Powers for the Fourth Generation: Constitutional Interpretation in the Age of Asymmetric Warfare (2009). Georgetown Journal of Law & Public Policy, Vol. 7, No. 1, p. 373, 2009. (Available at SSRN:<http://ssrn.com/abstract=1868346>)//EG

In America's current situation, however, in the midst of the conflict with al-Qaeda and other international terrorist organizations, the existing process of constitutional decision-making in warfare may prove a fatal hindrance to achieving the initiative necessary for victory. As a slow-acting, deliberative body, Congress does not have the ability to adequately deal with fast emerging situations in Fourth-generation warfare. Thus, in order to combat transitional threats such as al-Qaeda, the executive branch must have the ability to operate by taking offensive military action even without congressional authorization, because only the executive branch is capable of swift-decision making and action necessary to prevail in fourth-generational conflicts against fourth-generational opponents.

War

Executive ability to counter threats are the only way to be effective against threats

Li, Zheyao, 2009 Li worked for New York City Law Department, Georgetown University Law Center, Willkie Farr & Gallagher LLP Education Georgetown University Law Center War Powers for the Fourth Generation: Constitutional Interpretation in the Age of Asymmetric Warfare (2009). Georgetown Journal of Law & Public Policy, Vol. 7, No. 1, p. 373, 2009. (Available at SSRN: <http://ssrn.com/abstract=1868346>)//EG

By now it should be clear just how different this conflict against the extremist terrorists is from the type of warfare that occupied the minds of the Framers at the time of the Founding. Rather than maintaining the geographical and political isolation desired by the Framers for the new country, today's United States is an international power targeted by individuals and groups that will not rest until seeing her demise. The Global War on Terrorism is not truly a war within the Framers' eighteenth-century conception of the term, and the normal constitutional provisions regulating the division of war powers between Congress and the President do not apply. Instead, this "war" is a struggle for survival and dominance against forces that threaten to destroy the United States and her allies, and the fourth-generational nature of the conflict, highlighted by an indiscernible distinction between wartime and peacetime, necessitates an evolution of America's traditional constitutional war making scheme. As first illustrated by the military strategist Colonel John Boyd, constitutional decision-making in the realm of war powers in the fourth generation should consider the implications of the OODA Loop: Observe, Orient, Decide, and Act. 44 In the era of fourth-generational warfare, quick reactions, proceeding through the OODA Loop rapidly, and disrupting the enemy's OODA loop are the keys to victory. "In order to win," Colonel Boyd suggested, "we should operate at a faster tempo or rhythm than our adversaries." 145 In the words of Professor Creveld, "[b]oth organizationally and in terms of the equipment at their disposal, the armed forces of the world will have to adjust themselves to this situation by changing their doctrine, doing away with much of their heavy equipment and becoming more like police." 146 Unfortunately, the existing constitutional understanding, which diffuses war power between two branches of government, necessarily (by the Framers' design) slows down decision making. In circumstances where war is undesirable (which is, admittedly, most of the time, especially against other nation-states), the deliberativeness of the existing decision-making process is a positive attribute. In America's current situation, however, in the midst of the conflict with al-Qaeda and other international terrorist organizations, the existing process of constitutional decision-making in warfare may prove a fatal hindrance to achieving the initiative necessary for victory. As a slow-acting, deliberative body, Congress does not have the ability to adequately deal with fast-emerging situations in fourth-generational warfare. Thus, in order to combat transnational threats such as al-Qaeda, the executive branch must have the ability to operate by taking offensive military action even without congressional authorization, because only the executive branch is capable of the swift decision-making and action necessary to prevail in fourth-generational conflicts against fourth generational opponents.

4th Gen Warfare

The Executive powers are the only way to prevent and fight attacks in fourth generation warfare

Li, Zheyao, 2009 Li worked for New York City Law Department, Georgetown University Law Center, Willkie Farr & Gallagher LLP Education Georgetown University Law Center War Powers for the Fourth Generation: Constitutional Interpretation in the Age of Asymmetric Warfare (2009). Georgetown Journal of Law & Public Policy, Vol. 7, No. 1, p. 373, 2009. (Available at SSRN:<http://ssrn.com/abstract=1868346>)//EG

While the advent of fourth-generational warfare has dramatically altered the international order, which was dominated by the Westphalian system of nation-states for over three hundred years, those nation-states have not disappeared. Indeed, it is vital to note that the nation-state is not yet a relic of the past, even as existing nation-states continue to struggle with terrorists, insurgents, and freedom fighters. Thus, a new understanding of Presidential war power, based upon the realities of fourth-generational warfare, cannot replace, but rather must co-exist with the current system of constitutional decision-making that constrains military action against other nation-states. Congress's power to declare war, and to choose not to declare war, is absolute with respect to other nation-states. In military conflicts against nation-states, if there is an absence of a congressional declaration of war or authorization of the use of force, the President can only act defensively to repel attacks. The Framers intended the slow, deliberative process by which Congress makes its decisions to be a check against executive aggression and aggrandizement. Therefore, any Presidential claim of a preclusive war power with respect to other nation-states would be inconsistent with the Constitution. On the other hand, the slow-moving, deliberative Congress has no role to play in authorizing military action against non-state actors in the fourth generation of warfare. The President must have the ability to react quickly in conducting offensive military action against these transnational enemies, both in response to terrorist attacks that have already occurred and to prevent imminent attacks. Congress's powers over the initiation of war or the seeking of peace have no role in this civilizational conflict against extremist terrorists who will not rest until they destroy the United States and who have made such intentions known. In light of the fundamental difference in the nature of the threats posed, the nature of the adversaries, and the different strategies and tactics necessary to combat them, these parallel constitutional decision-making processes in the area of war—one conforming to the Framers' conception of traditional Westphalian warfare against nation-states, and the other adapting to the realities of asymmetric warfare waged by non-state actors—are both necessary to ensure the survival and prosperity of the United States in the twenty-first century and beyond.

Presidential Powers –WSDI

1NC – War Powers DA

The power to use surveillance is part of broad presidential powers authorized now—restrictions on the means of war hinders presidential authority

Michael Stokes Paulsen February 2006, Associate Dean University of Minnesota, Presidential Powers in Time of War,

http://www.law.umn.edu/uploads/wE/aa/wEaa1g7XB6j0QyoOhoFpYw/Presidential_Powers_exchange_Paulsen_Kitrosser_Carpenter.pdf

THE KEY PROBLEM with my colleagues' extraordinarily thoughtful points about the NSA communications interception program is this: They read the Sept. 18, 2001, AUMF as if it were any old statute passed by Congress. If (as I believe), **the AUMF is in legal effect a Declaration of War**, then **arguments that** "repeals by implication are disfavored," or that "**the AUMF does not specifically mention surveillance**," or that "Congress did not have this in mind" (or, in its weakest form, that former Senator Tom Daschle was not thinking about this specific question), or that the president might have been able to obtain FISA authorization, **are almost entirely irrelevant**. **If war has been authorized, then the commander in chief power to wage war against enemy forces has been unleashed in its entirety**. That power is a fearful and formidable one, but properly so. Where war is declared or authorized, **the president** possesses the full military and executive power of the nation with respect to waging that war. The president **determines matters of military strategy and tactics**; the rules of engagement with the enemy; **the means and methods to be employed**; how resources are to be deployed; and whether, when, and under what circumstances hostilities will be terminated. **Where the commander in chief power is brought into play, it is the president's power alone**. **No statute of Congress may limit it**. As Alexander Hamilton put it in Federalist #74: "Of all the cares or concerns of government, the direction of war most peculiarly demands those qualities which distinguish the exercise of power by a single hand. The direction of war implies the direction of the common strength; and the power of directing and employing the common strength forms a usual and essential part in the definition of the executive authority." Here is the crucial point: Whatever the scope of the president's constitutional power as commander in chief in time of authorized war, no statute of Congress constitutionally may limit it. This is basic *Marbury v. Madison*: If the Constitution provides one thing, **Congress may not pass a statute altering it**. Congress has the choice whether or not to trigger the commander in chief power of the president in time of war; but if it chooses to do so, it may not control the exercise of that power **with collateral statutory restrictions**. Put simply: **When war is declared, the commander in chief chooses how to conduct it**. Nowhere is this more clear than in **the Sept. 18, 2001 AUMF**, which sweepingly **gives the president power to use "all necessary and appropriate force"** against those nations, organizations, or persons he finds to be connected to the events of Sept. 11, 2001. If the **interception of communications of persons in contact with the enemy is a legitimate part of the commander in chief's conduct of war**—and I think this almost impossible to deny—then no act of Congress may impair it. If FISA, designed as peacetime authorization **for covert surveillance** of suspected foreign agents, limits the commander in chief power in time of war, it is to that extent unconstitutional. That's the endpoint of the game, **when push comes to shove**. Professor Kitrosser's arguments about how to read FISA are excellent ones; but in the end if FISA cannot be construed in a manner consistent with the president's overarching power as commander in chief in time of war, then it

is the FISA statute that must yield, not the president's constitutional power as commander in chief. Professor Carpenter's argument that Congress's power to make "Rules for the Government and Regulation of the Land and Naval Forces" trumps the president's power as commander in chief is, I think, unsound—and dangerous. Congress's power to prescribe general rules for regulating our armed forces surely cannot be read as a power to dictate rules for how military and defensive efforts are to be conducted by the president. That would effectively read the commander in chief clause out of the Constitution! The same cannot be said the other way round: Congress's power to regulate the military still has content, as a general proposition; it is simply limited by the president's power to direct and conduct offensive and defensive operations—to command—in wartime.

Spills over to destabilize all presidential war powers.

(Adam, J.D., magna cum laude, J. Reuben Clark Law School, Brigham Young University, "THE POWER TO END WAR: THE EXTENT AND LIMITS OF CONGRESSIONAL POWER," St. Mary's Law Journal Vol. 41 No. 3, <http://www.stmaryslawjournal.org/pdfs/Hederreadytogo.pdf>)

This constitutional silence invokes Justice Rehnquist's oftquoted language from the landmark "political question" case, *Goldwater v. Carter*.¹²¹ In *Goldwater*, a group of senators challenged President Carter's termination, without Senate approval, of the United States' Mutual Defense Treaty with Taiwan.¹²² A plurality of the Court held,¹²³ in an opinion authored by Justice Rehnquist, that this was a nonjusticiable political question.¹²⁴ He wrote: "In light of the absence of any constitutional provision governing the termination of a treaty, . . . the instant case in my view also 'must surely be controlled by political standards.'"¹²⁵ Notably, Justice Rehnquist relied on the fact that there was no constitutional provision on point. Likewise, there is no constitutional provision on whether Congress has the legislative power to limit, end, or otherwise redefine the scope of a war. Though Justice Powell argues in *Goldwater* that the Treaty Clause and Article VI of the Constitution "add support to the view that the text of the Constitution does not unquestionably commit the power to terminate treaties to the President alone,"¹²⁶ the same cannot be said about Congress's legislative authority to terminate or limit a war in a way that goes beyond its explicitly enumerated powers. There are no such similar provisions that would suggest Congress may decline to exercise its appropriation power but nonetheless legally order the President to cease all military operations. Thus, the case for deference to the political branches on this issue is even greater than it was in the *Goldwater* context. Finally, the Constitution does not imply any additional powers for Congress to end, limit, or redefine a war. The textual and historical evidence suggests the Framers purposefully declined to grant Congress such powers. And as this Article argues, granting Congress this power would be inconsistent with the general war powers structure of the Constitution. Such a reading of the Constitution would unnecessarily empower Congress and tilt the scales heavily in its favor. More over, it would strip the President of his Commander in Chief authority to direct the movement of troops at a time when the Executive's expertise is needed.¹²⁷ And fears that the President will grow too powerful are unfounded, given the reasons noted above.¹²⁸ In short, the Constitution does not impliedly afford Congress any authority to prematurely terminate a war above what it explicitly grants.¹²⁹ Declaring these issues nonjusticiable political questions

would be the most practical means of balancing the textual and historical demands, the structural demands, and the practical demands that complex modern warfare brings . Adjudicating these matters would only lead the courts to engage in impermissible line drawing — lines that would both confuse the issue and add layers to the text of the Constitution in an area where the Framers themselves declined to give such guidance.

That goes nuclear

Li '9

Zheyao, J.D. candidate, Georgetown University Law Center, 2009; B.A., political science and history, Yale University, 2006. This paper is the culmination of work begun in the "Constitutional Interpretation in the Legislative and Executive Branches" seminar, led by Judge Brett Kavanaugh, "War Powers for the Fourth Generation: Constitutional Interpretation in the Age of Asymmetric Warfare," 7 Geo. J.L. & Pub. Pol'y 373 2009 WAR POWERS IN THE FOURTH GENERATION OF WARFARE

A. The Emergence of Non-State Actors

Even as the quantity of nation-states in the world has increased dramatically since the end of World War II, the institution of the nation-state has been in decline over the past few decades. Much of this decline is the direct result of the waning of major interstate war, which primarily resulted from the introduction of nuclear weapons.¹²² The proliferation of nuclear weapons, and their immense capacity for absolute destruction, has ensured that conventional wars remain limited in scope and duration. Hence, "both the size of the armed forces and the quantity of weapons at their disposal has declined quite sharply" since 1945.¹²³ At the same time, concurrent with the decline of the nation-state in the second half of the twentieth century, non-state actors have increasingly been willing and able to use force to advance their causes. In contrast to nation-states, who adhere to the Clausewitzian distinction between the ends of policy and the means of war to achieve those ends, non-state actors do not necessarily fight as a mere means of advancing any coherent policy. Rather, they see their fight as a life-and-death struggle, wherein the ordinary terminology of war as an instrument of policy breaks down because of this blending of means and ends.¹²⁴ It is the existential nature of this struggle and the disappearance of the Clausewitzian distinction between war and policy that has given rise to a new generation of warfare. The concept of fourth-generational warfare was first articulated in an influential article in the Marine Corps Gazette in 1989, which has proven highly prescient. In describing what they saw as the modern trend toward a new phase of warfighting, the authors argued that: In broad terms, fourth generation warfare seems likely to be widely dispersed and largely undefined; the distinction between war and peace will be blurred to the vanishing point. It will be nonlinear, possibly to the point of having no definable battlefields or fronts. The distinction between "civilian" and "military" may disappear. Actions will occur concurrently throughout all participants' depth, including their society as a cultural, not just a physical, entity. Major military facilities, such as airfields, fixed communications sites, and large headquarters will become rarities because of their vulnerability; the same may be true of civilian equivalents, such as seats of government, power plants, and industrial sites (including knowledge as well as manufacturing industries). ¹²⁵ It is precisely this blurring of peace and war and the demise of traditionally definable battlefields that provides the impetus for the

formulation of a new theory of war powers. As evidenced by Part M, supra, the constitutional allocation of war powers, and the Framers' commitment of the war power to two co-equal branches, was not designed to cope with the current international system, one that is characterized by the persistent machinations of international terrorist organizations, the rise of multilateral alliances, the emergence of rogue states, and the potentially wide proliferation of easily deployable weapons of mass destruction, nuclear and otherwise.

B. The Framers' World vs. Today's World

The Framers crafted the Constitution, and the people ratified it, in a time when everyone understood that the state controlled both the raising of armies and their use. Today, however, the threat of terrorism is bringing an end to the era of the nation-state's legal monopoly on violence, and the kind of war that existed before—based on a clear division between government, armed forces, and the people—is on the decline.¹²⁶ As states are caught between their decreasing ability to fight each other due to the existence of nuclear weapons and the increasing threat from non-state actors, it is clear that the Westphalian system of nation-states that informed the Framers' allocation of war powers is no longer the order of the day.¹²⁷ As seen in Part III, supra, the rise of the modern nation-state occurred as a result of its military effectiveness and ability to defend its citizens. If nation-states such as the United States are unable to adapt to the changing circumstances of fourth-generational warfare—that is, if they are unable to adequately defend against low-intensity conflict conducted by non-state actors—"then clearly [the modern state] does not have a future in front of it."¹²⁸ The challenge in formulating a new theory of war powers for fourth-generational warfare that remains legally justifiable lies in the difficulty of adapting to changed circumstances while remaining faithful to the constitutional text and the original meaning.²⁹ To that end, it is crucial to remember that the Framers crafted the Constitution in the context of the Westphalian system of nation-states. The three centuries following the Peace of Westphalia of 1648 witnessed an international system characterized by wars, which, "through the efforts of governments, assumed a more regular, interconnected character."¹³⁰ That period saw the rise of an independent military class and the stabilization of military institutions. Consequently, "warfare became more regular, better organized, and more attuned to the purpose of war—that is, to its political objective."¹³¹ That era is now over. Today, the stability of the long-existing Westphalian international order has been greatly eroded in recent years with the advent of international terrorist organizations, which care nothing for the traditional norms of the laws of war. This new global environment exposes the limitations inherent in the interpretational methods of originalism and textualism and necessitates the adoption of a new method of constitutional interpretation. While one must always be aware of the text of the Constitution and the original understanding of that text, that very awareness identifies the extent to which fourth-generational warfare epitomizes a phenomenon unforeseen by the Framers, a problem the constitutional resolution of which must rely on the good judgment of the present generation.¹³ Now, to adapt the constitutional warmaking scheme to the new international order characterized by fourth-generational warfare, one must understand the threat it is being adapted to confront.

C. The Jihadist Threat

The erosion of the Westphalian and Clausewitzian model of warfare and the blurring of the distinction between the means of warfare and the ends of policy, which is one characteristic of fourth-generational warfare, apply to al-Qaeda and other adherents of jihadist ideology who view the United States as an enemy. An excellent analysis of jihadist ideology and its implications for the rest of the world are presented by Professor Mary Habeck.¹³³ Professor

Habeck identifies the centrality of the Qur'an, specifically a particular reading of the Qur'an and hadith (traditions about the life of Muhammad), to the jihadist terrorists. 134 The jihadis believe that the scope of the Qur'an is universal, and "that their interpretation of Islam is also intended for the entire world, which must be brought to recognize this fact peacefully if possible and through violence if not." 135 Along these lines, the jihadis view the United States and her allies as among the greatest enemies of Islam: they believe "that every element of modern Western liberalism is flawed, wrong, and evil" because the basis of liberalism is secularism. 136 The jihadis emphasize the superiority of Islam to all other religions, and they believe that "God does not want differing belief systems to coexist." 37 For this reason, jihadist groups such as al-Qaeda "recognize that the West will not submit without a fight and believe in fact that the Christians, Jews, and liberals have united against Islam in a war that will end in the complete destruction of the unbelievers." 138 Thus, the adherents of this jihadist ideology, be it al-Qaeda or other groups, will continue to target the United States until she is destroyed. Their ideology demands it. 139 To effectively combat terrorist groups such as al-Qaeda, it is necessary to understand not only how they think, but also how they operate. Al-Qaeda is a transnational organization capable of simultaneously managing multiple operations all over the world."14 It is both centralized and decentralized: al-Qaeda is centralized in the sense that Osama bin Laden is the unquestioned leader, but it is decentralized in that its operations are carried out locally, by distinct cells."4 Al-Qaeda benefits immensely from this arrangement because it can exercise direct control over high-probability operations, while maintaining a distance from low-probability attacks, only taking the credit for those that succeed. The local terrorist cells benefit by gaining access to al-Qaeda's "worldwide network of assets, people, and expertise." 42 Post-September 11 events have highlighted al-Qaeda's resilience. Even as the United States and her allies fought back, inflicting heavy casualties on al-Qaeda in Afghanistan and destroying dozens of cells worldwide, "al-Qaeda's networked nature allowed it to absorb the damage and remain a threat." 14 3 This is a far cry from earlier generations of warfare, where the decimation of the enemy's military forces would generally bring an end to the conflict. D. The Need for Rapid Reaction and Expanded Presidential War Power By now it should be clear just how different this conflict against the extremist terrorists is from the type of warfare that occupied the minds of the Framers at the time of the Founding. Rather than maintaining the geographical and political isolation desired by the Framers for the new country, today's United States is an international power targeted by individuals and groups that will not rest until seeing her demise. The Global War on Terrorism is not truly a war within the Framers' eighteenth-century conception of the term, and the normal constitutional provisions regulating the division of war powers between Congress and the President do not apply. Instead, this "war" is a struggle for survival and dominance against forces that threaten to destroy the United States and her allies, and the fourth-generational nature of the conflict, highlighted by an indiscernible distinction between wartime and peacetime, necessitates an evolution of America's traditional constitutional warmaking scheme. As first illustrated by the military strategist Colonel John Boyd, constitutional decision-making in the realm of war powers in the fourth generation should consider the implications of the OODA Loop: Observe, Orient, Decide, and Act. 44 In the era of fourth-generational warfare, quick reactions, proceeding through the OODA Loop rapidly, and disrupting the enemy's OODA loop are the keys to victory. "In order to win," Colonel Boyd suggested, "we should operate at a faster tempo or rhythm than our adversaries." 145 In the

words of Professor Crevel, "[b]oth organizationally and in terms of the equipment at their disposal, the armed forces of the world will have to adjust themselves to this situation by changing their doctrine, doing away with much of their heavy equipment and becoming more like police."¹⁴⁶ Unfortunately, the existing constitutional understanding, which diffuses war power between two branches of government, necessarily (by the Framers' design) slows down decision-making. In circumstances where war is undesirable (which is, admittedly, most of the time, especially against other nation-states), the deliberativeness of the existing decision-making process is a positive attribute. In America's current situation, however, **in the midst of the conflict** with al-Qaeda and other international terrorist organizations, the existing process of **constitutional decision-making in warfare may prove a fatal hindrance to achieving the initiative necessary for victory. As a slow-acting, deliberative body, Congress does not have the ability to adequately deal with fast-emerging situations** in fourth-generational warfare. Thus, in order to combat transnational threats such as al-Qaeda, **the executive branch must have the ability to operate** by taking offensive military action even **without congressional authorization, because only the executive branch is capable of the swift decision-making and action necessary to prevail in fourth-generational conflicts** against fourth-generational opponents.

Impact

2NC – Impact Overview

Pres power solve nuclear conflict –that’s Li

Outweighs on timeframe and probability—4th generation warfare is quick and likely, prolif, rogue states, and non state actors can attack quickly

Magnitude—challenges to pres power signal weakness and undermine our ability to respond to nuclear conflict

Zeisberg 4

(MARIAH ZEISBERG, Research Fellow, The Political Theory Project, Department of Political Science, and#34;INTERBRANCH CONFLICT AND CONSTITUTIONAL MAINTENANCE: THE CASE OF WAR POWERSand#34; SEPTEMBER 22, 2004, KB)

The first significant argument of pro-Presidency insularists is that flexibility is a prime value in the conduct of foreign affairs, and especially war. Implicit in this argument is the recognition that the executive is functionally superior to Congress in achieving flexibility and swiftness in war operations, a recognition I share. The Constitution cannot be meant to curtail the very flexibility that may be necessary to preserve the nation; and yet, according to the insularists, any general norm which would include Congress in decision-making about going to war could only undermine that flexibility. Writing on the War Powers Act, Eugene Rostow predicts that it would, “put the Presidency in a straightjacket of a rigid code, and prevent new categories of action from emerging, in response to the necessities of a tense and unstable world.” In fact, Rostow believes, “[t]he centralization of authority in the president is particularly crucial in matters of national defense, war, and foreign policy, where a unitary executive can evaluate threats, consider policy choices, and mobilize national resources with a speed and energy that is far superior to any other branch.” Pro-presidency insularists are fond of quoting Hamilton, who argued that “[o]f all the cares or concerns of government, the direction of war most peculiarly demands those qualities which distinguish the exercise of power by a single hand.” This need for flexibility, some insularists argue, is especially acute given modern conditions, where devastating wars can develop quickly. Today, “many foreign states have the power to attack U.S. forces - and some even the U.S. mainland - almost instantly,” and in such a world it is impracticable to require the President to seek advance authorization for hostilities. Such a requirement would simply be too risky to U.S. security. We furthermore face a nuclear age, and the system of deterrence that operates to contain that threat requires that a single person be capable of responding to nuclear attack with nuclear weapons immediately. Rostow writes, “the requirement for advance authorization would collapse the system of deterrence, making preemptive strikes by our enemies more likely.” Hence, “modern conditions” require the President to “act quickly, and often alone.” While this does not mean that Congress has no role to play in moments of crisis, it does mean that Congress should understand its role largely in terms of cooperating with the President to support his negotiations and decisions regarding relationships with foreign powers. Rostow writes, “Congress should be able to act effectively both before and after moments of crisis or potential crisis. It may join the President in seeking to deter crisis by publicly defining national policy in advance, through the sanctioning of treaties or other legislative declarations. Equally, Congress may participate formally in policymaking after

the event through legislative authorization of sustained combat, either by means of a declaration of war, or through legislative action having more limited legal and political consequences. Either of these devices, or both in combination, should be available in situations where cooperation between the two branches is indicated at many points along an arc ranging from pure diplomacy at one end to a declaration of war at the other.” In other words, for Congress to understand itself as having any justifiable role in challenging executive security determinations, especially at moments of crisis, would be to undermine the strength that the executive requires in order to protect the nation. Conflict in this domain represents political degradation. Flexibility is also a key value to support the stability of the global security order, some pro-Presidency insularists argue. International security systems require guarantees that an attack on an ally will be retaliated as quickly as possible. Given such a system, the requirement of congressional consultation “vitiates the security guarantee.” It is important to note that the US does not simply play a role in international collective security systems: it is a central player in those systems, and hence “it is necessary for the system that U.S. participation be assured and credible. But this means that in order to support collective security, the fundamental function for Congress is to support the executive in ways that send a clear message of national resolve, so unequivocal and unmistakable that international pillagers and those who advise them can have no doubts.” This value of flexibility is sometimes applied to the mechanisms for foreign policy themselves. John Yoo, for example, argues that there must be a diversity of mechanisms for going to war, including unilateral action by the President. On Yoo’s account, Congress is granted authority in foreign affairs in times of peace, the President for times of danger. Yoo interprets the understructured nature of war powers to indicate that “the Framers did not intend the Constitution to establish a single, correct method for going to war. . . [d]uring times of relative peace, Congress can use its authority over funding and the raising of the military to play a leading role in foreign policy. In times of emergency or national danger, however, the President can seize the initiative in warmaking.” A second insularist argument is that the “nature of foreign affairs” is such that this domain cannot be guided by law. Jefferson’s oft-cited quote, that “[t]he transaction of business with foreign nations is Executive altogether,” is sometimes used in support of this argument, although I do not believe Jefferson understood himself to be making this point. Robert Bork is instead the most prominent insularist arguing this position. Far from believing that the President’s use of force can be bound by law, Bork denies that law governing foreign affairs—whether domestic or international—even exists. In Bork’s own words, “[T]here are areas of life, and the international use of armed force seems to be one of them, in which the entire notion of law—law conceived as a body of legal principles declared in advance to control decisions to be made in the future—where that conception of law is out of place. The pretense that there is such a law and that it has been constantly violated, has debilitating effects upon our foreign policy . . . [t]wo examples come to mind: one is international law about the use of force, and the other is domestic law, that is, the War Powers Act. These two bodies of ‘law’ arise from different sources, but they are alike in that they are not law in any recognizable sense. They are not enforceable.” Since law in this domain simply cannot exist, the idea of a legislative body playing any role in guiding decisions here is simply senseless. Bork points us to the simple fact of the matter—that “Presidential use or support of force abroad will succeed when the public approves and fail when it disapproves. Law has little to do with the outcome.” The third important argument on behalf of insularity is that Congress already possesses all the

power it needs to contain a wayward executive. This power is wielded mainly through Congress' "power of the purse," but also through Congress' power to raise the military and commission (or de-commission) troops. It is in the course of approving Presidential requests for funding measures that Congress discusses the merits of his actions, and Congress retains the simple power to block the president's actions simply by refusing him funds or military resources. Yoo argues, "One might respond that it is unreasonable to expect Congress to use its appropriations powers to cut off troops in the field. Surely members of Congress will not take actions that might be interpreted as undermining the safety and effectiveness of the military, once committed and in the midst of hostilities. We should not mistake a failure of political will, however, for a violation of the Constitution. Congress undoubtedly possessed the power to end the Kosovo war, it simply chose not to. Affirmatively providing funding for a war, or at the very least refusing to cut off previous appropriations, represents a political determination by Congress that it will provide minimal support for a war, but that ultimately it will leave it to the President to receive the credit either for success or failure." Furthermore, it is simply a fact that the President relies upon Congress to wage the wars he wishes to pursue. As Bobbit points out, unless Congress "by statute, provides an army, transport, weapons, and materials . . . there is nothing for the President to command." Bobbit insists, though, that this does not mean that Congress can appropriately "interfere in the operation of that power" once handed over. Just as Congress, once it has established and vested the judiciary, has no authority to interfere in the operation of the judicial power, so too Congress, once it vests the President with command of a military, has no authority to interfere in how that command is used. Hence Bobbit believes that the only constitutionally legitimate way for Congress to engage in decisionmaking on the use of the sovereign war power is to remove forces from the command of the President. Bobbit continues, "[a]s a structural matter, Congress has the first and last word. It must provide forces before the President can commence hostilities, and it can remove those forces, by decommissioning them or by forbidding their use in pursuit of a particular policy at any time." Bobbit is quite explicit about the implications of his position: "Does this mean that presidents can simply ransack the current Defense Appropriations Act for available forces and that Congress then has no way to stop a president from unilaterally making war so long as one-third plus one of the members of one House sustains his veto - for the balance of the biennium? It may well mean that." The fourth argument is that the kind of challenging characteristic of interbranch deliberation would endanger the well-being of troops in the field, as **foreign nations interpret Congressional challenging to mean that we lack the will to support our soldiers**. This argument is not about the comparative advantages of the presidency as an institution, or about the meaning of law: rather, it directly challenges the value of conflict itself. In fact, as we saw in chapter two, settlement theorists and realists seem to believe that the conditions of war and insecurity are the most congenial territory for their claims about the importance of deference and settlement, precisely because **peace, stability, and the very possibility of rights-protection are all at stake** in this issue. Rostow cites Dean Acheson's comments on the Korean War: "An incredulous country and world held its breath and read the mounting casualties suffered by these gallant troops, most of them without combat experience. In the confusion of the retreat even their divisional commander, Major General William F. Dean, was captured. Congressional hearings on a resolution of approval at such a time, opening the possibility of endless criticism, would hardly be calculated to support the shaken morale of the troops or the unity that, for the

moment, prevailed at home. The harm it could do seemed to me to outweigh the little good that might ultimately accrue.”

2NC – Turns Economy

Flexibility key to solve financial crises

Posner and Vermeule 2010 [Eric A. , Professor of Law at the University of Chicago Law School and Editor of The Journal of Legal Studies; Adrian , Harvard Law Professor, The Executive Unbound: After the Madisonian Republic, Oxford Press, p. 60//wyo-sc]

Finally, we mention a dynamic that further tightens the political constraints on legislatures and courts in times of crisis. Precisely because markets expected the House to pass the EESA, its initial failure to do so created a perceived "crisis of authority"⁸⁷ suggesting a risk that dysfunctional political institutions would not be able to coordinate on any economic policy at all. That second-order crisis supervened on the underlying economic crisis, but acquired force independent of it. The Senate had to scramble to undo the damage and did so in world-record time. The House quickly fell into line. In this way, measures urged by the executive to cope with a crisis of unclear magnitude acquired a kind of self-created momentum. Rejection of those measures would themselves create a political crisis that might, in turn, reduce confidence and thus trigger or exacerbate the underlying financial crisis. A similar process occurred in the debates over the AUMF and the Patriot Act, where proponents of the bills urged that their rejection would send terrorist groups a devastating signal about American political willpower and unity, thereby encouraging more attacks. These political dynamics, in short, create a self-fulfilling crisis of authority that puts legislative institutions under tremendous pressure to accede to executive demands, at least where a crisis is even plausibly alleged. Critics of executive power contend that the executive exploits its focal role during crises in order to bully and manipulate Congress, defeating Madisonian deliberation when it is most needed. On an alternative account, the legislature rationally submits to executive leadership because a crisis can be addressed only by a leader. Enemies are emboldened by institutional conflict or a divided government; financial markets are spooked by it. A government riven by internal conflict will produce policy that varies as political coalitions rise and fall. Inconsistent policies can be exploited by enemies, and they generate uncertainty at a time that financial markets are especially sensitive to agents' predictions of future government action. It is a peculiar feature of the 2008 financial crises that a damaged president could not fulfill the necessary leadership role, but that role quickly devolved to the Treasury secretary and Fed chair who, acting in tandem, did not once express disagreement publicly.

2NC – Turns Terrorism

Curtailing war powers kills American counter-terror credibility

The Straits Times 2013

[The Straits Times, June 01, 2013, No closure yet to war on terror, LexisNexis, uwyo//amp]

PRESIDENT Barack Obama has not declared American victory **in the arduous campaign against terrorism**, but **his claim that the war is ending is** clearly **premature**. Every war the United States has ever fought has, indeed, come to an end - a truism he noted in his review last week of counter-terrorism strategy. But the war on terror is far from over, even after the US has killed Osama bin Laden, and reduced his core Al-Qaeda to "a shell of its former self". Terrorism has gradually morphed and metastasized. The list of examples is long: **Jihadists have gained** or are trying to gain **an opportunistic foothold in** such **trouble spots** as **in the Arabian peninsula, Syria, Somalia and Mali**. Self-radicalised extremists have again brought the war painfully home to the West, recently killing a soldier in London and bombing the Boston marathon. **Violent attacks remain frequent in Pakistan and Afghanistan**. Terrorist recruitment continues unabated in Indonesia and other South-east Asian countries. So, Mr **Obama should not** minimise the threat or **ask Congress to severely curtail war powers** it granted the President after 9/11. Of course, it may be politic of him to consider the Americans who are "deeply ambivalent about war". After spending more than a trillion US dollars and losing 7,000 troops in Afghanistan and Iraq in the last decade, the US is obviously suffering from war fatigue if not distaste. Also, harsh interrogation methods, lengthy imprisonment of suspects and lack of due process offend American values. **The risk is that terrorists will mistake his new approach for a softening of American resolve**. Hence, **US allies and partners may have to take up** any **slack** the US leaves. Some may ask if the change has anything to do with the US being on track to regaining energy self-sufficiency with shale oil and gas and reducing dependence on Middle East crude. **Mr Obama will have to send the right signals in redefining the threat to US and global security**. However objectionable other drastic measures against terrorism have been, Mr Obama has been at his most effective in using remotely piloted drones to take out top terrorists. Any requirement to guarantee there will be no civilian casualties will prevent him from striking targets who take to hiding among non-combatants precisely for that reason. The US should not so easily forget the lesson of the Al-Qaeda threat that went almost unnoticed by the West until it was too late. One hopes Mr Obama will always be right about which wars America should avoid being drawn into. Any mistake will be costly even if his intention is to make the war on terror more efficient, affordable and acceptable.

2NC – Turns ILAW/Credibility

Executive weakness destroys credibility—causes wars everywhere

Howell '7

William, professor of political science at U-Chicago, and Jon C. Pevehouse, professor of Political Science UW-Madison, "While Dangers Gather : Congressional Checks on Presidential War Powers," 2007 ed.

SIGNALING RESOLVE To the extent that congressional discontent signals domestic irresolution to other nations, the job of resolving a foreign crisis is made all the more difficult. As Kenneth Schultz shows, an "opposition party can undermine the credibility of some challenges by publicly opposing them. Since this strategy threatens to increase the probability of resistance from the rival state, it forces the government to be more selective about making threats"—and, concomitantly, more cautious about actually using military force.¹⁴ When members of Congress openly object to a planned military operation, would-be **adversaries** of the United States may **feel emboldened, believing** that **the president lacks** the domestic **support required to see a military venture through**. Such **nations**, it stands to reason, **will be more willing to enter conflict**, and if convinced that the United States will back down once the costs of conflict are revealed, **they may fight longer and make fewer concessions**. Domestic political **strife**, as it were, **weakens the ability of presidents to bargain** effectively **with foreign states, while increasing the chances that military entanglements abroad will become protracted and unwieldy**. A large body of work within the field of international relations **supports the contention** that a nation's **ability to achieve** strategic military **objectives** in short order **depends**, in part, **on the head of state's credibility** in conveying political resolve. Indeed, a substantial game theoretic literature underscores the importance of domestic political institutions and public opinion as state leaders attempt to credibly commit to war,⁷⁵ Confronting widespread and vocal domestic opposition, the president may have a difficult time signaling his willingness to see a military campaign to its end, While congressional opposition may embolden foreign enemies, the perception on the part of allies that the president lacks support may make them wary of committing any troops at all.

2NC UQ Pres Powers High

USA freedom act expanded pres powers and discretion

Patrick Eddington, 4-29-2015, Policy Analyst in Homeland Security and Civil Liberties at the Cato Institute., "The Minimalist Surveillance Reforms of USA Freedom," Just Security, <http://justsecurity.org/22553/usa-freedom-surveillance-reform-minimalism/>, Accessed: 6-25-2015, /Bingham-MB

On April 30, the House Judiciary Committee will take up a warmed-over version of last year's USA Freedom Act. The committee has offered a rather optimistic claim of the surveillance reforms the bill will accomplish if passed — an optimism I do not share (and my skepticism is buttressed by the concerns of transparency advocates and other well-informed NSA critics). Passing the USA Freedom Act in its current form would effectively represent a repeat of the Protect America Act fiasco of the previous decade — an act of Congress that made legal a previously illegal surveillance program that did exactly nothing to protect the country, while costing billions and subjecting Americans to continued mass surveillance. And the decline of a real Congressional institutional ethic for holding the executive branch accountable for its misdeeds in the intelligence arena is a major reason why this is happening. My doubts about the bill's likely effect are also based on the executive branch's well-documented penchant for playing legal word games with surveillance law — a practice key supporters of this bill have complained about loudly and often. But even if we suspend disbelief and assume the more optimistic interpretations of the legislation's effects come to pass, and that the executive branch will abide by the intent of the bill's authors, how will that reform compare with what's been revealed about the scope of NSA's activities since 9/11? The revelations about the abuses of the Patriot Act Sec. 215 metadata program are what ignited this surveillance reform debate. Yet even the current version of the USA Freedom Act would not end the executive branch's authority to collect metadata; it would (assuming the best case scenario) simply narrow the scope of such metadata collection. It's a curious course of action given the fact that Obama's own Review Group on Intelligence and Communications Technology found that the metadata program prevented zero attacks on the United States. And as the New York Times recently reported, multiple government audits of this and other post-9/11 surveillance programs found them essentially useless in the fight against foreign terrorist organizations.

USA Freedom Act reauthorized executive surveillance powers

Saudi Gazette, 6-3-2015, "President Obama signs bill curbing NSA powers into law," No Publication, <http://www.saudigazette.com.sa/index.cfm?method=home.regcon&contentid=20150604246156>, Accessed: 6-25-2015, /Bingham-MB

WASHINGTON — President Barack Obama on Tuesday signed into law landmark legislation ending the government's bulk telephone data dragnet, significantly reversing American policy by reining in the most controversial surveillance program since 9/11. The bill was given final passage earlier Tuesday by the US Senate, after being approved by the House several days earlier. The measure reauthorizes key national security programs that had lapsed early this week. "Glad the Senate finally passed the USA Freedom Act. It protects civil liberties and our national security," President Barack Obama said on Twitter shortly before he signed it. In a

separate statement earlier, Obama chided lawmakers for the “needless delay and inexcusable lapse in important national security authorities,” in the days leading up to the bill’s eventual passage. “My administration will work expeditiously to ensure our national security professionals again have the full set of vital tools they need to continue protecting the country,” the president said. The bill halts the National Security Agency’s ability to scoop up and store metadata — telephone numbers, dates and times of calls — from millions of Americans who have no connection to terrorism. It shifts responsibility for storing the data to telephone companies, allowing authorities to access the information only with a warrant from a secret counterterrorism court that identifies a specific person or group of people suspected of terror ties.

2NC UQ – AT: NSA

NSA was balanced—ensures counter terror flexibility still

Michael D. Shear, 6-3-2015, In Pushing for Revised Surveillance Program, Obama Strikes His Own Balance," New York Times, <http://www.nytimes.com/2015/06/04/us/winning-surveillance-limits-obama-makes-program-own.html>, Accessed: 6-8-2015, /Bingham-MB

"He weighs the balance every day," she said. The compromise on collections of telephone records may end up being too restrictive for the president's counterterrorism professionals, as some Republicans predict. Or, as others vehemently insisted in congressional debate during the past week, it may leave in place too much surveillance that can intrude on the lives of innocent Americans. Either way, Mr. Obama's signature on the law late Tuesday night ensures that he will deliver to the next president a method of hunting for terrorist threats despite widespread privacy concerns that emerged after Edward J. Snowden, a former N.S.A. contractor, revealed the existence of the telephone program. "He owned it in 2009," said Michael V. Hayden, a former N.S.A. director under President George W. Bush, who oversaw the surveillance programs for years. "He just didn't want anyone to know he owned it." Jameel Jaffer, the deputy legal director of the American Civil Liberties Union, called the USA Freedom Act "a step forward in some respects," but "a very small step forward." He said his organization would continue to demand that the president and Congress scale back other government surveillance programs. "Obama has been presented with this choice: Are you going to defend these programs or are you going to change them?" Mr. Jaffer said. "Thus far, we haven't seen a lot of evidence that the president is willing to spend political capital changing those programs." In the case of the telephone program, Mr. Obama's preferred compromise was originally the brainchild of his N.S.A. officials, who embraced it as a way to satisfy the public's privacy concerns without losing the agency's ability to conduct surveillance more broadly. In the lead-up to last week's congressional showdown, Mr. Obama and his national security team insisted that broad surveillance powers were vital to tracking terrorist threats, while admitting that the new approach to data collection would not harm that effort. White House officials said Mr. Obama was comfortable that history would show that he struck the right balance. "To the extent that we're talking about the president's legacy, I would suspect that that would be a logical conclusion from some historians," said Josh Earnest, the president's press secretary. Mr. Earnest said the compromise addressed anxiety about privacy but still gave the government access to needed records.

NSA is a win for Obama—they were the reforms that he wants

Michael D. Shear, 6-3-2015, In Pushing for Revised Surveillance Program, Obama Strikes His Own Balance," New York Times, <http://www.nytimes.com/2015/06/04/us/winning-surveillance-limits-obama-makes-program-own.html>, Accessed: 6-8-2015, /Bingham-MB

Now, **after successfully badgering Congress into reauthorizing the program**, with new safeguards the president says will protect privacy, **Mr. Obama has left little question that he owns it**. The new surveillance program created by the USA Freedom Act will end more than a decade of bulk collection of telephone records by the National Security Agency. But it will make records already held by telephone companies available for broad searches by government officials with a court order. **"The reforms** that have now been enacted **are exactly the reforms the president called**

for over a year and a half ago,” said Lisa Monaco, the president’s top counterterrorism adviser. She called the bill the product of a “robust public debate” and said the White House was “gratified that the Senate finally passed it.”

2NC – Link Wall

Surveillance is a critical presidential power—plan cracks presidential authority

Michael Stokes Paulsen February 2006, Associate Dean University of Minnesota, Presidential Powers in Time of War,
http://www.law.umn.edu/uploads/wE/aa/wEaa1g7XB6j0QyoOhoFpYw/Presidential_Powers_exchange_Paulsen_Kitrosser_Carpenter.pdf

ONE OF THE HOTTEST issues of the day is **presidential power in time of war**—specifically the president's power **unilaterally to order the interception of overseas communications by persons in the United States** who have been in contact with al Qaeda forces and terrorists. Some of my colleagues may well disagree, but I think the issue is relatively straightforward. **The president's power as military commander in chief**, in time of constitutionally authorized war, of course includes **the power to intercept enemy communications**, including enemy communications with persons here in the United States who may be in league with the enemy, **and to follow the chain of such communications where it leads, in order to wage the war against the enemy and, of vital importance, to protect the nation against further attacks.**

Plan introduces a wars powers fights over surveillance that congress can win

Evan Selinger, Christian Science Monitor, 3-9-2015, Why domestic drones stir more debate than ones used in warfighting abroad," <http://www.csmonitor.com/World/Passcode/Passcode-Voices/2015/0309/Why-domestic-drones-stir-more-debate-than-ones-used-in-warfighting-abroad>, Accessed: 5-27-2015, /Bingham-MB

The use of drones domestically has sparked heated debate around the potential threats to both **privacy** and safety. The digital rights group Electronic Frontier Foundation warns that **drones "raise significant issues for privacy and civil liberties" since they are capable of "highly advanced surveillance."** In terms of commercial use, the Federal Aviation Administration has proposed rules to limit where drones can fly. While military drone usage abroad has been opposed by various groups, it hasn't drawn the same kind of attention stateside as the emergence of commercial drones. The US appears more interested in whether drones will be approved for package delivery than whether it's acceptable to use drones for targeted killings in Yemen. I recently spoke with John Kaag about that contradiction. Mr. Kaag is an associate professor of philosophy at the University of Massachusetts at Lowell. He recently coauthored a book called "Drone Warfare" with Sarah Kreps, an associate professor in the Department of Government at Cornell University. Edited excerpts follow. Recommended: Can you pass the written police officer exam? Selinger: **Why is the American public more concerned** about the government using drones for domestic surveillance than putting the technology to military use abroad? PHOTOS OF THE DAY Photos of Memorial Day weekend Kaag: **The first reason has to do with the legal and political origins** of the United States. US citizens know – quite rightly – that the country was set up in such a way, at least in theory, **to protect its citizens from the abuse of governmental power.** Most of us have internalized some version of the Fourth Amendment that prohibits the government from conducting searches of citizens without probable cause and requires a court to issue a warrant prior to a search commencing. **The abuse of domestic drone surveillance would violate this amendment, and so Americans are quick to get their hackles up.** Using drones in targeted killings abroad is different. There's a sense – again, an accurate one –

that the laws of war are different than the domestic laws that govern a nation. Get Monitor cybersecurity news and analysis delivered straight to your inbox. Follow Passcode That said, we should worry about Americans not caring about the targeted killing program. Lethal drone strikes are described as precise and “clean” – much cleaner than traditional forms of warfare. The public can use this reassurance to assuage its moral concerns and direct its attention to more immediate, if not more morally pressing, issues at home. If you have to decide between confronting injustice in your backyard and addressing injustices half a world away, the backyard, for better or for worse, gets cleaned up first. In this case, I think it’s for the worse. Selinger: Why has Congress pushed for more oversight on the government using drones for domestic surveillance than international military missions? Kaag: There’s a simple answer to this question. It can. **Once Congress approves** the Authorization of Use of Military Force (AUMF), an extension of the **War Powers** Resolution, **it has relatively little authority over the actions taken by the executive** in military actions abroad. Historically, most armed conflicts were initiated by a declaration of war. Not so anymore. When President Obama ordered strikes to be carried out against ISIS in fall of 2014, he cited the “authority” granted by the AUMF in 2001. But that authorization was made against Al Qaeda, not ISIS, and these two organizations are largely rivals. So, **an extension of presidential power has occurred, and Congress has little power to curtail it. At the same time, Congress has considerably more oversight over domestic matters, and members of Congress have been consistently pushed by their constituents to oversee the FBI and other government agencies to secure their constitutional rights.**

It’s a war power under the AUMF

Professor Dale Carpenter, February 2006, Professor University of Minnesota, Presidential Powers in Time of War,
http://www.law.umn.edu/uploads/wE/aa/wEaa1g7XB6j0QyoOhoFpYw/Presidential_Powers_exchange_Paulsen_Kitrosser_Carpenter.pdf

THE PRESIDENT’S POWER to authorize warrantless surveillance of communications in the United States must come, if it exists at all, from either (1) a power lawfully given him by Congress, or (2) a **power he unilaterally and irrevocably enjoys under the Constitution.** (1) FISA forbids electronic surveillance of communications in the United States unless approved by a court. By its own terms, FISA is the “exclusive means by which electronic surveillance...may be conducted.” (18 U.S.C. Sec. 2511[2][f].) It covers the field. Except as allowed under FISA, such surveillance is criminal. The statute is not ambiguous on this point, so there is no reason to invoke the constitutional avoidance canon of statutory construction to read it some other way. The Justice Department appears to concede that the NSA program is not affirmatively authorized by FISA procedures. Instead, it contends that **Congress authorized warrantless surveillance, despite FISA, in the Authorization for Use of Military (AUMF) force of Sept. 18, 2001.** It’s true that **the AUMF gives the president fairly broad power to respond with force to the terrorist attacks** of Sept. 11, 2001. (One consequence of the administration’s aggressive claims of power under the AUMF is that future Congresses may be more careful—even too careful—in future force authorizations.) But two qualifications count against the DoJ’s argument.

Independently, legislative restrictions send signal of an unsupportive public – undercuts credibility of US resolve

Howell 13 - Professor of American Politics at the University of Chicago

(William G, "Count on Congress," <http://www.foreignaffairs.com/articles/139890/william-g-howell/count-on-congress>)

The first concerns Congress' continuing relevance in military decision-making. Many analysts have long written it off. And to a certain extent, they have been right to do so. **When it comes to foreign policy generally, and military action in particular, the president enjoys extraordinary power:** power to unilaterally advance his own agenda; power with the public, which looks to him to chart foreign policy; and informational power, which allows the president to structure the terms and direction of any accompanying debate. Congress, meanwhile, can seem hamstrung and all but useless. The multiple veto points, partisan polarization, and pervasive gridlock predictably impede and distort even the most sober efforts to address real-world challenges. ¶ **Even so, in the domestic politics of war-making, it would be unwise to count Congress out.** Obama did not have to seek congressional approval for military action in retaliation for the Assad regime's recent alleged use of chemical weapons against his own people. But he did. And that was a prudent choice. ¶ The advantages of consent will mostly matter in retrospect, not in the run-up to war. That is because, if Congress approves the military action, it cannot as easily criticize its effects. Just ask Secretary of State John Kerry, who stumbled through the 2004 campaign for the presidency trying to explain why he was for the Iraq War before he was against it. In the aftermath of a military action, members of Congress can use hearings, investigations, floor debates, and media appearances to make a case that a military venture failed outright or created new problems. In extreme cases, as occurred in the latter stages of the Vietnam War, all this may lay the groundwork for **legislative action against the president.** But **even in the absence of a formal rebuke, congressional criticisms can turn the public against the president** and his party, **signal to U.S. allies and enemies a lack of resolve for continued military action, and upend congressional action on other aspects of the president's policy agenda.**

2NC – Speed Key

Flexibility is key to quick action and intel

Sulmasy, US Coast Guard Academy law faculty, 2009

(Glenn, "Anniversary Contributions: Use of Force: Executive Power: the Last Thirty Year", 30 U. Pa. J. Int'l L. 1355, lexis)

Since the attacks of 9/11, the original concerns noted by Hamilton, Jay, and Madison have been heightened. Never before in the young history of the United States has the need for an energetic executive been more vital to its national security. The need for quick action in this arena requires an executive response - particularly when fighting a shadowy enemy like al Qaeda - not the deliberative bodies opining on what and how to conduct warfare or determining how and when to respond. The threats from non-state actors, such as al Qaeda, make the need for dispatch and rapid response even greater. Jefferson's concerns about the slow and deliberative institution of Congress being prone to informational leaks are even more relevant in the twenty-first century. The advent of the twenty-four hour media only leads to an increased need for retaining enhanced levels of executive [*1362] control of foreign policy. This is particularly true in modern warfare. In the war on international terror, intelligence is vital to ongoing operations and successful prevention of attacks. Al Qaeda now has both the will and the ability to strike with the equivalent force and might of a nation's armed forces. The need to identify these individuals before they can operationalize an attack is vital. Often international terror cells consist of only a small number of individuals - making intelligence that much more difficult to obtain and even more vital than in previous conflicts. The normal movements of tanks, ships, and aircrafts that, in traditional armed conflict are indicia of a pending attack are not the case in the current "fourth generation" war. Thus, the need for intelligence becomes an even greater concern for the commanders in the field as well as the Commander-in-Chief.¶ Supporting a strong executive in foreign affairs does not necessarily mean the legislature has no role at all. In fact, their dominance in domestic affairs remains strong. Additionally, besides the traditional roles identified in the Constitution for the legislature in foreign affairs - declaring war, ratifying treaties, overseeing appointments of ambassadors, etc. - this growth of executive power now, more than ever, necessitates an enhanced, professional, and apolitical oversight of the executive. An active, aggressive oversight of foreign affairs, and warfare in particular, by the legislature is now critical. Unfortunately, the United States - particularly over the past decade - has witnessed a legislature unable to muster the political will necessary to adequately oversee, let alone check, the executive branch's growing power. Examples are abundant: lack of enforcement of the War Powers Resolution about the executive's unchecked invasions of Grenada, Panama, and Kosovo, and such assertions as the Authorization for the Use of Military Force, the USA Patriot Act, military commissions, and the updated Foreign Intelligence Surveillance Act ("FISA"). There have been numerous grand-standing complaints registered in the media and hearings over most, if not all, of these issues. However, in each case, the legislature has all but abdicated their constitutionally mandated role and allowed the judicial branch to serve as the only real check on alleged excesses of the executive branch. This deference is particularly dangerous and, in the current environment of foreign affairs and warfare, tends to unintentionally politicize the Court.¶ The Founders clearly intended the

political branches to best serve the citizenry by functioning as the dominant forces in [*1363] guiding the nation's foreign affairs. They had anticipated the political branches to struggle over who has primacy in this arena. In doing so, they had hoped neither branch would become too strong. The common theme articulated by Madison, ambition counters ambition, n17 intended foreign affairs to be a "give and take" between the executive and legislative branches. However, inaction by the legislative branch on myriad policy and legal issues surrounding the "war on terror" has forced the judiciary to fulfill the function of questioning, disagreeing, and "checking" the executive in areas such as wartime policy, detentions at Guantanamo Bay, and tactics and strategy of intelligence collection. The unique nature of the conflict against international terror creates many areas where law and policy are mixed. The actions by the Bush administration, in particular, led to outcries from many on the left about his intentions and desire to unconstitutionally increase the power of the Presidency. Yet, the Congress never firmly exercised the "check" on the executive in any formal manner whatsoever.¶ For example, many policymakers disagreed with the power given to the President within the Authorization to Use Military Force ("AUMF"). n18 Arguably, this legislation was broad in scope, and potentially granted sweeping powers to the President to wage the "war on terror." However, Congress could have amended or withdrawn significant portions of the powers it gave to the executive branch. This lack of withdrawal or amendment may have been understandable when Republicans controlled Congress, but as of November 2006, the Democrats gained control of both houses of the Congress. Still, other than arguing strongly against the President, the legislature did not necessarily or aggressively act on its concerns. Presumably this inaction was out of concern for being labeled "soft on terror" or "weak on national security" and thereby potentially suffering at the ballot box. This virtual paralysis is understandable but again, the political branches were, and remain, the truest voice of the people and provide the means to best represent the country's beliefs, interests, and national will in the arena of foreign affairs. It has been this way in the past but the more recent (certainly over the past thirty years and even more so in the past decade) intrusions of the judicial branch into what [*1364] was intended to be a "tug and pull" between the political branches can properly be labeled as an unintended consequence of the lack of any real legislative oversight of the executive branch.¶ Unfortunately, now nine unelected, life-tenured justices are deeply involved in wartime policy decision making. Examples of judicial policy involvement in foreign affairs are abundant including *Rasul v. Bush*; n19 *Hamdi v. Rumsfeld*; n20 *Hamdan v. Rumsfeld*; n21 as well as last June's *Boumediene v. Bush* n22 decision by the Supreme Court, all impacting war policy and interpretation of U. S. treaty obligations. Simply, judges should not presumptively impact warfare operations or policies nor should this become acceptable practice. Without question, over the past thirty years, this is the most dramatic change in executive power. It is not necessarily the strength of the Presidency that is the change we should be concerned about - the institutional search for enhanced power was anticipated by the Founders - but they intended for Congress to check this executive tendency whenever appropriate. Unfortunately, this simply is not occurring in twenty-first century politics. Thus, the danger does not necessarily lie with the natural desire for Presidents to increase their power. The real danger is the judicial branch being forced, or compelled, to fulfill the constitutionally mandated role of the Congress in checking the executive.¶ 4. PRESIDENT OBAMA AND EXECUTIVE POWER¶ The Bush presidency was, and continues to be, criticized for having a standing agenda of increasing the

power of the executive branch during its eight-year tenure. Numerous articles and books have been dedicated to discussing these allegations. n23 However, as argued earlier, the reality is that it is a natural bureaucratic tendency, and one of the Founders presciently anticipated, that each branch would seek greater powers whenever and wherever possible. As the world becomes increasingly interdependent, technology and armament become more sophisticated, and with [*1365] the rise of twenty-first century non-state actors, the need for strong executive power is not only preferred, but also necessary. Executive power in the current world dynamic is something, regardless of policy preference or political persuasions, that the new President must maintain in order to best fulfill his constitutional role of providing for the nation's security. This is simply part of the reality of executive power in the twenty-first century. n24

Speed is key to the strategic advantage key to solve global crises and maintain leadership

Berkowitz, RAND senior analyst, 2008

(Bruce, *Strategic Advantage: Challengers, Competitors, And Threats To America's Future*, pg 1-4)

THIS BOOK is intended to help readers better understand the national security issues facing the United States today and offer the general outline of a strategy for dealing with them. National security policy—both making it and debating it — is harder today because the issues that are involved are more numerous and varied. The problem of the day can change at a moment's notice. Yesterday, it might have been proliferation; today, terrorism; tomorrow, hostile regional powers. Threats are also more likely to be intertwined—proliferators use the same networks as narco-traffickers, narco-traffickers support terrorists, and terrorists align themselves with regional powers. Yet, as worrisome as these immediate concerns may be, the long-term challenges are even harder to deal with, and the stakes are higher. Whereas the main Cold War threat — the Soviet Union — was brittle, most of the potential adversaries and challengers America now faces are resilient. In at least one dimension where the Soviets were weak (economic efficiency, public morale, or leadership), the new threats are strong. They are going to be with us for a long time. As a result, we need to reconsider how we think about national security. The most important task for U.S. national security today is simply to retain the strategic advantage. This term, from the world of military doctrine, refers to the overall ability of a nation to control, or at least influence, the course of events.¹ When you hold the strategic advantage, situations unfold in your favor, and each round ends so that you are in an advantageous position for the next. When you do not hold the strategic advantage, they do not. As national goals go, “keeping the strategic advantage” may not have the idealistic ring of “making the world safe for democracy” and does not sound as decisively macho as “maintaining American hegemony.” But keeping the strategic advantage is critical, because it is essential for just about everything else America hopes to achieve — promoting freedom, protecting the homeland, defending its values, preserving peace, and so on. The Changing Threat If one needs proof of this new, dynamic environment, consider the recent record. A search of the media during the past fifteen years suggests that there were at least a dozen or so events that were considered at one time or another the most pressing national security problem facing the United States — and thus the organizing concept for U.S. national security. What is most interesting is how varied and

different the issues were, and how many different sets of players they involved — and how each was replaced in turn by a different issue and a cast of characters that seemed, at least for the moment, even more pressing. They included, roughly in chronological order, • regional conflicts — like Desert Storm — involving the threat of war between conventional armies; • stabilizing “failed states” like Somalia, where government broke down in toto; • staying economically competitive with Japan; • integrating Russia into the international community after the fall of communism and controlling the nuclear weapons it inherited from the Soviet Union; • dealing with “rogue states,” unruly nations like North Korea that engage in trafficking and proliferation as a matter of national policy; • combating international crime, like the scandal involving the Bank of Credit and Commerce International, or imports of illegal drugs; • strengthening international institutions for trade as countries in Asia, Eastern Europe, and Latin America adopted market economies; • responding to ethnic conflicts and civil wars triggered by the reemergence of culture as a political force in the “clash of civilizations”; • providing relief to millions of people affected by natural catastrophes like earthquakes, tsunamis, typhoons, droughts, and the spread of HIV/AIDS and malaria; • combating terrorism driven by sectarian or religious extremism; • grassroots activism on a global scale, ranging from the campaign to ban land mines to antiglobalization hoodlums and environmentalist crazies; • border security and illegal immigration; • the worldwide ripple effects of currency fluctuations and the collapse of confidence in complex financial securities; and • for at least one fleeting moment, the safety of toys imported from China. There is some overlap in this list, and one might want to group some of the events differently or add others. The important point, however, is that when you look at these problems and how they evolved during the past fifteen years, you do not see a single lesson or organizing principle on which to base U.S. strategy. Another way to see the dynamic nature of today's national security challenges is to consider the annual threat briefing the U.S. intelligence community has given Congress during the past decade. These briefings are essentially a snapshot of what U.S. officials worry most about. If one briefing is a snapshot, then several put together back to back provide a movie, showing how views have evolved.² Figure 1 summarizes these assessments for every other year between 1996 and 2006. It shows when a particular threat first appeared, its rise and fall in the rankings, and in some cases how it fell off the chart completely. So, in 1995, when the public briefing first became a regular affair, the threat at the very top of the list was North Korea. This likely reflected the crisis that had occurred the preceding year, when Pyongyang seemed determined to develop nuclear weapons, Bill Clinton's administration seemed ready to use military action to prevent this, and the affair was defused by an agreement brokered by Jimmy Carter. Russia and China ranked high as threats in the early years, but by the end of the decade they sometimes did not even make the list. Proliferation has always been high in the listings, although the particular countries of greatest concern have varied. Terrorism made its first appearance in 1998, rose to first place after the September 11, 2001, terrorist attacks, and remains there today. The Balkans appeared and disappeared in the middle to late 1990s. A few of the entries today seem quaint and overstated. Catastrophic threats to information systems like an “electronic Pearl Harbor” and the “Y2K problem” entered the list in 1998 but disappeared after 2001. (Apparently, after people saw an airliner crash into a Manhattan skyscraper, the possible loss of their Quicken files seemed a lot less urgent.) Iraq first appeared in the briefing as a regional threat in 1997 and was still high on the list a decade later—though, of course, the Iraqi problem in the early years

(suspected weapons of mass destruction) was very different from the later one (an insurgency and internationalized civil war). All this is why the United States needs agility. It not only must be able to refocus its resources repeatedly; it needs to do this faster than an adversary can focus its own resources.

Internal Link – Spillover

Spills-over to collapse prez powers

Klukowski 11 (Kenneth, Research Fellow, Liberty University School of Law; Fellow and Senior Legal Analyst, American Civil Rights Union; National-Bestselling Author. George Mason University School of Law, J.D. 2008; University of Notre Dame, B.B.A. 1998, "MAKING EXECUTIVE PRIVILEGE WORK: A MULTI-FACTOR TEST IN AN AGE OF CZARS AND CONGRESSIONAL OVERSIGHT" 2011, 59 Clev. St. L. Rev. 31)

VI. CONCLUSION Most controversies between Congress and the White House over information are decided more by politics than by law, and so a settlement is usually reached favoring the party with the public wind to its back. n348 Questions of law should not be decided in that fashion. Therefore, **the reach and scope of executive privilege should be settled** by the courts in such situations, **so that the President's power is not impaired** whenever the political wind is in the President's face and at his opponents' backs, or the President is inappropriately shielded when political tides flow in his favor. While the best outcome in any interbranch dispute is the political branches reaching a settlement, "such compromise may not always be available, or even desirable." n349 It is not desirable where **it sets a precedent that degrades one of the three branches of government. If one branch of government demands something to which it is not constitutionally entitled** and that the Constitution has fully vested in a coequal branch, **the vested branch should not be required to negotiate** on the question. Negotiation usually involves compromise. **This negotiation would often result in one branch needing to cede to the other, encouraging additional unconstitutional demands in the future.** Though this may perhaps be a quicker route to a resolution, **it disrupts the constitutional balance in government.** As the Supreme Court has recently explained, "convenience and efficiency are not the primary objectives--or the hallmarks--of democratic government." n350 President Reagan declared that "you aren't President; you are temporarily custodian of an institution, the Presidency. And you don't have any right to do away with any of the prerogatives of that institution, and one of those is executive privilege. And this is what was being attacked by the Congress." n351 Thus, **any White House has the obligation to fight to protect executive privilege**, and the courts should draw the line to preserve that constitutional prerogative. Likewise, there are times when it is the President who is refusing to give Congress its due under the Constitution, where Congress must assert its prerogatives for future generations. Conversely, where confidentiality is not warranted, courts must ensure public disclosure and accountability.

Even small incursions on presidential authority threaten the unitary executive

Calabresi and Yoo 2008 [Stephen G., Law Professor at Northwestern; Christopher S., professor of Law, Communication, and Computer and Information Science at the University of Pennsylvania Law School, and founding director of the Center for Technology, Innovation, and Competition, *The Unitary Executive: Presidential Power From Washington to Bush*, Yale University Press, 2008, p.9 //wyo-sc]

Second, we believe that President George W. Bush and **all future presidents should recognize the existence of a strong, internal, executive branch precedent, established over the entire history of our republic, whereby all forty-three presidents have always resisted** serious

incursions on the principle of the unitary executive. For this reason, President Clinton was right to let the independent counsel law expire without his support in June 1999, and President George W. Bush was right to insist on broad removal power over the newly created Department of Homeland Security. Future presidents should veto statutes presented to them that infringe upon the unitariness of the executive, and they should enforce such statutes as are already on the books with the greatest circumspection.

Uniqueness- Presidential powers high now- XOs on immigration, climate change, and minimum wage

Payne 14 (Sebastian Payne, national reporter with The Washington Post, the Post's 35th Laurence Stern fellow, "How Obama has used executive powers compared to his predecessors", <http://www.washingtonpost.com/blogs/the-fix/wp/2014/07/10/how-obama-has-used-executive-powers-compared-to-his-predecessors/>, 7/10/14, 7/6/15, MEM)

But how far-reaching have Obama's orders and actions been and how do they compare to what other presidents have done? **On immigration, the president has signed orders to halt the deportation** of those who came to the United States when they were young, those who care for children and those who haven't committed crimes. He's also started to allow some relatives of U.S. service members living here illegally to stay. There's more to come, as the president promised in January to take significant executive action on immigration and border security, but nothing has actually happened yet. **Obama has also signed far reaching orders on climate change** in November 2013 – forcing power plants to cut their emissions by 30 percent by 2030 – which will be much discussed in this year's elections. **The president has instigated 23 separate executive orders on gun control**, which have made information about mental illnesses available in background checks and expanded research into causes of gun violence. Obama has promised two new executive actions on gun control but again, there's no sign of them. Through his executive powers, Obama has slowly extended the rights for same-sex couples and **raised the minimum wage for federal workers to \$10.10**. But for all the accusations of abuse of power, **his actual uses of his executive authority so far aren't that far-reaching**: Not so much the smack of firm government, more nudging in a certain direction. George W. Bush for example managed to gut the Presidential Records Act (greatly reducing access to presidential records), limit federal funding for stem cell research and sidestep the Geneva Convention on interrogation techniques -- all through executive orders, even when he had Congress on his side. Interestingly, all of these orders were later rescinded by Obama.

Link- Legislative interference caused by the aff ensures a decrease in executive power for Obama

Gonzales and Kohl 6 [Alberto R. Gonzales was the 80th United States Attorney General, appointed in February 2005 by President George W. Bush, becoming the highest-ranking Hispanic-American in Executive Branch government to date. Herbert H. "Herb" Kohl is an American businessman and politician. He is a former United States Senator from Wisconsin and a member of the Democratic Party http://fas.org/irp/congress/2006_hr/nsasurv.html "WARTIME EXECUTIVE POWER AND THE NATIONAL SECURITY AGENCY'S SURVEILLANCE AUTHORITY"] (Vaibhav)

Attorney General Gonzales. Yes, Senator. Senator Kohl. Mr. Attorney General, if applying to the secret FISA Court is too burdensome, then would you agree to after-the-fact review by the FISA Court and by Congress of the wiretaps used specifically in this program? At least in this way we can ensure going forward that the authority will never be abused by this or any other President?

Attorney General Gonzales. Senator, obviously, we want to ensure that there are no abuses. The President has said we are happy to listen to your ideas about legislation. There is concern, however, that, of course, the legislative process may result--first of all, **of course, we believe the President already has the authority and legislation is not necessary here. But the legislative process may result in restrictions upon the President's--attempted restrictions upon the President's inherent constitutional authority. He may not be able to protect the country in the way that he believes he has the authority to do under the Constitution.** And then, finally, of course, the legislative process is one where it is pretty difficult to keep certain information confidential, again, because if you are talking about amending FISA, there are many aspects of FISA that make sense to me, they work well. Again, **you are talking about--**if you are talking about **domestic surveillance** during peacetime, I think having the kind of restrictions that are in FISA makes all the sense in the world. And so you are probably talking about a very narrowly tailored, focused amendment in FISA. And, again, I am not the expert on legislation, but we are talking potentially a very narrow- focused amendment of FISA. And I think I am concerned that that process will inform our enemies about what we are doing and how we are doing it.

Focus on too many issues spread executive powers too thin

Mayer 07 (Kenneth R. Mayer, professor Department of Political Science at Wisconsin-Madison University, author of "With the Stroke of a Pen: Executive Orders and Presidential Power", <http://pup.princeton.edu/chapters/s7095.html>, 8/7/07, 7/7/15, MEM)

Presidential Power stressed the weakness of the president's legal authority, emphasizing the difficulties **of acting unilaterally in a system of separated powers, institutional decentralization,** and **competition with other actors** with their own independent sources of power.⁸⁰ This weakness is aggravated by the gulf between what the public expects of the presidency and what occupants can deliver, and the collapse of traditional political structures--especially political parties--that once gave stability and efficacy to presidential leadership. **The perceived disintegration of one presidency after another--**Johnson (Vietnam), Nixon (Watergate), Ford (Nixon's pardon, recession), Carter (just about everything), Reagan (Iran-Contra), Bush (recession), and Clinton (impeachment)--has **led to the conclusion that "the American political system now produces failed presidencies as the norm rather than the exception."**⁸¹ The changes wrought by television and the **proliferation of interest groups, the decline in U.S. international hegemony after the cold war, the confrontational style of media coverage of the presidency, congressional assertiveness, divided government, a bloated bureaucracy, and persistent budget deficits** combine to **place the presidency "under siege," incapable of governing** except under the most extraordinary circumstances.⁸²

Executive powers high now and key to sustain Heg

Tushnet 15 (Mark Tushnet, William Nelson Cromwell Professor of Law at Harvard Law School, attended Yale Law, Yale, and Harvard Law, "The Presidential Empire", <https://www.dissentmagazine.org/article/the-presidential-empire>, Spring 2015, 7/1/15, MEM) As with the National Surveillance State, so with Presidential Administration: **presidents** ground their actions in existing statutes but they **are** also **bypassing the current Congress and relying on what past Congresses have done.** Here too some of their interpretations are quite creative, almost necessarily so in light of the fact that presidents use old statutes to deal with new

problems. “Creative”—it should also be noted—doesn’t always mean unlawful. Courts are more active in examining whether Presidential Administration is lawful than with the National Surveillance State, but here too the legal rules give the president a lot of leeway. The House, for example, has threatened to sue Obama for some of the small ACA waivers that he has enacted during his tenure, but few constitutional scholars think that the suit has any chance of success. Presidential Administration and the National Surveillance State are almost certainly here to stay because they arise from the persistent quagmire of congressional politics and our hegemonic tendencies in foreign policy. These conditions will change only in the face of new political mobilizations around these two issues. At present it seems to me unlikely that we will see popular mobilizations strong enough to destabilize the consensus around the need for the National Surveillance State. Mobilizing partisans to produce a unified government in which Presidential Administration is replaced by collaboration between the president and Congress seems somewhat more likely. What domestic policies that collaboration would yield depends, of course, on whether Democrats or Republicans are in control.

Great power war

Zhang et al., Carnegie Endowment researcher, 2011

(Yuhan, “America’s decline: A harbinger of conflict and rivalry”, 1-22, <http://www.eastasiaforum.org/2011/01/22/americas-decline-a-harbinger-of-conflict-and-rivalry/>, ldg)

*no one can challenge USA and attack us

*bandwagon so they don’t just attack USA but USA and squad

*without hegemony there will be trade blocs and regional power wars

This does not necessarily mean that the US is in systemic decline, but it encompasses a trend that appears to be negative and perhaps alarming. Although the US still possesses incomparable military prowess and its economy remains the world’s largest, the once seemingly indomitable chasm that separated America from anyone else is narrowing. Thus, the global distribution of power is shifting, and the inevitable result will be a world that is less peaceful, liberal and prosperous, burdened by a dearth of effective conflict regulation. Over the past two decades, no other state has had the ability to seriously challenge the US military. Under these circumstances, motivated by both opportunity and fear, many actors have bandwagoned with US hegemony and accepted a subordinate role. Canada, most of Western Europe, India, Japan, South Korea, Australia, Singapore and the Philippines have all joined the US, creating a status quo that has tended to mute great power conflicts. However, as the hegemony that drew these powers together withers, so will the pulling power behind the US alliance. The result will be an international order where power is more diffuse, American interests and influence can be more readily challenged, and conflicts or wars may be harder to avoid. As history attests, power decline and redistribution result in military confrontation. For example, in the late 19th century America’s emergence as a regional power saw it launch its first overseas war of conquest towards Spain. By the turn of the 20th century, accompanying the increase in US power and waning of British power, the American Navy had begun to challenge the notion that Britain

'rules the waves.' Such a notion would eventually see the US attain the status of sole guardians of the Western Hemisphere's security to become the order-creating Leviathan shaping the international system with democracy and rule of law. Defining this US-centred system are three key characteristics: enforcement of property rights, constraints on the actions of powerful individuals and groups and some degree of equal opportunities for broad segments of society. As a result of such political stability, free markets, liberal trade and flexible financial mechanisms have appeared. And, with this, many countries have sought opportunities to enter this system, proliferating stable and cooperative relations. However, what will happen to these advances as America's influence declines? Given that America's authority, although sullied at times, has benefited people across much of Latin America, Central and Eastern Europe, the Balkans, as well as parts of Africa and, quite extensively, Asia, the answer to this question could affect global society in a profoundly detrimental way. Public imagination and academia have anticipated that a post-hegemonic world would return to the problems of the 1930s: regional blocs, trade conflicts and strategic rivalry. Furthermore, multilateral institutions such as the IMF, the World Bank or the WTO might give way to regional organisations. For example, Europe and East Asia would each step forward to fill the vacuum left by Washington's withering leadership to pursue their own visions of regional political and economic orders. Free markets would become more politicised — and, well, less free — and major powers would compete for supremacy. Additionally, such power plays have historically possessed a zero-sum element. In the late 1960s and 1970s, US economic power declined relative to the rise of the Japanese and Western European economies, with the US dollar also becoming less attractive. And, as American power eroded, so did international regimes (such as the Bretton Woods System in 1973). A world without American hegemony is one where great power wars re-emerge, the liberal international system is supplanted by an authoritarian one, and trade protectionism devolves into restrictive, anti-globalisation barriers. This, at least, is one possibility we can forecast in a future that will inevitably be devoid of unrivalled US primacy.

2NC Overview

Uniqueness

2NC Uniqueness Wall

A. Specifically true with surveillance

JAMES RISEN, 08, an American journalist for The New York Times who previously worked for the Los Angeles Times

[http://topics.nytimes.com/top/reference/timestopics/people/r/james_risen/index.html?inline=nyt-per,](http://topics.nytimes.com/top/reference/timestopics/people/r/james_risen/index.html?inline=nyt-per)

When he takes office, **Mr. Obama will inherit greater power in domestic spying power than any other new president in more than 30 years**, but he may find himself in an awkward position as he weighs how to wield it. As a presidential candidate, he condemned the N.S.A. operation as illegal, and threatened to filibuster a bill that would grant the government expanded surveillance powers and provide immunity to phone companies that helped in the Bush administration's program of wiretapping without warrants. But Mr. Obama switched positions and ultimately supported the measure in the Senate, angering liberal supporters who accused him of bowing to pressure from the right. Advisers to Mr. Obama appear divided over whether he should push forcefully to investigate the operations of the wiretapping program, which was run in secret from September 2001 until December 2005. Mr. **Obama recently started receiving classified briefings on intelligence operations** from Mike McConnell, the director of national intelligence. The Obama transition team declined to say whether Mr. Obama had been briefed on the agency's eavesdropping operations. His transition team also declined requests to discuss his current views on domestic surveillance or how his administration would respond to legal challenges growing out of it. But there has been no shortage of debate among lawyers involved in the challenges to the program. "I don't think President-elect Obama embraces Dick Cheney's theory of unfettered presidential power," said Jon B. Eisenberg, a San Francisco lawyer involved in one lawsuit against the wiretapping program. "So if President-elect Obama doesn't embrace that theory, one would expect a change in the direction of how the new administration handles this litigation." But other legal and political analysts suggest that Mr. Obama, as president, may be more willing to accept the broadened presidential powers that he once condemned as a candidate, particularly since Congress has approved expanded surveillance powers for the government. In the proposal in June that Mr. Obama ultimately voted to support, **Congress set up a new surveillance framework that gave intelligence officials much broader authority to eavesdrop on international communications** without prior court approval. One of the first clues of how the Obama administration will deal with the issue of domestic surveillance may come in a court case in Alexandria, Va., where a judge has ordered the Justice Department to turn over material from the National Security Agency and other intelligence agencies on possible eavesdropping on Ali al-Timimi, an Islamic leader convicted of supporting terrorism. The Justice Department has never acknowledged that it has used intercepts from the N.S.A. program in any criminal or civil case, which could be unlawful because the wiretaps were conducted without court warrants. Mr. Timimi has claimed that he did not get a fair trial because prosecutors secretly used N.S.A. wiretaps in his case, and he also argues that the government has turned over to the court only intercepted conversations that make him look guilty, while withholding those that might prove he is innocent. **A recently unsealed transcript, citing a closed hearing, strongly suggests that the wiretaps were used in Mr. Timimi's criminal trial.**

B. Jerusalem proves

Adler 6/8 (Jonathan H. Adler, an American legal commentator and law professor at the Case Western Reserve University School of Law, “A major victory for executive power at the Supreme Court”, <http://www.washingtonpost.com/news/volokh-conspiracy/wp/2015/06/08/a-major-victory-for-executive-power-at-the-supreme-court/>, 6/8/15, 7/6/15, MEM)

On Monday, in *Zivotovsky v. Kerry*, the Supreme Court held that Congress may not require the State Department to designate “Israel” as the place of birth for American citizens born in Jerusalem. It is a long-standing policy of the executive branch to simply list “Jerusalem” as the place of birth, as the United States has not officially recognized Israel’s claim over the disputed territory. Congress, however, disagreed and passed a statute attempting to trump the State Department’s position. *Zivotovsky* is a significant win for the executive branch, for reasons Jack Goldsmith explains at the LawfareBlog: It is very unusual for the Court to give the President a victory in defiance of a congressional restriction, a context that Justice Jackson described in his famous *Youngstown* concurrence as the “lowest ebb” of presidential power. And it is literally unprecedented for the Court to do so in the foreign relations context, as the Chief Justice noted in the first sentence of his dissent. This is one important feature of the case. ... as Justice Scalia noted, the reasoning in the opinion — especially its “functional considerations” in support of the exclusive recognition power — sweeps beyond the holding. ... Until today **the Executive branch** never possessed a judicial precedent that embraced its many functional arguments for presidential primacy in a decision that holds that the president can disregard a foreign affairs statute. **Now** it does **possess** such a precedent — a precedent with broad reasoning and **a good deal of pro-Executive dicta**. This precedent thus **gives executive branch lawyers much more powerful ammunition** than before in deciding whether to disregard foreign relations statutes in contexts that never reach courts for review.

C. Congress doesn’t care about illegal warfare

Cooper 15 (Ryan Cooper, a national correspondent at The Week, The Week, “Obama's war-powers farce: If you want to limit presidential power, don't start illegal wars”, <http://theweek.com/articles/539263/obamas-war-powers-farce-want-limit-presidential-power-dont-start-illegal-wars>, 3/4/15, 7/6/15, MEM)

Finally, there's the political reality. Congressional restrictions on presidential power are only as good as Congress' willingness to act when the restrictions are breached. And right now there is approximately **zero reason** to think that **Congress gives a crap about illegal war**. In response to Libya, Congress should have threatened to remove him from office. But the best it could do was offer some annoyed muttering, which lapsed into virtual silence by the time Obama turned to the Islamic State. In other words, in today's political climate, Obama is basically asking for the authority to start war against anyone who's watched an Islamic State video. Indeed, the main axis of debate is whether the proposed authority is broad enough. Except for Sen. Rand Paul, **Republicans are** basically **fine with Obama being able to make war** wherever he wants. So **until Congress starts** caring about **fulfilling its constitutional prerogatives**, lawmakers might as well save their breath when it comes to new authorizations.

D. Healthcare

Leonard 6/25 (Kimberly Leonard, a health care reporter for the News division at U.S. News, US News, “Supreme Court Upholds Obamacare Subsidies”,

<http://www.usnews.com/news/articles/2015/06/25/supreme-court-upholds-obamacare-subsidies-in-king-v-burwell>, 6/25/15, 7/6/15, MEM)

The Supreme Court on Thursday upheld one of the main tenets of President Barack Obama's health care law, ruling 6-3 that millions of Americans are entitled to keep the tax subsidies that help them afford insurance. Chief Justice John Roberts wrote the court's majority opinion and was joined by Justices Anthony Kennedy, Ruth Bader Ginsburg, Stephen Breyer, Sonia Sotomayor and Elena Kagan. The ruling, the second case in which the justices have decided in favor of the Affordable Care Act, preserves benefits for an estimated 6.4 million Americans and deals a crippling blow to the law's Republican opponents, who have attempted to undermine it since its passage in 2010. King v. Burwell centered on whether plaintiffs' arguments that middle- and low-income adults who purchased health insurance through the federally run Healthcare.gov marketplace were entitled to subsidies based on the language of the law that says tax credits are only to be distributed for marketplaces "established by the state." The law's architects countered that subsidies were always meant to be distributed through both channels, and that the goal of the law was to cover all Americans. The Supreme Court agreed. Acknowledging plaintiffs' contention that the language in the statute is "ambiguous," Roberts nevertheless said their interpretation of the law "would destabilize the individual insurance market in any State with a Federal Exchange, and likely create the very 'death spirals' that Congress designed the Act to avoid." "The combination of no tax credits and an ineffective coverage requirement could well push a State's individual insurance market into a death spiral," the chief justice wrote. "It is implausible that Congress meant the Act to operate in this manner. Congress made the guaranteed issue and community rating requirements applicable in every State in the Nation. But those requirements only work when combined with the coverage requirement and the tax credits. So it stands to reason that Congress meant for those provisions to apply in every State as well."

Link

2NC Link Wall

A. Theories

Collins '04 [Jason Collins, JD Candidate @ University of Connecticut School of Law, "A Republic of Emergencies: Martial Law in American Jurisprudence" Connecticut Law Review, 36 Conn. L. Rev. pg. 1432-1433] (Vaibhav)

The opinion that has had greatest influence, however, is not Black's majority opinion, but Justice Jackson's concurrence.³⁰² Jackson set forth the framework by which courts would examine the use of emergency powers in the years to come. ³⁰³ At the heart of Jackson's theory of separation of powers was relativity—that **presidential powers fluctuate depending upon their juxtaposition with those of Congress**.³⁰⁴ Jackson deduced three categories which determined the degree of the President's authority under the Constitution to implement emergency measures.³⁰⁵ The **first involved an executive action pursuant to an express or implied authorization from Congress**.³⁰⁶ Under these circumstances, **presidential power was at its height, "for it includes all that he possesses in his own right plus all that Congress can delegate."**³⁰⁷ The Court would bestow congressional executive cooperation with "the strongest of presumptions and the widest latitude of judicial interpretation."³⁰⁸ The **second situation entailed an action in which the President and Congress had concurrent authority, yet Congress was silent on the matter**.³⁰⁹ Here, the President could bring only the executive's independent powers to bear, on which the emergency measure would stand or fall.³¹⁰ The **third category addressed those presidential actions which were in direct contravention with the express or implied will of Congress**.³¹¹ Such acts represented the lowest constitutional authority of the President, subject to scrutiny by the courts.³¹² Jackson placed Truman's seizure in the third category because Congress had considered, and rejected, an amendment in the Taft-Hartley Act that would have provided for exactly that which Executive Order No. 10340 sought to accomplish.³¹³ Thus, Jackson concurred in the majority's decision without endorsing Black's rationale.

B. Empirically true with surveillance

Gonzales and Kohl 6 [Alberto R. Gonzales was the 80th United States Attorney General, appointed in February 2005 by President George W. Bush, becoming the highest-ranking Hispanic-American in Executive Branch government to date. Herbert H. "Herb" Kohl is an American businessman and politician. He is a former United States Senator from Wisconsin and a member of the Democratic Party http://fas.org/irp/congress/2006_hr/nsasurv.html "WARTIME EXECUTIVE POWER AND THE NATIONAL SECURITY AGENCY'S SURVEILLANCE AUTHORITY"] (Vaibhav)

When the **Foreign Intelligence Surveillance Act was passed, that language was stricken**. So by all customary standards of statutory interpretation, FISA, the Foreign Intelligence Surveillance Act, changed that 180 degrees, didn't it? Attorney General Gonzales. **There is no question, if you look at the legislative history and the record, that Congress intended to try to limit whatever the President's inherent authority existed**. But there is also from my review of the record a clear indication that some Members of Congress were concerned about the constitutionality of this effort.

C. Legislative interference on surveillance can decrease the executive power for Obama

Buttar 15 [Shahid Buttar is a constitutional lawyer, electronic musician, grassroots organizer and executive director of the Bill of Rights Defense Committee. Mary 26, 2015 <http://www.truth-out.org/news/item/30976-senate-starts-to-rethink-mass-surveillance-checking-executive-spying-power> Senate Moves to Check Executive Spying Power] (Vaibhav)

It's a good thing that a bipartisan measure, the Surveillance State Repeal Act (HR 1466), is poised to do exactly that. Rep. Mark Pocan (D-Wisconsin) and Rep. Thomas Massie (R-Kentucky) introduced the SSRA to force the agencies to justify the expansion of any powers from a constitutional baseline, rather than one contrived by a decade of executive lies. Congress has long abandoned its role of checking and balancing runaway executive power, but the Senate's recent vote suggests an overdue awakening. Members should heed the political wind, and embrace bipartisan calls for aggressive limits as the starting point for comprehensive surveillance reform.

D. Justices agree with this

Richard Henry Seamon 7 [Professor, University of Idaho College of Law <http://www.hastingsconlawquarterly.org/archives/V35/I3/seamon.pdf> "Domestic Surveillance for International Terrorists: Presidential Power and Fourth Amendment Limits"] (Vaibhav)

The most authoritative opinion from *Youngstown* has come to be, not the majority's opinion, but Justice Jackson's concurrence.⁷⁴ In his concurrence, Justice Jackson set out a three-part framework for analyzing the President's power.⁷⁵ The framework reflects the interdependence of the President and Congress in certain matters, including war.⁷⁶ Under the first part of the framework, the President's power is "at its maximum" when he or she acts with the express or implied authorization of Congress.⁷⁷ In this first situation, the President has "all [of the power] that he [or she] possesses in his [or her] own right plus all that Congress can delegate."⁷⁸ The second part of the framework applies when the President acts with neither congressional approval nor congressional denial of his or her authority. In this second situation, the President "can only rely upon his [or her] own independent powers."⁷⁹ The third part of the framework applies when the President takes action "incompatible with the expressed or implied will of Congress."⁸⁰ In this third situation, the President's power "is at its lowest ebb, for then he [or she] can rely only upon his [or her] own constitutional powers minus any constitutional powers of Congress over the matter. Courts can sustain exclusive presidential control in such a case only by disabling Congress from acting upon the subject."⁸¹

E. This is specifically true with the surveillance climate

Yoo 14, <http://blog.constitutioncenter.org/2014/10/surveillance-and-executive-power/> a Korean-American attorney, law professor, and author.

In this excerpt from a paper on the legality of the NSA's bulk collection of phone records, UC Berkeley law professor John Yoo looks at Article II and the President's power to conduct domestic surveillance. As Commander-in-Chief, the President has the constitutional power and the responsibility to wage war in response to a direct attack against the United States. In the Civil War, President Lincoln undertook several actions—raised an army, withdrew money from

the treasury, launched a blockade—on his own authority in response to the Confederate attack on Fort Sumter, moves that Congress and the Supreme Court later approved. During World War II, the Supreme Court similarly recognized that once war began, the President's authority as Commander-in-Chief and Chief Executive gave him the tools necessary to effectively wage war. In the wake of the September 11 attacks, Congress agreed that "the President has authority under the Constitution to take action to deter and prevent acts of international terrorism against the United States," which recognizes the President's authority to use force to respond to al Qaeda, and any powers necessary and proper to that end. Even legal scholars who argue against this historical practice concede that once the United States has been attacked, the President can respond immediately with force. The ability to collect intelligence is intrinsic to the use of military force. It is inconceivable that the Constitution would vest in the President the powers of Commander-in-Chief and Chief Executive, give him the responsibility to protect the nation from attack, but then disable him from gathering intelligence to use the military most effectively to defeat the enemy. **Every evidence of the Framers' understanding of the Constitution is that the government would have every ability to meet a foreign danger.** As James Madison wrote in *The Federalist*, "security against foreign danger is one of the primitive objects of civil society." Therefore, the "powers requisite for attaining it must be effectually confided to the federal councils." After World War II, the Supreme Court declared, **"this grant of war power includes all that is necessary and proper for carrying these powers into execution."** Covert operations and electronic surveillance are clearly part of this authority. During the writing of the Constitution, some Framers believed that the President alone should manage intelligence because only he could keep secrets. Several Supreme Court cases have recognized that the President's role as Commander-in-Chief and the sole organ of the nation in its foreign relations must include the power to collect intelligence. These authorities agree that intelligence rests with the President because its structure allows it to act with unity, secrecy, and speed. Presidents have long ordered electronic surveillance without any judicial or congressional participation. More than a year before the Pearl Harbor attacks, but with war clearly looming with the Axis powers, President Franklin Roosevelt authorized the FBI to intercept any communications, whether wholly inside the country or international, of persons "suspected of subversive activities against the Government of the United States, including suspected spies." FDR was concerned that "fifth columns" could wreak havoc with the war effort. "It is too late to do anything about it after sabotage, assassinations and 'fifth column' activities are completed," FDR wrote in his order. FDR ordered the surveillance even though a federal law at the time prohibited electronic surveillance without a warrant. Presidents continued to monitor the communications of national security threats on their own authority, even in peacetime. **If Presidents in times of peace could order surveillance of spies and terrorists, executive authority is only the greater now, as hostilities continue against al Qaeda.**

AT: Zero Sum

Executive/legislative power is zero-sum—increased executive power diminishes the power of Congress

Howell 03 (William, Asst Prof of Gov't @ Harvard, Powers without Persuasion: The Politics of Direct Presidential Action, pg 101) (Vaibhav)

We repeatedly return to a basic theme about **systems of governance defined by their separated powers**: executive power is inversely proportional to legislative strength. **Presidential power expands** at exactly **the same times when**, and precisely the same places that, **congressional power weakens**. The occurrence is hardly coincidental. Indeed, the forces operate in tandem, for it is the check each places on the other that defines the overall division of power.

Presidential/Congressional power is zero-sum

Columbus Dispatch 2/15/06 (lexis)

The Constitution empowers Congress to serve as a check on executive power. Over the years, as **presidents strengthened their powers** in matters of national security and foreign policy, legislative authority has waned.

Internal Link

2NC Brink

Focus on too many issues spread executive powers too thin

Mayer 07 (Kenneth R. Mayer, professor Department of Political Science at Wisconsin-Madison University, author of "With the Stroke of a Pen: Executive Orders and Presidential Power", <http://pup.princeton.edu/chapters/s7095.html>, 8/7/07, 7/7/15, MEM)

Presidential Power stressed the weakness of the president's legal authority, emphasizing the difficulties of acting unilaterally in a system of separated powers, institutional decentralization, and competition with other actors with their own independent sources of power.⁸⁰ This weakness is aggravated by the gulf between what the public expects of the presidency and what occupants can deliver, and the collapse of traditional political structures--especially political parties--that once gave stability and efficacy to presidential leadership. The perceived disintegration of one presidency after another--Johnson (Vietnam), Nixon (Watergate), Ford (Nixon's pardon, recession), Carter (just about everything), Reagan (Iran-Contra), Bush (recession), and Clinton (impeachment)--has led to the conclusion that "the American political system now produces failed presidencies as the norm rather than the exception."⁸¹ The changes wrought by television and the proliferation of interest groups, the decline in U.S. international hegemony after the cold war, the confrontational style of media coverage of the presidency, congressional assertiveness, divided government, a bloated bureaucracy, and persistent budget deficits combine to place the presidency "under siege," incapable of governing except under the most extraordinary circumstances.⁸²

Presidential power used on too many issues risk US credibility and presidential power- Congress fill in

Waxman 14 (Matthew C. Waxman, an American law professor at Columbia University, author who held several positions during the George W. Bush administration, a Fellow at the Hoover Institution on War, Revolution and Peace, Adjunct Senior Fellow for Law and Foreign Policy at the Council on Foreign Relations, U.S. Department of State as principal deputy director of policy planning, graduate of Yale College and Yale Law School, studied international relations as a Fulbright scholar in the United Kingdom, law clerk to Supreme Court justice David H. Souter and U.S. Court of Appeals judge Joel M. Flaum, "The Power to Threaten War", <http://www.yalelawjournal.org/article/the-power-to-threaten-war>, April 2014, 7/7/15, MEM)

Consider, as an illustration of this difference in methodological starting point, that for the period of 1946-1975 (during which the exercise of unilateral presidential war powers had its most rapid expansion), the Congressional Research Service compilation of instances in which the United States has conducted military operations abroad to protect U.S. citizens or promote U.S. interests—often relied upon by legal scholars studying war powers—lists only twenty-three incidents.¹²⁵ For the same time period, the Blechman and Kaplan study of political uses of force (usually threats accompanied by some movement of military forces)—often relied upon by political scientists studying U.S. security strategy—includes dozens more data-points, because its authors divide up many military crises into several discrete policy decisions, because many crises were resolved with threat-backed diplomacy, and because many uses of force were preceded by overt or implicit threats of force.¹²⁶ Among the most significant incidents studied by Blechman and Kaplan but not included in the Congressional Research Service compilation are the 1958-1959 and 1961 crises over Berlin and the 1973 Middle East War, during which U.S. Presidents signaled threats of superpower war, and in the latter case signaled particularly a

willingness to resort to nuclear weapons.¹²⁷ Because the Presidents did not in the end carry out these threats, these cases lack the sort of authoritative legal justifications or reactions that accompany actual uses of force. It is therefore difficult to assess definitively how the executive branch and Congress understood the scope of the President's war powers in these cases. Historical inquiry, however, would probably show the executive branch's interpretation to be very broad, even to include full-scale war and even where the main U.S. interest at stake was the very credibility of U.S. defense commitments undergirding its grand strategy, not simply the interests specific to divided Germany and the Middle East region. One might argue that because the threatened military actions were never carried out in these cases, it is impossible to know for sure if the President would have sought congressional authorization or how Congress would have reacted to the use of force. Nonetheless, it is easy to see that in crises like these a threat by the President to use force, having put U.S. credibility on the line in addition to whatever other foreign policy stakes were at issue, would have put Congress in a bind.

Weak enforced view weakens presidential powers

Yoo 13 (John Yoo, Korean-American attorney, law professor, and author. He served as a political appointee, the Deputy Assistant U.S. Attorney General in the Office of Legal Counsel, Department of Justice, UC Berkeley School of Law, "The presidency redefined – Obama weakens it where it should be strong and strengthens it where it should be weak", <https://www.law.berkeley.edu/article/the-presidency-redefined-obama-weakens-it-where-it-should-be-strong-and-strengthens-it-where-it-should-be-weak/>, 3/11/13, 7/7/15, MEM)

Choosing enemy targets and selecting weapons systems thus fall squarely in the executive's docket. Presidents have generally followed the laws of war, which require that militaries discriminate between civilians and combatants and use proportional force to achieve their missions. But now the administration has said, in a Justice Department white paper, that, for the first time in American history, White House advisers are choosing targets in war using criteria developed in the criminal-justice context: whether the enemy's due-process rights allow the use of force, whether capture is feasible, and whether an attack on the United States is imminent. Civil libertarians of the Left and the Right might find comfort in the fact that Obama and his advisers worry about terrorists' rights before they authorize a drone strike. But they should concede that none of it — despite appearing in a Justice Department paper — is required by the law. Under the traditional laws of war, members of the enemy forces are legitimate targets at any time, unless they have surrendered or can no longer fight owing to injury. It does not matter whether they are generals or privates, or whether they are continually planning attacks or pose an "imminent" threat to the United States, as required by the Obama administration. In World War II, for example, the U.S. bombed military targets in Germany and Japan far behind the front lines; the only legal question was whether the U.S. could also bomb civilian targets to stop war production or weaken the enemy's will to carry on. It does not even matter whether the enemy is American. In past wars — especially the Civil War, during which President Abraham Lincoln believed all Confederates remained U.S. citizens — some Americans have joined the enemy and have received the same treatment as their brothers-in-arms. By introducing law-enforcement concerns such as imminence, capture, and due process into military decisions, President Obama weakens his office. These criminal-justice notions not only slow down the military decision-making process, but also invite the judicialization of war. Obama's drone policy resembles the abortive September 10 terrorism policies he announced at the start of his first term. Soon after taking office, he ordered Guantanamo Bay shut down and terrorists transferred to a mainland prison. He halted military trials of terrorists and announced that al-Qaeda leaders such as Khalid Sheikh Mohammed, the mastermind of the 9/11 attacks, would be tried in federal courts in

downtown New York City. His Justice Department read Miranda warnings to captured al-Qaeda operatives, such as Umar Abdulmutallab, who tried to blow up a Northwest airliner over Detroit on Christmas Day 2009. — Transferring detainees to the courts effectively gives the judiciary the final say over terrorism policy — just as judges set the rules for police conduct. Congressional opposition, and the intrusion of the reality of the security threat, led President Obama to back away from this approach and retain much of the framework that had been established by President George W. Bush (in whose administration I served). But the president's support of legislation that would involve the courts in the question of drone strikes marks a new turn toward the mistaken idea that terrorism is just another law-enforcement matter. In his foreign policy, Obama has avoided hard decisions. The administration waited for three weeks for the United Nations to approve intervention in Libya, resulting in greater risks to Western militaries than would have existed if Qaddafi had been deposed sooner, greater death and destruction among the Libyan people, and a prolonged civil war whose unsecured weapons have spilled into neighboring countries, such as Mali. Obama eventually ordered bombing runs in Libya in support of the rebels, which he shortly downgraded to command-and-control support for European air forces, but sent no ground troops and had no hand in influencing the post-Qaddafi regime. This was anything but the "energy" that the office demands. In Syria and Iran, the administration has failed to support popular movements that could topple those nations' anti-American regimes. Even as he restricts the executive's freedom in the area where it counts most, Obama enlarges executive power in the area where it should count least. The Framers intended for issues concerning the domestic economy and society to remain under the control of the legislature, which has power to make laws, spend from the Treasury, and raise taxes, and at least one branch of which has always been directly elected by the people. The president would enter domestic lawmaking only with a limited veto power, designed to prevent Congress from running to extremes. So concerned were the Founders that Congress would bully the president that they insulated his election and pay from the legislature. But President Obama has been so eager to plunge into domestic policy that he has used the power of his office to undermine existing laws. Rather than negotiate with Congress on the matter of immigration, Obama granted executive exemptions from immigration law to a large class of illegal immigrants. Rather than seek legislative repeal of the Defense of Marriage Act, which clashed with his newfound support for gay marriage, the president ordered his Justice Department to stop defending the law in court. He gutted by executive order the work requirements of the welfare reform that President Clinton signed into law after Congress had passed it with overwhelming bipartisan support. Enforcing the drug laws has gone by the wayside, with the Justice Department declining to prosecute marijuana possession in states that have legalized weed. President Obama's unwillingness to "faithfully execute" the laws — one of the president's core responsibilities — is unprecedented in the history of the office. President Obama has also intruded upon the legislature by making recess appointments to the National Labor Relations Board and the Consumer Financial Protection Bureau while the Senate formally remained in session. He thus arrogated to himself the right to determine whether the Senate's proceedings are in fact its proceedings. Last month, the D.C. Circuit Court of Appeals recognized this power grab for what it is and nullified the appointments to the NLRB, implying that the appointment to the CFPB was unconstitutional as well. The case, Noel Canning v. NLRB, reined in a presidential power that had been traditionally exercised for 190 years — by rejecting not just Obama's unconstitutional moves, but all recess appointments that do not occur in the break between the first and second sessions of a Congress (which usually occurs between its first and second years). His successors will suffer the consequences. Conservatives may feel reluctant to criticize Obama's understanding of executive power. Modern conservative thought has depended on the

presidency to check the growth of the administrative state, and much of modern conservative jurisprudence in the area of the separation-of-powers doctrine has had a similar goal. Powerful presidents can revoke burdensome rules, fire regulators, and bring greater coherence and uniformity to the activities of the government. But such efforts to tame the beast that was unleashed by the early-20th-century progressives have yet to succeed. Conservatives would be more consistent in their quest to rein in the administrative state if they forswore the vigorous use of executive power. It may be possible to beat liberals at their own game — and in the process to repudiate their interpretation of the Founders — by seeking a sounder rights-based jurisprudence. This would require that federal judges once again consider whether they can enforce the Constitution's economic rights, restore the states as the primary regulators of daily life, and demand that the administrative state act not just rationally, but in the public's best interests. Using something as momentous as the presidency for a purpose opposite the one for which it was designed not only will be ineffective, but will also cause considerable harm. Mr. Obama is weakening his office, the Constitution, and the nation. Only future generations will know how long it took to reverse the damage.

The president's action would be converted to a global scale

Sunstein 95 [Cass Robert Sunstein is an American legal scholar, particularly in the fields of constitutional law, administrative law, environmental law, and law and behavioral economics, who was the Administrator of the White House Office of Information and Regulatory Affairs in the Obama administration.[2] For 27 years, Sunstein taught at the University of Chicago Law School.[3] Sunstein is the Robert Walmsley University Professor[4] and Felix Frankfurter Professor of Law at Harvard Law School. "An Eighteenth Century Presidency in a Twenty-First Century World" pg. 48 Lexis] (Vaibhav)

With the emergence of the United States as a world power, the **President's foreign affairs authority has become far more capacious** than was originally anticipated. For the most part this is because the powers originally conferred on the President have turned out - in light of the unanticipated position of the United States in the world - to mean much more than anyone would have thought. The constitutionally granted authorities have led to a **great deal of unilateral authority, simply because the United States is so central an actor on the world scene.** The posture of the President means a great deal even if the President acts **clearly within the scope of his constitutionally-granted power.** Indeed, mere words from the President, at a press conference or during an interview, can have enormous consequences for the international community.

The president represents American politics- loss of his/her power impacts the world

Fitts 96 [Michael Fitts served as a clerk to Third Circuit Judge Leon Higginbotham and as an attorney in the Office of Legal Counsel. He has written on questions of administrative law, presidential power and separation of powers, and has argued for improving the structure of political parties and executive-branch decision making. Fitts is a member of the Law and Political Process Study Group of the American Political Science Association. His 14-year tenure as Dean of Penn Law ended in June, when he stepped down to become President of Tulane University in New Orleans. Teaches law at UPenn after getting his degree from Yale and Harvard "The Paradox Of Power In The Modern State", University of Pennsylvania Law Review, 144 U. Pa. L. Rev. 827, Lexis] (Vaibhav)

Not surprisingly, these diverse factual conclusions often mirror contrasting normative positions on the value of a strong president. On one side, proponents of a strong president argue that a government more directly controlled by a single decisionmaker - that is, a strong unitary executive - frequently avoids many of the collective action problems endemic to legislative bodies or dispersed government organizations, such as Congress or a plural executive. Borrowing from public choice theory, these proponents conclude that the exercise of power by a centralized but politically visible and [*830] electorally accountable institution, such as the **president**, often **serves as the most effective** and democratic **form of government.** In a sense, it is a better form of "enterprise liability." Critics of presidential power, on the other side, emphasize the failures of recent presidents: their lack of accountability to many important political constituencies (both majoritarian and minoritarian); their inability to exercise effective leadership; and their apparent lack of competence, let alone expertise. 4 The succession of scandals surrounding each of the last three presidents reinforces this view. Proponents of this position ask why more power should be placed in such a discredited and potentially tyrannical

institution. Despite these different assessments of the president's appropriate role, most contributors to this debate seem to agree implicitly on one thing: vesting enhanced authority in the person of the president has increased his influence in the past and will continue to do so if additional centralizing changes are implemented. 5 This view is especially prevalent among legal academics, who generally assume that giving greater formal legal control to the president through devices such as a line-item veto or executive order 12,291, 6 [*831] will necessarily increase his ability to work his will over the bureaucracy, and the government in general. 7 Formal legal power, in other words, will ultimately translate into real policy influence. Similarly, political science scholars who study the strategic implications of political organization suggest that the political singularity of the **presidential persona is a source of immense informal political strength**. By applying insights derived from game theory, these commentators delineate the president's strategic advantages in overseeing the modern state, chiefly his influence on the public agenda, ability to establish "focal points" for political bargaining, and freedom from the costs of collective decisionmaking and action. 8 Indeed, even critics of a strong presidency recognize this [*832] centralization as an important - albeit unwelcome - source of the president's power. 9 [*833] As a result, the debates over whether the president is strong or weak, and whether his power should be increased or limited, have focused invariably on legal, structural, and political changes that would either vest or reduce personal presidential authority. On the one side, those who argue that the president is too strong tend to support expanded congressional oversight of the White House, limited use of the presidential veto, increased autonomy of the executive branch bureaucracy, and increased access for Congress and the press to government documents and deliberations under the Freedom of Information Act (FOIA), 10 Government in the Sunshine Act (GSA), 11 and Federal Advisory Committee Act (FACA). 12 On the other side, those who perceive the president as too weak usually call for a more "unitary executive." These proponents tend to support the enactment of a law authorizing a [*834] line-item veto, expansion of presidential supervisory powers over the bureaucracy through executive orders such as 12,291, 13 12,498, 14 and 12,866, 15 elimination of the independence of independent agencies, expansion of the executive privilege doctrine, and greater insulation of the president from public scrutiny under FOIA and FACA. 16 As the breadth of this list indicates, resolution of most legal issues regarding the powers of the presidency turns on whether one views the president as either too strong or too weak. 17 Both sides seem to agree, however, that increasing the centralization of power in the person of the president, both legally and politically, will significantly increase his influence. 18 [*835] This Article takes issue with some important elements of this analysis. I argue that the structural changes that appear to enhance the power of the president under public choice approaches and unitary executive principles can, at the same time, actually undermine the president's reputation, his ability to resolve conflicts, and ultimately, his political strength. As a result, formal attempts to strengthen the presidency may have "diminishing marginal returns" and perhaps even negative effects, at least in some contexts. The reasons are complicated but straightforward: the individuality, centrality, and visibility of the "personal unitary presidency," which is seen as an advantage in terms of collective choice and public debate, can be a disadvantage when it comes to conflict resolution and public assessment. By using the term "mediating conflict," I refer to the way in which a political leader or institution overcomes the social and political costs of resolving distributional and symbolic disputes. 19 Due to his singularity and enhanced visibility, [*836] a

unitary, centralized president may be less able to mediate many of these conflicts. At the same time, he may be politically evaluated more often under personal (rather than institutional) criteria and **subjected to an overassessment of government responsibility** and error. This combination of effects can undermine not only the popularity and perceived competence - what I will call "legitimacy" - of the person who holds the office, but indirectly, the president's political influence as well. What the institution of the presidency seems to gain in strategic power from its centralization in a single visible individual, it may lose, at least in some contexts, as a result of the normative political standards applied to individuals. This analysis is intended to explain a paradox in the current debate. Many commentators suggest that the presidency has become more centralized both legally and politically in recent years, as the president and his bureaucratic alter ego, the Executive Office of the President, have become more involved formally and informally in public policy decisions. 20 At the same time, some commentators, led by Theodore Lowi, have persuasively detailed the political weaknesses and perceived inadequacies of modern presidents. 21 How can these observations be reconciled? 22 Extending Lowi's analysis, I argue that while the presidency may have become a more complex and effective institution bureaucratically and legally, in many ways it has also become more individualized politically, which can undermine its political legitimacy and strength. The legal theory of the unitary executive, for which I have some sympathy, can thus be at war with itself. [*837] What are the implications of this analysis? First, legal scholars should appreciate the theoretical complexity of the problem. The debate over whether the president is too strong or too weak is in some cases a false dichotomy because the various legal and political changes serving to centralize formal and informal presidential resources may increase presidential influence in some contexts and diminish it in others. 23 Indeed, although a more central, unitary president may be stronger overall, he may nevertheless be perceived as less competent. In this sense, one important goal of this Article is to explore how the source of at least some of our frustration with the office of the presidency is the result of the structure of the position, rather than the personal "mistakes" of its inhabitants. The second purpose of this Article, though far more speculative, is policy oriented: to suggest possible legal reforms and tactical approaches modern presidents could follow. Can structural mechanisms or approaches be developed that help the chief executive, when appropriate, mediate conflict and avoid certain types of individualized scrutiny? In the past, old-style political parties often filled this role, 24 but we are unlikely to return to that era. 25 In the alternative, I offer several legal, structural, and political changes that might improve the president's ability to mediate conflict, including (paradoxically) reassessment of the line-item veto, selected cutbacks in direct presidential oversight of agencies, and the judicious creation of commissions, such as the Commission on Base Realignment and Closure, 26 which operate [*838] with less direct presidential control. Part I describes the different ways in which the modern presidency has become more centralized legally and politically, making the office more visible and politically accountable. Under the analyses developed separately in the legal literature on the unitary presidency and in the political science literature on a centralized "modern" or "plebiscitary" presidency, these developments would seem to make the presidency a more effective and democratic institution. These writings, while focusing on different substantive areas, share common theoretical perspectives on the value of increasing centralized presidential power. Despite these structural developments, the modern presidency does not seem to be a particularly strong institution.

Parts II through V offer several possible theoretical explanations, exploring, from a general perspective, the different ways in which the president's visibility and centralization may, at the same time, delegitimize politically his exercise of governmental power. Specifically, increased visibility and centralization may diminish the president's ability to mediate conflict (Part II), subject him to an instrumentally inappropriate standard of personal moral evaluation (Part III), result in an overassessment of personal presidential error (Part IV), and lead to an overassessment of the president's responsibility for government and social outcomes (Part V). Although these potential consequences are powerfully affected by cultural perceptions and vary in importance according to context, taken together they can help explain many of the difficulties faced by a more visible and centralized modern presidency. At the same time, these generic effects serve to undermine some of the common analytic assumptions underlying the legal and public choice analyses of a unitary, centralized presidency. My point is not that a modern centralized presidency is overall weaker as a result of the changes (it probably is not), but only that the relationship between greater centralized authority and overall influence can be quite mixed. Finally, in the Conclusion, this Article explores specifically how we might alleviate some of these negative consequences through both legal and political changes. In entering the legal and policy debate over the presidency, this Article reflects two rather distinct approaches. First, it focuses on the informal political consequences of legal structure, especially [*839] mediating political conflict and assessing error. Given the heightened visibility of and information about political actors, these informal consequences may be becoming more important in understanding the influence of the president. 27 Yet, as explained below, scholars writing in both the unitary president and public choice traditions often deemphasize the importance of these two informal effects. This is perhaps because public choice scholars operate under the assumption that "preferences" are given, 28 while legal academics tend to overlook the systemic impact of formal legal authority on informal political power. 29 Although I will rely in many places on public choice and legal analysis, this Article is a work of mid-level analysis. I seek to integrate the insights of the rational choice tradition with more textured claims about political psychology, information asymmetries, and American culture. [*840] Second, to understand the effects of these informal factors on the power of the presidency, this Article adopts a fairly abstract approach. References to individual presidents, which I plan to develop further in a future article, are offered primarily for illustrative purposes. This method contrasts with many political science pieces on the presidency that seek to explain the strength of the institution in terms of individual personalities or styles. These "great person" theories are rich in detail but offer no analysis that can be usefully generalized or evaluated. 30 Legal studies, on the other hand, tend to engage in a formal doctrinal analysis but ignore informal political factors or fail to incorporate them systematically into their formal analysis. 31 If one broadens the analysis of the presidency to include these informal perspectives, however, the political singularity of the president - viewed positively under public choice models of collective action and unitary president proposals - emerges as a potential source of his weakness. 32 [*841] I. The Presidency

A. The Modern Presidency What is the nature of the presidency in the modern state? Numerous political scientists and legal academics claim that our recent chief executives have inherited a "modern presidency," 33 which began to develop with Franklin Roosevelt and is structurally distinct from earlier regimes. 34 Of course, the balance of power among the president, Congress, and the agencies is exceedingly complex, since the amount of bureaucratic activity

and legislative oversight has increased greatly over the years. Nevertheless, "the resources of modern presidents [are thought by many to] dwarf those of their predecessors." 35 Commentators point to three related changes that centralize greater formal power in the institution and increase the informal political assets at the president's command. The first change, which is to some extent considered the most important and defining quality of the modern presidency, is the increased visibility of the president as an individual within the electoral process. Prior to the Roosevelt Administration, the president was viewed more as a member of both a party and a complicated and elite system of government. He was also relatively distant from the population. The modern presidents, in contrast, are elected increasingly as individuals in the primary and general elections on the basis of direct public exposure in the media. This [*842] evolution, which has occurred over a number of years, is a result of social forces, such as the decline of political parties 36 and the rise of the media, as well as legal changes, such as the ascendancy of primaries. 37 Second, once in power, modern presidents have increasingly attempted to take greater formal and informal control of the executive branch, through policy expansion of the OMB and the Executive Office of the President and increased oversight of agencies under Executive Order 12,291 38 and its successor orders. Indeed, every president since Roosevelt has attempted to centralize power in the White House to oversee the operations of the executive branch and to make its resources more responsive to his policy and political needs. 39 [*843] Finally, and relatedly, the modern presidency has become more centralized and personalized through its public media role - that is, its "rhetorical functions." 40 Given changes in the press and the White House office, the president has become far more effective in setting the agenda for public debate, sometimes even dominating the public dialogue when he chooses. 41 Economists would probably attribute the president's ability to "transmit information" to the centralized organization of the presidency - an "economy of scale" in public debate. 42 At the same time, the president can establish [*844] a "focal point" around preferred public policies. 43 This proposition can also be stated somewhat differently. As an institution embodied in a single individual, the president has a unique ability to "tell" a simple story that is quite personal and understandable to the public. As a number of legal academics have shown, stories can be a powerful mode for capturing the essence of a person's situated perspective, improving public comprehension of particular facts, and synthesizing complex events into accessible language. 44 Complex institutions, such as Congress, have difficulty [*845] assembling and transmitting information as part of a coherent whole; they represent a diversity - some would say a babble - of voices and perspectives. In contrast, presidents have the capacity to project a coherent and empathetic message, especially if it is tied to their own life stories. In this sense, the skill of the president in telling a story about policy, while sometimes a source of pointed criticism for its necessary simplicity, 45 may greatly facilitate public understanding and acceptance of policy. 46

B. The Theory of the Unitary Presidency This picture of the modern presidency is quite consistent with those parts of the legal and political science literatures exploring the advantages of presidential (as opposed to legislative) power and advocating a more unitary or centralized presidency. According to this view, 47 power and accountability in government and in the executive branch should be moved more toward the top, giving the [*846] president and his staff greater ability to make decisions themselves or to leave them, subject to oversight, in the hands of expert agency officials. In the legal literature, this position is usually associated with support for strengthening the president's

directorial powers over the agencies, unfettered presidential removal authority, and Chevron deference to agency regulations 48 reviewed by the White House. Similarly, political scientists emphasize the plebiscitarian president's growing informal influence with the agencies and the public, as well as the association between a strong president and the "national" interest. 49 To be sure, legal proponents of a strong unitary presidency usually do not outline a comprehensive policy defense of the legal position but rely more on doctrinal justifications and related policy arguments. 50 By synthesizing and integrating the interrelated legal and policy rationales in the legal and political science literatures, however, one can sketch the outlines of a common theory. This analysis suggests that the structure of a more unitary, centralized presidency should enhance the power, legitimacy, and effectiveness of the office, especially as compared to Congress, in three different but related ways. [*847] First, with respect to the administration of the executive branch, centralized power, or at least the opportunity for the exercise of centralized power, is thought to facilitate better development and coordination of national programs and policies. Because federal government programs interrelate in countless ways, a centralized figure or institution such as the president is seemingly in a good position to recognize and respond to the demands of the overall situation. 51 For similar reasons, as social and political change accelerates, the president may be well-situated to foresee and implement adaptive synoptic changes - that is, to engage in strategic planning. One of the rationales for the existence of the federal government is the national effect of its policies, which under this view can be reconciled most easily at the top. 52 To the extent that the president is successful in putting together such programs, he should receive political credit, which would redound to his political strength. 53 Second, centralized power facilitates greater political accountability by placing in one single individual the public's focus of government performance. If the public had to evaluate electorally the activities of hundreds of different officials in the executive branch, its information about the positions, actions, and effects of government behavior would be extraordinarily limited. 54 Only those most [*848] interested in a particular function would be likely to have information about its behavior or attempt to influence that behavior through election, lobbying, or litigation. This is the standard concern with New Deal agencies captured by the so-called iron triangle of Washington politics. 55 By contrast, placing overall political responsibility in one individual is thought to facilitate broader political accountability. While this oversight can have mixed effects depending on presidential performance, it has the potential for strengthening the president's political support and influence. 56 Because he is more likely to approximate the views of the median voter, 57 a unitary president is thought to enjoy a clear majoritarian mandate, as the only elected representative of all "The People." This democratic legitimacy should be, in turn, a major source of his political strength. 58 As one commentator has [*849] argued: "Every deviation from the principle of executive unitariness will necessarily undermine the national majority electoral coalition." 59 Finally, on an elite political level, the existence of a single powerful political actor serves a political coordination function. 60 A dispersed government with a decentralized political structure has a great deal of difficulty in reaching cooperative solutions on policy outcomes. Even if it does reach cooperative solutions, it has great difficulty in reaching optimal results. Today, there are simply too many groups in Washington and within the political elite to reach the necessary and optimal agreement easily. 61 A central and visible figure such as the president, who can take clear positions, can serve as a unique focal point for coordinating action. 62 With the ability to focus public attention and

minimize information costs, 63 [*850] a president can also be highly effective in overcoming narrow but powerful sources of opposition and in facilitating communication (that is, coordination and cooperation) between groups and branches. 64 In technical terms, he might be viewed as the "least cost avoider." 65 The budget confrontation between Clinton and Congress is only the most recent example of the president's strategic abilities. 66 In this regard, it is not surprising that most studies have found that the president's popularity is an important factor in his ability to effectively negotiate with Congress. 67

Executive Authority K2 International Relations

Quattelbaum 15, (<http://www.annenbergclassroom.org/speakout/what-role-does-congress-hold-in-international-affairs>, What role does Congress hold in international affairs? Student Voices staff writer at the Annenberg Classroom for student voices)

In a rare but not unprecedented move, 47 senators signed an open letter to the leadership of Iran, stating that Congress or the next president could revoke any agreement that Iran makes with the executive branch regarding the Middle Eastern nation's nuclear weapon ambitions. The letter was written because many in the Senate's Republican majority do not like the deal that President Obama is negotiating with Iran. The letter said that Obama's limited time left in office means that Congress or the next president can revoke any agreement that is reached. "It has come to our attention while observing your nuclear negotiations with our government that you may not fully understand our constitutional system," the letter said. "Anything not approved by Congress is a mere executive agreement..." The next president could revoke such an executive agreement with the stroke of a pen and future Congresses could modify the terms of the agreement at any time." The letter's author, Sen. Tom Cotton of Arkansas, has said that the negotiations for Iranian nuclear disarmament do not go far enough. He says that the president is being too soft on Iran and that complete nuclear disarmament should be the goal, with tougher sanctions and the threat of military action if Iran does not comply. Iran has been sanctioned by the United States and the United Nations for its nuclear weapons program. U.N. sanctions froze monetary assets linked to Iran's nuclear program, created an arms embargo, and forbid foreign travel for Iranians involved with the nuclear program, among other restrictions. The current negotiations would end the sanctions if Iran agrees to cease attempts to develop a nuclear weapon and gives international inspectors access to all nuclear sites. The senators' letter riled the executive branch. The president said to Vice News: "I'm embarrassed for them. For them to address a letter to the ayatollah – the supreme leader of Iran, who they claim is our mortal enemy – and their basic argument to them is: don't deal with our president, because you can't trust him to follow through on an agreement... That's close to unprecedented." Law professors and senators who did not sign the letter are not only criticizing the signers for overstepping the role and decorum of Congress, but are also saying the letter might be a criminal offense.

The next president could revoke such an executive agreement with the stroke of a pen and future Congresses could modify the terms of the agreement at any time." The letter's author, Sen. Tom Cotton of Arkansas, has said that the negotiations for Iranian nuclear disarmament do not go far enough. He says that the president is being too soft on Iran and that complete nuclear disarmament should be the goal, with tougher sanctions and the threat of military action if Iran does not comply. Iran has been sanctioned by the United States and the United Nations for its nuclear weapons program. U.N. sanctions froze monetary assets linked to Iran's nuclear program, created an arms embargo, and forbid foreign travel for Iranians involved with the nuclear program, among other restrictions. The current negotiations would end the sanctions if Iran agrees to cease attempts to develop a nuclear weapon and gives international inspectors access to all nuclear sites. The senators' letter riled the executive branch. The president said to Vice News: "I'm embarrassed for them. For them to address a letter to the ayatollah – the supreme leader of Iran, who they claim is our mortal enemy – and their basic argument to them is: don't deal with our president, because you can't trust him to follow through on an agreement... That's close to unprecedented." Law professors and senators who did not sign the letter are not only criticizing the signers for overstepping the role and decorum of Congress, but are also saying the letter might be a criminal offense.

Impact

Executive Power K2 Surveillance

Obama key to surveillance reform- key to combat terrorism

Tushnet 15 (Mark Tushnet, William Nelson Cromwell Professor of Law at Harvard Law School, attended Yale Law, Yale, and Harvard Law, "The Presidential Empire", <https://www.dissentmagazine.org/article/the-presidential-empire>, Spring 2015, 7/1/15, MEM) Obama has been careful to retract Bush's most aggressive legal positions on presidential unilateralism and congressional power, though he has continued to implement some of Bush's surveillance policies. Obama could do this because of the second part of the surveillance state's legal framework: a group of statutes—enacted by Congress, it is worth emphasizing—that establishes the terms on which the National Surveillance State's activities, including surveillance but extending well beyond, are to be conducted. These statutes include the Foreign Intelligence Surveillance Act (1978, with later amendments), the U.S.A. Patriot Act (2001), and the Authorization for the Use of Military Force (AUMF) against Al Qaeda, the Taliban, and "associated forces" (2001). The Obama administration relied, with some reluctance, on the 2001 AUMF to justify its on-going operations in Yemen, Somalia, and, in the past year, against ISIS, on the premise that the operations' targets are either part of Al Qaeda itself, or that they are armed forces that are Al Qaeda's co-belligerents. This alone indicates how the statutory framework for the National Surveillance State is jerry-built, assembled out of statutes enacted years ago for other purposes. Notably, Obama's recently proposed AUMF for ISIS, while limited in some ways (a three-year sunset, a statement that it would not authorize the enduring presence of ground troops), does not include a repeal of the 2001 AUMF, which makes it possible for his successors to return to an interpretation that covers all radical Islamist terrorism.

Executive powers are key to stop whistleblowers

Branfman 13 (Fred Branfman, bachelor degree from the University of Chicago in political science and his master's degree in education from Harvard University, AlterNet, <http://www.alternet.org/activism/we-live-under-total-surveillance-state-america-can-we-prevent-it-evolving-full-blown-police>, 9/25/13, 7/1/15, MEM)

Genuine whistleblower protection would have two aspects. First, internal: ensuring that whistleblowers who do go through official channels have an independent body evaluate their charges, and provide them with full protection from punishment by superiors whose wrongdoing they have revealed. Second, external: The Executive Branch must end its prosecution of whistleblowers who reveal classified information to the media or public; or, in those rare instances where there is a case for actual damage having been done to "national security," the whistleblower must receive a fair trial by a jury that is given access to the information in question so that it can determine to what extent national security was harmed, and that takes into account the whistleblower's motivation.

Executive powers are key for action on surveillance

Epstein 05 (Richard Allen Epstein, James Parker Distinguished Service Professor Emeritus of Law and Senior Lecturer At The University of Chicago Law School, B.A. at Oxford University, B.A. at

Columbia College, LLB at Yale Law School, Hofsta Law review,
http://chicagounbound.uchicago.edu/cgi/viewcontent.cgi?article=2206&context=journal_articles, winter 2005, 7/1/15, MEM)

In this Idea I seek to examine these claims, by looking at the relevant textual and historical materials from what some would call an originalist perspective. The ironies here are palpable, for this approach demonstrates, quite conclusively, that these inflated claims for executive power have no textual or historical justification. Some of **the strongest evidence** on this point **rests on** a proper **appreciation** of one element **that** both **the President and his opponents have left out** of the debate: the key role that the state militias (which have morphed into the National Guard) play in the original constitutional scheme. To set my argument in perspective, first note that **many defenders of** extensive **executive power** insist that **the President, as head of the executive branch** of government **and as the commander in chief of the armed forces**, is **entitled** on the strength of his "**inherent power**" to engage **in** these **surveillance activities**, **with or without the authorization of Congress**.³ For example, Professor Harvey Mansfield writing in the *Weekly Standard* says: One can begin from the fact that the American Constitution made the first republic with a strong executive. A strong executive is one that is not confined to executing the laws but has extra-legal powers such as commanding the military, making treaties (and carrying on foreign policy), and pardoning the convicted, not to mention a veto of legislation. To confirm the extra-legal character of the presidency, **the Constitution has** him take **an oath not to execute the laws but to execute the office of president**, which is larger.⁴ David Rivkin echoes the same theme in a more explicit form in a debate that he and I had in *National Review Online's* Opinion Duel: While there are healthy debates and disagreements about the precise interplay between congressional and presidential powers, I do not know many scholars who seriously contend that the commander-in chief clause of Article II does not vest **the president** with **enormous** substantive **powers**. For that matter, so does the Vesting Clause of Article II, which assigns all of the executive powers to the president. (I am not sure what Richard means by the commander-in-chief provision being a role, but to read it as amounting to no more than a ceremonial function is, to use a term so oft-misused in Senate judicial confirmation battles, quite out of the constitutional mainstream.) It is pretty well-settled that **the transaction of foreign and defense policy is an executive function**, that it was so at the time of the Founding, and that the Constitution assigns this power to the president, with a few exceptions, narrowly construed, granted to Congress.⁵ In dealing with these quotations, there is no doubt the defenders of the strong executive power are correct insofar as they insist that the President as the commander in chief possesses the power to defend the United States against a sudden attack. That conclusion, which answers in part Mansfield's query of "who you gonna call" was part of the original understanding of the point,⁶ and has been accepted and endorsed by modern Supreme Court decisions as well.⁷

Executive power is key for Surveillance reform- Congress involvement is refrained from executive actions

Whittington and Carpenter 03 (Keith E Whittington, the William Nelson Cromwell Professor of Politics at Princeton University and Daniel P. Carpenter, Allie S. Freed Professor of Government, Director of the Center for American Political Studies in the Faculty of Arts and Sciences, and Director of the Social Science Academic Ventures Program at the Radcliffe Institute at Harvard

University, "Perspectives on politics, pg. 506, <https://www.law.upenn.edu/live/files/1518-whittington-carpenter--executive-power-in-amer>, September 2003, MEM)

We pose another counterfactual in the form of a question: In the absence of the aggressive executive actions of the 1960s and early 1970s, would intelligence reforms and a change in congressional intelligence institutions have occurred when they did and in the same form, or would they have occurred at all? The historical narrative answers all parts of this question quite patently in the negative. Reform came only after extensive and difficult legislative investigations designed both to inform Congress of what policies were actually being pursued by the executive branch and to build political support for reform. Even amidst the exposure of past executive abuses, the president was able to keep Congress on the defensive regarding its capacity to secure the national interest in such a sensitive area.⁹⁹ In the end, Congress had to radically restructure its own oversight structure in order to institute constraints on intelligence operations and partly counter the inherent institutional advantage of executive officials. Even so, Congress refrained from involving itself in the operational details of intelligence activities, and also from specifying the broad principles that should guide and constrain executive actions in this area.

2NC Laundry List

Executive powers are key to solving laundry list

Posner 14 (Eric Posner, professor at the University of Chicago Law School, <http://www.newrepublic.com/article/116450/obama-use-executive-power-unexceptional>, 2/3/14, 7/1/15, MEM)

Meanwhile, the founders' anxieties about executive tyranny have proven erroneous. The president is kept in check by elections, the party system, the press, popular opinion, courts, a political culture that is deeply suspicious of his motives, term limits, and the sheer vastness of the bureaucracy which he can only barely control. He does not always do the right thing, of course, but presidents generally govern from the middle of the political spectrum. Obama's assertion of unilateral executive authority is just routine stuff. He follows in the footsteps of his predecessors on a path set out by Congress. And well should he. If you want a functioning government—one that protects citizens from criminals, terrorists, the climatic effects of greenhouse gas emissions, poor health, financial manias, and the like—then you want a government led by the president.

2NC Economy

Executive powers influence the economy

Lennard 14, (Obama adds economy under extraordinary executive powers, http://www.salon.com/2014/01/29/obamas_dictatorial_sotu_vow/, Assistant News Editor at Salon Media Group)

Barack Obama's State of the Union address Tuesday was, in the most literal sense, presidential. Near the speech's opening, the president vowed to act "wherever and whenever [he] can take steps without legislation to expand opportunity for more American families." His promise, while concretely entailing only modest initiatives on jobs and wages, placed Obama squarely in the pantheon of presidents who have acutely represented the conflict and contradictions inherent in the role of the U.S. executive branch. Within the codes of U.S. government, the president can be both, as I've noted before, dictator of and hostage to political process. In the realms of war-making, national security, surveillance operations and, of course, drone killings, President Obama's tenure has been marked by frightening executive overreach. As I commented in advance of this year's SOTU for Al Jazeera America, "Obama stands in a line of presidents who have grounded the extension of executive powers — over life, death, freedom and privacy — in the necessities of wartime." The interminable war on terror has, for the entire Obama presidency and the foreseeable future, given troubling but amorphous grounds for the executive branch to call on terrorism and unbounded war as a pretext to abrogate civil liberties. Obama's vow to use executive authority and skirt the legislative process on the economy is, even if only symbolically, his response to a conflict that has been so far definitive of his presidency: He has at once been an absolute sovereign, with power over life and death by drone fire, while also occupying the role of hands-tied puppet to an ideologue-filled Congress willing to push the U.S. economy into disaster. On Tuesday night Obama suggested that "wherever and whenever" possible on economic policy now, as well as the business of war, he will choose dictator over congressional hostage. While drenched in neoliberal rhetoric of "opportunity," Obama's position on bypassing legislation for economic initiatives is not unique. Indeed, his concrete proposals in regard to this are meek compared to Franklin D. Roosevelt's appeal to extraordinary executive power to push through the New Deal in 1933. A key difference, of course, is that while FDR was able to appeal to Congress to gain near limitless power to regulate U.S. economic life, no such appeal to Congress would work for our president today. The response would be as stony as House Speaker John Boehner's expression Tuesday night. Hence Obama's vowed executive action on economic matters of wages and retirement will be comparatively limited. The act, nonetheless, of promising to act "wherever and whenever" possible without legislation tells us much about what sort of sovereign we're dealing with in Obama's second term. For a president who has acted with an often opaque executive overreach in the realm of national security, a vow to use that same executive power to act on modest but sensible economic initiatives is not — in the context — horrifying. But it is significant: In response to a conflict of sovereignty that has seen Obama as at once dictator and hostage, Obama's resolution as expressed Tuesday is to lean toward the dictatorial. We might call it an alignment of policy: As with matters of civil liberty, war-mongering and privacy, Obama wants to bring economic policy increasingly under executive control too. Compared to his exercise of extraordinary powers so far, his vowed application of such power to the economy is not

remarkable. It is, as the late, great poet George Oppen wrote, “An event as ordinary/ As a President.” Oppen places the banality of a president within an “air of atrocity.” His verse is appropriately applied to this year’s SOTU: an event as ordinary as a president, taking place in an already established context of atrocity.

2NC Wars

Executive powers key to mitigate wars- Libya proves

Levine 13(David Levine, law clerk to the Hon. Michael S. Kanne of the US Court of Appeals for the Seventh Circuit, consulting and data management services to the US Department of Defense and the US Intelligence Community, an intelligence officer in the United States Air Force, Michigan Law review, "War Time: An Idea, Its History, Its Consequences.", Pg. 136, April 2013, 7/1/15, MEM)

The Obama Administration has adopted this position - that a president has inherent constitutional authority to deploy forces outside of war - and even sought to clarify it. In the Office of Legal Counsel's ("OLC") memo to President Obama on the authority to use military force in Libya, n56 the Administration acknowledged that the Declare War Clause is a "possible constitutionally-based limit on ... presidential authority to employ military force." n57 The memo reasoned that the Constitution speaks only to Congress's ability to shape engagements that are "wars," and that presidents have deployed forces in limited contexts from the earliest days of the Union. n58 Acknowledging those facts, the memo concluded that the constitutional limit on congressional power must be the conceptual line between war and not war. In locating this boundary, the memo looked to the "anticipated nature, scope, and duration" of the conflict to which President Obama was introducing forces. n59 OLC found that the "war" standard "will be satisfied only by prolonged and substantial military engagements, typically involving exposure of U.S. military personnel to significant risk over a substantial period." n60 The Obama Administration's position was not out of sync with previous presidential practice - the Declare War Clause did not require congressional approval prior to executive deployment of troops. In analyzing the "nature, scope, and duration" questions, the memo looked first to the type of missions that U.S. forces would be engaged in. The air missions envisioned for the Libya operation did not pose the threat of withdrawal difficulty or escalation risk that might indicate "a greater need for approval [from Congress] at the outset." n61 The nature of the mission, then, was not similar to full "war." Similarly, the scope of the intended operation was primarily limited, at the time the memo was written, to enforcing a no-fly zone. n62 Consequently, [*1208] the operation's expected duration was not long. Thus, concluded OLC, "the use of force by the United States in Libya [did not rise] to the level of a 'war' in the constitutional sense." n63 While this conclusion may have been uncontroversial, it highlights Dudziak's concerns over the manipulation of the idea of "wartime," concerns that were heightened by the Obama Administration's War Powers Resolution analysis.

2NC Hard Power

Continuation of threats are good for executive 'boots on the ground' action- Syria proves

Barnes 13 (Fred Barnes, Executive editor of the weekly standard, "Hesitation, Delay, and Unreliability", http://www.weeklystandard.com/articles/hesitation-delay-and-unreliability_752788.html, 9/16/13, MEM)

Hayward adds: "Reagan had one important rule that Obama has already flunked: Never say 'never.' Privately Reagan was adamant that he'd never put 'boots on the ground' in Nicaragua, but publicly he'd never admit this, on the sensible ground that it was better for our enemies to be worried that we might. That **fear helped make** our limited actions more effective."¶ One could argue that **Obama** had **no choice but to** disavow the **use of ground troops**. Otherwise the resolution authorizing force would lose in Congress. But this pitfall was avoidable. **Obama believes**, correctly, **he has the authority**, as president, **to order** the bombing and **dispatch troops**. Congressional consent is optional.¶ As Allied commander in World War II, Dwight Eisenhower felt he was obliged to be upbeat. If he appeared doubtful or downbeat in public, it would be interpreted as a sign of alarm about the war's progress. War presidents have the same obligation. Yet Obama talks about how "weary of war" he and the American people are.¶ **"We've ended one war in Iraq,"** he said in his Rose Garden announcement about congressional authorization. **"We're ending another in Afghanistan.** And the American people have the good sense to know we cannot resolve the underlying conflict in Syria with our military." The message, whatever the president's intention, was: I'm tired and I can't achieve much in Syria anyway.¶ "Saying 'I am war-weary' is an appalling thing to do," says Eliot Cohen, whose book *Supreme Command* examines four successful wartime leaders (Lincoln, Clémenceau, Churchill, Ben-Gurion). "Number One has to look confident, self-assured, positive without conveying an impression of irrational optimism. Above all, he can never, ever feel sorry for himself—or, indeed, anyone else."

Executive Action needed to take military action

O'Toole 14, (Obama, Iraq and the Coming War Powers Fight With Congress, <http://www.defenseone.com/politics/2014/08/obama-facing-war-powers-choice-over-iraq/92264/>.)

The **operation in Iraq** is likely to extend beyond the 60-day limit **under** the **War Powers Resolution** that **triggers congressional approval**, meaning **Obama may need a different authority to continue the fight**. The president has used the sweeping 2001 Authorization of the Use of Military Force, or , to fight terrorist groups across the globe, but many argue it was primarily intended to authorize combat operations in Afghanistan, which officially end in December. The latest Iraq intervention represents what may be Congress's last, best opportunity to rein in the dramatic expansion of the commander-in-chief's authority to wage war that has occurred in the last 13 years. The irony is that Obama just one year ago declared he would cut back the very authority his aides are now reconsidering. He pledged to chart a new path forward when he laid out his vision for **a new comprehensive national security strategy to guide foreign policy**. "The is now nearly 12 years old," Obama said at National Defense University in May 2013. "Unless we

discipline our thinking, our definitions, our actions, we may be drawn into more wars we don't need to fight, or continue to grant presidents unbound powers more suited for traditional armed conflicts between nation states. So I look forward to engaging Congress and the American people in efforts to refine, and ultimately repeal, the 's mandate." Today, gone is the talk of curbing unbound presidential powers to wage war. As the clock ticks, and Obama extends air attacks on Islamic State fighters, administration officials argue that the commander-in-chief is operating within his authority. "We comply with the War Powers Act and informed Congress on how many people we have," Defense Secretary Chuck Hagel said on Thursday. "This is not about mission creep." But Obama's team quietly is considering whether they can use the original to shore up the president's authority to conduct the growing military operation in Iraq.

2NC Climate Change

Presidential powers key to international climate regulation- deforestation and CO2 emissions

Lederman 6/30 (Josh Lederman, White House reporter for The Associated Press, Associated Press, "2 years after spying flap, US, Brazil seek to turn the page", http://www.stltoday.com/news/brazil-aims-to-curb-deforestation-as-part-of-climate-pledge/article_1a9dbcf5-8220-5b9a-87ae-5ac02ec129ad.html, 6/30/15, 7/2/15, MEM) Aiming to move past those difficulties, **Obama and Rousseff put a spotlight on areas of growing cooperation between the U.S. and Brazil as she wrapped up her two-day visit to the White House.** The leaders touted a recent defense agreement as well as a U.S. decision Monday to begin allowing fresh beef imports from all 14 of Brazil's states — a longstanding Brazilian request. Yet the capstone of the attempt to show common cause was a joint announcement on climate change, an issue Rousseff deemed "one of the central challenges of the 21st century." **Brazil pledged to curb illegal deforestation and expand renewable energy** use as it gears up to unveil its contribution to a global climate treaty that Obama has been championing and world leaders expect to finalize this year. Although the announcement stopped short of a commitment to bring deforestation down to zero, as many environmentalists wanted, the pledge offered some of the **first signs of how Brazil intends to curb its greenhouse gas emissions as part of the treaty.** The South American nation also vowed to **restore and reforest 12 million hectares** — an area roughly the size of England — by 2030. About three-quarters of Brazil's greenhouse gas emissions come from destruction in the Amazon rainforest, which acts as a giant absorber of carbon dioxide. **Both the U.S. and Brazil announced plans to increase the share of renewable, non-hydropower electricity sources to 20 percent by 2030.** That will require tripling the amount of renewable energy on the U.S. electricity grid, while doubling it in Brazil. The White House said it was counting on gains from **Obama's controversial power plant emission rules to meet the new goal.**

Presidential powers key to curbing CO2 emissions- China proves

Davenport 6/30 (Coral Davenport, the energy and environment correspondent for National Journal, fellow with the Metcalf Institute for Marine and Environmental Reporting, The New York Times, "Global Climate Pact Gains Momentum as China, U.S. and Brazil Detail Plans", <http://www.nytimes.com/2015/07/01/world/americas/us-and-brazil-agree-on-climate-change-actions.html>, 6/30/15, 7/2/15, MEM) Christiana Figueres, the top United Nations climate change official, said, "Over the past 24 hours, we've seen a very nice example of **the diversity of countries engaging on the climate solution.**" But she added, "The sum total of these does not get us to 2 degrees." Climate policy experts pointed to the significance of China's plan is particular. The United States and China, the world's top greenhouse gas polluters, have long been viewed as **the biggest obstacles to** reaching a meaningful **global warming** deal. That changed last November when Mr. Obama and President Xi Jinping jointly announced that the United States would lower its emissions up to 28 percent from 2005 levels by 2025, while China's emissions would peak and then decline no later than 2030. In March, Mr. **Obama submitted a plan** to the United Nations **detailing how** the **United States would meet its target.** It said it would do so chiefly through enactment of Environmental Protection Agency regulations on emissions from cars, trucks and power plants.

China's plan included a broad commitment to decouple economic growth from the use of fossil fuels, and move to lower its carbon intensity, or the amount of the pollutant generated by each point of economic growth, by 60 to 65 percent from 2005 levels by 2030. It also laid out plans to develop a national cap-and-trade system, a market-based program for reducing emissions in which companies must pay for permits to pollute, and can buy and sell those permits among themselves.

Climate change will result in extinction- IPCC agrees

Snow 15 [Anthony McMichael receives funding from The National Health and Medical Research Council. He is affiliated with The Climate Institute. Colin Butler receives funding from the Australian Research Council. He is co-director of the NGO Benevolent Organisation for Development, Health and Insight. Helen Louise Berry receives funding from the National Health and Medical Research Council and the Australian Research Council. She is a member of the Australian Labor Party. March 31, 2014 <http://www.smh.com.au/environment/climate-change/climate-change-could-make-humans-extinct-warns-health-expert-20140330-35rus.html> "Climate change could make humans extinct, warns health expert"] (Vaibhav)

The Earth is warming so rapidly that unless humans can arrest the trend, we risk becoming "extinct" as a species, a leading Australian health academic has warned. Helen Berry, associate dean in the faculty of health at the University of Canberra, said while the Earth has been warmer and colder at different points in the planet's history, the rate of change has never been as fast as it is today. "What is remarkable, and alarming, is the speed of the change since the 1970s, when we started burning a lot of fossil fuels in a massive way," she said. "We can't possibly evolve to match this rate [of warming] and, unless we get control of it, it will mean our extinction eventually." Professor Berry is one of three leading academics who have contributed to the health chapter of a Intergovernmental Panel on Climate Change (IPCC) report due on Monday. She and co-authors Tony McMichael, of the Australian National University, and Colin Butler, of the University of Canberra, have outlined the health risks of rapid global warming in a companion piece for The Conversation, also published on Monday. The three warn that the adverse effects on population health and social stability have been "missing from the discussion" on climate change. "Human-driven climate change poses a great threat, unprecedented in type and scale, to wellbeing, health and perhaps even to human survival," they write. They predict that the greatest challenges will come from undernutrition and impaired child development from reduced food yields; hospitalisations and deaths due to intense heatwaves, fires and other weather-related disasters; and the spread of infectious diseases. They warn the "largest impacts" will be on poorer and vulnerable populations, winding back recent hard-won gains of social development programs. Projecting to an average global warming of 4 degrees by 2100, they say "people won't be able to cope, let alone work productively, in the hottest parts of the year". They say that action on climate change would produce "extremely large health benefits", which would greatly outweigh the costs of curbing emission growth. A leaked draft of the IPCC report notes that a warming climate would lead to fewer cold weather-related deaths but the benefits would be "greatly" outweighed by the impacts of more frequent heat extremes. Under a high emissions scenario, some land regions will experience temperatures four to seven degrees higher than pre-industrial times, the report said. While some adaptive measures are possible, limits to humans' ability to regulate heat will

affect health and potentially cut global productivity in the warmest months by 40 per cent by 2100. Body temperatures rising above 38 degrees impair physical and cognitive functions, while risks of organ damage, loss of consciousness and death increase sharply above 40.6 degrees, the draft report said. Farm crops and livestock will also struggle with thermal and water stress. Staple crops such as corn, rice, wheat and soybeans are assumed to face a temperature limit of 40-45 degrees, with temperature thresholds for key sowing stages near or below 35 degrees, the report said.

2NC Russia

Presidential leadership key to solve Russia threats and terrorism

Tushnet 15 (Mark Tushnet, William Nelson Cromwell Professor of Law at Harvard Law School, attended Yale Law, Yale, and Harvard Law, “The Presidential Empire”, <https://www.dissentmagazine.org/article/the-presidential-empire>, Spring 2015, 7/1/15, MEM) Schlesinger’s imperial president was the leader of what students of the constitutional order call the National Security State—or, in their more conspiratorial moments, the “deep state.” As Stephen Griffin’s recent book *Long Wars and the Constitution* (2013) shows, the National Security State was created during the Cold War, when a bipartisan consensus agreed that presidential leadership was essential to combat the threat to U.S. interests posed by the Soviet Union, which had its own surveillance apparatus and nuclear weapons. According to this consensus, only a U.S. national security apparatus under the president’s control could gather intelligence about security threats and develop countermeasures, all of which had to be done with a secrecy that precluded widespread congressional participation. Whistle-blowers were the functional equivalent of spies aiding the U.S.’s adversaries. Consensus over the National Security State weakened after the collapse of the Soviet Union. But by then it had acquired the kind of institutional form that is difficult to dismantle, even under the best of circumstances. The Central Intelligence Agency, National Security Agency, and the armed forces were potent political actors in Washington by the 1990s. They had many allies in Congress and the news media who still believed that the National Security State was needed to protect American interests. Then, following September 11, a new sense of existential threat emerged among the American populace. With the rise of international terrorism affecting U.S. interests, the state’s target changed. A new consensus transformed the National Security State into the National Surveillance State. Surveillance was needed to study and act against these dispersed threats, especially because many of them were non-state actors. Originally, the National Surveillance State focused on actors outside the United States. Terrorism—exemplified by actors like the Irish Republican Army, the Tamil Tigers in Sri Lanka, and a number of Palestinian groups that the State Department listed as terrorists—mostly happened abroad. But the September 11 attacks showed that the “homeland” was vulnerable as well; and so the surveillance state began to focus on a large number of people within the United States. The legal framework of the surveillance state had two parts. According to the consensus supporting it, the president has the inherent power to guard the United States against “sudden attacks,” a phrase used at the Constitutional Convention in 1787 to explain why the Constitution gave Congress the power to “declare war”—not, as the original version had it, to “make war.” President George W. Bush and his legal advisers had an extremely aggressive and liberal interpretation of this inherent power. They contended not only that the president had the authority to initiate a full-scale war without Congress’s involvement, but also that Congress cannot limit the president’s decisions. They argued that statutes that Congress might enact to regulate the president’s actions—such as limitations on torture used to gain intelligence that might thwart a sudden attack—were unconstitutional.

Extinction

Helfand and Pastore 9 [Ira Helfand, M.D., and John O. Pastore, M.D., are past presidents of Physicians for Social Responsibility. March 31, 2009, "U.S.-Russia nuclear war still a threat", http://www.projo.com/opinion/contributors/content/CT_pastoreline_03-31-09_EODSCAO_v15.bbdf23.html]

President Obama and Russian President Dimitri Medvedev are scheduled to Wednesday in London during the G-20 summit. They must not let the current economic crisis keep them from focusing on one of the greatest threats confronting humanity: the danger of nuclear war. Since the end of the Cold War, many have acted as though the danger of nuclear war has ended. It has not. There remain in the world more than **20,000 nuclear weapons**. Alarming, more than 2,000 of these weapons **in the U.S. and Russian arsenals** remain on ready-alert status, commonly known as hair-trigger alert. They **can be fired within five minutes** and reach targets in the other country 30 minutes later. Just one of these weapons can destroy a city. **A war** involving a substantial number **would cause devastation on a scale unprecedented** in human history. A study conducted by Physicians for Social Responsibility in 2002 showed that if only 500 of the Russian weapons on high alert exploded over our cities, 100 million Americans would die in the first 30 minutes. An attack of this magnitude also would destroy the entire economic, communications and transportation infrastructure on which we all depend. Those who survived the initial attack would inhabit a nightmare landscape with huge swaths of the country blanketed with radioactive fallout and epidemic diseases rampant. They would have no food, no fuel, no electricity, no medicine, and certainly no organized health care. In the following months it is likely the vast majority of the U.S. population would die. Recent studies by the eminent climatologists Toon and Robock have shown that such a war would have a huge and immediate impact on climate world wide. If all of the warheads in the U.S. and Russian strategic arsenals were drawn into the conflict, **the firestorms** they caused **would loft 180 million tons of soot and debris into the upper atmosphere — blotting out the sun. Temperatures** across the globe **would fall** an average of 18 degrees Fahrenheit to levels not seen on earth since the depth of the last ice age, 18,000 years ago. **Agriculture would stop, eco-systems would collapse,** and many **species, including perhaps our own, would become extinct.** It is common to discuss nuclear war as a low-probability event. But is this true? We know of five occasions during the last 30 years when either the U.S. or Russia believed it was under attack and prepared a counter-attack. The most recent of these near misses occurred after the end of the Cold War on Jan. 25, 1995, when the Russians mistook a U.S. weather rocket launched from Norway for a possible attack. Jan. 25, 1995, was an ordinary day with no major crisis involving the U.S. and Russia. But, unknown to almost every inhabitant on the planet, a misunderstanding led to the potential for a nuclear war. The ready alert status of nuclear weapons that existed in 1995 remains in place today.

Executive powers key to US diplomacy- normalizing US/Cuba relations proves

Levy 7/2 (Arturo Lopez Levy, Lecturer and Doctoral Candidate, University of Denver, "Embassies in Havana and Washington: A Victory of Diplomacy and Democracy",

http://www.huffingtonpost.com/arturo-lopez-levy/embassies-in-havana-and-washington-a-victory-of-diplomacy-and-democracy_b_7708898.html, 7/2/15, 7/2/15, MEM)

On July 1st, the governments of the United States and Cuba announced an agreement to open diplomatic relations and embassies in Washington and Havana. This is a major watershed in the road to full normalization of relations between the two states and the two societies. This is also a major win for democracy because the steps taken by Presidents Obama and Castro gives voice to overwhelming majorities in both societies in favor of peaceful and constructive U.S.-Cuba relations.

Diplomacy is key to dismantle hostile measurements against Cuba

Levy 7/2 (Arturo Lopez Levy, Lecturer and Doctoral Candidate, University of Denver, "Embassies in Havana and Washington: A Victory of Diplomacy and Democracy",

http://www.huffingtonpost.com/arturo-lopez-levy/embassies-in-havana-and-washington-a-victory-of-diplomacy-and-democracy_b_7708898.html, 7/2/15, 7/2/15, MEM)

The time to dismantle the walls is now. President Obama exhorted Congress to follow up and listen to the well registered voices of the American and the Cuban people against an embargo that kept bilateral relations hostage to the past. He clearly targeted the travel ban when he wondered: "why should Washington stand in the way of our own people?" In the few next weeks, Secretary John Kerry, the architect of this policy change will travel to Havana. The first historic visit of a U.S. secretary of State to Cuba in more than six decades would show a more civil and constructive way to manage American differences with Cuba. The United States is simply measuring up to its commitment to universal values and human rights. As was shown the day before in the White House by Brazil president Dilma Rousseff, the Americas and the international community endorse a U.S. approach that promotes its values and interests in Cuba through engagement not coercion. As a great power in the context of asymmetric relations, the United States has the opportunity to take some important unilateral dismantlement of hostile structures because it has nothing to risk by doing so. Reciprocity is a useful legal concept for diplomacy but it is politically detrimental in asymmetric relations. Cuba cannot take the United States out of any negative list or give back a naval base in American territory. Similarly Cuba cannot expect deference in its global role as a great power because it is not in such international affairs rank. It is important to take notice of the intangible complexities of the normalization process. Cuba and the United States are countries of different size and power but both have strong nationalist pride. Diplomacy, interdependence, respect and self-restraint are key elements for a constructive solution of the almost six decades conflict between them.

Liberal values like privacy and liberty cause widespread environmental destruction – we must explicitly downgrade these rights to allow for the emergence of a responsible eco-authoritarian regime

Matthew Humphrey, 2007, *Ecological Politics and Democratic Theory: The challenge to the deliberative ideal*, p. 16-19, mm

So much, then, for the eco-authoritarian diagnosis; liberal democracy cannot save us because its choices are motivated by the wrong reasons and even were they not, we cannot overcome the collective action problem and still retain our liberal freedoms. 'It is not technology that has single-handedly created the problems we face with regard to our natural environment, but our belief that the choices and preferences of the majority in democratic, affluent countries are and should be viewed as absolute, beyond discussion' (Westra, 1998: 3). What about the proposed solutions offered by this group of thinkers? How does their version of 'coercive politics' work? The solutions on offer can be usefully broken down into two parts: changes in values and changes in institutions. It is because in 'crisis' conditions there is insufficient time to inculcate the former that stress is placed upon the latter, but both are required for an adequate analysis of the eco-authoritarian position. There are, as one might expect, variations in terms of the values that the eco-authoritarians are seeking to promote, depending upon which thinker one is referring to and which part of their argument. It is possible to make some generalisations however; most importantly, our 'conventional' ways of thinking about, and the importance vested in, justice, democracy, and liberalism are all challenged in the eco-authoritarian literature, and in their place are offered a value or set of values that is/are taken to be more in keeping with our newly discovered obligations to the non-human world or future generations.⁶ These latter values promote a particular conception of the good, and some notion of a politics of virtue that flows from that conception, be it, for example, 'integrity' on the part of Laura Westra or the triumph of political ecology over economics for William Ophuls. We will examine this call for value change in more detail before going on to examine the changes to political institutions that the eco-authoritarians seek. One of the most important strategies of the eco-authoritarians is to historicise certain principles that they see as being predominant in modern western societies. For them, we are in danger of seeing the values of liberty, democracy, and distributional justice as eternal verities whereas we should see them as products of a specific time and place, and more importantly, as products of, or at least as dependent upon, the existence of an economy of plenty which is both historically specific and fleeting. For Ophuls the discovery of the New World in particular liberated the Old World from ecological scarcity, and 'created all the peculiar institutions and values characteristic of modern civilisation – democracy, freedom, and individualism'. However, the 'golden age' of these values is all but over and we have to return to something like a pre-modern, closed polity (Ophuls, 1977: 144, 145). In seeking to challenge what they see as widely accepted and deeply held values in contemporary societies, the eco-authoritarians seek to both promote a new set of values and recontest or downgrade existing ones on the grounds that they are harmful to the prospects of ecological survival. The

fundamental divide here is between a politics of the right and a politics of the good. Eco-authoritarians see liberalism (as a manifestation of the politics of the right) as being a transient phenomenon crucially dependent upon the temporary conditions of material abundance ushered in by the fossil fuel age. Liberalism is a function of the material conditions that make it possible and is parasitic upon unsustainable economic policies. When the tragedy of the commons strikes, then 'the concept of inalienable rights, the purely self defined pursuit of happiness, liberty as maximum freedom of action, and laissez-faire all become problematic' (Ophuls, 1977: 152). As an account of the rights embedded in liberal ideology this is itself a contestable account, but it illustrates the way in which liberal democracy is understood in this body of literature. The problem lies in the rights that are granted which allow us to live according to our self-defined values. Westra also holds that the proliferation, under conditions of liberal democracy, of individual and aggregate rights is undesirable from an environmental point of view (1998: 57). The choices we make under these conditions are not constrained by a conception of the common good, and so can be harmful to all (Westra, 1998: 155). Hardin focuses on one particular right, that of procreation – it is 'painful' to have to deny, categorically, the claim embodied in the UN Declaration on Human Rights that 'any choice and decision with regard to the size of the family must irrevocably rest with the family itself, and cannot be made by anyone else' (1968: 1246). Nonetheless it is the case that to 'couple the concept of the freedom to breed with . . . an equal right to the commons is to lock the world into a tragic course of action' (1968: 1246). So, the kinds of 'basic liberties' that would be constitutionally entrenched in, say, a Rawlsian liberal society in order to ensure people the right to choose their own form of life are seen on this view as profoundly problematic in terms of their ecological consequences. Abrogating these rights may violate the liberal conception of justice, but 'injustice is preferable to total ruin' (Ophuls, quoting Hardin, 1977: 148). Justice, anyway, is one of the political concepts for which a move away from the liberal definition is suggested as explained later in this chapter. Against the politics of the right the eco-authoritarians recommend a virtue politics based upon a conception of the common good. Against the liberal desire to allow people to choose their own values, 'wisdom' tells us that not all values are equal and that virtue matters in life (Ophuls, 1977: 237). Virtue here entails recognising the necessity of living life according to 'ecological values' and being prepared to abandon or reconfigure those values that are not conducive to the end of sustainability. Westra offers the overarching value of (ecological) 'integrity' as the embodiment of this politics of the common good. This in turn is defined in terms of ecosystem health, resilience, the optimum potential for speciation and development, and the non-constraint of non-human nature by the actions of human beings (see Westra, 1998: 7–8). Integrity 'demands' that approximately one-third of the earth's surface be left in a wild and unmanaged state. The value of integrity is taken to embody the good of all, and so is uncompromising in its prescription of infinite, non-negotiable value to life (1998: 12). Integrity serves to ground the precautionary principle, which should be mandatory in public policy.⁷ Integrity is 'more basic' than justice, and is an anti-democratic principle (1998: 9) because democratic choices are inadequate when it comes to realising the principle (1998: 222). The principle is rendered 'compatible' with the idea of right simply by being recast in terms of a right, the fundamental and trumping 'right' to integrity, which is taken to operate at both a micro (organism) and macro (species, ecosystem) level. Only such a principle can protect people from unchosen

harm, whereas democracy can inflict unchosen harms, or at least the risk of such harms, onto defeated minorities. As a manifestation of the common good it behoves all of us to live according to the principle of ecological integrity, and to the extent that we do not embrace this principle voluntarily, those in authority will have to force it upon us, rather in the fashion of the forced administration of anti-psychotic medicines. The Aristotelian 'wise man' referred to above will have the task of running a top-down regulatory regime – 'the "top-down" regulatory and public policy aspect will have to be prescribed by an interdisciplinary team of biologists, ecologists, political scientists, medical specialists and philosophers with a strong traditional moral basis' (1998: 198–9). Given our poor habits of making democratic decisions that are not underpinned by conceptions of the common good (1998: 155), of choosing leaders for the 'wrong' reasons and making decisions on the basis of uninformed preferences, we have to accept the imperative to downgrade the value of democracy and accept more authoritarian forms of public rule. This downgrading of the value of democracy is common across this literature, although at times it seems in tension with the projection of mutual coercion mutually agreed upon, which implies a democratically legitimated move towards authoritarian forms of government. So for example Ophuls suggests that certain normatively justified restrictions must be imposed upon a populace that would do something quite different (and more damaging) if left to their own devices. The problem lies in legislating the appropriate 'temperance and virtue' without 'exalting the few over the many and subjecting individuals to the unwarranted exercise of power or to excessive conformity to some dogma' (1977: 227). To return to the Schumpeterian theme one of the significant problems with democratic decision making for this group of writers stems from a belief that people vary significantly in terms of their competence to make appropriate political decisions, whereas a key assumption of democratic theory is that 'people do not differ greatly in competence' (Ophuls, 1977: 159). If they do so differ, 'effective government may require the sacrifice of political equality and majority rule.8 Indeed in certain circumstances democracy must give way to elite rule' (Ophuls, 1977: 159), such an elite being made up of the biologists, philosophers, and so on who function as the 'wise man' of Westra's account. We may have to 'respect' a plurality of positions but we do not have to accord them equal weight in the political process (Westra, 1998: 220–1, although is not entirely clear how we show 'respect' to a political position by granting it inferior status to our own beliefs). The problem with this analysis is the epistemological barrier it seems to place in the path of us ever achieving mutual agreement upon the mutual coercion that is taken to be necessary. If we could reach such agreement we would be 'democratically coercing ourselves to behave responsibly' (Ophuls, 1977: 155) and thus the authoritarian government we place over ourselves would have a degree of democratic legitimacy. There is clearly, however, a problem with the analysis here. If we are both (1) woefully attached to the 'wrong' values already and (2) drop down to a childlike level of performance in the political sphere, it is difficult to see where the political resources are that would enable us to vote down the liberties to which we are apparently so attached. It seems rather more likely that eco-authoritarianism would consist in coercion that had not been mutually agreed and would thus lack that imprimatur of democratic legitimation, which in turn leaves open the question of how the ecological 'wise man' could ever reach a position of authority, given that 'powerful economic and political interests' are taken to be in fundamental opposition to ecological values and also to 'manipulate' the preferences of

citizens (from what baseline of preferences, that is, what the counter-factual is here, is not clear). As well as downgrading the value of democracy, we must be prepared to similarly downgrade our attachment to liberties, the value of which have to be set against the politics of the common good. Indeed we must 'eliminate' hazardous and wasteful individual rights, including property and procreative rights. 'Strong' rights must be 'basic' only, and the prime instance of a basic right is that to ecological integrity. It follows from this basic right to integrity that 'respect' for 'wildness for both its services and its component life' is basic as well (Westra, 1998: 235). Limitations on rights to property, mobility, and procreation do not conflict with the ethic of (micro-) integrity because they are 'compatible' with respect for life (1998: 256). Ophuls comments that we should not fear that any concession of political rights to the community must lead to the total subjugation of the individual by an all-powerful state, as authoritarian rule can still be constitutional and limited (1977: 226).

The crunch is coming – our current pace of growth is unsustainable and will cause extinction

Rose Buchanan, 6/20/2015, writer at The Independent. Cites study from scientists at Stanford, Princeton and Berkeley

<http://www.independent.co.uk/environment/earth-is-entering-sixth-extinction-phase-with-many-species--including-our-own--labelled-the-walking-dead-10333608.html>, mm

The planet is entering a new period of extinction with top scientists warning that species all over the world are "essentially the walking dead" – including our own. The report, authored by scientists at Stanford, Princeton and Berkeley universities, found that vertebrates were vanishing at a rate 114 times faster than normal. In the damning report, published in the Science Advances journal, researchers note that the last similar event was 65 million years ago, when dinosaurs disappeared, most probably as a result of an asteroid. "We are now entering the sixth great mass extinction event," one of the authors of the paper told the BBC. Gerardo Ceballos, lead author of the research, added: "If it is allowed to continue, life would take many millions of years to recover and our species itself would likely disappear early on". The research examined historic rates of extinction for vertebrates, finding that since 1900 more than 400 vertebrates have disappeared – an extinction rate 100 times higher than in other – non-extinction – periods. "There are examples of species all over the world that are essentially the walking dead," said Stanford University professor Paul Ehrlich. He added: "We are sawing off the limb that we are sitting on." The research, which cites climate change, pollution and deforestation as causes for the rapid change, notes that a knock-on effect of the loss of entire ecosystems could be dire. As our ecosystems unravel, the Centre for Biological Diversity has noted that we could face a "snowball" effect whereby individual species extinction ultimately fuels more losses. The report, which builds on findings published by Duke University last year, does note that averting this loss is "still possible through intensified conservation effects," but that "window of opportunity is rapid closing."

The alternative is to endorse a radical, eco-authoritarian pedagogy. Only this can prevent extinction. Growth is unsustainable and is destroying the environment – our alternative motivates existing social movements to topple the political order – this isn't crazy, credible climate scientists are increasingly supporting this position.

Naomi Klein, 10/29/2013, New Statesman, (Klein is the author of "The Shock Doctrine"), "How science is telling us all to revolt," <http://www.newstatesman.com/2013/10/science-says-revolt>, mm

In December 2012, a pink-haired complex systems researcher named Brad Werner made his way through the throng of 24,000 earth and space scientists at the Fall Meeting of the American Geophysical Union, held annually in San Francisco. This year's conference had some big-name participants, from Ed Stone of Nasa's Voyager project, explaining a new milestone on the path to interstellar space, to the film-maker James Cameron, discussing his adventures in deep-sea submersibles.¶ But it was Werner's own session that was attracting much of the buzz. It was titled "Is Earth F**ked?" (full title: "Is Earth F**ked? Dynamical Futility of Global Environmental Management and Possibilities for Sustainability via Direct Action Activism").¶ Standing at the front of the conference room, the geophysicist from the University of California, San Diego walked the crowd through the advanced computer model he was using to answer that question. He talked about system boundaries, perturbations, dissipation, attractors, bifurcations and a whole bunch of other stuff largely incomprehensible to those of us uninitiated in complex systems theory. But the bottom line was clear enough: global capitalism has made the depletion of resources so rapid, convenient and barrier-free that "earth-human systems" are becoming dangerously unstable in response. When pressed by a journalist for a clear answer on the "are we f**ked" question, Werner set the jargon aside and replied, "More or less."¶ There was one dynamic in the model, however, that offered some hope. Werner termed it "resistance" – movements of "people or groups of people" who "adopt a certain set of dynamics that does not fit within the capitalist culture". According to the abstract for his presentation, this includes "environmental direct action, resistance taken from outside the dominant culture, as in protests, blockades and sabotage by indigenous peoples, workers, anarchists and other activist groups".¶ Serious scientific gatherings don't usually feature calls for mass political resistance, much less direct action and sabotage. But then again, Werner wasn't exactly calling for those things. He was merely observing that mass uprisings of people – along the lines of the abolition movement, the civil rights movement or Occupy Wall Street – represent the likeliest source of "friction" to slow down an economic machine that is careening out of control. We know that past social movements have "had tremendous influence on . . . how the dominant culture evolved", he pointed out. So it stands to reason that, "if we're thinking about the future of the earth, and the future of our coupling to the environment, we have to include resistance as part of that dynamics". And that, Werner argued, is not a matter of opinion, but "really a geophysics problem".¶ Plenty of scientists have been moved by their research findings to take action in the streets. Physicists, astronomers, medical doctors and biologists have been at the forefront of movements against nuclear weapons, nuclear power, war, chemical contamination and

creationism. And in November 2012, Nature published a commentary by the financier and environmental philanthropist Jeremy Grantham urging scientists to join this tradition and “be arrested if necessary”, because climate change “is not only the crisis of your lives – it is also the crisis of our species’ existence”.¶ Some scientists need no convincing. The godfather of modern climate science, James Hansen, is a formidable activist, having been arrested some half-dozen times for resisting mountain-top removal coal mining and tar sands pipelines (he even left his job at Nasa this year in part to have more time for campaigning). Two years ago, when I was arrested outside the White House at a mass action against the Keystone XL tar sands pipeline, one of the 166 people in cuffs that day was a glaciologist named Jason Box, a world-renowned expert on Greenland’s melting ice sheet.¶ “I couldn’t maintain my self-respect if I didn’t go,” Box said at the time, adding that “just voting doesn’t seem to be enough in this case. I need to be a citizen also.”¶ This is laudable, but what Werner is doing with his modelling is different. He isn’t saying that his research drove him to take action to stop a particular policy; he is saying that his research shows that our entire economic paradigm is a threat to ecological stability. And indeed that **challenging this economic paradigm – through mass-movement counter-pressure – is humanity’s best shot at avoiding catastrophe.**¶ That’s heavy stuff. But he’s not alone. **Werner is part of a small but increasingly influential group of scientists whose research into the destabilisation of natural systems – particularly the climate system – is leading them to similarly transformative, even revolutionary, conclusions.** And for any closet revolutionary who has ever dreamed of overthrowing the present economic order in favour of one a little less likely to cause Italian pensioners to hang themselves in their homes, this work should be of particular interest. Because **it makes the ditching of that cruel system** in favour of something new (and perhaps, with lots of work, better) no longer a matter of mere ideological preference but rather **one of species-wide existential necessity.**¶ Leading the pack of these new scientific revolutionaries is one of Britain’s top climate experts, Kevin Anderson, the deputy director of the Tyndall Centre for Climate Change Research, which has quickly established itself as one of the UK’s premier climate research institutions. Addressing everyone from the Department for International Development to Manchester City Council, Anderson has spent more than a decade patiently translating the implications of the latest climate science to politicians, economists and campaigners. In clear and understandable language, he lays out a rigorous road map for emissions reduction, one that provides a decent shot at keeping global temperature rise below 2° Celsius, a target that most governments have determined would stave off catastrophe.¶ But in recent years Anderson’s papers and slide shows have become more alarming. Under titles such as “Climate Change: Going Beyond Dangerous . . . Brutal Numbers and Tenuous Hope”, he points out that the chances of staying within anything like safe temperature levels are diminishing fast.¶ With his colleague Alice Bows, a climate mitigation expert at the Tyndall Centre, Anderson points out that we have lost so much time to political stalling and weak climate policies – all while global consumption (and emissions) ballooned – that we are now facing cuts so drastic that they challenge the fundamental logic of prioritising GDP growth above all else.¶ Anderson and Bows inform us that the often-cited long-term mitigation target – an 80 per cent emissions cut below 1990 levels by 2050 – has been selected purely for reasons of political expediency and has “no scientific basis”. That’s because climate impacts come not just from what we emit today and tomorrow, but from the cumulative emissions that build up in the atmosphere over time. And they warn that by focusing on targets three and a half decades into

the future – rather than on what we can do to cut carbon sharply and immediately – there is a serious risk that we will allow our emissions to continue to soar for years to come, thereby blowing through far too much of our 2° “carbon budget” and putting ourselves in an impossible position later in the century.¶ Which is why Anderson and Bows argue that, if the governments of developed countries are serious about hitting the agreed upon international target of keeping warming below 2° Celsius, and if reductions are to respect any kind of equity principle (basically that the countries that have been spewing carbon for the better part of two centuries need to cut before the countries where more than a billion people still don’t have electricity), then the reductions need to be a lot deeper, and they need to come a lot sooner.¶ To have even a 50/50 chance of hitting the 2° target (which, they and many others warn, already involves facing an array of hugely damaging climate impacts), the industrialised countries need to start cutting their greenhouse-gas emissions by something like 10 per cent a year – and they need to start right now. But Anderson and Bows go further, pointing out that this target cannot be met with the array of modest carbon pricing or green-tech solutions usually advocated by big green groups. These measures will certainly help, to be sure, but they are simply not enough: a 10 per cent drop in emissions, year after year, is virtually unprecedented since we started powering our economies with coal. In fact, cuts above 1 per cent per year “have historically been associated only with economic recession or upheaval”, as the economist Nicholas Stern put it in his 2006 report for the British government.¶ Even after the Soviet Union collapsed, reductions of this duration and depth did not happen (the former Soviet countries experienced average annual reductions of roughly 5 per cent over a period of ten years). They did not happen after Wall Street crashed in 2008 (wealthy countries experienced about a 7 per cent drop between 2008 and 2009, but their CO2 emissions rebounded with gusto in 2010 and emissions in China and India had continued to rise). Only in the immediate aftermath of the great market crash of 1929 did the United States, for instance, see emissions drop for several consecutive years by more than 10 per cent annually, according to historical data from the Carbon Dioxide Information Analysis Centre. But that was the worst economic crisis of modern times.¶ If we are to avoid that kind of carnage while meeting our science-based emissions targets, carbon reduction must be managed carefully through what Anderson and Bows describe as “radical and immediate de-growth strategies in the US, EU and other wealthy nations”. Which is fine, except that we happen to have an economic system that fetishises GDP growth above all else, regardless of the human or ecological consequences, and in which the neoliberal political class has utterly abdicated its responsibility to manage anything (since the market is the invisible genius to which everything must be entrusted).¶ So what Anderson and Bows are really saying is that **there is still time to avoid catastrophic warming, but not within the rules of capitalism as they are currently constructed**. Which may be the best argument we have ever had for changing those rules.¶ In a 2012 essay that appeared in the influential scientific journal *Nature Climate Change*, Anderson and Bows laid down something of a gauntlet, accusing many of their fellow scientists of failing to come clean about the kind of changes that climate change demands of humanity. On this it is worth quoting the pair at length:¶ . . . in developing emission scenarios scientists repeatedly and severely underplay the implications of their analyses. When it comes to avoiding a 2°C rise, “impossible” is translated into “difficult but doable”, whereas “urgent and radical” emerge as “challenging” – all to appease the god of economics (or, more precisely, finance). For example, to avoid exceeding the maximum rate of emission reduction dictated by economists,

“impossibly” early peaks in emissions are assumed, together with naive notions about “big” engineering and the deployment rates of low-carbon infrastructure. More disturbingly, as emissions budgets dwindle, so geoengineering is increasingly proposed to ensure that the diktat of economists remains unquestioned.¶ In other words, in order to appear reasonable within neoliberal economic circles, scientists have been dramatically soft-peddling the implications of their research. By August 2013, Anderson was willing to be even more blunt, writing that the boat had sailed on gradual change. “Perhaps at the time of the 1992 Earth Summit, or even at the turn of the millennium, 2°C levels of mitigation could have been achieved through significant evolutionary changes within the political and economic hegemony. But climate change is a cumulative issue! Now, in 2013, we in high-emitting (post-)industrial nations face a very different prospect. Our ongoing and collective carbon profligacy has squandered any opportunity for the ‘evolutionary change’ afforded by our earlier (and larger) 2°C carbon budget. Today, after two decades of bluff and lies, the remaining 2°C budget demands revolutionary change to the political and economic hegemony” (his emphasis).¶ We probably shouldn’t be surprised that some climate scientists are a little spooked by the radical implications of even their own research. Most of them were just quietly doing their work measuring ice cores, running global climate models and studying ocean acidification, only to discover, as the Australian climate expert and author Clive Hamilton puts it, that they “were unwittingly destabilising the political and social order”.¶ But there are many people who are well aware of the revolutionary nature of climate science. It’s why some of the governments that decided to chuck their climate commitments in favour of digging up more carbon have had to find ever more thuggish ways to silence and intimidate their nations’ scientists. In Britain, this strategy is becoming more overt, with Ian Boyd, the chief scientific adviser at the Department for Environment, Food and Rural Affairs, writing recently that scientists should avoid “suggesting that policies are either right or wrong” and should express their views “by working with embedded advisers (such as myself), and by being the voice of reason, rather than dissent, in the public arena”.¶ If you want to know where this leads, check out what’s happening in Canada, where I live. The Conservative government of Stephen Harper has done such an effective job of gagging scientists and shutting down critical research projects that, in July 2012, a couple thousand scientists and supporters held a mock-funeral on Parliament Hill in Ottawa, mourning “the death of evidence”. Their placards said, “No Science, No Evidence, No Truth”.¶ But the truth is getting out anyway. The fact that the business-as-usual pursuit of profits and growth is destabilising life on earth is no longer something we need to read about in scientific journals. The early signs are unfolding before our eyes. And increasing numbers of us are responding accordingly: blockading fracking activity in Balcombe; interfering with Arctic drilling preparations in Russian waters (at tremendous personal cost); taking tar sands operators to court for violating indigenous sovereignty; and countless other acts of resistance large and small. In Brad Werner’s computer model, this is the “friction” needed to slow down the forces of destabilisation; the great climate campaigner Bill McKibben calls it the “antibodies” rising up to fight the planet’s “spiking fever”.¶ It’s not a revolution, but it’s a start. And it might just buy us enough time to figure out a way to live on this planet that is distinctly less f**ked.

2NC – Impact Overview

Extinction is inevitable – the crunch is coming. All aspects of the environment are in decline – resource scarcity, biodiversity loss, climate change – due to liberalism and democracy. That’s Humphrey, Buchanan and Klein from the 1NC. This makes all of the aff’s impacts inevitable absent the alternative.

The crunch is coming and causes extinction – our evidence is based on new scientific studies

Oliver Milman, 1/16/2015, The Guardian, “Life on Earth now officially at risk, scientists say,” <http://grist.org/climate-energy/life-on-earth-now-officially-at-risk-scientists-say/>, mm

Humans are “eating away at our own life support systems” at a rate unseen in the past 10,000 years by degrading land and freshwater systems, emitting greenhouse gases, and releasing vast amounts of agricultural chemicals into the environment, new research has found.¶ Two major new studies by an international team of researchers have pinpointed the key factors that ensure a livable planet for humans, with stark results.¶ Of nine worldwide processes that underpin life on Earth, four have exceeded “safe” levels — human-driven climate change, loss of biosphere integrity, land system change, and the high level of phosphorus and nitrogen flowing into the oceans due to fertilizer use.¶ Researchers spent five years identifying these core components of a planet suitable for human life, using the long-term average state of each measure to provide a baseline for the analysis.¶ They found that the changes of the last 60 years are unprecedented in the previous 10,000 years, a period in which the world has had a relatively stable climate and human civilization has advanced significantly.¶ Carbon dioxide levels, at 395.5 parts per million, are at historic highs, while loss of biosphere integrity is resulting in species becoming extinct at a rate more than 100 times faster than the previous norm.¶ Since 1950, urban populations have increased sevenfold, primary energy use has soared by a factor of five, while the amount of fertilizer used is now eight times higher. The amount of nitrogen entering the oceans has quadrupled.¶ All of these changes are shifting Earth into a “new state” that is becoming less hospitable to human life, researchers said.¶ “These indicators have shot up since 1950 and there are no signs they are slowing down,” said professor Will Steffen of the Australian National University and the Stockholm Resilience Center. Steffen is the lead author on both of the studies.¶ “When economic systems went into overdrive, there was a massive increase in resource use and pollution. It used to be confined to local and regional areas but we’re now seeing this occurring on a global scale. These changes are down to human activity, not natural variability.”¶ Steffen said direct human influence upon the land was contributing to a loss in pollination and a disruption in the provision of nutrients and fresh water.¶ “We are clearing land, we are degrading land, we introduce feral animals and take the top predators out, we change the marine ecosystem by overfishing — it’s a death by a thousand cuts,” he said. “That direct impact upon the land is the most important factor right now, even more than climate change.”¶ There are large variations in conditions around the world, according to the research. For example, land clearing is now concentrated in tropical areas, such as Indonesia and the Amazon, with the practice reversed in parts of Europe. But the overall picture is one of

deterioration at a rapid rate.¶ “It’s fairly safe to say that we haven’t seen conditions in the past similar to ones we see today and there is strong evidence that there [are] tipping points we don’t want to cross,” Steffen said.¶ “If the Earth is going to move to a warmer state, 5-6 degrees C warmer, with no ice caps, it will do so and that won’t be good for large mammals like us. People say the world is robust and that’s true, there will be life on Earth, but the Earth won’t be robust for us.¶ “Some people say we can adapt due to technology, but that’s a belief system, it’s not based on fact. There is no convincing evidence that a large mammal, with a core body temperature of 37 degrees C, will be able to evolve that quickly. Insects can, but humans can’t and that’s a problem.”¶ Steffen said the research showed the economic system was “fundamentally flawed” as it ignored critically important life support systems.¶ “It’s clear the economic system is driving us towards an unsustainable future and people of my daughter’s generation will find it increasingly hard to survive,” he said. “History has shown that civilizations have risen, stuck to their core values and then collapsed because they didn’t change. That’s where we are today.”¶ The two studies, published in Science and Anthropocene Review, featured the work of scientists from countries including the U.S., Sweden, Germany, and India. The findings will be presented in seven seminars at the World Economic Forum in Davos, which takes place between Jan. 21 and 25.

2NC - Alt Overview

The alternative is an endorsement of a radical, eco-authoritarian pedagogy. Only this political strategy can create a governance model that allows us to survive the crunch. The Humphrey evidence says we must reject the liberal tradition and formulate a centrally planned society governed by ecologically conscious elites. The Klein evidence provides a strategy of direct action to bring about this transition. Even if the alternative does not result in immediate political action, we still solve because this space provides a unique forum to deploy our alternative – the university is the key site for training the new class of eco-authoritarian elites

David Shearman and Joseph Wayne Smith, 2007, *The Climate Change Challenge and the Failure of Democracy*, p. 133-34, mm

Both de la Boetie and Hoppe are primarily concerned with the preservation of freedom of the individual, this being the core value in their systems. But for us freedom is not the most fundamental value and is merely one value among others. Survival strikes us as a much more basic value. Now our proposal is that since fighters for freedom are always likely to arise, the probability of fighters for life and survival arising must be as great if not greater. This will be especially so if the opportunity is provided for such ecowarrior/philosophers to develop and be nurtured in special institutions called “real universities” or academies. **At present our leaders are primarily trained in institutions that perpetuate and legitimate our environmentally destructive system.** The conventional university trains narrow, politically correct thinkers who ultimately become the economic warriors of the system. **Our proposal is to counter this by an alternative framework for the training and complete education of a new type of person who will be wise and fit to serve and to rule.** Unlike the narrowly focused economic rationalist universities of today, **the real university will train holistic thinkers in all of the arts and sciences necessary for tough decision making that the environmental crisis confronts us with. These thinkers will be the true public intellectuals with knowledge well grounded in ecology.** Chapter 9 will describe in more detail how we might begin the process of constructing such real universities to train the ecowarriors to do battle against the enemies of life. We must accomplish this education with the dedication that Sparta used to train its warriors. As in Sparta, these natural elites will be especially trained from childhood to meet the challenging problems of our times.

And liberal democracy is unsustainable – the alternative allows for a smooth transition by reconceptualizing our political and cultural values

Bruce Jennings, May 2013, [Jennings is the Director of Bioethics and Editor of *Minding Nature* at the Center for Humans and Nature], Center for Humans & Nature, “Governance in a Post-Growth Society: An Inquiry into the Democratic Prospect,”

<http://www.humansandnature.org/governance-in-a-post-growth-society--an-inquiry-into-the-democratic-prospect-article-136.php>, mm

In addition, new developments have arisen to complicate governance enormously, such as the global mobility of capital and investment that undermines the relative power of the nation state as a meaningful policy maker and as a locus of economic leverage. Meanwhile, regional and **global ecological problems have gotten much worse** than they were in the 1970s—climate change, biodiversity loss, fresh water shortages, damage to the ocean ecosystems. Hence, **the** continuing **viability of the liberal tradition**—a proud and hard-won intellectual orientation promoting liberty, equality, and human rights for three hundred years beginning in the seventeenth century—**is in serious question**. Can we be sanguine about the possibility of genuinely coping with limits to growth while still remaining committed to these basic values, institutions, and practices?¶ Two points, however, do seem reasonably certain. First, while we do not know what form the transition to a new structure of governance will take, that **transition will be necessary and inevitable**. Consider the issue of climate change and the attempt to limit greenhouse gas (GHG) emissions. As we witness the current struggles by global democracies to respond to the pronouncements of scientists and to set meaningful limits to unsustainable economic forces and interests, these governments reveal indecision so deep seated that it amounts to a paralysis of political and moral will. The timetable of the challenges facing us and the timetable of our collective capacity to respond are tragically out of joint.¶ The second clear starting point is that whatever type and form of governance emerges, it will require normative legitimation to be sustained. Beginning in the 1970s, a number of social theorists began to maintain that **ecological constraints will create a** legitimation **crisis for liberal democracy** and that either a non-democratic authoritarian state or at least a democratic regime with new non-democratic power centers will emerge from that crisis. A future authoritarianism does not necessarily entail a military dictatorship or police state. Coercion alone, even if ethically justified, cannot sustain behavioral compliance across a large population and govern complex networks of economic activity under modern social conditions for a sustained period of time. Popular commitment and voluntary consent, not coercion, are the key to modern governance, certainly on the national level, let alone on larger scales than that. Hence **whatever effective form of governance emerges** in a future degrowth society, **a new form of social contract will be needed as its foundation**: a transformation within the political culture that will produce voluntary consent to the new forms of governance and to new reach of political authority.¶ Such commitment is brought about in one of two ways: by purchase or by persuasion; by deploying financial incentives and self-interested motivations, or by manipulating ideas, ideals, and arguments. If the growth of material consumption and affluence will not be the currency with which to buy the necessary commitment and compliance, then what form of persuasion can secure them?¶ What would **a social contract for a degrowth society** be comprised of? For one thing, it **would** be based on the recognition that advanced industrial societies had finally encountered the natural limits to their expansion, and that henceforth they would **have to make sweeping technological, political, and social adjustments** in order to bring economic activity in line with the fragile and finite carrying capacity of the planet.¶ In addition, it would have to be based on new conceptions of justice because, without the continuing promise of an ever-growing pie to hold them in abeyance, claims for substantive redistribution from the most to the least well-off will inevitably arise, calling for potentially disruptive allocation decisions and, therefore, new principles of distributive justice to legitimate them.¶ Finally, **it will have to**

involve an ongoing type of political education and cultural value transformation away from a political culture marked by unrealistic expectations and political demands about future prosperity and a growing consumerist orientation. Only thus can the preoccupation of future governance turn to something other than the successful management of material economic growth without losing normative legitimacy and social-political stability.

Rethinking the political order is a prerequisite – any action to save the environment in the current paradigm is doomed to failure – the alt is necessary and sufficient to solve

William Ophuls, 2011, *Plato's Revenge: Politics in the Age of Ecology*, p. xii-xiv, (Ophuls received a PhD in Political Science from Yale in 1973, served for eight years as a Foreign Service Officer in Washington and Tokyo, and has taught at Northwestern University), [this evidence has been modified for gendered language], mm

Some may object that a radical change in public philosophy is hardly a practical or feasible solution – as if it were somehow illegitimate to propose answers to our problems that do not accord with received ideas or that cannot be implemented by existing institutions. But if our problems have been created by a certain way of thinking, then the only real solution is to adopt a new way of thinking and not to devise clever political or economic mousetraps based on the old one. As Albert Einstein is supposed to have said, “No problem can be solved from the same level of consciousness that created it.” And once adopted, the new level of consciousness will almost automatically generate the requisite practical measures. Why is it taboo to propose political change when we complaisantly permit massive, unlegislated technological changes that have the effect of overturning the social order? The current American political system is sacrosanct. If the founders could see how the Constitution that they framed with such prudence has been subverted by their political progeny, they would be appalled. The only genuine solution to our predicament is a new political philosophy, however impractical, unfeasible, or event heretical it might seem to adherents of the old one. ¶ For some, political philosophy is irrelevant for all practical purposes because technique and finance, not poetry, how legislate for humankind. This makes our governing ideas mere resultants or rationales, not causes. But John Maynard Keynes argued to the contrary that practical men [people] of affairs are in reality the intellectual slaves of defunct scribblers. In our case, we are the slaves of Thomas Hobbes. Despite his lament at the end of book 2 of *Leviathan* that his philosophical labor was as “useless” as Plato’s *Republic*, Hobbes’s ideas, as revised and elaborated by John Locke and Adam Smith, became the template of modern life – that is, life seemingly determined by technique and finance. In other words, the economic and technocratic juggernaut driving us toward an increasingly chaotic and dismal future is but the physical manifestation of Hobbes’s mostly unacknowledged philosophy. Until we invent and implement a better one that is inspired by a vision of a more satisfying and genuinely sustainable future, nothing can change for the better. In the end, not only do ideas matter, but they may be all that matter. As Keynes said, “the world is ruled by little else.” The process is inevitably dialectical: when ideas are given concrete form, that form then affects our way of thinking. To adapt Winston Churchill’s tribute to the power of architecture, “We shape our institutions, and afterward our institutions shape us.”

2NC – Alt Solvency (Environment)

Solvency deficits are irrelevant – collapse is inevitable – the alternative is the only way to train a new class of eco-authoritarians so we can survive the crunch

David Shearman and Joseph Wayne Smith, 2007, *The Climate Change Challenge and the Failure of Democracy*, p. 136, mm

It is not possible to take the argument further. Today we are reluctant to add the names of any individuals who could be conscripted for our alternative “Intensive Care Management Government,” because there are obviously defects in all individuals educated in our existing institutions—including us! Nevertheless, as Darwinian evolutionists we believe imperfections can be eliminated by a process of trial and error and selection. We can rebuild the ship of civilization while it floats, slowly attempting to produce better qualified people, people who are less selfish and more altruistic than ourselves. The time frame for any sort of education-based leadership change will be many decades and of course, humanity does not have the luxury of waiting for such a time. Therefore, in our opinion, there is a considerable likelihood that some type of economic or ecological crash will occur that will lead to the collapse of our present social system. There will thus be casualties; there is no escape from the fact that a great reckoning for humankind is to come. What we propose is a form of crisis care management so that civilization does not perish; we wish to save a remnant. Of course we have not answered all the questions that naturally arise when any strategy of “how to get there” is postulated. Given that there is so little thought about what to do in such worse case scenarios, we believe that some process is better than nothing at all. Given the problems we have sketched, it is difficult to see where else one could go or what else one could do. Therefore, take our proposal as a “work in progress” research program that can be developed further.

An eco-authoritarian system can succeed – Singapore is a perfect model

David Shearman and Joseph Wayne Smith, 2007, *The Climate Change Challenge and the Failure of Democracy*, p. 124, mm

In the face of the environmental failures of the liberal democracies, there may be lessons to be learned from one country, Singapore, which is often called authoritarian and an “illiberal democracy.” Singapore became independent in 1965 when, like many other countries in the third world, it was poor and lacked natural resources.¹³ Today its citizens have one of the highest per capita incomes in the world without suffering the sectional and social consequences of affluence. Yet Singapore is in effect a one-party state with minimal parliamentary opposition and restrictive laws. The People’s Action Party (PAP) was elected in 1959 and has governed ever since. It has dedicated itself to economic success by value creation and full employment. It has created high standards in management, housing, health, education, transportation, and the environment. It has used the expertise of multinational corporations without succumbing to their philosophy. When the PAP is in effect the state, why

has its authoritarian rule not become corrupt and incompetent? Lee Kwan Yew was the leader of the PAP in the first decades of its rule. He was a highly intelligent technocrat who avoided the cult of personality and established a team based on intellectual and technical ability. Government is a meritocracy that renews itself from within its own ranks. Transition of leadership is managed carefully and appropriately without the vituperation and denigration so prevalent in the liberal democracies. Economic advancement has been a legitimizing factor for authoritarianism and opposition is insignificant. In the sphere of parliamentary opposition there are nominated members to represent particular interests and expertise. The PAP did not evolve into an authoritarian structure. It was created in this mold. Lee said that the PAP founders “believed that political stability was the top priority because it was a prerequisite for development and modernization. This belief accompanied a shared apprehension about the transferability of Western democracy to an Asian society and an underlying conviction that unfettered democracy contained within it certain frailties always threatening to degenerate into mob rule.”¹⁴ This viewpoint from an Asian culture reflected Plato’s conclusions from centuries before and has been justified by Lee’s outcomes. Singapore demonstrates that it is possible for a state to fashion an intellectual elite that can succeed in creating a wealthy economy for all its citizens. In doing this it does not allow the freedoms that many self-proclaimed leaders of the world’s liberal democracies enjoy. However the freedoms of democracy are increasingly eroded by leaders using the threat of terror and the imposition of law and order to bolster their own power. It is becoming debatable whether it is better to live under these deprivations or under a benign authoritarianism that provides basic human needs necessary for well-being. Let us take the argument further by asking whether a Singapore system could be developed to drive vital environmental outcomes in the interests of humanity’s future? The answer is surely yes. Governance is by a team of technocratic elites supported by educational structures described in the next chapter. An analysis of the pathetic, self-serving performance of many elected representatives of liberal democracies is a cogent argument for this option.

2NC – AT Perm

The perm can't solve - rights and autonomy are incompatible with an eco-authoritarian model – privileging these values makes environmentally responsible governance impossible

Bruce Jennings, May 2013, [Jennings is the Director of Bioethics and Editor of Minding Nature at the Center for Humans and Nature], Center for Humans & Nature, "Governance in a Post-Growth Society: An Inquiry into the Democratic Prospect,"

<http://www.humansandnature.org/governance-in-a-post-growth-society--an-inquiry-into-the-democratic-prospect-article-136.php>, mm

Ecological authoritarianism. Ecological authoritarians maintain that the successful governance in a degrowth era will require centralized, elitist, and technocratic management at least in the areas of economic and environmental policy.[9] Mindful of the internal contradictions plural democratic governance faces as it attempts to cope with problems of productivity, capital accumulation, and growth, ecological authoritarians stress the need for policy makers and planners to be insulated from democratic pressures and granted an increasing measure of autocratic authority if they are to steer the economy on an ecologically rational and efficient course. Ecological authoritarians are impressed, perhaps overly so, by the popular demand in pluralistic democratic systems for democratic rights and material affluence. They speak of democratic overload in reference to those pressures and demands: democratic overload of policy makers leads to economic overload or overshoot of the carrying capacity of ecosystems. The former has to be broken free from in order to prevent the latter.¶ Indeed, ecological authoritarians see a vicious cycle, a destructive feedback loop in this. As pluralistic democracies succeed in their aim to increase economic prosperity for the population, the democratic assertiveness of citizens for more growth and prosperity also increases. As the economic management of ever-higher levels of affluence becomes more complex, the tension between democratic politics and "scientific" planning comes to a crisis point.¶ The ecological authoritarians here make an important point. The fact that pluralistic democracy has demonstrated its inability to perform ecologically precautionary governance in a consistent or timely way is not fortuitous; it is built into the deep structure and political logic of this type of system as such. If pluralistic democratic governments follow the dictates of ecological science and planning, they will restrict growth in ways that risk losing their popular base of support. If, conversely, such governments attempt to maintain their legitimacy by bowing to short-term democratic pressures, they will not be able to take (and require the private sector to take) the steps necessary to protect the environment. Eventually economic downturn, inequality, and hardship will result from ecological degradation, and again the governments will lose their popular support and legitimacy.[10] Note, however, that the political costs of the first prong of this dilemma are more immediate than those from the second prong, so pragmatism in a pluralistic democracy counsels the first course of action. Such pragmatism is ecologically insane.

Starting Point DA – The perm maintains the same political reference point as the plan, which guts solvency for the alt and ensures extinction

Pentti Linkola, 2009, (Linkola is a Finnish environmental activist and scholar), “Can Life Prevail? A Revolutionary Approach to the Environmental Crisis,” p. 39-41, mm

I did not know how the dictionary defines the word utopia. Anyhow, Hovila uses it to indicate “a model differing from the dominating one” or – in more elaborate terms – “a model that differs from the one that happens to prevail at the time of observation.” This concept, I would argue, is both fruitless and misleading. The words utopia and utopian are useful when used to describe reveries that are only dreamt of: things impossible, deceptive, unrealistic or which lead to ruin. For a long time it has been clear that of all known societies and economies, the most genuinely utopian are those that have been adopted at present, as they are founded on the logical impossibility of continuous economic growth. ¶ When, in an articles entitled “Utopian Politics are Dangerous,” Hovila describes the model societies suggested by Pentti Linkola and Eero Paloheimo as “unrealistic,” “dangerous utopias,” his line of reasoning makes no sense whatsoever. What could be more “dangerous” than the present unwavering and relentless descent into a mass grave: this society of economic growth and technology that every second is destroying the life around us? If nothing else, the programmes of Linkola, Paloheimo and Schumacher (who was also mentioned by Hovila) are examples of extreme realism, anti-idealism and anti-utopianism. Each in their own way, these programmes have specifically been devised to secure the survival of society, mankind and life: they are as far away from being “dangerous” as could be. ¶ What Hovila writes is often unbelievable: “The use of violent methods poses a concrete risk. The recent raids carried out by animal-rights extremists are an example of how ‘utopians’ may collaborate with dissenters.” In his expression of this matter Hovila even manages to lump together two completely opposite things: the subtle and altogether limited violence of animal rights activists on the one hand; the massive violence openly practiced by fur farmers and the vast, hidden violence perpetrated by economic growth on the other. ¶ Hovila deftly writes: “These models present the same problem as all utopias: unless fully implemented, they will not be implemented at all. Without a connection to the present, these programmes are simply meaningless.” It is rather grotesque that Hovila’s words should be completely disproved by his own suggestions (in this case, in favour of greener farming). For neither have his own compromising suggestions been “realized to any degree:” the complete end of agriculture and absolute triumph of industrial farming are shaping market economy. Small adjustments toward a softer direction have not been accepted any more than radical environmentalist alternatives: integrated farming or IP (Integrated Production) plays no part whatsoever in the contemporary economy. ¶ Hovila’s point about being “connected to the present” is significant. The worst mistake that anyone thinking about society can make is to envisage the prevailing system as the starting point: to begin from a tabula rasa, a clean slate, is an absolute must in order to develop any sort of programme. Human history across the world offers a wide range of societal models: the model that happens to be the prevailing one in our own society does no represent any intrinsically superior point of reference. Any binding to a given societal model paralyses the whole thinking process, as is shown by the conventionalities that Hovila – like many others – writes.

Links - General

Link – Privacy

The affirmative's conception of privacy is not value-neutral – it reinforces a materialist view of the world that allows for widespread environmental destruction

Bruce Jennings, May 2015, [Jennings is the Director of Bioethics and Editor of Minding Nature at the Center for Humans and Nature], Center for Humans & Nature, "Mine and Ours," <http://www.humansandnature.org/mine-and-ours-article-202.php?issue=26>, mm

The concept of property is fundamental to an understanding of the relationship between humans and nature. Moreover, land use, or land management and governance, is a significant factor determining the human impact on natural systems, including agriculture, biodiversity and habitat loss, deforestation, and overall climate change. Aldo Leopold made the connection between property and land use explicit: "We abuse land because we regard it as a commodity belonging to us. When we see land as a community to which we belong, we may begin to use it with love and respect." [1] ¶ The note Leopold sounds here has been an enduring one in social philosophy. Here are three of my favorite examples. ¶ Writing in 1755, Jean-Jacques Rousseau maintained that a decisive turning point in the story leading from the state of nature to human political and social being was the invention of property, especially as it manifested itself in the enclosure of land: ¶ The first person who, having fenced off a plot of ground, took it into his head to say this is mine and found people simple enough to believe him, was the true founder of civil society. What crimes, wars, murders, what miseries and horrors would the human Race have been spared by someone who, uprooting the stakes or filling in the ditch, had shouted to his fellows: Beware of listening to this impostor; you are lost if you forget that the fruits belong to all and the Earth to no one! [2] ¶ A century later, writing shortly before his death in 1884, Karl Marx described the next step in human social evolution as involving a change in our attitude toward ownership and the land: ¶ From the standpoint of a higher socio-economic formation, the private property of particular individuals in the earth will appear just as absurd as the private property of one man in other men. Even an entire society, a nation, or all simultaneously existing societies taken together, are not the owners of the earth. They are simply its possessors, its beneficiaries, and have to bequeath it in an improved state to succeeding generations as *boni patres familias*. [3] ¶ Finally in 1944, economic historian and anthropologist Karl Polanyi traced the changes that led in the late medieval and early modern period to viewing land, human labor, and capital as commodities that could be bought and sold in an impersonal market. He regarded this way of looking at land and labor as artificial and pernicious, but recognized how historically and politically powerful this alteration of perception had been in history. It changed the ways in which the relationship between human beings and the material world was understood and the ethical rules governing it. And it fractured the way that economic production and consumption had been embedded in a larger cultural structure of meaning and norms, thereby setting the economy apart as a semi-autonomous sphere of life and activity, with rules and a logic of its own. ¶ Polanyi argued that this commodification of material life and separation of economic activity from a more seamless cultural web of meanings, despite its material benefits, was in other ways impoverishing and diminishing to humanity. He expresses

the point this way:¶ The economic function is but one of many vital functions of land. It [land] invests man's life with stability; it is the site of his habitation; it is a condition of his physical safety; it is the landscape and the seasons. We might as well imagine his being born without hands and feet as carrying on his life without land. And yet to separate land from man and organize society in such a way as to satisfy the requirements of a real-estate market was a vital part of the utopian concept of a market economy.[4]¶ At the beginning of the twenty-first century, "This is mine" increasingly looks like a bad deal. Where is Rousseau's "someone," that shadowy figure who pulls up the stakes and fills in the ditch? Where are Marx's good householders and good ancestors?¶ The answer is, everywhere. But they operate on local scales mainly, and they are only slowly gaining ground.[5]¶ They are the new commons movement that is redefining property and the management and governance of common-pool resources. It is a diverse movement, full of intellectual inspirations that are often conflicting. Recovering and re-governing the commons in a practical sense must go hand in hand with rediscovering the concept of the commons.¶ The concept, ethics, and politics of the commons are vibrant topics in many disciplines. This is especially the case in economics. A starting point for discussion in that discipline was Garrett Hardin's essay "The Tragedy of the Commons," which focused attention on the vulnerability of common-pool resources to overexploitation or neglect. This is a situation in which individuals following the logic of rational self-interest produce suboptimal collective results. Many, including Hardin himself, have drawn the lesson that privatization of the common resource is the best solution to this collective action problem. However, Elinor Ostrom's work challenged this. Rather than embracing privatization as a solution to the degradation of the commons, she found in many parts of the world that localized, culturally informed participatory management of common-pool resources results in sustainable governance. And it avoids the conventional approaches of competitive market privatization on the one hand, and of central government regulatory and legal control on the other.[6]¶ Moreover, since the concept of the commons tends to reintegrate economic activity within a broader cultural and value network as a counterpoint to the fragmentation that Polanyi decried, it has also led to lively discussions between economists and anthropologists, who find that much more is involved than rationality and efficiency, which are often the overriding concerns of economists.[7]¶ For example, a study of the aboriginal commons in Queensland, Australia, found that the land is not understood as an economic resource primarily, but as a being with its own agency of "listening, watching, nurturing, disciplining and balancing human and natural resources." [8]¶ One lesson to be drawn from these debates is that the relationship between humans and the natural world in principle has many dimensions and facets. **Commodification in a separate sphere of market exchange and merely instrumental economic use flattens the meaning of nature and perhaps removes some of the reasons for, and inhibitions against, inappropriate and ultimately self-defeating exploitation of the land.** Exactly as Leopold envisioned.¶ Property is not a thing, although we often use the word that way in common parlance. It is more accurate to say that **property is a relationship between and among objects and people.** As such it has consequences—it affects individual and group motivation and action, it determines access to and control over resources, and **it is value-laden, not value-neutral,** from both an economic and an ethical point of view. In the Western tradition, at any rate, property has been linked to the concept of rights going back to ancient Roman law. **In modern times a privatized and individuated understanding of property is predominant,** and it links property

closely with commoditization and market exchange. But **that conception** of property **is not the only possible one**. Most generally understood, property concerns access to resources, differentiating those who have free access to something from those who do not, and setting the conditions under which various individuals and groups may obtain access and a right to use. Often, the right of access and use brings corresponding duties and obligations.¶ **It is important to distinguish between private property and collective or common property**. Today the term “property” is often taken to be synonymous with private property or individual ownership, but this closes off creative possibilities, especially in connection with sustainable land use and ecological trusteeship. **Private property puts one person in control of how a resource is used; common property involves shared control and shared use**. Indeed, there are forms of property rights in which the private owner does not have complete and exclusive control over access and use of a resource. Usufruct (usus et fructus, “use and enjoyment of fruits”) arrangements cover a situation in which individuals have rights of access to property owned by someone else, as long as the property is maintained appropriately. Use and enjoyment rights to someone else’s property historically have come in many forms and varieties, but one important notion that was developed over time is the idea of estover (est opus, “it is necessary”) rights under which owners could not deny non-owning occupiers access to resources needed to sustain themselves and to perform their services on the land. Such resources could include access to grazing land, firewood, wild fruits, game, and the like. Hence it is important to note that while common property involves shared ownership and shared power to determine resource use, and thus, the normative dimensions of participatory decision making are readily apparent, even private property ownership can also be limited by normative notions, such as the appropriate maintenance and usage necessary to sustain people or ecosystems. Common-pool resources are those for which open access is difficult to restrain, either for physical or traditional cultural reasons. Neither private ownership nor state ownership always provide the best governance and trusteeship for the commons.¶ **The ontological separation of human life and well-being from natural living systems on local, regional, and planetary scales is now the ideological default setting. And so is private control of the land in the service of the personal and material interests of the owner. These presumptions**—and they are indeed presumptuous—**go hand in hand. They both must be challenged** and, in certain circumstances, rebutted. Last year, new legislation in California to limit the virtually free-for-all drilling of deep water wells and the depletion of aquifers in the face of the current severe drought in the Central Valley is a noteworthy example, but such governmental regulation of common-pool resources is only one solution. Weaving an infrastructure of more participatory common governance solutions, through the law and through building alternative institutional arrangements in civil society—mutual associations, cooperatives, sustainably oriented covenants and contracts, and the like—is an important alternative and an opportunity for the conservation movement. When one is pleading the case for the planet, commons-inspired efforts to reintegrate the property system with the fabric of other cultural and natural systems is a worthy goal and an ethical imperative.¶ Today the vision of ecological trusteeship through democratic governance is not a self-evident truth by any means. It requires hard work to make a case for its ethical justification that can persuasively garner popular support. But nature is chiming in and pressing its own case against the continued abuse of the land in the name of private property rights. In the past, the notion of estover was applied as a basis for claiming certain rights to common access and land use for people. How

about the estover claims of nature itself? To the human cultural claim, It is mine, the answering response is the natural claim, It is necessary.¶ In other words, the current psychological and economic defaults of individualistic strategic thinking must be reset to a mode of relational ethical thinking that is mindful of human interdependence, sustaining the natural commons, and promoting the social common good. From mine to ours, from “What’s in it for me?” to “What’s in it for diverse, abundant, and resilient life?”

Link – Privacy Key to Democracy

Privacy is key to democracy – continued mass surveillance will break the system

Truthout, 9/24/2013, “without privacy there can be no democracy,” <http://www.truthout.org/opinion/item/19039-without-privacy-there-can-be-no-democracy>, mm

She said, "Without the right of privacy, there is no real freedom of speech or freedom of opinion, and so there is no actual democracy."¶ This is not just true of international relations. It's also true here within the United States.¶ Back before the Kennedy administration largely put an end to it, J Edgar Hoover was infamous in political circles in Washington DC for his spying on and blackmailing of both American politicians and activists like Martin Luther King. He even sent King tapes of an extramarital affair and suggested that King should consider committing suicide.¶ That was a shameful period in American history, and most Americans think it is behind us. But the NSA, other intelligence agencies, and even local police departments have put the practice of spying on average citizens in America on steroids.¶ As Brazil's President points out, without privacy there can be no democracy.¶ Democracy requires opposing voices; it requires a certain level of reasonable political conflict. And it requires that government misdeeds be exposed. That can only be done when whistleblowers and people committing acts of journalism can do so without being spied upon.¶ Perhaps a larger problem is that well over half – some estimates run as high as 70% – of the NSA's budget has been outsourced to private corporations. These private corporations maintain an army of lobbyists in Washington DC who constantly push for more spying and, thus, more money for their clients.¶ With the privatization of intelligence operations, the normal system of checks and balances that would keep government snooping under control has broken down.

Link – Repression

Repressive political strategies like surveillance are key to ensuring an authoritarian regime can maintain power

Dan Shahar, 2015, *Environmental Values*, 24(3), "Rejecting eco-authoritarianism, again, 345-366, mm

History seems to teach us that the only reliable way to achieve true autonomy from citizens' demands is through an active and sustained commitment to suppressing would-be dissenters and to imposing policies without compromise. For both the Soviet Union and People's Republic of China, the price of political openness was the risk of instability and political upheaval when citizens came to disapprove of their leaders' actions, and there is good reason to think that this outcome was not a coincidence.⁶⁶ It is only by preventing robust civil discourse and open dissent from emerging in the first place through consistent repression that authoritarian governments have been able to retain and exercise their power with relative impunity.⁶⁷

Link – Spillover/US Key to Global Demo

Global democracy is declining now – restoring faith in the US model reverses this trend

Larry Diamond, January 2015, [prof. at Stanford], *Journal of Democracy*, 26(1), “facing up to the democratic recession,” http://cddrl.fsi.stanford.edu/sites/default/files/ld_jod_jan2015-1.pdf, mm

Perhaps the most worrisome dimension of the democratic recession has been the decline of democratic efficacy, energy, and self-confidence in the West, including the United States. There is a growing sense, both domestically and internationally, that democracy in the United States has not been functioning effectively enough to address the major challenges of governance. The diminished pace of legislation, the vanishing ability of Congress to pass a budget, and the 2013 shutdown of the federal government are only some of the indications of a political system (and a broader body politic) that appears increasingly polarized and deadlocked. As a result, both public approval of Congress and public trust in government are at historic lows. The ever-mounting cost of election campaigns, the surging role of nontransparent money in politics, and low rates of voter participation are additional signs of democratic ill health. Internationally, promoting democracy abroad scores close to the bottom of the public’s foreign-policy priorities. And the international perception is that democracy promotion has already receded as an actual priority of U.S. foreign policy. The world takes note of all this. Authoritarian state media gleefully publicize these travails of American democracy in order to discredit democracy in general and immunize authoritarian rule against U.S. pressure. Even in weak states, autocrats perceive that the pressure is now off: They can pretty much do whatever they want to censor the media, crush the opposition, and perpetuate their rule, and Europe and the United States will swallow it. Meek verbal protests may ensue, but the aid will still flow and the dictators will still be welcome at the White House and the Elysée Palace. It is hard to overstate how important the vitality and self-confidence of U.S. democracy has been to the global expansion of democracy during the third wave. While each democratizing country made its own transition, pressure and solidarity from the United States and Europe often generated a significant and even crucial enabling environment that helped to tip finely balanced situations toward democratic change, and then in some cases gradually toward democratic consolidation. If this solidarity is now greatly diminished, so will be the near-term global prospects for reviving and sustaining democratic progress. Democracy has been in a global recession for most of the last decade, and there is a growing danger that the recession could deepen and tip over into something much worse. Many more democracies could fail, not only in poor countries of marginal strategic significance, but also in big swing states such as Indonesia and Ukraine (again). There is little external recognition yet of the grim state of democracy in Turkey, and there is no guarantee that democracy will return any time soon to Thailand or Bangladesh. Apathy and inertia in Europe and the United States could significantly lower the barriers to new democratic reversals and to authoritarian entrenchments in many more states. Yet the picture is not entirely bleak. We have not seen “a third reverse wave.” Globally, average levels of freedom

have ebbed a little bit, but not calamitously. Most important, there has not been significant erosion in public support for democracy. In fact, what the Afrobarometer has consistently shown is a gap—in some African countries, a chasm—between the popular demand for democracy and the supply of it provided by the regime. This is not based just on some shallow, vague notion that democracy is a good thing. Many Africans understand the importance of political accountability, transparency, the rule of law, and restraint of power, and they would like to see their governments manifest these virtues. While the performance of democracy is failing to inspire, authoritarianism faces its own steep challenges. There is hardly a dictatorship in the world that looks stable for the long run. The only truly reliable source of regime stability is legitimacy, and the number of people in the world who believe in the intrinsic legitimacy of any form of authoritarianism is rapidly diminishing. Economic development, globalization, and the information revolution are undermining all forms of authority and empowering individuals. Values are changing, and while we should not assume any teleological path toward a global “enlightenment,” generally the movement is toward greater distrust of authority and more desire for accountability, freedom, and political choice. In the coming two decades, these trends will challenge the nature of rule in China, Vietnam, Iran, and the Arab states much more than they will in India, not to mention Europe and the United States. Already, democratization is visible on the horizon of Malaysia’s increasingly competitive electoral politics, and it will come in the next generation to Singapore as well. The key imperative in the near term is to work to reform and consolidate the democracies that have emerged during the third wave—the majority of which remain illiberal and unstable, if they remain democratic at all. With more focused, committed, and resourceful international engagement, it should be possible to help democracy sink deeper and more enduring roots in countries such as Indonesia, the Philippines, South Africa, and Ghana. It is possible and urgently important to help stabilize the new democracies in Ukraine and Tunisia (whose success could gradually generate significant diffusion effects throughout the Arab world). It might be possible to nudge Thailand and Bangladesh back toward electoral democracy, though ways must be found to temper the awful levels of party polarization in each country. With time, the electoral authoritarian project in Turkey will discredit itself in the face of mounting corruption and abuse of power, which are already growing quite serious. And the oil-based autocracies in Iran and Venezuela will face increasingly severe crises of economic performance and political legitimacy. It is vital that democrats in the established democracies not lose faith. Democrats have the better set of ideas. Democracy may be receding somewhat in practice, but it is still globally ascendant in peoples’ values and aspirations. This creates significant new opportunities for democratic growth. If the current modest recession of democracy spirals into a depression, it will be because those of us in the established democracies were our own worst enemies.

Links – Case Specific

Link – Mass Surveillance

The US is at a tipping point of an authoritarian transition – mass surveillance is key

John Suarez, 10/18/2013, Pam Am Post, “The US surveillance state and the totalitarian tipping point,” <http://panampost.com/john-suarez/2013/10/18/the-us-surveillance-state-and-the-totalitarian-tipping-point/>, mm

In the 20th century, the United States reached levels of wealth for more people than had ever been seen in human history. However, those in power whittled away at the nation’s basic freedoms, slowly and over generations. Complaints were few because material prosperity endured.¶ Today, massive and unsustainable debts are maintaining the US standard of living. **Freedom continues to be whittled away** at, but more US Americans are awakening to this hard truth, because material prosperity for many is evaporating. One area that they view with growing alarm is **the emergence of the United States of America as a surveillance state**, since, along with a militarized police force, it **is the infrastructure of totalitarianism**.+¶ This is the second in a series of reflections seeking to understand these negative trends in the United States. The first essay analyzed the role of the US Supreme Court — in particular, its decisions that undermined private property rights and forced taxpayers to cooperate with evil. I concluded with the controversial proposition that the present system in the United States is post-constitutional.+¶ For generations, US Americans believed that the first, third, fourth, and ninth amendments found in the Bill of Rights protected the privacy of citizens of the United States — that only a small number engaged in criminal conduct would be subjected to surveillance, following a court order permitting such activity by the authorities.+¶ However, the arrival of new technologies provided the state with the means to circumvent these constitutional provisions. In the state of Florida, for example, automated systems are replacing toll operators, and they either process your information via your Sun Pass or by photographing your license plate and sending you the bill. According to the pre-paid toll program privacy policy, “information concerning a SunPass account is provided only when required to comply with a subpoena or court order.”+¶ In other words, they are compiling and storing information on your whereabouts.+¶ Affirming this reality, the American Civil Liberties Union stated on July 18, 2013, that “Police around the United States are recording the license plates of passing drivers and storing the information for years with little privacy protection. The information potentially allows authorities to track the movements of everyone who drives a car.”+¶ However, the Electronic Frontier Foundation makes clear that the federal and state governments are monitoring not only US Americans’ physical movement, but also their telephone and e-mail communications.+¶ The government is mass collecting phone metadata of all US customers under the guise of the Patriot Act. Moreover, the media reports confirm that the government is collecting and analyzing the content of communications of foreigners talking to persons inside the United States, as well as collecting collecting [sic] much more, without a probable cause warrant. Finally, the media reports confirm the “upstream” collection off of the fiberoptic cables that Mr. Klein first revealed in 2006.¶ **The Edward Snowden revelations expose a national government that is systematically monitoring and recording the communications of the entire**

US American people all of the time, and beyond. From the Wall Street Journal: ¶ The National Security Agency — which possesses only limited legal authority to spy on U.S. citizens — has built a surveillance network that covers more Americans' Internet communications than officials have publicly disclosed, current and former officials say. The system has the capacity to reach roughly 75% of all U.S. Internet traffic in the hunt for foreign intelligence, including a wide array of communications by foreigners and Americans. In some cases, it retains the written content of emails sent between citizens within the U.S. and also filters domestic phone calls made with Internet technology . . . ¶ What is equally disturbing is that private companies are complicit in the behavior — when not engaging in their own monitoring of internet communications — although, to be fair, their will is not always on the side of the spying. (See the video below.) Further, even though the immense and illegal surveillance apparatus is out in the open now, we see no remorse from the instigators and the elected officials responsible. Rather, they are doubling down, and their apologists are right there with them. ¶ Unfortunately, there is no plan; there is no conspiracy. This expansion and centralization of power has continued under both Republicans and Democrats in the United States and would most likely continue under a third party. Centralized power has become an end unto itself, and as the late Czech president Vaclav Havel observed: ¶ Once the claims of central power have been placed above law and morality, once the exercise of that power is divested of public control, and once the institutional guarantees of political plurality and civil rights have been made a mockery of, or simply abolished, there is no reason to respect any other limitations. The expansion of central power does not stop at the frontier between the public and the private, but instead, arbitrarily pushes back that border until it is shamelessly intervening in areas that once were private. ¶ The United States is reaching a tipping point that leads into a totalitarian abyss and the crackdown on privacy whistleblowers is one of many ominous signs regarding where this centralization of power is heading. +

Link – Mass Surveillance (Spillover/US Key)

US mass surveillance gets modeled – that empowers authoritarianism abroad

Donahue 14 (Eileen,- visiting scholar at Stanford University's Freeman Spogli Institute for International Studies, former U.S. ambassador to the United Nations Human Rights Council “Why the NSA undermines national security”)

The U.S. model of mass surveillance will be followed by others and could unintentionally invert the democratic relationship between citizens and their governments. Under the cover of preventing terrorism, authoritarian governments may now increase surveillance of political opponents. Governments that collect and monitor digital information to intimidate or squelch political opposition and dissent can more justifiably claim they are acting with legitimacy. For human rights defenders and democracy activists worldwide, the potential consequences of the widespread use by governments of mass surveillance techniques are dark and clear.

Domestic surveillance sets a global precedent

Deibert '13 (6-12 Ronald,- professor of political science at the University of Toronto, where he is director of the Canada Centre for Global Security Studies and the Citizen Lab at the Munk School of Global Affairs “Why NSA spying scares the world”)

Many of the countries in the Southern Hemisphere are failed or fragile states; many of them are authoritarian or autocratic regimes. No doubt the elites in those regimes will use the excuse of security to adopt more stringent state controls over the Internet in their jurisdictions and support local versions of popular social media companies over which they can exact their own nationalized controls -- a trend that began prior to the NSA revelations but which now has additional rhetorical support.¶ In the age of Big Data, the revelations about NSA's intelligence-gathering programs touched many nerves. The issue of surveillance won't go away, and Americans will need to figure out the appropriate safeguards for liberty in their democracy. It's an important debate, but one that doesn't include us "foreigners" that now make up the vast majority of the Internet users. Americans would do well to consider the international implications of their domestic policies before they come home to bite them.

Link – Border Surveillance

Border surveillance is key to the expansion of a global surveillance regime and the emergence of authoritarianism

Todd Miller, 7/11/2013, Truthout, “surveillance surge on the border: how to turn the US-Mexican border into a war zone,” <http://www.truth-out.org/news/item/17513-surveillance-surge-on-the-border-how-to-turn-the-us-mexican-border-into-a-war-zone>, mm

This “border surge,” a phrase coined by Senator Chuck Schumer, is also a surveillance surge. The Senate bill provides for the hiring of almost 19,000 new Border Patrol agents, the building of 700 additional miles of walls, fences, and barriers, and an investment of billions of dollars in the latest surveillance technologies, including drones.¶ In this, the bill only continues in a post-9/11 tradition in which our southern divide has become an on-the-ground laboratory for the development of a surveillance state whose mission is already moving well beyond those borderlands. Calling this “immigration reform” is like calling the National Security Agency’s expanding global surveillance system a domestic telecommunications upgrade. It’s really all about the country that the United States is becoming -- one of the police and the policed.¶ The \$46 billion border security price tag in the immigration reform bill will simply expand on what has already been built. After all, \$100 billion was spent on border “enforcement” in the first decade after 9/11. To that must be added the annual \$18 billion budget for border and immigration enforcement, money that outpaces the combined budgets of all other federal law enforcement agencies. In fact, since Operation Blockade in the 1990s, the U.S.-Mexico border has gone through so many surges that a time when simple chain link fences separated two friendly countries is now unimaginable.¶ To witness the widespread presence of Department of Homeland Security agents on the southern border, just visit that international boundary 100 miles south of Border Security Expo. Approximately 700 miles of walls, fences, and barriers already cut off the two countries at its major urban crossings and many rural ones as well. Emplaced everywhere are cameras that can follow you -- or your body heat -- day or night. Overhead, as in Afghanistan, a Predator B drone may hover. You can’t hear its incessant buzzing only because it flies so high, nor can you see the crew in charge of flying it and analyzing your movements from possibly hundreds of miles away.¶ As you walk, perhaps you step on implanted sensors, creating a beeping noise in some distant monitoring room. Meanwhile, green-striped Border Patrol vehicles rush by constantly. On the U.S.-Mexican border, there are already more than 18,500 agents (and approximately 2,300 more on the Canadian border). In counterterrorism mode, they are paid to be suspicious of everything and everybody. Some Homeland Security vehicles sport trailers carrying All Terrain Vehicles. Some have mounted surveillance cameras, others cages to detain captured migrants. Some borderlanders like Mike Wilson of the Tucson-based Border Action Network, a member of the Tohono O’odham Nation (a Native American people and the original inhabitants of the Arizona borderlands), call the border security operatives an “occupying army.”¶ Checkpoints -- normally located 20-50 miles from the international boundary -- serve as a second layer of border enforcement. Stopped at one of them, you will be interrogated by armed agents in green, most likely with drug-sniffing dogs. If you are near the international divide, it’s hard to avoid such checkpoints where you will

be asked about your citizenship -- and much more if anything you say or do, or simply the way you look, raises suspicions. Even outside of the checkpoints, agents of the Department of Homeland Security can pull you over for any reason -- without probable cause or a warrant -- and do what is termed a "routine search." As a U.S. Border Patrol agent told journalist Margaret Regan, within a hundred miles of the international divide, "there's an asterisk on the Constitution."¶ Off-road forward operating bases offer further evidence of the battlefield atmosphere being created near the border. Such outposts became commonplace during the U.S. wars in Iraq and Afghanistan, where they were meant to house U.S. soldiers deployed into remote areas. On the border, there are high-tech yet rudimentary camps that serve the same purpose. They also signal how agents of the Department of Homeland Security are "gaining, maintaining, and expanding" into rural areas traversed by migrants and used by smugglers, though to this point never crossed by a known international terrorist.¶ These rural areas, especially in Arizona, are riddled with migrant casualties. More than 6,000 "remains" have been recovered since the mid-1990s, deaths not for the most part from bullets but from exposure. The U.S. borderlands, according to sociologist Timothy Dunn, started to become a militarized zone as early as the 1970s -- in part, in response to the Pentagon's low-intensity conflict doctrine. With Congressional immigration reform, if it passes the House of Representatives, it may very well become a full-fledged war zone.¶ Since the 1990s, the strategy of the Border Patrol has been termed "prevention by deterrence" and has been focused on concentrating agents and surveillance technologies in urban areas, once the traditional migrant routes. The idea was to funnel migrant flows into areas too dangerous and desolate to cross like the triple-degree-temperature desert in Arizona. Deadly yes; impossible to cross, no. Although unauthorized border-crossings have slowed down in recent years, tens of thousands continue to cross into the United States annually from Mexico and Central America, thanks in part to the continued havoc of the North American Free Trade Agreement, which left more than two million Mexican farmers unemployed. ¶ I met Adira, a 21-year-old from Oaxaca, Mexico, in early June. She told me a story all too common in Arizona. As she described her experience, I realized that I was talking to somebody who had probably died and been brought back to life. We were only a few blocks from the border. Homeland Security had formally deported her only days before. Still reliving the trauma of her experience, she stared down, her face colorless, as she talked.¶ I had heard the basics of her story so many times before: to avoid the militarized surveillance apparatus, she and her companions walked for at least five days through the southern Arizona desert with little -- and then no -- water or food. By the fourth day, the mountains began to talk to her, so she told me, and she suspected she was coming to the end of her young life. After she couldn't walk any more, the guide dragged her, telling her constantly: "We just have to make it to the next point."¶ When they reached a road on the American side of the border, she remembers convulsing four times (just as she remembers blood bursting spontaneously from the noses of her companions). And then she remembers no more. She woke up in a hospital. There were scars on her chest. Medics must have used a machine, she thought, to shock her back to life. She found out later that somebody had lit a fire to attract the Border Patrol. She's lucky not to be among those remains regularly found out in that desert.¶ In other words, each further tightening of the border is a death sentence passed on yet more Latin Americans. According to a statement by a group of Tucson organizations, including No More Deaths and the Coalición de Derechos Humanos, the border build-up in the immigration reform bill promises

more of the same: “Make no mistake: this bill will lead to more deaths on the border.”¶ In early March, DRS Technologies set up its integrated fixed-tower technology at the University of Arizona’s (UA) Science and Technology Park, just south of Tucson, an hour from the border, and very close to where Adira almost lost her life. The company was eager to show off the long-range surveillance technology it had been developing for borders in places like Egypt and Jordan.¶ It set up a mock operational control room to do a dog-and-pony show for the local media. Four of its IT guys then focused their cameras on an elevated railroad spur more than four miles away in the middle of the desert where two men were approaching each other to consummate a fake drug deal. One handed the other a backpack. It was all vividly watchable on DRS’s video screens. Although the odds of such a scenario actually happening ranged from slim to none, the demonstration was a reminder of just how fertile the U.S.-Mexico borderlands are for defense- and surveillance-related companies. It’s here that new generations of surveillance technology are regularly born and developed.¶ For almost a decade, the Department of Homeland Security has been attempting to build a “virtual wall” along the border -- not a physical barrier but a high-tech surveillance masterpiece, a complex web of technology, radar, unattended ground sensors, and camera systems meant to detect anyone crossing the border anywhere. The last attempt to install such an experimental system along part of the border was in 2006. Then the Department of Homeland Security awarded Boeing Corporation a multi-billion-dollar contract to develop such a “wall,” known as SBInet. That contract was abruptly cancelled in 2011, after the costly and delayed program advertised as offering “unprecedented situational awareness” misfired regularly in the rugged terrain of the Arizona borderlands. Now, companies like DRS are standing in line for the next round of potentially lucrative contracts, as Homeland Security wants “to finish the job.”¶ The UA Tech Park is one place in the southern borderlands where surveillance technology can be developed, tested, evaluated, and demonstrated. It has 18,000 linear feet of fencing surrounding its “solar zone,” a solar-technology-centric research area ideal for testing sensor systems along a future border wall. On any of the roadways in its 1,345 acres, it can set up mock border-crossings or checkpoints to test new equipment and methods. It draws on faculty and graduate students from the college of engineering. In “rapid-response teams,” they offer third-party evaluations of border control technology. Some of this same technology is also being created on the UA campus, thanks in part to millions of dollars in DHS grants.¶ Here, too, as Tech Park CEO Bruce Wright tells me, they can test new technologies “right in the field” -- that is, on the border, presumably on real people. One of the tech park’s goals, he says, is to develop the first border security industry cluster of its kind in the United States. In southern Arizona alone, they have already identified 57 companies, big and small, working on border policing technology.¶ The Tech Park’s director of community engagement Molly Gilbert says, “It’s really about development, and we want to create technology jobs in our border towns.” These are sweet words for the economically depressed communities of southern Arizona, their poverty rates usually hovering at around 20%. With projected global revenues of approximately \$20 billion in 2013 and a 5% growth rate that has withstood a worldwide recession, the global border security industry was flourishing even before the latest immigration reform proposal. Now, it is poised for a potential bonanza.¶ The key, as Wright stressed in a 2012 interview, is that the products developed for the U.S.-Mexican borderlands be marketed in the future for the U.S.-Canada border, where “defenses” are already being upgraded, for other international borders, but also for places that have little

to do with borders. These might include the perimeters of utility companies and airports, or police forces with expanding national security and immigration enforcement missions.¶ “There’s a huge market for this technology worldwide,” Wright told me then, “because borders exist everywhere. There’s the Palestinian-Israeli border, there’s the Syrian-Israeli border, there’s the German-Polish border... Take it around the world and wherever you want to go there are borders, so the technology is very adaptable and has a market worldwide.”

Link – Project Bullrun

Project Bullrun undermines the foundation of democracy – it is key to an authoritarian transition

Eben Moglen, 5/28/2014, Watching the Watchers, "Is privacy essential for democracy?"
<http://watchingthewatchers.org/news/2771/privacy-essential-democracy>, mm

When Snowden disclosed the existence of the NSA's Bullrun program we learned that NSA had lied for years to the financiers who believe themselves entitled to the truth from the government they own. The NSA had not only subverted technical standards, attempting to break the encryption that holds the global financial industry together, it had also stolen the keys to as many vaults as possible. With this disclosure the NSA forfeited respectable opinion around the world. Their reckless endangerment of those who don't accept danger from the United States government was breathtaking.¶ The empire of the United States was the empire of exported liberty. What it had to offer all around the world was liberty and freedom. After colonization, after European theft, after forms of state-created horror, it promised a world free from state oppression.¶ Last century we were prepared to sacrifice many of the world's great cities and tens of millions of human lives. We bore those costs in order to smash regimes we called "totalitarian," in which the state grew so powerful and so invasive that it no longer recognized any border of private life. We desperately fought and died against systems in which the state listened to every telephone conversation and kept a list of everybody every troublemaker knew.¶ But in the past 10 years, after the morality of freedom was withdrawn, the state has begun fastening the procedures of totalitarianism on the substance of democratic society.¶ There is no historical precedent for the proposition that the procedures of totalitarianism are compatible with the system of enlightened, individual and democratic self-governance. Such an argument would be doomed to failure. It is enough to say in opposition that omnipresent invasive listening creates fear. And that fear is the enemy of reasoned, ordered liberty.¶ It is utterly inconsistent with the American ideal to attempt to fasten procedures of totalitarianism on American constitutional self-governance. But there is an even deeper inconsistency between those ideals and the subjection of every other society on earth to mass surveillance.¶ Some of the system's servants came to understand that it was being sustained not with, but against, democratic order. They knew their vessel had come unmoored in the dark, and was sailing without a flag. When they blew the whistle, the system blew back at them. In the end -- at least so far, until tomorrow -- there was Snowden, who saw everything that happened and watched the fate of others who spoke up.¶ He understood, as Chelsea Manning also always understood, that when you wear the uniform you consent to the power. He knew his business very well. Young as he was, as he said in Hong Kong, "I've been a spy all my life." So he did what it takes great courage to do in the presence of what you believe to be radical injustice. He wasn't first, he won't be last, but he sacrificed his life as he knew it to tell us things we needed to know. Snowden committed espionage on behalf of the human race. He knew the price, he knew the reason. But as he said, only the American people could decide, by their response, whether sacrificing his life was worth it.¶ So our most important effort is to understand the message: to understand its context, purpose, and meaning, and to experience

the consequences of having received the communication.¶ Even once we have understood, it will be difficult to judge Snowden, because there is always much to say on both sides when someone is greatly right too soon.¶ In the United States, those who were "premature anti-fascists" suffered. It was right to be right only when all others were right. It was wrong to be right when only people we disagreed with held the views that we were later to adopt ourselves.¶ Snowden has been quite precise. He understands his business. He has spied on injustice for us and has told us what we require in order to do the job and get it right. And if we have a responsibility, then it is to learn, now, before somebody concludes that learning should be prohibited.¶ In considering the political meaning of Snowden's message and its consequences, we must begin by discarding for immediate purposes pretty much everything said by the presidents, the premiers, the chancellors and the senators. Public discussion by these "leaders" has provided a remarkable display of misdirection, misleading and outright lying. We need instead to focus on the thinking behind Snowden's activities. What matters most is how deeply the whole of the human race has been ensnared in this system of pervasive surveillance.¶ We begin where the leaders are determined not to end, with the question of whether any form of democratic self-government, anywhere, is consistent with the kind of massive, pervasive surveillance into which the United States government has led not only its people but the world.¶ This should not actually be a complicated inquiry.¶ For almost everyone who lived through the 20th century -- at least its middle half -- the idea that freedom was consistent with the procedures of totalitarianism was self-evidently false. Hence, as we watch responses to Snowden's revelations we see that massive invasion of privacy triggers justified anxiety among the survivors of totalitarianism about the fate of liberty. To understand why, we need to understand more closely what our conception of "privacy" really contains.¶ Our concept of "privacy" combines three things: first is secrecy, or our ability to keep the content of our messages known only to those we intend to receive them. Second is anonymity, or secrecy about who is sending and receiving messages, where the content of the messages may not be secret at all. It is very important that anonymity is an interest we can have both in our publishing and in our reading. Third is autonomy, or our ability to make our own life decisions free from any force that has violated our secrecy or our anonymity. These three -- secrecy, anonymity and autonomy -- are the principal components of a mixture we call "privacy."¶ Without secrecy, democratic self-government is impossible. Without secrecy, people may not discuss public affairs with those they choose, excluding those with whom they do not wish to converse.¶ Anonymity is necessary for the conduct of democratic politics. Not only must we be able to choose with whom we discuss politics, we must also be able to protect ourselves against retaliation for our expressions of political ideas. Autonomy is vitiated by the wholesale invasion of secrecy and privacy. Free decision-making is impossible in a society where every move is monitored, as a moment's consideration of the state of North Korea will show, as would any conversation with those who lived through 20th-century totalitarianisms, or any historical study of the daily realities of American chattel slavery before our civil war.¶ In other words, privacy is a requirement of democratic self-government. The effort to fasten the procedures of pervasive surveillance on human society is the antithesis of liberty. This is the conversation that all the "don't listen to my mobile phone!" misdirection has not been about. If it were up to national governments, the conversation would remain at this phony level forever.

Link – Section 702/PRISM

Section 702 and PRISM will bring about a quick authoritarian system if allowed to continue

Kim Dotcom, 6/13/2013, The Guardian, “PRISM: concerns over government tyranny are legitimate,” <http://www.theguardian.com/commentisfree/2013/jun/13/prism-utah-data-center-surveillance>, mm

Some proponents of Prism assert that it is an essential tool against terrorism. They claim that only data belonging to foreigners (that is, non-US residents) is retained, and that content is not reviewed as a matter of course, only algorithmically analysed for suspicious patterns. They point out that a search warrant is still required from a secret court set up under the US. The Foreign Intelligence Surveillance Act (FISA) may be spun up so that content – accumulated over years of daily internet spooling – may be extracted and analysed, laying bare a suspect’s entire virtual life.¶ Those safeguards have limited value. According to congressional reporting, the FISA court received 1,789 applications for authority to conduct electronic surveillance in 2012, but not one application was denied. We cannot debate whether the FISA court is a rubber stamp, because its proceedings are secret. Further, any assurance to US citizens that the NSA will not gather and archive their data is suspect. The “Five Eyes” alliance between the intelligence agencies of the US, Australia, Canada, New Zealand and the UK effectively permits those governments to circumvent the prohibition against gathering data on their own citizens by sharing information across the Five Eyes intelligence community. The UK for example can spy on Americans and make that information available to the US government on its massive spy cloud – one that the NSA operates and the Five Eyes share.¶ Prior to 9/11, the operative presumption in developed nations favoured privacy, but the security narrative has since reversed the presumption, eroding our privacy rights in favour of government control over our personal information. However, government is an instrument – sometimes a crude one – susceptible to abuse, as demonstrated by recent admissions that the US Internal Revenue Service has targeted specific groups based on ideology. When we empower the state, we empower those that hold sway over the state, and the state is subject to influence from a multitude of quarters.¶ I have personally been a victim of such abuses. The US government has indicted me, shut down my cloud storage company Megaupload and seized all of my assets because it claims I was complicit in copyright infringement by some of the people who used the Megaupload service. I have emphasised that I am being prosecuted not because the charges against me have some sound basis in US copyright law, but because the US justice department has been instrumentalised by certain private interests that have a financial stake in neutralising my business. That trend represents a danger not just to me, but to all of us.¶ Recent polls in the US suggest that the public is not much preoccupied with the fact that our data is being retained, so long as our own political party is in control of the government. That kind of fickle comfort is small-minded. The point we should derive from Snowden’s revelations – a point originally expressed in March 2013 by William Binney, a former senior NSA crypto-mathematician – is that the NSA’s Utah Data Center will amount to a “turnkey” system that, in the wrong hands, could transform the country into a totalitarian state virtually overnight. Every person who values personal freedom, human rights

and the rule of law must recoil against such a possibility, regardless of their political preference. Others take a more cavalier approach, such as former Google CEO Eric Schmidt in 2009: "If you have something that you don't want anyone to know, maybe you shouldn't be doing it in the first place."[¶] We should heed warnings from Snowden because the prospect of an Orwellian society outweighs whatever security benefits we derive from Prism or Five Eyes. Viewed through the long lens of human history, concerns over government tyranny are always legitimate. It is those concerns that underpin the constitutions of most developed countries, and inform international principles of human rights and the rule of law. Prism and its related practices should be discontinued immediately, and the Utah Data Center should be leased to cloud storage companies with encryption capabilities.

Impacts – Democracy Bad

Democracy Bad – Environment

Democracy can't save the environment – studies prove a correlation between democratization and environmental destruction

Mark Beeson, 3/30/2010, (Department of Political Science and International Relations, University of Western Australia, Perth), "The coming of environmental authoritarianism," Environmental Politics, vol 19, no 2, https://www.academia.edu/539179/The_coming_of_environmental_authoritarianism, mm

In much of East Asia, the population may not have the luxury or capacity even to engage in these sorts of discursive practices, while the absence of effective democracy in much of the region stands as a continuing obstacle to achieving anything approximating deliberative democracy. Even more problematically in the long-run, there is no compelling evidence that democracy of any sort will necessarily promote good environmental outcomes (Neumayer 2002), or that rising living standards will inevitably deliver a sustainable environment (Dinda 2004). On the contrary, there is evidence to suggest that in the initial phases at least, 'democratisation could indirectly promote environmental degradation through its effect on national income' (Li and Reuveny 2006, p. 953). In other words, even the best of all outcomes – rising living standards and an outbreak of democracy – may have unsustainable environmental consequences that may prove to be their undoing in the longer-term. In such circumstances, ideas about possible ways of reorganising societies to lessen their impact on the natural environment may not find sufficient support to make them realisable or effective. As Lieberman (2002, p. 709) points out, 'an idea's time arrives not simply because the idea is compelling on its own terms, but because opportune political circumstances favor it'. In much of Southeast Asia and China the forces supporting environmental protection are comparatively weak and unable to overcome powerful vested interests intent on the continuing exploitation of natural resources. In short, predominantly Western concerns with 'thick cosmopolitanism' and the hope that a 'metabolistic [sic] relationship with the natural environment' might bind us to strangers (Dobson 2006, p. 177), seem bizarrely at odds with lived experience where climate change is already profoundly undermining sociability within national frameworks, let alone between them (Raleigh and Urdal 2007). The sobering reality would seem to be that '... as the human population grows and environmental damage progresses, policymakers will have less and less capacity to intervene to keep damage from producing serious social disruption, including conflict' (Homer-Dixon 1991, p. 79).

Liberalism makes an eco-extinction inevitable – only an authoritarian transition solves

Mark Beeson, 3/30/2010, (Department of Political Science and International Relations, University of Western Australia, Perth), "The coming of environmental authoritarianism," Environmental Politics, vol 19, no 2, https://www.academia.edu/539179/The_coming_of_environmental_authoritarianism, mm

While evidence about the implications of environmental degradation and even global warming are increasingly uncontroversial, their possible political consequences are more contentious. Although some of the preceding analysis is necessarily speculative and inferential, the experiences of China and Southeast Asia highlight issues of unambiguously global significance. The central question that emerges from this discussion is whether democracy can be sustained in the region – or anywhere else for that matter – given the unprecedented and unforgiving nature of the challenges we collectively face. Indeed, such is the urgency of the environmental crisis that some have argued – alarmingly persuasively – that ‘humanity will have to trade its liberty to live as it wishes in favour of a system where survival is paramount’ (Shearman and Smith 2007, p. 4). In such circumstances, forms of ‘good’ authoritarianism, in which environmentally unsustainable forms of behaviour are simply forbidden, may become not only justifiable, but essential for the survival of humanity in anything approaching a civilised form. Such ideas are difficult to accept, especially for societies steeped in traditions of liberalism, individualism, freedom of choice and personal advancement. The US is, of course, such a country, where an entire national consciousness and way of life is predicated upon liberal values – values which some consider profoundly inimical to environmental sustainability (Ophuls 1997). It is also the country that has done most to contribute to global environmental problems like climate change, but which has until now seemed incapable of addressing them politically (Stephens 2007). In China, by contrast, an authoritarian regime has arguably done more to mitigate environmental problems than any other government on earth: without the one-child policy instigated in the 1970s, it is estimated that there would already be another 400 million Chinese (Dickie 2008) and China’s environmental problems (and everyone else’s) would be that much worse. Luckily for the world’s non-Chinese population, China does not enjoy the same living standards as the US, and it is impossible to imagine that the vast majority of its citizens ever will. There are, it seems, fundamental, implacable constraints on the carrying capacity of the planet (Cohen 1995). The real tragedy about China’s development is not the failure to democratise rapidly, but that at the very moment that human beings seem to have figured out how to generate economic development on a massive scale, it is becoming apparent that it cannot be sustained, at least not by 6 billion people living Western lifestyles, and certainly not by the 9–12 billion or so that some think will mark the extent of human expansion.⁶

Liberty and democracy make environmental destruction inevitable – only a rejection of liberal political systems can solve

Brett Stevens, 2009, (writing in the Forward to Pentti Linkola’s book “Can Life Prevail? A revolutionary approach to the environmental crisis”), p. 14-15, mm

In our time, it is not only unfashionable but inconceivable to think outside the method of preserving individual autonomy. We worship ‘freedom,’ itself a negative definition focused not on what we can do but what we cannot be obligated to do. Our civilization understands itself not as a product of history and maker of future history, but as a facilitation – like a big shopping mall with a legal system – of individuals doing what pleases them, so long as they do not interrupt others doing the same and disrupt the peace. ¶ This condition has not made us happy.

While we agree that liberty, equality, fraternity and open economies are noble methods, the goal of these – having a better civilization and individual lives – has not manifested itself through those methods. By basing our ideal on freedom, we have closed ourselves off to obligations outside of ourselves, which coincidentally are the things that make us feel most alive. We are prisoners of the self, and it is no surprise we act selfishly as a result. ¶ Linkola most clearly distinguishes himself from other environmental spokesmen by thinking practically about the effect of individuals “as a group:” The consciousness of ecology has grown, but still the Average Joe only increases the load. The bustle is controlled by three words: as long as. As long as we can still travel to the other side of the globe four times a year, we will do it. As long as we can still buy a SUV, we will buy it. This is the reality.” ¶ In doing so, he has escaped the methodological ghetto. The safe methods we have been using do not achieve our goals, so we must change. Linkola saw that while every well-meaning “education” program has vanished without making change, the occasional governmental fascism like the Endangered Species Act in the USA has produced results. Either we enforce an unpopular truth on ourselves, or we wait paralyzed by our inability to transcend our methods, and let nature enforce it on us through environmental cataclysm. ¶ To avoid the selfishness of individuals, Linkola advocates an end to Third World aid and immigration, mandatory population control, and the creation of a ruthless “green police” to clean up the planet. His theories tie together deep ecology with a recognition that democratic, liberal societies cannot control themselves. He believes that the individual who connects himself to reality through struggle – and not the individual withdrawing into him – or herself – brings the greatest meaning to life.

Democracy can't solve the environment – the public can't exert enough influence to enact eco-friendly policies

David Shearman and Joseph Wayne Smith, 2007, *The Climate Change Challenge and the Failure of Democracy*, p. 165, mm

In this text we have listed the impediments to recognition within the liberal ¶ democracies, the inertia and self-interest in preventing political change, ¶ the self-interest of the so-called free press, and the corporate and financial ¶ interests. And to these impediments we must add the lack of understanding ¶ by the ordinary robotic worker and mechanical consumer that he or ¶ she has now become. It will require a fundamental change in society for the ¶ citizen to be able to understand the present political system, let alone the ¶ complexities of our dependence on ecological services. We doubt if any ¶ transformation of the masses is possible, at least to the extent needed for a ¶ radical democratic transformation of the present system. For example, most ¶ people have difficulty understanding the nature of the monetary system ¶ of capitalism at the basic level described here. It is difficult even for those ¶ with slightly higher IQs to grasp the diabolical logic of credit creation. Yet ¶ without such a grasp, reform of the present system is impossible. Without ¶ leadership with a will and power to act the crisis is certainly insoluble. ¶ As scientific realists, we must look elsewhere if we are to find a political ¶ answer adequate to the challenge of the environmental crisis. Democracy, ¶ like communism, is a nice idea, and it is a pity that neither works. If there ¶ was a way of saving democracy then we should save it, but it is

unlikely that there is any such way because the ordinary person or “mass man” is not made of the right heroic stuff necessary to meet the challenge of our age.

AT Petro/Liberty Impacts – Environment O/W

The environment outweighs liberty – putting liberty first ensures extinction

David Shearman and Joseph Wayne Smith, 2007, *The Climate Change Challenge and the Failure of Democracy*, p. 162, mm

An ecologically sustainable legal system must give ultimate priority to the preservation of the life support systems of the earth. This value must trump the values of economic interest and personal liberty. Otherwise a tragedy of the commons situation will arise. We recall that the classical tragedy of the commons¹³ is that individual economic agents operating only with principles of economic utility maximization will all pursue their exploitation of economic resource to produce the highest return, until that resource is exhausted (i.e., exterminated). The pursuit of individual self-interest results in collective environmental destruction, which ultimately threatens the life of those individuals and the entire economic system itself. Therefore the supreme legal principle, which must be enshrined in the constitutions of all nations, must be the principle of ecological sustainability and environmental protection. Roughly drafted such a principle would assert: “This nation has an overriding legal duty to protect the environment and ensure that social, political, and all economic systems and activities that impact substantially upon the environment by any agents, persons, or entities whatsoever are ecologically sustainable.” By the expression ‘ecologically sustainable’ we mean ‘X’ and in the assertion will be placed a concise drafting of the principles of sustainability. Further to that, each person and corporation has a duty of environmental protection.

Sustaining the environment outweighs protecting liberty

David Shearman and Joseph Wayne Smith, 2007, *The Climate Change Challenge and the Failure of Democracy*, p. 85, mm

Our position differs from Wolff and other anarchists also insofar as we reject the principle of autonomy, the foundation belief of liberalism. It is the argument of this work that liberalism has essentially overdosed on freedom and liberty. It is true that freedom and liberty are important values, but such values are by no means fundamental or ultimate values. These values are far down the list of what we believe to be core values based upon an ecological philosophy of humanity: survival and the integrity of ecological systems. Without such values, values such as freedom and autonomy make no sense at all. If one is not living, one cannot be free. Indeed liberal freedom essentially presupposes the idea of a sustainable life for otherwise the only freedom that the liberal social world would have would be to perish in a polluted environment.

AT Petro/Liberty Impacts - Freedom Unsustainable

Personal liberty is unsustainable – inevitable resource constraints

William Ophuls, 2011, *Plato's Revenge: Politics in the Age of Ecology*, p. 187-188, mm

The atomistic, liberal societies of today, along with their expansive notions of personal freedom, are an artifact of an abnormal and transitory period of abundance enabled by humanity's exploitation of found wealth – the virgin resources of the New World and the storehouses of untouched fossil fuels. With the return of ecological scarcity, individuals will not have the same latitude to go their own way – to exist apart from or even in defiance of their community, on which they will increasingly depend for livelihood. Nothing less than a resurgence of fraternity will make the return of scarcity bearable. Without some feeling of kinship that induces us to seek or at least accept a common mode of life, the response to scarcity is likely to be Hobbesian in the worst sense – a war of all against all, ending only with the imposition of order by a heavy-handed Leviathan.

AT Democratic Peace Theory

Democratic peace theory is wrong- democracies do go to war

Layne 7

Christopher, Professor @ TX A&M, American Empire: A Debate, pg. 94

Wilsonian ideology drives the American Empire because its proponents posit that the United States must use its military power to extend democracy abroad. Here, the ideology of Empire rests on assumptions that are not supported by the facts. One reason the architects of Empire champion democracy promotion is because they believe in the so-called democratic peace theory, which holds that democratic states do not fight other democracies. Or as President George W. Bush put it with his customary eloquence, "democracies don't war; democracies are peaceful."¹³⁶ The democratic peace theory is the probably the **most overhyped and undersupported "theory"** ever to be concocted by American academics. In fact, it is not a theory at all. Rather **it is a theology that suits** the conceits of Wilsonian true believers-especially the **neoconservatives** who have been **advocating American Empire** since the early 1990s. **As serious scholars have shown,** however, **the historical record does not support the** democratic peace **theory.**¹³¹ On the contrary, it shows that democracies do not act differently toward other democracies than they do toward nondemocratic states. **When** important **national interests are at stake,** **democracies** not only have threatened to use force against other democracies, but, in fact, **democracies have gone to war with other democracies.**

Democracies start more wars- statistical analysis proves

Henderson 2

Errol Henderson, Assistant Professor, Dept. of Political Science at the University of Florida, 2002, Democracy and War The End of an Illusion?, p. 146

Are Democracies More Peaceful than Nondemocracies with Respect to Interstate Wars? The results indicate that **democracies are more war-prone than non-democracies** (whether democracy is coded dichotomously or continuously) and that democracies are more likely to initiate interstate wars. **The findings are obtained from analyses that control for** a host of **political, economic, and cultural factors** that have been **implicated in the onset of interstate war,** and focus explicitly on state level factors instead of simply inferring state level processes from dyadic level observations as was done in earlier studies (e.g., Oneal and Russett, 1997; Oneal and Ray, 1997). The results imply that **democratic enlargement is more likely to increase the probability of war for states** since democracies are more likely to become involved in—and to initiate—interstate wars.

AT Authoritarianism -> War

Authoritarian states best keep the peace- one decision maker and natural aversion to casualties

Elman 97

Miriam Elman, Assistant Professor in the Department of Political Science at Arizona State University, Paths to Peace Is Democracy the Answer?, p. 495-496

NONDEMOCRATIC REGIME FEATURES HELP TO **KEEP THE PEACE**. Our cumulative findings show that nondemocracies do not necessarily apply their internal norms of political behavior to their foreign relations, and that such domestic norms do not necessarily reduce the chances for international cooperation. For example, Kacowicz (Chapter 8) notes that both **Mauritania and Peru upheld norms of conflict resolution, compromise, and mediation at the international level, though they ignored similar norms at home**. Our findings suggest that we should not assume that **nondemocracies** externalize domestic norms of conflict resolution when dealing with international actors. They frequently **initiate international negotiations and see war as an option of last resort**. Thus, aggressiveness or peacefulness cannot be readily inferred from the degree of violence in a state's domestic arena. In addition, we note that **the absence of institutional constraints on leaders can facilitate peace**. Martin Main (Chapter 9) points out that because of the absence of governmental and societal constraints on foreign policy, **Iran and Iraq were able to resolve long standing disagreements** in the 1970s. The freedom of both executives made the negotiation of a peaceful settlement easier than it might otherwise have been; **neither government feared the domestic political consequences of an unpopular agreement**. Similarly, in Chapter 11, Matthews argues that during the interwar period, **nondemocratic Turkey was able to pursue a moderate foreign policy toward Greece** because there were no institutional constraints on the leader's discretion. **Had Turkey been more democratic, it would have been more aggressive** internationally because hard-line elites would not have been excluded from the policy making process. Thus, Matthews argues that when leaders are moderate and prefer peaceful methods of international conflict resolution, nondemocracy—particularly the absence of checks on the leader's foreign policy choices—can be a force for peace instead of an obstacle. Kurt Dassel (Chapter 10) also suggests that a sizeable subset of nondemocracies will usually adopt peaceful rather than aggressive foreign policies. Dassel argues that, in authoritarian states that have unstable regimes, **if the military can use force domestically without jeopardizing its cohesiveness, it will favor repressing domestic opponents and refrain from international aggression**. Thus, Dassel points out that regimes in which there are few checks on foreign policy decision makers, and in which domestic conflicts are resolved through massive violence, may be the very states that pursue pacific foreign policies; because force can be used at home, it will not be used abroad. In short, democratic peace theorists wrongly assert that non-democracies are predisposed to aggression because of the characteristics of their governments. In this book, we suggest that only some nondemocratic states will use force abroad; treating all nondemocracies as potential aggressors is misleading.

Impacts – Environment Core

Impact – Environment O/W Everything

Environmental destruction outweighs all other impacts

Chen 2000 [Jim, Professor of Law at the U of Minnesota, Minnesota Journal of Global Trade Winter 2000, pg. 211]

The value of endangered species and the biodiversity they embody is literally . . . incalculable. What, if anything, should the law do to preserve it? There are those that invoke the story of Noahs Ark as a moral basis for biodiversity preservation. Others regard the Judeo-Christian tradition, especially the biblical stories of Creation and the Flood, as the root of the Wests deplorable environmental record. To avoid getting bogged down in an environmental exegesis of Judeo-Christian myth and legend, we should let Charles Darwin and evolutionary biology determine the imperatives of our moment in natural history. The loss of biological diversity is quite arguably the gravest problem facing humanity. If we cast the question as the contemporary phenomenon that our descendents [will] most regret, the loss of genetic and species diversity by the destruction of natural habitats is worse than even energy depletion, economic collapse, limited nuclear war, or conquest by a totalitarian government. Natural evolution may in due course renew the earth with a diversity of species approximating that of a world unspoiled by Homo sapiens in ten million years, perhaps a hundred million.

Impact – Environmental Destruction -> Extinction

Environmental destruction results in climatic change, famine, disease, nuclear war and ultimately extinction

Takacs, Instructor in Department of Earth Systems Science and Policy at California State-Monterey Bay 1996 (David, Philosophies of Paradise, Available online at www.dhushara.com/book/diversit/restor/takacs.htm, Accessed 07/13/2012, ZR)

More often, however, humans are said to benefit from such ecosystem services. Half a century ago, Aldo Leopold warned: "Recent discoveries in mineral and vitamin nutrition reveal unsuspected dependencies in the up-circuit: incredibly minute quantities of certain substances determine the value of soils to plants, of plants to animals. What of the down-circuit? What of the vanishing species, the preservation of which we now regard as an esthetic luxury. They helped build the soil; in what unsuspected ways may they be essential to its maintenance?" More recently, Jane Lubchenco feels very strongly that **people are** in fact much more **dependent on ecosystem** services that are provided by both managed and unmanaged ecosystems than is generally perceived to be the case. So I think it's sheer folly for us to act in ways that are undermining the ability of both managed and unmanaged ecosystems to provide these services that we're dependent on. And that we're doing that more and more as we pollute and destroy habitats, or alter habitats in one fashion or another. And I guess the bottom line is that we're changing the environment faster than our ability to understand the consequences of how we're changing it." Most predictions of eco-doom are predicated on this argument, and many are stated in much more dramatic terms than those Lubchenco employs. As the argument runs, a myriad of organisms, especially "little things," comprise ecosystems that provide countless services that keep the Earth's biotic and abiotic processes up and running.' According to Souls, "Many, if not all, ecological processes have thresholds below and above which they become discontinuous, chaotic, or suspended." **Biodiversity may regulate** these processes; among its many talents, biodiversity is said to create soil and maintain its fertility, control **global climate, inhibit agricultural pests, maintain atmospheric gas balances, process organic wastes, pollinate crops and flowers, and recycle nutrients.**' Confusion in this line of argumentation ties back into why the concept of biodiversity has risen to prominence. Remember that biologists have scant understanding of the roles that species or populations play in maintaining ecosystems. In interviews, Lovejoy, Falk, and Ray confessed that you can strip away many species from an ecosystem without loss of ecosystem function. Ehrlich points out that by the time a species is endangered, it has probably stopped playing an important role in keeping the system functioning anyway." Furthermore, it is not clear whether we should focus on species as functional cogs in the ecosystem wheel, or whether ecological services are emergent properties of ecosystems themselves. With the biodiversity concept, these dilemmas become nearly moot. Biodiversity embraces lists of species, lists of ecosystems, the interactions of species within ecosystems, and the processes that species may maintain or control. When arguing on behalf of bio-diversity, one need not focus on the specifics-specifically, the specifics of what we don't know. It is enough to explicate some of the functions that keep ecosystems running, or that ecosystems provide for us, and then extrapolate to the dangers associated with declining biodiversity. Peter Raven bases his thinking on Leopold's observation "To keep every cog and wheel is the first precaution of intelligent tinkering": "In every sense, in the sense of

communities that will preserve soil, promote local climate, keep the atmosphere, preserve water, and every thing else, the first rule of being able to put together communities well or have the world go on functioning well, or to keep climates as they are, or to retard disease, to produce products we want sustainably, be cause, after all, plants, algae, and photosynthetic bacteria are the only device we have to capture energy from the sun effectively-in all those senses, and in the sense that we're losing the parts so rapidly, I consider **the loss of biological diversity to be the most serious problem that we have**-far more serious than global climate change or stratospheric ozone depletion, or anything else." "Habitat destruction and conversion are eliminating species at such a frightening pace that extinction of many contemporary species and the systems they live in and support ... may lead to ecological disaster and severe alteration of the evolutionary process," Terry Erwin writes." And E. O. Wilson notes: "The question I am asked most frequently about the diversity of life: **if enough species are extinguished, will the ecosystem collapse, and will the extinction of most other species follow soon afterward?** The only answer anyone can give is: possibly. **By the time we find out,** however, **it might be too late.** One planet, one experiment." So biodiversity keeps the world running. It has value in and for itself, as well as for us. Raven, Erwin, and Wilson oblige us to think about the value of biodiversity for our own lives. The Ehrlichs' rivet-popper trope makes this same point; by eliminating rivets, we play Russian roulette with global ecology and human futures: "It is likely that destruction of the rich complex of species in the Amazon basin could trigger rapid changes in global climate patterns. Agriculture remains heavily dependent on stable climate, and human beings remain heavily dependent on food. By the end of the century the extinction of perhaps a million species in the Amazon basin could have entrained famines in which a billion human beings perished. And if our species is very unlucky, **the famines could lead to a thermonuclear war, which could extinguish civilization.**" Elsewhere, Ehrlich uses different particulars with no less drama: What then will happen if the current decimation of organic diversity continues? Crop yields will be more difficult to maintain in the face of climatic change, soil erosion, loss of dependable water supplies, decline of pollinators, and ever more serious assaults by pests. Conversion of productive land to wasteland will accelerate; deserts will continue their seemingly inexorable expansion. Air pollution will increase, and local climates will become harsher. Humanity will have to forgo many of the direct economic benefits it might have withdrawn from Earth's well stocked genetic library. It might, for example, miss out on a cure for cancer; but that will make little difference. As ecosystem services falter, mortality from respiratory and epidemic disease, natural disasters, and especially famine will lower life expectancies to the point where cancer (largely a disease of the elderly) will be unimportant. **Humanity will bring upon itself consequences depressingly similar to those expected from a nuclear winter.** Barring a nuclear conflict, it appears that **civilization will disappear some time before the end of the next century not with a bang but a whimper.**

Impact – Biodiversity Loss

Biodiversity loss risks extinction

Walsh 10 [Bryan, covers environment, energy and — when the need arises — particularly alarming diseases for TIME magazine, Wildlife: A Global Convention on Biodiversity Opens in Japan, But Can It Make a Difference? October 18, 2010

<http://ecocentric.blogs.time.com/2010/10/18/wildlife-a-global-convention-on-biodiversity-opens-in-japan-but-can-it-make-a-difference/#ixzz131wU6CSp>

The story of non-human life on the planet Earth over the past few decades is a simple one: loss. While there are always a few bright spots—including the recovery of threatened animals like the brown pelican, thanks to the quietly revolutionary Endangered Species Act—on a planetary scale biodiversity is steadily marching backwards, with extinctions rising and habitat destroyed. Species as diverse as the tiger—less than 3,500 live in the wild today—to tiny frogs could be gone forever if the trends keep heading downwards. In a bitterly ironic twist, back in 2002 the United Nations declared that 2010 would be the international year of biodiversity, and countries agreed to "achieve a significant reduction of the current rate of biodiversity loss at the global, regional and national level," as part of the UN Convention on Biological Diversity (CBD). At this paper in Science shows (download a PDF here), however, the world has utterly failed to reduce the rate of biodiversity loss, and by just about every measurement, things are getting worse all the time. (Read the Global Biodiversity Outlook if you really want to be depressed.) With that cheery backdrop, representatives from nearly 200 nations are meeting in the Japanese city of Nagoya—home to Toyota and not a whole lot else—for the 10th summit of the CBD, where they will set new goals for reducing species loss and slowing habitat destruction. At the very least, they should know how critical the biodiversity challenge is—as Japanese Environment Minister Ryo Matsumoto said in an opening speech: All life on Earth exists thanks to the benefits from biodiversity in the forms of fertile soil, clear water and clean air. We are now close to a 'tipping point' - that is, we are about to reach a threshold beyond which biodiversity loss will become irreversible, and may cross that threshold in the next 10 years if we do not make proactive efforts for conserving biodiversity. Ahmed Djoghlaif, the executive secretary of the CBD, struck an even darker note, reminding diplomats that they were on a clock—and time was running out: Let's have the courage to look in the eyes of our children and admit that we have failed, individually and collectively, to fulfil the Johannesburg promise made by 110 heads of state to substantially reduce the rate of loss of biodiversity by 2010. Let us look in the eyes of our children and admit that we continue to lose biodiversity at an unprecedented rate, thus mortgaging their future. But what will actually come out of the Nagoya summit, which will continue until Oct. 29? Most likely there will be another agreement—a new protocol—outlining various global strategies on sustaining biodiversity and goals on slowing the rate of species loss. (You can download a PDF of the discussion draft document that will be picked over at Nagoya.) It won't be hard for governments to agree on general ambitions for reducing biodiversity loss—who's against saving pandas?—but the negotiations will be much trickier on the question of who will actually pay for a more biodiverse planet? And much as we've seen in international climate change negotiations, the essential divide is between the developed and developing nations—and neither side seems ready to bend. The reality is that much of the world's biodiversity—the most fantastic species and the most complete forests—is found in the poorer, less developed parts of the world. That's in part because the world's poor have been, well, too poor to develop the land around them in the way rich nations have. (There was once a beautiful, undeveloped island off the East Coast of the U.S., with wetlands and abundant forests. It was called Mannahatta. It's a little different now.) As a result, the rural poor—especially in tropical nations—are directly dependent on healthy wildlife and plants in a way that inhabitants of developed nations aren't. So on one hand that makes the poor directly vulnerable when species are lost and forests are chopped down—which often results in migration to thronging urban areas. But on the other, poverty often drives the rural poor to slash-and-burn forests for agriculture, or hunt endangered species to sell for bush meat. Conservation and development have to go hand in hand. That hasn't always been the mantra of the conservation movement—as Rebecca Tuhus-

Dubrow writes in Slate, conservation projects in the past sometimes displaced the human inhabitants over a reserve or park, privileging nature over people. But that's changed in recent decades—environmental groups like Conservation International or the Nature Conservancy now spend as much of their time working on development as they do in protecting nature. "Save the people, save the wildlife"—that's the new mantra. The missing ingredient is money—and that's what will be up for debate at Nagoya. As climate change has risen on the international agenda, funding for biodiversity has lagged—the 33 member nations of the Organization for Economic Co-operation and Development (OECD) donated \$8.5 billion for climate change mitigation projects in 2008, but just \$3 billion annually for biodiversity. One way to change that could be through "payment for ecosystem services." A biodiverse landscape, intact forests, clean water and air—all of these ebbing qualities of a healthy world are vital for our economies as well. (The Economics of Ecosystems and Biodiversity, a UN-funded study, estimates that nature degradation costs the world \$2 trillion to \$5 trillion a year, with the poorest nations bearing the brunt of the loss.) Rich countries could pay more biodiverse developing nations to keep nature running—allowing poorer countries to capitalize on their natural resources without slashing and burning. Will that work? I'm skeptical—the experience of climate change negotiations have shown that the nations of the world are great at high ideals and fuzzy goals, but not so hot at actually dividing up the pie in a more sustainable fashion. That doesn't mean there aren't smaller solutions—like Costa Rica's just-announced debt-for-nature deal—but a big bang from Japan this month doesn't seem too likely. The problem is as simple as it is unsolvable, at least so far—there's no clear path to national development so far that doesn't take from the natural world. That worked for rich nations, but we're rapidly running out of planet, as a report last week from the World Wildlife Fund showed. And there's something greater at stake as well, as the naturalist E.O. Wilson once put it: The one process now going on that will take millions of years to correct is the loss of genetic and species diversity by the destruction of natural habitats—this is the folly our descendants are least likely to forgive us. We're losing nature. And that loss really is forever.

Impact – Warming

Global warming is real, anthropogenic, and causes extinction

Deibel '7 (Terry L. Deibel, professor of IR at National War College, 2007, Foreign Affairs Strategy, Conclusion: American Foreign

Finally, there is one major existential threat to American security (as well as prosperity) of a nonviolent nature, which, though far in the future, demands urgent action. It is the threat of global warming to the stability of the climate upon which all earthly life depends. Scientists worldwide have been observing the gathering of this threat for three decades now, and what was once a mere possibility has passed through probability to near certainty. Indeed not one of more than 900 articles on climate change published in refereed scientific journals from 1993 to 2003 doubted that anthropogenic warming is occurring. "In legitimate scientific circles," writes Elizabeth Kolbert, "it is virtually impossible to find evidence of disagreement over the fundamentals of global warming." Evidence from a vast international scientific monitoring effort accumulates almost weekly, as this sample of newspaper reports shows: an international panel predicts "brutal droughts, floods and violent storms across the planet over the next century"; climate change could "literally alter ocean currents, wipe away huge portions of Alpine Snowcaps and aid the spread of cholera and malaria"; "glaciers in the Antarctic and in Greenland are melting much faster than expected, and...worldwide, plants are blooming several days earlier than a decade ago"; "rising sea temperatures have been accompanied by a significant global increase in the most destructive hurricanes"; "NASA scientists have concluded from direct temperature measurements that 2005 was the hottest year on record, with 1998 a close second"; "Earth's warming climate is estimated to contribute to more than 150,000 deaths and 5 million illnesses each year" as disease spreads; "widespread bleaching from Texas to Trinidad...killed broad swaths of corals" due to a 2-degree rise in sea temperatures. "The world is slowly disintegrating," concluded Inuit hunter Noah Metuq, who lives 30 miles from the Arctic Circle. "They call it climate change...but we just call it breaking up." From the founding of the first cities some 6,000 years ago until the beginning of the industrial revolution, carbon dioxide levels in the atmosphere remained relatively constant at about 280 parts per million (ppm). At present they are accelerating toward 400 ppm, and by 2050 they will reach 500 ppm, about double pre-industrial levels. Unfortunately, atmospheric CO₂ lasts about a century, so there is no way immediately to reduce levels, only to slow their increase, we are thus in for significant global warming; the only debate is how much and how serious the effects will be. As the newspaper stories quoted above show, we are already experiencing the effects of 1-2 degree warming in more violent storms, spread of disease, mass die offs of plants and animals, species extinction, and threatened inundation of low-lying countries like the Pacific nation of Kiribati and the Netherlands at a warming of 5 degrees or less the Greenland and West Antarctic ice sheets could disintegrate, leading to a sea level of rise of 20 feet that would cover North Carolina's outer banks, swamp the southern third of Florida, and inundate Manhattan up to the middle of Greenwich Village. Another catastrophic effect would be the collapse of the Atlantic thermohaline circulation that keeps the winter weather in Europe far warmer than its latitude would otherwise allow. Economist William Cline once estimated the damage to the United States alone from moderate levels of warming at 1-6 percent of GDP annually; severe warming could cost 13-26 percent of GDP. But the most frightening scenario is runaway greenhouse warming, based on positive feedback from the buildup of water vapor in the atmosphere that is both caused by and causes hotter surface temperatures. Past ice age transitions, associated with only 5-10 degree changes in average global temperatures, took place in just decades, even though no one was then pouring ever-increasing amounts of carbon into the atmosphere. Faced with this specter, the best one can conclude is that "humankind's continuing enhancement of the natural greenhouse effect is akin to playing Russian roulette with the earth's climate and humanity's life support system. At worst, says physics professor Marty Hoffert of New York University, "we're just going to burn everything up; we're going to heat the atmosphere to the

temperature it was in the Cretaceous when there were crocodiles at the poles, and then everything will collapse.” During the Cold War, astronomer Carl Sagan popularized a theory of nuclear winter to describe how a thermonuclear war between the United States and the Soviet Union would not only destroy both countries but possibly end life on this planet. Global warming is the post-Cold War era’s equivalent of nuclear winter at least as serious and considerably better supported scientifically. Over the long run it puts dangers from terrorism and traditional military challenges to shame. It is a threat not only to the security and prosperity to the United States, but potentially to the continued existence of life on this planet.

Crunch UQ

Crunch UQ – Collapse Coming (Global Industrial Collapse/Transition)

Global collapse is inevitable – only our alternative allows for us to survive the crunch

William Ophuls, 2012, "Immoderate Greatness: Why Civilizations Fail," 66-69, mm

It will not have escaped the reader's attention that the signs and symptoms of impending collapse roughly sketched above are pervasive. Ecological problems, exponential pressures, thermodynamic losses, risky complexity, moral decay, and human incapacity are evident everywhere, differing only in extent and degree among the various regions and societies that make up modern industrial civilization. ¶ Moreover, all these societies are now interconnected in a vast and complex world system far beyond anyone's ken or control. We therefore confront a potential worldwide collapse, as a cascade of failure brings down a global order that is now approximately 250 years old (i.e., close to what Glubb deems to be the natural lifespan of a civilization). Having built up a "stupendous fabric" far beyond anything that Gibbon could have conceived, the implosion to come seems destined to be equally stupendous. ¶ Before civilization became universal, the consequences of decline and fall may have been catastrophic for a particular society and for many or even most of its inhabitants, but they were not fatal to civilization itself. There were always others to keep the flame alive. Or a lurking horde of barbarians poised to bring fresh blood to a tired and moribund society. But now that a highly interdependent, global, industrial civilization extends its monopoly to the ends of the earth, there are no others to pick up the baton, nor any barbarian reservoirs to replenish its élan. "Collapse, if and when it comes again, will this time be global," says Tainter. ¶ It will also be uniquely devastating. Given the enormous growth of populations and the extent of ecological devastation and social dislocation caused by industrialization – as well as the degree to which the methods and materials of traditional agriculture have been abandoned in the rush to ramp up yields by converting fossil fuel into food – a gradual and gentle transition to a viable agrarian civilization capable of supporting large numbers of people and a reasonable level of complexity is extremely unlikely. In fact, says Tainter, the collapse of today's highly developed societies "would almost certainly entail vast disruptions and overwhelming loss of life, not [to] mention a significantly lower standard of living for the survivors." Wright's metaphor perfectly captures our plight: "As we climbed the ladder of progress, we kicked out the rungs below," leaving ourselves with no non-catastrophic way back to a less complex mode of existence. ¶ At this point, even a return to a hunting and gathering would be challenging. Apart from a few bands of isolated Tupi-Guarani in the Amazon, almost all of the remaining, scattered tribal peoples have lost the territory, knowledge, and traditions that would enable them to survive if industrial civilization were to collapse. ¶ What is to be done? First, we must recognize that the deep structural problems elucidated above have no feasible solutions. Like Glubb, but for different reasons, Tainter does not believe that today's societies can escape the dynamic that eventuates in collapse. A military-industrial arms race among the sub-units of the existing global civilization "rives increased complexity and resource consumption regardless of costs, human or ecological." ¶ Hence, second, the task is not to forestall a foreordained collapse but, rather, to

salvage as much as possible from it, lest the fall precipitate a dark age in which the arts and adornments of civilization are partially or completely lost. ¶ To this end, just as prudent mariners carry lifeboats and practice abandoning ship, a global civilization in its terminal phase would be well advised to prepare arks, storehouses, and banks designed to preserve the persons, tools, and materials with which to retain or reconstitute some semblance of civilized life post-collapse. ¶ This appeal to prudence will not be readily accepted. For the hubris of every civilization is that it is, like the Titanic, unsinkable. Hence the motivation to plan for shipwreck is lacking. In addition, the civilization's contradictions and difficulties are seen not as symptoms of impending collapse, but, rather, as problems to be solved by better policies and personnel. In other words, the populace does not yet understand that the civilization has reached an impasse. As Tainter notes, "It takes protracted hardship to convince people that the world to which they have been accustomed has changed irrevocably." ¶ Moreover, although collapse may be foreordained, its course and timing are largely unpredictable. Collapse could happen suddenly or gradually, sooner or later, so why act now? To make matters worse, preparing for this uncertain future requires present sacrifice – that is, the diversion of resources from both current consumption and from the task of coping with today's problems – at a time when those very same resources are becoming scarcer and more expensive. In short, denial, evasion, and procrastination are all but inevitable. ¶ Thus if preparations for collapse are made at all, they are likely to be too little and too late. Modern civilization is therefore bound for a worse fate than the Titanic. When it sinks, the lifeboats, if any, will be ill provisioned, and no one will come to its rescue. Humanity will undoubtedly survive. Civilization as we know it will not. ¶ Although it would be intellectually dishonest of me to suggest any other outcome – a tragic denouement followed by a lengthy time of troubles – I can envision an alternative to civilization as it is currently conceived and constituted. This alternative, which could not be imposed but would have to emerge slowly and organically, should allow humanity to thrive in reasonable numbers on a limited planet for millennia to come. But it would require a fundamental change in the ethos of civilization – to wit, the deliberate renunciation of greatness in favor of simplicity, frugality, and fraternity. For the pursuit of greatness is always a manifestation of hubris, and hubris is always punished by nemesis. Whether human beings are capable of such sagacity and self-restraint is a question only the future can answer.

Crunch UQ – Collapse Coming (Consumption)

The crunch is coming – overconsumption causes extinction – only the transition solves

Karl Tate, 3/19/2014, Live Science, “study: civilization doomed by overconsumption, wealth inequality,” <http://www.livescience.com/44204-study-civilization-doomed-by-overconsumption-wealth-inequality-infographic.html>, mm

A NASA-funded study looked at factors that cause a civilization to collapse. In the past 5,000 years, many advanced societies have collapsed, resulting in hundreds of years of decline and regression. Basing their model on how predators and prey interact, the scientists concluded that societies that collapsed had two factors in common: overconsumption of natural resources and economic stratification.¶ The so-called "balance of nature" works like this: As a prey population grows, the predators that feed on them thrive as well. But once the predators become too numerous and overconsume the prey, famine results. The predator population declines as well (a “collapse”).¶ The study looked at three scenarios: Egalitarian, Equitable and Unequal. In an Egalitarian society that has no elite class, an equilibrium can be reached where the commoner population increases to the maximum carrying capacity of the planet.¶ However, if the population overconsumes its resources, a collapse results from which there is no recovery. Resources, wealth and population all go to zero.¶ The Equitable society divides the population into “workers” and “nonworkers.” This society can reach equilibrium with slow growth and fairly distributed salaries.¶ In the Unequal scenario, the population collapses after an apparent equilibrium when the elite population starts to take off, peaking around year 775. By year 900, everything has collapsed, and nature makes a recovery.

Ecological limits make the crunch inevitable – absent the alternative to a different societal model, extinction is inevitable

William Ophuls, 2012, "Immoderate Greatness: Why Civilizations Fail," 9-11, mm

As a process, civilization resembles a long-running economic bubble. Civilizations convert found (or conquered) ecological wealth into economic goods and population growth. As the bubble expands, a spirit of “irrational exuberance” reigns. Few take thought for the morrow or consider that they are borrowing from posterity. Finally, however, resources are either effectively exhausted or no longer repay the effort needed to exploit them. As massive demand collides with dwindling supply, the ecological “credit” that has fueled expansion and created a large population accustomed to living high off the hog is choked off. The civilization begins to implode, in either a slow and measured decline or a more rapid and chaotic collapse. As civilizations encounter emerging limits, they will of course make every effort to innovate their way around them. However, as we shall see later, these efforts themselves have costs that gradually accumulate. Thus the civilization’s “indebtedness” compounds. Unfortunately, the benefits accrue immediately, but the debts come due only later, so the momentum of

development continues. However, at some point, “service” on the accumulated debt begins to preclude new investment, as more and more energy has to be expended simply running in place. Stealing resources from others is not a permanent solution, because conquest, too, has serious costs: “imperial overstretch” has spelled the downfall of many empires. Even peaceful trade provides no escape from biophysical limits. To get resources from others, you must normally give something valuable in return – either resources themselves, or goods and services that depend ultimately on resources. In short, on a finite planet you cannot grow forever or violate the laws of physics. If you use renewable resources faster than they can regenerate, they will dwindle and ultimately disappear; if you produce wastes faster than they can be rendered harmless, they will poison you; and if you use nonrenewable resources to fuel current consumption, they will eventually run out. Of course, the ultimate limits are rarely reached, because diminishing returns on ecological exploitation and extraction set in well before then. Technology and good management can forestall the day of ecological reckoning, but not indefinitely. ¶ To make matters worse, it is not resources in general that matter, for natural processes are governed by a basic ecological principle called “the law of the minimum.” Thus the factor in least supply is controlling. For example, to grow cereals takes soil, seeds, fertilizer, and water as well as labor. Not only must all of these factors of production be present for there to be a crop, but they must be present in the right quality or proportion. Thin soils or poor seeds will stunt crop growth even if all the other factors are present in abundance. Thus some resources are more critical for civilization than others. The most critical of all is water, without which life simply cannot be sustained. But as civilizations develop, they tend to overuse and misuse their water supplies, with consequences that can be serious. For example, salinization due to inappropriate irrigation plagued many ancient civilizations (and continues to be a problem today). Civilizations also damage watersheds by cutting down the forests that moderate climate, promote rainfall, and store water. In addition, the law of the minimum have a corollary: consuming to the limit when times are flush leaves a civilization exposed to peril if resources decline in quality or quantity. For example, because rainfall varies from year to year, water supply inevitably fluctuates. This means that past levels of agricultural production may not always be achievable, threatening the civilization with hunger or even famine. To restate the corollary in prescriptive form, consistently pressing ecological limits is risky to the point of being suicidal. Unfortunately, civilization does just that: as a system, its basic mode is overshoot and collapse. That is, it tends to continue developing well beyond the point of ecological sense (as well as economic sense in many cases, although that is another story). In doing so, it degrades or exhausts ecological resources that are critical for its long-term survival. What ecologists call the “carrying capacity” is eroded. When the inevitable day of reckoning arrives, the civilization therefore experiences decline or even collapse until it comes into balance with the remaining, impoverished resource base.

Crunch UQ – Crunch Coming (Entropy)

Entropy makes the crunch inevitable – only a transition to society with restricted rights and freedom solves

William Ophuls, 2012, "Immoderate Greatness: Why Civilizations Fail," p. 29, mm

Civilization is trapped in a thermodynamic vicious circle from which escape is well nigh impossible. The greater a civilization becomes, the more the citizens produce and consume – but the more they produce and consume, the larger the increase in entropy. The longer economic development continues, the more depletion, decay, degradation, and disorder accumulate in the system as a whole, even if it brings a host of short-term benefits. Depending on a variety of factors – the quantity and quality of available resources, the degree of technological and managerial skill, and so forth – the process can continue for some time but not indefinitely. At some point, just as in the ecological realm, a civilization exhausts its thermodynamic “credit” and begins to implode. ¶ The only way out would be radically to transform civilization so that the human economy resembled the natural economy. Nature is highly efficient in thermodynamic terms. The steady flow of solar energy is not simply consumed but is instead used to build up a rich and diverse capital stock. To put it more technically, nature internalizes thermodynamic costs, using the same matter and energy over and over to wring a maximum of life out of a minimum of energy. ¶ Although it might be theoretically possible for the human economy to mimic the natural economy, it would involve a radical transformation of civilization as we know it. Societies would have to be far more intricately and closely coupled – just as in natural ecosystems. And individuals would have to tolerate strong checks on human will and desire – that is, powerful negative feedback, just as in natural ecosystems. But even if such a hive-like existence were somehow acceptable, one would have to question whether human beings have the managerial capacity to sustain it. Let us, therefore, turn to the fourth biophysical limit that confronts civilization: the challenge of complexity.

Crunch UQ – Laws of Thermodynamics

Growth and consumption and unsustainable – the laws of thermodynamics prove

William Ophuls, 2011, *Plato's Revenge: Politics in the Age of Ecology*, p. x-xi, (Ophuls received a PhD in Political Science from Yale in 1973, served for eight years as a Foreign Service Officer in Washington and Tokyo, and has taught at Northwestern University), [this evidence has been edited for gendered language], mm

This failure to grasp that the root of the disease is not defective public policies but a defective public philosophy motivated me to resume the discussion in 1997 with *Requiem for Modern Politics*. In that work, I argued that the modern political paradigm – that is, the body of political concepts and beliefs inherited from Thomas Hobbes and his successors – was bound for self-destruction even before the emergence of ecological scarcity. That paradigm is no longer intellectually tenable or practically viable because any polity that abandons virtue and rejects community necessarily becomes the author of its own demise. The tendencies toward moral decay, social breakdown, economic excess, and administrative despotism that are evident everywhere in the so-called developed world testify to the need for a new public philosophy – on political as well as ecological grounds. This book attempts to sketch the basic outline of such a philosophy – a natural law theory of politics grounded in ecology, physics, and psychology. In doing so, I make explicit the basic principles of ecological polity that were implicit in my previous work and add new material to make the theory more robust. I start from the radical premise that “sustainability” as usually understood is an oxymoron. Industrial man [people] has used the found wealth of the New World and the stocks of fossil hydrocarbons to create an antiecological Titanic. Making the deck chairs recyclable, feeding the boilers with biofuels, installing hybrid winches and windlasses, and every other effort to “green” the Titanic will ultimately fail. In the end, the ship is doomed by the laws of thermodynamics and by implacable biological and geological limits that are already beginning to bite. We shall soon be obliged to trade in the Titanic for a schooner – in other words, a postindustrial future that, however technologically sophisticated, resembles the preindustrial past in many important respects. This book attempts to envision the politics of that smaller, simpler, humbler vessel.

Crunch UQ – Transition Key

The crunch is coming – we are entering a sixth mass extinction – only the transition can solve

Dovey 6/23/15

Dana Dovey, writer for Medical daily cites study from scientists at Stanford, Princeton and Berkeley

<http://www.medicaldaily.com/end-world-6th-mass-extinction-earths-history-has-begun-and-humans-may-not-survive-339480>

Extinction is a natural part of life. With each passing century species enter and fade from existence, but **mass extinctions are few and far between**. To date, Earth has seen only five, with the last one taking out the dinosaurs about 65 million years ago. However, **according to a recent study completed by an international team of biologists, we are currently in the midst of a sixth mass extinction**, and humans may be one of the first species to die off. Stories on pollution, habitat destruction, and the impending “end of days” are nothing new. What marks this collaborative paper apart from the countless number of doomsday predictions is that it is based on accurate and hard-to-dispute scientific data. Using fossil records, the team compared natural extinction rates, which are also known as background extinction rates, to current extinction rates, and came up with some disturbing figures. Results showed that even with conservative estimates, species today are disappearing up to 100 times faster than the normal rate between mass extinctions. “We emphasize that our calculations very likely underestimate the severity of the extinction crisis, because our aim was to place a realistic lower bound on humanity’s impact on biodiversity,” the researchers wrote. According to Dr. Paul Ehrlich, a researcher involved in the study, “[The study] shows without any significant doubt that we are now entering the sixth great mass extinction event.” What’s A Mass Extinction? The mass extinction of the dinosaurs, scientifically known as the Cretaceous-Tertiary (or K-T) extinction, is the best known of all mass extinctions, but it is only one of five extinction events believed to have occurred on Earth. Mass extinctions are defined as periods where abnormal or above average numbers of species completely die out. For example, BBC reports that in the Permian mass extinction, which occurred an estimated 248 million years ago, about 96 percent of all of Earth’s species died out. The International Union for Conservation of Nature, which maintains an authoritative list of threatened and extinct species, estimates the current specter of extinction could wipe out 41 percent of amphibian species, 26 percent of all mammals, and 13 percent of birds. **It takes the Earth millions of years to recover from mass extinctions**. In the press release, senior author Geraldo Ceballos said, “Our species itself would likely disappear early on.” In a video clip, Ehrlich explains that this is because of our dependence on the “natural services” that other species provide. Examples of this include the pollination of crops and climate control. “We are not likely to lose the honey bee as a species but we are already losing it in lots of places where its important, say for pollinating your almond orchards,” Ehrlich said. Past extinctions were brought about by a number of uncontrollable factors, such as climate change, sea level shifts, and possibly a large, catastrophic asteroid impact. What marks this current descent into extinction

as different is not only that it's believed to be completely man-made but also that it might be avoidable if we take action against it now. The team writes that deforestation for farming and settlement, the introduction of invasive species, carbon emissions, and our introducing toxins to the environment are permanently and irreversibly destroying ecosystems. Despite the grim news, it may still be a bit early to start building a doomsday bunker. Through intensified conservation efforts, we may still be able to preserve the Earth's ecosystem. But the "window of opportunity is rapidly closing," the researchers said. "Avoiding a true sixth mass extinction will require rapid, greatly intensified efforts to conserve already threatened species, and to alleviate pressures on their populations — notably habitat loss, over-exploitation for economic gain, and climate change," they wrote.

Crunch UQ – AT Growth Sustainable (Technology)

Tech doesn't make growth sustainable – entropy and the Jevons Paradox

William Ophuls, 2012, "Immoderate Greatness: Why Civilizations Fail," 25-26, mm

In addition, technological improvements actually increase thermodynamic costs. Take the substitution of the automobile for the horse. To make a horse requires a modest investment in pasture, water, and fodder for the two to three years it takes from conception until the horse can work. But to make a car requires not only many direct inputs – steel, copper, fuel, water, chemicals, and so forth – but also many indirect ones such as a factory and labor force as well as the matter and energy needed to sustain them. To use a technical term, the “embodied energy” in the car is many times that in the horse. In addition, the thermodynamic cost of operating the car is far greater. A horse needs only a modicum of hay, water and oats procured locally without too much difficulty. But the auto requires oil wells, refineries, tankers, gasoline stations, mechanics’ shops, and so on – that is, a myriad of direct inputs that are difficult and expensive to procure, as well as a host of indirect costs. So the substitution of auto for the horse may have brought many advantages, but at a heavy thermodynamic price. ¶ Even the technological leap represented by the computer is no different. Its partisans may believe that it will be the instrument of humanity’s final liberation from the tyranny of nature, but a quick glance at the enormous quantity of embodied energy in each computer and in the systems that support it, plus the major energy requirements needed to operate networks, testify otherwise. The idea that technology will allow us to do ever more with ever less is a delusion. The more humanity resorts to technology, the more it expedites entropy (and generates other problems that we shall take up in the next chapter). It is vital to understand that technology is not a source of energy. That is, it is not a fuel in its own right, only a means for putting fuel to work or for transforming one energy resource into another. Thus, for example, coal can be converted into gasoline – but at a high thermodynamic price, because much of the potential energy in the coal is lost in the process. Or technology can make the conversion of energy more efficient – but, as we have seen, only up to a point. (Moreover, gains in efficiency tend to be nullified by increases in demand, a phenomenon known as Jevons Paradox). Similarly, technology can make new energy resources available – but only by expanding energy to find and exploit them. So technology does not make energy out of thin air. On the contrary, technology is always ultimately dependent on the supply of energy. If the quantity or quality of energy resources dwindles, the power of technology declines along with them.

Authoritarianism UQ

Auth. UQ – Transition Now

Global authoritarianism is increasing now – halting the spread of liberal ideals like privacy is key to sustaining the containment of democracy

Christopher Walker, 6/13/2014, (Walker is an executive director of the International Forum for Democratic Studies at the National Endowment for Democracy), The Washington Post, “Authoritarian regimes are changing how the world defines democracy,” http://www.washingtonpost.com/opinions/christopher-walker-authoritarian-regimes-are-changing-how-the-world-defines-democracy/2014/06/12/d1328e3a-f0ee-11e3-bf76-447a5df6411f_story.html, mm

In 1947, George Kennan’s “X-Article” argued for a policy of containment to combat the spread of Soviet influence. That policy would become the basic strategy of the United States throughout the Cold War.¶ More than six decades later, in an underappreciated twist, today’s leading authoritarian regimes are turning “containment” on its head, using massive resources and coordinated political efforts to chip away at the rules-based institutions that have served as the glue for the post-Cold War liberal order, while checking the reform ambitions of aspiring democracies and reshaping the way the world thinks about democracy.¶ Call it the “democracy containment” doctrine.¶ Russia’s destabilization of Ukraine, where Moscow has annexed Crimea and provoked a debilitating separatist rebellion in the eastern part of that country, has dominated the news recently. But this action should be seen for what it is: a Kremlin containment effort to prevent Ukrainians from achieving a democratically accountable government that would threaten Russia’s corrupt authoritarian system. The Ukraine example is just one small part of a vast containment ambition led by the regimes in Moscow, Beijing, Riyadh and Tehran, which may disagree on many things but share an interest in limiting the spread of democracy.¶ The strategy has evolved in three key areas. The first concerns institutions. Seeing regional and international rules-based bodies as a threat to regime interests, authoritarians have focused their efforts on hobbling key institutions’ democracy and human rights mechanisms.¶ Russia, in cooperation with other authoritarian regimes in Eurasia, has undermined the human rights dimensions of the Council of Europe and the Organisation for Security and Cooperation in Europe, especially the latter’s election-monitoring and media-freedom functions. Venezuela plays a similarly harmful role with regard to the Organization of American States.¶ Within the United Nations, an “authoritarian fraternity” led by Security Council members China and Russia routinely blocks democracy-friendly measures on a range of issues. Iran, along with China and Russia, is pursuing greater control of the Internet in intergovernmental bodies worldwide.¶ As the authoritarians whittle away at democratic standards, they have created their own clubs, such as the Shanghai Cooperation Organization (SCO) and the Eurasian Customs Union, that mimic their liberal counterparts but whose aim is to institutionalize authoritarian norms.¶ Through a treaty arrangement with SCO members, China has challenged the norm against refoulement — the return of persecuted individuals to the hands of their persecutors — by using a designation of “terrorist” as the basis for repatriation. China has persuaded non-SCO countries such as Cambodia and Malaysia to cooperate with this new standard. More broadly, authoritarian regimes work with each other to monitor activists

and oppositionists and block their movement, for instance through international “watchlists” and “blacklists” that are generated within the context of the SCO and the Gulf Cooperation Council.¶ The second sphere relates to the containment of both young democracies and middle-performing countries with reform ambitions whose democratic success would pose a threat to authoritarian regimes.¶ In addition to Ukraine, Russia pursues a disruptive policy toward democratic hopefuls Georgia and Moldova. The Baltic states, although NATO and European Union members, nevertheless are targets of Kremlin-backed political efforts and media campaigns that aim to raise doubts about the integrity of their young democracies.¶ China is taking measures to slowly squeeze the democracy out of Hong Kong. Saudi Arabia’s political and security commitment to Bahrain’s government has served to contain its smaller neighbor’s democracy movement.¶ The third sphere of containment is in the realm of ideas.¶ These regimes may not be ideological in the Cold War sense, but they understand the importance of ideas, which explains a good deal about why they work so hard to try to prevent the emergence of alternative ones within their own systems. With time, they have fine-tuned arguments that share the goal of creating an anti-American, anti-democracy narrative.¶ This matters because the best-resourced regimes — especially China and Russia — have built formidable traditional and new media outlets that enable them to project such messages into the global marketplace. This prowess is especially apparent in the developing world, where a new battle of ideas is underway. China has an enormous media presence in sub-Saharan Africa and has rapidly gained a foothold there. Its multibillion-dollar international CCTV has programs in Arabic, French, Russian and Spanish, and the state news agency Xinhua is expanding worldwide. Russia’s RT, in addition to its virulently anti-Western English programming, broadcasts its jaundiced view of the world around the clock in Spanish and Arabic.¶ While the authoritarians claim that their massive international broadcasting ventures are needed to offer an unfiltered view of their countries, it is telling that these state-led media conglomerates devote so much of their programming to assailing the West and the idea of democracy.¶ We can infer from this that the emerging authoritarian doctrine reflects the need for leaders in Moscow, Beijing and elsewhere to contain what they fear and do not possess: democratic accountability and legitimacy.¶ Given the stakes for the liberal order, the democratic world will need to develop a serious “long game” sooner rather than later to respond to the growing challenge presented by the migration of the authoritarians’ illiberal norms beyond their borders.

Global authoritarianism is increasing now

Larry Luxner, 4/22/2015, Atlantic Council, “Authoritarianism stages a comeback,”

<http://www.atlanticcouncil.org/blogs/new-atlanticist/authoritarianism-stages-a-comeback, mm>

From Azerbaijan’s Ilham Aliyev to Zimbabwe’s Robert Mugabe, dictators seem to be gaining the upper hand these days—outsmarting the most determined pro-democracy activists with a clever mix of 21st-century technology and old-fashioned repression.¶ Why this is happening, and what we can do about it, is the subject of an insightful new book that covers the A-to-Z of dictatorship around the globe: *Is Authoritarianism Staging a Comeback?*¶ The answer is a resounding yes, according to half a dozen scholars who gathered April 21 at the Atlantic Council to discuss the book and its implications. The panel included the volume’s two editors, Mathew

Burrows and Maria J. Stephan, who together lead the Atlantic Council's Future of Authoritarianism project. ¶ "The success rate of civil disobedience has declined to a rate not seen since the 1950s. It's worrisome," said Stephan, a Senior Policy Fellow at the United States Institute of Peace (USIP). "There's an element of authoritarian resilience around the world."

Global authoritarianism is consolidating now – but the transition could be derailed by a democratic resurgence

Democracy Digest, 7/3/2014, "Are the authoritarians winning?"
<http://demdigest.net/blog/authoritarians-winning/>, mm

"For the first time since the end of the cold war, the advance of democratic constitutionalism has stopped," the Harvard Kennedy School's Michael Ignatieff asserts: ¶ In the 1930s travelers returned from Mussolini's Italy, Stalin's Russia, and Hitler's Germany praising the hearty sense of common purpose they saw there, compared to which their own democracies seemed weak, inefficient, and pusillanimous. ¶ Democracies today are in the middle of a similar period of envy and despondency. Authoritarian competitors are aglow with arrogant confidence. In the 1930s, Westerners went to Russia to admire Stalin's Moscow subway stations; today they go to China to take the bullet train from Beijing to Shanghai, and just as in the 1930s, they return wondering why autocracies can build high-speed railroad lines seemingly overnight, while democracies can take forty years to decide they cannot even begin. The Francis Fukuyama moment—when in 1989 Westerners were told that liberal democracy was the final form toward which all political striving was directed—now looks like a quaint artifact of a vanished unipolar moment. ¶ "The conflict between authoritarianism and democracy is not a new cold war, we are told, because the new authoritarians lack an expansionary ideology like communism," he writes for the New York Review of Books. "This is not true. Communism may be over as an economic system, but as a model of state domination it is very much alive in the People's Republic of China and in Putin's police state," he notes: ¶ Nor does this new authoritarianism lack an economic strategy. Its goal is a familiar form of modernization that secures the benefits of global integration without sacrificing political and ideological control over its populations. Its economic model is price-fixing state capitalism and its legal system is rule by (often corrupt) fiat in place of the rule of law. Its ethics rejects moral universalism in favor of a claim that the Chinese and Russian civilizations are self-contained moral worlds. Persecution of gays, therefore, is not some passing excess, but is intrinsic to their vision of themselves as bulwarks against Western individualism. ¶ Russia's and China's strategic visions may draw on different historical experiences, but the messages they take from their histories are similar. Both dwell on the humiliations they have received at the hands of the West. Both explicitly refuse to accept liberal democracy as a model. Both insist that their twentieth-century experience of revolution and civil war necessitates centralized rule with an iron fist. ¶ The Chinese and Russian variants of authoritarian modernization draw upon different resources, and they remain geostrategic competitors, one rising, the other trying to halt its decline, but both see good reasons to align their interests for the medium term. This commonality of interest is striking—they vote together on the Security Council, persecute their own dissidents, and jointly stick up for exterminatory dictatorship in Syria. In their shared resentment toward the American world order, they have spoken as one

since the day the Americans bombed the Chinese embassy in Belgrade in 1999.¶ “The new authoritarians offer the elites of Africa and Eurasia an alternate route to modern development: growth without democracy and progress without freedom,” notes Ignatieff. “This is the siren song some African, Latin American, and Asian political elites, especially the kleptocrats, want to hear.”¶ U.S. no longer vanguard of democracy¶ President Obama’s recent address at West Point suggests that he is listening to a new doctrine of restraint, he writes, one which “captures a sense, among conservatives and progressives alike, that America no longer has the power to shape the international order as it once did. In particular, it no longer can imagine itself as the vanguard democracy of an advancing global order of democracies.”¶ The Economist’s John Micklethwait and Adrian Wooldridge urge Western democrats to learn from their authoritarian competitors, says Ignatieff:¶ The fact that Singapore and Shanghai are better governed than Detroit or Los Angeles is hardly news. The issue is whether authoritarian governance is sustainable in the face of demands by the middle class to be treated like citizens, and whether such governance is capable of dealing with radical shocks like a long-term economic slowdown of the kind currently predicted for China.¶ The authoritarian archipelago is arrogant but it is brittle: it must control everything, or soon it controls nothing. The saving grace of democracy is its adaptability. It depends for its vitality on discontent. Discontent leads to peaceful regime change, and as regimes change, free societies can discard failed alternatives.

Auth. UQ – Crunch Makes it Inevitable

The crunch makes a transition to authoritarianism inevitable

Mark Beeson, 3/30/2010, (Department of Political Science and International Relations, University of Western Australia, Perth), "The coming of environmental authoritarianism," *Environmental Politics*, vol 19, no 2, https://www.academia.edu/539179/The_coming_of_environmental_authoritarianism, mm

The environment has become the defining public policy issue of the era. Not only will political responses to environmental challenges determine the health of the planet, but continuing environmental degradation may also affect political systems. This interaction is likely to be especially acute in parts of the world where environmental problems are most pressing and the state's ability to respond to such challenges is weakest. One possible consequence of environmental degradation is the development or consolidation of authoritarian rule as political elites come to privilege regime maintenance and internal stability over political liberalisation. Even efforts to mitigate the impact of, or respond to, environmental change may involve a decrease in individual liberty as governments seek to transform environmentally destructive behaviour. As a result, 'environmental authoritarianism' may become an increasingly common response to the destructive impacts of climate change in an age of diminished expectations. Long before the recent global economic crisis inflicted such a blow on Anglo-American forms of economic organisation, it was apparent that there were other models of economic development and other modes of political organisation that had admirers around the world. The rise of illiberal forms of capitalism and an apparent 'democratic recession' serve as a powerful reminders that there was nothing inevitable about the triumph of 'Western' political and economic practices or values (Zakaria 2003, Diamond 2008). Nowhere has the potential importance of authoritarian, state-led capitalist development been more evident than in East Asia.¹ An examination of East Asia's development and the concomitant environmental problems it generates highlights a number of broad-ranging trends that have widespread relevance.

Alt

Environment Solvency – Democracy Fails/Eco-Authoritarianism

Good

Democratic choice theory ensures environmental destruction – only eco-authoritarianism solves

Matthew Humprey, 2007, Ecological Politics and Democratic Theory: The challenge to the deliberative ideal, p. 12-13, mm

The second set of background assumptions concerned the motivational aspects of human behavior and the problems of co-ordinating collective responses to collective problems. The understanding of the motivations and execution of human actions were based upon the rational actor model in its Schumpeterian mode. For Schumpeter, people have a much clearer understanding of their own personal, short-term interests than they do of their interests in respect of political questions, which frequently relate to policy choices filtered through complex social and economic problems and long-term time horizons. There are good reasons for this; we have sufficient control over the circumstances of our daily lives such that our actions can make a genuine difference to our welfare. If we know we can get the same model car cheaper at one showroom rather than another, or we understand that an item of electrical equipment is still under guarantee and can be exchanged for something new, this is important information. When it comes to the world of democratic politics, however, the understanding of the average citizens, says Schumpeter, drops to that of a 'primitive,' who fails to understand complex processes of cause and effect (1943: 262). Who can say whether a drop in interest rates two years ago caused inflation today? Or whether a rise in the value of the national currency in the past led to increased unemployment now? It is not merely that these complex causal processes are difficult to understand, it is also that the average citizen has no incentive to try and understand them, which would involve a great deal of effort for little reward (the reward of a better informed vote, for example, which would have no more effect on the outcome of an election than an uninformed vote. Inefficacy does not reward information gathering). The implication of this argument is that when citizens do come to take political action within a democracy, they will be motivated by a narrow conception of their interests, and will possess only a very rough understanding of how to promote them through the ballot box. This certainly appears to be the assumption of the eco-authoritarians, who have no faith in the ability of citizens to act democratically with regard to a more (ecologically) enlightened sense of their self-interest. Citizens cannot be expected to vote for new laws that would curtail their existing freedoms in the name of long-term environmental sustainability. Nor can they be expected to modify their individual behavior through appeals to an environmental ethic; and even if they did that, it would be counter-productive for them in the long run, at least for certain important behaviors (as explained in the following paragraphs).

Environment Solvency – China Proves

Eco-authoritarianism solves – China proves

Thomas Friedman, 9/8/2009, New York Times, “Our One-Party Democracy,”
http://www.nytimes.com/2009/09/09/opinion/09friedman.html?_r=0, mm

Watching both the health care and climate/energy debates in Congress, it is hard not to draw the following conclusion: There is only one thing worse than one-party autocracy, and that is one-party democracy, which is what we have in America today.¶ One-party autocracy certainly has its drawbacks. But when it is led by a reasonably enlightened group of people, as China is today, it can also have great advantages. That one party can just impose the politically difficult but critically important policies needed to move a society forward in the 21st century. It is not an accident that China is committed to overtaking us in electric cars, solar power, energy efficiency, batteries, nuclear power and wind power. China’s leaders understand that in a world of exploding populations and rising emerging-market middle classes, demand for clean power and energy efficiency is going to soar. Beijing wants to make sure that it owns that industry and is ordering the policies to do that, including boosting gasoline prices, from the top down.

Alt – AT Elites Won't be Benevolent/Won't Last

1NC Humphrey evidence says this version of authoritarianism will not be abusive – the alternative ensures a class of virtuous elites committed to ecological integrity rise to the top – that prevents abuses of power

Eco-authoritarianism will be benevolent and durable – a political class already exists and the Roman Catholic Church provides an appropriate model

David Shearman and Joseph Wayne Smith, 2007, *The Climate Change Challenge and the Failure of Democracy*, p. 134-35, mm

Government in the future will be based upon (or incorporate, depending on the level of breakdown of civilization) a supreme office of the biosphere. The office will comprise specially trained philosopher/ecologists. These guardians will either rule themselves or advise an authoritarian government of policies based upon their ecological training and philosophical sensitivities. These guardians will be specially trained for this task. In the meantime can we move forward? There are those unsullied by the search for power and influence and with ability, who already serve humanity with meager financial reward in the professions, in science and medicine, in the entrepreneurial social services, and, yes, in the religious orders, but they are not prepared to join the political rabble. And even if they were, the present political cabal would not move over for them. The emergence of the World Social Forum may offer some lessons in networking individuals with common goals, the seed of an international organization for environmental equity and sustainability. This would not be inward looking and self-serving like various Zionist organizations or the Yale Skull and Bones, but might be universal like a reformed Roman Catholic Church. Come back St. Francis! Authoritarian leadership exists in the Roman Catholic Church where power and greed are successfully suppressed to deliver spiritual succor to the believers and nourishment for the poor. Lessons can be learned from the modus operandi of this Church. In its service to humanity it publicly abhors the destructiveness of both totalitarianism and capitalism, and its views might allow it to be the chrysalis of care for the earth through directions to its flock. As Pope John Paul II stated: The ecological crisis is a moral issue . . . respect for life and for the dignity of the human person extends also to the rest of creation . . . Humanity has disappointed God's expectations. Man, especially in our time, has without hesitation devastated wooded plains and valleys, polluted waters, disfigured the earth's habitat, made the air unbreathable, disturbed the hydrological and atmospheric systems, turned luxuriant areas into deserts and undertaken unrestrained industrialization . . . We must therefore encourage and support the ecological conversion which in recent years has made humanity more sensitive to the catastrophe to which it has been heading.³⁶ A recurrent theme in this text is the need for a new religious basis to modern life to give substance and meaning to people's existence as an alternative to consumerism and materialism. A "green pope" who actively pursued the philosophical words of Pope John Paul II quoted above would make a substantial contribution to the saving of civilization. But there is another important contribution that Catholicism offers to our argument. The Roman Catholic Church is one of the longest surviving Western institutions. It is much older than the common law, democracy, the English language, and Western science.

The Church has seen the collapse of one civilization (the Roman), has existed through a dark age, and survived wars, revolutions, and plagues. As a social institution it is truly remarkable and offers to all of us a lesson in how to set up an organization for long-term survival. What is important for our argument is that the Roman Catholic Church, unlike the fragmented Protestant churches, has a rigid authoritarian structure and a strict hierarchy of rule. If the Roman Catholic Church had been run as a democratic institution, as the Protestant churches have been to some degree, it is highly doubtful whether the Roman Catholic Church would have survived. We do not see in the Church an exact model to replicate for an alternative authoritarian model of government, as it obviously would be a dangerous gamble to have one person as a "political pope" or world emperor. Nevertheless the survival of the Church as an authoritarian structure does indicate that authoritarian systems, if set up correctly, can be long lasting and stable.

Alt – AT Authoritarianism Bad

1NC Humphrey evidence says this version of authoritarianism will not be abusive – the alternative ensures a class of virtuous elites committed to ecological integrity rise to the top – that prevents abuses of power

Historical failures of authoritarianism do not disprove the alternative – eco-authoritarianism learns from past failures to avoid repeating them

David Shearman and Joseph Wayne Smith, 2007, *The Climate Change Challenge and the Failure of Democracy*, p. 124, mm

In proposing that liberal democracies will be replaced by authoritarian structures, we differ somewhat from a select group of environmentalist writers who have also rejected a liberal democratic solution to the environmental crisis.¹² In general, such writers have felt that only centrally commanded economies can meet the challenge of dealing with the environmental crisis. We do not join that camp. We recognize that command economies committed to militarism and industrialization can be just as destructive, if not more so than liberal democracies. The former Soviet Union is not our idea of paradise on earth. Planned economies, where there is an attempt by a body of elite planners to coordinate all aspects of an economy, is a recipe for disaster because there is simply too much information, chaotic nonlinear effects, and unpredictable events to permit accurate planning. However we believe that many aspects of the economy must be firmly regulated. This position is a long way away from a planned economy. We have no lingering belief that communism could or will save humanity, but we hold that when civilization-threatening changes occur, liberal democratic solutions are the first things to go. The rule of law is abandoned, and the rule of the strong dominates. We are not indicating that we like this; we are maintaining as a matter of real politick that this is what occurs historically and is likely to occur again. Nor are we supporting a form of authoritarianism as witnessed in Nazi Germany where one Fuhrer makes fundamental decisions about life and death for society. Such forms of authoritarianism typically lead to social disaster when the leader, following the weaknesses of human will, succumbs to corruption or madness. Our form of authoritarianism looks to the leadership of an entire stratum of society rather than one individual or even part, and there is a better chance that corruption and madness of the Hitler and Stalin levels can be weeded out. But there is no guarantee; human life is uncertain and down the track, human life promises to be desperate.

Alt – AT Human Nature

Historical evidence proves authoritarianism is more in line with human nature than liberalism

David Shearman and Joseph Wayne Smith, 2007, *The Climate Change Challenge and the Failure of Democracy*, p. 130, mm

The hypothesis that a steady state economy will characterize the new order follows from the limits to growth thesis defended in this book. If a growth economy is not sustainable, then the economy must be either a steady state nongrowth economy or one that is constantly decreasing and degenerating. A degenerating economy eventually leads to economic collapse that is nonsustainable. By elimination, a sustainable economy must be a steady state economy. A future society is likely to be stratified and nonegalitarian because history shows that this is the way societies in the past have been. The hypothesis defended in this book is that liberalism and its values, as well as democracy, are just moments in human history. It is likely that the human brain is hardwired for authoritarianism, for dominance, and submission (chapter 5). This is a reasonable scientific hypothesis that better fits the available historical evidence than the hypothesis of liberal egalitarianism.

Eco-Authoritarianism Module

Uniqueness—Crunch Now

The crunch is coming now – peak oil puts us on the brink

Turner and Alexander 14 - Turner is principal research fellow at the University of Melbourne's Melbourne Sustainable Society Institute and Alexander is Melbourne based journalist [Graham Turner and Cathy Alexander, "Limits to Growth was right. New research shows we're nearing collapse", 9-1-14, Accessed: 7-12-15, <http://www.theguardian.com/commentisfree/2014/sep/02/limits-to-growth-was-right-new-research-shows-were-nearing-collapse>] hk

As pollution mounts and industrial input into agriculture falls, food production per capita falls. Health and education services are cut back, and that combines to bring about a rise in the death rate from about 2020. Global population begins to fall from about 2030, by about half a billion people per decade. Living conditions fall to levels similar to the early 1900s. It's essentially resource constraints that bring about global collapse in the book. However, Limits to Growth does factor in the fallout from increasing pollution, including climate change. The book warned carbon dioxide emissions would have a "climatological effect" via "warming the atmosphere". As the graphs show, the University of Melbourne research has not found proof of collapse as of 2010 (although growth has already stalled in some areas). But in Limits to Growth those effects only start to bite around 2015-2030. The first stages of decline may already have started. The Global Financial Crisis of 2007-08 and ongoing economic malaise may be a harbinger of the fallout from resource constraints. The pursuit of material wealth contributed to unsustainable levels of debt, with suddenly higher prices for food and oil contributing to defaults - and the GFC. The issue of peak oil is critical. Many independent researchers conclude that "easy" conventional oil production has already peaked. Even the conservative International Energy Agency has warned about peak oil. Peak oil could be the catalyst for global collapse. Some see new fossil fuel sources like shale oil, tar sands and coal seam gas as saviours, but the issue is how fast these resources can be extracted, for how long, and at what cost. If they soak up too much capital to extract the fallout would be widespread. Our research does not indicate that collapse of the world economy, environment and population is a certainty. Nor do we claim the future will unfold exactly as the MIT researchers predicted back in 1972. Wars could break out; so could genuine global environmental leadership. Either could dramatically affect the trajectory. But our findings should sound an alarm bell. It seems unlikely that the quest for ever-increasing growth can continue unchecked to 2100 without causing serious negative effects – and those effects might come sooner than we think. It may be too late to convince the world's politicians and wealthy elites to chart a different course. So to the rest of us, maybe it's time to think about how we protect ourselves as we head into an uncertain future.

Peak oil put us on the brink now – heading for the crunch

Gupta 2-2 - Gupta contributes to outlets including Al Jazeera America, Vice, The Progressive, The Guardian, and In These Times [Arun Gupta, "Why the Crash in Oil Prices Should Bury "Peak Oil" Once and for All", 2-2-15, Accessed 7-12-15, <http://www.counterpunch.org/2015/02/02/why-the-crash-in-oil-prices-should-bury-peak-oil-once-and-for-all/>] hk

Fervent peak oilers are neo-Malthusians, believing the relentless growth of population and society on their own will outstrip natural resources. While Malthus's ideas were discredited on scientific, historical, and economic grounds in the 19th century, they live on in peak oil, peak water, peak minerals, peak soil, peak food and peak everything. From a scientific perspective, peak oil posits geology as determining oil supplies. Of course oil is a finite and non-renewable resource, but the last decade of spiraling oil prices was caused by Middle East wars, Wall Street commodities speculation, and ecological disasters like Hurricane Katrina, not by natural limits. It's the socio-economic system that determines how much oil, along with every other commodity, is produced, distributed, and consumed. Grasping why peak oil and its variants are flawed offers a deeper understanding of the global energy order, the politics of climate change, and capitalism itself. Even the term peak oil is problematic, obscuring how the energy industry works. We may imagine oil as gushing out of a steel derrick in a barren desert, but energy companies are after any form of hydrocarbons that can be profitably refined. Cars on a highway could be powered by fuel derived from tar sands, natural-gas or its condensates, shale oil, biofuels, heavy oil, or coal-to-liquid. One scenario by the U.S. Energy Information Administration estimates such non-conventional sources could account for more than one-third of all oil produced by 2030. Then there is the concept of a peak. Even though Hubbert was off by only one year—domestic production peaked in 1971—production looks nothing like his bell curve over time. It rose after each seventies shock, went into a twenty-year funk after the mid-eighties crash, and in the last five years it has soared to near its 1971 peak. The inherent flaw of peak oil is that it naturalizes capitalism. Energy reserves are determined by price, investment and technology. The current oil boom, driven by innovations in fracking and drilling, tar-sands production, low-cost investment capital and persistently high oil prices, have smashed Hubbert's theory to bits like brittle shale. The inaccuracy of peak oil hasn't stopped prominent figures like Paul Krugman and George Monbiot from flirting with the concept. Monbiot admitted his error in 2012, correctly noting the problem is not too little oil, but too much: "There is enough oil in the ground to deep-fry the lot of us, and no obvious means to prevail upon governments and industry to leave it in the ground." On the left, Michael Klare has pushed versions of peak oil in books like *Resource Wars* and *The Race for What's Left*. In 2005 Klare declared that "the world is headed for a severe and prolonged energy crunch in the not-too-distant future." In 2008 Klare wrote that "the current energy crisis is almost certain to be long-lasting." In 2012 he asserted that "oil prices are destined to remain high for a long time to come."

The crunch is coming now- there is a moral imperative is to restrain capitalism from endless environmental destruction

Romm 14 (Sep. 16, 2014. Joe Romm is a fellow at American Progress and is the founding editor of Climate Progress. He also holds a Ph. D in physics from MIT. He has won numerous awards and was the acting assistant secretary of energy for energy efficiency and renewable energy in the late 1990s. "This Changes Everything: Naomi Klein Is Right, Unchecked Capitalism Will Destroy Civilization" ThinkProgress.org.

<http://thinkprogress.org/climate/2014/09/16/3567322/this-changes-everything-naomi-klein-capitalism-climate/> //HS)

Best-selling progressive journalist Naomi Klein has an important new book out, "This Changes Everything: Capitalism Vs. The Climate." The author of "No Logo" and "The Shock Doctrine" now

“tackles the most profound threat humanity has ever faced: the war our economic model is waging against life on earth,” as the book jacket aptly puts it. In diagnosing the unprecedented existential threat humanity faces thanks to our myopia and unbridled greed, Klein has three essential points to make: Because we have ignored the increasingly urgent warnings and pleas for action from climate scientists for a quarter century (!) now, the incremental or evolutionary paths to avert catastrophic global warming that we might have been able to take in the past are closed to us. Humanity faces a stark choice as a result: The end of civilization as we know it or the end of capitalism as we know it. Choosing “unregulated capitalism” over human civilization would be a “morally monstrous” choice — and so the winning message for the climate movement is a moral one. KleinBookAs an aside, readers may remember that I don’t always agree with Klein on either substance or messaging. And obviously I have quibbles with her book — in particular I am skeptical of some elements of her proposed “cure” (and how she frames them) as I’ll discuss in a later post. But in fairness to Klein, our 25-year dawdling has made the diagnosis (and prognosis) unimaginably graver and thus made all cures look politically implausible, as the pessimistic, do-little “eco-modernists” keep pointing out far too gleefully. To anyone who thinks attacking unchecked capitalism is not a winning message (when done correctly), I’d urge you to read the advice of Frank Luntz, the GOP’s top messaging guru, on the subject: “don’t say capitalism” because Americans “think capitalism is immoral.” The great value in the book lies in Klein’s understanding and elaboration of the three essential points above. Indeed I’m not certain any other book has so clearly spelled out these points. And yet these three points are, arguably, the most important ones for climate hawks, for the (misnamed) “intelligentsia” — indeed, for all homo sapiens — to understand at a deep level, since they clarify the choices we now face in the actions we must now take. Let’s look at them in turn. 1. Time’s Up Anyone would expect a far worse diagnosis and far more limited/radical treatment options from your doctor if — for a quarter century — you kept ignoring her increasingly strong recommendations to change your diet as you kept gaining weight and your prediabetes finally became full-blown Type 2 diabetes. So nobody can profess shock that our situation is much worse and our options for preserving a livable world are far more limited after ignoring thousands of the world’s leading climate “doctors” for more than two decades. Klein quotes leading climatologist Michael Mann: “There is a huge procrastination penalty when it comes to emitting carbon into the atmosphere”: the longer we wait the more it builds up, the more dramatically we must change to reduce the risk of catastrophic warming. She quotes climate expert Kevin Anderson that we might have been able to avert catastrophe (stabilize near 2°C or 3.6°F total warming) using “significant evolutionary” strategies if we had acted at the time of the 1992 Earth Summit or perhaps even if we had acted around the year 2000, but now only “revolutionary” strategies will work. Klein’s 566-page book does not have a great deal of science in it. It is clearly for those who accept climate science. I might have preferred a little more detail on why allowing 4°C (7°F) warming — let alone why the 6°C (11°F) warming we are currently headed toward — is not a rational or moral option. That said, a lot of other people have laid out that science in great detail. Indeed if it weren’t for the massive denial campaign, the gross miscoverage/undercoverage of climate change by the media, and the blinkered obsession with deck-chair-rearranging by opinion makers, one would say the perilous nature of our situation is mind-numbingly obvious: International Energy Agency (2011): World on Pace for 11°F Warming, “Even School Children Know This Will Have Catastrophic Implications for All of Us” Shocking

World Bank Climate Report (2012): “A 4°C [7°F] World Can, And Must, Be Avoided” To Avert “Devastating” Impacts Landmark Report (2014) Warns Time Is Running Out To Save U.S. From Climate Catastrophe Climate action delayed is climate action denied. Literally. 2. Laissez Not Fair As you’d expect with the subtitle, “Capitalism Vs. The Climate,” the book focuses on a critique of modern capitalism, which Klein generally refers to as “deregulated capitalism.” Klein isn’t calling for an end to capitalism, just an end to the rapacious, self-destructive version it has evolved into. Klein also takes on deregulated capitalism’s close relatives and accomplices, such as globalization, materialism, hyper-consumerism, and the conservative theory of (non)governance. Indeed she explains that the opening chapters will show: ... the real reason we are failing to rise to climate movement is because the action required directly challenge our reigning economic paradigm (deregulated capitalism combined with public austerity), the stories on which Western cultures are founded (that we stand apart from nature and can outsmart limits), as well as many of the activities that form our identities and define our communities (shopping, living virtually, shopping some more). These are Klein’s *bête noires* and areas of expertise. I’m not going to summarize her arguments here in part because reading her thoughts on these subjects is probably the primary reason for buying the book. I can’t do them justice and also it would be hard to avoid quibbling with her history in the areas where we slightly disagree. What matters most is Klein’s core argument that unchecked capitalism will lead to catastrophe. This is an argument I also make (albeit in a different way). In 2009, I detailed how humanity constructed the grandest of Ponzi schemes, whereby current generations have figured out how to live off the wealth of future generations. New York Times columnist Tom Friedman quoted me: “We created a way of raising standards of living that we can’t possibly pass on to our children,” said Joe Romm, a physicist and climate expert who writes the indispensable blog climateprogress.org. We have been getting rich by depleting all our natural stocks — water, hydrocarbons, forests, rivers, fish and arable land — and not by generating renewable flows. “You can get this burst of wealth that we have created from this rapacious behavior,” added Romm. “But it has to collapse, unless adults stand up and say, ‘This is a Ponzi scheme. We have not generated real wealth, and we are destroying a livable climate ...’ Real wealth is something you can pass on in a way that others can enjoy.” Unchecked capitalism is a Ponzi scheme that must collapse. 3. The moral of our story Klein argues that the successful social movements were won not on economic grounds, but on moral ones. As Salon put it last year, “Once third-rail issues transform into moral imperatives, impossibilities sometimes surrender to new realities.” Klein concludes that while it’s important to make economic arguments that immediate climate action is far more cost-effective than inaction followed by attempts at adaptation: But we will not win the battle for a stable climate by trying to beat the bean counters at their own game.... We will win by asserting that such calculations are morally monstrous, they imply there is an acceptable price for allowing entire countries to disappear, for leaving untold millions to die on harsh land, for depriving today’s children of their right to live in a world teeming with the wonders and beauty of creation. The crucial nature of the moral argument is one that many are starting to make. The immorality of inaction is a point we simply cannot make too often.

Uq

<http://www.ecointernet.org/2015/03/22/green-liberty-antidote-authoritarian-corporatism-global-ecological-collapse/>

Humanity has so massively overshoot planetary ecological boundaries, that already there is an impact upon jobs and consumption; and as a result of diminishing expectations, neo-fascism is rising. It is likely humanity's cumulative huge demands upon ecosystems, which we seek to prolong at all costs for a huge population base, will collapse the entire biosphere as societies and economies crash. To avoid such a fate we must have fewer children, end fossil fuels, and restore natural ecosystems. Green Liberty – a political re-alignment of progressives, greens and libertarians who value ecology, justice, equity, and small governments and corporations – is the only pathway within existing sovereignty to achieve global ecological sustainability.

Humanity's inability to stop destroying nature can only lead to profound human suffering as all known life's one shared biosphere collapses, falling into nothingness, but not before we undergo an authoritarian corporatist hell on Earth. – Dr. Glen Barry

Ecological science has known for some time, and I have written and spoken at length, how Earth's biosphere is collapsing and dying as global ecosystems and atmosphere are overwhelmed by human growth. How and over what time frame biosphere collapse will play out is less known though certain aspects are becoming increasingly apparent as environmental decline progresses. Lack of easily exploitable natural ecosystems to destroy in order to access resources to feed industrial growth has led to a downturn in jobs to fuel highly consumptive lifestyles, and the concurrent rise of political demagoguery and resurgence of authoritarian corporatism (of many types, under many names) to exploit the situation.

Uniqueness—Ecoauthoritarianism/Counterplan Solvency

Environmental surveillance now

Kuh 15 – Professor of Law, Maurice A. Deane School of Law at Hofstra University [Katrina Kuh, “ENVIRONMENTAL PRIVACY”, 2015, Accessed: 7-26-15, epubs.utah.edu/index.php/ulr/article/download/1319/1045] hk

Environmental regulators also frequently obtain information through environmental surveillance.⁹⁰ U.S. Army Corps of Engineers (“Corps”) regulations implementing the CWA, for example, advocate surveillance by the Corps to “detect unauthorized activities requiring permits” and encourage district engineers to “consider developing joint surveillance procedures with Federal, state, or local agencies.”⁹¹ Courts have upheld administrative searches aimed at ascertaining whether a property contains a jurisdictional wetland.⁹² Unlike interrogation, however, environmental surveillance generates significant legal scrutiny.⁹³ This Section provides an overview of environmental surveillance and its legal treatment under the Fourth Amendment both to offer a general overview of how existing environmental statutes balance implementation and privacy and to provide background for a close analysis of environmental surveillance in the specific context of the enforcement of fish and game laws (the hunter enforcement cases). Most environmental statutes grant regulators the authority to conduct administrative searches.⁹⁴ Statutes granting this authority include inter alia core environmental statutes such as the CWA; ⁹⁵ Resource Conservation and Recovery Act (RCRA); ⁹⁶ Clean Air Act (CAA); ⁹⁷ Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA); ⁹⁸ Toxic Substances Control Act (TSCA); ⁹⁹ and Endangered Species Act (ESA).¹⁰⁰ Generally speaking, the Fourth Amendment has been interpreted to require a warrant for an administrative search involving a private individual¹⁰¹ or commercial entity.¹⁰² There are, however, a number of caveats and exceptions. Those caveats and exceptions of particular relevance in the environmental context are discussed in greater detail below. Under the “open fields” doctrine, the Supreme Court holds that there is no expectation of privacy, and thus no Fourth Amendment protection, for “activities conducted out of doors in fields, except in the area immediately surrounding the home.”¹⁰³ It is not unusual for environmental administrative searches to involve inspections of outdoor areas and numerous cases have upheld warrantless administrative searches by environmental regulators under the open fields doctrine.¹⁰⁴ The Supreme Court, for example, has held that warrantless entry by a state environmental official on commercial premises for purposes of observing the quality of smoke emitted from a facility did not violate the Fourth Amendment as it fell within the open fields exception.¹⁰⁵ The Court further held that the EPA did not conduct a search for purposes of the Fourth Amendment when it took aerial photographs of an industrial plant complex as part of a site inspection under the Clean Air Act.¹⁰⁶ Notably, however, the court found it important that the entity observed was a commercial entity and not a private residence.¹⁰⁷

Environmental Authoritarianism is effective in the status quo – the aff reverses that

Zhu et al 15 – An Associate Professor at Renmin University of China Law School, Ph.D. in Law, Secretary-General of Environment and Resources Law Research Association, Beijing Law Society [Xiao Zhu, “Regional restrictions on environmental impact assessment approval in China: the legitimacy of environmental authoritarianism,” *Journal of Cleaner Production*, pp. 106, January 9, 2015, Wiley]

4.2. Environmental effectiveness Legitimacy of EIARTR can be enhanced when these measures are Environmentally effective. While it is impossible to execute a sound and causal environmental effectiveness analysis of the EIA restriction measures, anecdotal evidence – based on interviews, media reports and (in) formal documents up till now – does point to several (indirect) environmental effects of these measures. Six arguments for environmental effectiveness of EIARTR will be assessed here. First, EIARTR has forced local leaders to attach importance to environmental protection and has changed their behavior with respect to implementation of environmental measures. EIARTR has touched on the core interest of these local leaders (that is: economic development in their region) and this has enhanced priority given to environmental targets and standards. This measure often also came with changed power balances between the different local governmental agencies, often in favor of environmental protection bureaus. For instance, after EIA approval was restricted by Sichuan provincial EPB in 2006, Luzhou municipal government established an environmental targets-based assessment system to hold administrative and party leaders responsible for not meeting environmental targets (Luzhou EPB document no. 177, 2006). This enhanced the power of the local EPB vis- a-vis their economic counterparts. According to Pan Yue, the then deputy director- general of SEPA, “the three-month EIARTR in 2007 achieved much more than any previous enforcement campaign of EIA. It not only solved some serious environmental problems left over by history, but also forced local governments to change the track of development and accelerated the industrial transformation towards sustainable development”.¹³ Second, in the regions affected by EIA restriction the capacity of local environmental (or rather: EIA) law enforcement staff was strengthened and enhanced, and the environmental budget of the local EPB was increased (both for staff and monitoring equipment). For instance, in the case of Luzhou the municipal government immediately approved the additional employment of 4 EPB staff and planned to appoint an additional 10 staff members to enhance environmental investigation and supervision, which did materialize. At the same time, budgets for both operation and equipment were increased (Luzhou EPB document no. 177, 2006). Third, EIARTR did temporarily stop industrial investment in polluting industries and projects, but it is unclear what the longer term environmental effects have been. After lifting the restrictions industrial investment and output often increased more than before, but it is unclear whether this industrial output was of a different, less polluting, nature. For instance, the EIA restrictions in Luzhou lasted for two months (26 December 2006 to 26 February 2007), and came together with a major set-back in industrial investments, and even a small set back in industrial output growth during these months. But during the two months after that period, industrial investment was higher than before the restrictions, as was industrial output growth.¹⁴ However, it is not

possible to relate these changes in industrial investment and output causally to changes in environmental performance. Fourth, some environmental targets were achieved to a certain extent through applying EIARTR, especially when the EIA restriction aimed at major environmental accidents in the region. For instance, MEP imposed the EIA restriction to Huzhou municipality in 2011 following a major lead pollution accident. MEP required Zhejiang provincial EPB to ensure that Huzhou government investigated and punished the responsible enterprises and scrutinized all enterprises involved in heavy metals. Enterprises that did not have an EIA or did not implement the EIA adequately had to stop operations. And the most severe environmental pollution problems with most complaints had to be addressed before the set deadline and the responsible persons had to be punished (MEP document no.584, 2011). In MEP's notice to Zhejiang provincial EPB on lifting the restriction, MEP argued that based on the on-site investigations and checks by both of them, MEP trusted that Huzhou had met the required conditions for lifting the restriction. Hence, this would indeed point at a significant environmental improvement and an effective instrument to obtain such improvements (MEP document no. 1267, 2011). Fifth, one could also imagine that frequent application of EIARTR may result in a preventive effect towards local and provincial governments. The possibility of being targeted for EIA restrictions in their jurisdiction might lead local leaders to take action to prevent a condition where EIA restriction could be enforced upon them. It is rather difficult to prove such a preventive effect and no such indications have been found yet. A sound legal basis of these measures, implementation of transparency, apply a longer time period and more experience with EIARTR makes such preventive behavior of local environmental authorities more likely. Finally, up till now application and thus environmental effectiveness of such EIA restriction measures obviously has been limited. There exist numerous situations in China where ambient environmental standards or total emissions in a region have been exceeded, but where EIA restrictions were not applied. A most notable and well-known case would be Beijing air pollution by for instance power companies and Beijing ambient air quality. For political reasons it is highly unlikely that EIA restrictions will be easily applied in such a situation/region, which severely limits the environmental effectiveness of the measure.

Common law solves enviro laws

Kuh 15 – Professor of Law, Maurice A. Deane School of Law at Hofstra University [Katrina Kuh, “ENVIRONMENTAL PRIVACY”, 2015, Accessed: 7-26-15, epubs.utah.edu/index.php/ulr/article/download/1319/1045] hk

Common law nuisance has, of course, evolved into a diverse panoply of environmental laws that require significant information for their implementation, thereby intersecting with interests in privacy.⁷¹ The discussion that follows identifies some of the ways that environmental laws demand information, the privacy issues that this can raise, and the accommodation struck between the regulatory need for information and privacy interests. The present survey is not complete—it does not claim to represent a categorical review of all environmental laws from all jurisdictions—but employs representative examples to illustrate some of the common privacy issues that arise with respect to the collection and use of information in support of environmental regulations that are most relevant to thinking about privacy in the context of

environmentally significant individual behaviors. At the outset, it is useful to distinguish between an environmental regulator requesting the submission of information (interrogation) (for example, requiring the submission of information to obtain a permit) and a regulator taking information, usually in the context of enforcement (surveillance) (for example, conducting searches or inspections to enforce an environmental statute).⁷² Examples drawn from the context of environmentally significant individual behaviors could include, with respect to interrogation, requirements that individuals reveal to regulators the content of their vehicle's tailpipe emissions by undergoing an emissions check⁷³ and, with respect to surveillance, a regulator's inspection of an individual's private property to ascertain the presence of a jurisdictional wetland under the CWA. ⁷⁴ This Section proceeds by providing an overview of the legal treatment of interrogation and then focuses on the legal treatment of environmental surveillance—specifically on the application of the Fourth Amendment to surveillance conducted in support of environmental statutes.

Link—Effective Authoritarianism

Surveillance is key to effective authoritarianism – government monitoring requires expansive data collection – the plan undoes this regime

Clarke 94 (Jun. 1994). Roger Clarke is a 40 year veteran of the information technology industry. He runs his own IT consulting firm specializing in the strategic policy aspects of eBusiness, information infrastructure, and data surveillance in policy. He has been a senior Information Systems academic at the Australian National University, a visiting professor of eCommerce at the University of Hong Kong, a visiting professor of Cyberspace Law and Policy at the University of New South Wales, and a visiting professor of Computer Science at the Australian National University. "Information Technology: Weapon of Authoritarianism or Tool of Democracy?" Roger Clark's Website. <http://www.rogerclarke.com/DV/PaperAuthism.html> //HS)

Under an authoritarian regime, the populace must be managed. Tools and techniques that have proven effective in managing raw materials, manufactured goods and animals, can be applied to humans too. A unique identifier for each person, and its general use by government agencies and other organisations which conduct transactions with people, are highly desirable tools for efficient social administration. Public administration systems must be designed to exercise control over people, in all of their various roles. There may be scope for at least some semblance of choice by individuals, but employees need to operate within a corporate culture, consumer demand needs to be statistically predictable, and citizens' freedom of choice needs to be constrained, lest unworkable parliaments eventuate, with too many splinter parties, independents and conscience votes. It is only logical that an authoritarian society should recognise the benefits of a unary executive branch, in which the boundaries between agencies are porous. In this way, data can flow freely (such that transaction data and client histories can be cross-verified, and changes of address and status cross-notified), and systems can be tightly integrated and efficient (and hence misdemeanours by people in one arena, such as traffic fines, can be readily punished through another, such as denial of a marriage licence, permission to move apartments, or approval for travel). Authoritarian IT-based systems use a centralised architecture. Elements may be physically dispersed, however, to achieve efficiency in data transmission, and to provide resilience against localised threats such as natural disasters and sabotage by dissidents. The general shape of such systems is that provided by cyberneticians: a cascade of control loops, culminating in a master-controller. In authoritarian regimes, information privacy and data security play important roles. These have little to do with the protection of people, however, but rather serve to protect the integrity of data, and of the system, and to legitimate the repressive system through the provision of nominal rights for data subjects. For discussions of the authoritarian application of technology in general, see Ellul (1964) and Packard (1964), and of IT in particular, see Rule (1974), Weizenbaum (1976), Kling (1978), Rule et al. (1980), Burnham (1983), OTA (1986), Laudon (1986), Clarke (1988), Davies (1992) and Ronfeldt (1992, pp.277-287). 4. Instances of Authoritarian Application of I.T. The reader is by now (hopefully) annoyed by the extent to which the foregoing description has been a caricature, hyperbole, a 'straw man' designed to be easily criticised. However there are manifold instances of just these features in IT-based public administration systems, both those in operation and being conceived, in countries throughout the world. In North America, whose use of IT has been well ahead of that in most other countries, a 'national data center' was

proposed as early as 1966. Elements of it have emerged, such as the widespread use of the Social Security Number (SSN) as a unique identifier, proposals for a health id card, and the all-but uncontrolled use of computer matching and profiling. Some protagonists in the current debates surrounding the national information infrastructure (NII) are seeking a network consistent with authoritarian control; for example, by insisting on use only of those cryptographic techniques which are 'crackable' by national security agencies. Australia has followed the North American tendency. It flirted with a national identification scheme in the late 1980s (Greenleaf & Nolan 1986, Clarke 1987, Graham 1990). When that was overwhelmingly rejected by the populace, senior executives in public sector agencies 'went underground'. They have variously gained Parliamentary support for, and smuggled through, a series of measures whose cumulative impact is in some ways already more emphatic than the 'Australia Card' would have been (Clarke 1992). The cultures of many Asian nations are well-suited to authoritarian regimes. There are elements of high-social-efficiency applications of IT in such nations as Singapore. Busy Asian countries have shown especial interest in vehicle monitoring systems. Thailand and the Phillipines appear eager to act as laboratories for United States corporations developing identification and surveillance technologies. Under China's strongly authoritarian political system, it is unlikely that IT will be applied in any way other than to bolster existing relationships between its citizens and the State. In Western Europe, Scandinavian countries lead the way with their social welfare systems and the heavy dependence of their citizens on the State. Denmark's citizen register is a model for authoritarian regimes everywhere, and a looming export success. Other countries are keenly adopting proposals to use IT to constrain the populace, by such means as identification cards (variously for football fans, patients, and the public in general), and the integration of data systems between government agencies, and between countries within and beyond the European Community. In Central and Eastern Europe, there was an expectation that democratic, free enterprise systems would arise to replace the authoritarianism of the collapsed communist regimes. In practice, few of those countries have ever known freedom of choice, and genuine democracy (as distinct from variants of authoritarianism referred to in local lexicons as 'democracy') is not on the agenda of many of these countries. Their focus is on economic growth, rationalist solutions to economic and social problems, and centralism. IT is seen as a tool of authoritarianism, not of democracy; of centralised power, not of a pluralist body politic; and of control, not of freedom. It can come as no surprise that public administration systems are being conceived in these ways. Applications of all kinds are developed by well-trained and self-confident engineers, using unequivocally rationalist techniques. System design comprises the expression of relevant parts of the present and near-future world in a formal model which has the important characteristic of being 'mappable' onto a machine. The application's users and 'usees' (i.e. the people affected by it) are treated as objects to be modelled, not as stakeholders with interests in the process and its outcomes. Human language is treated as though it were an (imprecise) formalism, rather than a means of interaction among people. The designers fail to notice that their formalisms cannot reflect the complexities, ambiguities and dynamism inherent in social systems, and the negotiation and accommodation processes which take place among humans and social groups (Clarke 1992b, Ciborra 1992, Agre 1994, Gronlund 1994). Hence the problems highlighted in this paper are to a considerable degree inherent in the techniques

currently used to develop IT applications generally. Nonetheless, their greatest impact on people's freedom is by way of public administration systems.

Link—High Risk Populations

Surveilling humans is key

Keusch et al 9 - Professor of Medicine and International Health [Gerald T Keusch, "Sustaining Global Surveillance And Response To Emerging Zoonotic Diseases", 2009, Accessed 7-28-15, ProQuest] MC

Second, in countries where disease surveillance in animal populations is absent or weak, ministries of health, agriculture, and natural resources should collaborate as broadly as necessary to develop, enhance, and implement disease surveillance and response systems in human populations that are at high risk for zoonotic disease infection. For example, surveillance is needed in the following high-risk human populations:

- Occupational groups that are at high risk for infection with zoonotic diseases. Such workers include livestock, dairy, and poultry workers; live-animal market workers; veterinarians and animal health technicians; hunters of bushmeat and other wildlife; food preparers (and restaurant workers handling food prepared from bushmeat and exotic animals); slaughterhouse workers; and laboratory scientists and technicians working with animals;
- Healthcare workers who could spread zoonotic diseases to the general public;
- Household and village members who keep live animals within their living quarters or come in close contact with animals in village settings; and
- People engaging in high-risk behaviors known to increase risk of exposure to zoonotic diseases. Such high-risk behaviors include close contact with wildlife and exotic animals; preparing and consuming bushmeat; culturally traditional animal husbandry practices and livestock production systems; failure to use personal protection equipment; failure to follow recommended hand-washing practices.

Link—Integrated Systems Key

Integrated, comprehensive systems are key – the aff takes one link out of the chain

Keusch et al 9 - Professor of Medicine and International Health [Gerald T Keusch, "Sustaining Global Surveillance And Response To Emerging Zoonotic Diseases", 2009, Accessed 7-28-15, ProQuest] MC

Fourth, ministries of health, agriculture, and natural resources will need to develop and formalize a system wherein surveillance information from these different human and animal populations will be integrated and synthesized for analysis. These ministries will also need to develop and formalize effective communication and reporting systems to ensure real-time reporting of linked surveillance data from human and animal populations nationally and internationally to those responsible for planning and instituting prevention, protection, and response interventions. The Danish Zoonosis Centre could be a model of an effectively integrated national program for zoonoses (see Box 8-1). Finally, science-based nongovernmental organizations (NGOs) have a critical role to play in national and global efforts to develop an integrated surveillance system. In many cases these organizations have extremely wide geographic reach, with offices and trained staff based in countries with the highest risk for new zoonoses. They have often developed the most effective and closest relationships and collaborations with local communities. NGOs have the capacity to act nimbly to rapidly refocus resources on outbreaks during crises, and they are usually not encumbered by geopolitical constraints. Science-based NGOs—such as Wildlife Conservation Society, Wildlife Trust, The Consortium for Conservation Medicine, and EnviroVet—have launched programs specifically targeted at many of this committee's recommendations and should be actively involved in future efforts to address them. While the focus of this committee is primarily scientific, it recognizes that advocacy groups can also provide an important push for integrated surveillance by urging relevant policy changes involving food production, wildlife conservation, poverty-alleviation, and global health.

Impact—Environment

Environmental collapse approaching a tipping point – causes extinction

Common Dreams 12 - Independent, non-profit organization [“Earth Facing Imminent Environmental 'Tipping Point': Report”, June 07, 2012, Accessed 7-28-15, <http://www.commondreams.org/news/2012/06/07/earth-facing-imminent-environmental-tipping-point-report>] hk

Humankind is facing an imminent threat of extinction, according to new research released on Wednesday by the science journal Nature. The report Approaching a state shift in Earth's biosphere reveals that our planet's biosphere is steadily approaching a 'tipping point', meaning all ecosystems are nearing sudden and irreversible change that will not be conducive to human life. The authors describe what they see as a fast paced 'state shift' once the tipping point is reached, which contrasts with the mainstream view that environmental change will take centuries. "It's a question of whether it is going to be manageable change or abrupt change. And we have reason to believe the change may be abrupt and surprising," said co-researcher Arne Mooers, a professor of biodiversity at Simon Fraser University in Canada's British Columbia. "The data suggests that there will be a reduction in biodiversity and severe impacts on much of what we depend on to sustain our quality of life, including, for example, fisheries, agriculture, forest products and clean water. This could happen within just a few generations," stated lead author Anthony Barnosky, a professor of integrative biology at the University of California in Berkeley. "My colleagues who study climate-induced changes through the Earth's history are more than pretty worried," he said in a press release. "In fact, some are terrified," said co-researcher Arne Mooers, a professor of biodiversity at Simon Fraser University in Canada's British Columbia. The report, written by 22 scientists from three continents ahead of this year's Rio+20 summit, claims that the 'state shift' is likely; however, humans may have a small window to curb over-consumption, over-population growth and environmental destruction, with drastic efforts to change the way we live on planet earth through international cooperation. Climate change, population growth and environmental destruction could cause a collapse of the ecosystem just a few generations from now, scientists warned on Wednesday in the journal Nature. The paper by 22 top researchers said a "tipping point" by which the biosphere goes into swift and irreversible change, with potentially cataclysmic impacts for humans, could occur as early as this century. [...] The Nature paper, written by biologists, ecologists, geologists and palaeontologists from three continents, compared the biological impact of past episodes of global change with what is happening today. The factors in today's equation include a world population that is set to rise from seven billion to around 9.3 billion by mid-century and global warming that will outstrip the UN target of two degrees Celsius (3.6 degrees Fahrenheit). The team determined that once 50-90 percent of small-scale ecosystems become altered, the entire eco-web tips over into a new state, characterised especially by species extinctions. Once the shift happens, it cannot be reversed. To support today's population, about 43 percent of Earth's ice-free land surface is being used for farming or habitation, according to the study. On current trends, the 50 percent mark will be reached by 2025, a point the scientists said is worryingly close to the tipping point. If that happened, collapse would entail a shocking disruption for the world's food supply, with bread-basket regions curtailed in their ability to grow corn, wheat, rice, fodder and other essential crops. "It really will be a new world, biologically, at that point," said lead author

Anthony Barnosky, a professor of integrative biology at the University of California in Berkeley. Or, as Canadian co-author Arne Mooers, at Simon Fraser University in British Columbia, puts it: "Once the shift occurs, they'll be no going back." A shift or tipping point is "speculation at this point," Mooers told Postmedia News. "But it's one of those things where you say: 'Hey, maybe we better find out,' because if it's true, it's pretty serious." [...] The climate is warming so fast that the "mean global temperature by 2070 (or possibly a few decades earlier) will be higher than it has been since the human species evolved," they say. And to support the current population of seven billion people, about 43 per cent of Earth's land surface has been converted to agricultural or urban use. The population is expected to hit nine billion by 2045 and they say current trends suggest that half Earth's land surface will be altered by humans by 2025. That's "disturbingly close" to a potential global tipping point, Barnosky says in a release issued with the report. The study says tipping points tend to occur when 50 to 90 per cent of smaller ecosystems have been disrupted. "I think that if we want to avoid the most unpleasant surprises, we want to stay away from that 50 per cent mark," Barnosky says. The "ultimate effects" of a state shift are unknown, but the researchers suggest it could have severe impact on the world's fisheries, agriculture, forests and water resources. And they warn that "widespread social unrest, economic instability and loss of human life could result."

Impact—Peak Oil

Peak oil destabilization causes extinction

Mórrigan 10 – A principal research associate of Global Climate Change, Human Security & Democracy and a member of its Global Academic Council [Tariel Mórrigan, “PEAK ENERGY, CLIMATE CHANGE, AND THE COLLAPSE OF GLOBAL CIVILIZATION”, October 2010, Accessed 7-28-15, http://www.global.ucsb.edu/climateproject/publications/pdf/Morrigan_2010_Energy_CC4.pdf] hk

While reduced GHG emissions may help to mitigate climate change, peak oil may interfere with global efforts to further mitigate and adapt to climate change. It is possible that climate negotiations may be abandoned or at least marginalized for a long time (if not permanently) as the crisis of peak oil and economic shock and awe overwhelms the stability and security of every nation. It will likely require a concerted and transcendent effort on the part of any remaining international climate negotiators, their governments, and the public to pursue a meaningful international climate policy – much less a binding international climate treaty. Two main arguments against pursuing an international climate policy will likely be made: (1) the peak oil shock and the associated collapse of societies and the global economy will be a more pressing issue; and (2) climate change will no longer be a concern since most oil demand will have been destroyed which will cause GHG emissions to decline sharply. The international community and climate negotiators urgently need to review and reconsider the science and data regarding climate change and energy supplies. If this reassessment and discourse does not occur, not only will the international climate negotiations be ineffective, if it is not entirely destined to failure, human security and the stability of all societies may be gravely threatened by future climate changes. Peak energy resources, peak phosphorus, dwindling mineral and natural resources, the passing of thresholds for dangerous climate change, a human-driven global mass extinction event, peak economy, possible peak food production, and peak globalization – this convergence of events all at the same time will surely create multiple systemic crises throughout the world, which will undoubtedly lead to a collapse of the current paradigm and the emergence of a new world order. The best and the worse of humanity will express itself in these coming times after peak oil. While civil unrest, revolutions, coups, conflicts and wars will likely occur as an indirect result of peak oil, the overall global outcome could either be relatively peaceful and benevolent or catastrophic. The international and local communities can come together and cooperate to create a benevolent and sustainable new world order, or they can drive the world to further humanitarian and environmental catastrophe. Currently, economies worldwide are unraveling as the global economic system can no longer support itself without cheap and abundant energy resources. The world is beginning a rapid and volatile transition: currency and trade wars; deteriorating wars in the Middle East and elsewhere; countless regional and intranational conflicts and coups; rapidly shifting and volatile geopolitics; the mobilization of extremist movements; the decline of the West and East; exponential population and economic growth; soaring food prices; increasing natural resource scarcity; energy shortages; accelerating rates of extinction; and accelerating environmental degradation and climate change. At this point, even a global nuclear war might be possible, if either or both state and non-state actors escalate multiple crises into bitter conflict. This current transition of economic decline that was triggered

by the oil price shock starting in 2007 and culminating in the summer of 2008 will likely accelerate and become more volatile once oil prices exceed \$80 – \$90 per barrel for an extended time. Assuming BAU, oil prices are projected to reach \$100 – \$108 per barrel by 2020 and \$115 – \$133 per barrel by 2030 (in real 2008 dollars). Demand destruction for oil may be somewhere above \$80 per barrel and below \$141 per barrel. So, it is likely that very few will be able to pay afford to produce or purchase oil in the near future. This will likely occur once global production enters terminal decline and major supply shortfalls occur in the near-term. At this point, the global economy and world order will pass the edge of the cliff into collapse without a transcendent effort by the international community to cooperate and manage the collapse as harmoniously and securely as possible. With global civilization approaching the proverbial cliff's edge, there is little time left to prepare for peak oil and the collapse of global civilization. The new world order that will emerge will be largely determined by local and international governance responses. Peak oil will surely destabilize the world as confusion and collapse ensue. Climate change will further challenge societies' abilities to adapt and prosper. Nevertheless, the human species has the unprecedented opportunity from this unprecedented crisis to radically change the world for the betterment of all humanity. The world also has the opportunity and capacity to turn this opportunity into a catastrophe of apocalyptic proportions. One way or another, the ending of the Age of Oil is the beginning of very uncertain times.

Impact—Opop—War

Overpopulation sparks global conflict and escalating war.

Steve Thomas, a member of Global Population Concerns. Global Population Concerns, November 1994, "Overpopulation and Violence, 6/27/07. <http://perc.ca/PEN/1994-11/s-thomas.html>

The world's population is increasing at a rate of over 1.5 million people a week—95 million people a year—equivalent to a country the size of Mexico. Population is the key to the matrix of environmental degradation, scarcity of resources and political disorder. It is the most easily controlled factor and therefore should be the highest priority on any agenda.

Overpopulation results in a scarcity of water, a scarcity of arable land, deforestation and depletion of fish stocks in the oceans. Because of population pressures, especially in the third world, the environment is being continually despoiled. There are limits to the resources needed to satisfy basic human needs: food, shelter, education and health care. Poverty, ignorance, fear and hunger exacerbate ethnic conflict and political instability. The inevitable result is violence, civil war and inter-state strife. Anwar Sadat of Egypt and King Hussein of Jordan both stated that the only reason they would go to war would be over water. Both countries have high birthrates and a pressing need for water. Syria and Iraq both rely on water from the Euphrates. This river originates in Turkey and its flow is now being altered by the Turkish southeast Anatolia project. This will have serious consequences for the region. India and Bangladesh both have increasing population pressures on their shared river, the Ganges. China with 23% of the earth's people has only 8% of the world's water. But as much of a tinderbox is the paucity of arable land on our precious planet. This is the root cause of many explosive situations around the world. Some recent examples are Haiti, Central America and Rwanda. As land is subdivided because of inheritance, farmers are no longer able to support themselves on family farms and so migrate to the cities. The scarcity of land is often a conflagration point for ethnic and tribal warfare. Moreover, landowners in certain countries are under pressure to share ownership of the land with the tenants who traditionally farmed for them. As good land gets scarcer, the common crop and grazing land owned by the whole village is disappearing, leaving more destitution. Inequity and poverty breed violence. Another factor festers. In countries such as Haiti and Somalia the depletion of forests leads to soil erosion and lack of fuel for cooking fires. Internecine strife and tribal warfare results when agrarian people are forced to move and they encroach on others' land. In the African Sahel and West Africa deforestation causes erosion, crop failure and famine. There are vast migrations of indigents, destabilizing neighbouring countries and sparking civil wars. Finally (and this example hits home to Canadians), because of overfishing, climactic changes and technological innovation in fishing methods, fish stocks are fast declining in many areas of the world. Two notable examples are the Philippines and Canada's Grand Banks. As we know in Canada, shortages of fish result in a change of lifestyle for many, much international bickering and more significantly the occasional use of gunboats to further national interests. A shortage of fish cannot help but displace a large number of gainfully employed families who have fished the seas for generations. Bitterness, economic despair and frustration follow, increasing international tensions. Shortages of this valuable foodstuff only serve to increase pressure for other sources of food in a world of already increasing

demand. We now see finite limits to the vast bounty of the ocean. These finite resources of water, land, forests and fish are being consumed at an alarming rate by an ever-increasing population. The most cost-effective method of dealing with this environmental deterioration and diminution of scarce resources is to ease the population growth in developing countries. Some suggest that the level of population in the world today is not sustainable at the high levels of consumption. We may be faced with apocalyptic images of starving and emaciated people killing each other in anarchic chaos that could well reach our own borders. Even today millions of people are on the move, struggling to avoid war, famine, plagues and other catastrophes in their homelands.

Left unchecked overpopulation will cause extinction.

John Cairns, Jr., Department of Biology at VA Polytechnic Institute and State University, April 30, 2004, "You and Earth's resources," 6/27/07, <http://www.int-res.com/articles/esep/2004/E45.pdf>, MM

The twenty-first century represents a defining moment for humankind. This globally dangerous period of human history has two major threats: (1) overshooting global carrying capacity for humans and (2) major damage to Earth's ecological life support system as well as natural capital and the ecosystem services it provides. Should humankind fail to replace unsustainable practices with sustainable practices before the middle of the twenty-first century, the irresponsibility and lack of concern for posterity will probably result in global catastrophe. Humankind must repudiate some beliefs and alter its attitude towards technology and exponential economic growth.

Impact –Opop—Terror

Continued overpopulation will make terrorism inevitable.

Jared Diamond, Professor of Geology at UCLA. (Staff) 2005. "Disaster in the wings," Manchester Guardian Weekly. Lexis.

Countries that are environmentally stressed, overpopulated, or both, become at risk of getting politically stressed and of their governments collapsing. When people are desperate, undernourished and without hope, they blame their governments, which they see as responsible for or unable to solve their problems. They try to emigrate at any cost. They fight each other over land. They kill each other. They start civil wars. They figure that they have nothing to lose, so they become terrorists, or they support or tolerate terrorism. The results of these transparent connections are far-reaching and devastating. There are genocides, such as those that exploded in Bangladesh, Burundi, Indonesia and Rwanda; civil wars or revolutions, as in most of the countries on the lists; calls for the dispatch of troops, as to Afghanistan, Haiti, Indonesia, Iraq, the Philippines, Rwanda, the Solomon Islands and Somalia; the collapse of central government, as has already happened in Somalia and the Solomons; and overwhelming poverty, as in all these countries.

Impact—Opop—Warming

Overpopulation is the most important factor contributing to global warming.

Tulsa World (Oklahoma), 12/11/06. "Overpopulation a key factor in global carbon dioxide."

"Overpopulation does contribute to greenhouse gas emission but not due to breathing -- it's the more people we have, the more cars we have, and the more energy we need to heat and cool homes and the more trees we cut down to build homes. It is overpopulation that is the root problem of all problems," said Hobson. "Overpopulation does contribute to the problem, but not because of all the extra breathing. If we only had half as many people, we would be emitting only half as much carbon. Everybody concerned with global warming is also concerned with overpopulation. They are eager to level it off somewhere below the 12 billion that it could become -- that's about twice what it is today -- and keep it under 8 billion. "Greenhouse gas emission is proportional to the number of people, but not because of breathing. It's because of technology -- vehicles (25 percent) and power plants (50 percent). But you could say that overpopulation is 100 percent responsible because if there were no people, there would be no global warming, and if there were half as many people, there would be half the global warming.

Impact—Wolves

EPA using drones to monitor the environment now

Watson 12 (Paul Joseph, editor and writer for Prison Planet “YES, THE EPA IS USING SPY DRONES TO MONITOR FARMS”, June 22nd, <http://www.infowars.com/yes-the-epa-is-using-spy-drones-to-monitor-farms/>)CDD

In other words, the EPA has since at least 2009 developed the capability to use unmanned drones to monitor man-made pollution and spy on farms and ranches for the purpose of land management. In addition, a separate 2005 EPA report details how the agency planned to use “Unmanned Aerial Vehicles (UAV), in a multi-stage approach to meet EPA information needs.” Not only has the EPA developed its own spy drones for the task of monitoring the environment, it has also given grants to other organizations for the same purpose. A 2008 progress report found on the EPA website describes a a four-year grant to Syracuse University. One “major outcome” of the project is listed as the, “Successful development and testing of an unmanned aerial vehicle for urban airshed monitoring to measure pollutant levels above buildings.” So yes, despite what you read in the Washington Post and the rest of the establishment media echo chamber, the EPA is using drones to spy on land use and monitor pollution. The EPA is using unmanned aerial vehicles to conduct surveillance of ranches and farms and has been doing so for years.

The American grey wolf population is on the brink now- Being taken off of federal protection radically reduced their population

Predator defense 14 (An organization dedicated to the defense of predators, “Coming Soon: A World without Wolves?”, Spring, <http://www.predatordefense.org/wolves.htm>)CDD

Wolves were rescued from the brink of extinction over 35 years ago when they gained federal protection under the Endangered Species Act. Today the American wolf is again in grave danger. Since President Obama removed the gray wolf from the endangered species list in April 2011 and turned management of these majestic animals over to state wildlife agencies, over 3,600 wolves have been senselessly slaughtered by sport hunters and trappers alone in Idaho, Montana, Wyoming, Minnesota, Wisconsin and Michigan (see sport kill totals in sidebar at right). 1,141 of these wolves were killed during the 2012-13 season alone. This "kill tally" does not include the scores of wolves slaughtered by federal and state predator control programs. The situation is now dire, as the U.S. Fish and Wildlife Service intends to remove protections for wolves across nearly the entire country. This will be disastrous for gray wolf recovery.

Grey wolves were re-added to federal protection, but can't catch poachers

Predator defense 14 (An organization dedicated to the defense of predators, “Coming Soon: A World without Wolves?”, Dec 19th, <http://www.predatordefense.org/wolves.htm>)CDD

A real gift of life arrived in a legal package for wolves in the Great Lakes states where a coalition of humane organizations triumphed in a lawsuit to stop the killing of wolves in Michigan,

Minnesota and Wisconsin. The judge found the 2012 federal delisting of wolves to be "arbitrary and capricious" in those states and reinstated federal protection for them under the Endangered Species Act. We hope this ruling remains intact to allow the packs in those states to reestablish themselves and recover from the senseless assault waged by hunters, trappers and ranchers facilitated under the states' management agencies.

Wolf poaching is driving them to extinction

Wolf world 14 (A wolf conservation organization, "WOLF HUNTING", <http://www.wolfworlds.com/wolf-hunting/>)CDD

Due to the drastically low numbers of wolves, it is illegal in most areas to hunt them. Some populations such as those in Montana are now high enough again that limited hunting of them is allowed. There is still a great deal of illegal hunting that goes on behind the scenes though. For many hunters the thrill of finding a wolf in Alaska or Canada is something that they are very interested in doing. They can spend days or weeks in the wilderness trying to track them down. With limited numbers it has become increasingly hard to find them to hunt. Yet for many that is part of the fun of trying to make it happen. Some of them also hire guides in these areas that know where to find the wolves.

Surveillance Drones key to catching poachers

Hausheer 12 (Justine, writer for the national Audubon society "High-flying Surveillance Drones Protect Wildlife from Poachers", June 26th, <https://www.audubon.org/news/high-flying-surveillance-drones-protect-wildlife-poachers>)CDD

Conservationists working to protect endangered species may soon have a new weapon in their arsenal—one borrowed from the military. Scientists working with the World Wildlife Fund (WWF) have created conservation drones—unmanned aerial vehicles that can monitor remote areas for poaching and other illegal activities. On June 12 two drones were tested in Nepal's Chitwan National Park, home to the endangered Bengal tiger and Indian rhinoceros. Attending the event were representatives from the Nepalese government, army, National Parks department, and WWF Nepal. The drones are equipped with GPS and a camera, allowing them to collect photographs and videos that can help conservationists keep an eye on wildlife in remote locations. Only six and a half feet wide, the drones are powered by rechargeable batteries and fly a pre-programmed route. The drones were designed by Serge Wich, a biologist at the University of Zurich, and Lian Pin Koh, an ecologist at the Swiss Federal Institute of Technology in Zurich. Wich and Koh have already used drones to survey for orangutans in Indonesia and chimpanzees in Tanzania. In addition to species-specific searches, they're also useful for general habitat monitoring or forest assessment. Although many endangered animals like rhinos and tigers are protected in national parks, borders do little to dissuade determined poachers, who often kill the animals within park boundaries. In 2000 there were an estimated 544 rhinos in Chitwan National Park, but by 2008 poaching had lowered that number to an estimated 408 rhinos. Drones will add an extra level of protection. "We hope these drones will be useful in detecting poachers as they enter the parks," said Wich to the BBC. "If they see poachers in the area, they can send out a team to catch them."

Wolf biodiversity loss leads to extinction

Yule et al. 13 (Jeffrey V., professor of Environmental studies at Dixie state University, Robert J. Fournier, Patrick L. Hindmarsh, professor of biology at Louisiana Tech University, "Biodiversity, Extinction, and Humanity's Future: The Ecological and Evolutionary Consequences of Human Population and Resource Use", April 2nd, Humanities 2013, 2nd issue)CDD

Ecologists recognize that the particulars of the relationship between biodiversity and community resilience in the face of disturbance (a broad range of phenomena including anything from drought, fire, and volcanic eruption to species introductions or removals) depend on context [16,17]. Sometimes disturbed communities return relatively readily to pre-disturbance conditions; sometimes they do not. However, accepting as a general truism that biodiversity is an ecological stabilizer is sensible—roughly equivalent to viewing seatbelt use as a good idea: although seatbelts increase the risk of injury in a small minority of car accidents, their use overwhelmingly reduces risk. As humans continue to modify natural environments, we may be reducing their ability to return to pre-disturbance conditions. The concern is not merely academic. **Communities provide the ecosystem services on which both human and nonhuman life depends**, including the cycling of carbon dioxide and oxygen by photosynthetic organisms, nitrogen fixation and the filtration of water by microbes, and pollination by insects. **If disturbances alter communities** to the extent that they can no longer provide these crucial services, **extinctions (including, possibly, our own) become more likely**. In ecology as in science in general, absolutes are rare. Science deals mainly in probabilities, in large part because it attempts to address the universe's abundant uncertainties. Species-rich, diverse communities characterized by large numbers of multi-species interactions are not immune to being pushed from one relatively stable state characterized by particular species and interactions to other, quite different states in which formerly abundant species are entirely or nearly entirely absent. Nonetheless, in speciose communities, the removal of any single species is less likely to result in radical change. That said, there are no guarantees that the removal of even a single species from a biodiverse community will not have significant, completely unforeseen consequences. Indirect interactions can be unexpectedly important to community structure and, historically, have been difficult to observe until some form of disturbance (especially the introduction or elimination of a species) occurs. Experiments have revealed how the presence of predators can increase the diversity of prey species in communities, as when predators of a superior competitor among prey species will allow inferior competing prey species to persist [18]. **Predators can have even more dramatic effects on communities**. The presence or absence of sea otters determines whether inshore areas are characterized by diverse kelp forest communities or an alternative stable state of species poor urchin barrens [19]. In the latter case, the absence of otters leaves urchin populations unchecked to overgraze kelp forests, eliminating a habitat feature that supports a wide range of species across a variety of age classes. Aldo Leopold observed that when trying to determine how a device works by tinkering with it, the first rule of doing the job intelligently is to save all the parts [20]. The extinctions that humans have caused certainly represent a significant problem, but there is an additional difficulty with human investigations of and impacts on ecological and evolutionary processes. Often, our tinkering is unintentional and, as a result, recklessly ignores the necessity of caution. Following the logic inherited from Newtonian physics, humans expect single actions to have single effects. Desiring more game species, for instance, **humans typically hunt** predators (in North America, for instance,

extirpating wolves so as to be able to have more deer or elk for themselves). Yet removing or adding predators has far reaching effects. Wolf removal has led to prey overpopulation, plant over browsing, and erosion [21]. After wolves were removed from Yellowstone National Park, the K of elk increased. This allowed for a shift in elk feeding patterns that left fewer trees alongside rivers, thus leaving less food for beaver and, consequently, fewer beaver dams and less wetland [22,23]. Such a situation represents, in microcosm, the inherent risk of allowing for the erosion of species diversity. In addition to providing habitat for a wide variety of species, wetlands serve as natural water purification systems. Although the Yellowstone region might not need that particular ecosystem service as much as other parts of the world, freshwater resources and wetlands are threatened globally, and the same logic of reduced biodiversity equating to reduced ecosystem services applies. Humans take actions without considering that when tugging on single threads, they unavoidably affect adjacent areas of the tapestry. While human population and per capita resource use remain high, so does the probability of ongoing biodiversity loss. At the very least, in the future people will have an even more skewed perspective than we do about what constitutes a diverse community. In that regard, future generations will be even more ignorant than we are. Of course, we also experience that shifting baseline perspective on biodiversity and population sizes, failing to recognize how much is missing from the world because we are unaware of what past generations saw [11]. But the consequences of diminished biodiversity might be more profound for humans than that. If the disturbance of communities and ecosystems results in species losses that reduce the availability of ecosystem services, human K and, sooner or later, human N will be reduced.

XT Drones Key

Drones are key to nighttime surveillance

Shapiro 13 (Jenna, editorial intern for TakePart, "Rhino Poaching to be Stopped by Surveillance From the Sky", 1/8, <http://www.takepart.com/article/2013/01/08/rhinos-woes-fight-rise-poaching-conservationists-turn-drones>)CDD

The Ol Pejeta Conservancy, a 90,000-acre park that's home to four of the seven remaining wild Northern White Rhinoceroses, has partnered with Unmanned Innovation to develop an aerial ranger to help protect the treasured creatures from being rhino poaching victims. **The drone will fly over the park**—covering about 50 miles of land per hour and a half flight—**and livestream HD video feed to park rangers.** Each rhino will also be outfitted with radio frequency ID tags. These unique tags will allow the drone to locate each animal using GPS technology. **Knowing a drone is guarding the park should act as a big deterrent to potential poachers.** Richard Ruggiero, Chief of the U.S. Fish and Wildlife Service's Africa Program, told TakePart he believes the drone will be a boon to conservation efforts: **"[drones] are relatively inexpensive, have a long flight duration and can carry cameras that can help with surveillance."** Ruggiero stressed that **the drone will be especially helpful at nighttime, when most rhino poaching occurs.** **"At night you have trouble monitoring** [the animals] **but a drone is able to use thermal imaging,** while flying very quietly, to identify the rhinos and identify poachers." While **there are countless benefits to using drones to stop** rhino **poaching,** Ruggiero does not think human guards will be abandoned altogether: "It's not realistic to say it will be all drones. It's going to be a hybrid system."

XT Keystone Species

Wolves are a keystone species- They're crucial to biodiversity

Munscher 13 (Eric, Ecologist / Herpetologist at SWCA Environmental Consultants, "Understanding the Role of Keystone Species in Their Ecosystems", 7/7, <http://www.swca.com/index.php/media/newsdetail/understanding-the-role-of-keystone-species-in-their-ecosystems/>)CDD

A keystone species is one that plays a unique and crucial role in the way an ecosystem functions. It has a disproportionately large effect on its environment relative to its abundance. There are two hallmarks of a keystone species. First, the presence of a keystone species is crucial in maintaining the integrity of its ecosystem through species diversity and organization. Second, these species are relatively more important in structuring their ecosystem when compared to most other species of equal biomass found within their community. Like the keystone at the top of a masonry arch that keeps a whole structure from collapsing, a keystone species can be the central supporting element that allows its ecosystem to function as we know it. The loss of these species often can result in trophic level collapse. Given their perceived importance, some ecologists have suggested that management of individual keystone species should be the focus for managing the entire community. In this article we discuss two examples that showcase the importance of keystone species to their ecosystems and the species communities within those ecosystems. A Cascading Effect Wolf Once abundant throughout the Western United States, the gray wolf (*Canis lupus*) was almost driven to extinction by human persecution. As wolves disappeared from the Yellowstone National Park ecosystem in the early 1900s, the resident elk population significantly increased. This resulted in overgrazing by elk of numerous plant species and the local extirpation of some of the park's flora. This loss had a negative effect on other organisms dependent on these plant species for survival. For example, heavy browsing pressure prevented tree seedlings from reaching maturity. Over time, the natural attrition of large trees along creeks and rivers decreased stream bank stability, canopy cover, and therefore shade. As a result, water temperatures increased, which in turn reduced the abundance of some fish species within the park. Not only did the loss of the gray wolf affect the number of elk in the park, it had a cascading effect on the entire ecosystem. The gray wolf was listed as endangered in 1967 under a precursor to the Endangered Species Act (ESA), the Endangered Species Preservation Act of 1966. The Yellowstone population recovered following the release of 66 gray wolves from Canada in 1995-1996. As the population thrived, predation decreased elk numbers, resulting in decreased browsing pressure. This in turn allowed the vegetation to change through natural succession, and the ecosystem is returning to its pre-wolf eradication structure. The recovery of the gray wolf in Yellowstone demonstrates how crucial keystone species are to maintaining the integrity of their ecosystems. Most importantly, the preservation and restoration of keystone species is essential for maintaining and/or reestablishing the historic structure and function of the ecosystems they inhabit.

Impact—Bio Terror

Independently, environmental surveillance can prevent bioterror

Shulman et al 12 - Central Virology Laboratory, Public Health Services, Israel Ministry of Health Sheba Medical Center and Dept. of Epidemiology and Preventive Medicine, School of Public Health, Sackler Faculty of Medicine [Shulman LM, Manor Y, Sofer D, Mendelson E, "Bioterrorism and Surveillance for Infectious Diseases - Lessons from Poliovirus and Enteric Virus Surveillance", February 18, 2012, Accessed 7-28-15, <http://www.omicsonline.org/bioterrorism-and-surveillance-for-infectious-diseases-lessons-from-poliovirus-and-enteric-virus-surveillance-2157-2526.S4-004.php?aid=4691#a1>] hk

These VDPV studies illustrate four additional principles and some limitations of environmental surveillance [1] that can be applied toward bio-defense. (1) Environmental surveillance is sensitive enough to detect virus excreted by one or a very small number of individuals in very large populations. (2) A negative finding does not mean the absence of the virus since the sensitivity is at the limits of detection. Most virus positive sewage samples contained one or at most a few poliovirus isolates, whereas it is estimated that 10⁷ viruses are excreted per gram of feces [1]. Intermittency may also reflect the finding that poliovirus was isolated in most but not every stool sample collected from an identified, persistently infected individual [25]. (3) When enough surveillance sites are re-sampled for sufficiently long intervals it may even be possible to follow movements of the infected individual within large populations. This is illustrated by the shift from Jerusalem to Tel Aviv of the source of the second event (blue boxes in Table 1), and the shift within Tel Aviv of the source of the first event, i.e. the two times when progeny from the first event (pink boxes in Table 1) were isolated from the site on the Kav B branch, rather than along the Ayalon branch. And (4) The ability of environmental surveillance to determine the pattern of excretion within a region, specifically whether one individual or more than one is infected and when there is more than one, whether they live or at least excrete in different regions of the city. This is most clearly illustrated by the isolation of two unrelated VDPVs in the same sample (blue and pink box Table 1) from Reading site on March 14th 2001 and the exclusive finding of isolates related to only one at simultaneously sampled upstream sites along the Ayalon trunk line. For reference, the Reading site is located downstream of the Ayalon and Kav B trunk lines from which most epidemiological event one and two VDPV2s were previously isolated, respectively.

Impact—Disease

Environmental surveillance k2 prevent disease spread

Manor et al 14 – Contributors to the EuroSurveillance [Manor Y, Shulman LM, Kaliner E, Hindiyeh M, Ram D, Sofer D, Moran-Gilad J, Lev B, Grotto I, Gamzu R, Mendelson E “INTENSIFIED ENVIRONMENTAL SURVEILLANCE SUPPORTING THE RESPONSE TO WILD POLIOVIRUS TYPE 1 SILENT CIRCULATION IN ISRAEL, 2013” Volume 19, Issue 7, 20 February 2014, Accessed 7-28-15, <http://www.eurosurveillance.org/ViewArticle.aspx?ArticleId=20708>] hk

Over the years, the environmental surveillance programme has detected several introductions of WPV into Gaza and Israel, but subsequent circulation in the local community occurred only once in Gaza in 1994–45 [7-9]. In addition, it has detected two lineages of highly diverged type 2 VDPV in the Tel Aviv sewage system, excreted by single individuals [9-11], demonstrating the high sensitivity of environmental surveillance for monitoring large populations. Laboratory methods for sample treatment and poliovirus isolation, including the plaque formation approach, are also a major factor in the sensitivity of the environmental surveillance, as reviewed by Hovi et al. [3]. Plaque formation allows a rough estimation of the virus circulation intensity since the number of viral plaque-forming units (PFU) present in the original sewage sample can be deduced based on spiking experiments [8]. In December 2012, WPV1-SOAS was detected in sewage collected from Cairo, Egypt [11], where systematic environmental surveillance for poliovirus has been in place since 2000. A large immunisation campaign initiated as a response led to the disappearance of the virus from the sewage and, by implication, from the population at large [12]. In April 2013, a surge in the number of plaques recovered on L20B cells from a sewage sample collected in Rahat and Beer Sheva, two major cities in southern Israel, occurred. Identification of the plaques as WPV1 suggested an importation and possible circulation of WPV1 in the region [13]. These alarming findings prompted an urgent assessment and response by the Public Health Services of the Ministry of Health. Notably, intensification of environmental surveillance for poliovirus played a key role in monitoring the spread of the virus. Here we describe the modification and enhancement of the environmental sampling and laboratory methods used in order to meet the increased demand for processing of sewage samples and generation of surveillance data that will inform public health response and incident management.

A2 Eco Authoritarianism Fails

Ecotechnic dictatorship solves

Karlin 10 – Studied at U.C. Berkley and specializes in researching and writing about global trends in resource depletion, climate change and technological growth [Anatoly Karlin, “Ecotechnic Dictatorship is Our Last Hope of Averting Collapse”, 1-31-10, <http://akarlin.com/2010/01/ecotechnic-dictatorship/>] hk

A) Reinforcing Resilience. Technocratic central planning using the latest tools of operations research and networking to minimize waste while maximizing real living standards. The legitimacy of the state is not based on creating prosperity or opportunity, so it will be ideologically resilient in the face of the economic decline that is necessary to reduce physical throughput to levels consistent with a retreat to global sustainability. Resources will be funneled into 1) intensive, targeted research in computer science, cybernetics, sustainable energy generation and food production, geoengineering, systems dynamics, and cliodynamics, 2) the provision of social goods such as education, preventative healthcare services, high culture, and social support to the indigent, and 3) internal security and military forces necessary to defend the fledgling ecotechnic republic from hostile forces within and without. The ecotechnic dictatorship is a democratic society. The state will make strategic decisions by balancing their decisions between opinion polls and expert panels – much like modern China’s experiment with “deliberative dictatorship”. Since corruption and economic sabotage will be immensely harmful in a world suffering from resource shortages, it will have to be stamped out without mercy. One workable method is to institute a system of universal 2-way sousveillance to detect corruption and free-riders; since this mechanism is “horizontal”, in contrast to the “vertical” nature of traditional surveillance, it will reinforce ecotechnic democracy. The people will be able to observe trials and electronically vote on criminals’ punishments. How to maintain enthusiasm and prevent the ideological ossification of the regime’s elites? Through a dedication to meritocracy and the power of modern electronic technology to enforce transparency. Promotions will be based on technical competence and devotion to the cause as judged by one’s peers; greater power will gain one greater material perks and privileges. One might object, how is this different from the current System that needs to be overthrown? Realistically, some level of hierarchy is necessary and inevitable. Once society acquires a certain level of size and technological development (like our own), it needs a corresponding level of socio-political complexity to sustain itself, and that in turn requires a hierarchy. You need people at the top to set certain the limits and restrictions by which the world is to be dragged back from overshoot. Unless we return to primitivism (impossible with the size of today’s populations) or manage to achieve a technological singularity (then we’ll talk about it), all hierarchy cannot be abolished without a large fall in carrying capacity. That said, under the ecotechnic dictatorship, there will be nothing on the scale of the awning inequality chasms of today. Furthermore, thanks to the power of modern networking technologies, power can be distributed horizontally to an unprecedented degree. The ecotechnic elites will be subject to greater scrutiny than those below them. Though this all sounds restrictive of individual freedom, even dystopian, it is nonetheless a valid and probably morally superior alternative to anarchy, collapse, and dieoff. (Nonetheless, it should be borne in mind that a reversion to authoritarianism – furthermore, a socially unjust authoritarianism – is in any case virtually guaranteed in the last throes of the

business-as-usual scenario). For we can only achieve a rapid enough sustainable retreat back to within the limits if the transition is backed by a powerful, global, and universal coercive force, or in other words, Leviathan.

Regs resolve individual behavior

Kuh 12 – Kuh is an Associate Professor of Law, Maurice A. Dean School of Law at Hofstra University [Katrina Kuh, “WHEN GOVERNMENT INTRUDES: REGULATING INDIVIDUAL BEHAVIORS THAT HARM THE ENVIRONMENT” VOLUME 61; Number 6, March 2012, Accessed 7-25-15, <http://scholarship.law.duke.edu/cgi/viewcontent.cgi?article=1529&context=dlj>] hk

Emerging environmental problems and technologies, coupled with the maturation of regulatory regimes governing most industrial sources of pollution, reveal with new clarity the harms that individual behaviors and lifestyles inflict on the environment. Individual behaviors and lifestyles lie at the core of both the climate-change problem and its potential solutions.³ Individuals directly pollute a range of environmental media in significant volumes; indeed, individual sources are responsible for approximately “a third of the chemicals that form low-level ozone or smog,” and “[h]ouseholds discharge as much mercury to wastewater as do all large industrial facilities combined.”⁴ Increasingly sophisticated detection and mapping methods document resource depletion and the unsustainability of present Western lifestyles and consumption.⁵ In the memorable words of one scholar, “Actions that may not have previously appeared to be worthy of regulation have been found to cause significant adverse impacts cumulatively, over time, and in context—heading us toward a certain death by a thousand cuts.”⁶ But existing federal environmental laws focus on controlling the impacts of resource extraction—pollution generated by industrial sources during, for example, the manufacturing or production of a good—and the disposal of waste. These laws rarely address individual behaviors or apply directly to private individuals.⁷ And, in the few instances in which federal environmental laws do directly impose controls on individuals—for example, by introducing limits on the use of private property to protect wetlands or endangered species⁸ —enforcement has often been both controversial and halting.⁹ Using law to change how individuals impact the environment through their behaviors and lifestyles thus requires a reorientation of environmental law and policy and also perhaps a balancing of government prerogatives with individual liberty.

A2 Democracy Solves

Bottom up sustainability is stupid

<http://www.eurozine.com/articles/2011-07-11-bluhdorn-en.html>

Yet, for all their undeniable achievements, techno-managerial policy approaches have so far been unable to bring about anything like the profound structural transformations that are required if internationalised consumer society is ever to become sustainable. After the fiasco of international climate politics in Copenhagen, after international investment banks were declared too big to fail, and after the oil disaster in the Gulf of Mexico, it is clear how unambiguously priorities are set. There is little evidence that this will change in any substantial way in the foreseeable future.

True to the tradition of the emancipatory social movements, critics of established approaches have been calling for a bottom-up renewal of climate and environmental policy. Claus Leggewie and Harald Welzer, for example, posit that "Only when [...] members of the political community are spoken to as active architects of their society, can changes in lifestyle and options for action be realized." [7] The remodelling of industrial society "will only function", they suggest "if it is posed as a project with which members of society identify. [...] Then it will become a generator of identity rather than a problem of implementation ". The dysfunctional politics of the elites can be corrected only through "'more democracy', in other words innovative forms of direct participation." Similarly, Clive Hamilton asserts that "the climate crisis is upon us because democracy has been corrupted". [8] The "passivity of the public", he believes, has bred a political class "who stand for little other than self-advancement". [9] Accordingly, he sees "reclaiming democracy for the citizenry" as the only way to mitigate the effects of climate change and to "ensure that the wealthy and powerful cannot protect their own interests at the expense of the rest". In a manner truly reminiscent of political ecology at the time of the nuclear arms race he urges: "We must democratise survivability" [10] and adopt "a new radicalism [...] that refuses to be drawn into short-term electoral trade-offs and aims to shift the ground of politics itself". [11] And in the same vein, Daniel Hausknost insists: "Given the state's inability to initiate radical change, it is down to civil society to mobilise political and social imagination and make genuine alternatives to the current trajectory conceivable and tangible". [12] For him, too, "the refusal to participate in ecological governance-processes", would be a first decisive step towards "de-legitimizing the liberal state's politics of simulation" (ibid.) and making authentic progress towards sustainability.

Climate of change?

Social agreement about the necessity of radical ecological change may be unprecedented, yet rhetoric and reality go their separate ways. Are multilateral climate deals inherently ineffective?

Is the cap-and-trade approach being pursued at the expense of fairer alternatives? Is the declaration of commitment to sustainability an exercise in societal self-delusion? A Eurozine focal point debates the politics of global warming. Undoubtedly, the radical criticism of de-politicization and expert rule implied in these statements is perfectly justified. The rule of experts is, and has always been, the rule of vested interests, and no structural change to the established order of unsustainability is ever to be expected from those who confine themselves to stimulating ever new cycles of techno-managerial innovation, economic growth and mass consumption. There is also every reason to be concerned about the global elites' determination to buy their way out of the crisis and maintain their lifestyles of unsustainability, whatever the costs for the vulnerable and excluded. And thirdly, the demand for a new radicalism that re-opens a debate on the very principles of liberal consumer capitalism is also fully justified: rising to the challenge of the climate and sustainability crisis does indeed necessitate "thinking about a third industrial revolution in less instrumental terms than the first and the second. Climate change means cultural change – and hence a change in political culture." [13]

Yet assertions that the empowerment of civil society will trigger such a revolution, that more democracy will promote more sustainability, and that at the grass roots of consumer societies an "alternative hedonism" [14] that might provide the basis for the democratic transition towards sustainability is already emerging, seem idealistic. Alternative niche-cultures certainly exist, and the recent revitalisation of citizen protests in a number of European countries – most notably perhaps the revitalised anti-nuclear movement in Germany – is a beacon of hope. But how much confidence should we have that empowering the democratic citizenry will really move contemporary society closer towards sustainability? What are participatory-democratic approaches able to achieve exactly? More broadly, how are the conditions of contemporary modernity reconfiguring democracy?

Democracy can't solve sustainability because there's always a race for compromise

Doubts about the feasibility of democratic solutions to the sustainability crisis have commonly been fended off with warnings that those who raise them are probably sympathetic to authoritarian approaches. Yet this logic disregards two important points. First, in addition to the participatory-democratic and the expertocratic-authoritarian solutions to the sustainability crisis, there is also the option of non-solution, i.e. a sustained politics of unsustainability [15] that seeks to extend the status quo and manage its unpleasant implications for as long as possible. Second, democracy – depending on its particular form – can be just as much part of the problem as part of the solution. There is evidence to suggest that under the particular conditions of modern consumer society, democracy may indeed be assuming a shape that is geared more towards stabilizing than radically changing the unsustainable status quo.

Doubts about the capacity of democracy to deal with environmental problems are, of course, not entirely new. It has often been pointed out, for example, that democracy is anthropocentric and has only limited potential to represent that which has no political voice. Notably, electoral

democracy has a strong fixation on the present, in other words it prioritizes the interests of today and is structurally inclined to discount those of future generations. Moreover democracy encourages compromise, although compromise solutions are often ecologically ineffective. Democratic procedures are time- and resource-consuming and therefore inappropriate wherever fast and decisive action is necessary. Democracy is, at least in modern differentiated societies, highly individualistic and therefore ill-suited to determining, let alone implementing, something like a Rousseauian *volonté g n rale* or public good. Instead, democracy aligns politics with the electoral majority, even though the preferences of the majority – witness, for example, the addiction to car- or air-travel – are rarely sensible in terms of sustainability. Democratic systems are hard pushed to generate majorities for policies that burden citizens with costs or restrictions mainly for the benefit of people in faraway parts of the world and for something as abstract as the global climate. And, perhaps most importantly, democracy is always emancipatory, in other words it always centres on the enhancement of rights and (material) living conditions. It is not really suited to restricting the rights or material conditions affecting the majority – unless, as with the rule that red traffic lights must be observed, the benefits are immediately tangible.

All these concerns have articulated by eco-political sceptics of democracy for a long time. They have taken authors like Paul Ehrlich, Robert Heilbroner or Herbert Gruhl, into eco-authoritarian terrain. In 1975 Wolfgang Harich considered a "strong, rigorous allocation state", an "ascetic distributive state", as the only way out of the looming environmental crisis.[16] William Ophuls believed that the crisis "may require the sacrifice of equality and majority rule" and that "democracy must give way to elite rule".[17] Hans Jonas mused about "a well-intentioned, well-informed tyranny" as the most promising solution.[18] But such elitist perspectives have always triggered profound and very justified scepticism, and since the 1970s emancipatory social movements have forcefully insisted that effective environmental policies can only be developed bottom-up and require broad democratic legitimation.

Dem govts are powerless

Throughout the 1980s and 1990s, the ongoing process of modernisation reinforced emancipatory claims for individual freedom, self-determination and self-fulfilment, but also deepened doubts about whether democracy is suitable as a political tool for restructuring contemporary societies towards sustainability. Relevant developments have included:

The rapid increase of societal subsystems – most notably the economy, science and the media – as well as individual lifeworlds and network, beyond the boundaries of the nation-state, hence increasingly eluding the control of national democratic politics.

- The increasing abstraction and complexity of environmental issues (e.g. climate change, energy security, the environmental footprint of specific products). The most important risks cannot be directly perceived by citizens but are measured, framed and communicated by scientific experts. Invariably, this implies the disempowerment of the democratic sovereign.

- The acceleration of change and the flexibilization of social norms, reinforcing a fixation on the present. In both private life and public policy, thinking beyond the crises of the day and taking decisions for an entirely unpredictable future becomes increasingly difficult.

- Finally, the extension of the ecological footprint of modern consumer societies far beyond their national territory (and their respective present), invalidating the democratic principle of congruence between the authors of political decisions and those affected by them. Effectively, national democratic structures have turned into a means of legitimizing the externalization of ecological and social costs.

These developments, which are inherent to the ongoing process of modernization and hardly controllable, progressively undermine the ability of democracy to devise and implement appropriate strategies against the sustainability crisis. No wonder that suspicions about the eco-political failure of liberal democracy re-emerged in the late 1990s. Contrary to the democratic optimism of social movements and Green Parties, some, for example Laura Westra,[19] have seen democracy increasingly to be part of the problem. More recently, David Shearman and Joseph Wayne Smith have concluded that the underlying cause of the sustainability crisis is not the capitalist growth economy but, ultimately, liberal democracy itself.[20] Anthony Giddens, in his *Politics of Climate Change*, regards the commitment of social movements and the Green parties to participatory democracy as eco-politically ineffective.[21] Echoing Westra's call for a "global regulatory authority" to pursue top-down policy implementation, Giddens advocates an "active interventionist state" as the all-important eco-political actor. He explicitly calls for the de-politicization of climate policy and insists that centralised planning and an "ensuring state" are the best strategies for making sure that politicians do not only set well-sounding targets, but can actually guarantee policy delivery.

A2 Individual Changes Key

Aff doesn't solve

Anarchy doesn't solve – no method – we resolve this

Karlin 10 – Studied at U.C. Berkley and specializes in researching and writing about global trends in resource depletion, climate change and technological growth [Anatoly Karlin, “Ecotechnic Dictatorship is Our Last Hope of Averting Collapse”, 1-31-10, <http://akarlin.com/2010/01/ecotechnic-dictatorship/>] hk

The fundamental predicament (not problem) of most biological life-forms is their tendency to overshoot the carrying capacity of their environment. One of the most powerful theories for the rise of the state was its capacity to raise the carrying capacity of the land, which postponed overshoot and collapse, and in general made state-centered societies far more powerful than the hunter-gatherer tribes that they displaced. Now let's turn to today's reality. If all states were to magically vanish right now, so would the administrative and coercive tools to sustain global industrialism. Soon afterwards, the underlying carrying capacity-enhancing infrastructure such as the global oil industry, fertilizer production, cybernetics, etc, would depreciate into irrelevance from lack of maintenance. Anarchy will reign and the global population will plummet back down to the few millions of people that primitive technology and band-like social organization could support. You may dismiss or despise the hand of the state that feeds you, but you will likely sing a different tune when it withers away into your anarchic paradise.

Individuals aren't key - ><

Karlin 10 – Studied at U.C. Berkley and specializes in researching and writing about global trends in resource depletion, climate change and technological growth [Anatoly Karlin, “Ecotechnic Dictatorship is Our Last Hope of Averting Collapse”, 1-31-10, <http://akarlin.com/2010/01/ecotechnic-dictatorship/>] hk

2) Why Individual and Community Retreats are no Real Solution. Another strand of the anarchist delusion is that since collapse is unavoidable, it is best to retreat from the System while you can, pay off your debts, cut the ties that bind, etc. But quite apart from the implicit resignation to the inevitability of the untimely deaths of billions of people, it cannot be stressed enough that any collapse today will be global (see Tainter above), and the chaotic fluxes it produces will be so violent than any community, no matter how prepared or resilient, could be casually swept away by the tidal waves it would generate. I do not deny that it pays to get personally and psychologically prepared for collapse, but this must be part and parcel of a multi-pronged political effort to avert collapse if possible, and dampen its severity should avoidance prove impossible. The idea that you can hole up in a doomstead and survive against the imminent zombie hordes is particularly inane (read the War Nerd's entertaining essay *Apocalypse Never* to find out why). Finally, defeatist notions of the inevitability of collapse – such as those advanced by Dmitry Orlov, who is strongly opposed to all forms of political activism – are in many ways as counter-productive as the mindless business-as-usual mentality of modern society. The

traditional American focus on individualism and self-reliance only worked in the age of abundance which characterized their entire history (the US GDP has been higher at the end of every decade than at the beginning since its founding). This era is at end and will never return. This will be a major shock for Americans, more so than for most people whose memories of cyclical and Malthusian dynamics are more recent, but they will all have to get used to it.

A2 Green Parties Solve

AT: Green Parties solve—empirically denied

These developments, which are inherent to the ongoing process of modernization and hardly controllable, progressively undermine the ability of democracy to devise and implement appropriate strategies against the sustainability crisis. No wonder that suspicions about the eco-political failure of liberal democracy re-emerged in the late 1990s. Contrary to the democratic optimism of social movements and Green Parties, some, for example Laura Westra,[19] have seen democracy increasingly to be part of the problem. More recently, David Shearman and Joseph Wayne Smith have concluded that the underlying cause of the sustainability crisis is not the capitalist growth economy but, ultimately, liberal democracy itself.[20] Anthony Giddens, in his *Politics of Climate Change*, regards the commitment of social movements and the Green parties to participatory democracy as eco-politically ineffective.[21] Echoing Westra's call for a "global regulatory authority" to pursue top-down policy implementation, Giddens advocates an "active interventionist state" as the all-important eco-political actor. He explicitly calls for the de-politicization of climate policy and insists that centralised planning and an "ensuring state" are the best strategies for making sure that politicians do not only set well-sounding targets, but can actually guarantee policy delivery.

A2 Surveillance Can't Solve

Surveillance is key to environmental public health and is distinct from surveys—preventive and informs research priorities

Thacker et al 96 (Stephen B, Epidemiology Program Office, Centers for Disease Control and Prevention, Donna F. Stroup, PhD, MSc, R. Gibson Parrish, MD, Henry A. Anderson, MD, May 1996, "Surveillance in environmental public health: issues, systems, and sources", American Journal of Public Health, Vol. 86, Issue 5, pp. 633-638, Accessed 7/13/15)//LD

Public health surveillance has been defined as the ongoing systematic collection, analysis, and interpretation of data on specific health events affecting a population, closely integrated with the timely dissemination of these data to those responsible for prevention and control.¹ While this definition focuses on health outcomes (e.g., diseases, disabilities, or injuries), surveillance of hazards (or risk factors) and exposures is also critical to environmental public health practice (Figure 1). Hazard surveillance is the "assessment of the occurrence of, distribution of, and the secular trends in levels of hazards (toxic chemical agents, physical agents, biomechanical stressors, as well as biological agents) responsible for disease and injury."² Exposure surveillance is the monitoring of individual members of the population for the presence of an environmental agent or its clinically inapparent (e.g., subclinical or preclinical) effects. Three of the functions of a surveillance system are critical to its usefulness for environmental public health.¹ First, the system must enable measurement of specific hazards (e.g., air pollutants), exposures (e.g., blood lead), or health outcomes (e.g., asthma). Second, it must produce an ongoing data record; although one-time surveys or sporadic epidemiologic studies are valuable to public health, they are distinct from surveillance activities. Third, it must produce timely and representative data that can be used in planning, implementing, and evaluating public health activities. The uses of surveillance data can be categorized according to timeliness. For detecting epidemics, unusual clusters of specific birth defects (by use of automated triggers defined by sentinel health events) signal instances in which public health officials should respond immediately.³ In addition, such a system may enable detection of newly emerging conditions⁴ (e.g., toxic shock syndrome and the eosinophilia-myalgia syndrome). Detection of changes in health practice could be signaled by an increase in the use of over-the-counter medications for asthma. Changes in antibiotic-resistance patterns may lead physicians to change their prescription practices or researchers to alter their priorities. Data from the Environmental Protection Agency, the US Bureau of the Census, and the National Health Interview Survey can be used to relate risk of illness among defined populations (e.g., asthma in children) to air quality.⁵ In the United States, decisions affecting public health policy and allocation of resources usually are made yearly in conjunction with government budgets. Timely annual data summaries would provide immediate estimates of the magnitude of a health problem, thus assisting policymakers to modify priorities and plan intervention programs.⁶ These same data would be useful to those assessing control activities and would help researchers establish priorities in applied epidemiology and laboratory research. In addition, reviewing surveillance data annually can facilitate the testing of hypotheses related to prevention and intervention efforts (e.g., ocular injuries associated with fireworks).⁷ As intervention programs are evaluated and priorities are set, policymakers must evaluate the effects of the programs on populations (e.g., protective measures to reduce the threat of lead toxicity in workplaces⁸).

Metadata is key to response time and preventing disproportionate public alarm that misguides health policy

Thacker et al 96 (Stephen B, Epidemiology Program Office, Centers for Disease Control and Prevention, Donna F. Stroup, PhD, MSc, R. Gibson Parrish, MD, Henry A. Anderson, MD, May 1996, "Surveillance in environmental public health: issues, systems, and sources", American Journal of Public Health, Vol. 86, Issue 5, pp. 633-638, Accessed 7/13/15)//LD

Second, data collected for other purposes may not be sufficient for environmental public health surveillance.¹⁵ For example, data from vital records or disability claims rarely contain sufficient information to meet a case definition for a condition caused by an environmental exposure. Other limitations of such data sources may include lack of timeliness of data collection or data availability, incomplete data on outcomes, nonrepresentativeness of the population, and problems with data quality¹⁶ (Table 1). Third, although all public health decisions are made in a social context, in environmental public health, public alarm is quite common and may often be out of proportion to the hazard itself.¹⁷ Thus, sentiment rather than science may influence environmental public health policy disproportionately.

Internet Module

Link— General

Government surveillance has controlled how people behave on the internet

Sass 3-23 - Sass is a Reporter of Media Daily News and Social Graf at MediaPost [Erik Sass, "One In Three Americans Changed Online Behavior Because Of Surveillance", 3-23-15, Accessed 7-13-15, <http://www.mediapost.com/publications/article/246194/one-in-three-americans-changed-online-behavior-bec.html>] hk

The revelations of widespread government surveillance by NSA contractor Edward Snowden may have dominated public discussion, but they didn't have much impact on how Americans actually use digital technology. That's the conclusion of a new Pew study based on a survey of 475 U.S. adults, polled about their use of technologies including mobile devices, social media, and email, among other channels. There is no question that most Americans have heard about government surveillance in the wake of Snowden's leak of secret documents: 87% of respondents said they have heard "a lot" or "a little" about the surveillance, and only 6% said they have heard "nothing at all," about them (the elusive "living under a rock" demo). However, just 39% said they are concerned about monitoring of search engines, 38% said the same for email, 37% were concerned about monitoring of cell phones, and 31% were worried about monitoring of social media apps. Similarly, just 34% of Americans who said they were aware of the surveillance reports have taken any steps to shield themselves from surveillance by the government, including 17% (of the group who were aware of surveillance) who have changed their privacy settings on social media; 15% who said they use social media less often; 15% who have avoided using certain apps, and 13% who have uninstalled apps; 14% who said they speak more in person instead of communicating online or by phone; and 13% who avoid using certain terms in online communications. In addition, 18% have changed the way they use email, 17% changed their use of search engines, and 13% have changed the way they use text messages. Not surprisingly, people who said they knew "a lot" about the government surveillance (31%) and younger adults under age 50 were more likely to have changed at least on of these behaviors (40% versus 27%).

New Pew study concludes there are changed behaviors after the Snowden revelation

Rainie and Madden 3-16 - Rainie is the director of internet, science and technology research at the Pew Research Center and Madden is a contributor to the Pew Research Center [Lee Rainie and Mary Madden, "Americans' Privacy Strategies Post-Snowden", 3-16-15, <http://www.pewinternet.org/2015/03/16/americans-privacy-strategies-post-snowden/>] hk

It has been nearly two years since the first disclosures of government surveillance programs by former National Security Agency contractor Edward Snowden and Americans are still coming to terms with how they feel about the programs and how to live in light of them. The documents leaked by Snowden revealed an array of activities in dozens of intelligence programs that collected data from large American technology companies, as well as the bulk collection of phone "metadata" from telecommunications companies that officials say are important to protecting national security. The metadata includes information about who phone users call, when they call, and for how long. The documents further detail the collection of Web traffic

around the globe, and efforts to break the security of mobile phones and Web infrastructure. A new survey by the Pew Research Center asked American adults what they think of the programs, the way they are run and monitored, and whether they have altered their communication habits and online activities since learning about the details of the surveillance. The notable findings in this survey fall into two broad categories: 1) the ways people have personally responded in light of their awareness of the government surveillance programs and 2) their views about the way the programs are run and the people who should be targeted by government surveillance. Some people have changed their behaviors in response to surveillance. Overall, nearly nine-in-ten respondents say they have heard at least a bit about the government surveillance programs to monitor phone use and internet use. Some 31% say they have heard a lot about the government surveillance programs and another 56% say they had heard a little. Just 6% suggested that they have heard “nothing at all” about the programs. The 87% of those who had heard at least something about the programs were asked follow-up questions about their own behaviors and privacy strategies: 34% of those who are aware of the surveillance programs (30% of all adults) have taken at least one step to hide or shield their information from the government. For instance, 17% changed their privacy settings on social media; 15% use social media less often; 15% have avoided certain apps and 13% have uninstalled apps; 14% say they speak more in person instead of communicating online or on the phone; and 13% have avoided using certain terms in online communications. Those most likely to have taken these steps include adults who have heard “a lot” about the surveillance programs and those who say they have become less confident in recent months that the programs are in the public interest. Younger adults under the age of 50 are more likely than those ages 50 and older to have changed at least one of these behaviors (40% vs. 27%). There are no notable differences by political partisanship when it comes to these behavior changes.

Direct correlation between surveillance and online behaviors

Marthews and Tucker 4-29 – Marthews is part of the National Chair at Restore the Fourth and Tucker is a Professor of Marketing at MIT Sloan and part of the National Bureau of Economic Research [Alex Marthews and Catherine Tucker, “Government Surveillance and Internet Search Behavior”, 4-29-15, Accessed 7-13-15, <https://www.sebastianwendt.de/wp-content/uploads/2015/06/Government-Surveillance-and-Internet-Search-Behavior.pdf>] hk

Table 4 presents our initial results. The first three columns focus on a specification where we use a binary indicator to mark whether a search term was considered to be above average in terms of its likelihood to lead to trouble with the government or trouble with a friend. Column (1) presents the results for all countries.¹³ The results suggest that search terms rated as having an above-average likelihood of getting the searcher in trouble with the government, fell two index points relative to an average index of 13 points. Search terms rated as having an above-average likelihood of getting the searcher in trouble with a friend fell by half an index point. Column (2) presents results for the US only; Column (3) presents results for the ten non-US countries in our study. We see that US-based search traffic falls by quite a large extent in the Google index for terms that are perceived as having an aboveaverage likelihood of getting you in trouble with the US government, whereas non-US traffic also falls but by a smaller magnitude. However, by

contrast, in non-US countries there is a significant fall in the volume of search terms that are perceived as having an above-average likelihood of getting the searcher in trouble with a friend. The second three columns of Table 4 present a complementary specification where, rather than using an indicator variable, we use the full scale for how likely raters perceived this search term as leading to trouble with a government or friend. The results are similar to those in the non-parametric specification in columns (1)-(3) and in subsequent regressions we use these specifications, as they use more of our available data. Overall, these results provide empirical evidence that the surveillance revelations caused a substantial chilling effect relating to users' willingness to enter search terms that raters considered would get you into trouble with the US government. We also see that outside the US there is a large and significant drop in the search terms which are more likely to get you into trouble if a friend found out you used that search term. This suggests that international users, in contrast to US users, reduced their relative number of searches for personally sensitive terms.

Surveillance allows effective forms of social control – deterrence effect

Ragnedda 11 – Ragnedda has a Ph.D. in Theory of Communication and Intercultural Studies at the University of Sassari [Massimo Ragnedda, "Social control and surveillance in the society of consumers", 1-21-11, Accessed 7-13-15, http://www.academia.edu/673071/Social_control_and_surveillance_in_the_society_of_consumers] hk

The new digitalized surveillance allowed a new form of social control that tries to direct and influence the behavior of people. Indeed reconstructing the past and the present by using this information the new controller can, in some way, address and influence future behaviour. For the sake of clarity, since always the governance entails control and its aims is to steer and direct individuals, encouraging them to embrace particular behaviours. As Haggerty suggested 'while governance inevitably involves efforts to persuade, entice, coerce or cajole subjects to modify their behaviour in a particular direction the targets of governance are understood to be a locus of freedom, although this freedom is inevitably bounded by various constraints' (Haggerty, 2006: 40). All the forms of punishment were always future-oriented, because they involved forms of specific deterrence that sought to stop an individual offender from committing comparable acts again in the future, or a form of general deterrence that sought to deter others from doing so. Thus, in some way, both 'previous' and 'contemporary' forms of social control are future-oriented. They differ in the assumption on the strategies and forms of knowledge that can be used to govern future behaviour. Above all, and this is the main difference today, different agents are using different strategies and forms of knowledge to govern future behaviour for different reasons and purposes. The particularity of the society of consumers (Bauman, 2005) is that private corporations, what here I call the economic elite, are trying to steer and direct individuals using private surveillance and them media's empire and cultural industry. More strongly: if it is normal and inevitable that governance 'efforts to persuade, entice, coerce or cajole subjects to modify their behaviour in a particular directions', it is not normal that to do it is not a democratic and public institution but the economic elite: in other words, a private organization. Furthermore the market and the economic elite try to control directly the citizens/consumers, reconstructing the 'biographies of consumption' through the combination of transactional and personal data (Evans, 1998).

Surveillance methods prevent decisions – deterrence method

Ragnedda 11 – Ragnedda has a Ph.D. in Theory of Communication and Intercultural Studies at the University of Sassari [Massimo Ragnedda, “Social control and surveillance in the society of consumers”, 1-21-11, Accessed 7-13-15, http://www.academia.edu/673071/Social_control_and_surveillance_in_the_society_of_consumers] hk

It should be specified that surveillance is neither good nor bad. The particular governmental ambitions are a consumer-oriented society, based on the ICT as a medium of exchange and a tool for social control. The role of ICT within infrastructures of surveillance and control cannot be understated. Not only fidelity card shopping or intelligent transportation systems connect purchasing patterns to customer databases, but also biometric technologies and, above all, Internet are used for monitoring and collection of personal and identifiable information about millions of users/citizens/customers. In an analysis of Giddens’ work (1987), Webster (2006) portrays the use of surveillance tools to capture transactional information, information which ‘contributes towards and individuated portrait of that person’s spending habits, clothing and food tastes, even preferred shopping locations’ (225). The new technologies of surveillance may not always prevent the actions but tend to prevent the decisions. One can argue that the surveillance systems are ineffective at preventing violent crimes. This sometimes is true; however this does not imply that they are without effects on human behaviour.

Public paranoia

Fisher and Timberg 13 – Fisher is a senior editor for the Washington Post and Timberg is a national technology reporter for The Post [Marc Fisher and Craig Timberg, “Americans uneasy about surveillance but often use snooping tools, Post poll finds” 12-21-13, Accessed 7-13-15, https://www.washingtonpost.com/world/national-security/americans-uneasy-about-surveillance-but-often-use-snooping-tools-post-poll-finds/2013/12/21/ca15e990-67f9-11e3-ae56-22de072140a2_story.html] hk

This year, in the months since former National Security Agency contractor Edward Snowden leaked secret documents detailing U.S. surveillance programs, it has become clear that there are not yet widely accepted norms about who may watch whom and when and where tracking is justified. The Post’s poll found that Americans’ attitudes about surveillance are anything but consistent, whether the sample is the entire nation or a single, conflicted person. Nearly seven in 10 Americans are concerned about how much personal information government agencies and private companies collect, the poll found. But among parents 40 or older — the group most likely to have teenagers — 70 percent said they monitor the Web sites their children visit. Many also review their kids’ texts, e-mails and social-media use. A small number of Americans also report tracking the movements of their spouses or using video feeds to monitor elderly parents.

Social control modifies the way people behave

Ragnedda 11 – Ragnedda has a Ph.D. in Theory of Communication and Intercultural Studies at the University of Sassari [Massimo Ragnedda, “Social control and surveillance in the society of consumers”, 1-21-11, Accessed 7-13-15,

http://www.academia.edu/673071/Social_control_and_surveillance_in_the_society_of_consumers] hk

Social control also means the ability to push individuals to adapt themselves to the expectations of the group. The mass media has the ability, at various levels, to condition and influence the perception of their expectations and, consequently, their expectations. Indeed, if an individual or customer perceives that its group of reference expects from him a determined behaviour he or she will stretch to adapt to this in order to avoid the pain of deviance and exclusion from the group. It does not matter what the group actually expects, but what the individual believes that the group expects. It does not count therefore what 'reality' is, but its representation, its simulacrum. The mass media seems to move in this field: influencing expectations and perceptions and thus acting like a formidable instrument of social control. Although mass media plays a key role in this, it is not enough to guarantee the homogeneity and the coherence in a post-modern society. Indeed in our society, where all the classic institutions that were deputies to 'social control' are in crisis (family, school, religious institutions and soon), it is also a new form of surveillance that is both intrusive and invisible, more invasive but perceived as normal. The mass media plays a crucial role in creating the conditions for surveillance that are perceived as being natural and unavoidable in spreading and reinforcing the neo-liberal values, influencing the citizen-consumers' behaviour.

Behavioral targeting resolves undesirable behavior – allows a system to determine economic viability of consumers

Surveillance Society 13 – [The Surveillance Society, " Behavioral Targeting and the surveillance society", 12-9-13, Accessed 7-13-15, <http://thesurveillancesociety.weebly.com/blog/behavioral-targeting-and-the-surveillance-society>] hk

Surveillance is a key component to Panopticism in that it all revolves around the watcher and those being watched. Foucault describes it as "a machine for dissociating the see/being seen dyad: in the peripheric ring, one is totally seen, without ever seeing; in the central tower, one sees everything without ever being seen". The prisoners in the cells are perpetually exposed to the gaze of the guards in the tower, yet since they cannot themselves see into the tower, they are never certain whether or not they are being watched. Sociologist James Lyon defines surveillance as "the focused, systematic, and routine attention to personal details for purposes of influence, management, protection, or direction" (Richards). Internet ad servers have become a mirror of the Panopticon in their utilization of surveillance technologies for information gathering and aggregation. In regard to Bentham's Panopticon, the objective is to assess an individual's likelihood for undesirable behavior, and to monitor, categorize, and rank so as to curb such behavior. In a broader perspective, the Panopticon was seen as a new and more effective way of "organizing social institutions to ensure a more orderly society by producing disciplined and predictable citizens. With Internet ad servers, the goal is to provide marketers with the personal information necessary to determine if an individual constitutes an economically viable consumer" (Panopticon.com). The advanced customer profiling system offered by third-party ad servers hikes the sufficiency and potency of advertisers' efforts, downsizing the unpredictability faced by producers hyping their goods and services into the marketplace. While many consumers deem behavioral targeting's process of data mining a

breeching of privacy, there are many benefits produced as well. For years psychologists (and marketers/advertisers alike) have argued that the most efficient way to predict future behavior is looking at past behavior. So if researchers/ marketers could get a glimpse into a user's online behavior, they would be more likely to accurately assess your needs and interests. Thus, the beauty of behavioral targeting being that the lack of guesswork allows consumers to be offered advertisements that are relevant and more likely to find desirable. Another research study done by Forrester revealed that "behavioral targeting improves the process of generating traffic and achieving conversions because it customizes the customer experience and allows firms to maintain consistency across all customer touch points. For example, if a customer visits a travel website and indicates an interest in upcoming Mediterranean vacation packages, a firm could incorporate this data into targeted emails or even promotional texting campaigns" (Benefits). By collecting information, companies can provide the best user experience and improve conversion rates.

Link—NSA Surveillance

NSA Surveillance creates a direct placebo effect on consumers – action and reaction theory shapes their behaviors

Rosenbush 13 - Rosenbush is Editor of The Wall Street Journal's CIO Journal, which reports on the strategic use of technology in business [Steven Rosenbush, "Surveillance Has 'Placebo Effect' on Consumer Behavior", 6-10-13, Accessed 7-13-15, <http://blogs.wsj.com/cio/2013/06/10/surveillance-has-placebo-effect-on-consumer-behavior/>]
hk

If nothing else, the current focus on National Security Agency mechanisms for Internet surveillance drives home the awareness that online activity is being collected and analyzed by a wide range of parties. And while most U.S. consumers seem to have a rather sanguine view of that surveillance from a privacy perspective, it nonetheless may be shaping their behavior in subtle ways. Observation is seldom—if ever – a neutral act. "If a person knows they are being observed, it can impact any decision that they make," Forrester Research Inc. analyst Sucharita Mulpuru told CIO Journal. "You can send passive-aggressive messages to the observer. You can send explicit messages to the observer. You can choose to change your behavior. It absolutely has an effect," she said. It's no surprise that people are most likely to change their online behavior if they feel that observation carries risk of a negative consequence. They will avoid certain Web sites at work, if they know visiting them puts them at risk of being disciplined or fired — or just looking foolish. But they also might shift their behavior in conscious or unconscious ways just to communicate a message to an observer. For example, Ms. Mulpuru said that she lives in Charlotte and tends to book as many flights as possible from the local hub of US Airways, which is merging with American Airlines. "I want them to increase their number of flights from Charlotte and stay here," she explains. Companies need to be aware of how their observation of the market shapes the market itself, although that is not an easy thing to do; the impact doesn't play out in obvious ways, according to Ms. Mulpuru. "You would have to be a really good data analyst" to detect and understand such an impact, she said. But that doesn't mean that companies shouldn't try to understand how consumer awareness of being tracked may be shaping behavior more and more, according to Ms. Mulpuru. "It's like the placebo effect," she said. "You have to control for it."

Link- Panopticon

Panopticon model solves – 1970 software model proves

Dryden 14 – contributor to the Model View Culture [Ashe Dryden, “Social Networking as Peer Surveillance”, 10-8-14, Accessed 7-13-15, <https://modelviewculture.com/pieces/social-networking-as-peer-surveillance>] hk

In the late 18th century, the philosopher and social theorist Jeremy Bentham designed the Panopticon, a building that allowed a watchman to observe every occupant from one vantage point. This led occupants to act as if they were being observed at all times, regardless of whether a watchman was in the tower or observing them; the mere potential of constant surveillance altered occupant behavior. Foucault discussed his social theory of Panopticism in *Discipline & Punish: The Birth of the Prison*, noting that the occupants of the Panopticon are “the object of information, never a subject in communication,” and that He who is subjected to a field of visibility, and who knows it, assumes responsibility for the constraints of power; he makes them play spontaneously upon himself; he inscribes in himself the power relation in which he simultaneously plays both roles; he becomes the principle of his own subjection. In the 1970s, a piece of software called DIALOG was designed to replicate the Panopticon effect and tested at a large pharmaceutical company as part of a psychology experiment. The software allowed workers to not only report the work they were doing, but to socialize with peers. When users realized the software was allowing management to monitor them continuously, many stopped using it. Others decided to continue, “raising the question of whether remaining users modified their behavior under the threat of surveillance, as prisoners in Bentham’s Panopticon would, or whether they believed that the benefits offered by the system outweighed the possibility of punishment.” Social networks operate in much the same way. Thanks to open APIs and the limited technical talent needed to use them, the ability to monitor someone’s every activity can be easily automated and analyzed for patterns. A few weeks worth of data can give you an idea of when someone leaves for work, what coffee shop they stop at in the morning, and even what route they drive to get home. Using additional data – something as simple as a selfie – it’d be easy for a relative stranger to “recognize” you on the street.

A panopticon type of surveillance deters bad behaviors

Beauchamp 13 - Beauchamp is Editor of TP Ideas and a reporter for ThinkProgress.org. He previously contributed to Andrew Sullivan’s *The Dish* at Newsweek/Daily Beast, and has also written for *Foreign Policy* and *Tablet* magazines. Zack holds B.A.s in Philosophy and Political Science from Brown University and an M.Sc in International Relations from the London School of Economics [Zack Beauchamp, “Why The NSA’s Secret Online Surveillance Should Scare You”, 6-7-13, <http://thinkprogress.org/justice/2013/06/07/2120141/why-the-nsas-secret-online-surveillance-should-scare-you/>] hk

The reaction to the National Security Agency (NSA)’s secret online spying program, PRISM, has been polarized between seething outrage and some variant on “what did you expect?” Some have gone so far as to say this program helps open the door to fascism, while others have downplayed it as in line with the way that we already let corporations get ahold of our personal

data. That second reaction illustrates precisely why this program is so troubling. The more we accept perpetual government and corporate surveillance as the norm, the more we change our actions and behavior to fit that expectation — subtly but inexorably corrupting the liberal ideal that each person should be free to live life as they choose without fear of anyone else interfering with it. Put differently, George Orwell isn't who you should be reading to understand the dangers inherent to the NSA's dragnet. You'd be better off turning to famous French social theorist Michel Foucault. The basic concern with the PRISM program is that it is undoubtedly collecting information on significant numbers of Americans, in secret, who may not have any real connection to the case the Agency is pursuing. PRISM sifts through tech giants' databases to cull information about suspected national security threats. However, since it uses a 51 percent confidence threshold for determining whether a target is foreign, and likely extends to individuals that are "two degrees of separation" from the original target, the chances are extraordinarily high that this program is spying on a significant number of Americans. A citizenry that's constantly on guard for secret, unaccountable surveillance is one that's constantly being remade along the lines the state would prefer. Foucault illustrated this point by reference to a hypothetical prison called the Panopticon. Designed by utilitarian philosopher Jeremy Bentham, the Panopticon is a prison where all cells can be seen from a central tower shielded such that the guards can see out but the prisoners can't see in. The prisoners in the Panopticon could thus never know whether they were being surveilled, meaning that they have to, if they want to avoid running the risk of severe punishment, assume that they were being watched at all times. Thus, the Panopticon functioned as an effective tool of social control even when it wasn't being staffed by a single guard. In his famous *Discipline and Punish*, Foucault argues that we live in a world where the state exercises power in the same fashion as the Panopticon's guards. Foucault called it "disciplinary power;" the basic idea is that the omnipresent fear of being watched by the state or judged according to prevailing social norms caused people to adjust the way they acted and even thought without ever actually punished. People had become "self-regulating" agents, people who "voluntarily" changed who they were to fit social and political expectations without any need for actual coercion. Online privacy advocates have long worried that government surveillance programs could end up disciplining internet users in precisely this fashion. In 1997, the FBI began using something called Project Carnivore, an online surveillance data tool designed to mimic traditional wiretaps, but for email. However, because online information is not like a phone number in several basic senses, Carnivore ended up capturing far more information than it was intended to. It also had virtually no oversight outside of the FBI. As the Electronic Frontier Foundation told Congress in 2000, "Systems like Carnivore have the potential to turn into mass surveillance systems that will harm our free and open society...Once individuals realize that they have a lowered expectation of privacy on the Net, they may not visit particular web sites that they may otherwise have visited." Writing in 2004, a group of scholars drew a straight line from this analysis to Foucault's theory of disciplinary power. "Resembling the ever-present powers of the central watchtower in a prison modeled after the Panopticon," they wrote "the very fact that the FBI has the potential to monitor communications on a website may lead Internet users to believe that they are constantly being watched." We know now that this hypothetical fear about Carnivore has become a reality, courtesy of the NSA. The more people come to see mass online surveillance as a norm, rather than something used only on specific subjects of investigation, the more they'll tailor their online habits to it. Since people

understandably don't want the government looking at their private information, that'll mean the internet will over time slowly become less of a place for vibrant self-expression. That should trouble anyone who believes that the best society is one in which people are most free to be themselves in whatever way they find most meaningful. In essence, that should trouble anyone committed to the basic liberal project. Foucault's point wasn't that disciplinary power was intrinsically bad; the idea that, for example, pedophiles might be deterred from accessing child pornography for fear of state surveillance of child porn sites shouldn't bother anyone. Rather, Foucault warned, disciplinary power was dangerous — used in certain fashions, it could be subtly corrosive of exactly the sorts of freedoms of expression and self-identity that liberal democracies purportedly protected absolutely. The NSA program, especially as its breadth becomes clear, is exactly the sort of overreach his work should warn us against.

Panopticon surveillance effectively changes human behavior – China proves

Schneier 13 - Schneier is a contributing writer for The Atlantic and the chief technology officer of the computer-security firm Co3 Systems [Bruce Schneier, "Why the NSA's Defense of Mass Data Collection Makes No Sense", 10-21-13, Accessed 7-13-15, <http://www.theatlantic.com/politics/archive/2013/10/why-the-nsas-defense-of-mass-data-collection-makes-no-sense/280715/>] hk

This sort of surveillance isn't new. We even have a word for it: It's the Panopticon. The Panopticon was a prison design created by 18th-century philosopher Jeremy Bentham, and has been a metaphor for a surveillance state ever since. The basic idea is that prisoners live under the constant threat of surveillance. It's not that they are watched all the time—it's that they never know when they're being watched. It's the basis of Orwell's 1984 dystopia: Winston Smith never knew if he was being watched, but always knew it was a possibility. It's why online surveillance works so well in China to deter behavior; no one knows if and when it will detect their actions online. Panopticon-like surveillance—intermittent, but always possible—changes human behavior. It makes us more compliant, less individual. It reduces liberty and freedom. Philosopher Michael P. Lynch recently wrote about how it dehumanizes us: "when we lose the very capacity to have privileged access to our psychological information—the capacity for self-knowledge, so to speak, we literally lose our selves To the extent we risk the loss of privacy we risk, in a very real sense, the loss of our very status as subjective, autonomous persons." George Dyson recently wrote that a system that "is granted (or assumes) the absolute power to protect itself against dangerous ideas will of necessity also be defensive against original and creative thoughts." That's what living in a Panopticon gets you.

Link- Polls

Polls prove-Americans are increasingly hesitant about online behaviors

Cobb 14-Stephen, Senior Security Researcher at ESET North America, internally cites Harris Poll (“New Harris poll shows NSA revelations impact online shopping, banking, and more”, WeLiveSecurity, <http://www.welivesecurity.com/2014/04/02/harris-poll-nsa-revelations-impact-online-shopping-banking/>) HC

Online banking and shopping in America are being negatively impacted by ongoing revelations about the National Security Agency’s digital surveillance activities. That is the clear implication of a recent ESET-commissioned Harris poll which asked more than 2,000 U.S. adults ages 18 and older whether or not, given the news about the NSA’s activities, they have changed their approach to online activity. Almost half of respondents (47%) said that they have changed their online behavior and think more carefully about where they go, what they say, and what they do online. Harris-NSA-poll-banking

When it comes to specific Internet activities, such as email or online banking, this change in behavior translates into a worrying trend for the online economy: over one quarter of respondents (26%) said that, based on what they have learned about secret government surveillance, they are now doing less banking online and less online shopping. This shift in behavior is not good news for companies that rely on sustained or increased use of the Internet for their business model. Online commerce shrinkage? After 20 years of seemingly limitless expansion of Internet commerce, these poll numbers may come as something of a shock to online firms, but they were not a complete surprise to ESET researchers. Last fall we detected early signs of this phenomenon when we conducted a smaller survey of “post-Snowden” attitudes. Some respondents reported reduced online shopping and banking behavior (14% and 19% respectively). At that time it was reasonable to speculate that such changes in behavior might be a temporary blip, but our latest findings suggest otherwise. And the reasons are not hard to find: continued revelations from the Snowden documents and a lack of convincing reassurances from government about privacy protections. The news for online stores and financial services does not get any better when you dig deeper into the numbers. The economically important 18-34 age group are more likely to say they are doing less shopping online (33% compared to an overall 26%). Online retailers who rely more on female shoppers should note that 29% of women surveyed said they have reduced how much they shop online (compared to 23% of men and 26% overall). When it comes to banking online 29% of folks in that 18-34 age bracket had cut back, as had 30% of those aged 65 and older. Harris-nsa-impact-on-email

Clearly, these findings will be of concern to the retail and financial services sectors, but the news is also bad for just about any sector of the American economy where replacing physical contact with electronic communication is part of the business model. Just under one-quarter of respondents (24%) said that, based on what they have learned about secret government surveillance, they are less inclined to use email. Important economic sectors ranging from healthcare to education and government are looking at expanded use of electronic communications as a way to cut costs and improve service levels. Those objectives could be harder to attain if a significant percentage of the public is less inclined to use those channels. We observed a higher than average contraction in email use in the 18-34 age group (32%) and in households where annual household income is under \$50,000. Ongoing impact of privacy intrusions

As a recent New York Times article titled “Revelations of N.S.A. Spying Cost U.S. Tech

Companies” observed: “It is impossible to see now the full economic ramifications of the spying disclosures.” However, I think that when you look at this new survey and our previous research it is clear that changes in online behavior have already taken place, changes with broad economic ramifications. Whether or not we have seen the full extent of the public’s reaction to state-sponsored mass surveillance is hard to predict, but based on this survey and the one we did last year, I would say that, if the NSA revelations continue—and I am sure they will—and if government reassurances fail to impress the public, then it is possible that the trends in behavior we are seeing right now will continue. For example, I do not see many people finding reassurance in President Obama’s recently announced plan to transfer the storage of millions of telephone records from the government to private phone companies. As we will document in our next installment of survey findings, data gathering by companies is even more of a privacy concern for some Americans than government surveillance. And in case anyone is tempted to think that this is a narrow issue of concern only to news junkies and security geeks, let me be clear: according to this latest survey, 85% of adult Americans are now at least somewhat familiar with the news about secret government surveillance of private citizens’ phone calls, emails, online activity, and so on. As to what should be done about this situation and its effects on commerce, privacy, and online behavior, I will have more findings to share in my next blog post, along with suggested strategies for companies who may be impacted.

Increased surveillance decreases immoral behavior-studies prove

Gonzalez 11-Robbie, senior science editor at iO9, internally cites study published in *Evolutionary Psychology* from Pierrick Bourrat, research associate from University of Sydney, PhD in biology from University of Sydney, Ryan McKay, researcher in psychology at University of London, PhD from Macquarie University, former clinical neuropsychologist and Nicolas Baumard, co-leader of the Evolution and Social Cognition Group at the Department of Cognitive Science of the Ecole Normale Supérieure and post-doctoral fellow at University of Pennsylvania (6/17, “People under surveillance are more likely to condemn "bad behavior" in others”, iO9 <http://io9.com/5813160/people-under-surveillance-are-more-likely-to-condemn-bad-behavior-in-others>) HC

Social scientists have long known that people manage their reputations by modifying their behavior in public. But new research out of Australia now shows that this tendency to "act appropriately" extends beyond our actions and into our moral judgments. When people believe they are being watched, they become more judgmental of others' behavior. Especially if they believe others are acting outside social norms or morals. Will our surveillance societies create a generation of moralists? People have recognized the power of a perceived gaze for hundreds, if not thousands of years; in the 18th century, English social theorist Jeremy Bentham designed the Panopticon, a prison compound designed to allow a single guard to observe all the prisoners without the prisoners being able to discern if they are being watched; the 20th century saw the introduction of CCTV, a surveillance technology that many claim has "imprisoned" even innocent civilians in a modern day version of the panopticon; and let's not even get into the behavior-modifying implications of an all-seeing god. On the scientific front, many empirical studies have demonstrated that people tend to be more generous and cooperative when they know that they are being observed by others. Until now, however, studies like the ones linked to above have neglected to address the effect of perceived observation on moral judgments. Now,

Pierrick Bourrat from the University of Sydney – together with colleagues Nicolas Baumard from the University of Pennsylvania and Ryan McKay from the University of London – has shown that people are more likely to condemn the "bad" behavior of others if they sense that they are being observed. That sense – the feeling that one is being watched – is triggered by researchers using something called "surveillance cues." Perhaps the most interesting thing about Bourrat's study is just how subtle his chosen surveillance cues are. Bourrat describes the testing methods of the study: [We] presented students at the Campus Universitaire de Jussieu in Paris with stories of two moral transgressions, keeping the money found in a lost wallet and faking a résumé. For some participants, the scenarios were accompanied by an image of a pair of eyes, for others the scenarios were accompanied by an image of flowers. Those given the version with the eyes rated the actions as less morally acceptable than those who saw the flowers. Above are the two pictures used in the study. Amazingly, the median "moral acceptability" score for each vignette was significantly lower for people who were exposed to surveillance cues (the picture of the eyes). Bourrat explains this effect via two possibilities. The first is that the surveillance cues "actually affected [the participants'] perception of moral violations, perhaps by activating their awareness of internalized moral norms." The second is that an image of a pair of eyes "matches the input conditions for evolved mental mechanisms that detect when one's behavior is observed." What is interesting about Bourrat's second explanation is that this evolved reputation-maintenance mechanism may be activated subconsciously. This raises important questions about our susceptibility to manipulation by an entity capable of toying with the part of our brain that is inaccessible to the conscious mind, but nevertheless affects behavior and emotions.

Link- Cameras

Cameras reverse the bystander effect

Jaffe 12 - Jaffe is a senior associate editor at CityLab [Eric Jaffe, "Surveillance Cameras Could Make Us Better People", 6-25-12, Accessed: 7-13-15, <http://www.citylab.com/design/2012/06/could-surveillance-cameras-make-us-better-samaritans/2363/>] hk

Exhibit A for the "cities are mean" thesis is the 1964 murder of Kitty Genovese in Queens. Two weeks after the killing, The New York Times ran a story called "Thirty-Eight Who Saw Murder Didn't Call the Police," suggesting that dozens of witnesses did nothing to stop the gruesome event. Subsequent analysis cast serious doubt on the Times report, but the story remains a parable for the cruel indifference of urban life. In 1968, inspired by the Genovese murder, psychologists John Darley and Bibb Latané studied bystander behavior in the laboratory [PDF]. Test subjects who thought they were alone were more likely to respond to someone having a seizure than when they were in a group. The "bystander effect," as it's now known, has since become one of the most established ideas in modern social psychology. The underlying factor of the bystander effect isn't necessarily a callous lack of concern for other human beings. (Unless, of course, you're George, Elaine, Jerry, or Kramer watching a fat guy get robbed.) Instead it emerges, in large part, from the decreased sense of personal responsibility that comes with being part of a big crowd. If that sense of accountability could be increased, then the effect might disappear even if the crowd remained. Using this logic as guide, a Dutch research team says it's found a way to reverse the bystander effect. In an upcoming issue of the Journal of Experimental Social Psychology, Marco van Bommel of VU University Amsterdam and colleagues report that victim assistance increases among a large group of bystanders when a person's self-awareness and accountability are stimulated, say, through the presence of a camera documenting their behavior. Van Bommel et al write: People help less when there are bystanders present, but when they become public self-aware (by our camera manipulation), the presence of other bystanders leads them to increase helping behavior. ... This indicates that the feeling of public self-awareness, as created by the presence of a camera, was sufficient for participants to change their behavior in accord with a pattern that signifies reputation concerns. To observe their theory in action the researchers invented a fake online forum for people with severe emotional distress. They brought people into a laboratory and had them read five messages posted to the forum. The messages described troubling personal stories, from someone contemplating suicide to someone going through a very bad break-up. The researchers recorded which test subjects responded to the messages, and which didn't. While studying the interactions in this forum, Van Bommel and colleagues found plenty of evidence for the classic bystander effect. In one test situation, people responded to the distressed messages at a lower rate when they thought there were 30 other people online in the forum — essentially bystanders — than when there were only a couple. But the researchers were able to flip this effect by making test subjects more self-aware. In another test situation, forum participants saw their name in red on the screen among the 30 or so other forum participants, whose names were in black. That was enough to make them feel as if they stood out in the crowd, and the bystander effect was reversed: these subjects responded to crisis messages more than those who were in the forum without many bystanders. A follow-up study with a video camera

confirmed the influence of self-awareness on bystander behavior. This time, instead of seeing a name in red, test subjects thought they were being watched by a webcam as they navigated the forum. Even this mere feeling of accountability led subjects in a big group to respond to distress messages more often than those without many bystanders. The researchers consider their tests "among the first to repeatedly demonstrate a reversal of the bystander effect." But what's happening here isn't some magnanimous injection of altruism. If that were the case, then every test subject whose self-awareness increased should have shown more victim assistance. Instead those in the big group of bystanders helped out much more than people who read the distress messages alone. What's happening, Van Bommel and company suggest, is that people whose self-awareness is aroused in big groups fear they'll be held accountable for their behavior by the other bystanders. As a result they alter their response to account for what others might think. In short, when our reputation is on the line, the cost of inaction increases enough to get us involved.

Link- Empirics

One-third of adults guard internet behavior post-Snowden-even if the actions aren't large, it still proves a behavioral shift

Dave 15-Paresh, reporter for LA Times, internally citing Pew Research Center survey (3/16, "Snowden leaks lead Americans to scale back online activity, survey finds", LA Times, <http://www.latimes.com/business/technology/la-fi-tn-snowden-behavior-pew-20150316-story.html>) HC

In the nearly two years since Edward Snowden leaked secrets about U.S. government online surveillance, about a third of U.S. adults have taken steps to guard their Internet behavior more closely, according to a new survey. But few have adopted the strongest measures to protect their privacy. The Pew Research Center survey found that 87% of U.S. adults queried had heard about the Snowden leaks, and 34% of them subsequently took at least one action to shield their privacy. Some adjusted social media settings or put off social media altogether. Apps and search engines have been avoided. Others have tried to talk in person instead of through chat apps or the phone. The biggest change noted was with passwords — 25% have adopted stronger ones. Email was also a big pivot point, with 18% of adults aware of the U.S. surveillance efforts saying they have changed their email usage at least somewhat. Those U.S. citizens most concerned about surveillance were the most likely to change behavior, which might seem obvious. Still, no more than 10% of those aware of U.S. surveillance turned to powerful measures such as do-not-track, encryption and anonymity software. Tools like Tor, PGP and proxy servers can add to privacy and security, but often are cumbersome to install and use. While 54% of those surveyed said it is OK for the government to monitor communications of foreign citizens, just 40% said it was acceptable for the government to track communications of U.S. citizens. Additionally, a notable share of Americans have taken specific technical steps to assert some control over their privacy and security, though most of them have done just simple things. For instance, 25% of those who are aware of the surveillance programs are using more complex passwords.

Specificity of the purpose doesn't matter-data proves Americans view surrendering data as a violation of their privacy

Dinev Hart and Mullen 8-Tamara, professor and chair of the Department of Information Technology and Operations Management at Florida Atlantic University, PhD in physics from Florida Atlantic University, Associate Editor of European Journal of Information Systems, Paul, Department Chair of Information Technology and Operations Management at Florida Atlantic University, PhD in communications from USC, and Michael, professor of international business at Florida Atlantic University ("Internet privacy concerns and beliefs about government surveillance – An empirical investigation", Journal of Strategic Information Systems, vol. 17, no. 3, Elsevier) HC

The data support the bifurcation of the Internet privacy concern construct, one related to concerns about information finding and the other related to concerns about information abuse. The relationships between each of these constructs and the other variables in the model were quite similar, in terms of direction and strength. In comparing the coefficients for privacy concerns about information abuse to privacy concerns about information finding, there is no more than a .05 spread between the standardized, statistically significant, coefficients. The consistently similar relationships for each of these privacy constructs suggests that individuals do not significantly differentiate between privacy concerns based on the potential threat of information abuse and simple information discovery. This is an interesting finding that deserves further scholarly exploration. One possible interpretation of the lack of differentiation may be that individuals believe that so long as information can be found on the Internet, the potential for abuse is not far removed. To the extent that this interpretation may be true, it surely reflects a negative assessment about the availability of personal information to be found on the Internet. The results of our empirical study are consistent with the notion that government initiatives to improve security influence Internet use. The statistically significant relationship between perceived need for government surveillance and willingness to disclose personal information suggests that users perceive security initiatives as important and, arguably, tolerable. At the same time, government intrusion concerns do not directly influence willingness to provide personal information. However, government intrusion concerns are positively related to privacy concerns which, in turn, are negatively related to the willingness to provide personal information over the Internet. Thus, privacy concerns play an important role in understanding how users assess the relationship between government initiatives and Internet use. The negative relationship between perceived need for surveillance and government intrusion concerns further suggests that if government security-related initiatives were to be perceived as intrusive, the justification for such initiatives would decline. This would erode public support for government security initiatives and may, in turn, undermine government efforts to increase protection for the public.

Even if intent is positive, still proves a negative relationship between the government and disclosing information

Dinev Hart and Mullen 8-Tamara, professor and chair of the Department of Information Technology and Operations Management at Florida Atlantic University, PhD in physics from

Florida Atlantic University, Associate Editor of European Journal of Information Systems, Paul, Department Chair of Information Technology and Operations Management at Florida Atlantic University, PhD in communications from USC, and Michael, professor of international business at Florida Atlantic University (“Internet privacy concerns and beliefs about government surveillance – An empirical investigation”, Journal of Strategic Information Systems, vol. 17, no. 3, Elsevier) HC

These results are important and interesting for a number of reasons. The empirical support for the important role of privacy in e-commerce is consistent with other studies which show that privacy concerns inhibit online transactions (Culnan and Armstrong, 1999, Harris Interactive, 2003a, Harris Interactive, 2003b, Dinev and Hart, 2003 and Dinev and Hart, 2004). The direction of these findings also reinforces the notion that disclosing how personal information is gathered and processed through online transactions is important to Internet users. The findings regarding perceived need for government surveillance and government intrusion concerns suggest that the respondents of our survey were of two minds regarding government initiatives. The perceived need for government surveillance was positively related to willingness to disclose personal information and negatively related to Internet privacy concerns. On the other hand, government intrusion concerns were positively related to the Internet privacy concerns but did not affect willingness to disclose personal information. And, we found a negative relationship between perceived need for government surveillance and government intrusion concerns. A close examination of the items used to measure these two constructs shows that they are similar except for their orientation. The need for surveillance items were proactive statements addressing actions needed to be taken by the government. The intrusion concerns were statements about how actions would affect the respondents. Are the respondents saying: do what needs to be done to ensure security but we do not approve of what these actions will do to us or while security initiatives might be good for the country and e-commerce, they are not good me? There is an important nuance in these different interpretations. The first interpretation would indicate that the respondents are uncertain about how to view the need for security initiatives. They are necessary but they have negative consequences and the resolution of this tension is not clear. The second interpretation would indicate that the respondents acknowledge the need for security initiatives and that there will be negative consequences regarding privacy. The tension is not resolvable and therefore they will modify their behavior. It is not clear to us whether we can claim the accuracy of one of these interpretations over the other based on the data we have analyzed. However, the possibility of either begs for further study, especially because commercial surveys capture similar nuances Harris Interactive, 2001, Harris Interactive, 2002, Harris Interactive, 2003a and Harris Interactive, 2003b. They consistently indicate that, in spite of a relatively small decline in public support since 9/11, there is a broad consensus in favor of giving law enforcement increasing powers. At the same time, however, Harris surveys indicated that the public is anxious that certain initiatives pose threats to individual privacy – their primary message was Proceed – but with great care Harris Interactive, 2001, Harris Interactive, 2002, Harris Interactive, 2003a and Harris Interactive, 2003b. The consistently mixed results of opinion polls about public attitudes toward surveillance since September 11, 2001, are in accordance with our findings. A recent poll about U.S. public support of the warrantless wiretapping program (Nagourney and Elder, 2006) provided particularly strong support for our results and interpretations of continuing mixed

attitudes of the American public. According to the survey results, American citizens were willing to support a surveillance program if they believed it was intended to protect them. They however overwhelmingly opposed the same kind of surveillance if it was aimed at ordinary Americans. Thus, the majority of Americans approved of eavesdropping without prior court approval in order to reduce the threat of terrorism. When the same question was asked, but stripped of any mention of terrorism, the majority of the respondents said they disapproved.

Link- Finance

Surveillance causes behavior change-people are less inclined to act immorally-studies prove especially in financial contexts

Lohr 13-Steve, tech reporter for NYT, internally cites study conducted by Lamar Pierce, an associate professor at the Olin Business School at Washington University in St. Louis; Daniel Snow, an associate professor at the Marriott School at Brigham Young University; and Andrew McAfee, a research scientist at the Sloan School of Management at the Massachusetts Institute of Technology(8/26/, "How Surveillance Changes Behavior: A Restaurant Workers Case Study", New York Times, <http://bits.blogs.nytimes.com/2013/08/26/how-surveillance-changes-behavior-a-restaurant-workers-case-study/>) HC

The paper, "Cleaning House: The Impact of Information Technology Monitoring on Employee Theft and Productivity," is the work of three academics: Lamar Pierce, an associate professor at the Olin Business School at Washington University in St. Louis; Daniel Snow, an associate professor at the Marriott School at Brigham Young University; and Andrew McAfee, a research scientist at the Sloan School of Management at the Massachusetts Institute of Technology. The researchers measured the impact of software that monitors employee-level theft and sales transactions, before and after the technology was installed, at 392 restaurants in 39 states. The restaurants were in five "casual dining" chains. The paper does not name the five, but it cites examples of the casual dining category including Applebee's, Chili's and Olive Garden. Employee theft and fraud is a big problem, estimated at up to \$200 billion a year across the economy. In the restaurant industry, analysts estimate the losses from employee theft at 1 percent of revenue. That does not seem like a lot, but restaurant profit margins are slender, typically 2 to 5 percent. So cutting down on theft can be an important contributor to a restaurant's financial health. Most of the restaurant industry pays its servers low wages and they depend on tips. Employee turnover is high. In that environment, a certain amount of theft has long been regarded as a normal part of the business. Unethical behavior runs the gamut. There is even a how-to book on the subject, published in 2004, "How To Burn Down the House: The Infamous Waiter and Bartender's Scam Bible by Two Bourbon Street Waiters." A simple example is a bartender's not charging for a round of drinks, and urging the customers to "take care of me" — with a large tip. Other tactics are more elaborate. But monitoring software is now available to track all transactions and detect suspicious patterns. In the new study, the tracking software was NCR's Restaurant Guard product, and NCR provided the data. The software is intentionally set so that a restaurant manager gets only an electronic theft alert in cases that seem to clearly be misconduct. Otherwise, a manager might be mired in time-consuming detective work instead of running the restaurant. The savings from the theft alerts themselves were modest, \$108 a week per restaurant. However, after installing the monitoring software, the revenue per restaurant increased by an average of \$2,982 a week, or about 7 percent. The impact, the researchers say, came not from firing workers engaged in theft, but mostly from their changed behavior. Knowing they were being monitored, the servers not only pulled back on any unethical practices, but also channeled their efforts into, say, prompting customers to have that dessert or a second beer, raising revenue for the restaurant and tips for themselves. "The same people who are stealing from you can be set up to succeed," said Mr. Pierce of Washington University. In the research, the data sets were sizable. For example, there were more than

630,000 transactions by servers tracked and collected each week over the course of the project. But more significant, the researchers say, is what the data analysis might contribute to fields of study like social psychology and behavioral economics — and the business discipline of human resources management. In human resources, much emphasis is placed on employee selection: if you pick the right people, they will do the right thing. Instead, this research suggests that the surveillance effect on employee behavior is striking. “What’s surprising is the weird effectiveness of the intervention, once the monitoring technology is in place,” said Mr. McAfee of M.I.T. Not surprisingly, NCR is delighted by the results. “It validates the customer data we’ve seen,” said Jeff Hindman, a vice president at NCR. “But this is done by outside experts with the academic standards and statistical rigor they bring to the analysis.”

Impact—Sex Trafficking—Nuke Terror

Government online monitoring is key to stop trafficking

Latonero 11 (Mark, research director and deputy managing director at the Annenberg Center on Communication Leadership & Policy and a research assistant professor at the University of Southern California, “Future Action for Trafficking Online”, <http://technologyandtrafficking.usc.edu/report/future-action-for-trafficking-online/>)CDD

Human trafficking via online technologies can be addressed by a variety of actors, including those in government, the private sector, NGOs, service providers, and academia. This section explores possibilities for future action with a focus on cross-sector partnerships.¹ Government Ambassador Luis CdeBaca recently testified, “As important as innovations and partnerships with civil societies are, it remains a core governmental responsibility to fight against modern slavery.”² The William Wilberforce Trafficking Victims Protection Reauthorization Act of 2008 called for a study specifically focused on the relationship between the Internet and sex trafficking. Section 237(c), on “Reports and Studies,” states: “subject to availability of appropriations, the head of the National Institute of Justice shall conduct ... a comprehensive study to examine the use of Internet-based businesses and services by criminal actors in the sex industry, and to disseminate best practices for investigation and prosecution of trafficking and prostitution offenses involving the Internet.”³ However, according to the National Institute of Justice, funds were not appropriated for the study.⁴ Research studies can inform future policy and action and lead to innovative technologies, which law enforcement and government officials can use in anti-trafficking efforts. Government officials can play an essential role in the response to trafficking online by allocating resources for further research related to sex and labor trafficking in domestic and international contexts. Enforcement efforts in this space are especially dependent on specialization and expertise that can keep pace with the rapidly changing technologies that can be used to facilitate or combat trafficking. To promote the development of this expertise, additional actions for government officials include: Establishing national-level taskforces on trafficking online and supporting existing regional taskforces with information and capabilities to address trafficking online. Enabling federal and local agencies to develop the technological capabilities to monitor trafficking online and to share information among organizations. Informing national taskforces and government officials about issues related to technology and trafficking and providing training and skills on how best to use these technologies are inter-related endeavors. Federal and local officials could also work toward coordinating databases and developing platforms for information sharing on trafficking cases. Private-sector expertise could assist these government efforts. As Yury Fedotov, executive director of UNODC, notes, “When it comes to fighting crime there has to be a partnership between the public and the private sectors. Crime prevention and victim protection cannot be achieved by governments or criminal justice systems alone; we need Internet service providers, civil society, the media, educational institutions and the public on board.”⁵

Human trafficking is critical support for terrorism--- key to facilitate terrorist travel and alliances

Russell D. Howard 13, professor at Middlebury Institute of International Studies, Joint Special Operations University, Report 13-6, October 2013, "The Nexus of Extremism and Trafficking: Scourge of the World or So Much Hype?" jsou.socom.mil/JSOU%20Publications/13-6_Howard_Nexus_FINAL.pdf

Select cases show that supporters and facilitators have actually used human trafficking to support terrorist efforts. Three Pakistani citizens—who were tried in a U.S. court—pleaded guilty to provide material support to the Tehrik-e-Taliban in Pakistan (TTP), a designated foreign terrorist organization (FTO) often referred to as the “Pakistani Taliban.”⁶² The three men ... admitted that between January 3, 2011 and March 10, 2011 they conspired to provide material support to the TTP in the form of false documentation and identification, knowing that the TTP engages in terrorist activity and terrorism. ^δ According to court documents ... [they] conducted a human smuggling operation in Quito, Ecuador that attempted to smuggle an individual they believed to be a member of the TTP from Pakistan into the United States.⁶³ According to Assistant Attorney General for National Security Lisa Monaco, the case “underscores the threat posed by human smuggling networks that facilitate terrorist travel.”⁶⁴ A similar case was reported in Europe in late 2011, when a Helsinki man supporting the Somali Islamist al-Shabaab movement was arrested by Finland’s National Bureau of Investigation for participating in aggravated human trafficking with a terrorist intent. The lead investigator stated that “plans were under preparation for taking people abroad without their knowledge of the real purpose of their travel. There is reason to believe that they would have been taken to a training camp.”⁶⁵ This case is reportedly the country’s first-ever terrorism case, showing the expansion and pervasiveness of the nexus.^δ In 2011, the European Police Office (Europol) reported a growing connection between human trafficking and terrorism. Its European Union (EU) Terrorism Situation and Trend Report summarized member states’ intelligence and analysis that the Kurdistan Workers’ Party (PKK) and the Liberation Tigers of Tamil Elam (LTTE) were actively involved in human trafficking. The Canadian government further reported that LTTE entered the human cargo business when its arms smuggling profits dried up after the war in Sri Lanka ended.⁶⁶ In August 2011, the Criminal Investigation Department of Sri Lanka arrested a leading member of the LTTE named “Uganda Bala.” The human trafficker had been transiting between Malaysia, Singapore, India, Thailand, and several other countries, earning millions of rupees for LTTE by sending people to European countries via illegal means.⁶⁷ These reports not only highlight the linkages between human trafficking and terrorism, but they also show the resiliency and adaptability of these criminal nexus organizations.^δ Human traffickers and terrorists benefit from disruptions in an increasingly globalized world characterized by enclaves that provide space for illicit activities.⁶⁸ These spaces can be juridical, social, virtual, or territorial, and may be the result of the vacuum in power left by weak or failing states.⁶⁹ Like other forms of organized crime, human trafficking is pervasive, and there is hardly a location in the world that is not affected, whether as an origin, transit, or recipient country.⁷⁰ As a result, the opportunity for linkages and alliances between human trafficking and terrorist groups is great and widespread. The following case studies provide a sampling of this growing phenomenon.

Nuclear terror causes accidental US/Russia nuclear war---extinction

Anthony Barrett 13, PhD, Engineering and Public Policy from Carnegie Mellon University, Director of Research, Global Catastrophic Risk Institute, Fellow in the RAND Stanton Nuclear Security Fellows Program, Seth Baum, PhD, Geography, Pennsylvania State University, Executive Director, GCRI, Research Scientist at the Blue Marble Space Institute of Science, former Visiting Scholar position at the Center for Research on Environmental Decisions at Columbia University, and Kelly Hostetler, Research Assistant, GCRI, 6/28, "Analyzing and Reducing the Risks of Inadvertent Nuclear War Between the United States and Russia," *Science and Global Security* 21(2): 106-133

War involving significant fractions of the U.S. and Russian nuclear arsenals, which are by far the largest of any nations, could have globally catastrophic effects such as severely reducing food production for years,¹ potentially leading to collapse of modern civilization worldwide and even the extinction of humanity.² Nuclear war between the United States and Russia could occur by various routes, including accidental or unauthorized launch; deliberate first attack by one nation; and inadvertent attack. In an accidental or unauthorized launch or detonation, system safeguards or procedures to maintain control over nuclear weapons fail in such a way that a nuclear weapon or missile launches or explodes without direction from leaders. In a deliberate first attack, the attacking nation decides to attack based on accurate information about the state of affairs. In an inadvertent attack, the attacking nation mistakenly concludes that it is under attack and launches nuclear weapons in what it believes is a counterattack.³ (Brinkmanship strategies incorporate elements of all of the above, in that they involve intentional manipulation of risks from otherwise accidental or inadvertent launches.⁴) ¶ Over the years, nuclear strategy was aimed primarily at minimizing risks of intentional attack through development of deterrence capabilities, though numerous measures were also taken to reduce probabilities of accidents, unauthorized attack, and inadvertent war. For purposes of deterrence, both U.S. and Soviet/Russian forces have maintained significant capabilities to have some forces survive a first attack by the other side and to launch a subsequent counterattack. However, concerns about the extreme disruptions that a first attack would cause in the other side's forces and command-and-control capabilities led to both sides' development of capabilities to detect a first attack and launch a counter-attack before suffering damage from the first attack.⁵ ¶ Many people believe that with the end of the Cold War and with improved relations between the United States and Russia, the risk of East-West nuclear war was significantly reduced.⁶ However, it has also been argued that inadvertent nuclear war between the United States and Russia has continued to present a substantial risk.⁷ While the United States and Russia are not actively threatening each other with war, they have remained ready to launch nuclear missiles in response to indications of attack.⁸ ¶ False indicators of nuclear attack could be caused in several ways. First, a wide range of events have already been mistakenly interpreted as indicators of attack, including weather phenomena, a faulty computer chip, wild animal activity, and control-room training tapes loaded at the wrong time.⁹ Second, terrorist groups or other actors might cause attacks on either the United States or Russia that resemble some kind of nuclear attack by the other nation by actions such as exploding a stolen or improvised nuclear bomb,¹⁰ especially if such an event occurs during a crisis between the

United States and Russia.¹¹ A variety of nuclear terrorism scenarios are possible.¹² Al Qaeda has sought to obtain or construct nuclear weapons and to use them against the United States.¹³ Other methods could involve attempts to circumvent nuclear weapon launch control safeguards or exploit holes in their security.¹⁴ It has long been argued that the probability of inadvertent nuclear war is significantly higher during U.S.-Russian crisis conditions,¹⁵ with the Cuban Missile Crisis being a prime historical example. It is possible that U.S.-Russian relations will significantly deteriorate in the future, increasing nuclear tensions. There are a variety of ways for a third party to raise tensions between the United States and Russia, making one or both nations more likely to misinterpret events as attacks.¹⁶

XT – Patriarchy IMP

Sex trafficking reifies the politics of patriarchy which makes extinction inevitable and turns the case

Warren and Cady 94

[Karen and Duane, *Feminism and Peace: Seeing Connections*, Hypatia, Vol. 9, No. 2, Spring, p4-20]

Operationalized, the evidence of patriarchy as a dysfunctional system is found in the behaviors to which it gives rise, (c), and the unmanageability (d), which results. For example, in the United States, current estimates are that one out of every three or four women will be raped by someone she knows; globally, rape, sexual harassment, spouse-beating, and sado-masochistic pornography are examples of behaviors practiced, sanctioned, or tolerated within patriarchy. In the realm of environmentally destructive behaviors, strip-mining, factory farming, and pollution of the air, water, and soil are instances of behaviors maintained and sanctioned within patriarchy. They, too, rest on the faulty belief that is okay to “rape the earth,” that it is “man’s God-given right” to have dominion (that is, domination) over the earth, that nature has only instrumental value, that environmental destruction is the acceptable price we pay for “progress.” And the presumption of warism, that war is a natural, righteous, and ordinary way to impose dominion on a people or nation, goes hand in hand with patriarchy and leads to dysfunctional behaviors of nations and ultimately to international unmanageability. Much of the current “unmanageability” of contemporary life in patriarchal societies, is then viewed as a consequence of a patriarchal preoccupation with activities, events, and experiences that reflect historically male-gender-identified beliefs, values, attitudes, and assumptions. Included among these real-life consequences are precisely those concerns with nuclear proliferation, war, environmental destruction, and violence towards women, which many feminist see as the logical outgrowth of patriarchal thinking. In fact, it is often only through observing these dysfunctional behaviors—the symptoms of dysfunctionality—that one can truly see that and how patriarchy serves to maintain and perpetuate them. When patriarchy is understood as a dysfunctional system, this “unmanageability” can be seen for what it is—as a predictable and thus logical consequence of patriarchy. The theme that global environmental crisis, war, and violence generally are predictable and logical consequences of sexism and patriarchal culture is pervasive in ecofeminist literature. Ecofeminist Charlene Spretnak, for instance, argues that “a militarism and warfare are continual features of a patriarchal society because they reflect and instill patriarchal values and fulfill needs of such a system. Acknowledging the context of patriarchal conceptualizations that feed militarism is the first step toward reducing their impact and preserving the earth”. Stated in terms of the foregoing model of patriarchy as a dysfunctional social system, the claim by Spretnak and other feminists take on a clearer meaning: Patriarchal conceptual frameworks legitimate impaired thinking (about women, national and regional conflict, the environment) which is manifested in behaviors which, if continued, will make life on earth difficult, if not impossible. It is a stark message, but it is plausible. Its plausibility lies in understanding the conceptual roots of various women-nature-peace connections in regional, national and global contexts.

XT—Moral Obligation

We have a moral obligation to fight human trafficking

Pryce '6 Deborah Pryce. (US Representative). May 8, 2006. "Combatting Modern Day Slavery."

<http://www.humanevents.com/article.php?id=14618> Accessed 7/5/13

We have a moral obligation to fight this evil. Trafficking in human beings is an assault on our most cherished beliefs, that every human being has freedom and dignity and worth. A nation that stands for the freedom and dignity of every human being cannot tolerate the exploitation of the innocent on its own soil. This needs to be a national priority, because it is a global outrage. In 2005, I led a congressional delegation to Italy, Greece, Albania and Moldova to meet with trafficking victims and government officials and discuss ways to end this crime and protect its victims. During this trip, and later during hearings I held as chairman of a House financial services subcommittee, I heard testimony on the economic and financial implications of human trafficking, as well as the heartrending stories of trafficking victims. Their stories of rape, torture and routine brutality are simply beyond description. Congress passed, and the President signed, the Trafficking Victims Protection Reauthorization Act. This legislation strengthens the original Trafficking Victims Protection Act to keep the U.S. at the forefront of the global war on this modern-day slavery. Included in the \$360-million package is an expansion of the Operation Innocence Lost program, a nationwide initiative that aggressively pursues sex traffickers and child prostitution rings. Over the last two years, the program has rescued more than 200 child victims and helped uncover the Toledo sex trafficking ring. Congress has also recently taken steps to target demand for sex trafficking. Provisions of the Trafficking Victims Protection Act that I authored along with Rep. Carolyn Maloney (D.-N.Y.) will provide state and local law enforcement with new tools to target demand and investigate and prosecute sex trafficking, fund a national conference on best practices for reducing demand for sex trafficking and fund a review of the incidence of sex trafficking in the U.S., to provide us with a more accurate picture of the scope of this problem. Our law enforcement strategy must be wedded to a vigorous partnership between government agencies and private and religious organizations on the front lines of this struggle. For years these groups have helped rescue and support trafficking victims and raise awareness about the fight against human trafficking. Human trafficking is a heinous crime, a betrayal of one of the most basic obligations of morality -- the obligation to defend the innocent. The presence of this scourge in our midst cannot and will not be tolerated. But those who would so debase themselves and the human family by buying and selling women and children are beyond mere reproach. They will not respond to outrage, but to action.

Impact—Online Illegal Transactions-

Surveillance capabilities deters illicit online commercial transactions

Andreas 10 - John Hay Professor of International Studies and an academy scholar at Harvard University, a research fellow at the Brookings Institution, and an SSRC-MacArthur Foundation Fellow on International Peace and Security. He holds an MA and PhD in government from Cornell University and a BA in political science from Swarthmore College [Peter Andreas, "The Illicit Global Economy: The Dark Side of Globalization", 5-18-10, Accessed 7-25-15, <http://webpace.pugetsound.edu/facultypages/bdillman/382Readings/Reading1.pdf>] hk

The role of new technologies in facilitating law enforcement has, if anything, been growing. Even as new information technologies enable crossborder crime, these technological advances also greatly increase tracking and surveillance capacities (well beyond traditional wiretapping, which itself was a crucial technological development for state authorities).⁵⁶ Technology has also dramatically lowered the costs and increased the intensity and frequency of trans-governmental law enforcement networks, allowing state actors to interact with their foreign counterparts more rapidly and frequently.⁵⁷ In short, many of the same technological transformations that facilitate the globalization of crime also facilitate the globalization of crime control. And new technologies will continue to enhance the ability of states to police the cross-border flow of people, cargo, money, and information. For example, the "virtual borders" increasingly promoted by U.S. law enforcement strategists are essentially electronic borders.⁵⁸ The digitization of border controls has ranged from the use of more-expansive and -sophisticated databases for "data mining" and computer tracking systems to the creation of more tamper resistant travel documents and "smart" IDs with biometric identifiers (such as digital fingerprints and facial and retinal scans). Some illicit uses of new technologies such as electronic banking leave digital fingerprints that state authorities can detect and trace.⁵⁹ This is one reason why the use of informal banking mechanisms (such as hawalas) are often preferred over the formal banking system, and why concerns about digital eavesdropping can make transnational law evaders wary of using cell phones and other forms of electronic communication. Similarly, illicit online commercial transactions are often constrained by the need to use credit cards, which leave a record. This is partly the reason that so many illicit activities on the Internet—whether the circulation of pirated music or child pornography—involve a barter exchange economy based on file sharing rather than financial transactions.

Direct correlation between illicit trade and conflict

Andreas 10 - John Hay Professor of International Studies and an academy scholar at Harvard University, a research fellow at the Brookings Institution, and an SSRC-MacArthur Foundation Fellow on International Peace and Security. He holds an MA and PhD in government from Cornell University and a BA in political science from Swarthmore College [Peter Andreas, "The Illicit Global Economy: The Dark Side of Globalization", 5-18-10, Accessed 7-25-15, <http://webpace.pugetsound.edu/facultypages/bdillman/382Readings/Reading1.pdf>] hk

Illicit global trade has also been increasingly blamed for fueling armed conflicts, and vice versa. Indeed, links between the illicit global economy and conflict are considered a defining attribute

of so-called new wars.⁸⁵ The economic incentives and opportunities presented by illicit trade are also an important part of the “greed and grievance” debate in the literature on contemporary civil wars.⁸⁶ Prominent cases include drug production and trafficking (Colombia and Afghanistan), export of “conflict diamonds” (West Africa), and embargo busting, theft, and diversion of humanitarian aid (the Balkans), among others. New transportation and communication technologies also clearly facilitate longdistance diaspora mobilization and funding of conflicts, as evident in the Balkans and elsewhere.⁸⁷ Illicit trade and conflict are clearly connected in many cases and in many ways, and international interventions of various sorts (such as delivering humanitarian aid, deploying peacekeepers, and imposing economic sanctions and arms embargoes) can unintentionally exacerbate this connection.⁸⁸ But this connection is too easily overstated and oversimplified. Take the case of the illicit drug trade, which is increasingly depicted as closely connected to armed conflict.⁸⁹ There is nothing automatic and predetermined about this connection, which is made readily apparent by the fact that many drug-producing and transit areas are not war zones, and similarly, that many war zones are not drug-producing and transit areas. And in one particularly prominent case, Mexico (a major heroin, marijuana, and methamphetamine producer and the main transshipment point for U.S.-bound cocaine), the country’s large drug trade and small and isolated insurgencies have been strikingly disconnected. Similarly, Bolivia has long been a major coca producer (the raw material used for cocaine) and has gone through many bouts of political instability—but so far without turning to armed conflict. In Colombia, the drug trade has been a key factor in extending the armed conflict, providing a major source of financing for both leftist guerillas and right-wing paramilitaries, but it should also be remembered that the conflict long predates the rise of the Colombia drug trade.⁹⁰ It should also be emphasized that despite the “new wars” label, the connection between illicit trade and conflict is not a post-Cold War invention. It goes back not just decades but centuries. One need only look to the early American historical experience: much to the dismay of the British imperial authorities, illicit trade kept French forces clandestinely supplied by American colonial merchants during the Seven Years’ War, and transatlantic smuggling kept George Washington’s Continental Army supplied during the American War of Independence.⁹¹ Much to the delight of the British, American colonial merchants illicitly traded with the enemy and helped keep English forces supplied during the War of 1812, and confederate cotton smuggling helped keep English mills supplied during the American Civil War.⁹² Then, as now, it was often difficult to clearly differentiate between greed and grievance. But there is certainly no evidence to suggest that today’s insurgents are more profit-driven than some of their American predecessors: one need only examine the large and lucrative privateering business (which the British defined as piracy) during the American Revolution to realize how much economic motives can be a decisive contributor to a rebel political cause.⁹³

Illicit globalization causes conflict

Andreas 10 - John Hay Professor of International Studies and an academy scholar at Harvard University, a research fellow at the Brookings Institution, and an SSRC-MacArthur Foundation Fellow on International Peace and Security. He holds an MA and PhD in government from Cornell University and a BA in political science from Swarthmore College [Peter Andreas, “The

Illicit Global Economy: The Dark Side of Globalization", 5-18-10, Accessed 7-25-15, <http://webpace.pugetsound.edu/facultypages/bdillman/382Readings/Reading1.pdf>] hk

According to the standard story of illicit globalization, as criminal enterprise has gone global, so too has the violence associated with it. This violence comes in two forms: first, violence as an inherent attribute of illicit business transactions; and second, illicit business as an economic motivator and/or enabler of contemporary internal wars—what some observers have called “new wars.”⁷⁹ Regarding the first claim, illicit market transactions tend to have more potential for violence than licit market transactions, given that the market actors do not have recourse to the law to enforce contracts or to protect or punish depredations by other participants or outsiders. Lacking the protections of the law, illicit market actors must rely on informal forms of control to resolve their disputes, punish those who impede their livelihood, and deter those who might otherwise interfere. Violence is one such form, a time-honored form of self-help. Nevertheless, actors in the illicit global economy are defined more by stealth than by violence.⁸⁰ Part of the reason that violence and illicit markets are so closely linked in conventional accounts is that episodes of violence draw the most attention and provoke the most concern. Thus, the analysis is distorted by selection bias. Such selection bias privileges the most-violent sectors of the illicit economy—most notably the illicit drug trade, though even drug markets are less violent than is commonly perceived.⁸¹ Moreover, within the drug trade, there is a privileging of attention to hard drugs such as cocaine and heroin (relatively high levels of violence) over soft drugs such as marijuana (relatively lower levels of violence). And within the trade in hard drugs, there is selection bias that favors attention to the most-violent places and actors. Contrast Colombia (relatively high levels of violence) to Bolivia (relatively much lower levels of violence)—both countries that are deeply enmeshed in the coca/cocaine trade, yet Colombia receives far more attention.

Democracy

Tech advances and the internet advance capitalism while undermining freedom and democracy

Robert McChesney 13, University of Illinois communication professor, writer of Digital disconnect, March 14, 2013, phys.org, <http://phys.org/news/2013-03-capitalism-democracy-compatible-internet-author.html>, AB)

Two decades into the digital age, the Internet is now "enmeshed in the fabric of nearly every aspect of life," says University of Illinois communication professor Robert McChesney. In ongoing debates about its influence and future, there are, he says, celebrants and skeptics. But there's an "elephant in the room" that's getting little attention, McChesney says in a new book. That elephant is capitalism, and its growing dominance of the Internet is threatening everything from privacy to democracy. Both the celebrants and skeptics "take capitalism for granted as part of the background scenery" and disregard the political economy, McChesney writes in "Digital Disconnect: How Capitalism is Turning the Internet Against Democracy," published this month by The New Press. "When capitalism is mentioned, it is usually as the 'free market,' which is taken as a benevolent given, almost a synonym for democracy," McChesney writes. Yet "really existing capitalism" doesn't fit with the free-market "catechism" or with democracy, he writes; "the crisis of our times is that capitalism undermines democracy." The Internet has been transformed from the noncommercial and public space that many dreamed of in its earlier days to one that "has been commercialized, copyrighted, patented, privatized, data-inspected, and monopolized," McChesney writes. As part of that process, advertising has been transformed online in a way that eliminates previous notions of privacy, and the government has surveillance powers that were once unimaginable. Large telecommunication and entertainment corporations that once appeared to be vulnerable, because of the Internet, have prospered through their influence in a "corrupt" policymaking process. The Internet giants that have risen over the last two decades are not the progressive force some think them to be, and have prospered as the result of monopoly privileges, exploited labor, and government policies and subsidies, he says. McChesney has written extensively in the past about the politics and economics of the media, the decline of journalism, and corporate influence in the government's media policymaking. He also is a co-founder of Free Press, a media reform organization. This book comes now, McChesney writes, because he sees the Internet as having crystallized to a significant degree. "We are in a position, in some respects for the first time, to make sense of the Internet experience and highlight the cutting-edge issues it poses for society," he writes. We also are in a better position to understand what decisions can be made that might determine the future of the Internet and its influence in shaping the society, he says in the book. Among his prescriptions: broadband availability to all for free as a basic right, strict regulation of advertising and a sharp reduction or elimination of the tax write-off of advertising as a business expense, heavy regulation of digital "natural monopolies" or conversion of them to nonprofit services, large public investments in journalism, net neutrality, strict privacy regulations that make online activities as private as correspondence in the mail, and strong legal barriers against militarization of the Internet and use of it for warrantless surveillance. Yet while outlining these and other reforms related to the broader communications environment, McChesney pessimistically writes that none of them have a chance of enactment given the power of wealth

and corporations in the policymaking process. Movements for democratic reform and revolution will therefore be required, he writes, and he believes those movements are emerging. "At the center of political debate will be economics: What sort of economy can best promote democratic values and structures and self-governance while nurturing the environment? And at the center of everything will be the Internet. The democratization of the Internet is integrally related to the democratization of the political economy. They rise and fall together."

Internet Freedom

Internet freedom creates a radical form of democracy which fractures ecological regimes and makes environmental destruction inevitable

Aigrain 14 - Aigrain is one of the founders of La Quadrature du Net, a non-profit association that defends rights and freedoms of citizens in the digital sphere and acts at both National and European level. He is also one of the founders of the INTERDEMOS group of political solidarity with Greece. He has authored several books on the potential of the commons and sharing for cultural, social and political empowerment and human development [Phillipe Aigrain, "Can the bottom-up actions of citizens regenerate democracy in Europe? ", 6-27-14, Accessed 7-13-15, <http://www.eutopiamagazine.eu/en/philippe-aigrain/issue/can-bottom-actions-citizens-regenerate-democracy-europe>] hk

The democratic crisis The fact that citizens of democratic regimes criticise the failure of those regimes to reach their stated objectives, and even doubt their ability to do so at all is part of democracy itself. That's no excuse for ignoring the depth of today's global crisis of democracies, and the particular intensity of this crisis in Europe. Despite democratic processes such as elections and parliamentary votes, there is a widespread feeling that our societies are governed by a small group of people among whom economic, media, and political interests are used for their own wealth and benefit. Even though the digital revolution has made it possible for more and more activities to take place without monetary transactions, most political thinking is dominated by a narrow economism. Non-market production and exchanges are at best ignored, in most cases considered as temporary market failures to be overcome or eradicated by various means. Production and distribution models have been installed that fail to spread the benefits of technological progress among all, that is to share both work and free time. Many people are pressured to accept low-paid menial jobs or stigmatised for receiving benefits and appearing to be unemployable, albeit in non-existent jobs. Though real professional achievements are more and more on a group basis, stressful managerial environments based on individual performance indicators are widely imposed. The organisation of cities, commerce, work or media takes freely usable time and turns it over to consumer-driven activities instead of creative and social ones. The urgency of ecological reform is stubbornly ignored in order to protect unsustainable industrial and consumption models and short-term profit. Several more or less consistent lines of analysis have been proposed to find ways to overcome this democratic crisis. The first concentrates on the oligarchic evolution of our ruling classes – the increase in inequalities and the way in which the interests of a new group of the hyper-rich are serviced. The second describes our societies as post-democratic, and pays more attention to institutional processes and the role of managerial techniques in the destruction of the social and democratic fabric. A third line emphasises the dual role of the digital revolution, strengthening on the one hand the ability of large organisations to arrange production in ways that weaken collective resistance, and to control and keep watch on societies; and on the other hand the development of new abilities in individuals and groups to develop critical thinking, to coordinate, innovate and put in place concrete alternatives. Thinkers who adopt the third line of analysis are more optimistic about the possibility of the regeneration of democracy, even though they acknowledge that the challenges it is facing are great. The response of citizens to the democratic crisis Marking a new relationship between citizens and politics are activism and advocacy for internet freedoms and

rights in the digital sphere; the much more widespread use of internet-mediated political action in the Iranian, Syrian, Spanish and Turkish uprisings; and the commons movement in Italy and more generally in Europe. These differ profoundly from the anti-globalization movements of the end of the twentieth century and from the single issue movements led for instance by NGOs in the environmental, social or gender domain. This difference can be summed up by looking at three interrelated aspects: decentralisation, a new relationship between the individual and the collective, and a combination between political struggles and the direct construction of alternative ways of producing and sharing. The new movements are rooted in the personal expression of individuals, but they are by no means individualist in the neo-liberal sense. They aim to develop communities based on friendship, shared interests, practices or neighbourhoods, and whose products are under commons statute. They may include trade, but only as one activity means among many others. They are characterised by the participation of individuals in several communities or activities. This involvement might take the form of participation in activities rather than formal membership or affiliation. Each community relies heavily on computer networks and digital media for expression and coordination, and for the activities themselves (be it software, internet activism, digital culture, or local exchange systems). The achievements of these movements are impressive, well beyond the limits normally faced by pressure groups, according to Colin Crouch. He stresses the fact that single issue NGOs gain local victories by putting 'their' issues on the agenda, but fail to achieve real change by overcoming the obstacles a post-democratic world faces. In contrast, the new social movements appear much more powerful and attractive, with their combined aims of radical political reform and the building of a better daily life. Not only do they score victories such as the rejection of the ACTA treaty in the European Parliament or the outcome of the referendums on water management in Italy; they also build new technology such as free software or open design, and they create new participatory processes with new mechanisms such as zero-interest loans between individuals, and participatory financing based on donations. More generally, they regenerate the autonomous production and exchange of goods, services, culture, and knowledge. However, they also face obstacles that result from the dilemma of how to position themselves in relation to the centralised political and economic power. Limits to the democratic regeneration and new paths

The economic and social constraints which we can see embodied in existing policies are the first obstacle for movements that try to revisit options for the development of our societies. These constraints might be the domination of finance in the overall economic system, the domination of older media and advertising in representations of what is desirable, the inertia of production and consumption models, the town planning and social organisation of cities and the resulting constraints on time for most individuals, etc. These obstacles have been identified in Stefano Bartolini's *Manifesto per la felicità* or Juliet Schor's *Plenitude*, in which they advocated public policies and changes in individual behaviour to overcome these difficulties. Despite the looming ecological crisis, and the devastating social cost of maintaining the status quo, the changes needed for a new system appear out of reach to many. The attractiveness of refocussing our societies on knowledge and cultural sharing, on collaboration rather than war-like economic competition, on information-based rather than energy-based activities, on quality rather than cost appeals to those who are already engaged in such related practices. However, too many still think they have more to lose than to gain in making such a change, even though their social situation, their self-esteem, the sense of meaningfulness of their life deteriorates.

Such obstacles could be overcome in time, as more and more people drop out of the dominating economic and social system to various degrees and experience the benefits of the new practices. However, such a gradual scenario is made unlikely by the attitude of the present post-democratic leaders. They describe any attempt at radical reform arising from the new social movements, and the related criticism addressed at their policies, as yet another form of populist demagoguery. Rather than trying to create new coalitions with these movements (the post-occupation movements in Spain, the *beni comuni* movements in Italy, the internet freedom and knowledge sharing movements in many European countries, the relocalisation movements in agriculture and production, etc.), they stigmatise them and create a more hostile regulatory framework for them. It seems that they would rather face real populist xenophobia in the hope that it will convince people to keep supporting them rather than opening the door to radical reform. These external constraints must not hide the fact that the grassroots 'reboot' of society also faces internal obstacles, and in particular the difficulty of participants in agreeing a core reform platform. They reuse or develop interesting collective deliberation tools, from the sign-based practices in the *Acampada* or *Occupy Wall Street* movements, to internet-based decision-making tools such as *Liquid feedback*. However, these approaches have proven inefficient when it comes to developing new ideas. In Spain, a mixed approach has appeared that seems more promising. The 15 May 2011 movement was made possible by earlier work on designing a policy platform. Its later development included an interesting interaction with proponents of radical reform policies in the intellectual sphere. Networks such as *Partido X* made extensive use of digital technology to develop their proposals and submit them to comments by a wider public. The policy which resulted fed the programme of *Podemos* and some other movements which obtained significant success in the European Parliamentary elections of May 2014. Overall, the jury is still out. Will the stubborn application of economic status quo policies leave no other possible change open than the development of regressive xenophobic and authoritarian regimes? Or will a sufficient number of humanist and progressive policy makers understand that their duty is to empower those who have already tried to build another future?

Warming/Consumption

Surveillance key to battling overconsumption---monitoring of homes

Cakici 13 (Baki, postdoctoral researcher at Goldsmiths, University of London, Department of Sociology, PhD from Stockholm University, Department of Computer and Systems Sciences, 2013, "Sustainability through surveillance: ICT discourses in design documents", *Surveillance and Society* 11(1/2), pp. 177-189, Accessed 7/13/15)//LD

A highly vibrant intersection of sustainability and ICT is called the smart home. While it seemingly refers to an isolated housing unit, it is physically connected to infrastructures as much as any other urban structure, and its information networks reach even further into central servers that collect data at the street, district, city, and nation level. In the smart home, a wide variety of surveillance systems gather sensor and usage data from the surroundings. The gathered data are used by system designers, managers, other technological systems as well as the inhabitants themselves to interpret the activities within the home and to manipulate the home environment. In this description, the home is smart because it is populated by sensor systems. However, it is also a home, because it is populated by the inhabitants. While they go about their daily lives, the sensor systems continually record the interior temperature, water and electricity consumption, and the movements within the home. These measurements are gathered to create representations of the inhabitants' behaviour over time using central databases and statistical methods for analysis. The data, collected from many smart homes simultaneously, are used to reconfigure the image of a standard home: how much energy is consumed, how much movement occurs in it, how many humans live together, etc. The data collection is made invisible, but certain results are communicated back to the inhabitants in the form of logs, graphs, and bills. In the smart home and its surroundings, sustainability is linked to ICT through surveillance. Following David Lyon's definition, surveillance takes the form of routine attention to personal details with the intention to sort and classify (Lyon 2007: 14). Personal data are collected not only to make systems more efficient, but also to provide ways of creating categories, comparing different individuals, and sorting individuals into groups. The consequence of bringing ICT into the smart home resembles that of any other surveillance system anywhere else; it generates and expresses power (2007: 23). I refer here to the Foucauldian notion of power: it is immanent in all relations, inherently productive, and possible to resist, or rather, constitutes resistance (Foucault 1976: 92-96). The power expressed by surveillance links sustainability and ICT by making possible the formulation of knowledge about a population of smart home inhabitants. In the smart home domain, it appears as categories, groupings, and classifications. These can collectively be seen as normalisations: In a sense, the power of normalization imposes homogeneity; but it individualizes by making it possible to measure gaps, to determine levels, to fix specialities and to render the differences useful by fitting them one to another. (Foucault 1975: 184) As Foucault describes the process, the creation of averages also provides a way of combining differences. The 'inhabitant' category is constructed by measuring the differences in consumption and linking them using statistical methods to produce a whole. In the case of energy consumption, those that consume less and those that consume more (themselves categories constructed through surveillance), can be connected to form a single category under the label 'smart home inhabitants'. With such a construction, the differences of the category are made useful in the quest for sustainability. For

example, by regularly monitoring the events in and around the home, it becomes possible to translate traces of everyday life into values such as 'avoiding excessive consumption' that the inhabitants are encouraged to recognise and support in their lives. Categories and classifications are imbued with values, because they make some things visible while concealing others (Bowker and Star 2000). Donaldson and Wood (2004) have emphasised the importance of categories by defining surveillance itself as a process of translating worldviews, denoting systems of categorisation, into materialities. Categories embedded into ICT have also been understood as attempts to control and discipline those who use the systems (Suchman 1994a), although as with any other expression of power, they can also be contested and resisted. In the case of the smart home, surveillance systems categorise and classify traces of consumption behaviour. However, the categories themselves have to be created somewhere. In this paper, I examine acts of category creation in design documents.

Surveillance solves warming---ICT enables reduction in CO2 emissions

Cakici 13 (Baki, postdoctoral researcher at Goldsmiths, University of London, Department of Sociology, PhD from Stockholm University, Department of Computer and Systems Sciences, 2013, "Sustainability through surveillance: ICT discourses in design documents", *Surveillance and Society* 11(1/2), pp. 177-189, Accessed 7/13/15)//LD

*ICT = information and communication technology

The three projects share the common goal to design and develop ICT to accomplish sustainability goals. These goals are defined under four headings in the SRS report: climate change, ecological sustainability, economic sustainability, and social sustainability (SRS 2011: 5). The HGI report only refers to the concept of sustainability in the abstract, favouring the terms 'energy efficiency' and 'reduction in energy consumption' instead (HGI 2011: 9). The FINSENY report motivates its focus through its understanding of the users, where the 'generic home dwellers' are willing to accept optimising technologies if the services are kept at the same level, and a few who are 'energy conscious' and thus more likely to be proactive (FINSENY 2011: 20). I return to the definition of the user in the next section. In all three reports, similar future urban environments are described as being rendered more environmentally sustainable by introducing ICT. Many of the technologies rely on the wealth of sensors proposed for inclusion in smart homes. The properties of the inhabitants of these homes are made visible by the wide-spread use of surveillance systems in the form of sensor networks. Additionally, in the SRS report, the phrase 'the ease of doing the right thing' appears in several sections, denoting a specific right thing, a way of behaving sustainably with the help of ICT. Regarding the evaluation of a population and the ordering of individuals through ICT, the HGI report cites the European Union directive 2006/32/EC in its introduction, which states that member states should ensure that energy distributors make available 'comparisons with an average normalised benchmarked user of energy in the same user category' (European Parliament 2006: 72). In accordance with the directive, the use case 'Visualization of historical data' proposes to allow the customers to 'compare their own energy consumption with other similar customer/communities types' (HGI

2011: 27). These comparisons are motivated in the 'business rationale' section of the HGI report: Environmental degradation and global warming are among the major challenges facing society. . . The most pressing challenge is to reduce the rate of increase of greenhouse gases in the atmosphere and ultimately to decrease the absolute level of these gases. . . ICT technologies can help reduce energy consumption and manage scarce resources, improve efficiency and contribute to cutting carbon emissions. . . Smart Metering, Smart Buildings and Smart Grids, are among the most important ICT-enabled solutions with the highest potential to reduce CO2 emissions. (HGI 2011: 15) The HGI report constructs a particular society in which all inhabitants of the smart homes are compelled to act to counter environmental degradation through the use of technological solutions. By framing the reduction in the rate of increase of greenhouse gases as the most pressing challenge, and proposing management and efficiency as potential solutions, the report links ICT to environmental sustainability. In the three reports I have analysed, energy is conceptualised primarily as a commodity to be bought and sold. The HGI report states that 'instead of measuring energy use at the end of each billing period, smart meters provide this information at much shorter intervals' and '[e]nergy companies will also be able to innovate and offer their customers new types of tariffs that will allow customers to take advantage of cheaper deals at off-peak times' (2011: 15). In the FINSENY report, the consumer is defined as having 'signed a contract with the electricity provider to access electricity' (FINSENY 2011: 23), and that 'for many customers, monitoring energy consumption is in fact monitoring the bill' (2011: 21). In these proposals, sustainability is interpreted as something that can be achieved in the future and only through change. Since the ability to sell energy, and hence the structure of the participating organisations, is conserved, the partner that is designated as being compatible with change is users. After locating the potential of change in the users, ICT solutions are proposed to utilise that potential and to effect change. Viewed from this perspective, the status quo is preserved for the organisations that provide the energy, and the home dwellers become individually responsible for creating sustainable lifestyles with the help of ICT.

Surveillance key to eco-authoritarianism---urban planning

Krupar and Al 12 (Shiloh, Assistant Professor in the Culture and Politics Program at Georgetown University's School of Foreign Service, Ph.D. in cultural geography from the University of California at Berkeley, M.A. in East Asian studies from Stanford University, Stefan, Director of the Urban Design Programme at the University of Hong Kong, M.Sc. in Architecture from Delft University of Technology, an M.Arch. from the Bartlett UCL, Ph.D. in City and Regional Planning from UC Berkeley, 2012, "The SAGE Handbook of Architectural Theory", Chapter 14, "Notes on the Society of the Spectacle", Accessed 7/13/15)//LD

Authoritarian capitalist countries also promote themselves as sustainable and eco-friendly, following the lead of eco-cities such as Curitiba, Brazil, where urban planners have continually displaced democratic decision-making and political debate with fast-tracked remediations of the built environment (Lubow 2007). Beijing's 'Green Olympics' aimed to create an eco-city of control and surveillance, entrenching what some critics refer to as "ecological authoritarianism" (Reiss 2007). Fear and greenwashing are complementary. Green developments not only utilize surveillance cameras, biometric technologies, and other security devices but also function as promotional, cost-efficient 'overlay environments' for military bases, detention facilities, and other carceral landscapes. In fact, some of the most innovative 'eco-friendly atmosfear' is

produced in the field of incarceration, i.e., the much-touted 'sustainable prison' and Omni View's zero- blind-spot panopticon prison design.

Democracy Promotion DA vs. Internet Credibility

Boosting U.S. internet freedom credibility signals a strategic shift towards democracy promotion in Obama's foreign policy---that destroys U.S. relations with authoritarian powers---it's unique because Obama downplays internet freedom and democracy now

Theodore Kahn 10, PhD candidate in International Relations @SAISHopkins, Summer-Fall 2010, "Internet Freedom and the Challenge of a Principled Foreign Policy," SAIS Review of International Affairs, Vol. 30, No. 2

In his article Internet Freedom: Historic Roots and the Road Forward, State Department innovation advisor Alec Ross offers a compelling vision of a U.S. foreign policy grounded in the principles of freedom and individual rights. In his vision, a proactive State Department would monitor and report violations of Internet freedom by foreign governments and actively counter their efforts by spreading the technology and skills needed to circumvent censorship. Behind the scenes, U.S. officials would engage in diplomacy to encourage Internet repressors to change their ways. Such a policy could have a powerful impact on the state of democracy and human rights around the world. Unfortunately, the Obama administration does not seem especially interested in pursuing it.

The Internet freedom agenda Ross outlines falls under the rubric of democracy promotion. As the article points out, democracy promotion—the idea that the United States should encourage the development of plural, democratic governments abroad—has a long history in U.S. foreign policy. While most presidents and top diplomats have embraced the principle in their rhetoric, U.S. support for democracy has a mixed record in practice. The Bush years provide a case in point. The administration couched many of its aggressive foreign policy actions—most notably the invasion of Iraq—in the language of democracy promotion. This association with the foreign policy milieu of the Bush years, and the Iraq War in particular, has seriously damaged democracy promotion's reputation in Washington. Indeed, many of its day-to-day practitioners in the development field avoid using the term, preferring the more technocratic "democracy assistance."

Undoubtedly aware of this sentiment, President Obama has not made democracy promotion a foreign policy priority of his administration. There have been encouraging words, such as his speech in Cairo last June where Obama expressed his "commitment to governments that reflect the will of the people," but few actions to reflect that commitment.¹ Instead, the administration has embraced a variety of authoritarian regimes for strategic reasons. We have continued our close ties with Arab autocrats such as Hosni Mubarak, who has ruled Egypt for three decades, and the Saudi royal family; Obama has embraced Russian President Dmitri Medvedev, even as the Putin protégé and his mentor increasingly monopolize political power and abet a disturbing crackdown on civil society; and most glaringly, the [End Page 17] administration has studiously avoided provoking China's leadership on issues surrounding rights and political freedoms. The anecdote in Alec Ross' piece neatly makes the point: Obama's tepid endorsement of "openness" was promptly censored by the Chinese, with no objection on the part of the U.S. administration.

Of course, **the reasoning** behind these policy choices **is** straightforward. In each of the instances mentioned above, **the United States maintains a strategic relationship with the government** in question that the administration deems **more valuable than promoting** human rights or civil **liberties** in those countries. In the case of Egypt, for example, President Mubarak has been a willing partner in U.S. security initiatives in the region. The United States has been loath to risk jeopardizing that cooperation by pushing Mubarak to expand political freedoms—a process that could, of course, bring about his replacement by a less friendly government. But it is unclear whether the assumptions underlying this strategic calculus are correct. During his second term, President Bush did make a push for political openness in the Middle East; Mubarak responded at the time with unprecedented reforms but quickly backtracked after an Islamist group did well in elections. The Bush administration did not press the issue, but the point remains that the United States has the leverage to prod our allies on issues such as human rights and political freedoms while maintaining a cooperative, strategic relationship. Indeed, Egypt watchers have pointed out that security relations with the United States remained strong throughout this period.²

Obama's prioritizing cooperative relations with great powers over emphasizing democracy---the plan flips that strategy---causes great power conflict

Jakub Grygiel 11, Senior Fellow at the Center for European Policy Analysis and the George H.W. Bush Associate Professor of International Relations at Johns Hopkins-SAIS, October 3, 2011, "Great Powers and Democracy Promotion," online:
http://www.cepa.org/ced/view.aspx?record_id=319

Over the past few months, spurred by the popular uprisings in the Middle East and North Africa, U.S. President Barack Obama has seemingly realigned himself with **a stronger pro-democracy stance**. He indicated as much in his May speech at Westminster Hall in the UK, when he said that the United States stands "squarely on the side of those who long to be free." The challenge is that such support **is likely to lead to more tense relations with authoritarian Great Powers, contradicting** in many cases **this Administration's desire to engage** or reset relations with **them**.

Whether consciously or not, the **Obama** Administration recognizes this tension. The President's insistence that he would pursue a different foreign policy from that of his predecessor has in practice meant that Washington **is seeking better relations with Great Powers** (as exemplified by the reset with Russia) **and is pushing less vigorously to challenge oppressive regimes** abroad (remember the "Green" revolution in Iran?). The atmospherics in some cases (Russia in particular) have improved, in part precisely because Washington chose to ignore blatant violations of human rights in those countries. **The choice was between** polite and pleasant **relations with non-democratic great powers or a clearer pro-democracy posture. One cannot have both,** and in his opening gambit **Obama chose the former**.

Now that the President is, at least tepidly and rhetorically, supporting democratization efforts in the Middle East and Belarus, is his Administration ready for less cordial relations with rival Great Powers, from Russia, Iran and China?

The Causes of Our Naiveté

The belief that support for democracy does not preclude good relations with rival authoritarian great powers is deeply ingrained in our intellectual and bureaucratic genetic code. Recent history is partly to blame for the tendency to underestimate the linkage of Great Power competition with democratization. The 1989 “spring of nations” in Central and Eastern Europe succeeded at least in part because one Great Power, the Soviet Union, retreated from the chessboard, effectively ending a decades-long struggle for control and influence in Europe. It was the outcome of this clash — the defeat and collapse of Soviet power — that preceded and thus enabled the restoration of democracy in Eastern and Central Europe.

Moreover, many academics and policy wonks argue that democracy is a win-win game on the international scene. Democracy, the argument goes, brings strategic benefits not just to the people of the state in question, but also to neighboring powers because it is a source of political stability and an engine of economic growth. Hence, a Great Power conflict over a democratizing state is a misunderstanding and an aberration that should and can be avoided through negotiation; it is simply natural to share the goal of democratization.

Finally, the intellectual and policy communities that deal with democratization and those that deal with Great Power competition tend to function in separate realms. Academically, students of democracy promotion usually focus on the internal dynamics of the nascent democracy, whereas those preoccupied with geostrategic and security issues pay more attention to the foreign policies of the states in question. Similarly, the way the U.S. government is organized favors seeing democratization in terms of development and negotiations (USAID and the State Department) and Great Power competition in terms of conflict (the Department of Defense). This is certainly a simplification, but I doubt many at USAID would think of their actions in terms of a Great Power game.

Alas, reality is different. Democratization does not occur in a vacuum, but in the shadow of Great Power competition.

The Opponents of Democratization

A quick look at the world map makes apparent that in many of the regions where the United States and its allies are promoting democracy, other powers are vying for influence by either undermining our efforts or by trying to hijack the outcome. In Eastern Europe, along a belt stretching from Belarus to Moldova and then farther south to the Caucasus, Russia has been carefully watching U.S. and EU calls for democratization. In Ukraine, the so called “Orange revolution” of a few years back, greeted in Europe as a step toward a stronger democracy, was seen by Moscow as a loss of influence that needed to be thwarted and rolled back.

In Africa and Asia, China is striking deals with all types of autocratic regimes, regardless of their human rights record, with the purpose of expanding its commercial and strategic reach. Promoting democracy in countries like Burma or Sudan would put Chinese investments at risk — or at least that is how Beijing is likely to perceive it.

Finally, in the world’s most volatile region — the Middle East and North Africa — the processes of democratization that may emerge in the wake of the Arab Spring will likely be regarded with suspicion and trepidation by many of the powers with regional interests there. American,

European and Israeli political leaders will fear Iranian meddling and the ascendance of pro-Tehran groups or individuals in some of these states — a repeat of the Gaza scenario. Iran, on the other side, may fear the exact opposite, and a Western push to strengthen liberal democratic parties in the region will only exacerbate tensions with Tehran. The outcome is one of competing interests between the two powers — or rather, between Iran and the West, led by the United States — and it will have a significant impact on the timid democratization efforts of the countries in the region.

Whether we want it to or not, **democratization cannot be separated from Great Power competition**. In order to be successful in promoting the establishment of democratic states, we need to factor in the likely active opposition of other powers, such as Russia, China and Iran.

Indeed, **if we are to support democratization efforts, we must be prepared for a heightened competition with non-democratic Great Powers**. For such powers, the establishment of truly democratic states in their neighborhood represents a risky development as it would jeopardize their ability to exercise influence. It could encourage their own populations to seek greater freedoms; and it would directly challenge the ideological foundation of their regimes.

Cooperative relations with rising great powers require the U.S. to tolerate non-democracies---Western norm-promotion shreds global coop

Charles Kupchan 11, professor of international affairs at Georgetown University and Whitney Shepardson Senior Fellow at the Council on Foreign Relations, June 2011, “The false promise of unipolarity: constraints on the exercise of American power,” Cambridge Review of International Affairs, Vol. 24, No. 2, p. 165-173

These examples aside, Brooks and Wohlforth also fail to address another important pathway through which norms and rules constrain the exercise of US power. They focus exclusively on the costs to the United States of its own failure to comply with the institutions and rules that Washington took the lead in crafting after the close of World War II. But in the aftermath of the global financial crisis that began in 2008 and **amid the ongoing ascent of China, India, Brazil, and other rising states, change in ordering norms may well be driven by the preferences and policies of emerging powers, not by those of the United States**. Moreover, the impressive economic performance and political staying power of regimes that practice non-democratic brands of capitalism—such as China, Russia, and Saudi Arabia—call into question the durability of the normative order erected during America’s watch. Well before emerging powers catch up with America’s material resources, **they will be challenging the normative commitment to open markets and liberal democracy that has defined the Western order**.

The substantive gap between the norms of the Western order and those that inform the domestic and foreign policies of rising powers has not gone unnoticed (Kupchan and Mount 2009). Nonetheless, many **scholars have offered an illusory response: that the United States and its democratic allies should dedicate the twilight hours of their primacy to universalizing Western norms**. According to G John Ikenberry (2008, 37, 25), ‘the United States’ global position may be weakening, but the international system the United States leads can remain the dominant order of the twenty-first century’. The West should ‘sink the roots of this order as

deeply as possible' to ensure that the world continues to play by its rules even as its material preponderance wanes. Such confidence in the universality of the Western order is, however, based on wishful thinking about the likely trajectory of ascending powers, which throughout history have sought to adjust the prevailing order in ways that advantage their own interests. Presuming that rising states will readily embrace Western norms is not only unrealistic, but also dangerous, promising to alienate emerging powers that will be pivotal to global stability in the years ahead (Gat 2007).

Brooks and Wohlforth do not address this issue—presumably because they believe that US preponderance is so durable that they need not concern themselves with the normative orientations of rising powers. But facts on the ground suggest otherwise. China is, as of 2010, the world's second largest economy, holds massive amounts of US debt, and is strengthening its economic and strategic presence in many quarters of the globe; the G-8 has given way to the G-20; the prime minister of democratic India has called for 'new global "rules of the game"' and the 'reform and revitalization' of international institutions (Mahubane 2008, 235); the International Monetary Fund and the World Bank have increased the voting weight of developing countries; and the United Nations Security Council is coming under growing pressure to enlarge the voices of emerging powers. All of these developments come at the expense of the influence and normative preferences of the United States and its Western allies. By the numbers, Brooks and Wohlforth are correct that unipolarity persists. But rising powers are already challenging the pecking order and guiding norms of the international system. If the next international system is to be characterized by norm-governed order rather than competitive anarchy, the West will have to make room for the competing visions of rising powers. A new order will have to be based on great-power consensus and toleration of political diversity rather than the normative hegemony of the West.

Extinction

Chas W. Freeman 14, served in the United States Foreign Service, the State and Defense Departments in many different capacities over the course of thirty years, past president of the Middle East Policy Council, co-chair of the U.S. China Policy Foundation and a Lifetime Director of the Atlantic Council, 9/13/14, "A New Set of Great Power Relationships," <http://chasfreeman.net/a-new-set-of-great-power-relationships/>

We live in a time of great strategic fluidity. Borders are shifting. Lines of control are blurring. Long-established spheres of influence are fading away. Some states are decaying and dissolving as others germinate and take root. The global economic order is precarious. New economic and geopolitical fault lines are emerging.

The great powers of North and South America are barely on speaking terms. Europe is again riven by geopolitical antagonisms. Ukraine should be a prosperous, independent borderland between the European Union and Russia. It has instead become a cockpit of strategic contention. The United States and Russia have relapsed into hostility. The post-Ottoman borders of West Asia and North Africa are being erased. Neither Europeans, nor Russians, nor Americans can now protect or direct their longstanding clients in the Middle East. Brazil, China,

and India are peacefully competing for the favor of Africa. But, in the Indo-Pacific, China and Japan are at daggers drawn and striving to ostracize each other. Sino-American relations seem to be following US-Russian relations into mutual exasperation and intransigence.

No one surveying this scene could disagree that the world would benefit from recrafting the relationships between its great powers. As President Xi Jinping has proposed, new types of relations might enable the great powers to manage their interactions to the common advantage while lowering the risk of armed conflict. This is, after all, the nuclear age. A war could end in the annihilation of all who take part in it. Short of that, unbridled animosity and contention between great powers and their allies and friends have high opportunity costs and foster the tensions inherent in military posturing, arms races, instability, and impoverishment.

Capitalism Module

Uniqueness—Regulated Cap

Capitalism now allows regulations/surveillance to protect market failures

Ofer Raban 12, Associate Professor of Law, Elmer Sahlstrom Senior Fellow, University of Oregon., 2012, "Capitalism, Liberalism, and the Right to Privacy", http://papers.ssrn.com/sol3/papers.cfm?abstract_id=2069647, AB)

First, modern capitalism recognizes the legitimacy of regulations aimed at correcting “market failures”—those instances where the unregulated operation of the free market produces economic inefficiencies. To give one obvious example, sometimes a free market will produce a monopoly—an economic actor having little or no competition which can then single-handedly control output and prices.⁴ In such cases, the state may legitimately intervene so as to bring about the competition that failed to emerge on its own accord, and that is essential for economic efficiency. The forced breakup of AT&T’s telephone monopoly in the 1970s was no doubt an extreme form of government intervention in the economic sphere, but a perfectly legitimate one. The alleged causes of market failures are numerous and include, among other things, information costs and positive or negative externalities (that is, the beneficial or detrimental effects of economic transactions on third parties). Thus, when economic actors cannot be compensated for their products or services by the beneficiaries of positive externalities (for example, the car-driving beneficiaries of a railroad system that reduces pollution and traffic), or conversely, when actors are not forced to internalize costs to third parties (say, the costs of pollution), undersupply or overuse may ensue. In such instances the government may intervene so as to correct these distortions through subsidies or penalties, or even by assuming the role of an owner and distributor of goods and services (as in “public goods” and “common resource goods”—things like clean water or highways).⁵ Although economists often disagree as to what is or is not a market failure, the validity of the concept as a basis for government regulation is, for the most part, beyond dispute.⁶ Capitalism has come to recognize that a free economy is not always self-correcting and that the invisible hand of the market may sometimes itself need a guiding hand. Unlike the creation and enforcement of a free economic sphere and the remedying of market failures, both of which are justified on the ground that they promote economic efficiency, the last category of legitimate state intervention has different concerns. It involves instances where the value of economic efficiency yields to more important purposes or values, including moral values. Examples include limitations on the number of working hours, minimum wage laws, prohibition on usurious interest rates, taxation and transfer payments, and the prohibition on trade in human organs or in children for adoption.⁷ All these may arguably reduce economic efficiency, but even so are accepted for the sake of other, noneconomic ends. Put differently, nonintervention has its limits because the importance of economic efficiency does. In short, state interventions in the economy need to be justified as (1) maintaining a free economic sphere where individuals can make free economic choices; (2) addressing market failures; or (3) serving moral, political, or social purposes that take priority (in specific contexts) over economic efficiency. In the absence of any such justification, capitalism dictates a default position of governmental noninterference in the economy.

Uniqueness—Populist Movements

Populist movements supercharge—authoritarianism coming now

Weeks 14 - Weeks is Professor Emeritus, School of Oriental & African Studies, University of London [John Weeks, "A rising authoritarian wave", 2-3-14, Accessed 7-25-15, <https://www.opendemocracy.net/can-europe-make-it/john-weeks/rising-authoritarian-wave>]
hk

The de-regulation of financial capital threatens to bring us back to capitalist authoritarianism that flourished in the 1920s and 1930s. But this time it gathers strength with no strong popular movement in the United States or any European country to challenge it. As the one hundredth anniversary of the beginning of World War I approaches, one may encounter some rather strained attempts to compare the current global balance of forces to that in Europe in 1914. I recently visited several countries in south east Asia and a different comparison struck me, the similarities between now and the 1930s, weak democracies and strong dictatorships. This comparison "jumped off the page" after a week in Bangkok, followed by several days in Hanoi - a journey from a country with weak and faltering formal democratic institutions to an apparently stable one with an authoritarian regime (bordering on a country with a considerably more brutal dictatorship, China). In *The Age of Extremes*, Eric Hobsbawm argued that the conflict between capitalism and communism determined the course of the twentieth century. This confrontation of socio-economic ideologies without doubt dominated European and global history, especially after 1945. But another, inter-related confrontation that determined the course of the century was authoritarianism versus democracy. The capitalism-communism conflict seems but a moment of history for people in their forties and younger. However, the danger of a rising authoritarian wave is as imminent in the twenty-first century as it was in the twentieth. In most countries of Europe in the 1930s the contest between authoritarian and democratic visions of society dominated the political struggle. The exceptions were Italy where the fascists had already established an extreme version of authoritarian rule, and Britain where a rigid class structure gave stability to superficially democratic institutions. By the middle of the decade, capitalist authoritarian regimes were clearly on the rise in Germany and much of central and eastern Europe (e.g., Hungary and Poland), as well as Portugal, with Spain soon to join the anti-democratic camp. Indeed, in very few of the industrialised countries in the late 1930s did democracy seem the stronger trend. Among the large countries only in the United States was there an unambiguous shift towards strengthening popular participation. Ironically enough it was during the presidency of patrician Franklin D Roosevelt that trade unions asserted themselves as a major political force (which would not survive much past mid-century). Now, well into the twenty-first century it is even more difficult to find a major country with vigorous and democratic institutions, certainly not in the United States nor in Europe. In the United States the confrontation between a well-funded right wing Republican Party and the middle-of-the road Democrat Party dominates politics, one doctrinaire and aggressive, the other muddled and vacillating. The anti-democratic trend is demonstrated by passage of laws restricting the right to vote in Republican controlled states, linked to the racist xenophobia of the Tea Party. In the White House sits a Democrat apparently unconcerned by a massively intrusive national security complex. In Europe anti-democratic trends are if anything stronger. Britain probably has the most extensive video surveillance network in Europe (see recent articles in the Guardian), as

well as legal restrictions on the right of assembly, designed to reduce public protests (as we find in Spain). In addition, the Conservative-dominated coalition government's brutal attack on poor households receiving social support in effect legalises civil rights violations. Surveillance, attacks on the poor and the government fanning fears of immigrants combine to make a potent anti-democratic package. On the continent pre-existing authoritarian tendencies enjoyed a quantum leap under the EU-wide austerity regime fostered by the German government under the cover of the European Commission. The unelected governments in Greece (2011-12) and Italy (2011-13) represent the most obvious and shocking examples of the authoritarian trend. Much more serious in the long term is the EU fiscal compact (officially named the Treaty on Stability, Coordination and Governance in the Economic and Monetary Union). This treaty, which came into effect at the beginning of 2013, severely limits the authority of national parliaments to set fiscal policy. The treaty and additional measures demanded by the German government remove fiscal policy from public control (with monetary policy in the hands of the European Central Bank and beyond national accountability). This process in which major decisions are taken away from the electorate fundamentally undermines public faith in the democratic process. The rise of neo-fascist groups with an extra-parliamentary agenda, such as the New Dawn in Greece, comes as no surprise. Almost exactly a year ago, Peer Steinbrueck, then the German Social Democratic Party's candidate for chancellor, spoke at the German embassy in London. In his speech he proposed that the European Commission should have the power to veto national budgets if they exceed the guidelines of the fiscal pack. I suggested during questions that such a veto would violate the principle that the governed should be able to hold their governments accountable. He replied that fiscal stability required countries to surrender some of their sovereignty. In other words, the goal of "fiscal stability" requires the citizens of Europe to surrender their basic democratic right to hold a government responsible for its economic policies. The authoritarian trend in the United States and Europe is obvious. What is its source in these countries? In the 1920s and 1930s the rise of authoritarian regimes followed the widespread public perception that unregulated capitalism resulted in spectacular disasters. These disasters included the most catastrophic war in human history, soon followed by the most devastating economic crisis the world had ever known. Many on both the left and the right judged "bourgeois democracy" as degenerate and dysfunctional. In Russia the rejection of capitalism took the form of an attempt to create a governance system in the interests of the working class and peasantry. The hope for popular democracy quickly collapsed as the putative workers' state transformed into thinly disguised authoritarian rule. Far worse, in Italy and Germany the discrediting of liberal capitalism led to unabashed dictatorships that made no pretence of their authoritarian nature. The business elites constructed these fascist regimes to maintain the rule of capital in the face of powerful labour movements. The regimes proved appallingly successful not only in crushing the labour movement but in rolling back the principles of the Enlightenment. Destruction of these savage regimes required a war even more catastrophic than the 1914-18 conflict. The current authoritarian tide in European and the United States also comes from the business elites, but is in this case driven by the ideology of neoliberalism not fascism (see "Democracy against Neo-liberalism: Paradoxes, Limitations, Transcendence," by Alfredo Saad Filho and Alison J Ayers, forthcoming in *Critical Sociology*). Neoliberalism pretentiously claims to be the guarantor of freedom – "free markets, free men" was the title of Milton Friedman's infamous London lecture to adoring businessmen in 1974. Reality is quite the contrary. The neoliberal

inspired market deregulation over the last 30 years has been the destroyer of freedom. The most obvious mechanism by which this destruction occurs is the weakening of the power of trade unions and other popular organisations. Parallel to that weakening has been the rise and consolidation of the power of the financial capital to control the media, political debate and elections themselves.

Link- General

No surveillance means unregulated capitalism which is a bad thing

Billy Connolly 2, market analysis, bafta award winner, "The American model of unregulated capitalism - anything goes", 7/1/2, <http://www.scotsman.com/news/the-american-model-of-unregulated-capitalism-anything-goes-1-610889>, AB)

There is method in this madness. The CEOs of corporations are today's merchant princes. The world is their oyster. They have fabulous salaries with massive share options. If share prices are artificially inflated, they can unload them on the market and become overnight billionaires. There is no restraint, no surveillance. This is the American model of unregulated market capitalism. Anything goes. Decent human society is incompatible with unrestrained freedom to do what you want. If we were free to kill one another, social life would become impossible. A civilised existence has to be protected. We need institutions to keep the peace and protect citizens from abuse. In the latter part of the 20th century, this was accepted in the West - with one exception. Economics. In that field, the argument was reversed. Deregulate. Free trade. Free markets. No mention of restraint. Life is damnable without restraint. The greedy have to be restrained along with bullies and rapists and psychopaths, if the rest of us are to survive. Proper regulations make life more free for the good and more difficult for the bad. The same standards must apply in the economic life of humanity. There is a mistaken assumption that global capitalism is homogenous. It isn't. Economies are modified by the political culture of nations. The emergence of European capitalism broadly coincided with the breakthrough of liberal democracy. Social reform was in the air. Towards the end of the 19th century and the first half of the 20th, socialism made an impact not through revolution but by reforms within the existing system. As Europe moved to the left after the Second World War, socialists and social democrats in government enshrined in law the postwar consensus of the mixed economy, social welfare, social justice and neo-Keynsianism. This consensus also embraced the parties of European conservatism. American capitalism had a different culture. Red in tooth and claw with a kind of frontiersman or cowboy culture. The conflict between American labour and the bosses was bloody and vicious. The Pinkerton detective agency, so beloved of Western movies, was actually an armed strike-breaking organisation. Workers on strike, in self defence, armed themselves. Industrial struggles were replete with murders, assassinations, broken heads and hearts. Organised crime infiltrated key labour unions and laundered its money on Wall Street. The Kennedy family link with the Mafia was no one-off. Socialism never had a mass influence in the US, though there were social democratic elements in Roosevelt's New Deal. In the latter part of the 20th century, the dominant ideological economic faction in America was the Chicago School led by Milton Friedman, a fundamentalist free marketeer. He was Thatcher and Clinton's economic guru. During the years in opposition, Tony Blair and Gordon Brown spent a lot of time in the States sitting at the feet of the Clintonites and became fully paid up advocates of unbridled free market capitalism. It is this model, endorsed by Britain's two governing parties, that is threatening to undermine American capitalism.

Link—Economic Surveillance

Economic surveillance protects regulated capitalism – otherwise global economics and trade collapse which causes war and disease spread

John Kojiro Yasuda and Christopher Ansell 14, Center for the Study of Contemporary China, University of Pennsylvania, Philadelphia, PA, USA, and Department of Political Science, University of California, Berkeley, CA, USA, “Regulatory capitalism and its discontents: Bilateral interdependence and the adaptability of regulatory styles”, *Regulation & Governance* (2014), <http://www.sas.upenn.edu/~jyasuda/pdf/reggovprelim.pdf>, AB)

We highlight different degrees of adaptability for regulatory styles among major players in the global food trade. A regulatory style can predict how a country is likely to respond to regulatory gaps in risk management and based on this we can determine whether countries will be in conflict or not. Moreover, the inability to adapt can have effects on the restoration of trade and the institutionalization of regulatory relations. In a global trading system, the ability to adapt becomes paramount. As new risks emerge, nations must constantly adjust their regulatory approaches. Countries that are well positioned to change and adapt their systems to the needs of trading partners are likely to function more effectively. China, with its export tailored regulatory style may be better equipped to function in this dynamic environment. However, adaptability writ large will not prevent regulatory gaps from emerging; it is also important to consider how a country can adapt to the specific needs of its trading partner. Europe’s “harmonization” style, for example, may be less effective in addressing risks with its less developed trading partners. With their more uncompromising regulatory styles, Japan and the US could face increasing regulatory conflict. As regulatory capitalism is diffused, countries will still need to work out their differences bilaterally. Bilateral relationships may be particularly important where global trade is partially, but not completely, harmonized through international standards. For example, the US Federal Aviation Administration (FAA) has relied extensively on bilateral arrangements to ensure the safety of aircraft or aircraft parts destined for use in the US. In this case, international standards specify only minimum requirements. The FAA typically uses bilateral agreements to certify that foreign production processes or designs are either equivalent to or match FAA standards (Bermann 1992–1993). Even where multilateral regulation is primary, it may often be complemented by bilateral regulatory cooperation, particularly where the incentives to successfully manage joint interdependence are strong. Recent US-Mexico regulatory cooperation, for example, includes work on a range of topics, including food safety, transportation, health, nanotechnology, and offshore oil and gas development (Executive Office of the President 2012). Does this framework also aid our understanding of other areas of consumer product safety? While further empirical analysis is necessary, we believe we can make a prima facie case that it does. Significant trade in pharmaceuticals, for example, may be less developed than food trade (Moss 2010–2011), but regulatory challenges in the sphere of drug safety are similar to those for food safety. Importing countries have raised serious concerns about the safety of drugs produced by two emerging pharmaceutical exporters, China and India (Bate & Porter 2009; Brhilikova et al. 2007; Riviere & Buckley 2012). For pharmaceuticals, as for food, exporters and importers are guided by prevailing regulatory styles in their regulatory behavior. Both countries have created special export regimes for pharmaceuticals (China has introduced special export licensing). Their regulatory styles are likely to have important

consequences for the types of interactions that will arise between trading partners (Yue & Yue 2010). Under regulatory capitalism, bilateral relations still play a key role. As monitoring and surveillance mechanisms are stretched thin, pathogens, illegal additives, and counterfeit products can easily penetrate global supply chains. In an era of accelerated global trade, a deeper understanding of the adaptability of bilateral regulators and their distinctive regulatory styles is essential to ensure transnational consumer product safety.

Link- Right to Privacy

Giving a right to privacy lets corporations gain further control over the market

Anup Shah 2, editor of Global Issues, degree in computer science, "The Rise of Corporations", December 05, 2002, , <http://www.globalissues.org/article/234/the-rise-of-corporations> ,AB) Only humans were "endowed by their creator with certain inalienable rights" and those human rights included the right to free speech, the right to privacy, the right to silence in the face of accusation, and the right to live free of discrimination or slavery. While to this day unions, churches, governments, and small unincorporated businesses do not have "human rights" (but only privileges humans give them), corporations alone have moved into the category with humans as claiming rights instead of just privileges. Politics In many states, it was a felony for corporations to give money to politicians, political parties, or try to influence elections: "They can't vote, so what are they doing involved in politics?!" Corporations claimed the human right of free speech, expanded that to mean the unlimited right to put corporate money into politics, and have thus taken control of our major political parties and politicians Business States and local communities had laws to protect and nurture entrepreneurs and local businesses, and to keep out companies that had been convicted of crimes. Multi-state corporations claimed such laws were "discrimination" under the 14th Amendment (passed to free the slaves) and got such laws struck down; local communities can no longer stop a predatory corporation. War Government, elected by and for "We, The People," made decisions about how armies would be equipped and, based on the will of the general populace, if and when we would go to war. Prior to WWII there were no permanent military manufacturing companies of significant size. Military contractors grew to enormous size as a result of WWII and a permanent arms industry came into being, what Dwight Eisenhower called "the military/industrial complex." It now lobbies government to buy its products and use them in wars around the world. Regulation Corporations had to submit to the scrutiny of the representatives of "We, The People," our elected government. Corporations have claimed 4th Amendment human right to privacy and used it to keep out OSHA, EPA, and to hide crimes. Purpose Corporations were chartered for a single purpose, had to also serve the public good, and had fixed/limited life spans. Corporations lobbied states to change corporate charter laws to eliminate "public good" provisions from charters, to allow multiple purposes, and to exist forever. Ownership Just as human persons couldn't own other persons, corporations couldn't own the stock of other corporations (mergers and acquisitions were banned). Corporations claim the human right to economic activity free of regulatory restraint, and the still-banned-for-humans right to own others of their own kind.

Internal- Corporate Capitalism

Limiting corporate power solves human rights and the environment- a centralized movement is key

Shiva 15 (Apr. 9, 2015. Dr. Vandana Shiva is a physicist who has spent her life striving for the protection of biodiversity. She has published two books covering the subject. "Limiting Corporate Power and Cultivating Interdependence: A Strategic Plan for the Environment" Tikkun. <http://www.tikkun.org/nextgen/limiting-corporate-power-and-cultivating-interdependence-a-strategic-plan-for-the-environment> //HS)

In the current era, corporate power translates into abuses of the environment and violations of every human right, including basic human rights, worker rights, and the rights of women. As a result, limiting corporate power must be a central concern for those who seek a strategy to save the environment. Illustration of hillside losing trees. Deforestation by Amy Bell. Credit: Amy Bell. Environmentalists need to insist that businesses create or allow for mechanisms to hold them accountable to society. Corporate accountability is precisely the opposite of what is happening today in the political arena, where the allies of corporations in the government are trying to take these corporations one step beyond the reach of democratic accountability. Overcoming Fragmentation In addition to fighting for limits on corporate power, it's important for environmentalists today to focus on overcoming the divisions within the environmental movement, as well as the separations between environmental, economic justice, and social justice movements. At present, even when some campaigns become successful, they don't go all the way because they lack the integration with other struggles that's required to effect sweeping changes. In the earlier days of the environmental movement, back when new environmental agencies, laws, and regulations were being created and it was easier to enforce compliance with these regulations, it seemed fine for an environmental activist to specialize on an issue such as water, air, or endangered species. That kind of specialization of social change works in a period of stability and democratic accountability. But when the state has been hijacked, as it has been in the current moment, then the power needed to bring change has to be an amplified power. And that amplified power won't come from a movement fragmented into separate silos of specialization—it will come from the integration of various environmentally sensitive projects into one movement or one big organization that helps people develop clarity about the interconnectedness of all the environmental and economic issues.

Sustainable capitalism hinges on government regulations

Amy 07 (2007. Douglas J. Amy is a professor of American Politics at Mount Holyoke College. He has published several books covering electoral reform and is the founder of the blog Government is Good. "Capitalism Requires Government" <http://www.governmentisgood.com/articles.php?aid=13&print=1> //HS)

That, then, is the traditional justification for government regulation of business and market: only government can address the many serious problems caused by laissez-faire capitalism. Even if government rules decrease somewhat corporate growth and profits, they promote important things that Americans care about – like better health care, safer workplaces, a cleaner environment, and more economic security. But this rationale leaves out an important – and

more intriguing – reason why government “interference” in the economy is desirable. The fact is that many government actions that hurt businesses in the short run are actually good for business in the long run. Most regulations, for instance, are not only good for the American people, they are also ultimately good for business as well. This point may not seem obvious at first. But I will argue that the central pillars of the modern democratic state – the regulations and social programs that conservatives and business interests often oppose so vehemently – actually work in important ways to the benefit of the business community and capitalism itself. What business thinks is bad for it economically can be very beneficial, and even essential, for it politically. How can this possibly be true? To see, we need only ask ourselves a simple question: What would happen to market capitalism without all of these regulations and social programs? Fortunately, we don’t have to try to speculate about the answer to this question; we merely need to go back to the first several decades of the twentieth century. This was the time before big government – before extensive regulations and expensive social programs – an era that anti-government conservatives consider a golden age. But what they forget is that at that time, around the world and even in this country, growing numbers of people were becoming very discontent with capitalism. They were also becoming increasingly interested in alternatives such as socialism, communism, and anarchism. The communist revolution in Russia prompted a wave of attempted socialist uprisings or threats of uprisings throughout much of Europe after World War I. Rosa Luxemburg led one uprising in Germany, and the communists actually overthrew the government in Bavaria and briefly established a soviet state. Another short-lived communist government was established by revolutionaries in Hungary in 1919. The success in Russia also inspired a host of anti-capitalist movements and incidents in other countries: there was a wave of factory occupations in Italy, a wide-spread series of strikes in Britain, and a general strike in Winnipeg, Canada. Later, in the 1930s, in the Spanish Civil War, anarchists and communists fought side by side for control of the country. Many people today wonder how anyone could have become such a radical, anti-capitalist revolutionary. But they are forgetting the horrendous conditions that many people were living under in unregulated capitalist economies – the grinding poverty, the enormous economic inequality, the lack of adequate health care for most people, the absence of old-age pensions, the widespread unemployment, the unchecked and abusive power of monopolies, the environmental squalor of the cities, the dangerous and often lethal working conditions, the inevitable and hugely destructive economic depressions. It was these unaddressed problems of capitalism that led to the creation of communism and communist revolutions. Some people were so upset and disgusted with the widespread injustices and suffering caused by of laissez-faire capitalism that they were willing to take up arms and risk their lives to throw out the entire system and to start over with new and untried economic systems. The extreme problems of capitalism drove them to those political extremes. The United States was not immune to these problems or this kind of political and social unrest. In 1912, Eugene Debs, the Socialist Party presidential candidate, offered a radical critique of capitalism and won the support of nearly a million voters. Some unions, like the Industrial Workers of the World, wanted to replace capitalism with worker-controlled production. The IWW was instrumental in organizing the Seattle General Strike of 1919 where 60,000 workers went out on strike and paralyzed the city for a week. The influence of the Socialist Party and the IWW only abated when federal and state authorities jailed their leaders, deported many of them, harassed their members, shut down their newspapers, and denied them use of the mail.

The 1930s and the Great Depression, however, saw a resurgence of interest in anti-capitalist ideas and movements. Political unrest was growing. There were food riots, widespread labor violence, street protests, and increasing political instability. In this atmosphere, communist and socialist parties experienced growing support and began to exert more influence in unions as well. In addition, socialist and communist groups became very popular on college campuses. To students, they seemed to be the only organizations that could explain the causes of the Depression and who offered alternatives to a malfunctioning capitalist system. Into this highly volatile and precarious political situation stepped Franklin Delano Roosevelt and his New Deal programs. Anti-market conservatives have reviled Roosevelt ever since as a "socialist" who betrayed capitalism; but in reality, his government programs actually saved capitalism by stabilizing the economy and developing programs to alleviate the suffering it was causing – all of which had the effect of undermining political unrest. Examining the deeper political implications of New Deal, the political scientist Edward Greenberg concluded in his book *Capitalism and the American Political Ideal* that Roosevelt's efforts can best be seen as ultimately aiding the cause of business and conservatives: [T]he New Deal is best understood as a series of attempts to save a faltering and depressed capitalist system by further regulating and rationalizing the economy, by bringing important elements of the labor movement into the established political life, and by staving off social disruption and revolution through expansion of the welfare role of government. ... the New Deal represents, paradoxically, a conservative expansion of government activities. While it is traditional to define any expansion of government activities as "liberal," I would argue that since this expansion was directed toward preserving and cementing the position of capital and maintaining the social class system, it must, in the end, be judged "conservative."¹³ Ironically, then, free-market conservatives and business leaders who worked so hard against Roosevelt and his policies were actually working against their own long-term interests. They failed to see that capitalism actually needs some "socialism" to make it less destructive and more palatable to most people. Today, the corporate community and anti-government conservatives fail to see this point as well. They fail to understand that government policies that protect consumers, make workplaces safe, provide economic security, eliminate poverty in old age, provide health care to the poor, and prevent and repair environmental damage are what "humanize" capitalism and make it tolerable to people. In this way, businesses are a lot like sulky teenagers. They resent their parents' rules – such as no drinking and driving, no unsafe sex, no experimentation with hard drugs – which they simply see as constraints on their freedom and their fun. They refuse to see that these rules are for their own good, their own long-term health and welfare. Similarly, businesses and free-market conservatives have been unable to appreciate how government efforts to humanize capitalism have been for their own good. Instead, they have resented and opposed virtually every effort to make capitalism less harsh – from the 40-hour week and the abolition of child labor to Social Security and Medicare. They should see the costs they pay for these policies as a premium on a vital form of political insurance. Government regulatory policies and social programs are crucial in undermining popular discontent about the problems of a free-market economy and serve to co-opt potential anti-capitalist and anti-business political movements. These "liberal" reforms provide and sustain the social and political peace on which profitable business activity ultimately depends. Even Ben Bernanke, chairman of the Federal Reserve, understands how essential government safety net programs are to maintaining public support for our market system. He

has warned of the "painful dislocations" associated with capitalism and has stated that if "we did not place some limits on the downside risks to individuals affected by economic change, the public at large might become less willing to accept the dynamism that is so essential to economic progress." There is one final ironic twist to all of this. Modern government's achievements in reining in abuses of corporate power and humanizing capitalism have actually backfired on those who champion an active role for government in society. These successes have fostered an illusion that a market economy is relatively harmless. Few people remain alive who actually experienced the severe problems of the "bad old days" of capitalism before the New Deal. Today, many think we are living in a natural "free market" system, but in reality it has been extensively tamed by myriad government policies. It is as if we lived in a world where all we knew about wild animals is what we learned by going to the circus, and thus came to believe that bears and elephants were naturally gentle creatures. Frustratingly, then, it has been the government's triumphs in addressing the many problems inherently caused by a free-market economy that has allowed conservatives to argue that markets are naturally benign and largely problem free – and so we do not really need much government.¹⁴ Beyond the Myths of Government and Markets In the end, anti-government conservatives get it wrong about both markets and government. In their zeal to justify shrinking the state, they intentionally misrepresent both of these institutions and how they interact. The market is not God and the government is not the Devil. Despite their enormous advantages, markets are not benign and self-regulating. They create numerous social, economic, and political problems that only government can correct. Government is also not the sworn enemy of business and capitalism. Conservatives can only promote this misleading caricature of government by deliberately ignoring the myriad ways that government aids business and makes a market economy possible. Anti-government conservatives are constantly warning that government is primarily a threat to business and the economy – that unless we reduce it, it will "kill the goose that lays the golden eggs." But as we've seen, this is far from the truth. The modern state is more like the farmer who feeds and waters the goose, builds the facility that houses it, inoculates it from disease, clips its wings so it can't fly away, protects it from predators, cleans up its excrement, and tames it so it won't bite people. If we appreciate those golden eggs, we should also appreciate the efforts of the farmer who helps make the egg production process possible. Similarly, those who celebrate the achievements of business and a market economy should also acknowledge and celebrate the role government has had in those accomplishments. This would be the fair thing to do; but of course it would not fit into anti-government conservative orthodoxy. The basic lesson is this: we Americans need to realize that our economy has thrived not in spite of government, but in many ways because of government. The American economy that so many people admire is not the mythical free market that operates without government interference. Our version of a market economy is highly constructed, regulated, subsidized, and humanized by government laws and policies. And we are all better off for it. Even if it were possible to create a world of free markets that were left entirely alone by government, none of us would want to live there.

Impact—Econ

Unregulated capitalism causes inevitable collapse

Joseph E Stiglitz 11, professor at Columbia University, a Nobel laureate in Economics, and author of several books, “The evils of unregulated capitalism”, 10 Jul 2011, <http://www.aljazeera.com/indepth/opinion/2011/07/20117714241429793.html>, AB)

Just a few years ago, a powerful ideology - the belief in free and unfettered markets - brought the world to the brink of ruin. Even in its hey-day, from the early 1980s until 2007, US-style deregulated capitalism brought greater material well-being only to the very richest in the richest country of the world. Indeed, over the course of this ideology's 30-year ascendance, most Americans saw their incomes decline or stagnate year after year. Moreover, output growth in the United States was not economically sustainable. With so much of US national income going to so few, growth could continue only through consumption financed by a mounting pile of debt. I was among those who hoped that, somehow, the financial crisis would teach Americans (and others) a lesson about the need for greater equality, stronger regulation, and a better balance between the market and government. Alas, that has not been the case. On the contrary, a resurgence of right-wing economics, driven, as always, by ideology and special interests, once again threatens the global economy - or at least the economies of Europe and America, where these ideas continue to flourish. In the US, this right-wing resurgence, whose adherents evidently seek to repeal the basic laws of mathematics and economics, is threatening to force a default on the national debt. If Congress mandates expenditures that exceed revenues, there will be a deficit, and that deficit has to be financed. Rather than carefully balancing the benefits of each government expenditure program with the costs of raising taxes to finance those benefits, the right seeks to use a sledgehammer - not allowing the national debt to increase forces expenditures to be limited to taxes. This leaves open the question of which expenditures get priority - and if expenditures to pay interest on the national debt do not, a default is inevitable. Moreover, to cut back expenditures now, in the midst of an ongoing crisis brought on by free-market ideology, would inevitably simply prolong the downturn. A decade ago, in the midst of an economic boom, the US faced a surplus so large that it threatened to eliminate the national debt. So what happened? Unaffordable tax cuts and wars, a major recession, and soaring health-care costs - fueled in part by the commitment of George W Bush's administration to giving drug companies free rein in setting prices, even with government money at stake - quickly transformed a huge surplus into record peacetime deficits. The remedies to the US deficit follow immediately from this diagnosis: put America back to work by stimulating the economy; end the mindless wars; rein in military and drug costs; and raise taxes, at least on the very rich. But the right will have none of this, and instead is pushing for even more tax cuts for corporations and the wealthy, together with expenditure cuts in investments and social protection that put the future of the US economy in peril and that shred what remains of the social contract. Meanwhile, the US financial sector has been lobbying hard to free itself of regulations, so that it can return to its previous, disastrously carefree, ways. But matters are little better in Europe. As Greece and others face crises, the medicine du jour is simply timeworn austerity packages and privatisation, which will merely leave the countries that embrace them poorer and more vulnerable. This medicine failed in East Asia, Latin America, and elsewhere, and it will fail in Europe this time around, too. Indeed, it has already failed in Ireland, Latvia, and

Greece. There is an alternative: an economic-growth strategy supported by the European Union and the International Monetary Fund. Growth would restore confidence that Greece could repay its debts, causing interest rates to fall and leaving more fiscal room for further growth-enhancing investments. Growth itself increases tax revenues and reduces the need for social expenditures, such as unemployment benefits. And the confidence that this engenders leads to still further growth. Regrettably, the financial markets and right-wing economists have gotten the problem exactly backwards: they believe that austerity produces confidence, and that confidence will produce growth. But austerity undermines growth, worsening the government's fiscal position, or at least yielding less improvement than austerity's advocates promise. On both counts, confidence is undermined, and a downward spiral is set in motion. Do we really need another costly experiment with ideas that have failed repeatedly? We shouldn't, but increasingly it appears that we will have to endure another one nonetheless. A failure of either Europe or the US to return to robust growth would be bad for the global economy. A failure in both would be disastrous - even if the major emerging-market countries have attained self-sustaining growth. Unfortunately, unless wiser heads prevail, that is the way the world is heading.

Regulated/Surveilled capitalism solve sustainable democracy and growth

John Braithwaite 5, Distinguished Professor and Founder of RegNet (the Regulatory Institutions Network) at the Australian National University Distinguished Professor and Founder of RegNet (the Regulatory Institutions Network) at the Australian National University, October 2005, "NEOLIBERALISM OR REGULATORY CAPITALISM", RegNet Occasional Paper No 5, https://www.anu.edu.au/fellows/jbraithwaite/_documents/Articles/Neoliberalism_Regulatory_2005.pdf, AB)

Those who believe we are in an era of neoliberalism - where this means hollowing out of the state, privatization and deregulation - are mistaken. The transitions since feudal structures of governance fell to incipient capitalist institutions have been from a Police Economy, to an Unregulable 19th Century Liberal Economy (that oscillated between laissez faire, dismantling the decentralized Police Economy and laying the bricks and mortar of an initially weak urban administrative state), to the Provider State Economy, to Regulatory Capitalism. Across all of these transitions, markets in fits and starts have tended to become progressively more vigorous, as has investment in the regulation of market externalities. Not only have markets, states, and state regulation become more formidable, so has non-state regulation by civil society, business, business associations, professions and international organizations. Separations of powers within polities have become more variegated, with more 34 private-public hybridity. This means political science conceived narrowly as a discipline specialized in the study of public governance to the exclusion of corporate governance, NGO governance and the governance of transnational networks makes less sense than it once did. If we have entered an era of Regulatory Capitalism, regulation may be, in contrast, a fruitful topic around which to build intellectual communities and social science theory.

In seeing the separations among the periods posited in this essay, it is also important to grasp the posited continuities. Both markets and the state become stronger, enlarged in scope and transaction density, at every stage. The amount of governance in the world also continuously

grows, because non-state forms of governance by firms, industry associations, NGOs and global institutions grow alongside growth in state governance capability. Elements of 18th century police are retained in the creation of 19th century para-military police and other specialized regulators. Post-1980 Regulatory Capitalism learns from and builds upon the weaknesses (and the strengths) of 19th and early 20th century regulation – from 21st century private security corporations learning from Peel’s Met and the KGB, to state shipping regulators and the International Maritime Organization learning from regulatory technologies crafted in Lloyd’s Coffee Shop. While many problems solved by state provision prior to 1980 are thence solved by privatisation into contested, regulated markets, most of the state provision of the era of the Provider State persists under Regulatory Capitalism. Even some re-nationalization of poorly conceived privatisation has begun.

While less welfare is state administered today and more is provided through contracted out, contested, regulated markets for welfare provision, state spending on welfare has not fallen. The rumours of the death of Keynes, and of Hayek’s immortality, at the End of History were both exaggerated. Keynesian demand management is more complicated in the global economy, but remains a central preoccupation of Regulatory Capitalism. Hayek’s insistence that central states lack sufficient local knowledge to plan investment underpins both the attraction of markets in regulatory capitalism and the attraction to devolved regulatory technologies that harness local knowledge (Shearing & Wood 2003). A fair criticism of this essay would be that its attack on the analytic value of neoliberalism as a package of privatisation, deregulation and rolling back the state assails a straw (wo)man. Milton Friedman agrees that privatisation is and should be combined with at least some kinds of regulation. No one implements the more radical prescriptions of the old Chicago School for abolishing antitrust. Those who point to the hollowing out of the state today mostly do so in a governance frame that notes its capacity to get things done through proliferating interdependencies, or in a Foucauldian frame that notes capacities to “govern at a distance” (Rose & Miller 1992). Across all points of the political spectrum, there now seems as much concern about state failure as market failure, and about their interdependence. Perhaps that suggests there is some consensus around what Levi-Faur labels Regulatory Capitalism. Yet we have seen it is very limited. It follows that interesting agendas are Levi Faur’s (2006) of documenting and comparatively dissecting the Varieties of Regulatory Capitalism, the Hall and Soskice (2001), Stiglitz (2002), Sachs (2005) and Rodrik (2005) agendas of diagnosing the institutional mixes that make capitalism buzz and collapse in the context of specific states, the Dorf and Sabel (1998) agenda of evidence-based “democratic experimentalism”, the Campbell Collaboration and behavioural economics agendas for real policy experiments on the impacts of regulatory interventions (www.campbellcollaboration.org). A contribution of this chapter has been to suggest that regulation, particularly antitrust and securitisation of national debt, enabled the growth of both provider and regulatory states. Regulation did this through pushing the spread of large corporations that made Chandler’s (1977, 1990) three-pronged investment. The corporatisation of the world increased the efficacy of tax enforcement, funding provider and regulatory state growth. The corporatisation of the world drove a globalisation in which transnational networks, industry associations, professions, international organizations, NGOs, NGO/retailer hybrids like the Forest Stewardship Council, and most importantly corporations themselves (especially, but not limited to, stock exchanges, ratings agencies, the Big Four

accounting firms, multinationals that specialize in doing states' regulation for them like Société Général de Surveillance,¹⁸ and large corporates that regulate small upstream and downstream firms in the same industry) became important national, regional and global regulators. This was a very different capitalism and a very different world of governance than existed in the early 20th century industrial capitalism of family firms. Hence the power of Levi-Faur's conceptualisation of Regulatory Capitalism. While states are "decentred" under Regulatory Capitalism, the wealth capitalism generates means that states have more capacity both to provide and to regulate than ever before.

Impact—Enviro

Extinction inevitable thanks to unregulated capitalism

Thom Hartmann 6/22, The Daily Take Team, The Thom Hartmann Program, American radio host, author, former psychotherapist, entrepreneur, and progressive political commentator, "Unregulated Capitalism Is Destroying the Planet", 6/22/15, truthout, <http://www.truthout.org/opinion/item/31515-unregulated-capitalism-is-destroying-the-planet#>, AB)

We are in the middle of the first great mass extinction since the end of the age of the dinosaurs. That's the conclusion of a shocking new study published Friday in a journal called *Science Advances*. The study, which was conducted by a group of scientists from some of the United States' leading universities, found that over the past century-plus, vertebrate species have gone extinct at a rate almost 114 times faster than average. See more news and opinion from Thom Hartmann at Truthout here. That's right - not one, not two, not 50, but 114 times faster than average! The study also found that as many 477 different vertebrate species have disappeared since 1900, a mind-boggling statistic because it usually takes between 800 to 10,000 years for that many species to disappear. In terms of the bigger picture, we really haven't seen this kind of planet-wide holocaust since an asteroid wiped out *Tyrannosaurus rex* and friends over 65 million years ago. And that isn't a coincidence. The scientists behind the vertebrate study say their data reveal an "exceptionally rapid loss of biodiversity during the last few centuries, indicating that a sixth mass extinction is already under way." So that raises the question: if a sixth mass extinction is under way - what's causing it? The answer, it turns out, is easy - arrogance, greed and the belief that we as a species can continue to exploit natural resources without any regard for the effect that such behavior has on the world around us. One of the most important points the Pope makes in his new encyclical on the environment is that the source of our current ecological crisis is actually an ideology, the ideology of unregulated capitalism. "The idea of infinite or unlimited growth," he writes, "which proves so attractive to economists, financiers and experts in technology... is based on the lie that there is an infinite supply of the Earth's goods, and this leads to the planet being squeezed dry at every limit." As the Pope goes on to explain, we have now turned unregulated capitalism into the new God, and as result, we now see the Earth as something to dominate as opposed to something we hold in trust as part of the great chain of being. This is really the story of Western civilization as a whole, but things have gotten a lot worse since the Reagan revolution and the "greed is good" era of the 1980s. Before Reagan came to town, we were actually having a conversation about how to moderate our culture's tendency towards greed and exploitation. The EPA was created, and so was Earth Day. And thanks to people like Rachel Carson, we actually took the time to think about how the hunger for profit was hurting our planet and our health. But ever since the "Reagan Revolution," we've become addicted to the pursuit of "growth." Instead of thinking about how to become better stewards of the Earth, we now worry about how to make markets more "efficient" - the environment be damned. Unregulated capitalism, also known as Reaganomics, is our new religion, and we're just as fundamentalist about it as the Taliban are about Islam. And that's a really important point. Going forward, we're going to have to make some important policy choices if we want to stop most life on Earth from vanishing forever - including, perhaps, us. We're going to have to better manage natural resources, abandon fossil fuels and decentralize our energy system. But we also need a revolution in terms of the way we

think. As the Pope said, "We need to reject a magical conception of the market, which would suggest that the problems can be solved simply by an increase in the profits of companies or individuals." For too much of our history, but especially since the 1980s, we in the Western world have seen the planet as something to be exploited for profit. We're now addicted to an extremist ideology that is literally killing us. So if we want to save the planet, the environment and probably the human race, we're going to have to let our belief in unregulated capitalism go extinct.

THE HAMMER

YOU MUST REJECT EVERY INSTANCE OF TYRANNY

Petro '74 [Professor of Law @ Wake Forest University. University of Toledo Law Review Spring 1974, page. 480]

However, one may still insist, echoing Ernest Hemingway—"I believe in only one thing: liberty". And it is always well to bear in mind David Hume's observation: "It is seldom that liberty of any kind is lost all at once." Thus, it is unacceptable to say that the invasion of one aspect of freedom is of no import because there have been invasions of so many other aspects. That road leads to chaos, tyranny, despotism and the end of all human aspiration. Ask Solzhenistyn. Ask Milovan Djilas. In sum, if one believes in freedom as a supreme value and the proper ordering principle for any society aiming to maximize spiritual and material welfare, then every invasion of freedom must be emphatically identified and resisted with undying spirit.

Global warming is a liberal lie - they're all commies

McFarlane 6/19

(Bonnie McFarlane, 6/19/15, [Totally serious standup comedian], "Global warming is totally a lie liberals tell to distract us from their commie agendas," The Guardian, www.theguardian.com/environment/commentisfree/2015/jun/19/global-warming-lie-liberals-tell-distract-us, MX)

Everybody is talking about global warming. Clearly, it's got a great publicist. My guess is it's the same one that Amy Schumer uses. However, unlike Schumer – whom I have on good authority is real – Global Warming is a big fat lie. Now, before you spit out your fair trade coffee and start yelling about carbon emissions, let me assure you that this is not a conclusion that came easily to me. I thought about it a lot. Just this morning I was in the shower for a good two hours debating the pros and cons of dating someone with a giant global footprint. Once the water went cold and I dried myself off with a hair dryer, I knew I had my answer. This so-called "environmental Armageddon" is a fictitious construction cooked up by the left so we'll spend all our time (or at least a half hour a week) changing out our light bulbs and flattening cardboard and completely overlooking their pinko/commie/socialist agendas. I'm on to you, liberals! You're trying to be heroes to humanity. You want everyone to pat you on the back and say, "Oh, look who saved the planet!" Well, I have news for you. The planet doesn't need saving. After all, it's been around for almost 2,000 years. It was fine before you got here, and it'll be fine after the apocalypse destroys most of humankind for the sins of homosexuality and shellfish consumption. God hates Shrimp Scampi, but He doesn't seem to have a problem with littering. (Leviticus 10:10) I wish people would stop incessantly asking, "Don't we care what kind of planet we're going to leave our children?" First of all, I'm pretty sure any child psychologist would agree that leaving a whole planet to a kid is an appalling idea. I wouldn't dream of spoiling my daughter with an entire planet. You don't have to give your kids the world; just spend some time with them once in a while. That's what they really want. That, and a Mercedes SUV for their sweet 16. I wish scientists would stop blaming us humans for causing global warming. This is patently false, since global warming is not real! If the fact that we've just experienced the coldest spring on record isn't enough to sway you, I've got other anecdotal evidence that should be plenty convincing. For example: my sister went to Greenland and never saw any polar bears stranded on tiny ice floes. In fact, my sister didn't see any live polar bears at all, so there. But the most telling sign that global warming is not an actual threat is this: the Republican presidential candidates aren't trying to scare us with the prospect that we're all doomed to die from toxic air and scorching temperatures. And Republican presidential candidates love scaring the public. It's their passion. If they could put a gun to each of our heads individually and say, "Vote for me or else you die", I think they would. That's why, despite the numerous scientific claims and all those hockey-stick graphs showing the sharp rise in temperatures, I don't think there's any truth to this whole global warming thing. At the very least, the declarations are exaggerated and we have nothing to worry about for at least a decade.

A. The ecological crunch is coming---overwhelming scientific evidence proves an impending environmental crisis risks extinction

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia, The Climate Change Challenge and the Failure of Democracy, Pages 4-6, MX)

This impending crisis caused by the accelerating damage to the natural environment on which humans depend for their survival. This is not to deny that there are other means that may bring catastrophe upon the earth. John Gray for example⁵ argues that destructive war is inevitable as nations become locked into the struggle for diminishing resources. Indeed, Gray believes that war is caused by the same instinctual behavior that we discuss in relation to environmental destruction. Gray regards population increases, environmental degradation, and misuse of technology as part of the inevitability of war. War may be inevitable but it is unpredictable in time and place, whereas environmental degradation is relentless and has progressively received increasing scientific evidence. Humanity has a record of doomsayers, most invariably wrong, which has brought a justifiable immunity to their utterances. Warnings were present in The Tales of Ovid and in the Old and New Testaments of the Bible, and in more recent times some of the predictions from Thomas Malthus and from the Club of Rome in 1972, together with the "population bomb" of Paul Ehrlich, have not eventuated. The frequent apocalyptic predictions from the environmental movement are unpopular and have been vigorously attacked. So it must be asked, what is different about the present warnings? As one example, when Sir David King, chief scientist of the UK government, states that "in my view, climate change is the most severe problem that we are facing today, more serious than the threat of terrorism,"⁶ how is this and other recent statements different from previous discredited prognostications? Firstly, they are based on the most detailed and compelling science produced with the same scientific rigor that has seen humans travel to the moon and create worldwide communication systems. Secondly, this science embraces a range of disciplines of ecology, epidemiology, climatology, marine and fresh water science, agricultural science, and many more, all of which agree on the nature and severity of the problems. Thirdly, there is virtual unanimity of thousands of scientists on the grave nature of these problems. Only a handful of skeptics remain. During the past decade many distinguished scientists, including numerous Nobel Laureates, have warned that humanity has perhaps one or two generations to act to avoid global ecological catastrophe. As but one example of this multidimensional problem, the Intergovernmental Panel on Climate Change (IPCC) has warned that global warming caused by fossil fuel consumption may be accelerating.⁷ Yet climate change is but one of a host of interrelated environmental problems that threaten humanity. The authors have seen the veils fall from the eyes of many scientists when they examine all the scientific literature. They become advocates for a fundamental change in society. The frequent proud statements on economic growth by treasurers and chancellors of the exchequer instill in many scientists an immediate sense of danger, for humanity has moved one step closer to doom. Science underpins the success of our

technological and comfortable society. Who are the thousands of scientists who issue the warnings we choose to ignore? In 1992 the Royal Society of London and the U.S. National Academy of Sciences issued a joint statement, Population Growth, Resource Consumption and a Sustainable World,⁸ pointing out that the environmental changes affecting the planet may irreversibly damage the earth's capacity to maintain life and that humanity's own efforts to achieve satisfactory living conditions were threatened by environmental deterioration. Since 1992 many more statements by world scientific organizations have been issued.⁹ These substantiated that most environmental systems are suffering from critical stress and that the developed countries are the main culprits. It was necessary to make a transition to economies that provide increased human welfare and less consumption of energy and materials. It seems inconceivable that the consensus view of all these scientists could be wrong. There have been numerous international conferences of governments, industry groups, and environmental groups to discuss the problems and develop strategy, yet widespread deterioration of the environment accelerates. What is the evidence? The Guide to World Resources, 2000–2001: People and Ecosystems, The Fraying Web of Life¹⁰ was a joint report of the United Nations Development Program, the United Nations Environment Program, the World Bank, and the World Resources Institute. The state of the world's agricultural, coastal forest, freshwater, and grassland ecosystems were analyzed using 23 criteria such as food production, water quantity, and biodiversity. Eighteen of the criteria were decreasing, and one had increased (fiber production, because of the destruction of forests). The report card on the remaining four criteria was mixed or there was insufficient data to make a judgment. In 2005, The Millennium Ecosystem Assessment Synthesis Report by 1,360 scientific experts from 95 countries was released.¹¹ It stated that approximately 60 percent of the ecosystem services that support life on earth—such as fresh water, fisheries, and the regulation of air, water, and climate—are being degraded or used unsustainably. As a result the Millennium Goals agreed to by the UN in 2000 for addressing poverty and hunger will not be met and human well-being will be seriously affected.

B. This means a transition to environmental authoritarianism's coming now---solves extinction

Beeson 10 (Mark, Professor of International Politics at Murdoch University in Perth, Western Australia, Environmental politics, Environmental Politics, 15(5): 750–767., Volume 19, issue 2)//ADS

The environment has become the defining public policy issue of the era. Not only will political responses to environmental challenges determine the health of the planet, but continuing environmental degradation may also affect political systems. This interaction is likely to be especially acute in parts of the world where environmental problems are most pressing and the state's ability to respond to such challenges is weakest. One possible consequence of environmental degradation is the development or consolidation of authoritarian rule as political elites come to privilege regime maintenance and internal stability over political liberalisation. Even efforts to mitigate the impact of, or respond to, environmental change may involve a decrease in individual liberty as governments seek to transform environmentally destructive

behaviour. As a result, 'environmental authoritarianism' may become an increasingly common response to the destructive impacts of climate change in an age of diminished expectations.

C. The transition is only possible in a world with limited rights – the 1AC is founded on a philosophy of abundance that is incompatible with environmental survival

Humphrey 7

(Mathew Humphrey 7, Reader in Political Philosophy at the University of Nottingham, UK, 2007, *Ecological Politics and Democratic Theory: The Challenge to the Deliberative Ideal*, p. 20-21//um-ef)

If these changes are necessary - the downgrading, curtailment and reconceptualisation of democracy, liberties, and justice, as well as the raising to primacy of integrity and ecological virtue - how are the necessary changes to come about? Value change represents the best 'long-term' hope but the ecological crisis is not a 'long-term' problem. These changes have to be introduced quickly and before there has been time to inculcate value shifts in the population. The downgrading of rights and liberties has to be achieved through policy and institutional change, even while the question of a long-term change of values is also addressed. For both these tasks what is required is political leadership and the institution of the state. The immediate problem lies in the collective action problem that arises in respect of the looming ecological constraints on economic activity and the potential collapse of the global commons. The end of the 'golden age' of material abundance, as we slide back down the other side of 'Hubbert's pimple' will bring about intense competition for scarce resources. To understand politics under these circumstances, we have to turn back to Hobbes and Burke, the political philosophers who conceptualised life under conditions of scarcity, and also to Plato, commended for his healthy mistrust of democracy. For Ophuls a crucial element of political philosophy is the definition of reality itself; political philosophy carries within it an ontological component which sets out the foundations of political possibility. The contemporary West he sees as defined by the 'philosophers of the great frontier' Locke, Smith, and Marx. These are the political philosophers of abundance. For Locke the proviso of always leaving 'as much and as good' for others in appropriation could always be met even when there was no unappropriated land left, as the productivity of the land put to useful work would always create better opportunities for those coming later. Smith's 'invisible hand' thesis was also dependent upon the assumption that the material goods would always be available for individual to accomplish their own economic plans. For Marx the 'higher phase' of communist society arrives 'after the productive forces have... increased with the all-round development of the individual', and all the springs of co-operative wealth flow more abundantly' (Marx, 1970: 19). For Ophuls these are all the political philosophies of abundance. Ecological crisis, however, returns us to the Hobbesian struggle of all against all (Heilbroner, 1974: 89). With ecological scarcity we return to the classical problems of political theory that 400 years of abnormal abundance has shielded us from (Ophuls, 1977: 164). Both liberalism and socialism represent the politics of this 'abnormal abundance' and with the demise of this period we return to the eternal problems of politics. Hobbes, then, is seen as the political philosopher of ecological scarcity *avant la lettre*. 'Hardin's "logic of the commons" is

simply a special version of the general political dynamic of Hobbes' "state of nature" (Ophuls, 1977; 148). Competition over scarce resources leads to conflict, even when all those involved realise that they would be collectively better off if they could co-operate, 'to bring about the tragedy of the commons it is not necessary that men be bad, only that they not be actively good' (Ophuls, 1977: 149). It is this Hobbesian struggle that may impose 'intolerable strains on the representative political apparatus that has been historically associated with capitalist societies' (Heilbroner, 1974: 89). Coercion is seen as the solution (and it is hoped, although as we have seen not for terribly good reasons, that this coercion can be agreed democratically), and the appropriate agent of this solution is the state. The transition from abundance to scarcity will have to be centralised and expert-controlled, and it is unlikely that 'a steady state polity could be democratic' (Ophuls, 1977: 162). As we shall see in the following paragraphs, this faith in the ability of the state to institute centralised controls that would be obeyed by its citizens is one of the areas that has attracted fierce criticism from contemporary green political theorists.

2NC Turns the Case

Only top-down, centralized imposition of constraints on freedom can guarantee planetary survival---their ethic will inevitably fail to improve ecological outcomes---an accelerating crisis makes authoritarianism inevitable, and the worse the environment gets, the worse the constraints on freedom will be

Humphrey 7

(Mathew Humphrey 7, Reader in Political Philosophy at the University of Nottingham, UK, 2007, Ecological Politics and Democratic Theory: The Challenge to the Deliberative Ideal, p. 14-15)

In terms of the first of these points, that our democratic choices reflect a narrow understanding of our immediate interests and not an enlightened view of our long-term welfare, the case is made by Ophuls. He claims that we are now 'so committed to most of the things that cause or support the evils' with which he is concerned that 'we are almost paralysed; nearly all the constructive actions that could be taken at present... are so painful to so many people in so many ways that they are indeed totally unrealistic, and neither politicians nor citizens would tolerate them' (Ophuls, 1977: 224).⁴ Environmentally friendly policies can be justifiably imposed upon a population that 'would do something quite different if it was merely left to its own immediate desires and devices' (Ophuls, 1977: 227): currently left to these devices, the American people 'have so far evinced little willingness to make even minor sacrifices... for the sake of environmental goals' (Ophuls, 1977: 197). Laura Westra makes a similar argument in relation to the collapse of Canadian cod fisheries, which is taken to illustrate a wider point that we cannot hope to 'manage' nature when powerful economic and political interests are supported by 'uneducated democratic preferences and values' (Westra, 1998: 95). More generally reducing our 'ecological footprint' means 'individual and aggregate restraints the like of which have not been seen in most of the northwestern world. For this reason, it is doubtful that persons will freely embrace the choices that would severely curtail their usual freedoms and rights... even in the interests of long-term health and self-preservation.'" (Westra, 1998: 198). Thus we will require a 'top-down' regulatory regime to take on 'the role of the "wise man" of Aristotelian doctrine as well as 'bottom-up' shifts in values (Westra, 1998: 199). Ophuls also believes that in certain circumstances (of which ecological crisis is an example) 'democracy must give way to elite rule' (1977: 159) as critical decisions have to be made by competent people. The classic statement of the collective action problem in relation to environmental phenomena was that of Hardin (1968). The 'tragedy' here refers to the "remorseless working of things' towards an 'inevitable destiny' (Hardin, 1968: 1244, quoting A. N. Whitehead). Thus even if we are aware of where our long-term, enlightened interests do lie, the preferred outcome is beyond our ability to reach in an uncoerced manner. This is the n-person prisoners' dilemma, a well established analytical tool in the social analysis of collectively suboptimal outcomes. A brief example could be given in terms of an unregulated fishery. The owner of trawler can be fully aware that there is collective over-extraction from the fishing grounds he uses, and so the question arises of whether he should self-regulate his own catch. If he fishes to his maximum capacity, his gain is a catch fractionally depleted from what it would be if the fisheries were fully

stocked. If the 'full catch' is 1, then this catch is $1 - \epsilon$, where ϵ is the difference between the full stock catch and the depleted stock catch divided by the number of fishing vessels. If the trawlerman regulates his own catch, then he loses the entire amount that he feels each boat needs to surrender, and furthermore he has no reason to suppose that other fishermen would behave in a similar fashion, in fact he will expect them to benefit by catching the fish that he abjures. In the language of game theory he would be a 'sucker', and the rational course of action is to continue taking the maximum catch, despite the predictable conclusion that this course of action, when taken by all fishermen making the same rational calculation, will lead to the collapse of the fishery. Individual rationality leads to severely suboptimal outcomes. Under these circumstances an appeal to conscience is useless, as it merely places the recipient of the appeal in a 'double-bind'. The open appeal is 'behave as a responsible citizen, or you will be condemned. But there is also a covert appeal in the opposite direction; 'If you do behave as we ask, we will secretly condemn you for a simpleton who can be shamed into standing aside while the rest of us exploit the commons' (Hardin, 1968: 246). Thus the appeal creates the imperative both to behave responsibly and to avoid being a sucker. In terms of democracy, what this entails is that, in general, **we have to be prepared to accept coercion** in order to overcome the collective action problem.⁵ The **Leviathan** of the state is the institution that **has the political power required to solve this** conundrum. 'Mutual coercion, mutually agreed on' is Hardin's famous solution to the tragedy of the commons. Revisiting the 'tragedy' argument in 1998, Hardin held that '[i]ts message is, I think, still true today. Individualism is cherished because it produces freedom, but the gift is conditional: **The more population exceeds the carrying capacity** of the environment, **the more freedoms must be given up**' (Hardin, 1998: 682). On this view coercion is an integral part of politics: the state coerces when it taxes, or when it prevents us from robbing banks. Coercion has, however, become 'a dirty word for most liberals now' (Hardin, 1968: 1246) but this does not have to be the case as long as this coercion comes about as a result of the democratic will. This however, requires overcoming the problems raised by the likes of Ophuls and Westra, that is, it is dependent upon the assumption that **people can agree to coerce each other** in order to realise their long-term, 'enlightened' self-interest. **If they cannot**, and both the myopic and collective action problem ecological objections to democracy are valid, then **this coercion may not be** 'mutually agreed upon' but rather **imposed by Ophuls' ecological 'elite'** or Westra's Aristotelian 'wise man'. Under these circumstances **there seems to be no hope at all for a reconciliation of ecological imperatives and democratic decision-making: we are faced with a stark choice, democracy or ecological survival.**

2NC Authoritarianism Key/Democ Fails

Democratic societies cannot address environmental destruction – only authoritarianism solves

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 13-14, MX)

An evolutionary and therefore genetic mechanism relevant to our analysis is the need and acceptance of authoritarian social structures conferred upon us by our primate ancestors. These forces can even be seen to operate within a liberal democracy in which leaders and democratic institutions themselves gradually evolve to become more authoritarian. Freedom and individuality expressed through the market economy result in elites widening the gap between rich and poor and enriching themselves by acquisitions in developing countries under the guise of freedom and democracy. Maladaptations of society as defined by Stephen Boyden²⁶ become more common, for example the economic view that retail spending is good for society or the accumulation of vast assets by the rich that they cannot possibly use or spend in their lifetimes. The number of billionaires in the world is increasing rapidly and the majority are in the liberal democracies. As we will see in the discussion to follow, many liberal democracies are moving visibly toward authoritarianism. Governments see this as an option to protect their power, and many of their rich supporters favor it to protect their assets. It will be argued in chapter 6 that liberal democracies are inherently unstable and move slowly but surely to authoritarianism. Theorists who have seen liberal democracy as representing humanity's final political system have adopted a too narrow historical perspective, which can be corrected by adopting a biohistorical or sociobiological view of the human species. We should not be blind to the possibility that an authoritarian meritocracy might have advantages in world crisis management compared to the present democratic mediocracy. Our patient in the intensive care unit could not be managed successfully under liberal democracy. Recognizing that totalitarian states have caused as much, if not more, environmental damage as the liberal democracies, we will nevertheless argue in chapter 4 that some historical totalitarian regimes have averted some catastrophic environmental damage by dictate. We will document the personal and democratic failures that render the environmental crisis difficult to address. An altruistic, able, authoritarian leader, versed in science and personal skills, might be able to overcome them. But liberal democracy predisposes the election of the slick wielders of the political knife and then encumbers them with the burdens of economic chains and powerful self-interested corporates who cannot be denied. They fuel the growth economy that preserves their power and that of government. It is instructive to ask our democratically elected leaders: What do you see as the endpoint of this liberalized growth economy? Surely to maintain this growth to infinity is unsustainable? Yet this growth is necessary for the present economic system to survive and satisfy the perceived material needs of humanity. Our leaders cannot provide an answer to this question. To some it falls beyond their elected period, and they do not have to address it. To others there is the hope that science and technology will capture the carbon dioxide of climate

change, create hydrogen fuel from water, and feed the millions with genetically modified foods. But in general it is not an issue that democratic societies are addressing in a way that will encourage solutions

2NC

Impact

2nc top o/v

Disad outweighs and turns the case –

The 1AC precludes effective centralized responses to a worsening global environmental crisis that risks the extinction of humanity as well as the total destruction of the biosphere and countless other species---overwhelming scientific evidence confirms that we've got a short window of time to take direct, concerted actions to move society back within the margin of ecological sustainability---that's Shearman & Smith.

Authoritarianism is inevitable – it's not a question of whether or not the transition will happen but when. Any reason sooner is better means you vote negative.

And, Absent a transition the only freedom one has is the freedom to die, and you can't be free if you're dead

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 85-86, MX)

Our position differs from Wolff and other anarchists also insofar as we reject the principle of autonomy, the foundation belief of liberalism. It is the argument of this work that liberalism has essentially overdosed on freedom and liberty. It is true that freedom and liberty are important values, but such values are by no means fundamental or ultimate values. These values are far down the list of what we believe to be core values based upon an ecological philosophy of humanity: survival and the integrity of ecological systems. Without such values, values such as freedom and autonomy make no sense at all. If one is not living, one cannot be free. Indeed liberal freedom essentially presupposes the idea of a sustainable life for otherwise the only freedom that the liberal social world would have would be to perish in a polluted environment. The issue of values calls into question the Western view of the world or perhaps more specifically the viewpoint that originates from Anglo Saxon development. It is significant that the "clash of civilizations" thinking espoused by Samuel Huntington, a precursor of the neoconservatives, has generated much debate and support. Huntington's analysis involves potential conflict between "Western universalism, Muslim militancy and Chinese assertion." The divisions are based on cultural inheritance. It is a world in which enemies are essential for peoples seeking identity and where the most severe conflicts lie at the points where the major civilizations of the world dash. Hopefully this viewpoint will be superseded, for humanity no longer has time for the indulgence of irrational hates. The important clash will not be of civilizations but of values. The fault line cuts across all civilizations. It is a clash of values between the conservatives and the consumers. The latter are well described in this book. They rule the world economically, and their thinking excludes true care for the future of the world. The

conservatives at present are a powerless polyglot of scientists, environmentalists, farming and subsistence communities, and peoples of various religious faiths, including a minority of right-wing creationist who think that God wishes the world to be cared for. They recognize the environmental perils and place their banishment as the preeminent task of humanity. The fight for minds, not liberal democracy, will determine the future of the world's population. If conservative thought prevails it may unite humanity in common cause and heal the cultural fault lines. In the next two chapters we will develop further our critique of liberal democracy, arguing first that democracy is already at an end through the undermining of democratic institutions by man's inherent mentality and by global corporate capitalism. We will find that the latter has become Plato's beast and the keeper that panders to the beast has become the democratic government. This is so, regardless of the correctness of the arguments of this chapter. In chapter 7, we will look more closely at liberalism itself and detail its philosophical flaws. This will complete our multipronged philosophical and ecological dissection of liberal democracy. Having exposed what remains beneath the mummy's shrouds, it will remain to search for an alternative system and explore whether liberal democracy can be saved by radical reforms or political surgery or resurrected from the tomb of its self-destruction by divine intervention.

And, The failures of liberalism mean that the affs solutions will fail

Ophuls '97

(William Ophuls (political Science at Northwestern Requiem for Modern politics, 1997)

Thus harsh and sweeping assessment of our predicament which will be elaborated and supported in the main body of the book, is intended to promote not despair but simply a realistic understanding of the political challenge confronting humanity on the threshold of the twenty-first century. Indeed it is only by exposing the intrinsically self-destructive nature of modern politics that we can reveal the only real solution to our multitude of problems – which is to change the way of thinking that caused them. Unfortunately when most people call for solutions a different way of thinking is usually the last thing they have in mind. What they want instead is something that will not challenge their assumptions, shock their sensibilities, or violate the conventional wisdom. Much of what follows is therefore designed to make it absolutely clear that no such solution exists – that trying to solve our problems in terms of the basic principles of liberal polity is a lost cause because it is these principles that have created the problem in the first place. In this way, the necessity for a new vision of politics that directly addresses the egotism and destructiveness of the modern way of life will follow as a matter of course. In that sense, not just the Conclusions, wherein I briefly sketch the essential spirit of the new vision, but the work as a whole is the “solution” to the problems it describes: it tries to exemplify a different way of thinking.

vs Value to Life

The disad outweighs by comparative magnitude – you should prioritize a utilitarian framework:

- a. **“Domestic” entails that the aff only solves for the 300 million citizens in the United States, this is versus planetary extinction, that’s Shearman and Smith**
- b. **The magnitude question should force you to prioritize human lives – total extinction removes possibility of solutions to human rights violations in the future – even if the aff solves for dehumanization in the United States, it doesn’t solve for deaths of 6 billion worldwide**

Extinction outweighs

Bostrum 12 (Nick, Professor of Philosophy at Oxford, directs Oxford's Future of Humanity Institute and winner of the Gannon Award, Interview with Ross Andersen, correspondent at The Atlantic, 3/6, “We're Underestimating the Risk of Human Extinction”, <http://www.theatlantic.com/technology/archive/2012/03/were-underestimating-the-risk-of-human-extinction/253821/>)

Bostrom, who directs Oxford's Future of Humanity Institute, has argued over the course of several papers that human **extinction risks are** poorly understood and, worse still, **severely underestimated by society**. Some of these existential risks are fairly well known, especially the natural ones. But others are obscure or even exotic. Most worrying to Bostrom is the subset of existential risks that arise from human technology, a subset that he expects to grow in number and potency over the next century. Despite his concerns about the risks posed to humans by technological progress, Bostrom is no luddite. In fact, he is a longtime advocate of transhumanism--the effort to improve the human condition, and even human nature itself, through technological means. In the long run he sees technology as a bridge, a bridge we humans must cross with great care, in order to reach new and better modes of being. In his work, Bostrom uses the tools of philosophy and mathematics, in particular probability theory, to try and determine how we as a species might achieve this safe passage. What follows is my conversation with Bostrom about some of the most interesting and worrying existential risks that humanity might encounter in the decades and centuries to come, and about what we can do to make sure we outlast them. Some have argued that we ought to be directing our resources toward humanity's existing problems, rather than future existential risks, because many of the latter are highly improbable. You have responded by suggesting that **existential risk mitigation may** in fact **be a dominant moral priority over** the **alleviation of present suffering**. Can you explain why? Bostrom: Well suppose you have a moral view that counts future people as being worth as much as present people. You might say that fundamentally it doesn't matter whether someone exists at the current time or at some future time, just as many people think that from a fundamental moral point of view, it doesn't matter where somebody is spatially---somebody isn't automatically worth less because you move them to the moon or to Africa or something. **A human life is a human life. If you have that** moral point of **view that**

future generations matter in proportion to their population numbers, then you get this very stark implication that existential risk mitigation has a much higher utility than pretty much anything else that you could do. There are so many people that could come into existence in the future if humanity survives this critical period of time---we might live for billions of years, our descendants might colonize billions of solar systems, and there could be billions and billions times more people than exist currently. Therefore, even a very small reduction in the probability of realizing this enormous good will tend to outweigh even immense benefits like eliminating poverty or curing malaria, which would be tremendous under ordinary standards.

- c. Acts to bolster civil liberties absent solutions to existing ecological rights violations create disproportionate levels of quality of life – turns the case

UNEP '14 (Division of Environmental Law and Conventions - United Nations Environment Programme environment for development - The Division of Environmental Law & Conventions (DELIC) is the lead Division charged with carrying out the functions of UNEP that involve the development and facilitation of international environmental law, governance and policy. To fulfill its mandate, DELIC's work focuses on: Leading the international community in the progressive development of environmental law Supporting States in the development and implementation of legal and policy measures that address emerging environmental challenges Facilitating harmony and inter-linkages among environmental conventions Working with MEA Secretariats to support States in implementing their treaty obligations Enhancing States' participation in regional and global environmental forum // 6-24-15 // MC)

More than 2 million annual deaths and billions of cases of diseases are attributed to pollution. All over the world, people experience the negative effects of environmental degradation ecosystems decline, including water shortage, fisheries depletion, natural disasters due to deforestation and unsafe management and disposal of toxic and dangerous wastes and products. Indigenous peoples suffer directly from the degradation of the ecosystems that they rely upon for their livelihoods. Climate change is exacerbating many of these negative effects of environmental degradation on human health and wellbeing and is also causing new ones, including an increase in extreme weather events and an increase in spread of malaria and other vector born diseases. These facts clearly show the close linkages between the environment and the enjoyment of human rights, and justify an integrated approach to environment and human rights. OVERVIEW OF LEGAL ISSUES There are three main dimensions of the interrelationship between human rights and environmental protection: The environment as a pre-requisite for the enjoyment of human rights (implying that human rights obligations of States should include the duty to ensure the level of environmental protection necessary to allow the full exercise of protected rights); Certain human rights, especially access to information, participation in decision-making, and access to justice in environmental matters, as essential to good environmental decision-making (implying that human rights must be implemented in order to ensure environmental protection); and The right to a safe, healthy and ecologically-balanced environment as a human right in itself (this approach has been debated). The Stockholm Declaration, and to a lesser extent the Rio Declaration, show how the link between human rights and dignity and the environment was very prominent in the early stages of United Nations efforts to address environmental problems. That focus has to some extent faded away in the

ensuing efforts by the international community to tackle specific environmental problems, with more focus being placed on developing policy and legal instruments, both at the international and national levels, targeted at the environmental problems that were emerging, through a series of MEAs and other mechanisms. Although the foundation of developing such mechanisms laid on the considerations made at the time of the Stockholm Conference, the human rights dimension is not made explicit in most of these instruments. However, there have been several calls from different UN bodies to address the issues of human rights and environment in conjunction. The Commission on Human Rights (now transformed into the Human Rights Council) by Resolution 2005/60 requested the High Commissioner and invited UNEP, UNDP and other relevant bodies and organizations, within their respective mandates and approved work programmes and budgets: “to continue to coordinate their efforts in activities relating to human rights and the environment in poverty eradication, post-conflict environmental assessment and rehabilitation, disaster prevention, post-disaster assessment and rehabilitation, to take into consideration in their work relevant findings and recommendations of others and to avoid duplication” (paragraph 8). The UN reform process also calls for the integration of human rights in all of the organization’s work. In a series of resolutions, the former United Nations Commission on Human Rights and the United Nations Human Rights Council have drawn attention to the relationship between a safe and healthy environment and the enjoyment of human rights. Most recently, the Human Rights Council in its resolution 7/23 of March 2008 and resolution 10/4 of March 2009 focused specifically on human rights and climate change, noting that climate change-related effects have a range of direct and indirect implications for the effective enjoyment of human rights. These resolutions have raised awareness of how fundamental the environment is as a prerequisite to the enjoyment of human rights.

vs Nuclear War

Extinction from ecocide is inevitable absent a transition to eco-authoritarianism – that's Shearman-Smith and Beeson

Default to probability – democratic consumerism is systemic and slowly destroying the environment

And, There is an invisible threshold that will result in massive and unstoppable feedback loops - it's try or die

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 24-26, MX)

So far, we have discussed events that are predicted with a high degree of certainty. However science is discovering mechanisms that may result in sudden irreversible changes in the earth's environment. These are termed threshold events, whereby a further small increase in temperature triggers a major change in the earth's control mechanisms. The U.S. National Academy of Sciences supports this concept and believes that there could be an abrupt climate change. The following are a few examples of possible mechanisms. The gulf stream, flowing north in the North Atlantic Ocean, warms northern Europe and returns deep cold waters flowing south. Studies from the National Oceanographic Centre in the UK have shown that the returning current may have slowed by 30 percent since 1957.¹⁶ The northward flow is weakening due to climate-related increases in the southward flow of fresh water from melting ice. This event is depicted in the doomsday thriller *The Day After Tomorrow*. If the gulf stream reversed, Europe would have the climate of Hudson Bay, despite a warming world. There are a number of natural stores of greenhouse gases ("sinks") in the tundra, soils, and oceans. These sinks could release their gases as the temperature increases, leading to a rapidly accelerating global warming. The permafrost in the tundra of Siberia is thawing rapidly and is releasing frozen stores of the greenhouse gas methane.¹⁷ The oceans absorb 2 billion tons more carbon dioxide than they release each year, and this is about one third of all carbon dioxide produced by humanity. In future, with warming of the ocean's water, this sink may be compromised and there may be a net release of carbon dioxide into the atmosphere. However at present the Antarctic Ocean is becoming more acidic due to absorption of carbon dioxide from the atmosphere. The acidity will affect the ability of tiny crustaceans to grow their calcium carbonate shells, and an important link in the food chain may be lost.¹⁸ The forests of the world are an important carbon sink, but as the temperature rises trees become sick and become net producers rather than stores of carbon dioxide. British scientists have also discovered another feedback mechanism whereby warmer temperatures have increased microbial activity in the soil, releasing greater than expected amounts of carbon—quantities sufficient to reduce Britain's attempt to curtail greenhouse gas emissions.¹⁹ There are other mechanisms whereby global warming is being accelerated. Arctic ice is rapidly melting, being 20 percent less than normal during the summer of 2005. Dr. Mark Serreze of Colorado's National Snow and Ice Data Center, believes that a

threshold may soon be reached beyond which sea ice will not recover. A feedback process may be set in motion, accelerating the melting of ice, as there is more open blue water to absorb solar energy and less white ice to reflect sunlight back into space.²⁰ The major threat of global sea level rising comes from the glaciers of Greenland and Antarctica. Greenland's glaciers are melting into the sea at almost twice their previously observed rate in the last five years.¹ The average temperature of Greenland has risen by 3°C (5.4°F) over the last two decades and between 1996 and 2006 the amount of water lost from Greenland's ice sheet increased from 90 cubic kilometers (21.6 cubic miles) to 220 cubic kilometers (52.8 cubic miles) per year. Greenland's ice sheet covers 1.7 million square kilometers (0.66 million square miles) with ice of up to 3 kilometers thick (1.86 miles), and if completely melted it would raise global sea levels by around 7 meters (7.65 yards). The evidence that we are moving into an accelerated phase of global warming is supported by data showing that 9 of the 10 warmest years since 1860 have occurred since 1990 and 19 since 1981, and annual increases in the concentration of carbon dioxide in the atmosphere are accelerating as shown by data from the U.S. Government's National Oceanic and Atmospheric Administration. These measurements are sufficient for scientists to be increasingly concerned that damage to carbon sinks and other mechanisms described above may be playing a part. James Lovelock is a scientist, respected internationally for his pioneering work on biological feedback systems. He introduced the Gaia concept of the living earth acting like a single organism by using feedback mechanisms to maintain stability of temperature and climate over long periods of time. In 2006, in his book *The Revenge of Gaia*, he argued that global warming will be amplified by the simultaneous malfunction of several feedback systems due to human activities and it is already too late to stop catastrophic warming.²² One such mechanism is that of global dimming, whereby aerosols in the atmosphere produced by global industry are shielding the earth from part of the sun's radiation. With a severe industrial downturn, a sudden leap in global temperatures will be expected. Various events are likely to precipitate economic downturn, such as the likely oil shortage are discussed later in this chapter.

Rights vs. Enviro

This vastly outweighs the case---preserving existence by definition has to come before any other value---worsening environmental crisis turns all of their impacts, but embracing eco-authoritarianism unites humanity and solves all war

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 85-86, MX)

Our position differs from Wolff and other anarchists also insofar as we reject the principle of autonomy, the foundation belief of liberalism. It is the argument of this work that liberalism has essentially overdosed on freedom and liberty. It is true that freedom and liberty are important values, but such values are by no means fundamental or ultimate values. These values are far down the list of what we believe to be core values based upon an ecological philosophy of humanity: survival and the integrity of ecological systems. Without such values, values such as freedom and autonomy make no sense at all. If one is not living, one cannot be free. Indeed liberal freedom essentially presupposes the idea of a sustainable life for otherwise the only freedom that the liberal social world would have would be to perish in a polluted environment. The issue of values calls into question the Western view of the world or perhaps more specifically the viewpoint that originates from Anglo Saxon development. It is significant that the "clash of civilizations" thinking espoused by Samuel Huntington, a precursor of the neoconservatives, has generated much debate and support. Huntington's analysis involves potential conflict between "Western universalism, Muslim militancy and Chinese assertion."18 The divisions are based on cultural inheritance. It is a world in which enemies are essential for peoples seeking identity and where the most severe conflicts lie at the points where the major civilizations of the world clash. Hopefully this viewpoint will be superseded, for humanity no longer has time for the indulgence of irrational hates. The important clash will not be of civilizations but of values. The fault line cuts across all civilizations. It is a clash of values between the conservatives and the consumers. The latter are well described in this book. They rule the world economically, and their thinking excludes true care for the future of the world. The conservatives at present are a powerless polyglot of scientists, environmentalists, farming and subsistence communities, and peoples of various religious faiths, including a minority of right-wing creationists who think that God wishes the world to be cared for. They recognize the environmental perils and place their banishment as the preeminent task of humanity. The fight for minds, not liberal democracy, will determine the future of the world's population. If conservative thought prevails it may unite humanity in common cause and heal the cultural fault lines.

Delaying the transition to authoritarianism in the hopes that people just start to “get it” on their own independently causes extinction

Charles Daniel 12, University of Leeds, Summer 2012, “To what extent is democracy detrimental to the current and future aims of environmental policy and technologies?,” POLIS Journal, Vol. 7, <http://www.polis.leeds.ac.uk/assets/files/students/student-journal/ug-summer-12/charles-daniel.pdf>

Is it therefore possible to conclude that democracy is indeed detrimental to the current and future aims of environmental policy and technologies? The resounding answer is ‘no’ as the alternative options proposed in the paper do not offer viable and comprehensive methods of being able to direct policy in ways that democracy is unable. What can be acknowledged though is that **as our planet becomes more over-crowded**, over-developed and over-dependent on financial instruments, **so too does the window of opportunity to secure a sustainable planet** for future generations. Tim Flannery is right in asserting that ‘our fate is in our own hands’ and whilst the need to be optimistic and to put faith in the ability of our future as stewards of the Earth is important, **one cannot ignore our inclination** as a species **to behave in a selfish manner**. Not only is it a political and cultural reality, it is also a biological one (Flannery 2010). Our instinct to survive will not go away. Unfortunately, that survival has become so contingent on the systematic exploitation of our natural world. It has, I believe, reached a point where something needs to be done. Progressive politics through raising awareness and encouraging good practices is vital for the survival of our planet. **We cannot, however, wait for people to slowly adjust their lifestyles and hope** that **environmental consciousness ‘just happens’**. I believe some level of **intervention is required**, a higher one that is currently present in our domestic and global politics. We need to accept, at some point, that **limitations on our economic and social freedoms may be necessary** in order to ensure that ‘Gaia’s’ future is secured. As I have suggested in Chapter 3, this has to be a two-tiered process. Firstly individuals have to accept limitations on their freedom. This has to be acknowledged by national governments that, in turn, would make the same sacrifice and relinquish certain aspects of their authoritative freedoms to supranational institutions. This process would require high levels of trust in global governance models that have, as such, been fairly ineffective in influencing the actions of powerful nations. However, we must not lose faith in these processes and retreat to policies of economic isolation and suspicion. James Lovelock is correct in affirming that **our planet is old and frail. It is up to those in power to ensure** that **it does not wither away**.

Liberating agency is the root cause of all their impacts and extinction --- the aff can’t solve human defects

Ophuls ’11 - former member of the U.S. Foreign Service and has taught political science at Northwestern University (Ophuls, William. “Plato's Revenge: Politics in the Age of Ecology.” 19 August 2011. P. 70-74)

The portrait of the psyche that emerges is cautionary. As much as contemporary humans would like to believe that we have transcended our evolutionary origins, **our animal nature lives on**

within us — in our genes and in our minds. Witness the architecture of the human brain, in which the cerebral cortex enfolds a mammalian limbic system wrapped around a reptilian core. Hence, said Jung, Every civilized human being, however high his conscious development, is still an archaic man at the deeper levels of his psyche. Just as the human body connects us with the mammals and displays numerous vestiges of earlier evolutionary stages going back even to the reptilian age, so the human psyche is a product of evolution which, when followed back to its origins, shows countless archaic traits. 2 In effect, Jung concludes, a “ 2,000,000-year-old man ” dwells in all of us. Even the distinctively human part of our nature associated with the cortex is irredeemably Paleolithic. 3 As a consequence, men and women are constantly agitated by primordial drives and conflicting emotions that they only partly understand and struggle to control — and that they are usually not even aware of. Much is healthy and good in human beings, but we have propensities for sickness and evil that must not be ignored. Anthropology supports this bleak assessment of the human psyche. With few exceptions, there are no harmless people, and the savage mind, whatever its virtues, is often prey to unconscious forces and raw emotions (and is therefore the author of savage behavior). A review of the anthropological literature reveals three seemingly universal tendencies of the human mind: we are prone to superstition and magical thinking, we are predisposed to paranoia, and we project our own hostility onto others. 4 In essence, says Melvin Konner, chronic fear pervades the psyche and drives human behavior. 5 Although the last word has yet to be spoken, there seems to be an emerging scientific consensus: we humans are a volatile mix of animal, primal, and civil — a tangle of emotions and drives that all but guarantees inner and outer conflicts. That human nature is partly animal nature is not entirely a bad thing. Instinct is necessary for a healthy psyche and a moral society. But for human beings to live peacefully in crowded civilizations, the more bestial and savage aspects of man’s nature have to be actively discouraged by society. Konner puts it more forcefully. Because of our fear-driven antisocial propensities, we humans are “ evil ” by nature and therefore need a “ Torah, ” or an equivalent ethical code, to forestall the war of all against all. 6 In practice, this means that mores are essential because they tip the balance between good and evil in human nature. Good ones turn fallible, passionate men and women into reasonably upright members of society, while bad ones turn them into feral menaces to society. This conclusion does not follow from theory alone; it has been empirically demonstrated. The social psychologist Stanley Milgram showed how simple it is to create little Adolf Eichmanns who obediently inflict severe pain on hapless experimental subjects. 7 In an even more frightening experiment, his colleague Philip Zimbardo contrived to convert ordinary, presumably decent students into punitive monsters. In the infamous Stanford prison experiment, student volunteers were randomly assigned to be either guards or prisoners. In a matter of days, the former turned harsh and sadistic, the latter cringing or rebellious, and the experiment had to be aborted to avert physical harm to the prisoners. 8 In effect, psychology has rediscovered what were once called “ the passions ” — the welter of conflicting and potentially dangerous impulses and emotions that lurk in every human breast and that threaten to erupt under the slightest provocation unless they are kept in check by personal character or social control. Recall the words of Burke: “ Society cannot exist unless a controlling power on will and appetite be placed somewhere. ” The choice is between self-imposed “ moral chains ” or externally imposed “ fetters. ” In his Politics, Aristotle identified the essential political challenge: For as man is the best of the animals when perfected, so he is the

worst of all when sundered from law and justice . . . [because he] is born possessing weapons for the use of wisdom and virtue, which it is possible to employ entirely for the opposite ends. Hence, when devoid of virtue man is the most unholy and savage of animals. 9 When individuals gather in crowds, the challenge increases by orders of magnitude because fear, greed, and danger are contagious. As Gustave Le Bon pointed out long ago, **crowds amplify every human defect and manifest many new ones** of their own. “ The masses, ” said Jung, “ always incline to herd psychology, hence they are easily stampeded; and to mob psychology, hence their witless brutality and hysterical emotionalism. ” 10 Nietzsche was even more scathing: “ Insanity in individuals is something rare — but in groups, parties, nations, and epochs it is the rule. ” 11 **The greatest Weapon of Mass Destruction on the planet is therefore the collective human ego.** History teaches that the human capacity for evil is virtually unlimited. Unless wisdom and virtue are deployed to counteract ego’s potential for destruction, actual destruction is inevitable as men and women forget their better nature and become unholy and savage animals. This new yet old understanding of human nature is enough by itself to demolish modern hubris. Infinite social progress is as much of a chimera as infinite material progress. The “ 2,000,000-year-old man ” is what he is and will not be improved, only tamed. Indeed, at this point in human history, the essential task is forestalling racial suicide, not pursuing social perfection. To this cautionary portrait of human nature, we must now add the limits of human cognition. As has been shown, the human perceptual apparatus is a trickster. **We are in touch not with reality but with** a kind of **shadow** play **projected onto the screen of the psyche by invisible deep structures.** We have also seen that even the finest intellects struggle to comprehend complex, self-organizing systems, for nature does not make it easy for us to know reality. But the fault does not lie in nature. The human mind was simply not created to unravel the mysteries of quantum mechanics or to comprehend the intricate dynamics of the global climate regime. It was instead cobbled together and then honed to perfection by evolution for one specific purpose — survival as hunter-gatherers on the African savannah. We are Jung’s “ 2,000,000-year-old man ” not just emotionally but also cognitively. We are hardwired to perceive in certain ways and not in others. Above all, human cognition is “ designed ” for concrete perception, so primal peoples are masters of what anthropologist Claude Lévi-Strauss called “ the sciences of the concrete. ” 12 This is by no means an inferior mode of thought. The savage is not, as we tend to think, a mere captive of strange fancies and outlandish beliefs. He is actually more of an empiricist than the physicist because he perceives his world directly and immediately whereas the latter filters nature through an elaborate intellectual apparatus made up of mathematical, theoretical, and technological lenses. So the abstraction associated with literacy, civilization, and, above all, scientific investigation is not natural but acquired — and only with great difficulty after years of schooling. Even **schooling cannot entirely eradicate the innate propensity** for concreteness in the human mind. For instance, **we daily commit the epistemological sin of reification** — **regarding abstractions or ideas, such as energy or the market, as if they were somehow as real as rocks** and trees rather than constructs that help us understand complex phenomena. Likewise, our opinions have a tendency to become “ set in concrete, ” resisting all evidence to the contrary. 13 But perhaps the most egregious instance of what Whitehead called “ the fallacy of misplaced concreteness ” is that so many otherwise sane human beings believe in the absolute, literal truth of the manifestly mythological accounts contained in various scriptures — **refusing to accept**

archeological and historical evidence to the contrary or even to entertain the possibility that these accounts could be fingers pointing at the ineffable rather than expressions of concrete truth. 14 Sadly, many, if not most, human beings are not capable of rising very far above Piaget's concrete operational stage of cognition. 15 Hence they cannot be said truly to comprehend the social and physical reality of life in complex civilizations — a life far removed from the comparatively simple and concrete existence of the hunter-gatherer, which centered on day-to-day survival amid an intimate circle of kinsmen and friends. As a corollary, the untutored human mind focuses on the present and the dramatic. The imperative of survival on the savannah made us sensitive to immediate or striking dangers — but comparatively oblivious to long-term trends, risks, and consequences, especially ones that are inconspicuous. Our attention is not grabbed by the creeping destruction of habitat, the imperceptible extinction of species, the continual accumulation of pollutants, the gradual loss of topsoil, the steady depletion of aquifers, and the like. Rather, we tend to fixate on dramatic symptoms (such as the occasional major oil spill) while ignoring the far greater long-term threat to ecosystems posed by quotidian events (such as the daily dribble of petrochemicals from a multiplicity of sources, which is far greater and much more damaging over the long term). Unfortunately, dribbles are not the stuff of melodrama and so tend not to register strongly, even when brought to our attention by the media. So it takes a crisis to thrust stealthy perils into full awareness. Unfortunately, says biologist Richard Dawkins, the human brain was simply not built to understand slow, cumulative processes like evolutionary or ecological change, which demand an acute sensitivity to the long-term consequences of small changes. 16 Since long-term observation and planning were not critical for our early survival, these mental attributes were not reinforced by evolutionary selection. Ecology and its implications are therefore poorly understood, even by the informed public. More generally, the human mind's inability to escape the clutches of the present leads to the habitual, shortsighted pursuit of current advantage to the detriment of future well-being. In addition, the survival imperative endowed us with a host of cognitive shortcuts — unconscious mental algorithms that may have been essential on the savannah but that must be consciously set aside if we humans are to live sanely in civilization. For example, the human mind tends to be quick to decide. Like any animal, we are emotionally wired for fight or flight, which means that our savage minds are also cognitively wired to jump to conclusions. When early humans spotted a tan shape lurking in the elephant grass, the minds that decided "lion" soonest had the best chance to pass their genes down to posterity. The human mind is dualistic, so it is constrained, if not compelled, to choose one pole or the other — fight or flight, black or white, right or wrong — not the middle ground. This has been experimentally demonstrated at the perceptual level: when humans look at a classical optical illusion, they see either the lady or the vase, never both at once. In other words, the human mind naturally dichotomizes, creating the common oppositions of "good" and "bad," "us" versus "them," "the" two sides "of any issue," "left" against "right" in politics, and so on. Unfortunately, as F. Scott Fitzgerald noted, it takes a first-rate intelligence to hold two opposing ideas in mind at the same time and still continue to function, so untutored minds readily affix themselves to one of the poles and oppose the other. This explains the perennial conflict between believers and infidels that has occasioned untold historical misery.

Discussing the environment in terms of human rights conflicts with the right to development- the result is ecological decline

OpenDemocracy 15 (Independent and not-for-profit, openDemocracy is a leading independent website on global current affairs. Editor in-chief is Anthony Barnett, who went to Cambridge. "Human Rights - Help Or Hindrance to Combatting Climate Change?" OpenDemocracy. Jan 09 2015. ProQuest. Web. 28 June 2015)

However, though initially appealing, articulating environmental struggles in the language of rights may not be helpful for more effectively addressing ecological concerns. The difficulty lies in the second of the barriers to cooperation noted above: the inability to imagine development alternatives. When dominant development patterns continue to demand infinite economic growth on a planet with a limited productive and adaptive capacity, the result is inevitable ecological decline. Alongside ecological degradation, current development patterns also exacerbate economic inequality between and within states, creating systemic global economic and environmental injustice. In such a context, articulating the problem in terms of achieving a balance between competing rights (the right to development and the right to a healthy environment) is unconstructive unless a substitute is found for the underlying economic system that demands limitless growth. Thus, the human rights framework may not help to reconcile globalization with its ecological limits. A more serious concern, however, is whether this framework may be part of the reason we struggle to imagine sustainable ways of life. The phenomenal growth of rights-based discourse has happened alongside ever-expanding fossil-fuel dependency, pollution and waste; modern freedoms are increasingly understood as being contingent on a resource-intensive, mass-consumption lifestyle. Today, increasing numbers of people understand themselves through a rights philosophy that privileges particular types of human entitlement and systemically devalues the non-human. Such a philosophy is the epitome of an obsessively anthropocentric worldview. It helps to propagate and entrench a particular abstraction of the 'human' that is profoundly disconnected from knowing ourselves as a species inextricably interconnected with other organic and inorganic life. In an intertwined state of being, where each entity's survival depends on its relationship with others within an ecosystem, the distinction between human and non-human is untenable; the non-human 'other' is essential for human life. Whatever we do to the other we are also doing to ourselves.

Extend Humphrey – Value changes represent a long-term solution to a short term problem – delaying the transition and gutting any chance of environmental solvency

And, Lack of moral and political restraints perpetuate ecocide

Ophuls '11 (Ophuls, William. *Plato's Revenge : Politics in the Age of Ecology*. Cambridge, MA, USA: MIT Press, 2011. ProQuest ebrary. Page 18-22 Web. 24 June 2015. He served for eight years as a Foreign Service Officer in Washington, Abidjan, and Tokyo before receiving a PhD in political science from Yale University in 1973. After teaching briefly at Northwestern University, he became an independent scholar and author. He has published three books on the ecological, social, and political challenges confronting modern industrial civilization.

In other words, a limited government compatible with wide personal liberty requires a virtuous people, a point well understood by the framers of the American Constitution. As John Adams said, “Our constitution was made only for a moral and religious people. It is wholly inadequate for the government of any other.”¹¹ James Madison extended this understanding to all of politics: “To suppose that any form of government will secure liberty or happiness without any virtue in the people, is a chimerical idea.”¹² In the end, living legally rather than morally is not desirable on political grounds alone: a lack of virtue in the people entails a government of force, not consent. If we now turn our attention to humankind’s relation with the natural world, the case for placing moral chains on human will and appetite becomes even more compelling. When Hobbes “unleashed the passions,” he liberated men and women from imposed moral or religious strictures, but he also gave birth to what we know as economic development. Although the state no longer had the duty or even the right to inculcate or enforce private virtue, it did nevertheless have a positive role beyond mere peacekeeping—to foster “commodious living.” Freed of the obligation to promote otherworldly ends, the state would henceforth dedicate itself to the things of this world—to abetting human desire, especially the urge for material gratification. Following in Hobbes’s footsteps, John Locke and Adam Smith made this profound shift in orientation from sacred to secular explicit: the purpose of politics is to facilitate the acquisition of private property and national wealth, along with the power that they confer. But the unfortunate side effect of unleashing human will and appetite in this fashion has been the destruction of nature. Nature may not be a moral agent in the usual sense of the word—although a moral code is indeed implicit within the natural order—but it does have physical laws and limits that cannot be transgressed with impunity. Tragically, in the absence of mores that promote self-restraint and respect for nature, the exploitation of the natural world is bound to turn into overexploitation, for human wants are infinite. The long-term effect of unleashed passions therefore has been to violate nature’s laws and limits and provoke an ecological crisis. Our escalating ecological problems have become both common knowledge and a growing focus

of political concern but to very little effect. After all, our form of politics requires perpetual economic growth, so the idea of limits, much less retrenchment, is anathema. Besotted with hubris, we cherish the delusion that we can overpower nature and engineer our way out of the crisis. We are not yet ready to admit that the destruction of nature is the consequence not of policy errors that can be remedied by smarter management, better technology, and stricter regulation but rather of a catastrophic moral failure that demands a radical shift in consciousness. The antidote to political corruption and ecological degradation is therefore the same—a moral order that governs human will and appetite in the name of some higher end than continual material gratification. For this we need true laws, not merely prudent or expedient rules. But where shall we find such laws? They will not be found in revealed religions, old or new. Whatever the virtues and advantages of premodern religious politics, the concomitant evils and disadvantages were enormous, and Hobbes's philosophical revolt was both intellectually and historically justified. Perhaps they can be found in some new ideology? Again, surely not. If the history of the twentieth century has anything to teach, it is that secular ideologies are even worse than religious creeds at fomenting cruelty and violence. This leaves only one possible source for a new moral code—natural law, the law “written on the tablets of eternity.”

America k2 Spillover

Collapse of liberal America will spill over to the rest of the world

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , *The Climate Change Challenge and the Failure of Democracy*, Pages 117, MX)

The end of liberal America could be sooner than we may think. General Tommy Franks, who led the U.S. military operation to liberate Iraq, says that if America is hit by a weapon of mass destruction that causes large casualties, the Constitution will be discarded and the United States will have a military form of government. In one interview he said that the result of a weapon of mass destruction hitting the United States would mean "the Western world, the free world, loses what it cherishes most, and that is freedom and liberty we've seen for a couple of hundred years in this grand experiment that we call democracy."⁴⁴ He continued that "it may be in the United States of America—that causes our population to question our own Constitution and begin to militarize our country in order to avoid a, repeat of another mass, casualty-producing event. Which in fact, then begins to unravel the fabric of our Constitution?"⁴⁵ In this context it is worth quoting the more recent remarks of the Australian cosmologist John O'Connor who has reminded us that civilizations typically collapse from within: Kenneth Clark in a famous television documentary series, *Civilization*, warned us that societies, however complex and solid they may appear, are in fact quite fragile. For example the almost total eclipse of the Greco-Roman civilization in western Europe after 600 years of predominance shows that collapse can occur when a society becomes exhausted ... when its people become so used to the rights, privileges and material prosperity endowed by their civilization that they no longer value them sufficiently to defend, maintain and build on them.⁴⁶ Similar sentiments have been expressed about the survival of America by the respected social theorist Chalmers Johnson in *The Sorrows of Empire*.⁴⁷ This is a perspective different from the one expressed in this book; Johnson sees America as a new Roman Empire, but a more enlightened one. Nevertheless the expansion of the American empire has led to the "sorrows of empire," including America becoming a debtor nation, owing more money than it is ever likely to pay back. International finance has a death grip on the throat of the American economy. Running an empire was expensive for the Romans, and it is even more expensive for the Americans. The arrogance of empire blinds leaders to basic realities: A combination of imperial over-stretching, rigid economic institutions, and an inability to reform weakens empires leaving them fatally vulnerable in the face of disastrous wars, many of which the empires themselves invited. There is no reason to think that an American empire will not go the same way and for the same reasons. However given the global reach of the American empire, the fall of America will be much like a large comet striking the ocean. The death of America will mean the death of liberal democracy."⁴⁸ Liberal democracy likewise suffers from these sorrows of empire. The system is, in short, corrosive of social capital, the cultural glue that holds society together.⁴⁹ Although theorists differ about how and to what extent this corrosion acts, it is clear that act it does. The difficulties, contradictions, and dilemmas of liberal

democracy are so great that that its demise is inevitable. What then will replace it, and what should replace it? The remainder of this book will consider these questions.

Authoritarianism Coming

2NC

Obama is shifting to Authoritarianism Now

a. Transitioning Government

Henninger 13

(Daniel, "Daniel Henninger: Obama's Creeping Authoritarianism," pg online @ <http://www.wsj.com/articles/SB10001424127887324136204578639953580480838> //um-ef)

Please don't complain later that you didn't see it coming. As always, Mr. Obama states publicly what his intentions are. He is doing that now. Toward the end of his speech last week in Jacksonville, Fla., he said: "So where I can act on my own, I'm going to act on my own. I won't wait for Congress." (Applause.) The July 24 speech at Knox College in Galesburg, Ill., has at least four references to his intent to act on his own authority, as he interprets it: "That means whatever executive authority I have to help the middle class, I'll use it." (Applause.) And: "We're going to do everything we can, wherever we can, with or without Congress." Every president since George Washington has felt frustration with the American system's impediments to change. This president is done with Congress. The political left, historically inclined by ideological belief to public policy that is imposed rather than legislated, will support Mr. Obama's expansion of authority. The rest of us should not. The U.S. has a system of checks and balances. Mr. Obama is rebalancing the system toward a national-leader model that is alien to the American tradition. To create public support for so much unilateral authority, Mr. Obama needs to lessen support for the other two branches of government—Congress and the judiciary. He is doing that. Mr. Obama and his supporters in the punditocracy are defending this escalation by arguing that Congress is "gridlocked." But don't overstate that low congressional approval rating. This is the one branch that represents the views of all Americans. It's gridlocked because voters are. Take a closer look at the Galesburg and Jacksonville speeches. Mr. Obama doesn't merely criticize Congress. He mocks it repeatedly. Washington "ignored" problems. It "made things worse." It "manufactures" crises and "phony scandals." He is persuading his audiences to set Congress aside and let him act. So too the judiciary. During his 2010 State of the Union speech, Mr. Obama denounced the Supreme Court Justices in front of him. The National Labor Relations Board has continued to issue orders despite two federal court rulings forbidding it to do so. Attorney General Eric Holder says he will use a different section of the Voting Rights Act to impose requirements on Southern states that the Supreme Court ruled illegal. Mr. Obama's repeated flouting of the judiciary and its decisions are undermining its institutional authority, as intended. The three administration nominees enabled by the Senate's filibuster deal—Richard Cordray at the Consumer Financial Protection Bureau, Thomas Perez at the Labor Department and EPA Administrator Gina McCarthy—open a vast swath of American life to executive authority on steroids. There won't be enough hours in the day for Mr. Obama to "act on my own." In a recent Journal op-ed, "Obama Suspends the Law," former federal judge Michael McConnell noted there are few means to stop a president who decides he is not obligated to execute laws as passed by Congress. So there's little reason to doubt we'll see more Obamaesque dismissals of established law, as with ObamaCare's employer mandate. Mr. Obama is pushing in a direction that has the potential for a political crisis. A principled

opposition would speak out. Barack Obama is right that he isn't running again. But the Democratic Party is. Their Republican opponents should force the party's incumbents to defend the president's creeping authoritarianism. If Democratic Senate incumbents or candidates from Louisiana, Alaska, Missouri, Arkansas, North Carolina, Montana and Iowa think voters should accede to a new American system in which a president forces laws into place as his prerogative rather than first passing them through Congress, they should be made to say so. And to be sure, the other purpose of the shafted middle-class tour is to demolish the GOP's standing with independent voters and take back the House in 2014. If that happens—and absent a more public, aggressive Republican voice it may—an unchecked, unbalanced presidential system will finally arrive.

b. Limiting rights and increasing surveillance

AllGov 12

("Obama Has Authoritarian Powers Bush Could Only Dream Of," pg online @ [//ghs-ef\)](http://www.allgov.com/news/top-stories/obama-has-authoritarian-powers-bush-could-only-dream-of?news=844386)

Barack Obama campaigned in 2008 as a civil libertarian, a former professor of Constitutional Law who promised to close the military prison at Guantánamo, Cuba, undo the unconstitutional excesses of the Bush administration's "War on Terror" and stop the relentless accumulation of power in the presidency. Yet since taking power, Obama has undone little, and has in fact been amassing additional powers to himself and the presidency. In what ways has President Obama increased his arsenal of powers? Let us list the ways:

- Obama has ordered the killing of U.S. citizens abroad whom he has deemed terrorists, without any opportunity to deny the accusation or present a defense.
- Despite promising to shut down the Bush system of trying terrorism detainees before military tribunals where their due process rights are severely limited, Obama instead signed the Military Commissions Act of 2009, essentially codifying the Bush policy.
- Obama has not only continued to use the Guantánamo prison, but also brought the underlying policy home by signing the National Defense Authorization Act of 2012, which allows the military to arrest and indefinitely detain anyone, including citizens, merely suspected of assisting terrorists. That codifies the Bush administration's treatment of Jose Padilla, a citizen arrested in 2002 and transferred from civil to military custody. It also reverses the 1878 Posse Comitatus Act's ban on the government using the military for domestic matters.
- Obama has refused to reveal how his Justice Department is interpreting the Patriot Act, despite requests from Democratic Senators and others.
- One of George W. Bush's worst civil liberties violations, using the telecom system to spy on virtually all Americans starting in 2003 (which Obama has since defended in court) also has been expanded. The National Security Agency (NSA) is now building its largest data processing center ever, which will go beyond the public Internet by also snooping into password-protected networks. The NSA is also relying on private corporations to mine data as a way to avoid the Constitutional requirement of obtaining search warrants, as the Constitution limits only government searches and seizures. The federal government continues to

require that computer makers and big Web sites provide access for domestic surveillance purposes.

Surveillance

Now

Congress enhancing the surveillance state now

Trimm '15 (Trevor, March 14th, 2015 - Trevor Timm is a Guardian US columnist and executive director of the Freedom of the Press Foundation, a non-profit that supports and defends journalism dedicated to transparency and accountability)

<http://www.theguardian.com/commentisfree/2015/mar/14/congress-wont-protect-us-from-the-surveillance-state-theyll-enhance-it> // 6-25-15 //)

The same Senator who warned the public about the NSA's mass surveillance pre-Snowden said this week that the Obama administration is still keeping more spying programs aimed at Americans secret, and it seems Congress only wants to make it worse. In a revealing interview, Ron Wyden – often the lone voice in favor of privacy rights on the Senate's powerful Intelligence Committee – told BuzzFeed's John Stanton that American citizens are being monitored by intelligence agencies in ways that still have not been made public more than a year and a half after the Snowden revelations and countless promises by the intelligence community to be more transparent. Stanton wrote: Asked if intelligence agencies have domestic surveillance programs of which the public is still unaware, Wyden said simply, "Yeah, there's plenty of stuff." Wyden's warning is not the first clue about the government's still-hidden surveillance; it's just the latest reminder that they refuse to come clean about it. For instance, when the New York Times' Charlie Savage and Mark Manzetti exposed a secret CIA program "collecting bulk records of international money transfers handled by companies like Western Union" into and out of the United States in 2013, they also reported that "several government officials said more than one other bulk collection program has yet to come to light." Since then – beyond the myriad Snowden revelations that continue to pour out – the public has learned about the Postal Service's massive database containing photographs of the front and back of every single piece of mail that is sent in the United States. There was also the Drug Enforcement Administration's mass phone surveillance program – wholly separate than the NSA's – in which "phone records were retained even if there was no evidence the callers were involved in criminal activity," according to the New York Times. And recently, the Justice Department's "national database to track in real time the movement of vehicles around the US", reported by the Wall Street Journal. That there are still programs aimed at Americans that the Obama administration is keeping secret from the public should be a front page scandal. Instead of exposing and informing these programs, however, Congress seems much more intent on giving the intelligence agencies even more power. On the same day that Wyden issued his warning, the Senate Intelligence Committee passed its latest version of CISA, a supposed "cybersecurity" bill that allows companies to hand over large swaths of personal information to the government without any court order at all – and gives the companies immunity from any privacy lawsuits that may result. Wyden called it "a surveillance bill by another name" – and was the only Senator on the Intelligence Committee member to vote against it. The committee claims they passed some privacy amendments, but we have no idea what since they did so in complete secrecy, and the announcement came after it had already passed. The public has yet to see the bill. While members of Congress attempt to pass a new way for the government – and the NSA – to get

their hands on more data of Americans, they've barely made a peep about reforming Section 215 of the Patriot Act, the controversial law that was twisted and warped to allow the NSA to collect every phone record in the United States. Soon they'll have no choice but to address it: Section 215 has to be renewed by Congress in June, or the law expires. With no progress on reforming, there will be a huge push in the coming weeks for Congress to reject Section 215 entirely – and many people believe the surveillance state might not have the votes to keep it. Congress can keep trying to avoid change, but reform is coming one way or another.

Inevitable

Liberal Democracy inevitably turns to mass surveillance – the aff is just lip service

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 109-110, MX)

This claim that liberalism is a socially destructive ideology has been made in the recent past by conservative thinkers. Malcolm Muggeridge, a Christian conservative thinker, saw liberals as possessing a death wish. Reflecting on the cultural revolution of the West in the 1960s, he saw liberals as having a tendency to grovel before any tyrant and their regime, however brutal (Pol Pot, Mao, etc.), so long as the tyrant mouthed the appropriate platitudes about the "brotherhood of man." Seeing humans as fallen and cursed by original sin, Muggeridge saw the liberal as possessed by an irrational necessity to abolish a degenerating culture and reconstruct it to conform to his or her own prejudices, revolving around the idea that human beings are fundamentally good. The notion that liberalism is grounded upon a fundamentally mistaken philosophy of human nature is also expressed by the conservative, former communist, writer James Burnham.⁶ For Burnham, liberalism is an ideology of national suicide that ultimately erodes a nation's will to survive. During the cold war French writer Jean-Francois Revel thought that communism would ultimately defeat liberal democracy.⁷ Liberal democracy may only have been an historical accident. This political system always allows internal enemies who seek to destroy the system to flourish (such as communists for Revel or environmentalists for corporate empires). Liberal democracies will self-destruct by following their own logic to extremes. The conservative intellectual Paul Gottfried has agreed that, unlike nineteenth-century liberalism, the contemporary liberal state is concerned with promoting uniformity, not individuality.⁸ For Gottfried liberalism now only pays shallow lip service to the philosophy of liberty; today the nanny state is more concerned with democratic socialization and social control. There is no real mobilization by the oppressed against the new class elites who run the state machine.⁹ Psychological weapons, with fear the most potent, are refined to maintain social control, power, and community silence. Fear allows those in power to enact sweeping counterterror legislation, spy on its citizens, kidnap, and torture in the name of their protection.¹⁰ Secrecy and deception become a normal part of liberal democracy, as was the case in totalitarian communism. The tenets of liberalism, such as justice, are cast aside in the interests of political designs. Political attacks on the judiciary became more and more open in Western democracy, reflecting liberalism's propensity to cast aside the collective good in favor of individual liberty. In a speech just after her retirement from the U.S. Supreme Court, Sandra Day O'Connor took aim at those leaders whose repeated denunciation of courts for alleged liberal bias could be contributing to a climate of bias against judges.¹¹ The leaders were political right-wingers flourishing in the free-for-all of liberalism. History tells us that attacks on the judiciary are often the forerunner of dictatorship. Thus the masses become apathetic and lose hope. if they ever had any, of self-government and are pacified by sexual bread and drug circuses, a quiet tyranny of tits, TV, and

consumer consolation. In this sense, George Orwell's 1984 has already arrived. Then the masses were pacified by Victory gin, "films football, beer and above all gambling filled up the horizon of their minds," and "there were some millions of proles for whom the lottery was the principal if not the only reason for remaining alive."¹² Gottfried's line of thought is that it was liberalism that destroyed the old monarchic order and concentrated power in the emerging modern state of Europe. At the time of the 1917 Revolution, communists in the former Soviet Union found a concentration of power ready for them to take over. Liberalism thus, ironically, laid the ground for the Soviet gulag.¹³ As discussed in chapter 6, liberal societies are far from liberal, in that the number of people killed by liberal democratic governments in the name of universal human emancipation from the time of the Enlightenment to the second Iraqi war is far greater than the number of people killed by communist regimes (thought by some authorities to be in excess of 150 million).¹⁴ Often those liberal democracies strutting their freedom and opportunity for all have transgressed the rights of others in the name of their own self-interest. The accusations of Harold Pinter ring true in his Nobel Lecture: The United States supported and in many cases engendered every right wing military dictatorship in the world after the end of the Second World War. I refer to Indonesia, Greece, Uruguay, Brazil, Paraguay, Haiti, Turkey, the Philippines, Guatemala, El Salvador and of course Chile. The horror the United States inflicted upon Chile in 1973 can never be purged and can never be forgiven. Hundreds of thousands of deaths took place throughout these countries.¹⁵

Transition

2NC MUST READ Inevitable

Environmental decline makes the transition to authoritarianism inevitable---the only question is whether it can be effective

Beeson, PhD, 10 [professor in political science and international relations]

(Mark, March, Environmental Politics Vol 19 No 2 "The coming of environmental authoritarianism" www.tandfonline.com/doi/pdf/10.1080/09644010903576918#.VY294vIViko)

The conclusions that emerge from the following discussion are necessarily impressionistic, speculative and rather dispiriting. The empirical evidence upon which such inferences depend is, by contrast, more and more compelling and unequivocal. There is little doubt that the natural environment everywhere is under profound, perhaps irredeemable stress. Parts of Southeast Asia and China are distinctive only in having already gone further than the most of the West in the extent of the degradation that has already occurred (see Jasparro and Taylor 2008). The only issue that remains in doubt is the nature of the response to this unfolding crisis. The extent of the problem, the seemingly implacable nature of the drivers of environmental decline, the limited capacity for action at the national level and the region's unimpressive record of cooperation and environmental management do not inspire confidence. Consequently, the prospects for an authoritarian response become more likely as the material base of existence becomes less capable of sustaining life, let alone the 'good life' upon which the legitimacy of democratic regimes hinges. At least equally important is the widespread realisation that the techno-managerial approaches of ecological modernisation will not be sufficient for achieving sustainability (however defined). The proponents of these approaches had once reassured policy makers and the public that a radical break with the established socio-economic order would not be required, but that sustainability can be achieved within this order, if new efficiency-technologies, market instruments, consensus-oriented strategies of stakeholder governance and even the consumer culture are wisely and strategically used. These promises resounded with the widespread commitment to consumer capitalism and liberal democracy and were, therefore, readily taken up. Yet, despite all technological innovation and resource efficiency gains, the strategies of ecological modernisation have never succeeded in stopping, let alone reversing, the over-exploitation of natural resources, the decline of bio-diversity, the advance of global warming or the increase of social inequality. They have helped to sustain the unsustainable for an extra couple of decades but, ultimately, they have only reinforced and radicalised, not suspended, the demand for policy measures which are less compatible with the principles of both liberal democracy and consumer capitalism.

Humans are biologically determined to become authoritarian

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 101-103, MX)

Why then is the authoritarian state a natural choice for humanity? It is not necessarily a choice, it happens, because, as Richard Dawkins wrote, "If you wish to build a society in which individuals cooperate generously and unselfishly towards a common good you can expect little help from biological nature." When Rousseau said that man was born free, this was far from the truth. We may not be happy with the thought, but there is much evidence to indicate that our evolutionary past dictates our instinct and behavior. On reviewing the scientific evidence to substantiate this, Robert Winston concludes that while people have no problem accepting our evolution from some form of ape, few of us accept the psychological implications. "Homo sapiens not only looks, moves and breathes like an ape, he also thinks like one. Not only do we have a Stone Age body, with many vestiges of our past, but we also have a Stone Age mind."⁴³ This mind is ruled by such basic instincts of fear and flight by which automatic physiological responses occur in threatening situations, and by the primacy of the sexual instinct to ensure survival of the species. The latter is the main determinant of our quest for power, goods, and status, and when the chips are down, is more important to us than the governance system that we use to obtain it. The modular theory of evolutionary psychology suggests that humans are born with minds that contain complex psychological mechanisms or modules so that the brain is hardwired for a wide range of behaviors and instincts that are shared by all humanity. These range from an inherent fear of snakes to an innate structure of the brain that allows us to learn language—according to the work of Chomsky.⁴⁴ The modular theory is supported by studies on patients who have injury to the brain localized by brain scanning, which shows a range of disabilities in speech and recall of words. These functions cannot be learned to any significant degree by undamaged parts of the brain. This is not an agreeable theory for humanity to accept, for it offers little hope for reform! Indeed other scientists believe that there is much plasticity in the brain that is adapted by our experience of the world around us. As with all diametrically opposed theories in science, the truth will encompass some of both theories with the modular theory preeminent. With the modular theory in mind, it is important to note that Somit and Peterson believe that our social evolution in tribal systems is framed around "dominance and submission, command and obedience."⁴⁵ Dominance is a relationship between different individuals that is usually established by threat and display. It serves the important role of preventing disputes that might lead to injury and turmoil. In evolutionary terms, violence would not be good for reproductive success. This system is seen in primates where it contributes to reproductive success, and a hierarchy is established that leads to social stability. Humanity uses dominance and submission to organize society. The reproductive intent is more hidden in the cloak of power and prestige of those who are leaders either elected or appointed. Within democracy we are always on the move towards authoritarianism. Political parties are hierarchical. Often they have cabals, each of which has its own hierarchy that selects its candidates for government. We have to have visible and directive leaders, even though we may recognize that the leader is constructed from cardboard and painted by spin-doctors and advertisers. Government, opposition and corporatism is hierarchical and cannot be challenged from within without potential injury. An exposure of misdoing or corruption by a whistle-blower is not accepted as a service to society. Instead of gratitude, there is discomfort, "outing," and unemployment. Those elected to leadership by democracy often move to authoritarianism by using the system to retain power or to wage war. In particular they consort with the rich and powerful corporations to usurp the needs of society, even to the extent of destroying other

democrat-les if they fail to satisfy the mold sought by corporatism, for example, Allendeons Chile. All these human traits are genetic barriers to the sustainability of democracy. Whatever social structure is freely created, it inherently becomes hierarchical and authoritarian. It is difficult to comprehend how a simple universal message of love and humility espoused by Christ and the disciples could be transformed into the pomp, power, and authoritarian dogma of the Roman Catholic Church. Obedience is part of this hierarchical system, and disobedience is rare. This is also an impediment to democracy. Obedience is expected within a so-called democratic party where the members are kept in line by whips, and in the workplace where questioning of roles can be insubordination. An order may be accepted when it involves personal sacrifice, and orders that are morally reprehensible such as torture, massacre, and genocide are often carried out with alacrity by individuals, formerly good family stalwarts of society. Obedience is necessary for the functioning of the killing machines, the armies trained by democracies as well as the tyrants. The scientific study of obedience using electric shocks shows that individuals have an ingrained ability to obey even when injury is conferred on others.⁴⁶ Observation of our closest primate relatives, chimpanzees, reveals a social and hierarchical structure uncannily similar to our own. Their society functions with a hierarchy based on dominance and submission. The dominant male is the leader because of strength and creation of alliances. Murder and organized violence are part of their society just as they are in ours. For example, male chimpanzees form alliances to seek revenge when a friend is killed. War parties are formed from mature males who have grown up together, and the anticipation of battle may produce sickness and vomiting through fear. These activities closely resemble the male bonding and platoon formation in human wars. This common behavior is summarized by Potts and Short as follows: "The unique and bloody common characteristic of the chimpanzee *Pan troglodytes* and *Homo sapiens* is a propensity for a close knit group of mature males to drop what they are doing, venture stealthily and deliberately into the territory of a neighboring group, seek out one or more individuals they can outnumber, and then beat the living daylights out of them. This behavior has not been found in any other animal and it has all the attributes of a war."⁴⁷ Indeed, both societies sometimes choose warfare as a strategy, even perhaps to the extent of preemptive strikes. Both societies can revel in the sight of violence, one need look no further than the television schedules. Liberal democracy provides but sheep's clothing for its selfish authoritarian genes, an unjustified bias in favor of humans. We agree that this is a fundamental problem of liberalism, but unlike these authors we will detail how liberalism is destructive in other human and social spheres. We will see that the liberal attitudes that have corrupted the concept of environmental sustainability, for this is incompatible with the growth economy, are the same ones that conflict with human values.

Even if not preferable, authoritarianism is inevitable with resource scarcity

Woods, PhD 10 [lecturer of political theory at Leeds]

(Kerri, January, *Human Rights and Environmental Sustainability*, Edward Elgar publishing, p 129-130)

Ophuls, writing in 1974, predicted 'the inevitable coming of scarcity to societies predicated on abundance', and with this, 'almost equally inevitable, will be the end of political democracy and

a drastic reduction in personal liberty' (Ophuls 1974. p. 47). Ophuls has been understood as claiming that we can either have democracy and individual freedom, or we can have sustainability, but we cannot have both. Pursuing both would lead to the destruction of the environment to the degree where scarcity caused societal breakdown and a return to authoritarianism as a matter of necessity. Taking a similarly apocalyptic tone. Hardin laments 'the tragedy of freedom in a commons*' (Hardin 2005. p. 28). The freedom he has in mind is mostly economic, and, in particular, procreative freedom. In this regard, he specifically attacks the UDHR right to found a family, which is proclaimed in Article 16.1. Writing much later. Beckerman argues that, rather than trying to predict future environmental demands and protect resources accordingly, 'our most important obligation to future generations is to bequeath to them a "decent society" in which there is respect for basic human rights' (Beckerman 2000. p. 22). The detail of the argument put forward by Ophuls and Hardin is not quite the apology for environmental authoritarianism that has sometimes been presented. Neither embraces authoritarian government as a good way to live. Rather, they both hold that an absence of individual moral responsibility makes authoritarianism necessary. Indeed. Hardin states that 'The only kind of coercion I recommend is mutual coercion, mutually agreed upon by the majority of the people affected' (Hardin 2005, p. 34). It is Hardin's and Ophuls's pessimism about the likelihood of self-motivated social change and the advent of a morally driven environmental citizenry that leads them to conclude that authoritarianism is, if not desirable, certainly inevitable. The arguments regarding democracy and citizenship discussed in the previous chapter suggest a greater degree of optimism among more contemporary green theorists.

Now

Environmental authoritarianism coming now

Beeson '10 (Mark, Beeson is a professor of Political Science and International Relations at University of Western Australia - <http://onlinelibrary.wiley.com/doi/10.1111/1467-6435.00198/epdf> // 6-24-15 // MC)

The environment has become the defining public policy issue of the era. Not only will political responses to environmental challenges determine the health of the planet, but continuing environmental degradation may also affect political systems. This interaction is likely to be especially acute in parts of the world where environmental problems are most pressing and the state's ability to respond to such challenges is weakest. One possible consequence of environmental degradation is the development or consolidation of authoritarian rule as political elites come to privilege regime maintenance and internal stability over political liberalisation. Even efforts to mitigate the impact of, correspond to, environmental change may involve a decrease in individual liberty as governments seek to transform environmentally destructive behaviour. As a result, 'environmental authoritarianism' may become an increasingly common response to the destructive impacts of climate change in an age of diminished expectations. Long before the recent global economic crisis inflicted such a blow on Anglo-American forms of economic organisation, it was apparent that there were other models of economic development and other modes of political organisation that had admirers around the world. The rise of illiberal forms of capitalism and an apparent 'democratic recession' serve as a powerful reminders that there was nothing inevitable about the triumph of 'Western' political and economic practices or values (Zakaria 2003, Diamond 2008).

Traditional western imperialism and modernization causing authoritarianism now

Beeson, PhD, 10 [professor in political science and international relations]

(Mark, March, Environmental Politics Vol 19 No 2 "The coming of environmental authoritarianism" www.tandfonline.com/doi/pdf/10.1080/09644010903576918#.VY294vIViko)

Historicising the East Asian experience is important because it highlights the path-dependent nature of some of the region's problems of governance, development and sustainability as products of the impact of European and latterly American intrusion into the region. Incorporation into extant systems of international political and economic order entailed structural changes of profound importance with enduring long-term consequences for the entire region. The introduction of Western political and economic practices to Southeast Asia transformed the existing social order, even if Western imperialism was mediated by contingent local realities (Elson 1992). Demographic change – especially population expansion and the

introduction of migrant labour – has had a major impact on both domestic politics and the natural environment in Southeast Asia (Tarling 2001). Many of these changes are not, of course, unique to the region, but features of a more generalised process of ‘modernisation’ that has supported the sort of population growth and economic development that is placing such pressure on the global environment. What is distinctive about much of East Asia is the geopolitical context this modernisation has occurred in and the concomitant patterns of political order it has encouraged at the domestic level. Despite a rhetorical preoccupation with the promotion of democracy and economic reform, the imperative of geopolitical contestation with the Soviet Union meant that the US tolerated – even encouraged – the development of authoritarian political allies in a process that helped entrench authoritarian rule in non-capitalist East Asia too (Schaller 1990, Woo-Cumings 2005). Far from ending after the Cold War, history has continued to unfold in distinctive ways that have often circumscribed political liberalism. During the 1990s, when we might have expected increased reformist pressure on the region, the general success of the ‘East Asian miracle’ and the performance legitimacy that accrued to Asian leaders militated against major political change. Even the Asian economic crisis failed to bring about wholesale political change, despite the noteworthy downfall of Suharto. Whether the democratic transition can be consolidated and entrenched even here is a moot point. On the one hand, the extent of the reform process in Indonesia is questionable (Robison and Hadiz 2004). On the other, democratic reform and ‘good governance’ have been further threatened by a deteriorating security situation and the difficulty of managing the complex strategic and political tensions associated with the ‘war on terror’ (Beeson 2004). The associated geopolitical constraints would have been difficult enough to manage for a country with a large Muslim population, but the growing threat of environmental degradation and food insecurity further intensified the political pressures on the region’s principal democratic success story (Adam 2008).

Collapse Inevitable

2NC

Collapse of Liberalism is inevitable - physical limits

Shearman Smith 07

A number of philosophers and social theorists have seen the liberal order as being at an end. British philosopher Alasdair MacIntyre in *After Virtue*³³ sees liberalism as an intrinsically flawed philosophy, for while pretending to be a master system of morality it is really only one moral system among a competing plurality of alternatives and cannot supply an objectively true justification of its own foundations. Liberalism is seen to beg the question of its own truth by assuming the primary value of its fundamental concept: freedom. MacIntyre concludes his work by seeing liberalism as not a genuine morality at all, in the sense of providing a moral worldview compared to the heroic societies of Homeric times. Liberalism fails to provide a philosophy of life.³⁴ If one has no philosophy of life then one cannot accept the value of nature. Perhaps the sense of this loss of a heroic view of life is what has made films such as *Gladiator*, *Lord of the Rings*, and *Troy* so popular. MacIntyre sees liberalism as leading to the ultimate end of this social order, which will inevitably break down or fall apart from a kind of moral entropy. Advocating a type of communitarian survivalism, MacIntyre believes that only small state-independent Benedictine-style communities will survive the coming dark age that liberalism is creating. Writing long before MacIntyre in 1936, Lawrence Dennis³⁵ saw capitalism and communism as both doomed because of ecological scarcity, as there is a limit to economic growth. He was right about communism. With regard to capitalism, he argued that capitalism is more than just the private (i.e., nonstate) ownership of the means of production. The essence of liberalism, Dennis and others have argued, is to give greater consideration to private property rights than to human life. Thus modern liberal capitalism requires a market expanding in geometrical progression for its successful operation. The physical limits to growth dooms capitalism: "Even the harshest critics of modern capitalism have never for a moment questioned its ability to go on growing indefinitely in geometrical progression."³⁶ Of course that statement was made in America in 1936, and since that time many have asked that very question. Dennis believed that liberal capitalism would grow like a cancer, producing environmental destruction in its wake. The system will inevitably destroy itself, to be replaced by a type of steady-state authoritarianism.

Liberalism self-destructs by devouring its own moral capital

Shearman Smith 07

William Ophuls in *Ecology and the Politics of Scarcity*³⁷ is one of the few ecology writers to reject democracy and favor an authoritarian solution to the environmental crisis. In the second version of the book, the antidemocratic focus has unfortunately been revised.³⁸ Nevertheless in his most recent book, *Requiem for Modern Politics*,³⁹ he returns to the theme of the rejection of liberalism. The thesis for Ophuls on *Requiem for Modern Politics* is that modern politics is at an end because the concepts and values of the Enlightenment of individualism, liberty, and materialism are no longer viable. He states: Modern civilization, in all of its aspects and everywhere on the planet, is plunging ever deeper into a multiplicity of crises that call into question its governing principles, practices and institutions. In this "crisis of crises," there is one that has yet to receive the attention it deserves: the impending failure of liberal polity, the modern system of politics founded on the tenets of classical liberalism and the rationalistic philosophy of the Enlightenment. Liberal polity is based on intrinsically self-destructive and potentially dangerous principles. It has already failed in its collectivist form and, contrary to the view of many, is now moribund in its individualist form as well ... Thus the three main components of modern civilization—liberal polity, exploitative economy, and purposive rationality—are riddled with inner contradictions. Civilization is therefore collapsing. As a result, the latent totalitarianism of modern politics is likely to manifest itself with increasing force in the years to come. In short, without a major advance in civilization. we confront a political debacle.⁴⁰ Economic growth and development are the modern liberal state's *raison d'etre*—but these phenomena are challenged by ecological scarcity, the idea that there are limits to growth. These are not the only self-destructive tendencies in modern liberalism, Ophuls argues. Liberalism tends to moral entropy (i.e., moral decay) with individual selfishness destroying civil society: "liberal policies destroy themselves by devouring their own moral capital, the fund of fossil virtue they have inherited from the pre-modern past."⁴¹ This can be seen in various shapes and forms: the destruction of civil society by a globalized market system;⁴² education, which has become a prescription for intellectual uniformity; the decay of reason; crime; violence; and family breakdown. In short, "America exemplifies the process of growing barbarization that is pushing us towards a Hobbesian future."⁴³ For Ophuls, the liberal order has no future. Liberalism is also at an end.

Liberalism is logically inconsistent making collapse inevitable OR Political correctness is merely an attempt to ignore logical inconsistencies in liberalism

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 109-113, MX)

This claim that liberalism is a socially destructive ideology has been made in the recent past by conservative thinkers. Malcolm Muggeridge, a Christian conservative thinker, saw liberals as possessing a death wish. Reflecting on the cultural revolution of the West in the 1960s, he saw liberals as having a tendency to grovel before any tyrant and their regime, however brutal (Pol Pot, Mao, etc.), so long as the tyrant mouthed the appropriate platitudes about the "brotherhood of man." Seeing humans as fallen and cursed by original sin, Muggeridge saw the liberal as possessed by an irrational necessity to abolish a degenerating culture and reconstruct it to conform to his or her own prejudices, revolving around the idea that human beings are fundamentally good. The notion that liberalism is grounded upon a fundamentally mistaken philosophy of human nature is also expressed by the conservative, former communist, writer James Burnham.⁶ For Burnham, liberalism is an ideology of national suicide that ultimately erodes a nation's will to survive. During the cold war French writer Jean-Francois Revel thought that communism would ultimately defeat liberal democracy.⁷ Liberal democracy may only have been an historical accident. This political system always allows internal enemies who seek to destroy the system to flourish (such as communists for Revel or environmentalists for corporate empires). Liberal democracies will self-destruct by following their own logic to extremes. The conservative intellectual Paul Gottfried has agreed that, unlike nineteenth-century liberalism, the contemporary liberal state is concerned with promoting uniformity, not individuality.⁸ For Gottfried liberalism now only pays shallow lip service to the philosophy of liberty; today the nanny state is more concerned with democratic socialization and social control. There is no real mobilization by the oppressed against the new class elites who run the state machine.⁹ Psychological weapons, with fear the most potent, are refined to maintain social control, power, and community silence. Fear allows those in power to enact sweeping counterterrorism legislation, spy on its citizens, kidnap, and torture in the name of their protection.¹⁰ Secrecy and deception become a normal part of liberal democracy, as was the case in totalitarian communism. The tenets of liberalism, such as justice, are cast aside in the interests of political designs. Political attacks on the judiciary became more and more open in Western democracy, reflecting liberalism's propensity to cast aside the collective good in favor of individual liberty. In a speech just after her retirement from the U.S. Supreme Court, Sandra Day O'Connor took aim at those leaders whose repeated denunciation of courts for alleged liberal bias could be contributing to a climate of bias against judges.¹¹ The leaders were political right-wingers flourishing in the free-for-all of liberalism. History tells us that attacks on the judiciary are often the forerunner of dictatorship. Thus the masses become apathetic and lose hope. If they ever had any, of self-government and are pacified by sexual bread and drug circuses, a quiet tyranny of tits, TV, and consumer consolation. In this sense, George Orwell's 1984 has already arrived. Then the masses were pacified by Victory gin, "films football, beer and above all gambling filled up the horizon of their minds," and "there were some millions of proles for whom the lottery was the principal if not the only reason for remaining alive."¹² Gottfried's line of thought is that it was liberalism that destroyed the old monarchic order and concentrated power in the emerging modern state of Europe. At the time of the 1917 Revolution, communists in the former Soviet Union found a concentration of power ready for them to take over. Liberalism thus, ironically, laid the ground for the Soviet gulag.¹³ As discussed in chapter 6, liberal societies are far from liberal, in that the number of people killed by liberal democratic governments in the name of universal human emancipation from the time of the Enlightenment to the second Iraqi war is far

greater than the number of people killed by communist regimes (thought by some authorities to be in excess of 150 million).¹⁴ Often those liberal democracies strutting their freedom and opportunity for all have transgressed the rights of others in the name of their own self-interest. The accusations of Harold Pinter ring true in his Nobel Lecture: The United States supported and in many cases engendered every right wing military dictatorship in the world after the end of the Second World War. I refer to Indonesia, Greece, Uruguay, Brazil, Paraguay, Haiti, Turkey, the Philippines, Guatemala, El Salvador and of course Chile. The horror the United States inflicted upon Chile in 1973 can never be purged and can never be forgiven. Hundreds of thousands of deaths took place throughout these countries.¹⁵ The United States is not alone in its actions for other liberal democracies, the UK, France, and others, have behaved similarly to protect their power and economic interests. The American conservative philosopher John Kekes concludes that liberalism is inconsistent "because the realization of these liberal values would increase the evils liberals want to avoid and because the decrease of these evils depends on creating conditions contrary to the liberal values."¹⁶ A good example of this paradox is the liberal's advocacy of both antiracism and multiculturalism and also the right of free speech, a matter to be discussed. For these thinkers, liberalism, in short, saws off the branch that supports it.¹⁷ These points can be developed by briefly considering some arguments made along these lines by Paul Gottfried. Gottfried points out that liberalism, in embracing doctrines such as hard multiculturalism, has generated further internal contradictions. For example, on the face of it, the 1972 French Gayssot Law seems reasonable enough. The law forbids "provocation to discrimination, to violence, or to hatred against a person or groups of persons by reason of their origin,"¹⁸ Fair enough. Also prohibited is "public defamation of a person or group of persons by reason of their origin or belonging or non-belonging to an ethnic body, nation, race or determined religion."¹⁹ Again on the surface this seems reasonable. But although such laws have been used to put Holocaust deniers in their place, they have also been used against those criticizing various aspects of France's immigration policy. One would have thought that a liberal democratic society would encourage, not suppress scholarly examination of its basic legal institutions.²⁰ French actress Bridget Bardot's criticism of Muslim migrants' mistreatment of animals, for example, fell under the French race hate legislation. She narrowly escaped two years in prison. In Germany the use of ancient Germanic runic symbols (the same type of symbols as seen in movies such as *The Lord of the Rings*) has been banned because a small minority of neoNazi groups decorated CD albums with them. Even the use of the Irish Celtic cross, a Celtic Christian symbol, has been banned for fear that it may have racist implications. Canada has banned controversial, yet prima facie scientific texts on race and behavior, such as by Canadian psychologist J. Philippe Rushton²¹ and a critique of America's immigration program by Wayne Lutton and John Tanton.²² Yet there is no ban placed upon many American black rap songs, which often contain clearly racist and violent lyrics often expressing desires to murder white people and rape white women. Such albums often express racist sentiments towards whites, or "crackers" or "rednecks," as white people are called. It may be thought that this is an understandable revolt of an oppressed group of people against an elite group of people. Yet most of these rappers are not ghetto youth but very rich black Americans who produce their music for a largely white youth market, not for oppressed and poor black minorities who could hardly afford these expensive CDs on their welfare checks. The black rap music is the white middle class kids' revolt against their parents who pay the bills. In Australia, race hate legislation

was even used against a humane and sensible liberal journalist, Phillip Adams, for his controversial, but arguably right, condemnation of Americans for their support of the war on Iraq. Adams had said no more than an American critic such as Michael Moore had said, but an American in Australia was offended by Adamson condemnation of Americans and took him to the Human Rights and Equal Opportunity Court through a race hate complaint. We are not saying that such legislation is wrong in spirit, but it does seem to be inconsistently applied, and, as the Adamson case shows, can have some nasty and unanticipated uses. In the future it could easily be used as a weapon of oppression to silence critics on a number of issues. As we see from the above examples, it is already being used to silence critics of immigration. Although counterterrorism legislation itself has not yet been used to explicitly suppress environmental criticism by labeling environmentalists as extremists, the legal system of the modern state has adequate means of doing so. Defamation laws in common law countries such as Australia are much stricter than in the United States. Australia has a poor legal framework for defending free speech, with no constitutional protection as the United States has in its First Amendment. Defamation law arose in England as a way of protecting the reputation of noblemen from criticism and public exposure. Today defamation cases are big business, where offended parties typically seek hundreds of thousands, if not millions of dollars of damage. Corporations and business people, typically developers, have made use of "SLAPP suits" to silence environmental critics of projects. SLAPP suits are strategically planned litigation brought against protesters to silence criticism—strategic lawsuits against public participation. This strategy is to threaten action against people who often have no more assets than their house with massive damage claims unless they cease their protest and apologize. In Australia, legislation such as the Trade Practices Act of 1974 (Commonwealth), which was originally devised as a form of consumer protection to produce a climate of fair trading, has been used against various environmental protesters by certain business organizations. The idea is to show that the protesters are frustrating trade by the protest itself, and massive damages are often sought. As we have no wish for such litigation against us, and in some cases even mentioning cases in discussion has led to further litigation—the reader requiring more details will need to pursue this matter on the Internet through the use of any Internet search engine with appropriate key words. Should one turn a blind eye to such inconsistencies in the name of tolerance? Liberals do so today just as a previous generation of the Left whitewashed the horrors and genocide of the communist regimes. But it did not make such horrors go away. Liberals lack a fundamental ability to be able to face up to the internal contradictions in their own position. As Brian Appleyard in *Understanding the Present* has said with some rhetorical flourish: It is, I believe, humanly impossible to be a liberal. Society may advocate liberal tolerance and open-mindedness, but nobody practices it. In fact, this is what preserves liberal society. For a complete personal acceptance of scientific-liberalism would reduce the society to passive, bestial anarchy. There would be no reason to do anything, no decisions worth making and certainly no point in defending one position as opposed to another.²³ The liberal difficulty in facing up to uncomfortable realities is well illustrated by the debate about whether feminism and multiculturalism are compatible. Liberals support women's liberation and equality with men even though practical equality in the workplace is not delivered by them. This parroting of equality is reminiscent of *Animal Farm* and "some animals are more equal than others."²⁴ Liberals also support antiracism, nondiscriminatory immigration programs, and allowing diverse

cultures to maintain their traditions. However, fundamentalist Islam is strongly antifeminist and highly patriarchal. If in principle there is no reason for immigration restrictions based upon culture and religion, there is no reason why a nation such as France should restrict building upon its already significant Muslim population. But what if this in turn led to a cultural and ethnic change leading to a radical demographic change? This would undermine women's rights? Thus feminism and multiculturalism, products of liberalism, are mutually incompatible.²⁵ The typical liberal response to such questions is to slam the questioner with abuse, usually calling the questioner a racist or fascist. But that doesn't solve the problem. The messenger may be silenced but the question remains. Political correctness is essentially about not asking these types of uncomfortable questions. Clearly some differences are more "different" than others.

Expanding populations make ecological crisis inevitable

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia, *The Climate Change Challenge and the Failure of Democracy*, Pages 59-67, MX)

A paper in the prestigious journal *Science* in July 2005 by a group of environmental scientists representing a wide range of scientific disciplines indicates that land use practices are destroying ecosystems that are vital for global sustainability.¹ The lead author, Jonathan Foley, commented that "short of a collision with an asteroid, land use by humans is the most significant impact on the world's biosphere."² Such dire warnings were used to describe global warming in chapter 2. It is irrelevant to debate which of these two threats is the greater, for they are synergistic and related to the many consequences of economic and population growth. In this chapter we find that humanity possesses the scientific knowledge that the depletion of ecological services is a threat to survival yet their protection is not a priority for government action. Biodiversity is the variety of all life-forms: the different forms of animals, plants, and microorganisms, the genes they contain, and the ecosystems of which they form a part. An ecosystem is a community of different species and their interactions in the habitat within which they live. What are ecological services? Ecological science is the study of the ways in which all living things interact with each other and with their environment. All living things exist in this web of life with mutual interdependence for food and other resources. Humans are part of this web of life. Thus an ecological service is the provision of a resource to humanity by other species. Examples are the provision to provide food, fiber, and purified water, degradation of wastes and pollutants, recycling of nutrients, stabilization of climate, protection against flood and storm, and provision of materials for shelter, medicines, and cultural activity. Clearly, therefore, ecosystem services are an integral part of the health and well-being of humanity and need to be maintained in perpetuity.³ The remorseless damage to ecological services by the growth economy and the population explosion since industrialization is the final common pathway of, the environmental crisis. The biodiversity that provides these services is lost through deforestation and overplanting of crops, leading to loss of soil, erosion, and

desertification; overuse and pollution of rivers; urbanization, overfishing; and climate change. Pollution from mining and oil wells, pipelines, and transport is also significant. The habitat of species becomes fragmented by development and replaced by invasive species brought by trade into environments where there are no natural controls; as a consequence food production on land and in coastal waters is compromised. The overall effect of all these events is to reduce the genetic pool of a species and to isolate it into pockets that cannot interbreed. Consequently there is a rapid increase in extinctions. The importance of biodiversity is recognized in the Millennium Development Goals,⁴ which aim to fulfill the UN declaration of 2000 that stated: "We will spare no effort to free our fellow men, women and children from the abject and dehumanising conditions of extreme poverty, to which more than a billion of them are currently subjected." Goal 7 is to ensure environmental sustainability, and within this goal the role of forests is emphasized: Forests contribute to the livelihoods of many of the 1.2 billion people living in extreme poverty. They nourish the natural systems supporting the agriculture and food supplies upon which many more people depend. They account for as much as 90 percent of terrestrial biodiversity. But in most countries they are shrinking.¹ In this chapter we will place some emphasis on the ecological role of forests because this role is easily recognized by the reader, but the arguments we put forward apply equally to many other systems: rivers, soils, the oceans, wetlands, coral reefs, and many more. Ecological systems have an inherent strength and ability for repair. Forests can grow again after logging, soils can regenerate after some degree of overcropping, and rivers can recover if their depleted flows are restored. But only to a point. We will develop the argument that all these resources continue to be used to the point of stress and potential collapse by the society in which we live, and this will threaten our survival. Let us look at a simple example. An ancient forest has valuable wood for harvesting, which can be used sustainably to provide a living for craftspeople. However, it is more profitable in the short term for the owners, private or government, to chop it down, to make wood chips for paper, and then to optimize future production by converting the land to plantation timber. If the forest is retained it continues to provide ecological services. It filters rainfall to provide pure water supplies at no cost to towns and cities, it evens out the flow from rainfall to avoid flood and drought, and it provides a stable source of sequestered carbon that would be released as greenhouse gas if the forest is felled. It will maintain numerous species of trees and plants that will help provide a sustainable existence for humanity. Forests create increased rainfall and therefore stabilize climates.⁶ However, in economic terms, our value system describes a conserved forest as "locked up," implying that it cannot be used for immediate exploitation and the creation of jobs. It is a measure of the values of wealthy Western civilization that more often than not the forest will be felled. What does the collapse of an ecological system mean? Essentially the system no longer functions and is not available to provide essential roles within the web of life, some of which may be essential to humanity. For example, overcropping and failure to provide natural manures leads to a reduction of the microorganisms that constitute soil and maintain its structure. It is then susceptible to erosion by wind and flood and is lost to further cultivation. A river may die because its flow is reduced by irrigation, and saline water is returned to the river from the irrigated regions. The animal and plant life of the river then dies, thus destroying the ecological mechanisms that purify the water. The culmination of thousands of such events around the world, all of which are reducing biodiversity, is a global ecological crisis. We will argue that the basic philosophy of Western society embodied in liberal democracy

is causing this ecological crisis. But first we must substantiate the existence of the crisis. It is not sufficient to state that soil is blowing away and rivers are dying. Like the issue of climate change we have to extrapolate into the future from existing evidence. We can measure the numbers of easily visible species and show a steady decline in recent decades. The skin of frogs easily absorbs environmental pollutants, and we can regard the frog as the canary down the coal mine. Its demise is a measure of the health of the environment.¹ Of the 5,743 known species of amphibians almost one third face extinction. In 1998 the Nair Scientist¹ reported that about 12 percent of bird species faced extinction and that there has been a massive reduction in the numbers of more common species in countries with intensive agriculture. This reduction was caused mainly by a loss of habitat and the use of chemicals that kill insects. In 2001 large reductions in the numbers of British woodland birds were reported due to climate change and to loss of habitat and insects.⁹ Mostly due to encroachment on their habitat by human activities, 23 percent of the world's mammals also face extinction. Amongst these are our closest relatives, the great apes.¹⁰ It is estimated that in 2003 there were 414,000 apes in the wild. Every two days 414,000 humans are born with the requirement of land and fresh water for their survival. All apes are endangered and expected to become extinct within a few generations because their territory is being taken by humans. Science can use the health and numbers of certain species as a measure of the health of the environment or more precisely of the ecosystem in which they live. Thus the health of fresh water streams is reflected in the numbers of frogs and of woodlands by the numbers and variety of woodland birds. When the health of one particular species is monitored it is referred to as a "sentinel species." For example the slow decline of the sea otter is a key indicator of the degradation of the Californian coast, which is increasingly polluted and infested with pathogens.¹¹ The ill health or extinction of a sentinel species often indicates the presence of an environment harmful to humans. Examination of fossil records indicates that the background rate of extinctions amounts to a few species per year. Currently it is estimated that at least one thousand species are lost each year. This loss is being increased by warming, and it is estimated that by 2050 15-37 percent of all animals and plants will be threatened with extinction by greenhouse emissions continuing at their present rate.¹² In the past half billion years of vertebrate existence of life on the planet, sudden climate change, meteors, and perhaps other catastrophic events caused five great natural extinctions, in which perhaps two thirds of species disappeared. Today, scientific opinion is that we are in a sixth extinction period, and this is due to human activity. In simple terms the basic cause is illustrated by the calculations of Vaclav Smil.¹³ Six billion humans weigh 100 million tons. If we weighed all wild mammals in the world they would probably not reach 10 million tons, and the mass of all domesticated animals would out-weigh all vertebrates twentyfold. Humans and their livestock consume 40 percent of the planet's primary production of edible plants, and the other seven million species manage on the rest. In biological terms, humans have been able to exist in plague proportions by occupying the ecological space of other species and by using the earth's stores of fossil fuel.

Tragedy of the commons brings ruin to all

Consider capitalism as an organized process to ingest natural, living systems (including people) in one end, and excrete unnatural, dead garbage and waste (including wasted people) out the other. From a thermodynamic view, capitalism may be seen as the conversion of low-entropy matter into high-entropy waste and garbage. From an economic view, capitalism may be seen as the high-speed depletion of natural capital. Politics (self-organization) among human animals is product of evolution. As soon as two or more people organize, the inevitable struggle for power ensues. This power struggle follows genetic patterns of exploitation, lying, and self-deception. The triumph of capitalism and democracy could have been predicted by evolutionary theory. Capitalism extends the human genetic propensity to exploit (make the best use of something: profit) and lie (meant to give a wrong impression: advertise). Democracy is simply the freedom to exploit and lie. Self-deception keeps us from knowing what we are really up to. In his 1968 classic, "Tragedy of the Commons", [35] Garrett Hardin illustrates why communities everywhere are headed for tragedy -- it's because freedom in the "commons" [36] brings ruin to all. Visualize a pasture as a system that is open to everyone. The carrying capacity of this pasture is 10 animals. Ten herdsmen are each grazing an animal to fatten up, and the 10 animals are now consuming all the grass that the pasture can produce. Harry (one of the herdsmen) will add one more animal to the pasture if he can make a profit. Adding one more animal will mean less food for each of the present animals, but since Harry only has only 1/10 of the herd, he has to pay only 1/10 of the cost. Harry decides to exploit the commons, and the other herdsmen, so he adds an animal and takes a profit. Shrinking profit margins force the other herdsmen either to go out of business or continue the exploitation by adding more animals. This process of mutual exploitation continues until overgrazing and erosion destroy the pasture system, and all the herdsmen are driven out of business. Most importantly, Hardin illustrates the critical flaw of freedom in the commons: all participants must agree to conserve the commons, but any one can force its destruction. Although Hardin is describing exploitation by humans in an unregulated public pasture, his principle fits our entire society. Private property is inextricably part of our commons because it is part of our life support and social systems. Owners affect us all when they alter the emergent properties of our life support and social systems (alter their land) to "make a profit" -- cover land with corn or with concrete. Neighborhoods, cities and states are commons in the sense that no one is denied entry. Anyone may enter and lay claim to the common resources. One can compare profits to Hardin's "grass" when any corporation -- from anywhere in the world -- can drive down profits by competing with local businesses for customers. One can see wages as "grass" when any number of workers -- from anywhere in the world -- can enter our community and drive down wages by competing with local workers for jobs. Everywhere one looks, one sees the Tragedy of the Commons. There is no technological solution, but governments can act to limit access to the commons, at which time they are no longer commons. In the private-money-based political system we have in America, everything (including people) becomes the commons because money is political power, and all political decisions are reduced to economic ones. In other words, we have no true political system, only an economic system -- everything is for sale. Thus, America is one large commons that will be exploited until it is destroyed. OVERSHOOT It was thus becoming apparent that nature must, in the not far distant future, institute bankruptcy proceedings against industrial civilization, and perhaps against the standing crop of human flesh, just as nature had done many times to other

detritus-consuming species following their exuberant expansion in response to the savings deposits their ecosystems had accumulated before they got the opportunity to begin the drawdown... Having become a species of superdetritivores, mankind was destined not merely for succession, but for crash. -- William Catton In the language of ecology, the human scenario can be predicted in four pungent words: "drawdown", "overshoot", "crash", and "die-out". "Drawdown" is the process by which we are using up the surrounding resources faster than they can be replaced. For example, in the space of a little more than a hundred years we have used up perhaps half of all the buried remains of the Carboniferous period -- oil, gas, and coal -- that were deposited over hundreds of millions of years. Moreover, we have become totally dependent on continuing the process. One might argue about the exact date that the global human "crash" will arrive, but the outcome is certain. "Overshoot" simply means that we have exceeded the "carrying capacity"[37] of Earth: If just the present world population of 5.8 billion people were to live at current North American ecological standards (say 4.5 ha/person), a reasonable first approximation of the total productive land requirement would be 26 billion ha (assuming present technology). However, there are only just over 13 billion ha of land on Earth, of which only 8.8 billion are ecologically productive cropland, pasture, or forest (1.5 ha/person). In short, we would need an additional two planet Earths to accommodate the increased ecological load of people alive today. If the population were to stabilize at between 10 and 11 billion sometime in the next century, five additional Earths would be needed, all else being equal -- and this just to maintain the present rate of ecological decline.[38]

Rights

General

The 1AC's framework for interpreting rights only furthers ecocide - only understanding our ethic of natural domination is impossible solves

Ophuls '11 (Ophuls, William. *Plato's Revenge : Politics in the Age of Ecology*. Cambridge, MA, USA: MIT Press, 2011. ProQuest ebrary. Page Web. 24 June 2015. He served for eight years as a Foreign Service Officer in Washington, Abidjan, and Tokyo before receiving a PhD in political science from Yale University in 1973. After teaching briefly at Northwestern University, he became an independent scholar and author. He has published three books on the ecological, social, and political challenges confronting modern industrial civilization.
<http://site.ebrary.com.proxy.lib.umich.edu/lib/umich/reader.action?docID=10496263> // 6-24-15 // MC)

Preserving the environment is thus the lesser part of the problem. Industrial civilization must indeed stop abusing nature and depleting resources before it follows previous civilizations in committing ecological suicide. 7 But the only real solution is to put an end to the hubris itself by dissolving the dread-driven, neurotic hostility to nature that fuels the urge for domination. Ecology is the surest cure for modern hubris. To understand ecology is to see that the goal of domination is impossible—in fact, mad—and that the crude means we have employed to this end are destroying us. To understand ecology is also to see that some of the most vaunted achievements of modern life—our extraordinary agricultural productivity, the dazzling wonders of technological medicine, and, indeed, even the affluence of the developed economies—are not at all what they seem but instead are castles built on ecological sand that cannot be sustained over the long term. In short, ecology exposes the grand illusion of modern civilization: our apparent abundance is really scarcity in disguise, and our supposed mastery of nature is ultimately a lie. 8 To put it more positively, ecology contains an intrinsic wisdom and an implied ethic that, by transforming man from an enemy into a partner of nature, will make it possible to preserve the best of civilization's achievements for many generations to come and also to attain a higher quality of civilized life. Both the wisdom and the ethic follow directly from the ecological facts of life: natural limits, balance, and interrelationship necessarily entail human humility, moderation, and connection. Like any other species, *homo sapiens* is subject to natural limits. Technology does give human beings an ability to manipulate the environment that other species mostly lack. But humanity's success in this regard is in large part illusory because it has been purchased at a high price—symbolized by the accelerated extinction of those other species, with all that this implies for our own long-term future. Technological man has neither abolished natural scarcity nor transcended natural limits. He has merely arranged matters so that the effects of his exploitation of nature are felt by others. Other species, other places, other people, other generations suffer the consequences of the intensified ecological imperialism of the modern age. The current environmental problematque testifies to the impending failure of this strategy. The limits on human action are physical, biological, and geological but also systemic. Reserving a fuller discussion of complex adaptive systems governed by a multiplicity of interacting feedback loops for the next chapter, I simply note here that the biosphere and all its subsidiary ecosystems are characterized by nonlinear dynamics that make them difficult to understand and harder to control. In fact, we cannot really know what the ultimate limits are.

To put it the other way around, just as games are constituted by the rules that regulate play, the limits themselves constitute natural systems. To be without limits is to be without structure and therefore to be entropic—chaotic, useless, or unintelligible. And limits do not oppose freedom: “Structure and freedom,” says Jeremy Campbell, “are not warring opposites but complementary forces.” 9

Liberal democracy’s provision of individual rights promotes ecocide through lack of environmental regulation

Daniel ’12 (<http://www.polis.leeds.ac.uk/assets/files/students/student-journal/ug-summer-12/charles-daniel.pdf> *add cites // 6-24-15 // MC)

The main point to take away from the case study is not to do with portraying the US as an enemy of the environment (it has, after all, provided some form of investment to the natural world’s future, with \$450 billion spent on research and development in the last ten years), it is more to do with the inescapable patterns of consumption that have become ingrained into the US political, social and cultural fabric. America’s national survival is contingent on continued economic abundance to feed a growing population. Democracy has become reliant on and indeed defined by this cycle, which is fuelled by unadulterated freedom for individuals and corporations alike. Speth is thus able to conclude that our ‘economic and political system does not work when it comes to protecting environmental resources’ (2004: 133). He believes that the amount of faith placed upon privatisation and the free market is unfounded, as they cannot be relied upon to provide the appropriate levels of environmental protection. Lack of regulation has resulted in companies consuming cheap resources and not taking into account the external implications of their actions. These ‘externalities’ are what Speth believes to be the main driver behind pollution (2004). What he means by this is that the producer’s financial costs are different from their external ones. For example, when a company burns coal, its only financial concerns are the labour it uses, capital and the outlay cost of raw materials; the price in the form of ‘dirty air’ is not their concern. Producers and consumers are not given the opportunity to see the damage of such patterns since air pollution is not literally visible to the human eye, nor is it a threat to short-term well-being (Panayotou 1998). Due to the lack of public intervention or government pressure, companies are free to act as they please as there is no downside for them in regards to financial gain if they continue to pollute the air. Imposing stringent regulation on these actions by, for example a tax on dirty air, is avoided as it is against democratic principles to over interfere with company activity and indeed there is nothing to be gained by regulators for favouring the environment (Speth 2004). This ties in with the mention of the US oil addiction in that numerous sources of wealth from within the country depend on these sources of energy and their processes. To interfere with them or attempt to reduce their powers would be to limit the economic capability of the nation and possibly hinder the standard of living of each individual therein. With the case of America and indeed other consumer-based economies, it can be concluded that too much freedom can, in certain circumstances, become a real barrier to necessary change. It can potentially create social conditions where individuals and institutions become POLIS Journal Vol. 7, Summer 2012 ISSN 2047-7651 105 too comfortable in

their habits. For liberal democracy, these habits are an over emphasis of the free-market, continual growth of industries and a fixation on GDP targets. Liberal democracy's success is contingent on these and, therefore, those in power have no choice but to abide by them, constrained by the short fixed terms they have in office. The desire for actual change has slowly been removed from politics, as governments seek to prioritise stability and to satisfy the wants of the electorate so that they will continue to stay in power for a further term. The financial crisis was a poignant example of this. It was the first time since the Great Depression that the foundations of the free market were truly shaken, allowing certain groups to question the success and stability of the economic systems we rely upon. An acceptance of certain failures and a move towards change could have provided the much-needed stimulus for environmental investment. As it is, that door has been shut as the government is forced to solve the situation with patchwork policies. Countries have localised themselves even further, reluctant to contribute to global environmental projects when their own economies are in dire need of assistance. The US congressional budget office in the wake of the financial crisis conveyed this direction in fiscal policy. In a report to the IMF, they expressed a need to make significant policy changes in order to keep the Federal Reserve in a stable position (Elmendorf 2010). Whilst it was not explicitly stated, the report suggested that the US government planned to roll back some of their international economic commitments. The UK government is equally guilty of attempting to localise their economy in favour of international commitments. David Cameron's decision to reject a EU wide treaty in order to maintain the strength of the domestic economy is just one example of policy direction that favours isolation instead of contribution (Grice 2012). Liberal democracy then, if defined in this way, can be seen as being detrimental to current and future environmental policies and investment, as it is reluctant to adjust its course, even in times of failure, favouring gradual social change that will not unsettle the electorate. It is here that I return to the suggestion that liberal democracy may not be the appropriate format to guide global society in its current period of over-development.

Privacy

Privacy key to human rights

Burow 2013 (Matthew L Candidate for JD @ New England School of Law; The Sentinel Clouds above the Nameless Crowd: Prosecuting Anonymity from Domestic Drones; 39 New Eng. J. on Crim. & Civ. Confinement 443)

Walking down the street. Driving a car. Sitting on a park bench. By themselves, these actions do not exhibit an iota of privacy. The individual has no intention to conceal their movements; no confidentiality in their purpose. The individual is in the open, enjoying a quiet day or a peaceful Sunday drive. Yet as Chief Justice Rehnquist commented, there is uneasiness if an individual suspected that these innocuous and benign movements were being recorded and scrutinized for future reference. 119 If the "uneasy" reaction to which the Chief Justice referred is not based on a sense of privacy invasion, it stems from something very close to it—a sense that one has a right to public anonymity. 120 Anonymity is the state of being unnamed. 121 The right to public anonymity is the assurance that, when in public, one is unremarked and part of the undifferentiated crowd as far as the government is concerned. 122 That right is usually surrendered only when one does or says something that merits government attention, which most often includes criminal activity. 123 But when that attention is gained by surreptitiously operated UASs that are becoming more affordable for local law enforcement agencies, 124 "it evades the ordinary checks that constrain abusive law enforcement practices ... : 'limited police resources and community hostility.'" 125 This association of public anonymity and privacy is not new. 126 Privacy expert and Columbia University Law professor Alan F. Westin points out that "anonymity [] occurs when the individual is in public places or performing public acts but still seeks, and finds, freedom from identification and surveillance." 127 Westin continued by stating that: [A person] may be riding a subway, attending a ball game, or walking the streets; he is among people and knows that he is being observed; but unless he is a well-known celebrity, he does not expect to be personally identified and held to the full rules of behavior and role that would operate if he were known to those observing him. In this state the individual is able to merge into the "situational landscape." 128 While most people would share the intuition of Chief Justice Rehnquist and professor Westin that we expect some degree of anonymity in public, there is no such right to be found in the Constitution. Therefore, with a potentially handcuffed judiciary, the protection of anonymity falls to the legislature. Based on current trends in technology and a keen interest taken by law enforcement in the advancement of UAS integration into national airspace, it is clear that drones pose a looming threat to Americans' anonymity. 129 Even when UASs are authorized for noble uses such as search and rescue missions, fighting wildfires, and assisting in dangerous tactical police operations, UASs are likely to be quickly embraced by law enforcement for more controversial purposes. 130 What follows are compelling interdisciplinary reasons why the legislature should take up the call to protect the subspecies of privacy that is anonymity. A. Philosophic: The Panopticon Harm Between 1789 and 1812, the Panopticon prison was the central obsession of the renowned English philosopher Jeremy Bentham's life. 131 The Panopticon is a circular building with cells occupying the circumference and the guard tower standing in the center. 132 By using blinds to obscure the guards located in the tower, "the keeper [is] concealed from the observation of the prisoners ... the sentiment of an invisible omnipresence." 133 The effect of such architectural brilliance is

simple: the lone fact that there might be a guard watching is enough to keep the prisoners on their best behavior. 134 As the twentieth-century French philosopher Michel Foucault observed, the major effect of the Panopticon is "to induce in the inmate a state of conscious and permanent visibility that assures the automatic functioning of power."¹³⁵ In Bentham's vision, there is no need for prison bars, chains or heavy locks; the person who is subjected to the field of visibility of the omnipresent guard plays both roles and he becomes the subject of his own subjection. 136 For Foucault, this "panopticism" was not necessarily bad when compared to other methods of exercising control as this sort of "subtle coercion" could lead people to be more productive and efficient members of society. 137 Following Foucault's reasoning, an omnipresent UAS circling above a city may be similar to a Panopticon guard tower and an effective way of keeping the peace. The mere thought of detection may keep streets safer and potential criminals at bay. However, the impact on cherished democratic ideals may be too severe. For example, in a case regarding the constitutionally vague city ordinance that prohibited "nightwalking," Justice Douglas commented on the importance of public vitality and locomotion in America: The difficulty is that [walking and strolling] are historically part of the amenities of life as we have known them. They are not mentioned in the Constitution or in the Bill of Rights. These unwritten amenities have been in part responsible for giving our people the feeling of independence and self-confidence, the feeling of creativity. These amenities have dignified the right of dissent and have honored the right to be nonconformists and the right to defy submissiveness. They have encouraged lives of high spirits rather than hushed, suffocating silence. 138 As Justice Douglas understood, government surveillance stifles the cherished ideal of an American society that thrives on free-spiritedness in public. 39 Without the right to walk the streets in public, free from the fear of high surveillance, our American values would dissipate into that resembling a totalitarian state that attacks the idea of privacy as immoral, antisocial and part of the dissident cult of individualism. 140

Freedom

Money

Money The freedom that comes with democracy makes people focus on the trade, technology and money but not the environment

Daniel 12 (Charles Daniel is a University of Leeds Political Science graduate. "To what extent is democracy detrimental to the current and future aims of environmental policy and technologies?" Journal of Politics and International Studies. May 2012. Vol. 7. <http://www.polis.leeds.ac.uk/assets/files/students/student-journal/ug-summer-12/charles-daniel.pdf>)

Democracy, through the development of political capability and the spread of freedom, has cemented its position within global society as 'the most ideal form of government' available to any given nation-state. Democracy, whilst arguably impossible to define, is widely considered to be a "government by the people, where liberty, equality and fraternity are secured to the greatest possible degree and in which human capacities are developed to the utmost, by means of including free and full discussion of common problems and interests." (Pennock 1979). Implicit in this definition is the commitment to ensuring that fairness and equality trump oppression and fear. As a direct product of social development, democracy is aimed at the progression of political culture that is now recognisably being expressed through the phenomena of globalisation that is increasing speeds and volumes of trade, improving technology and opening a whole array of opportunities to all areas of the economy (Beck 2000).

General

Individual freedoms tolerate environmental destruction and make democratic countries dependent on fossil fuels

Daniel 12 (Charles Daniel is a University of Leeds Political Science graduate. "To what extent is democracy detrimental to the current and future aims of environmental policy and technologies?" *Journal of Politics and International Studies*. May 2012. Vol. 7. <http://www.polis.leeds.ac.uk/assets/files/students/student-journal/ug-summer-12/charles-daniel.pdf>)

This strand of democracy is seen by many scholars, most notably Francis Fukayama, as the end-point of man's political development and thus is generally recognised, by Western nation-states and global institutions alike, as the final form of human government (Fukayama 1992). Whilst deliberative democracy is concerned with the 'bottom-up' pressures the electorate forces upon government, liberal democracy has a 'top-down' political structure where influences generally arise from established centres of power in the state and, most importantly, from the world's economic and financial forces (Cox 1998). At the heart of liberal democracy lies the importance of freedom of the individual to act as he/she pleases in accordance with the various legal and moral constraints placed upon them by society. Whilst this has served to produce the best possible conditions for society to flourish, it is the belief of this essay that these social conditions have perpetuated an economic model that tolerates an unjustified amount of freedom based on deregulation and has resulted in the irreversible destruction of the natural world (Speth 2008). This process has been fuelled by the growing dominance of economic globalisation to the extent that liberal democracy is now typified by its desire to promote exponential growth as the surest means of ensuring political stability (Beck 2000). Whilst democracy is not solely focused upon economic and material conditions of society, with social issues such as the maintenance of freedom of speech given an equally important role in political processes, controversy surrounding this mode of government is centred upon the knock-on effects that its economic agenda has on the human and natural world. The most prominent of these controversies surrounds issues of consumerism and the extent to which liberal democracy has unintentionally fuelled the processes of globalisation, seen by many as the greatest threat to environmental security (Khor; 2001; Mol 2001; Speth 2004). James Speth (2004), in his work *Red Sky at Morning*, appropriately articulates this concern, citing the ten drivers of environmental deterioration that all centered upon the habit of consumption fuelled by globalisation. The most poignant of these drivers is the scale and rate of economic growth that is occurring as a result of drastic increases in global population numbers. He believes that current nation-states are not fully aware of the implications that the vast global changes are having on the environment. The root of this problem lies in the vested interests that those in power obtain from continual support towards the 'tried and tested' strengths of a neo-liberal agenda, particularly a strong support from multinational corporations and the oil industry (Speth 2004). The reliance on large companies, for our food, fuel and consumer products means that neo-liberalism can be dictated and manipulated by a handful of powerful individuals that essentially decide the direction of the economy (Shah 2011). Whilst growth in corporations has created numerous jobs and a greater

level of financial opportunity it has equally ensured that Western populations have become dependent on consumer goods and fossil fuels.

Capitalism

Rights Inherent

Individual liberties in today's neoliberal society inextricably link human rights and environmental sustainability

Woods '10 (Kerri, Lecturer in Political Theory, specialising in contemporary political philosophy. I have written about human rights theory, the idea of cosmopolitan friendship, solidarity, vulnerability, environmental justice and global justice + member of the Global Network for the Study of Human Rights and the Environment, and Treasurer of the 'Association for Social and Political Philosophy' + PhD in Political Science

https://books.google.com/books?id=6rUtFjptp3sC&pg=PA129&lpg=PA129&dq=ophuls+environment+authoritarianism&source=bl&ots=UcrwISx4XV&sig=viyslEqnH4_b3A96SasNHCCUHFQ&hl=en&sa=X&ei=jq1LLVaWpBYq_sAWju4HgBw&ved=0CCEQ6AEwAQ#v=onepage&q=ophuls%20environment%20authoritarianism&f=false // 6-25-15 // MC)

Human rights and environmental sustainability inevitably come together and impact on one another in a globalized or globalizing world. It is a necessary task for theorists of human rights and of environmental sustainability to consider the conceptual and normative issues at stake in this interaction. The globalization of human rights, we are told, has brought greater freedom everywhere. But greater economic freedom and the economic expansion attendant upon globalization has also wrought more environmental degradation. Environmental degradation has in turn, in some parts of the world, undermined human rights, and has the potential to do so globally if unsustainable practices remain unchecked. Human rights, as a global norm, have been taken up by environmental activists from a wide range of cultural and political contexts.

Globalization, then, is an important variable in the tensions and connections between human rights and environmental sustainability. Globalization has been defined in a number of ways. For some it is purely economic, for others predominantly so, for others still it is a set of intrinsically linked and equally important processes of economic, political and cultural phenomena. One prominent commentator offers this definition: Fundamentally, [globalization is] the closer integration of the countries and peoples of the world which has been made possible by the enormous reduction of costs of transportation and communication, and the breaking down of artificial barriers to the flows of goods, services, capital, knowledge, and (to a lesser extent) people across borders. (Stiglitz 2002, p.9) I am concerned here primarily with economic globalization and the implications that this has for the environment, and thus for human rights. Defining globalization principally in economic terms draws out the relationship between the globalization of the world's economy and environmental problems caused by unsustainable patterns of production and consumption, and the consequent relationship between environmental problems and issues in human rights. Economic globalization as understood here is driven or promoted by neoliberal economic policies. In some writing on globalization such policies are responsible for all the evils of the world. For instance, in a polemical article Adamantia Pollis asserts that 'globalisation . . . is underpinned by the ideology of neoliberalism, which is devoid of any normative principle of justice and humanity; it is market driven' (Pollis 2004, p.343). Though Pollis is justified in some of her concerns about the neoliberal model of economic globalization, it is misleading to suggest that neoliberalism has no normative principles of justice. To be clear, neoliberalism is understood here as an economic theory which can be most simply characterized in terms of promoting the idea that the economy should be

freed from government. Adherents of neoliberalism hold that government regulation or other interference in the market place (such as state ownership or provision of goods) should be minimized, so as to maximize efficiency. Success is measured in terms of overall increases in economic activity. Neither justice nor humanity are absent from this theory: agents should receive the fruits of their own labour, and should not be arbitrarily deprived of them by government (by way of taxation). Wealth is expected to 'trickle down' through society, thereby improving the general welfare. I do not set out to demonize neoliberalism; what I argue here is that its environmental unsustainability raises human rights issues. Links between human rights and the environment are easy to find in academic discussion, non-governmental organization (NGO) campaigns and intergovernmental initiatives concerning the environment, sustainable development and development projects more generally. A crude explanation of this interconnection might make reference to the global nature of environmental problems; the global environment is everyone's home, and while there are highly localized instances of environmental degradation, there are also global problems, such as climate change, ozone depletion, biodiversity loss and so on, solutions to which require global cooperation. Human rights are held to represent a global standard. Almost all states have, at least formally, signalled their endorsement of the Universal Declaration of Human Rights (UDHR), and so one might reasonably expect a global problem to be met with a global solution. Starting from the environment side of the equation, greens often argue that a 'clean' or 'decent' environment is an essential precondition for the realization of human rights (see, for example, Sachs 1995; Hancock 2003; Globalization, human rights and the environment 5 Picolotti 2003). Starting from the human rights side, however, there is less evidence of an unfailing commitment to environmental issues on the part of human rights activists and scholars. Prominent human rights theorists such as Jack Donnelly (2003) and Michael Freeman (2002) mention environmental issues as a contemporary concern relevant perhaps to human rights theorizing, but the purported 'indivisibility of human rights and the environment' (Picolotti 2003, p.49) is undermined somewhat, or at the very least requires explication, in view of the substantive exclusion of environmental issues from most human rights theory. One way of approaching such explication is to consider the importance of environmental sustainability for human security. If human rights are claimed in defence of human security, and that security is threatened by environmental degradation resulting from unsustainable economic practices, then there would seem to be a prima facie case for considering the environment to be a human rights issue. There is a great deal to be unpacked in this proposition; in what follows I deal with only part of it. I begin by unpacking the links between human rights and globalization (Section 1.2). In Section 1.3 I demonstrate a link between human security and the environment. Following on from that, in Section 1.4 I illustrate some of the ways in which the globalization of the economy has contributed to environmental degradation, but I postpone until Chapter 4 a substantive demonstration of the ways in which contemporary economic practices are unsustainable from an environmental point of view. In Section 1.5 I offer a brief discussion of global environmental governance and Section 1.6 concludes.

Liberties and capitalism are the root cause of environmental decline

(Jay, 2-20, Requiem, <http://www.dieoff.org/page181.htm>)

Consider capitalism as an organized process to ingest natural, living systems (including people) in one end, and excrete unnatural, dead garbage and waste (including wasted people) out the other. From a thermodynamic view, capitalism may be seen as the conversion of low-entropy matter into high-entropy waste and garbage. From an economic view, capitalism may be seen as the high-speed depletion of natural capital. Politics (self-organization) among human animals is product of evolution. As soon as two or more people organize, the inevitable struggle for power ensues. This power struggle follows genetic patterns of exploitation, lying, and self-deception. The triumph of capitalism and democracy could have been predicted by evolutionary theory. Capitalism extends the human genetic propensity to exploit (make the best use of something: profit) and lie (meant to give a wrong impression: advertise). Democracy is simply the freedom to exploit and lie. Self-deception keeps us from knowing what we are really up to. In his 1968 classic, "Tragedy of the Commons", [35] Garrett Hardin illustrates why communities everywhere are headed for tragedy -- it's because freedom in the "commons" [36] brings ruin to all. Visualize a pasture as a system that is open to everyone. The carrying capacity of this pasture is 10 animals. Ten herdsmen are each grazing an animal to fatten up, and the 10 animals are now consuming all the grass that the pasture can produce. Harry (one of the herdsmen) will add one more animal to the pasture if he can make a profit. Adding one more animal will mean less food for each of the present animals, but since Harry only has only 1/10 of the herd, he has to pay only 1/10 of the cost. Harry decides to exploit the commons, and the other herdsmen, so he adds an animal and takes a profit. Shrinking profit margins force the other herdsmen either to go out of business or continue the exploitation by adding more animals. This process of mutual exploitation continues until overgrazing and erosion destroy the pasture system, and all the herdsmen are driven out of business. Most importantly, Hardin illustrates the critical flaw of freedom in the commons: all participants must agree to conserve the commons, but any one can force its destruction. Although Hardin is describing exploitation by humans in an unregulated public pasture, his principle fits our entire society. Private property is inextricably part of our commons because it is part of our life support and social systems. Owners affect us all when they alter the emergent properties of our life support and social systems (alter their land) to "make a profit" -- cover land with corn or with concrete. Neighborhoods, cities and states are commons in the sense that no one is denied entry. Anyone may enter and lay claim to the common resources. One can compare profits to Hardin's "grass" when any corporation -- from anywhere in the world -- can drive down profits by competing with local businesses for customers. One can see wages as "grass" when any number of workers -- from anywhere in the world -- can enter our community and drive down wages by competing with local workers for jobs. Everywhere one looks, one sees the Tragedy of the Commons. There is no technological solution, but governments can act to limit access to the commons, at which time they are no longer commons. In the private-money-based political system we have in America, everything (including people) becomes the commons because money is political power, and all political decisions are reduced to economic ones. In other words, we have no true political system, only an economic system -- everything is for sale. Thus, America is one large commons that will be exploited until it is destroyed. OVERSHOOT It was thus becoming apparent that nature must, in the not far distant future, institute bankruptcy proceedings against industrial civilization, and perhaps against the standing crop of human flesh, just as nature had done many times to other

detritus-consuming species following their exuberant expansion in response to the savings deposits their ecosystems had accumulated before they got the opportunity to begin the drawdown... Having become a species of superdetritivores, mankind was destined not merely for succession, but for crash. -- William Catton In the language of ecology, the human scenario can be predicted in four pungent words: "drawdown", "overshoot", "crash", and "die-out". "Drawdown" is the process by which we are using up the surrounding resources faster than they can be replaced. For example, in the space of a little more than a hundred years we have used up perhaps half of all the buried remains of the Carboniferous period -- oil, gas, and coal -- that were deposited over hundreds of millions of years. Moreover, we have become totally dependent on continuing the process. One might argue about the exact date that the global human "crash" will arrive, but the outcome is certain. "Overshoot" simply means that we have exceeded the "carrying capacity"[37] of Earth: If just the present world population of 5.8 billion people were to live at current North American ecological standards (say 4.5 ha/person), a reasonable first approximation of the total productive land requirement would be 26 billion ha (assuming present technology). However, there are only just over 13 billion ha of land on Earth, of which only 8.8 billion are ecologically productive cropland, pasture, or forest (1.5 ha/person). In short, we would need an additional two planet Earths to accommodate the increased ecological load of people alive today. If the population were to stabilize at between 10 and 11 billion sometime in the next century, five additional Earths would be needed, all else being equal -- and this just to maintain the present rate of ecological decline.[38]

Democracy

Environment

Democracy can't solve – politicians won't much environmental reform, it's political suicide

Humphrey 7 (Mathew Humphrey is a professor at the University of Nottingham. Ecological Politics And Democratic Theory: the Challenge to the Deliberative Ideal. London: Routledge, 2007. Page 29)

Clearly, both of these conceptualisations can be, and have been challenged. One can argue against the eschatology of survivalism and suggest that, for all the environmental problems that may exist in the world, there is no looming global environmental catastrophe (Lomborg, 2001). Second, one can challenge the conception of democracy on offer here as too thin and inadequately demanding on citizens in terms of their democratic responsibilities. As we shall see both of these approaches have been developed within the sphere of environmental political thought. Nonetheless, there are clearly many environmental problems in existence today that are amenable to the kind of analysis offered by the eco- authoritarians, in particular with regard to what democracy can deliver in the way of environmental policy. Problems with pollution caused by transport are a good example here. In the United Kingdom the fastest growing set of emissions contributing to global warming emanate from the transport industry, in particular from rapidly growing road transport and aviation use. There is a close-to-scientific consensus on the existence global warming due to human activities, and broad (not universal) agreement upon the urgent need for developed and developing nations to take measures to combat this.²⁰ Global warming has some strongly irreversible consequences and appears to be an environmental problem of the sort that fits with the eco-authoritarians' representation. The production of greenhouse gas emissions represents a good example of the n-person prisoner's dilemma as modelled by the tragedy of the commons. Any one person's efforts in making a reduction of CO₂ emissions would be dwarfed by the continuing increases of the rest of the world. Furthermore, the potential for democratic institutions to deliver reductions in CO₂ emissions of the required amount is questionable, reflected in Tony Blair's comment that it would be political suicide to propose an ecologically inspired increase in the cost of flying shortly before an election. For all that green political thinkers like to think that we have 'moved on' from the anti-democratic forms of ecological politics espoused by Hardin, Ehrlich, Heilbroner, and Ophuls, their conceptualisation of environmental problems and democratic politics still has some purchase today, and we should not underestimate the difficulties in achieving the kinds of cultural value changes that we shall see green theorists are committed to. Ecocentrism, or even an environmentally enlightened anthropocentrism does not come easily, and without such a change in values democracy's ability to deliver ecologically sustainable outcomes remains in serious question.

Democracy cannot address core issues like pollution and resource depletion- authoritarianism is the only alternative

Humphrey 7 (Mathew Humphrey is a professor at the University of Nottingham. *Ecological Politics And Democratic Theory: the Challenge to the Deliberative Ideal*. London: Routledge, 2007. Page 139-140)

The first part of the book examined the ways in which ecological politics and democracy can come apart, and whilst few would now argue for an authoritarian state as a response to environmental problems, the dilemmas with which the eco- authoritarians wrestled remain with us. The management of common resources, and the danger of the unsustainable depletion of these resources, remains a thorny issue in environmental policy (Ellis, 2003). Democracy, however, remains merely a contingently bad form of political organisation for these writers and if a form of democracy can be found that addresses the depletion/population/pollution problems that they are concerned with, it would be considered a viable political system. Given, however, the Schumpeterian view of human mental capacities that underpins the eco-authoritarian view, this outcome is unlikely.

Naive

Green Democracy is based upon naïve antics

Beeson 10 (Mark, Professor of International Politics at Murdoch University in Perth, Western Australia, Environmental politics, Environmental Politics, 15(5): 750–767., Volume 19, issue 2)

Although deliberative democracy has been described as ‘the currently hegemonic approach to democracy within environmental thinking’ (Arias-Maldonado 2007, p. 245), it has little obvious relevance to the situation in East Asia. While there is much that is admirable about the central precepts of deliberative democracy (see Bohman 1998), its underlying assumptions about the circumstances in which political activity actually occur are strikingly at odds with the lived reality outside North America and Western Europe. This merits emphasis because for some writers rational, informed discourse is central to sustainable environmental management and the resolution of the competing interests that inevitably surround it (Hamilton and Wills-Toker 2006). And yet, as the very limited number of **studies that actually examine environmental politics under authoritarian rule demonstrate**, the reality is very different and **the prospects for the development of progressive politics are very limited** (Doyle and Simpson 2006). Even if we assume that political circumstances do actually allow for a politically unconstrained and informed discussion of complex issues, as Arias-Maldonado (2007, p. 248) points out, **‘the belief that citizens in a deliberative context will spontaneously acquire ecological enlightenment, and will push for greener decisions, relies too much on an optimistic, naive view of human nature, so frequently found in utopian political movements’**. In much of East Asia, the population may not have the luxury or capacity even to engage in these sorts of discursive practices, while the absence of effective democracy in much of the region stands as a continuing obstacle to achieving anything approximating deliberative democracy. Even more problematically in the long-run, there is **no compelling evidence that democracy of any sort will necessarily promote good environmental outcomes** (Neumayer 2002), **or that rising living standards will inevitably deliver a sustainable environment** (Dinda 2004). On the contrary, there is evidence to suggest that in the initial phases at least, ‘democratisation could indirectly promote environmental degradation through its effect on national income’ (Li and Reuveny 2006, p. 953). In other words, even the best of all outcomes – rising living standards and an outbreak of democracy – may have unsustainable environmental consequences that may prove to be their undoing in the longer-term. In such circumstances, ideas about possible ways of reorganising societies to lessen their impact on the natural environment may not find sufficient support to make them realisable or effective. As Lieberman (2002, p. 709) points out, ‘an idea’s time arrives not simply because the idea is compelling on its own terms, but because opportune political circumstances favor it’. In much of Southeast Asia and China the forces supporting environmental protection are comparatively weak and unable to overcome powerful vested interests intent on the continuing exploitation of natural resources.

Inevitable

Democracy fails – makes collapse inevitable

Hanson, 98

(Jay, 2-20, Requiem, <http://www.dieoff.org/page181.htm>)

What can we do to avoid the "crash"? As a society, Americans can do nothing because of at least two fundamental -- and apparently insoluble -- problems: (1) In principle, democracy (i.e., government by the common people) can not direct a country to any specific goal because democracy is "process" politics as opposed to "systems" politics: As the name implies, process politics emphasizes the adequacy and fairness of the rules governing the process of politics. If the process is fair, then, as in a trial conducted according to due process, the outcome is assumed to be just -- or at least the best the system can achieve. By contrast, systems politics is concerned primarily with desired outcomes; means are subordinated to predetermined ends.[42] (2) American democracy is not even true politics because it is based on money -- one-dollar, one-vote. What passes for politics in America is actually a subset of our economic system. In principle, it is not possible for our economic system to avoid the "crash" because its premise, the conversion of nature into commodities, is the heart and soul of our system problems. Moreover, the doctrine of continuous and unlimited economic growth is a religious concept that serves as a substitute for redistribution of wealth and true politics. It's a way for the plutocrats to maintain political superiority over the lesser classes while avoiding unpleasant political questions:[43] It is the orthodox growth men who want to avoid the distribution issue. As Wallich so bluntly put it in defending growth, "Growth is a substitute for equality of income. So long as there is growth there is hope, and that makes large income differentials tolerable" (1972). We are addicted to growth because we are addicted to large inequalities in income and wealth. What about the poor? Let them eat growth! Better yet, let them feed on the hope of eating growth in the future![44] With no true political system -- and no prospect of obtaining one -- we have no means to save ourselves. Unfortunately, several billion innocent people will die untimely deaths over the next hundred years. Individuals in small communities can protect themselves somewhat through cooperation with others (reciprocal altruism). But groups larger than a few hundred will disintegrate under competition for increasingly scarce resources: In brief, our research showed that environmental scarcities are already contributing to violent conflicts in many parts of the developing world. These conflicts are probably the early signs of an upsurge of violence in the coming decades that will be induced or aggravated by scarcity. The violence will usually be sub-national, persistent, and diffuse. Poor societies will be particularly affected since they are less able to buffer themselves from environmental scarcities and the social crises they cause. These societies are, in fact, already suffering acute hardship from shortages of water, forests, and especially fertile land.[45]

Globalization

Globalization guts all forms of climate progress – individualism and financial incentives preclude action

Jennings, 13-- Director of Bioethics at the Center for Humans and Nature

(Bruce, "Governance in a Post-Growth Society: An inquiry into the Democratic Prospect", May, Vol 6 Num 2, p. 12-13)

Before turning to the three types of ecological governance, consider further the contrasting benchmark of pluralistic interest group democracy. All of the ecological types of governance I identify have one thing in common, namely, their critique and rejection of interest group democracy. Interest group democracy is concerned with aggregation and accommodation of interests among individuals and groups in societies where religious differences, ideological diversity, social competition, and conflict are widespread. This is the political system of the Western world, certainly in the bicameral presidential system of the United States, but also in parliamentary systems, systems with proportional legislative representation rather than single-member districts, and so on. Pluralistic democracy is responsive to individual interests, concatenated or organized by the formation of various group structures that compete for the attention of popularly elected officials. Their competition in this regard consists both of the market place of ideas and the market place of campaign contributions, and other financial incentives for public officials. Unlike discursive democracy, in which the citizen role is actively and extensively participatory at multiple levels, in pluralistic democracy citizenship consists essentially in the right to vote, with a relatively small number becoming directly involved financially or personally in the process of electoral competition. Candidates and parties vie there for the support of self-interested voters, which is increasingly determined by media advertisements and exposure. Interest group democracy is a kind of negative system of governance. It is set up to form compromise among conflicting interests in that no one group bears the cost of policy. This makes a win-win type of growth scenario very attractive and deters policy makers from setting clear priorities, making trade-offs, especially sharp ones that have been called "tragic choices," such as rationing and redistributing resources (wealth and power) explicitly.⁸ It has multiple veto points in its governing process that ensure these features. It is prone to incrementalism and bias in favor of preserving the status quo. Against this backdrop, I now turn to the three modes of governance that I think are reasonable options for a degrowth transition and eventual steady state.

AT: We Transition, Solve Enviro

Best research proves communicative, deliberative forums are most likely to move collective opinion further toward the preexisting views of the majority, cause irrational decisions made to placate the loudest participants, and dehumanizing violence against out-groups

Tina Nabatchi 7, Assistant Professor of Public Administration and International Affairs and a Faculty Research Associate at the Program for the Advancement of Research on Conflict and Collaboration at Syracuse University, 2007, *Deliberative Democracy: The Effects of Participation on Political Efficacy*, p. 67-69

Social psychology research on small groups highlights several potential pitfalls of deliberation (for an extensive review of this literature, see Mendelberg, 2002). In particular, research suggests three psychological limits to participation: risky shift, the Abilene paradox, and groupthink (e.g., Cooke and Kothari, 2002: 106-109; see also Torres, 2003: 72-73). Risky shift describes the phenomenon that group discussion can lead members to make riskier decisions than they would have made as individuals. The Abilene paradox reflects the experience of groups who make decisions and take actions that contradict their wants and interests in order to alleviate the anxieties and tensions of individual members. Groupthink refers to the replacement of independent critical thinking with irrational and dehumanizing actions against out-groups. As Sunstein (2003: 82) notes, "deliberative enclaves can be breeding grounds for both the development of unjustly suppressed views and for unjustified extremism, indeed fanaticism." Research on small group deliberation supports these contentions. For example, communication has been found to enhance cooperation among individuals at the expense of that between groups (Insko, et al., 1993). When group interests are consistent with individual interests, communication can increase cooperation among groups; however, when group interests compete with individual interests, individual and in-group cooperation increase at the expense of cooperation across groups (Bornstein, 1992). Moreover, communication across groups of unequal size can make group differences more salient, and thus decrease cooperation (Bettencourt and Dorr, 1998; Miller and Davidson-Podgorny, 1987). Other research suggests that individuals who are perceived to have particular expertise in the subject under deliberation are more likely to be influential in the group's decision (Bottger, 1984; Kirchler and Davis, 1986; Ridgeway, 1981, 1987). Moreover, groups tend to use information that is already commonly shared, and focus less on distinctive information held by specific individuals that could arguably improve the outcome or decision (Gigone, and Hastie, 1993, 1997; Larson, et al, 1998; Stasser 1992, Stasser and Titus, 1985; Stasser, Taylor and Hanna, 1989; Wittenbaum, Hubbel, and Zuckerman, 1999). The sum of these effects not only limits the potential benefits of participation, but also increases the potential for unwise decisions and polarization (e.g., Hibbing and Theiss-Morse, 2002; Huntington, 1975; Sunstein, 2003). The issue of group polarization is especially relevant: Though standard, the term "group polarization" is somewhat misleading. It is not meant to suggest that group members will shift to the poles, nor does it refer to an increase in variance among groups, though this may be the ultimate result. Instead the term refers to a predictable shift within a group discussing a case or problem. As the shift occurs,

groups, and group members, move and coalesce, not toward the middle of antecedent dispositions, but toward a more extreme position in the direction indicated by those dispositions. The effect of deliberation is both to decrease variance among group members, as individual differences diminish, and also to produce convergence on a relatively more extreme point among predeliberation judgments (Sunstein, 2003: 83). Indeed, research suggests that **discussion tends to move collective opinion in the direction of the preexisting views of the majority** (Moscovici and Zavalloni, 1969; Myers and Lamm, 1976; Schkade, Sunstein, and Kahneman, 2000). Moreover, when unanimity is the decision rule, the chances of deadlock increase (Hastie, Penrod, and Pennington, 1983), as does polarization (Kaplan and Miller, 1987; Mendelberg and Karpowitz, 2000).

This is a reason the aff collapses any response to climate change---deliberative forums will be filled with conservatives screaming about ClimateGate---means only authoritarianism solves

Ward 11

(Halina Ward 11, director of The Foundation for Democracy and Sustainable Development, "The Future of Democracy in the Face of Climate Change," <http://www.fdsd.org/wordpress/wp-content/uploads/Paper-Three-futures-of-SD-and-democracy.pdf>)

Some literature on the future of democracy takes a far less dim view of the future of expertise. At the other end of the spectrum, Shearman and Wayne Smith predict that **democracy** as we know it **will fail to deliver solutions to the environmental crisis**. They argue that **elected representatives ought to be replaced by** a ruling elite of eco-philosopher kings. Their vision of the future harks back to Plato's; that "[t]here will be no end to the troubles of states, or of humanity itself, till philosophers become kings in this world". 259 Shearman and Wayne Smith's (anti-democratic) suggestion is that **"*g]overnment in the future will be based on... a supreme office of the biosphere"** 260 comprising specially trained eco-philosophers, who will either rule themselves or advise **an authoritarian government**. They describe these eco-philosophers as "people of high intellect and moral virtue who are trained in a wide number of disciplines, ecology, the sciences, and philosophy (especially ethics) for the purpose of dealing with the crisis of civilisation". 261 Shearman and Wayne Smith call for the creation of what they call a 'Real University', delivering scientific education which is immune to the influence of feelings, desires, interests, aspirations, values, economic forces and moral considerations. They highlight the Intergovernmental Panel on Climate Change as a potential forerunner. The notion of value-free scientific endeavour would seem bizarre to those of Stephen Jay Gould's school of thought, who believe that "[s]cience, since people must do it, is a socially embedded activity". 262 And the value of scientific expertise within the realm of politics might be called into question on cognitive grounds. **There is a strong basis in psychological studies** for the argument **that the voting public allow "bias, prejudice, and emotion to guide their decisions"**, rather than objective facts. 263 Roger Pielke Jr argues that four categories (highlighted in Box 5 below) express the roles that experts can play in decision-making. A healthy system of decision-making

will benefit from the presence of all four kinds of advice. In particular, Pielke argues that when extra-scientific factors play a role in influencing expert advice, they can lead to 'stealth issue advocacy'; a phenomenon which can undermine the authority and legitimacy of expert advice. Pure Scientist and Science Arbiter roles therefore make most sense when values are broadly shared and scientific uncertainty is manageable. And when there are value conflicts or science is contested, the Issue Advocate and Honest Broker of Policy Options roles are more appropriate. Pielke suggests that policy responses to climate change have neglected the complexity of the relationship between experts and decisionmakers: "better decisions will be more likely if we pay attention to the role of expertise in decision making and the different forms that it can take".

264 Looking beyond the role of expertise in national democracies, former World Bank Vice-President Jean-François Rischard calls for expertise to occupy a prominent position within future global governance. He acknowledges that international governance structures will have to evolve to accommodate those global issues which extend beyond the territorially defined boundaries of states – such as forests which exist in one country, but which generate rainfall in surrounding countries. In his book, *High Noon*, 265 Rischard envisages an important role for experts in a series of twenty 'Global Issues Networks' (GINs) designed to arrive at normative responses to the central global issues facing humanity. He sees precursors to the GIN approach in initiatives including the World Commission on Dams and the Forestry Alliance. Rischard proposes that each Global Issues Network would consist of thirty experts; ten from NGOs, business and government respectively. And whilst this idea appears to favour expertise over public representation, Rischard goes on to explain that these expert networks would be invited to "represent all of us". Here is a compromise system based on limited representation via expertise. Critics would argue that we should draw on expertise rather than be driven by it. In contrast to Shearman and Wayne Smith's or Rischard's visions of an increasingly prominent role for scientific expertise in future democracies, there is also a body of thinking which predicts a (partial, at least) shift away from elitist technocratic science towards post-normal science, as a means of helping politicians and citizens to fully engage with the ideas of climate change and sustainability. Groups such as the UK think-tank Newton's Apple, 266 or the UK government's Sciencewise Expert Resource Centre 267 recognise the gap in communication and understanding between scientific experts and democratic policy-makers. They work to bridge the gap, recognising that its existence is not only detrimental to both experts and policy-makers, but also to the public's trust in each. Blowers et al also suggest that an effort must be made to engage a wider range of stakeholders and the general public in the process of policy-making, rather than relying on technocratic positivist science as a way of informing policy. More confident relationships between science and society might result. 268 And given the current and future pressures of climate change, where "the facts are uncertain, values in dispute, stakes high and decisions urgent", 269 it is not unreasonable to anticipate that new kinds – breeds – of post-normal science might evolve to cope with this uncertainty. Blowers et al further argue that the post-normal emphasis on the 'extended peer community' 270 and the 'democratization of science' 271 make this mode of scientific reasoning a complement to deliberative democracy. As they suggest, deliberative democracy "must be inclusive and it must encourage unconstrained dialogue. Inclusiveness requires that insofar as possible all relevant viewpoints and values should be represented". 272 Deliberation may even have become what Graham Smith dubs "a new orthodoxy within contemporary democratic theory". 273 Climate change might hasten the

spread of deliberative democracy; but it could equally counteract another imperative of climate-related policy: the (often urgent) need for a decision. For deliberation has no point of closure analogous to the vote in representative democracy. The future role of deliberation might therefore come to be seen simply as a means of exposing inherent value conflicts surrounding an issue, before a decision is taken. 274 Closely linked to Ravetz's 'extended peer community' 275 is the notion of 'the wisdom of crowds'. 276 In his book of the same name, James Surowiecki shows that certain kinds of decision involving quantitative rather than qualitative judgements and formed on the basis of aggregated information submitted by collections of individuals are often better than those that could be made by any single individual, however expert. But members of crowds are all too easily influenced by the opinions of others, particularly the media. And this has significant implications for climate change and for the role of expertise in democratic decision-making on climate change. Media coverage of the 'climategate' email controversy (as to which see Paper One), for instance, has fuelled climate scepticism, as has the journalistic norm of presenting both sides of a story despite the overriding consensus regarding the severity, and anthropogenic nature, of climate change. Therefore, in the words of journalist and commentator Will Hutton, "an independent, diverse and inquiring press is also fundamental to collective wisdom". 277 For a wide, crowd-based and democratic wisdom to emerge in the future, the media drivers of public opinion and engagement in decision-making would need to evolve too.

Surveillance

Generic

Domestic Surveillance erodes civil liberties, the AFF reverses that

Wu 2006

(Edieth, Associate Dean and Professor, DOMESTIC SPYING AND WHY AMERICA SHOULD AVOID THE SLIPPERY SLOPE, Thurgood Marshall School of Law., weblaw.usc.edu/why/students/orgs/rlsj/assets/docs/Wu_Final.pdf, vol 16:1)//ADS

After the New York Times exposed the NSA's domestic spying program, the president immediately attempted to divert attention from the civil liberties issue by characterizing warrantless surveillance— i.e., surveillance for which no warrant is issued—as essential to national security and “critical to saving American lives.”⁴ But critics of the NSA program argued that “[warrantless domestic surveillance] contradicts longstanding restrictions on domestic spying and subverts constitutional guarantees against unwarranted invasions of privacy.”⁵ In the wake of the terrorist attacks, however, it seems that the unprecedented vulnerability felt by many Americans helped galvanize support for the president and made many Americans reluctant. Consequently, a meaningful, public debate about the course and direction of the war on terror is necessary.⁷ However, because political pressures may deter publicly elected officials from speaking candidly about government programs, the media and third party experts have the duty of creating and sustaining a meaningful public discourse about domestic spying.⁸ In that vein, we as jurists have the duty to analyze precarious legal issues, even if it yields conclusions which are less than palatable. Recognizing that duty, this comment addresses the debate about the legality of the president's decision to conduct warrantless surveillance on United States citizens. Part II of this comment contends that the United States government should not resort to spying on its citizens because this abuse of power will lead to the erosion of American civil liberties.

PRISM

Curtailling PRISM bolsters civil liberties

Bruer 15

(Wes, Graduate from the University of Georgia's School of Public and International Affairs, www.cnn.com/2015/03/10/politics/nsa-spying-lawsuit-aclu/, Civil liberties groups file lawsuit against NSA, March 10, 2015)//ADS

Nearly a dozen civil liberties groups have filed a lawsuit against the National Security Agency regarding the agency's "upstream" surveillance, which is alleged to include monitoring of almost all international, and many domestic, text-based communications. The suit, led by the American Civil Liberties Union, was filed on Tuesday in a Maryland District Court "challenges the suspicion less seizure and searching of internet traffic" by the NSA on U.S. soil, according to court documents. The plaintiffs argue that to do their jobs they must be able to exchange information in confidence, free from, warrantless government search which undermines the named organizations' ability to communicate with clients, victims of human rights abuses, government officials and other civil society groups. The plaintiffs also contend NSA spying violates the First and Fourth Amendments, as well as Article III of the Constitution, because the surveillance orders are "in the absence of any case or controversy." The ACLU's concern is the government's interpretation of the updated Foreign Intelligence Surveillance law, which in 2011 allowed the government to collect 250 million Internet communications under the FISA Amendment Acts. And In 2013, the director of National Intelligence reported the surveillance of almost 90,000 individuals or groups relied on a single court order. The government contends that "upstream" surveillance is covered by the 2008 surveillance law and the practice includes installing devices, with the assistance of companies such as Verizon and AT&T, onto the network of cables, switches and routers that Internet traffic flows through, known as it's "backbone." The ACLU further details the NSA's surveillance program by intercepting massive amounts of communication in transit that are then searched alongside thousands of keywords associated with targets of intelligence analysts. In addition to having weak limitations and numerous exceptions on who they can surveil, the program's pool of potential targets can encompass completely innocent individuals as the only requisite is that the person is likely to communicate "foreign intelligence information, which can include journalists, professors, attorneys or aid workers. The "upstream" surveillance differs from another spying program carried out by the NSA called "PRISM," where information is obtained directly from U.S. companies providing communications services. "Upstream" allows the government to connect surveillance devices at Internet access points, which are controlled by telecommunications providers.

Drones

Restrictions on surveillance drones bolsters civil liberties

ACLU no date (ACLU ,Advocating individual rights by litigating, legislating, and educating the public on a broad array of issues affecting individual freedom, DOMESTIC DRONES, www.aclu.org/issues/privacy-technology/surveillance-technologies/domestic-drones)//ADS

U.S. law enforcement is greatly expanding its use of surveillance drones, and private actors are also seeking to use the technology for personal and commercial use. Drones have many beneficial uses, including in search-and-rescue missions, scientific research, mapping, and more. But deployed without proper regulation, drones equipped with facial recognition software, infrared technology, and speakers capable of monitoring personal conversations would cause unprecedented invasions of our privacy rights. Interconnected drones could enable mass tracking of vehicles and people in wide areas. Tiny drones could go completely unnoticed while peering into the window of a home or place of worship. Surveillance drones have been the subject of fierce debate among both legislators and the public, giving rise to an impressive amount of state legislation—proposed and enacted—to protect individuals’ privacy. Uniform rules should be enacted to ensure that we can enjoy the benefits of this new technology without bringing us closer to a “surveillance society” in which our every move is monitored, tracked, recorded, and scrutinized by the government.

Race

Restrictions on the domestic surveillances of specific races and ethnicity bolsters civil liberties

Cyril 2015 (Malkia

Amala, under and executive director of the Center for Media Justice (CMJ) and co-founder of the Media Action Grassroots Network]; Black America's State of Surveillance; Mar 30; www.progressive.org/news/2015/03/188074/black-americas-state-surveillance)//ADS

The NSA and FBI have engaged local law enforcement agencies and electronic surveillance technologies to spy on Muslims living in the United States. According to FBI training materials uncovered by Wired in 2011, the bureau taught agents to treat “mainstream” Muslims as supporters of terrorism, to view charitable donations by Muslims as “a funding mechanism for combat,” and to view Islam itself as a “Death Star” that must be destroyed if terrorism is to be contained. From New York City to Chicago and beyond, local law enforcement agencies have expanded unlawful and covert racial and religious profiling against Muslims not suspected of any crime. There is no national security reason to profile all Muslims. At the same time, almost 450,000 migrants are in detention facilities throughout the United States, including survivors of torture, asylum seekers, families with small children, and the elderly. Undocumented migrant communities enjoy few legal protections, and are therefore subject to brutal policing practices, including illegal surveillance practices. According to the Sentencing Project, of the more than 2 million people incarcerated in the United States, more than 60 percent are racial and ethnic minorities. But by far, the widest net is cast over black communities. Black people alone represent 40 percent of those incarcerated. More black men are incarcerated than were held in slavery in 1850, on the eve of the Civil War. Lest some misinterpret that statistic as evidence of greater criminality, a 2012 study confirms that black defendants are at least 30 percent more likely to be imprisoned than whites for the same crime. This is not a broken system, it is a system working perfectly as intended, to the detriment of all. The NSA could not have spied on millions of cellphones if it were not already spying on black people, Muslims, and migrants. As surveillance technologies are increasingly adopted and integrated by law enforcement agencies today, racial disparities are being made invisible by a media environment that has failed to tell the story of surveillance in the context of structural racism.

FISA

Restriction on FISA courts bolster civil liberties

Brennan Center for Justice 2015 (Brennan Center for Justice, at New York University Law School is a nonpartisan left-leaning law and public policy institute, FISA Court Needs Reform to Protect Americans' Civil Liberties, www.brennancenter.org/press-release/new-report-fisa-court-needs-reform-protect-americans-civil-liberties, March 18, 2015)//ADS

The Foreign Intelligence Surveillance Court is no longer serving its constitutional function of providing a check on the executive branch's ability to obtain Americans' private communications, concludes a new report released today by the Brennan Center for Justice at NYU School of Law. What Went Wrong with the FISA Court finds that dramatic shifts in technology and law have changed the role of the Foreign Intelligence Surveillance Court (FISA Court) since its creation in 1978 — from reviewing government applications to collect communications in specific cases, to issuing blanket approvals of sweeping data collection programs affecting millions of Americans. These fundamental changes not only erode Americans' civil liberties, but likely violate Article III of the U.S. Constitution, which limits courts to deciding concrete disputes between parties rather than issuing opinions on abstract questions. The FISA Court's wholesale approval process also fails to satisfy standards set forth in the Fourth Amendment, which protect against warrantless searches and seizures. "Today's FISA Court does not operate like a court at all, but more like an arm of the intelligence establishment," said Elizabeth Goitein, co-author of the report and co-director of the Liberty and National Security Program at the Brennan Center for Justice. "The Constitution's vision of the judiciary does not include issuing secret orders approving mass surveillance programs. The court has veered sharply off course, and nothing less than a fundamental overhaul of surveillance oversight practices will restore it to its constitutional moorings." "Although the FISA Court is held up as a bulwark against overbroad spying, it barely fulfills that role," said Faiza Patel, co-author of the report and co-director of the Center's Liberty and National Security Program. "The court's blanket approval of programs that sweep up the personal information of millions of Americans looks nothing like a warrant or any other accepted function of a court. As Congress considers surveillance reform this year, it must look seriously at overhauling the FISA Court to restore its role as a robust protector of Americans' privacy."

Whistleblowers

Whistleblowers bolster civil liberties

Sonenstein 14

(Brian; a writer and activist with a passion for civil liberties and criminal justice reform, Civil Liberties Advocates, Organizations and Whistleblowers Tell Congress to Oppose the USA FREEDOM Act, www.rootsaction.org/news-a-views/828-civil-liberties-advocates-organizations-and-whistleblowers-tell-congress-to-oppose-the-usa-freedom-act, September 15, 2014)///ADS

Dear Members of Congress, We, the undersigned civil liberties advocates, organizations, and whistleblowers, are alarmed that Senator Leahy's recently introduced bill, the USA FREEDOM Act (S. 2685), legalizes currently illegal surveillance activities, grants immunity to corporations that collaborate to violate privacy rights, reauthorizes the PATRIOT Act for an additional 2.5 years, and fails to reform EO 12333 or Section 702, other authorities used to collect large amounts of information on Americans. For these reasons, we encourage both the House and the Senate to oppose this legislation in its current form. Governmental security agencies' zeal for collecting Americans' personal information without regard for cost, efficacy, legality, or public support necessitates that Congress act to protect the rights of residents across the United States and around the globe. Our fundamental civil rights – the human rights we hold dear – are not adequately protected by either the Senate or House versions of the USA FREEDOM Act. The reckless actions of top officials charged with ensuring national security – from lying to Congress to secretly weakening security standards to hacking the communications of our allies – has undermined global confidence that the United States can act as an ethical Internet steward. The 11th-hour gutting of the USA FREEDOM Act in the House of Representatives and the CIA's recent illegal spying on the U.S. Senate underscore just how powerful and out of control this surveillance regime has become. Time and again, these agencies have relied on aggressive manipulation of legal loopholes to thoroughly undermine safeguards and checks and balances

Backdoor

Curtailing Backdoors bolsters Human rights

Fritz 15

(Jason ;doctoral student in the Department of Justice, Law and Criminology at American University's School of Public Affairs , COUNTERTERRORISM, BACKDOORS, AND THE RISK OF "GOING DARK", warontherocks.com/2015/06/counterterrorism-backdoors-and-the-risk-of-going-dark, June 25, 2015)

The terrorist threat to the United States is evolving rapidly, especially in terms of the methods by which extremists communicate. Counterterrorism analysts and operators face a variety of technical challenges to their efforts. In Oct. 2014, Federal Bureau of Investigation (FBI) Director James Comey warned of the growing risk of "going dark," whereby intelligence and law enforcement agencies "have the legal authority to intercept and access communications and information pursuant to court order," but "lack the technical ability to do so." European Police Chief Rob Wainwright has warned that terrorists are using secure communications in their operations more frequently, a technique the Islamic State of Iraq and the Levant (ISIL) is apparently pioneering. The emergence of secure messaging applications with nearly unbreakable end-to-end encryption capabilities such as Surespot, Wickr, Telegram, Threema, and Kik highlights how rapid technological change presents a powerful challenge to security and counterterrorism agencies. Responding to such developments, the FBI has lobbied Congress to legislate the mandatory creation of "backdoors" in commercially available communications via an update to the Communications Assistance for Law Enforcement Act. The Director of the National Security Agency (NSA), Adm. Michael Rogers, suggested creating overt "front doors" to allow the U.S. government access to certain devices and software. This scheme would split between agencies the "key" necessary to decode encrypted information. British Prime Minister David Cameron, went as far as to recommend legislation outlawing end-to-end encryption in the United Kingdom unless the government had assured access to the data "in extremis." President Barack Obama declared that the absence of such backdoors is "a problem" and described the ability to lawfully intercept all forms of communication as a "capability that we have to preserve." Such proposed steps are misguided and ill-advised. Creating backdoors in commercial communications technology is not the answer. First and foremost, in an era where state, terrorist, and criminal actors constantly strive toward — and succeed in — penetrating American commercial and government networks, legislating holes in encryption is dangerous. U.S. government networks themselves are clearly insecure, as the recently identified electronic intrusion into Office of Personnel Management records, as well as historical breaches of Department of Defense systems, indicates. ISIL has even successfully hacked American military social media accounts. Unidentified criminals stole the personal information of more than 100 million Target customers in a breach that the company discovered in 2013. Requiring software companies to weaken their encryption would provide hostile cyber actors additional vectors by which to harass, rob, and spy on American citizens. Relying fail. In Sept. 2014, Apple announced that it was upgrading on legislation to keep pace with technological advancement is impractical and bound to the encryption of iOS 8 to make it technically impossible for anyone but the

device's user to unlock it. This reversed a previous policy whereby Apple would unlock devices if police issued a warrant requiring the company to do so. Apple's move avoided legal complications by making compliance with such requests impossible on a technological level. Director Comey criticized this change in Apple's policy the following month, warning that "[s]ophisticated criminals will come to count on these means of evading detection," such as storing incriminating information on encrypted devices. Through a relatively simple technical modification, Apple effectively locked the FBI out of all devices it manufactures. To expect Congress to adapt constantly to such changes is unrealistic. Mandating the weakening of commercially available encryption would not only threaten the security and privacy of Americans, it would also require the establishment of a bureaucracy dedicated to examining software code and deeming it "backdoor compliant." Such needless red tape would hamstring American technology companies.

Metadata

Curtailling metadata storage bolsters civil liberties

Marrzorati 15

(Luca; intern at Capital, Appellate court invalidates N.S.A. metadata collection program, www.capitalnewyork.com/article/city-hall/2015/05/8567565/appellate-court-invalidates-nsa-metadata-collection-program, May 7, 2015)//ADS

"The government takes the position that the metadata collected—a vast amount of which does not contain directly 'relevant' information, as the government concedes—are nevertheless 'relevant' because they may allow the NSA, at some unknown time in the future, utilizing its ability to sift through the trove of irrelevant data it has collected up to that point, to identify information that is relevant," Lynch wrote. "We agree with appellants that such an expansive concept of 'relevance' is unprecedented and unwarranted." Because the court concluded that the program was not authorized by the language of the USA PATRIOT Act, it did not take up the ACLU's constitutional challenge to the program, based on Fourth Amendment unreasonable search and seizure grounds, "The constitutional issues, however, are sufficiently daunting to remind us of the primary role that should be played by our elected representatives in deciding, explicitly and after full debate, whether such programs are appropriate and necessary," Lynch added. But Lynch denied the ACLU's request for a preliminary injunction against the program, leaving that decision to a district court. In a concurring opinion, U.S Circuit judge Robert Sack reiterated a call for the Foreign Intelligence Surveillance Court to adopt an adversary system, by which some party is arguing against the government.

Library

Curtailing Library archives bolster civil liberties

Walt 2002

(Walt; American social issues journalist and university professor of journalism, The Patriot Act and Bookstores, www.counterpunch.org/2002/07/24/the-patriot-act-and-bookstores, JULY 24, 2002)//ADS

On the first floor are more than 10,000 books on more than 1,200 running feet of shelves that create aisles only about three feet wide. On top of the shelves are stacks of 10, 15, even 20 more books. On the floor are hundreds more, stacked spine out three- or four-feet high. There are books in metal racks, drawers, and on counters. It's hard to walk through the store without bumping into a pile in the 1,000-square foot store. In the basement, in reserve, are 2,000 more books. "Sometimes I order four or five copies of a title, but often I only order one copy, but I want to have whatever my customers want," says owner Arline Johnson who founded the store in 1976 after working almost two decades as a clinical psychologist and teacher. Unlike the chain stores with magazine and newspaper racks, wide aisles, track lighting, and even a coffee shop, Friends-in-Mind has only books and some greeting cards. Also unlike the chain stores with large budgets for space and promotion to attract hundreds of customers a day, Johnson says she sees "on a real good day" maybe 25 or 30 people; often she sees fewer than a dozen. In September 1984, she saw someone she didn't want to see. A week after the Naval Institute Press shipped three copies of Tom Clancy's cold war thriller, *The Hunt for Red October*, the FBI showed up. The FBI, which apparently got the information from the publisher, "wanted to know where the books were and who purchased them," says Johnson. She says she told the two men that she couldn't remember to whom she sold two of the copies, but acknowledged she sent one copy to her cousin, who had served aboard a nuclear submarine, "and had all kinds of clearances." Johnson says she wasn't pleased about the interrogation—"and my cousin certainly wasn't happy about anyone checking on what he was reading." The FBI never returned, but occasionally residents in this rural conservative community will complain about what's in the store. She's been challenged for selling books about Karl Marx, gay rights, and even dinosaurs. Johnson says she tells the "book police" that "it's important that people learn and read about everything, whether they believe it or not." She also stocks copies of the Constitution and the Federalist Papers. Left-wing. Right-wing. Business. Labor. Anti-establishment. Everything's available in her store. "It's not the government's job to tell me or anyone what they can read," she says. But the government has decided that under the cloak of "national security" it can abridge the rights of the citizen. The base is the Foreign Intelligence Surveillance Act (FISA). Under that Act's provisions, the government may conduct covert surveillance of individuals only after seeking an order from a special government-created secret court. However, that Court, in its first two decades, granted every one of the government's more than 12,000 requests. The most recent series of intrusions upon civil liberties began in 1998 when special prosecutor Ken Starr demanded a book store to release records of what Monica Lewinsky had purchased. It was a sweeping allegation that had no reasonable basis of establishing any groundwork in Starr's attacks upon President Clinton. Since then, there have been several cases in which police,

operating with warrants issued in state courts, have demanded a bookstore's records. In state actions, individuals have the right to ask local and state courts to quash subpoenas for records. If denied, they may appeal all the way to state supreme courts. There is no such protection under FISA. Not only can't individuals and businesses be represented in that secret court, they're bound by a federal gag order prohibiting any disclosure that such an order was even issued. There is no recourse. No appeal. Then came the USA Patriot Act, drafted by the Bush administration, and fine-tuned in secret by the House and Senate leadership following the Sept. 11 terrorist attacks. The Patriot Act, which incorporates and significantly expands FISA to include American citizens, was overwhelmingly approved by the Congress, most of whom admit they read only a few paragraphs, if any at all, of the 342-page document. President Bush enthusiastically signed the bill, Oct. 26. Among its almost innumerable provisions, the Act reduces judicial oversight of telephone and internet surveillance and grants the FBI almost unlimited, and unchecked, access to business records without requiring it to show even minimal evidence of a crime. The FBI doesn't even need to give the individual time to call an attorney. Failure to immediately comply could result in that person's immediate detainment. The federal government can now require libraries to divulge who uses public computers or what books they check out, video stores to reveal what tapes customers bought or rented, even grocery and drug stores to disclose what paperbacks shoppers bought. The effect of the USA Patriot Act upon businesses that loan, rent, or sell books, videos, magazines, and music CDs is not to find and incarcerate terrorists—there are far more ways to investigate threats to the nation than to check on a terrorist's reading and listening habits—but to put a sweeping chilling effect upon Constitutional freedoms. The Act butts against the protections of the First (free speech), Fourth (unreasonable searches), Fifth (right against self-incrimination), and Sixth (due process) amendments. If the Act is not modified, book publishers will take even fewer chances on publishing works that, like *The Hunt for Red October* "might" result in the government investigation; bookstore owners may not buy as many different titles; and the people, fearing that whatever they read might be subject to Big Brother's scrutiny, may not buy controversial books or check books out of the library. Even worse, writers may not create the works that a free nation should read. How ironic it is that a President who says he wants everyone to read is the one who may be responsible for giving the people less choice in what they may read. Chris Finan, president of the American Booksellers Foundation for Free Expression, believes "we've seen some shift" in the hard-core attitudes of the government's position. He believes public opinion will eventually shift "from the panic after Sept. 11 to allow a reasonable debate of the dangers" created by the USA Patriot Act. The Act has a built-in sunset provision—several sections will expire, unless Congress renews them, on Dec. 31, 2005. Judith Krug of the American Library Association isn't as optimistic as Finan. "It's going to be used as long as they think they can get away with it," says Krug, one of the nation's leading experts in First Amendment rights and civil liberties. Krug says until the people "start challenging the Act in the federal courts, we'll be lucky if we can 'sunset' out any of it." In the meantime, Arline Johnson says she doesn't keep computer records, accept credit cards, or even have a store newsletter, all of which can compromise the Constitutional protections of her customers. "I once lived and taught in Bulgaria," says Johnson, "and I don't like totalitarian regimes." It makes no difference if it's a Balkan dictatorship or one created out of fear in a democracy. The Bush administration has put

far more fear into the American people than any terrorist could. As Benjamin Franklin once argued, a nation that gives up freedom to gain security deserves neither.

Impacts

War

Environmental Decline

Energy resource depletion will lead to world wars – our government uses more and more energy to solve economic and social problems, and that’s unsustainable

Hanson 8 (Jay Hanson. June 24, 2008. “A BASIC IDEA OF HOW OUR GOVERNMENT WORKS”
JayHanson <http://www.jayhanson.org/democratic.htm>.)

Thermodynamic laws, evolution theory, and modern genetic sciences were unknown by our Founders. Today, these laws and sciences signal the end of our form of government. The first law of thermodynamics (conservation law) states that there can be no creation of matter/energy. This means that the economy is totally dependent upon natural resources for everything. The German physicist Helmholtz and the British physicist Lord Kelvin had explained the principle by the middle of the 19th century. The second law of thermodynamics (entropy law) tells us that energy is wasted in all economic activity. In 1824, the French physicist Sadi Carnot formulated the second law’s concepts while working on “heat engines”. Lord Kelvin and the German physicist Clausius eventually formalized Carnot’s concepts as the second law of thermodynamics. Our government was designed to require more-and-more energy (endless economic growth) to solve social problems, but the thermodynamic laws described above limit the available energy. Energy “resources” must produce more energy than they consume, otherwise they are called “sinks” (this is known as the “net energy” principle). In other words, if it costs more-than-one-barrel-of-oil to “produce” one-barrel-of-oil, then that barrel will never be produced – the money price of oil is irrelevant! Thus, the net energy principle places strict limits (in the physical sense) on our government’s ability to solve social problems. Although bankers can print money, they can not print energy! Biologists have found that our genes predispose us to act in certain ways under certain environments. This explains why history repeats itself and why humans have engaged in war after war throughout history: from time-to-time an environment emerges when “inclusive fitness”[5] is served by attacking your neighbor and stealing his resources. [6] Since our government was designed to require ever-growing energy resources, but energy resources are strictly limited by thermodynamic laws, sooner-or-later our government will collapse into another orgy of world wars. It’s just a matter of time...

Biodiversity

Causes Extinction

Anthropogenic Biodiversity loss is causing the 6th mass extinction

Hayat 6/28 (Ariel Hayal, 6/28/15, [Senior Staff], "Study identifies 6th mass extinction event, lists human activity as primary cause," The Daily Californian, <http://www.dailycal.org/2015/06/28/study-identifies-6th-mass-extinction-event-lists-human-activity-as-primary-cause/>, MX)

After years of warnings from ecologists about the dangers of biodiversity loss, a new study has quantified an ongoing mass extinction event — the sixth in our planet’s history — and suggests humans are largely to blame. The paper, published June 19 in the journal *Science Advances*, takes a “conservative” approach to measuring the extent of the situation because previous estimates have been criticized for overestimating the severity of the extinction crisis. The primary researchers — from institutions such as UC Berkeley, Stanford University and the National Autonomous University of Mexico — compared current extinction rates with a normal baseline rate of two mammal extinctions per 10,000 vertebrate species per 100 years. Based on this measure, about nine vertebrate species should have disappeared from the earth since 1900. But the paper’s “conservative” extinction count stands at 477, which should have taken as many as 10,000 years to occur. Paul Ehrlich, senior fellow at the Stanford Woods Institute for the Environment and co-author of the study, notes that the species extinction rate is the highest it has been in 65 million years. “We’re essentially doing to the planet what the meteor did that took care of the dinosaurs,” he said of the data’s implications. Seth Finnegan, an assistant professor in UC Berkeley’s integrative biology department who specializes in mass extinction, said the researchers’ study contrasts with other studies that tend to estimate modern extinction rates indirectly. For example, some measure areas of destroyed habitats and then extrapolate extinction predictions based on how many species are believed to exist in those areas. “This study doesn’t take the inferential approach,” he said. “They are tallying up well-documented, well-observed extinctions of mammals.” Though extinction can occur because of a variety of environmental factors, the study emphasizes humans’ effect on the alarming rate of species loss. According to Finnegan, industrialization has “drastically accelerated humans’ impact on Earth’s ecosystems.” Co-author Anthony Barnosky, a campus professor of integrative biology, cited a high per-capita use of fossil fuels and the over-exploitation of ecosystems for economic gain as major contributing factors. “In one or two human lifetimes, we are the ones wiping out what evolution took millions of years to create,” he said. In addition to being the driving force behind the sixth mass extinction, humans will ultimately face “high moral and aesthetic costs” in as little as three lifetimes, according to Barnosky. Crucial ecosystem services, such as crop pollination and water purification, will suffer if high rates of extinction persist, the study says. Considering that it took up to millions of years for the planet to rediversify after the previously recorded mass extinctions, the study says, these consequences would be effectively permanent on human time scales.

Warming

Recent Cards

Warming is real and anthro – only acknowledging this allows for reparative action

Myers et al 3/26

[Research Assistant Professor at the Center for Climate Change Communication at George Mason University]

(Teresa A, March 26 2015, "Simple Messages Help Set the Record Straight about Scientific Agreement on Human-Caused Climate Change: The Results of Two Experiments" Plos one. journals.plos.org/plosone/article?id=10.1371/journal.pone.0120985)

The U.S. National Academies [1], the Intergovernmental Panel on Climate Change [2], the U.S. National Climate Assessment [3], and myriad other leading scientific societies around the world have concluded, with great certainty, that human-caused climate change is occurring. Moreover, a growing body of literature demonstrates that the vast majority of individual climate scientists are also convinced that human-caused climate change is happening. Several methods have been used to estimate the extent of this agreement: both surveys of climate scientists [4–6] and empirical reviews of the peer-reviewed literature [4, 7] estimate the consensus at approximately 97%, with some empirical literature reviews suggesting even higher levels of consensus [8–9]. Yet, relatively few Americans know there is widespread agreement among climate scientists that human-caused climate change is occurring. A 2013 survey showed that only 42% of American adults believe “most scientists think global warming is happening.” Moreover, only about 1 in 5 survey respondents (22%) estimated the level of agreement among climate scientists at more than 80%; the most common response was “don’t know” (28% of the sample) with smaller proportions estimating 61–80% (19%), 41–60% (20%), and even lower estimates (10%) [10]. Several explanations have been offered for why the public doesn’t know about the scientific consensus about human-caused climate change, including “false balance” in news coverage [11] and organized efforts to create an illusion of scientific disagreement [12–15]. Public belief about the level of expert agreement on scientific issues appears to be an important factor in acceptance of scientific propositions across a variety of scientific issues—including humans causing climate change, smoking causing lung cancer, and HIV causing AIDS [16]. In the context of climate change, the evidence suggests that understanding the expert consensus is a “gateway” belief, such that recognition of a high level of scientific agreement about human-caused climate change predisposes people to be more certain that climate change is happening, human-caused, serious, and solvable; in turn, these beliefs are associated with greater support for societal responses to address climate change, and behavior to encourage societal responses [17–19], (but see Kahan [20] for an alternative view). It stands to reason that members of the general public will be less convinced of—and concerned about—climate change if they are under the impression that there is considerable disagreement among climate experts about the reality of human-caused climate change.

Warming is exponentially accelerating species loss culminating in the 6th mass extinction - analysis of 131 studies proves

Zielinski 4/30

(Sarah Zielinski, 4/30/15, award-winning science writer and editor, "Climate Change Will Accelerate Earth's Sixth Mass Extinction," Smithsonian.com, <http://www.smithsonianmag.com/science-nature/climate-change-will-accelerate-earths-sixth-mass-extinction-180955138/>, MX)

Climate change is accelerating species loss on Earth, and by the end of this century, as many as one in six species could be at risk of extinction. But while these effects are being seen around the world, the threat is much higher in certain sensitive regions, according to two new comprehensive studies. The planet is experiencing a new wave of die-offs driven by factors such as habitat loss, the introduction of exotic invaders and rapid changes to our climate. Some people have called the phenomenon the sixth mass extinction, on par with the catastrophic demise of the large dinosaurs 65 million years ago. To try and combat the declines, scientists have been racing to make predictions about which species are most likely to go extinct, along with when and where it will happen, sometimes with widely varying results. "Depending on which study you look at, you can come away with a rosy or gloomy view of climate change extinctions," notes Mark Urban of the University of Connecticut. "That's because each study focuses on different species [and] regions of the world and makes different assumptions about climate change and species' responses." In one of the two new studies published today in *Science*, Urban compensated for all those differences by combining 131 previously published studies into one big prediction. If greenhouse gas emissions continue unabated, he calculates, 16 percent of species will be threatened with extinction due to climate change by the end of the century. "Perhaps most surprising is that extinction risk does not just increase with temperature rise, but accelerates, curving upward as the Earth warms," Urban says. If greenhouse gases were capped and temperatures rose a couple degrees less, then the extinction threat would be nearly halved, he found. Urban's analysis focused on major land areas (minus Antarctica) and found that the risk of die-offs was not equal around the world. South America, Australia and New Zealand will experience the most extinctions, probably because these regions have many species that are endemic and found nowhere else in the world, and they rely on habitats that are not found anywhere else. In the second study, Seth Finnegan of the University of California, Berkeley and colleagues drew from the fossil record to make predictions about modern extinction risk in the world's coastal areas. "Extinction is a process that often plays out on very long timescales—thousands of years or more. But our direct observations of modern species span, in even the best cases, only a few hundred years," notes Finnegan. "Fossils allow us to examine the entire histories of different groups, from their first appearance until their final extinction." Finnegan's group used the fossil histories of six groups of marine animals—bivalves, gastropods, sea urchins, sharks, mammals and stony corals—to determine which kinds of animals were inherently more likely to disappear, or the intrinsic risk of extinction. Similar groups of species tend to have similar patterns of extinction, Finnegan notes, which makes fossil studies such as this one possible. They team also analyzed the geographic locations where such extinctions were more likely to occur. The researchers then overlaid their map of intrinsic extinctions with data on today's human impacts and climate change to determine probable

hotspots of species loss. They found that coastal species will be especially at risk near the tropics, including the Indo-Pacific, the Caribbean and the Gulf of Mexico. “The implications of these broad-scale patterns for the future of coastal marine ecosystems will depend on how intrinsic risk and current threats interact to determine future extinction risk,” the researchers note. In some places, such as the North Atlantic, “anthropogenic impacts may dwarf intrinsic risk effects and leave a distinctly human fingerprint on future extinctions.”

Warming is an existential threat

Rampell 6/1

(Catherine Rampell, 6/1/15, [received the Weidenbaum Center Award for Evidence-Based Journalism and is a Gerald Loeb Award finalist], The threat Republicans are ignoring, La Crosse Tribune, http://lacrossetribune.com/news/opinion/catherine-rampell-the-threat-republicans-are-ignoring/article_59a51fc4-9f48-586f-a170-a249f091fa43.html, MX)

That’s because climate change is a national security issue. You can’t credibly claim to be tough on national security and terrorism while simultaneously boasting how unconcerned you are about global warming. A scientific consensus has found that climate change is real. It’s also man-made, and while it can’t be unmade, per se, it can be at least minimized. You wouldn’t know this from the GOP presidential hopefuls, for whom climate denialism — or something close enough to it to amount to the same thing — is sadly considered a prerequisite for the nomination. Ted Cruz said that people who are concerned about global warming are “the equivalent of the flat-Earthers”; Ben Carson argued climate change is fake and also “irrelevant.” Jeb Bush, Rick Santorum, Marco Rubio and Rand Paul have, at best, equivocated, saying climate change is probably real but maybe not anthropogenic. So, you know, nothing to be done. Scott Walker has largely avoided the issue, but his record on other environmental policies (including proposed cuts to recycling) isn’t encouraging. Meanwhile these same candidates — including the once-isolationist Paul — have been offering tough, if vague, platitudes about everything they would do to neutralize any security threat to the United States. But extreme weather — high temperatures, droughts, storms, floods — is politically destabilizing. It can lead to food and water shortages, mass migrations, destruction of infrastructure, disputes over refugees, pandemics. Sure, it doesn’t directly create armed conflict or militia groups, but it can generate the conditions under which these threats are more likely to emerge and thrive. Such prospects are scarier when you consider that many of the parts of the world most vulnerable to climate change are also areas with weak governance and civil unrest. Global warming is, if nothing else, a threat multiplier. Don’t take my word for it; that term “threat multiplier” comes directly from a recent Defense Department report about climate change. America’s military and intelligence branches and their scientific partners have been analyzing environmental data for decades, under both Democratic and Republican administrations. In 2004, for example, the Pentagon developed a blueprint to “imagine the unthinkable”: how a sudden change in the world’s climate might affect national security. Many military reports, task forces, advisory boards and conferences since then have looked at the consequences of more gradual warming — and warned in no uncertain terms of the severe threats it poses to the country’s strategic interests around the globe.

Warming is close to reaching a tipping point - it's now or never

Ocko 6/9

(Ilissa Ocko, 6/9/15, Climate scientist at Environmental Defense Fund, "6 Climate Triggers That Could Completely Change Our World," Yahoo News, news.yahoo.com/6-climate-triggers-could-completely-change-world-183504266.html, MX)

One of the biggest fears about climate change is that it may be triggering events that would dramatically alter Earth as we know it. Known to scientists as "tipping events," they could contribute to the mass extinction of species, dramatic sea level rise, extensive droughts and the transformation of forests into vast grasslands — among other upheavals our stressed world can ill afford. Here are the top six climate events scientists worry about today.

1. The Arctic sea ice melts The melting of the Arctic's summer ice is considered to be the single greatest threat, and some scientists think we've already passed the tipping point. As sea ice melts and the Arctic warms, dark ocean water is exposed that absorbs more sunlight, thus reinforcing the warming. The transition to an ice-free Arctic summer can occur rapidly — within decades — and this has geopolitical implications as nations compete for the newly opened space and petroleum resources. Added to all that will be the damage that would result from the disruption of an entire ecosystem.
2. Greenland becomes ice free The warming of the Arctic may also render Greenland largely ice free. While Greenland's ice loss will likely reach the point of no return within this century, the full transition will take at least a few hundred years. The impacts of the Greenland ice melt is expected to raise sea levels by up to 20 feet. Half of the 10 largest cities in the world, including New York City, and one-third of the world's 30 largest cities are already threatened by this sea-level rise. Today, those cities are home to nearly 1.8 billion people. Other vulnerable American cities include Miami, Norfolk and Boston.
3. The West Antarctic ice sheet disintegrates. On the other side of Earth, the West Antarctic ice sheet is also disintegrating. Because the bottom of this glacier is grounded below sea level, it's vulnerable to rapid breakup, thinning and retreat as warm ocean water eats away at the ice. Scientists expect the West Antarctic ice sheet to "tip" this century, and there is evidence that it already began happening in 2014. However, the entire collapse of the glacier, which would raise sea level by 16 feet, could take a few hundred years.
4. El Niño becomes a more permanent climate fixture. The oceans absorb about 90 percent of the extra heat that is being trapped in the Earth system by greenhouse gases. This could affect the ocean dynamics that control El Niño events. While there are several theories about what could happen in the future, the most likely consequence of ocean heat uptake is that El Niño, a natural climate phenomenon, could become a more permanent part of our climate system. That would cause extensive drought conditions in Southeast Asia and elsewhere, while some drought-prone areas such as California would get relief. While the transition to a world with more El Niños is expected to be gradual and take around one hundred years, the event could be triggered during this century.
5. The Amazon rainforest dies back Deforestation, a longer dry season and rising summer temperatures are threatening the amount of rainfall in the Amazon. At least half of the Amazon rainforest could turn into savannah and grassland. Once that event is triggered, the changes could happen over just a few decades. This would make it very difficult for the rainforest to reestablish itself and

would lead to a considerable loss in biodiversity. However, the reduction of the Amazon ultimately depends on what happens with El Niño, along with future land-use changes from human activities. 6. Boreal forests are cut in half Increased water and heat stress are taking a toll on the large forests in Canada, Russia and other parts of the uppermost Northern Hemisphere. So are their vulnerability to disease and fires. This could lead to a 50 percent reduction of the boreal forests — an event from which they may never be able to recover. Instead, the forest would gradually transition into open woodlands or grasslands over several decades. This would have a huge impact on the world's carbon balance because forests can absorb much more carbon than grasslands can. As the forest diminishes, the climate will be affected — as will the Earth's energy balance. However, the complex interaction between tree physiology, permafrost and fires makes the situation tricky to understand.

Warming causes extinction - Currents attempts to solve fail

O'Callaghan 6/19

(Jonathan O'Callaghan, 6/19/15, [Southeast Asia director of publishing and partnerships], "Will YOUR child witness the end of humanity? Mankind will be extinct in 100 years because of climate change, warns expert," Daily Mail, www.dailymail.co.uk/sciencetech/article-3131160/Will-child-witness-end-humanity-Mankind-extinct-100-years-climate-change-warns-expert.html, MX)

Humans will be extinct in 100 years due to overcrowding, declining resources and climate change, according to a prominent scientist. The comments were first made by Australian microbiologist Dr Frank Fenner in 2010, but engineer and science writer David Auerbach has reiterated the doom-laden warning in his latest article. He criticises the recent G7 summit for failing to deal with the problems facing the survival of humanity, such as global warming and exhausting Earth's resources. Mr Auerbach goes on to say that experts have predicted that 21st century civilisation faces a similar fate to the inhabitants of Easter Island, who went extinct when they overexploited their natural habitat. A lot of other animals will, too. It's an irreversible situation. 'I think it's too late. I try not to express that because people are trying to do something, but they keep putting it off.' At the G7 talks in Bonn in Germany earlier this month, governments failed to come up with a clear plan to cut emissions in the coming years. It emerged that countries' current pledges for greenhouse gas cuts will fail to achieve a peak in energy-related emissions by 2030. This will likely result in a temperature rise of 2.6°C by the end of the century, the International Energy Agency said. 'When the G7 called on Monday for all countries to reduce carbon emissions to zero in the next 85 years, the scientific reaction was unanimous: That's far too late,' Mr Auerbach wrote. The widely agreed goal is that global temperatures must be kept below a rise of 2°C by the end of the century. A 5°C increase, as predicted to occur by 2100 at the moment, would cause widespread flooding, famine, drought and mass extinction. 'Even the 2°C figure predicts more than a metre's rise in sea levels by 2100, enough to displace millions,' Mr Auerbach noted in his Reuters article. But he said that current targets are simply not enough to keep under this 2°C target. The US has suggested cutting emissions by up to 28 per cent by 2025 from 2005 levels, the EU 40 per cent from 1990 to 2030, and China an unspecified amount. 'Ultimately, we need a Cold War-level of investment in

research into new technologies to mitigate the coming effects of global warming,' he concluded. 'Without it, the UN's work is a nice gesture, but hardly a meaningful one.'

No Pause

There is no warming pause

Mathiesen 6/4

(Karl Mathiesen, 6/4/15, [environmental journalist; writes the Guardian's Eco Audit.], "Global warming 'pause' didn't happen, study finds," <http://www.theguardian.com/environment/2015/jun/04/global-warming-hasnt-paused-study-finds>, MX)

Global warming has not undergone a 'pause' or 'hiatus', according to US government research that undermines one of the key arguments used by sceptics to question climate science. The new study reassessed the National Oceanic and Atmospheric Administration's (Noaa) temperature record to account for changing methods of measuring the global surface temperature over the past century. The adjustments to the data were slight, but removed a flattening of the graph this century that has led climate sceptics to claim the rise in global temperatures had stopped. "There is no slowdown in warming, there is no hiatus," said lead author Dr Tom Karl, who is the director of Noaa's National Climatic Data Centre. Dr Gavin Schmidt, a climatologist and the director of Nasa's Goddard Institute for Space Studies said: "The fact that such small changes to the analysis make the difference between a hiatus or not merely underlines how fragile a concept it was in the first place." The results, published on Thursday in the journal Science, showed the rate of warming over the past 15 years (0.116C per decade) was almost exactly the same, in fact slightly higher, as the past five decades (0.113C per decade). In 2013, the UN's most comprehensive report on climate science made a tentative observation that the years since 1998 had seen a "much smaller increasing trend" than the preceding half century. The results highlighted the inadequacy of using the global mean surface temperature as the primary yardstick for climate change. Karl said: "There's been a lot of work done trying to understand the so-called hiatus and understand where is this missing heat." A series of studies have since identified a number of factors, including heat transferred into deep oceans and small volcanic eruptions, that affected the temperature at the surface of the Earth. "Those studies are all quite valid and what they suggest is had those factors not occurred the warming rate would even be greater than what we report," said Karl. Dr Peter Stott, head of climate monitoring and attribution at the UK's Met Office, said Noaa's research was "robust" and mirrored an analysis the British team is conducting on its own surface temperature record. "Their work is consistent with independent work that we've done. It's within our uncertainties. Part of the robustness and reliability of these records is that there are different groups around the world doing this work," he said. But Stott argued that the term slowdown remained valid because the past 15 years might have been still hotter were it not for natural variations. In the coming years the world is expected to move out of a period in which the gradient of warming has not slowed even though the temperature has been moderated. This means "we could have 10 or 15 years of very rapid rates of warming," he said. "Even though the observed estimate is increased, over and above that there is plenty of evidence that the rate of warming is still being depressed," he said. "The caution is around saying that that is our underlying warming rate, because the climate models are predicting substantially higher rates than that." Noaa's

historical observations were thrown out by unaccounted-for differences between the measurements taken by ships using buckets and ships using thermometers in their engine intakes, the increased use of ocean buoys and a large increase in the number of land-based monitoring stations. "Science can only progress based on as much information as we have and what you see today is the most comprehensive assessment we can do based on all the information that's been collected," said Karl. Schmidt called the new observations "state of the art" and said Nasa had been in discussions with Noaa about how to incorporate the findings into their own global temperature record. Prof Michael Mann, whose analysis of the global temperature in the 1990s revolutionised the field, said the work underlined the conclusions of his own recent research. "They've sort of just confirmed what we already knew, there is no true 'pause' or 'hiatus' in warming," he said. "To the extent that the study further drives home the fact ... that global warming continues unabated as we continue to burn fossil fuels and warm the planet, it is nonetheless a useful contribution to the literature." Bob Ward, policy and communications director at London's Grantham Research Institute, said the news that warming had been greater than previously thought should cause governments currently meeting in Bonn to act with renewed urgency and lay foundations for a strong agreement at the pivotal climate conference in Paris this December. "The myth of the global warming pause has been heavily promoted by climate change sceptics seeking to undermine the case for strong and urgent cuts in greenhouse gas emissions," said Ward.

No Pause - also awareness doesn't solve

Note: Also kind of makes the humans don't care about threats because they're too far off argument - doesn't really have an impact though

Conca 6/15

(James Conca, 6/15/15, [scientist in the field of the earth and environmental sciences for 33 years], "A Pause In Global Warming? Not Really," Forbes, www.forbes.com/sites/jamesconca/2015/06/15/a-pause-in-global-warming-not-really/, MX)

The rate of global warming during the last 15 years has been as fast as the warming seen during the last half of the 20th Century, according to new study published in Science this month by scientists from the National Oceanic and Atmospheric Administration (NOAA). The new study used the latest global surface temperature data and other improvements in the quality of the observed record. This study refutes the notion that there has been a slowdown, hiatus, or Pause, in the rate of global warming in recent years. The Pause has been a rallying cry for those not wanting to accept climate change as real. Of course, conspiracy theorists claim that NOAA purposefully tampered with the data to make sure it showed a warming trend (The Week). Because that's what scientists do. Right? The Pause was an idea from a 2013 UN report by the Intergovernmental Panel on Climate Change (IPCC) that concluded the upward global surface temperature trend from 1998 to 2012 was markedly lower than the trend from 1951 to 2012. But Thomas Karl, Director of NOAA's National Centers for Environmental Information, says, "Our new analysis suggests that the apparent hiatus may have been largely the result of limitations in

past datasets, and that the rate of warming over the first 15 years of this century has, in fact, been as fast or faster than that seen over the last half of the 20th century.” The Pause never made sense to me given the other warming data available over this time period: - the Greenland and Antarctic ice sheets lost huge ice mass - glaciers continued to shrink worldwide - Arctic sea ice and Northern Hemisphere spring snow cover continued to decrease in extent - ocean warming continued unabated Besides, the IPCC data in the 2013 report didn’t actually show much of a Pause anyway. The report actually concluded, “Warming of the climate system is unequivocal, and since the 1950s, many of the observed changes are unprecedented over decades to millennia.” This is not the report I would cite if I wanted to show global warming was a fantasy. On the other hand, NOAA scientists have made significant improvements in the calculation of trends since the release of the IPCC report, and now use a global surface temperature record that includes the most recent two years of data, 2013 and 2014, the hottest year on record. The calculations also use improved versions of both sea surface temperature and land surface air temperature datasets. A correction that accounts for the difference in data collected from buoys and ship-based data is probably the most substantial improvement in the calculations. Before 1974, the primary method for measuring sea surface temperatures was by ship. But since then, buoys, with greater accuracy, have been used in increasing numbers. Data collected from buoys are always cooler than ship-based data, and we’ve developed methods for accurately comparing these two crucial data sets. The new analysis also demonstrated that incomplete spatial coverage led to underestimates of the true global temperature change previously reported in the 2013 IPCC report. The integration of dozens of data sets, including the International Surface Temperature Initiative databank, NOAA’s Global Historical Climatology Network-Daily dataset, and forty other historical data sources, has more than doubled the number of weather stations available for analysis, especially for the Arctic, where temperatures have been increasing the most. But the results from the full data set over the last century didn’t really change much with the new analysis. Before, it was 1.17°F/century. With this new analysis, it’s 1.22°F/century, not much different. The Pause was never much of a pause. Data like this is about trends, not absolutes. These improvements in data analyses will not sit well with many people. “We’re all climate change deniers at heart,” says Oliver Burkeman of The Guardian. That’s a problem for more things than the environment. As a species, we just don’t care as much about existential threats that are not immediately obvious. We are hard-wired to care about things that are immediately important, both good and bad. It’s why we keep doing stupid things, repeating history in bad ways, giving rise to the idea that we never seem to learn. Nobel Prize-winning psychologist Daniel Kahneman states it more dolefully in terms of climate change, “No amount of psychological awareness will overcome people’s reluctance to lower their standard of living.”

Try or Die

There is an invisible threshold that will result in massive and unstoppable feedback loops - it's try or die

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 24-26, MX)

So far, we have discussed events that are predicted with a high degree of certainty. However science is discovering mechanisms that may result in sudden irreversible changes in the earth's environment. These are termed threshold events, whereby a further small increase in temperature triggers a major change in the earth's control mechanisms. The U.S. National Academy of Sciences supports this concept and believes that there could be an abrupt climate change. The following are a few examples of possible mechanisms. The gulf stream, flowing north in the North Atlantic Ocean, warms northern Europe and returns deep cold waters flowing south. Studies from the National Oceanographic Centre in the UK have shown that the returning current may have slowed by 30 percent since 1957.¹⁶ The northward flow is weakening due to climate-related increases in the southward flow of fresh water from melting ice. This event is depicted in the doomsday thriller *The Day After Tomorrow*. If the gulf stream reversed, Europe would have the climate of Hudson Bay, despite a warming world. There are a number of natural stores of greenhouse gases ("sinks") in the tundra, soils, and oceans. These sinks could release their gases as the temperature increases, leading to a rapidly accelerating global warming. The permafrost in the tundra of Siberia is thawing rapidly and is releasing frozen stores of the greenhouse gas methane.¹⁷ The oceans absorb 2 billion tons more carbon dioxide than they release each year, and this is about one third of all carbon dioxide produced by humanity. In future, with warming of the ocean's water, this sink may be compromised and there may be a net release of carbon dioxide into the atmosphere. However at present the Antarctic Ocean is becoming more acidic due to absorption of carbon dioxide from the atmosphere. The acidity will affect the ability of tiny crustaceans to grow their calcium carbonate shells, and an important link in the food chain may be lost.¹⁸ The forests of the world are an important carbon sink, but as the temperature rises trees become sick and become net producers rather than stores of carbon dioxide. British scientists have also discovered another feedback mechanism whereby warmer temperatures have increased microbial activity in the soil, releasing greater than expected amounts of carbon—quantities sufficient to reduce Britain's attempt to curtail greenhouse gas emissions.¹⁹ There are other mechanisms whereby global warming is being accelerated. Arctic ice is rapidly melting, being 20 percent less than normal during the summer of 2005. Dr. Mark Serreze of Colorado's National Snow and Ice Data Center, believes that a threshold may soon be reached beyond which sea ice will not recover. A feedback process may be set in motion, accelerating the melting of ice, as there is more open blue water to absorb solar energy and less white ice to reflect sunlight back into space.²⁰ The major threat of global

sea level rising comes from the glaciers of Greenland and Antarctica. Greenland's glaciers are melting into the sea at almost twice their previously observed rate in the last five years.' The average temperature of Greenland has risen by 3°C (5.4°F) over the last two decades and between 1996 and 2006 the amount of water lost from Greenland's ice sheet increased from 90 cubic kilometers (21.6 cubic miles) to 220 cubic kilometers (52.8 cubic miles) per year. Greenland's ice sheet covers 1.7 million square kilometers (0.66 million square miles) with ice of up to 3 kilometers thick (1.86 miles), and if completely melted it would raise global sea levels by around 7 meters (7.65 yards). The evidence that we are moving into an accelerated phase of global warming is supported by data showing that 9 of the 10 warmest years since 1860 have occurred since 1990 and 19 since 1981, and annual increases in the concentration of carbon dioxide in the atmosphere are accelerating as shown by data from the U.S. Government's National Oceanic and Atmospheric Administration. These measurements are sufficient for scientists to be increasingly concerned that damage to carbon sinks and other mechanisms described above may be playing a part. James Lovelock is a scientist, respected internationally for his pioneering work on biological feedback systems. He introduced the Gaia concept of the living earth acting like a single organism by using feedback mechanisms to maintain stability of temperature and climate over long periods of time. In 2006, in his book *The Revenge of Gaia*, he argued that global warming will be amplified by the simultaneous malfunction of several feedback systems due to human activities and it is already too late to stop catastrophic warming.²² One such mechanism is that of global dimming, whereby aerosols in the atmosphere produced by global industry are shielding the earth from part of the sun's radiation. With a severe industrial downturn, a sudden leap in global temperatures will be expected. Various events are likely to precipitate economic downturn, such as the likely oil shortage are discussed later in this chapter.

Systemic

Climate change is a systemic impact- it affects 325 million people today and leads to both death and hardship

O'Hara and Abelsohn 11 (Dennis Patrick O'Hara PhD and Alan Abelsohn. "Ethical Response to Climate Change" *Ethics and the Environment*, Vol. 16, No. 1 (Spring 2011), pp. 25-50)

In 2000, in what was considered a conservative study, excluding many of the more indirect effects of climate change on health, climate change "was estimated to have caused 150,000 deaths and 5.5 million DALYs [disability adjusted life years]" (World Health Organization [WHO] 2003, 31). The majority of these effects are being felt in developing countries, due to increasing incidence of diarrhea, malaria and malnutrition (McMichael 2004). As the effects of climate change continue to grow, the incidence of death and disease have likely increased from the levels of 2000 (Intergovernmental Panel on Climate Change, Working Group II [IPCC WGII] 2007). In fact, in a recent report by the Global Humanitarian Forum, Kofi o'hara & abelsohn ethical response to climate change 27 Annan stresses that climate change is "the greatest emerging humanitarian challenge of our times" (Global Humanitarian Forum 2009, 2). The report estimates that over 300,000 lives are lost each year due to climate change, with the annual death toll estimated to reach 500,000 by 2030, and that "climate change today seriously impacts on the lives of 325 million people" (Global Humanitarian Forum 2009, 9, 11, 13). Due to indirect effects, climate change not only threatens each person's fundamental and inalienable "right to life, liberty, and personal security" as guaranteed by the Universal Declaration of Human Rights (United Nations 1948, Article 3), it is already responsible for considerable death and enormous hardship. The factors that cause climate change, and the efforts to both mitigate and adapt to it, raise ethical issues that require ethical responses.

Economy

Climate change turns econ- efforts to mitigate climate change help the economy

O'Hara and Abelson 11 (Dennis Patrick O'Hara PhD and Alan Abelson. "Ethical Response to Climate Change" Ethics and the Environment, Vol. 16, No. 1 (Spring 2011), pp. 25-50)

Fourthly, as the Stern Report has noted, "the evidence shows that ignoring climate change will eventually damage economic growth....Tackling climate change is the pro-growth strategy for the longer term, and it can be done in a way that does not cap the aspirations for growth of rich or poor countries. The earlier effective action is taken, the less costly it will be" (Stern 2006, ii). Delaying action to reduce GHG emissions will actually be more costly to economies in developed countries both in the near and long term. The "economic harm" argument is a misguided and ill-informed prioritization of current investors' interests at the expense of the welfare of future generations. Ironically, when President H.W. Bush addressed the Rio Earth Summit on June 15, 1992, he noted that, "It's been said that we don't inherit the earth from our ancestors, we borrow it from our children" (Bush 1992). Regrettably, this insight did not inform his response to climate change.

Violence

Best studies using meta-analyses show climate change leads to widespread violence

Levy and Sidel 14 (Barry S. Levy, MD, MPH, is Adjunct Professor of Public Health at Tufts University School of Medicine, Boston and Victor W. Sidel, MD, is Distinguished University Professor of Social Medicine Emeritus at Montefiore Medical Center and Albert Einstein College of Medicine, and an Adjunct Professor of Public Health at Weill Cornell Medical College, New York. "Collective Violence Caused by Climate Change and How It Threatens Health and Human Rights." *Health and Human Rights*, Vol. 16, No. 1, Climate Justice and the Right to Health (June 2014), pp. 32-40)

Meta-analyses of numerous studies provide the strongest evidence of a causal link between climate change and violence. The most comprehensive investigation on climate change and human conflict has been a meta-analysis by Hsiang et al., which was based on 60 longitudinal studies, mostly published since early 2009. 31 They found that deviations from normal precipitation and from mild temperatures significantly increased the risk of conflict, especially in poorer populations. They estimated that each standard deviation in climate toward more rainfall or warmer temperatures (equivalent to about a 3o C rise above average in New York City temperatures) increased the frequency of intergroup conflict overall by 14%—and in some places by more than 50%. They appropriately concluded that, with rising temperatures over future decades, there could be substantial increases in conflict.³¹ Although critics have suggested that this meta-analysis suffers from selection bias and conflates climate with weather, we believe that the authors have adequately refuted critiques concerning selection bias and that their inclusion of papers that cover long time periods minimizes the concern about conflating climate with weather.^{32,33} We therefore find its results and conclusions to be compelling evidence of a causal association between climate change and violent conflict.

AT: Warming Deniers

There are two types of warming deniers - those that do so unconsciously and those that do so for money - either way, reject both

Ropeik 12

(David Ropeik [Instructor at Harvard, a consultant in risk perception and risk communication], 2012, "The Ethics of Climate Change Denial," Big Think, bigthink.com/risk-reason-and-reality/the-ethics-of-climate-change-denial-2, MX)

Here is a version of The Trolley Problem, a classic experiment in ethics. Let's say you are next to some train tracks, and down the tracks and behind a hill you see smoke and hear the rumblings of what sounds like a train headed your way. You also see five people on the tracks who will be killed if it is a train. They are unaware of the danger, and too far away to hear or see you. To save them, before you know for sure it's a train, you can throw a switch which will divert the train to another track, where a single person is standing. What's the ethical thing to do? Now let's add a twist. Let's say you're standing near the tracks with a friend, and she is sure a train is coming and wants to throw the switch. But your deeply held religious faith says you are not supposed to interfere with what God has preordained. So you argue with your friend that, despite the smoke and noise, she can't be sure it's a train and she shouldn't do anything. Still, she goes to throw the switch, and you try to stop her, even though if it is a train, five people will die! Is that ethical? Now let's make this hypothetical real, and substitute climate change for the train. One of the most extensive multi-disciplinary research efforts in human history has determined that the climate is changing in ways that will cause massive disruption of the biological systems on which all life depends. The likelihood is that this will cause massive suffering and death, but the science isn't absolutely certain. Friends see that evidence and want to act. But your deep beliefs lead you to see the evidence through different lenses, so you both deny the evidence and you try to keep your friends from acting. Is that denial of climate change ethical? Like most such dilemmas, it's not as black and white as it seems. There are two populations of climate change deniers. Most, though they wield the weapons of fact in what sounds like an intellectual battle, are actually fighting a much more profoundly emotional war. As we all do with many issues, climate change deniers are interpreting the evidence so their view will agree with the group they identify with most strongly. That strengthens their group's dominance in society, and enhances the group's acceptance of them as members in good standing, both of which are vital for survival for social animals like us who depend on the tribe for our well being. This powerful tendency to interpret the facts so our views agree with our group, known as Cultural Cognition, happens below consciousness, below purposeful choice, and beyond what most would call free will. So, like the true believer near the train tracks whose beliefs caused him to honestly see things in a different way, this sort of climate change denial is the product of powerful subconscious motivations. It is an honest result of the innate way human cognition works. Though I disagree with climate change deniers, and I am frustrated by their stubborn rejection of overwhelming evidence, this version of denialism does not seem unethical. To blame behavior as unethical requires belief that we have conscious control of our choices and actions, and the social science evidence is pretty persuasive that a lot of our

'thinking' happens beyond our conscious awareness, or our ability to control it. But now let's add another twist to the Trolley Problem. Let's say you're standing by the tracks because you're waiting for a train to deliver merchandise that will earn you hundreds of millions of dollars, but only if it arrives on time. You lose hundreds of millions if the train is late. Throwing the switch might save those five people (and kill the one) but it will delay the train and cost you a TON of money. Is it ethical to try and keep your friend from throwing the switch now? Of course not. This is selfish and immoral by any reasonable standard. Yet this is precisely the nature of the climate denial by a small group of people who have, for personal and economic reasons, consciously created doubt about climate change, lobbying and campaigning against efforts to reduce the risk or even just to adapt to its effects. These deniers are different. Their actions are a matter of will, conscious and controlled, and their motives are personal wellbeing at the expense of others, at the expense in fact of nothing less than the health of the biosphere of the planet. This staggeringly selfish behavior embodies the purest example of what any fair minded person would call unethical. Evil, even.

Human Rights

CC kills HR

Empirics show climate change contributes to a litany of impacts including collective violence, which threatens human rights for all people on Earth

Levy and Sidel 14 (Barry S. Levy, MD, MPH, is Adjunct Professor of Public Health at Tufts University School of Medicine, Boston and Victor W. Sidel, MD, is Distinguished University Professor of Social Medicine Emeritus at Montefiore Medical Center and Albert Einstein College of Medicine, and an Adjunct Professor of Public Health at Weill Cornell Medical College, New York. "Collective Violence Caused by Climate Change and How It Threatens Health and Human Rights." *Health and Human Rights*, Vol. 16, No. 1, Climate Justice and the Right to Health (June 2014), pp. 32-40)

Climate change causes or contributes to adverse environmental consequences, including global warming, extreme deviations in rainfall, sea level rise, extreme weather events, and droughts, floods, and wildfires. Climate change threatens human health and well-being by increasing the risk of heat-related disorders; respiratory and allergic disorders; vectorborne, waterborne, and foodborne infectious diseases; food insecurity and malnutrition; mental disorders; and violence, most notably, collective violence. Collective violence due to climate change threatens basic human rights, as embodied in the Universal Declaration of Human Rights (UDHR) and other international human rights instruments. For example, it threatens the rights enumerated in Article 25 of the UDHR, including the right to a standard of living adequate for health and wellbeing, including rights to food, clothing, housing, medical care, and social services, as well as the right to security.¹ In this paper, we review the evidence that climate change causes or contributes to collective violence and the threats that this violence poses to health and human rights. In addition, we discuss challenges for future research on this subject, prevention of collective violence due to climate change, and States' obligations to prevent collective violence and protect human rights that are threatened by collective violence due to climate change. Violence has long been recognized as a major public health problem.² It is defined as "the intentional use of physical force or power, threatened or actual, against oneself, another person, or against a group or community that either results in or has a high likelihood of resulting in injury, death, psychological harm, maldevelopment or deprivation."³ It includes self-inflicted, interpersonal, and collective violence. Collective violence is defined as "the instrumental use of violence by people who identify themselves as members of a group...against another group or set of individuals, in order to achieve political, economic or social objectives."⁴ It includes armed conflict, state-sponsored violence (such as genocide and torture), and organized violent crime (such as gang warfare). Collective violence causes much morbidity and mortality, damage to the healthsupporting infrastructure of society, forced migration, environmental damage, diversion of resources, and more violence.⁵ Historical studies on climate change and violence: Climate change has been associated with violence for centuries. Three studies by Zhang and colleagues provide strong evidence to support this association. Zhang et al. demonstrated that, in the Preindustrial Era (from 1500 to 1800) in the Northern Hemisphere, climate change was the major driver of armed conflict and other large-scale humanitarian crises, and that social mechanisms failed to prevent these crises.⁶ The study found

that falling ambient temperatures decreased agricultural production, which, in turn, led to war and other major social problems, including inflation, famine, and population decline.⁶ In another study, Zhang et al. found that, in preindustrial Europe, cooling of the climate between 1560 and 1660 was the ultimate cause of successive agro-ecological, socioeconomic, and demographic catastrophes.⁷ In yet another study, Zhang et al. found that the frequency of warfare in eastern China over the past millennium was significantly associated with Northern Hemisphere temperature oscillations, especially cooling phases that significantly decreased agricultural production.⁸

Turn: Climate change destroys human rights

Caney 8 (Simon Caney works in Department of Politics and International Relations, Oxford University, UK. 2008 "Human rights, climate change, and discounting" *Environmental Politics*, 17:4, 536-555)

Some affirm a very minimal set of rights and would be sceptical of extending this set to include 'environmental' rights of any kind. Others do not take such a hostile approach but do ask why we should accept a right to a safe environment. The Stern Review, for example, insists quite rightly that rights 'should be argued rather than merely asserted' (Stern 2007, p. 47). In this paper I hope to have provided such an argument. The kinds of considerations that we normally invoke to defend human rights, I maintain, entail that persons have a human right not to suffer from the ill-effects of global climate change. Climate change undermines persons' human rights to a decent standard of health, to economic necessities, and to subsistence.¹⁸ I have, moreover, argued that this right should not be discounted. Its moral importance does not diminish over time. In doing so, however, I have defended a scope-restricted view with respect to discounting. That is to say, I have defended a view which (1) holds that basic rights should not be discounted but (2) allows for the possibility that that other values might be subject to a positive pure time discount rate.

CC O/W's HR

States have a moral obligation to protect humanity from climate change-induced collective violence

Levy and Sidel 14 (Barry S. Levy, MD, MPH, is Adjunct Professor of Public Health at Tufts University School of Medicine, Boston and Victor W. Sidel, MD, is Distinguished University Professor of Social Medicine Emeritus at Montefiore Medical Center and Albert Einstein College of Medicine, and an Adjunct Professor of Public Health at Weill Cornell Medical College, New York. "Collective Violence Caused by Climate Change and How It Threatens Health and Human Rights." *Health and Human Rights*, Vol. 16, No. 1, Climate Justice and the Right to Health (June 2014), pp. 32-40)

Because of their legal and moral obligations to protect human rights, States must work to prevent collective violence and to protect human rights that are threatened by collective violence due to climate change. States have legal and moral obligations to mitigate climate change and thereby reduce the risk of its adverse consequences to health and human rights. And, as convincingly described in a recent review article by two legal scholars, they have legal and moral obligations to promote and support adaptation to climate change.⁴⁴

Authoritarianism

Reform Fails

Epistemology

Discount affirmative authors' flawed imperialist epistemology – progressive politics fail in reality

Beeson, PhD, 10 [professor in political science and international relations]

(Mark, March, Environmental Politics Vol 19 No 2 "The coming of environmental authoritarianism" www.tandfonline.com/doi/pdf/10.1080/09644010903576918#.VY294vIViko)

-also an indict of ekerskly

One of the most noteworthy aspects of analyses of broadly conceived 'Asian development' is that it has been understood through theoretical models and concepts that were developed elsewhere, and which overwhelmingly reflect a 'Western' historical experience as a consequence (Acharya and Buzan 2007). At its most extreme and abstract, mainstream international relations (IR) theory barely reflects the Western experience, let alone that of the rest of the world. The criticisms of realism and neorealism are sufficiently well known to need little rehearsal here (see, for example, Legro and Moravcsik 1999), but it is important to emphasise how little help the universal claims, abstractions and assumptions of much Western IR theory actually provide when trying to make sense of the very different historical experience of the states in a region as diverse as East Asia. And what is true of much IR theory is even more evident in the Eurocentric preoccupations in much of the theoretical discussion about environmental issues and their possible political implications. Much theorising about the sorts of political structures, personal practices and normative values intended to conceptualise and even address environmental degradation is frequently brilliant and inspiring. It is also often incongruously at odds with the lived experiences of much of the world's population, many of whom find themselves engaged in an increasingly desperate struggle for survival. For example, Linklater (1998, p. 8) suggests that 'it is no longer utopian, at least as far as the relations between like-minded states which are exposed to high levels of transnational harm are concerned, to imagine new forms of political community and new conceptions of citizenship which bind sub-state, state and transnational authorities and their loyalties together in a post-Westphalian society'. There is little in the experience of the East Asian region to suggest that such transnational responses are likely to emerge from the present crisis. Indeed, where Asia's 'like-minded states' have shown an interest in developing transnational structures they have often been deliberately designed to reinforce the sovereignty of individual states, rather than collective action, and emerged as responses to liberalising pressures elsewhere (Beeson 2009). As Campbell (2005, p. 229) points out, 'the potential for environmental regionalism to increase national political demand for more democratic and transparent environmental policy setting also raises governmental apprehension about the indirect effects of relinquishing sovereignty to a regional institution.' Yet, whatever we may think about Asia's authoritarian regimes, we need to recognise that they have frequently been associated with a (generally successful) historical pattern of development that has prioritised the economic over the political, and that this model may continue to have appeal and potential efficacy (Beeson 2007b). The possibility that the state will, for better or worse, remain at the centre of attempts at environmental management

is recognised by some scholars (Meadowcroft 2005), but even some of the most sophisticated analyses of the state's role seem overwhelming Eurocentric, highly abstract and not terribly helpful in explaining current or likely future political and environmental outcomes in places like Southeast Asia. For example, Eckersley's (2004, p. 178) belief that there is 'the potential for a vibrant public sphere and innovative discursive procedures to lift the horizons of not only democratic opinion formation but also democratic will-formation beyond the territorially bounded community of citizens', has little obvious resonance with the history of much of Southeast Asia [emphasis in original]. The reality is that the Philippines, the country with arguably the most vibrant civil society in Southeast Asia, also has one of the most appalling environmental records (Fahn 2003, p. 117). Even in 'developed' industrial democracies with long traditions of political pluralism and arguably more effective civil societies, it has long been recognised that the exercise of effective 'green' agency is highly problematic and faces fundamental problems of mobilisation, organisation and collective action. The – perhaps understandable – suspicion of traditional politics, hierarchy and political authority has often rendered green parties politically ineffective (Goodin 1992). Even if we recognise the changes that have taken place in the social structures and even consciousness of many Western societies (Carter 2007), the reality on the ground in much of Southeast Asia and China is very different. Quotidian reality becomes especially important when we consider the potential efficacy of deliberative democracy, which some see as a way of resolving political conflicts over the environment. Although deliberative democracy has been described as 'the currently hegemonic approach to democracy within environmental thinking' (AriasMaldonado 2007, p. 245), it has little obvious relevance to the situation in East Asia. While there is much that is admirable about the central precepts of deliberative democracy (see Bohman 1998), its underlying assumptions about Environmental Politics 281 Downloaded by [] at 11:04 26 June 2015 the circumstances in which political activity actually occur are strikingly at odds with the lived reality outside North America and Western Europe. This merits emphasis because for some writers rational, informed discourse is central to sustainable environmental management and the resolution of the competing interests that inevitably surround it (Hamilton and Wills-Toker 2006). And yet, as the very limited number of studies that actually examine environmental politics under authoritarian rule demonstrate, the reality is very different and the prospects for the development of progressive politics are very limited (Doyle and Simpson 2006). Even if we assume that political circumstances do actually allow for a politically unconstrained and informed discussion of complex issues, as Arias-Maldonado (2007, p. 248) points out, 'the belief that citizens in a deliberative context will spontaneously acquire ecological enlightenment, and will push for greener decisions, relies too much on an optimistic, naive view of human nature, so frequently found in utopian political movements'.

Authoritarianism Good

Compromise Fails

Compromise fails

Blühdorn, PhD, 2011

(Ingolfur, June 12, "Ingolfur Blühdorn: The Sustainability Of Democracy"

<http://www.thenewsignificance.com/2011/07/12/ingolfur-bluhdorn-the-sustainability-of-democracy/>)

Democracy and sustainability Doubts about the feasibility of democratic solutions to the sustainability crisis have commonly been fended off with warnings that those who raise them are probably sympathetic to authoritarian approaches. Yet this logic disregards two important points. First, in addition to the participatory-democratic and the expertocratic-authoritarian solutions to the sustainability crisis, there is also the option of non-solution, i.e. a sustained politics of unsustainability[15] that seeks to extend the status quo and manage its unpleasant implications for as long as possible. Second, democracy – depending on its particular form – can be just as much part of the problem as part of the solution. There is evidence to suggest that under the particular conditions of modern consumer society, democracy may indeed be assuming a shape that is geared more towards stabilizing than radically changing the unsustainable status quo. Doubts about the capacity of democracy to deal with environmental problems are, of course, not entirely new. It has often been pointed out, for example, that democracy is anthropocentric and has only limited potential to represent that which has no political voice. Notably, electoral democracy has a strong fixation on the present, in other words it prioritizes the interests of today and is structurally inclined to discount those of future generations. Moreover democracy encourages compromise, although compromise solutions are often ecologically ineffective. Democratic procedures are time- and resource-consuming and therefore inappropriate wherever fast and decisive action is necessary. Democracy is, at least in modern differentiated societies, highly individualistic and therefore ill-suited to determining, let alone implementing, something like a Rousseauian *volonté générale* or public good. Instead, democracy aligns politics with the electoral majority, even though the preferences of the majority – witness, for example, the addiction to car- or air-travel – are rarely sensible in terms of sustainability. Democratic systems are hard pushed to generate majorities for policies that burden citizens with costs or restrictions mainly for the benefit of people in faraway parts of the world and for something as abstract as the global climate. And, perhaps most importantly, democracy is always emancipatory, in other words it always centres on the enhancement of rights and (material) living conditions. It is not really suited to restricting the rights or material conditions affecting the majority – unless, as with the rule that red traffic lights must be observed, the benefits are immediately tangible. All these concerns have articulated by eco-political sceptics of democracy for a long time. They have taken authors like Paul Ehrlich, Robert Heilbroner or Herbert Gruhl, into eco-authoritarian terrain. In 1975 Wolfgang Harich considered a "strong, rigorous allocation state", an "ascetic distributive state", as the only way out of the looming environmental crisis.[16] William Ophuls believed that the crisis "may require the sacrifice of equality and majority rule" and that "democracy must give way to elite rule".[17] Hans Jonas mused about "a well-intentioned, well-informed tyranny" as the most promising

solution.[18]But such elitist perspectives have always triggered profound and very justified scepticism, and since the 1970s emancipatory social movements have forcefully insisted that effective environmental policies can only be developed bottom-up and require broad democratic legitimation. Throughout the 1980s and 1990s, the ongoing process of modernisation reinforced emancipatory claims for individual freedom, self-determination and self-fulfilment, but also deepened doubts about whether democracy is suitable as a political tool for restructuring contemporary societies towards sustainability. Relevant developments have included: - Multiculturalism and the pluralisation of social values and individual lifestyles, raising fundamental questions about whether categorical ecological imperatives (most recently the IPCC's famous 4°C threshold) really do exist. - The functional differentiation of modern societies, implying that the democratic institutions of the state are less and less able to integrate and control societal subsystems. The new patterns of governance are increasingly undemocratic (opaque, unaaccountable), with the state only one of several actors with its sovereignty noticeably castrated. - The rapid increase of societal subsystems – most notably the economy, science and the media – as well as individual lifeworlds and network, beyond the boundaries of the nation-state, hence increasingly eluding the control of national democratic politics. - The increasing abstraction and complexity of environmental issues (e.g. climate change, energy security, the environmental footprint of specific products). The most important risks cannot be directly perceived by citizens but are measured, framed and communicated by scientific experts. Invariably, this implies the disempowerment of the democratic sovereign. - The acceleration of change and the flexibilization of social norms, reinforcing a fixation on the present. In both private life and public policy, thinking beyond the crises of the day and taking decisions for an entirely unpredictable future becomes increasingly difficult. - Finally, the extension of the ecological footprint of modern consumer societies far beyond their national territory (and their respective present), invalidating the democratic principle of congruence between the authors of political decisions and those affected by them. Effectively, national democratic structures have turned into a means of legitimizing the externalization of ecological and social costs. These developments, which are inherent to the ongoing process of modernization and hardly controllable, progressively undermine the ability of democracy to devise and implement appropriate strategies against the sustainability crisis. No wonder that suspicions about the eco-political failure of liberal democracy re-emerged in the late 1990s. Contrary to the democratic optimism of social movements and Green Parties, some, for example Laura Westra,[19] have seen democracy increasingly to be part of the problem. More recently, David Shearman and Joseph Wayne Smith have concluded that the underlying cause of the sustainability crisis is not the capitalist growth economy but, ultimately, liberal democracy itself.[20]Anthony Giddens, in his *Politics of Climate Change*, regards the commitment of social movements and the Green parties to participatory democracy as eco-politically ineffective.[21]Echoing Westra's call for a "global regulatory authority" to pursue top-down policy implementation, Giddens advocates an "active interventionist state" as the all-important eco-political actor. He explicitly calls for the de-politicization of climate policy and insists that centralised planning and an "ensuring state" are the best strategies for making sure that politicians do not only set well-sounding targets, but can actually guarantee policy delivery.

Now Key

transition now key – carrying capacity has been diminished

Hardin, no date, ecologist, (Garrett, "An Ecolate View of the Human Predicament, The Garrett Hardin

Society www.garretthardinsociety.org/articles/art_ecolate_view_human_predicament.html

-we don't endorse ableist language

That we have a higher regard for human life than we do for the life of other living things requires no apology. But the higher value placed on human life calls for no change in our previous ethical conclusion, namely, that the sanctity of the carrying capacity takes precedence over the sanctity of life. Once we accept this conclusion we discover that contemporary population/environment problems are even more terrible than we previously thought. Erik Eckholm in *Losing Ground* has painted a graphic picture of the tragedy now overtaking the people in the tropical highlands.³² The energy that they need for cooking their food they get from burning the wood of the trees around them. In addition, some highlanders make charcoal to heat little braziers in winter or to sell to outsiders, as the Kashmiri do to Indians. Modern medicine and more food have enabled highland populations to outstrip the productivity of their lands for timber. As people deforest the land the soil washes off, making reforestation all but impossible on steep slopes. Once transgressed, carrying capacity is progressively degraded. Soil lost to the highlands clogs irrigation systems in the lowlands—often of another nation—and silts up lakes behind the dams, thus diminishing their useful life. The loss of water-holding capacity in the highlands causes floods in the lowlands to peak higher and faster, destroying many more human lives and much more property. Only 10 percent of the world's population lives in the highlands, but, as Eckholm points out, the harm of their overpopulation affects 30 percent of the world's people. What can be done? Conceivably rich countries might ship oil and oil-burners to some 400 million highlanders—but how likely is such generosity now that the rich perceive the "energy shortage" as their major problem? To supply the poor with a great variety of solar heaters and cookers would require an immense diversion of capital. Moreover, do we possess the anthropological expertise to bring about the necessary change in folk-ways? As an alternate solution, people in adjacent lowlands might offer to take in some 200 million immigrants from the highlands: but the lowlanders are themselves mostly wretchedly poor—think of Bangladesh, and the Bihar in India. Again there is an anthropological question: How can one gently uproot a people and persuade them to live a different life elsewhere? Rich nations could more easily afford to take in hundreds of millions of immigrants, but in that case the problem of ethnic adjustment would be even more severe. The unrealistic character of these proposals is obvious. I think most people, untrained though they be in ecology, unconsciously weigh such proposals in an ecolate way, asking And then what? After we transport the surplus poor to other areas, or ship extra energy into their homelands, will not the present rate of population increase continue unabated? Such populations now typically increase at 3 percent per year, which means that their populations potentially increase nineteenfold per century. It is insanity to view poverty in such circumstances as a problem of shortages: it is a longage problem. And we don't know what to do about it. It is time to face the music. Discussing the human predicament in terms of

carrying capacity—a concept that originated in animal husbandry and game management—inevitably raises the suspicion that someone is about to propose treating human beings like cattle or wild animals. When a herd of animals is overpopulated we do not hesitate to liquidate the excess, that is, to kill them. Anyone who speaks of carrying capacity in connection with human population problems is suspected of following the lead of Nazi Germany or contemporary Cambodia. We must not repress this suspicion: We must bring it out into the open so that we can discuss the human predicament frankly. At the barren and heartless level of pure logic a game management solution should work for humans as it does for other animals: but the Heart won't stand for it. The Heart, too, is an ecologist, and asks And then what? The liquidation of excess lives might be sincerely proposed as a solution for a temporary crisis; unfortunately every act potentially sets a precedent. Liquidation can be both infectious and addictive. It can bring into existence a positive feedback system that is destructive both ethically and politically. It can destabilize society, bringing on a new Dark Age. The ecologist Heart knows this. But in rejecting a policy of liquidation we must not forget the fact that led us to consider it, namely, the primacy of the concept of carrying capacity in the theory of all populations, animal or human. In the human situation technology can increase the carrying capacity of the environment, but it cannot do so at an arbitrarily rapid rate, and there may be practical limits to what technology can do. Some optimists say that technology can always raise the carrying capacity of the human environment faster than the growth of human population. In some theoretical framework this may be true (for a while), but in the existing political and economic framework (which is resistant to change) it is hard to defend the thesis that the present rate of population increase is nothing to worry about. Justifiably we complain of the population-related ills of poverty, pollution, inflation, and unemployment. We should suspect that the carrying capacity of our environment has already been transgressed.

General

Authoritarianism k2 replace faulty system of pluralistic democracy and solve the environment

Jennings, 13-- Director of Bioethics at the Center for Humans and Nature

(Bruce, "Governance in a Post-Growth Society: An inquiry into the Democratic Prospect", May, Vol 6 Num 2, p. 12-13)

Ecological authoritarianism. Ecological authoritarians maintain that the successful governance in a degrowth era will require centralized, elitist, and technocratic management at least in the areas of economic and environmental policy.⁹ Mindful of the internal contradictions plural democratic governance faces as it attempts to cope with problems of productivity, capital accumulation, and growth, ecological authoritarians stress the need for policy makers and planners to be insulated from democratic pressures and granted an increasing measure of autocratic authority if they are to steer the economy on an ecologically rational and efficient course. Ecological authoritarians are impressed, perhaps overly so, by the popular demand in pluralistic democratic systems for democratic rights and material affluence. They speak of democratic overload in reference to those pressures and demands: democratic overload of policy makers leads to economic overload or overshoot of the carrying capacity of ecosystems. The former has to be broken free from in order to prevent the latter. Indeed, ecological authoritarians see a vicious cycle, a destructive feedback loop in this. As pluralistic democracies succeed in their aim to increase economic prosperity for the population, the democratic assertiveness of citizens for more growth and prosperity also increases. As the economic management of ever-higher levels of affluence becomes more complex, the tension between democratic politics and "scientific" planning comes to a crisis point. The ecological authoritarians here make an important point. The fact that pluralistic democracy has demonstrated its inability to perform ecologically precautionary governance in a consistent or timely way is not fortuitous; it is built into the deep structure and political logic of this type of system as such. If pluralistic democratic governments follow the dictates of ecological science and planning, they will restrict growth in ways that risk losing their popular base of support. If, conversely, such governments attempt to maintain their legitimacy by bowing to short-term democratic pressures, they will not be able to take (and require the private sector to take) the steps necessary to protect the environment. Eventually economic downturn, inequality, and hardship will result from ecological degradation, and again the governments will lose their popular support and legitimacy.¹⁰ Note, however, that the political costs of the first prong of this dilemma are more immediate than those from the second prong, so pragmatism in a pluralistic democracy counsels the first course of action. Such pragmatism is ecologically insane.

Asia

Asia proves environmental authoritarianism works

Beeson 10 (Mark, Professor of International Politics at Murdoch University in Perth, Western Australia, Environmental politics, Environmental Politics, 15(5): 750–767., Volume 19, issue 2)//ADS

The environment has become the defining public policy issue of the era. Not only will political responses to environmental challenges determine the health of the planet, but continuing environmental degradation may also affect political systems. This interaction is likely to be especially acute in parts of the world where environmental problems are most pressing and the state's ability to respond to such challenges is weakest. One possible consequence of environmental degradation is the development or consolidation of authoritarian rule as political elites come to privilege regime maintenance and internal stability over political liberalisation. Even efforts to mitigate the impact of, or respond to, environmental change may involve a decrease in individual liberty as governments seek to transform environmentally destructive behaviour. As a result, 'environmental authoritarianism' may become an increasingly common response to the destructive impacts of climate change in an age of diminished expectations. Long before the recent global economic crisis inflicted such a blow on Anglo-American forms of economic organisation, it was apparent that there were other models of economic development and other modes of political organisation that had admirers around the world. The rise of illiberal forms of capitalism and an apparent 'democratic recession' serve as a powerful reminder that there was nothing inevitable about the triumph of 'Western' political and economic practices or values (Zakaria 2003, Diamond 2008). Nowhere has the potential importance of authoritarian, state-led capitalist development been more evident than in East Asia.¹ An examination of East Asia's development and the concomitant environmental problems it generates highlights a number of broad-ranging trends that have widespread relevance. The point to emphasise at the outset is that the populations and governments of poorer regions of the world might have very different developmental priorities than their more affluent counterparts in Europe and North America; consequently, they may also have very different expectations about the appropriate role of government (Mahbubani 2008). The possibility that East Asia's political and economic elites might have distinctive views about politics, economics and the environment merits emphasis because such ideas are often radically at odds with much of the most influential – broadly 'Western' – scholarship about environmental politics in particular and political development more generally. Consequently, after providing a brief snapshot of development in East Asia, I highlight the incongruent nature of some of the most influential strands of western environmental and political theory. The major lesson that emerges from an examination of the developmental experience of East Asia generally is that powerful, even authoritarian states, have been central components of the region's remarkable economic expansion, and that there is consequently a pre-existing propensity toward authoritarianism that has been entrenched by the region's trajectory of economic and political development (Haggard 1990). In what follows I suggest that the increasingly severe environmental challenges faced by the region, and the possibility that resource-intensive economic development will prove unsustainable, are likely to entrench or encourage the return of authoritarian rule in many parts of the region. Not only is the emergence of an environmentally-conscious,

politically-savvy, effective civil society that can transform environmental practices obviated by uncertain economic development and inequality, but economic and environmental failure are likely to give authoritarianism increased salience in a region beset by intractable problems. As a result, the 'democratic moment' (Acharya 1999) that was expected to sweep through East Asia, if not the world, will prove difficult to sustain in the face of mounting political, economic and especially environmental challenges. I consider these challenges in the second part of this essay, where I detail some of the forces that are likely to perpetuate and profit from environmental degradation and make recourse to authoritarianism likely. Tragically, much of Southeast Asia may not only have missed the democratic moment, it may have missed its historical opportunity for widespread, sustainable development, too: just when human beings seem to have discovered what some of the prerequisites of economic development might actually look like (Collier 2007), the particular paradigm that underpinned the 'rise of the West' seems entirely unsustainable and simply unavailable to the billions of poor in Asia and elsewhere (Diamond 2005).

Asia proves environmental authoritarianism works

Beeson 10 (Mark, Professor of International Politics at Murdoch University in Perth, Western Australia, *Environmental politics, Environmental Politics*, 15(5): 750–767., Volume 19, issue 2) The environment has become the defining public policy issue of the era. China

Shift to authoritarianism now is key to avoid extinction – China proves it works

Beeson, PhD, 10 [professor in political science and international relations]

(Mark, March, Environmental Politics Vol 19 No 2 “The coming of environmental authoritarianism” www.tandfonline.com/doi/pdf/10.1080/09644010903576918#.VY294vIViko)

While evidence about the implications of environmental degradation and even global warming are increasingly uncontroversial, their possible political consequences are more contentious. Although some of the preceding analysis is necessarily speculative and inferential, the experiences of China and Southeast Asia highlight issues of unambiguously global significance. The central question that emerges from this discussion is whether democracy can be sustained in the region – or anywhere else for that matter – given the unprecedented and unforgiving nature of the challenges we collectively face. Indeed, such is the urgency of the environmental crisis that some have argued – alarmingly persuasively – that ‘humanity will have to trade its liberty to live as it wishes in favour of a system where survival is paramount’ (Shearman and Smith 2007, p. 4). In such circumstances, forms of ‘good’ authoritarianism, in which environmentally unsustainable forms of behaviour are simply forbidden, may become not only justifiable, but essential for the survival of humanity in anything approaching a civilised form. Such ideas are difficult to accept, especially for societies steeped in traditions of liberalism, individualism, freedom of choice and personal advancement. The US is, of course, such a country, where an entire national consciousness and way of life is predicated upon liberal values – values which some consider profoundly inimical to environmental sustainability (Ophuls 1997). It is also the country that has done most to contribute to global environmental problems like climate change, but which has until now seemed incapable of addressing them politically (Stephens 2007). In China, by contrast, an authoritarian regime has arguably done more to mitigate environmental problems than any other government on earth: without the one-child policy instigated in the 1970s, it is estimated that there would already be another 400 million Chinese (Dickie 2008) and China’s environmental problems (and everyone else’s) would be that much worse. Luckily for the world’s non-Chinese population, China does not enjoy the same living standards as the US, and it is impossible to imagine that the vast majority of its citizens ever will. There are, it seems, fundamental, implacable constraints on the carrying capacity of the planet (Cohen 1995). The real tragedy about China’s development is not the failure to democratise rapidly, but that at the very moment that human beings seem to have figured out how to generate economic development on a massive scale, it is becoming apparent that it cannot be sustained, at least not by 6 billion people living Western lifestyles, and certainly not by the 9–12 billion or so that some think will mark the extent of human expansion.⁶

Japan

Authoritarianism is empirically successful in Japan

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , *The Climate Change Challenge and the Failure of Democracy*, Pages 71-72, MX)

In chapter 8 we ask whether authoritarian technocratic rule, by imposing necessary solutions, could arrest the earth's ecological decline. In history there are examples of environmental decline that threatened the very nature of civilization, being reversed by determined authoritarian rule. In his analysis of societies that fail or survive, Jared Diamond³⁸ describes the reversal of destructive deforestation in Japan by determined authoritarian rulers. In the mid-seventeenth century, Japan became peaceful, prosperous, and self-sufficient after decades of civil war. The population and the economy exploded, greatly accelerating the cutting of timber used to build houses, castles, and ships, as a fuel for homes and industry, and as mulch for crops. The hereditary rulers, the shoguns, recognized the environmental consequences of erosion and the need to arrest the decline of a rapidly diminishing resource. They saw a threat to the very fabric of their civilization and promulgated a series of complex measures of reforestation in Japan over the subsequent 200 years. Elaborate systems of woodland management were introduced and policed by magistrates and armed guards. Forests became a commons system sustainably managed for the benefit of each village community by issuing separate leases for each household. Guard posts on highways inspected transported timber to ensure observation of rules, and all timber was graded and allocated for specific purposes to avoid waste. The science of silviculture was born and was facilitated by uniform institutions and methods over the entire county. All this was achieved by authoritarian rule in a peaceful society. It is tempting to contrast these events with those in some liberal democracies, for example Tasmania, where all the stakeholders in the natural forests, government, industry, and workers, have united to pillage the forests against the long-term interests of the world community. What lessons can we learn from the reforestation in Japan? As Diamond points out, these visionary actions were carried out in a society that became destructive to environments outside Japan, so it was not that Confucianism influenced them. Perhaps because there was a recognition of self-interest, for timber was recognized as being of vital importance and also because the hereditary rulers recognized the importance of protecting the needs of future rulers, their offspring. This is not to say that leaders recognizing long-term stakes do not succumb to short-term profits, this having become a hallmark of the democratic leader. But it raises the question as to whether Japan's recovery could be accomplished today under liberal democracy. Perhaps the really big decisions that are vital to the future of humanity are best imposed, and we need to look toward a form of governance that can do this. Hence our assertion that climate change will determine the future of liberal democracy. This is not to deny that bottom-up democratic management of environmental resources is unimportant in some circumstances, and Diamond cites numerous examples that have developed over time and are in use today. Interestingly they encompass microcosms of governance in small rural communities in Swiss alpine villages and in Spain and

the Philippines. the most democratic of the liberal democracies that has a meticulous system of proportional representation built into a representative democracy. This is the system in Tasmania, a state in wealthy Westernized Australia. There, it appears that the will of the people is to continue to destroy the mature forests of Tasmania for the export of woodchips. Both major political parties support this endeavor, so the destruction continues regardless of which party is in power. However, opinion polls indicate that a majority of the population wishes to preserve the forests and their viewpoint is supported by a minority Green Party. The Green Party does not gain power because other aspects of its platform do not attract votes and because the major parties use voting preferences at elections to exclude it. In terms of the future needs of the world, in Tasmania representative democracy is the means whereby environmental destruction is planned and executed against the will of the people.

Long Term Goals

Authoritarianism solves the environment better than democracy- more state control means government can prioritize long-term goals

Daniel 12 (Charles Daniel is a University of Leeds Political Science graduate. "To what extent is democracy detrimental to the current and future aims of environmental policy and technologies?" *Journal of Politics and International Studies*. May 2012. Vol. 7.

<http://www.polis.leeds.ac.uk/assets/files/students/student-journal/ug-summer-12/charles-daniel.pdf>)

This is exactly what Mark Beeson suggests in his argument for the coming of environmental authoritarianism. He acknowledges the fact that individual liberty has led to 'environmentally destructive behaviour' (Beeson 2010: 276). Whilst democracy has allowed for a more open discussion on environmental issues as well as raising awareness, there has been too much trust put on ecological enlightenment through education. For Beeson, this 'relies too much on an optimistic, naïve view of human nature' (Beeson 2010: 282), the idea that an attitude of respect, through the emergence of a shared cosmopolitan rhetoric will produce environmental improvement is wide of the mark. As Beeson rightly points out, the 'sobering reality' is that as the human population continues to grow, consuming resources on an unprecedented scale, 'policy-makers will have less and less capacity to intervene to keep damage to the environment from producing serious social disruption' (Beeson 2010: 283). Liberal democracy, through the necessities dictated by a capitalist economy has built its survival on the continued exploitation of environmental resources to a point where an attempt to gain control of this practice has become almost impossible. The article, whilst not wholly advocating the Asian political model (indeed Beeson highlights the fact that China is a ruthless exploiter of its own natural environment and sets a poor example for the rest of the continent), is appropriately pessimistic towards the success of liberal democracy. It therefore seems rational to put forward soft authoritarianism as a viable alternative: for it avoids trust in the individual, taking a negative view of human nature and advocates the need for state control, particularly surrounding urgent policy issues like the environment. Whilst it is difficult to accept, it may be the case that 'good forms of authoritarianism, in which environmentally unsustainable forms of behaviour are simply forbidden, may become not only justifiable, but essential for the survival of humanity' (Beeson 2010: 289). It is all very well to put forward the theoretical arguments for the implementation of soft authoritarian rules surrounding the environment, but the practical expression of this form of government has, up until recently, been abysmal in regards to meeting targets and contributing to climate change (Day 2005). However over the last decade, the response from a number of countries, which Western critics would view as authoritarian, has been overwhelmingly positive. Such an opinion is epitomised in projects like Masdar city in the UAE or the draconian environmental-social policies of Singapore. Whilst this has mainly been due to high profit margins in renewable energy investment as well as the vast expendable capital accumulated by such nations, there is scope to suggest that such success has been due to the strengths found within soft authoritarianism. In order for a balanced assessment to be given in the paper, the second case study will be analysing the world's other 'superpower', China.

AT: Aff Answers

AT: Status Quo Solves

Authoritarianism is rising now—double bind-- if the affirmative dramatically increases rights, they derail this shift and we can't solve warming in time.

All current reforms are a drop in the ocean

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 36, MX)

It is relevant to ask whether democracies have made any effort to substantially reorient their policies to energy efficiency and renewable energy sources. In the 1980s Denmark began to develop wind energy that now provides 10 percent of its electricity, and other European democracies have developed similar programs. Sweden is to take the biggest energy step of any advanced Western economy by trying to wean itself off oil completely within 15 years—without building a new generation of nuclear power stations. The intention is to replace all fossil fuels with renewable energy before climate change destroys economies and growing oil scarcity leads to huge new price rises.¹ However these efforts are a drop in the ocean of necessary reform.

AT: Authoritarianism sucks

Not Our RIMAL

There are other versions

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 2, MX)

Let us be clear about one point from the very beginning of this text. The authors are not living fossil Marxists attempting to rehabilitate the Soviet regime. We agree that existing authoritarian societies, largely based upon Marxist doctrines, have had an appalling environmental record. We accept that there is no example of an existing authoritarian government that does not have a record of environmental abuse. We also accept that all existing authoritarian governments have a worse environmental record than all liberal democratic societies. Being "least worst" of a bad bunch is not a logically good argument for the acceptability of the "least worst" option. As a matter of rational argument, defenders of liberal democracy must be forced to do better than merely ignore the long existing problems of democracy, first noted by Plato (427-347 B.c.). We contend that there are other forms of authoritarian government beyond the failed Marxist version. We discuss a Platonic form of authoritarianism based upon the rule of scientific experts, and, as we detail in chapter 8, this hypothetical system is not based upon Marxist principles. We are critics, on ecological grounds, of the capitalist economic system and existing authoritarian systems. We argue that even the allegedly more environmentally preferable liberal democratic societies fail to provide humanity with ecologically sustainable structures. We accept that mention of authoritarian government will horrify the reader with visions of dictators who have strutted during the past century, but we remind that many have been elected under democratic systems.

AT: Stalin and Hitler

Our vision of authoritarianism allows us to weed out people like Stalin and Hitler

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 124-125, MX)

In proposing that liberal democracies will be replaced by authoritarian structures, we differ somewhat from a select group of environmentalist writers who have also rejected a liberal democratic solution to the environmental crisis.¹² In general, such writers have felt that only centrally commanded economies can meet the challenge of dealing with the environmental crisis. We do not join that camp. We recognize that command economies committed to militarism and industrialization can be just as destructive, if not more so than liberal democracies. The former Soviet Union is not our idea of paradise on earth. Planned economies, where there is an attempt by a body of elite planners to coordinate all aspects of an economy, is a recipe for disaster because there is simply too much information, chaotic nonlinear effects, and unpredictable events to permit accurate planning. However we believe that many aspects of the economy must be firmly regulated. This position is a long way away from a planned economy. We have no lingering belief that communism could or will save humanity, but we hold that when civilization-threatening changes occur, liberal democratic solutions are the first things to go. The rule of law is abandoned, and the rule of the strong dominates. We are not indicating that we like this; we are maintaining as a matter of real politick that this is what occurs historically and is likely to occur again. Nor are we supporting a form of authoritarianism as witnessed in Nazi Germany where one Fuhrer makes fundamental decisions about life and death for society. Such forms of authoritarianism typically lead to social disaster when the leader, following the weaknesses of human will, succumbs to corruption or madness. Our form of authoritarianism looks to the leadership of an entire stratum of society rather than one individual or even party. and there is a better chance that corruption and madness of the Hitler and Stalin levels can be weeded out. But there is no guarantee; human life is uncertain and down the track, human life promises to be desperate. Thus unlike other antidemocratic theorists from Plato on, we do not have an alternative political ideology that we wish to promote in the place of liberal democracy, beyond that of environmentalism. We have no vision of a set of wise liberal leaders sitting in the wings, waiting to ride onto the set just in the nick of time to save us all by democratic means. Rather we have a stark vision of liberal democracy being destroyed by its own internal contradictions, in the process being replaced by authoritarian structures. It is important therefore to ask whether there exist any state authoritarian structures that are worthy of consideration. We believe that Singapore falls into the category.

AT: Democracy Key to Environment

Authoritarianism is the only solution to solve extinction – extend Shearman and Smith – liberal consumerism results in ecocide — the Beeson evidence indicates that authoritarianism solves because of emphasis on environmental regulation – reason to prefer because

Liberal democracy's provision of individual rights promotes ecocide through lack of environmental regulation

Daniel '12 (<http://www.polis.leeds.ac.uk/assets/files/students/student-journal/ug-summer-12/charles-daniel.pdf> *add cites // 6-24-15 // MC)

The main point to take away from the case study is not to do with portraying the US as an enemy of the environment (it has, after all, provided some form of investment to the natural world's future, with \$450 billion spent on research and development in the last ten years), it is more to do with the inescapable patterns of consumption that have become ingrained into the US political, social and cultural fabric. America's national survival is contingent on continued economic abundance to feed a growing population. Democracy has become reliant on and indeed defined by this cycle, which is fuelled by unadulterated freedom for individuals and corporations alike. Speth is thus able to conclude that our 'economic and political system does not work when it comes to protecting environmental resources' (2004: 133). He believes that the amount of faith placed upon privatisation and the free market is unfounded, as they cannot be relied upon to provide the appropriate levels of environmental protection. Lack of regulation has resulted in companies consuming cheap resources and not taking into account the external implications of their actions. These 'externalities' are what Speth believes to be the main driver behind pollution (2004). What he means by this is that the producer's financial costs are different from their external ones. For example, when a company burns coal, its only financial concerns are the labour it uses, capital and the outlay cost of raw materials; the price in the form of 'dirty air' is not their concern. Producers and consumers are not given the opportunity to see the damage of such patterns since air pollution is not literally visible to the human eye, nor is it a threat to short-term well-being (Panayotou 1998). Due to the lack of public intervention or government pressure, companies are free to act as they please as there is no downside for them in regards to financial gain if they continue to pollute the air. Imposing stringent regulation on these actions by, for example a tax on dirty air, is avoided as it is against democratic principles to over interfere with company activity and indeed there is nothing to be gained by regulators for favouring the environment (Speth 2004). This ties in with the mention of the US oil addiction in that numerous sources of wealth from within the country depend on these sources of energy and their processes. To interfere with them or attempt to reduce their powers would be to limit the economic capability of the nation and possibly hinder the standard of living of each individual therein. With the case of America and indeed other consumer-based economies, it can be concluded that too much freedom can, in certain circumstances, become a real barrier to necessary change. It can potentially create social conditions where individuals and institutions become POLIS Journal Vol. 7, Summer 2012 ISSN 2047-7651 105 too comfortable in their habits. For liberal democracy, these habits are an over emphasis of the free-market, continual growth of industries and a fixation on GDP targets. Liberal democracy's success is

contingent on these and, therefore, those in power have no choice but to abide by them, constrained by the short fixed terms they have in office. The desire for actual change has slowly been removed from politics, as governments seek to prioritise stability and to satisfy the wants of the electorate so that they will continue to stay in power for a further term. The financial crisis was a poignant example of this. It was the first time since the Great Depression that the foundations of the free market were truly shaken, allowing certain groups to question the success and stability of the economic systems we rely upon. An acceptance of certain failures and a move towards change could have provided the much-needed stimulus for environmental investment. As it is, that door has been shut as the government is forced to solve the situation with patchwork policies. Countries have localised themselves even further, reluctant to contribute to global environmental projects when their own economies are in dire need of assistance. The US congressional budget office in the wake of the financial crisis conveyed this direction in fiscal policy. In a report to the IMF, they expressed a need to make significant policy changes in order to keep the Federal Reserve in a stable position (Elmendorf 2010). Whilst it was not explicitly stated, the report suggested that the US government planned to roll back some of their international economic commitments. The UK government is equally guilty of attempting to localise their economy in favour of international commitments. David Cameron's decision to reject a EU wide treaty in order to maintain the strength of the domestic economy is just one example of policy direction that favours isolation instead of contribution (Grice 2012). Liberal democracy then, if defined in this way, can be seen as being detrimental to current and future environmental policies and investment, as it is reluctant to adjust its course, even in times of failure, favouring gradual social change that will not unsettle the electorate. It is here that I return to the suggestion that liberal democracy may not be the appropriate format to guide global society in its current period of over-development.

AT: human rights k2 warming

Human rights don't solve warming, their cameron evidence indicates that civil rights groups could influence the political climate over warming – eco-authoritarianism accesses the solution better because the population can't disobey environmental regulations

AT: racist/sexist

Our argument isn't that certain groups are individualized and discriminated against – it's much like Kurt Vonnegut's "Harrison Bergeron" where everybody is equal, without the physical debilitation part

Our vision of authoritarianism allows us to weed out people who promote discrimination

AT: Can't solve without China

China transitioning to eco-authoritarianism now

Gilley, 12 (Bruce, March 2012 Vo. 21, No. 2 Division of Political Science, Mark O. Hatfield School of Government, Portland State University, USA - (Ph.D. 2008, Princeton University) is an Associate Professor of Political Science. His research centers on democracy, legitimacy, climate change, and global politics, and he is a specialist on the comparative politics of China and Asia. - www.web.pdx.edu/~gilleyb/Gilley_AuthoritarianEnvironmentalism.pdf // 6-28-25 // MC)

China accounted for 25% of global carbon dioxide (CO₂) emissions in 2009, up from just 11% in 1990, making it the world's leading source of greenhouse gas emissions (which are about 80% CO₂ in China as elsewhere). By 2030, it will account for about half of global CO₂ emissions. China (along with India) is also a country where the absolute impacts of climate change will be greatest: melting Tibetan glaciers, sinking Shanghai, inundating Hong Kong, devastating south coast typhoons, an expected 5–10% decline in agricultural production, and a rapid loss of biodiversity (Lai 2009). Consistent with authoritarian environmentalism, the political response to climate change in China has been centred on the top-down, regulatory powers of the central state. A Climate Change Leadership Group was established Environmental Politics 289 within the then-State Council's Environmental Protection Commission in 1990. In 1998, a multi-agency National Coordination Committee on Climate Change was established and upgraded in 2007 into a 20-ministry National Leading Group to Address Climate Change (NLGACC) (guojia yingdui qihou bianhua lingdao xiaozu). The group is headed by the premier and headquartered in the ministerial-level National Development and Reform Commission's (NDRC) Department of Climate Change. The only outside participation comes from a scientific advisory committee, although most of its members are from government-funded or owned research institutes, especially the Energy Research Institute of the NDRC. The policy outputs in China have been rapid and comprehensive since the submission to the leadership of a national energy strategy in 2003 (Chen 2003). The report was taken up by the top leadership in 2004, leading to the promulgation of a National Climate Change Program in 2007 (National Development and Reform Commission 2007). A Renewable Energy Law was completed in 2004 after fewer than nine months of drafting (Tian 2004) and then passed into law with no amendments by the unelected national legislature in 2005. In 2009, Beijing announced a national target of reducing CO₂ emissions per unit of gross domestic product (GDP) by 40–45% by 2020 compared with 2005 levels. The 40–45% target resulted from studies conducted within the NDRC (Jiang et al. 2009) and the final decision was made by the ruling party's Politburo.¹ Following the announcement of the target, all agencies of government began issuing extensive implementing legislation, regulations, and circulars dealing with energy conservation, energy efficiency, and renewables as well as climate change mitigation. For instance, under a national 'energy savings and emissions reductions' (ESER) policy (jieneng jianpai), environmental authorities in coordination with the central bank and financial regulators began blacklisting polluting enterprises from receiving state bank loans or offering new shares (the so-called 'green credit' policy) (Wang and Chen 2010). Consideration is also being given to an 'environmental tax' on each company's pollution footprint and to a 'green export policy' to sanction polluters engaged in foreign trade (Aizawa and Yang 2010, p. 123). Power cuts to achieve energy reduction targets left 3500 households, as well as schools and hospitals, without indoor heat in one city in central China in

early 2011 as temperatures plunged to 7108C (Yan 2011). As to restrictions on liberties, a State Council circular of 2008 'required' that all drivers leave their cars at home at least one day a week; that elevators not be used to reach the first three floors of public buildings; and that public sector employees wear casual clothes to work in the summer (State Council 2008b). Local governments, meanwhile, are under pressure to impose their own rules 'so that people have no alternative but to adopt a low-carbon lifestyle' (He 2010b, p. 21). The state's population control policies have been cited as a model for future limits on individual choices related to climate change (Xinhua News Agency 2009). While policy-setting is done at the national level by the NLGACC, implementation is left to each provincial government, which in turn delegates most decision-making to lower level governments. Provincial, prefectural, county, and city governments have set up their own climate change leading groups to respond to central demands for emissions intensity cuts as well as for climate change mitigation strategies (Qi et al. 2008, National Development and Reform Commission 2009). The role of local governments is magnified by the number and scale of 'clean development mechanism' projects under which local governments and corporations sell emissions reductions to foreign buyers (National Development and Reform Commission Department of Climate Change 2010, Shin 2010). China's climate change policy is thus centred on the regulatory and coercive powers of the central state and on the developmental and political incentives of local governments.

Reform Fails

Tech

Technical policy fixes fail

Nordhaus et al 2005

-- American author, environmental policy expert, and the chairman of The Breakthrough Institute.

(Ted, Jan 14, "The Death of environmentalism: global warming politics in a post-environmental world" Grist. grist.org/politics/doe-reprint/full/)

Over the last 15 years environmental foundations and organizations have invested hundreds of millions of dollars into combating global warming. We have strikingly little to show for it. From the battles over higher fuel efficiency for cars and trucks to the attempts to reduce carbon emissions through international treaties, environmental groups repeatedly have tried and failed to win national legislation that would reduce the threat of global warming. As a result, people in the environmental movement today find themselves politically less powerful than we were one and a half decades ago. Yet in lengthy conversations, the vast majority of leaders from the largest environmental organizations and foundations in the country insisted to us that we are on the right track. Nearly all of the more than two-dozen environmentalists we interviewed underscored that climate change demands that we remake the global economy in ways that will transform the lives of six billion people. All recognize that it's an undertaking of monumental size and complexity. And all acknowledged that we must reduce emissions by up to 70 percent as soon as possible. But in their public campaigns, not one of America's environmental leaders is articulating a vision of the future commensurate with the magnitude of the crisis. Instead they are promoting technical policy fixes like pollution controls and higher vehicle mileage standards — proposals that provide neither the popular inspiration nor the political alliances the community needs to deal with the problem. By failing to question their most basic assumptions about the problem and the solution, environmental leaders are like generals fighting the last war — in particular the war they fought and won for basic environmental protections more than 30 years ago. It was then that the community's political strategy became defined around using science to define the problem as "environmental" and crafting technical policy proposals as solutions. The greatest achievements to reduce global warming are today happening in Europe. Britain has agreed to cut carbon emissions by 60 percent over 50 years, Holland by 80 percent in 40 years, and Germany by 50 percent in 50 years. Russia may soon ratify Kyoto. And even China — which is seen fearfully for the amount of dirty coal it intends to burn — recently established fuel economy standards for its cars and trucks that are much tougher than ours in the US. Environmentalists are learning all the wrong lessons from Europe. We closely scrutinize the policies without giving much thought to the politics that made the policies possible. Our thesis is this: the environmental community's narrow definition of its self-interest leads to a kind of policy literalism that undermines its power. When you look at the long string of global warming defeats under Presidents Bill Clinton and George W. Bush, it is hard not to conclude that the environmental movement's approach to problems and policies hasn't worked particularly well. And yet there is nothing about the behavior of environmental groups, and nothing in our

interviews with environmental leaders, that indicates that we as a community are ready to think differently about our work. What the environmental movement needs more than anything else right now is to take a collective step back to rethink everything. We will never be able to turn things around as long as we understand our failures as essentially tactical, and make proposals that are essentially technical. In Part II we make the case for what could happen if progressives created new institutions and proposals around a big vision and a core set of values. Much of this section is aimed at showing how a more powerful movement depends on letting go of old identities, categories and assumptions, so that we can be truly open to embracing a better model. We resisted the exhortations from early reviewers of this report to say more about what we think must now be done because we believe that the most important next steps will emerge from teams, not individuals. Over the coming months we will be meeting with existing and emerging teams of practitioners and funders to develop a common vision and strategy for moving forward.

tech solutions fail

Bluhdorn, Phd, 12, [Reader in Politics/Political Sociology at the University of Bath]

(Ingolfur, December 13, Friedrich Ebert Stiftung Sustainability "Opening the discursive arena - struggling for an innovative debate" www.fes-sustainability.org/en/nachhaltigkeit-und-demokratie/democracy-and-sustainability)

At least equally important is the widespread realisation that the techno-managerial approaches of ecological modernisation will not be sufficient for achieving sustainability (however defined). The proponents of these approaches had once reassured policy makers and the public that a radical break with the established socio-economic order would not be required, but that sustainability can be achieved within this order, if new efficiency-technologies, market instruments, consensus-oriented strategies of stakeholder governance and even the consumer culture are wisely and strategically used. These promises resounded with the widespread commitment to consumer capitalism and liberal democracy and were, therefore, readily taken up. Yet, despite all technological innovation and resource efficiency gains, the strategies of ecological modernisation have never succeeded in stopping, let alone reversing, the over-exploitation of natural resources, the decline of bio-diversity, the advance of global warming or the increase of social inequality. They have helped to sustain the unsustainable for an extra couple of decades but, ultimately, they have only reinforced and radicalised, not suspended, the demand for policy measures which are less compatible with the principles of both liberal democracy and consumer capitalism.

Economic Rationalizations

Liberal Democracies will never reform because in the context of the commons their destructive nature is rational

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia, The Climate Change Challenge and the Failure of Democracy, Pages 82-83, MX)

In most cases, however, it is the will of the people, fostered by the individualism of liberal democracy, that treats the environment as a resource. It is now relevant to explain in more detail the thesis of Garrett Hardin in his seminal paper, "The Tragedy of the Commons," published in the journal *Science* in 1968.¹³ This paper exposes the defect that makes democracy unsustainable. The commons of Anglo Saxon culture was the pasture open to the cattle of all villagers. Hardin explained: As a rational being, each herdsman seeks to maximise his gain. Explicitly or implicitly, more or less consciously, he asks "What is the utility to me of adding one more animal to my herd?" This utility has one positive and one negative component. The positive component is the increment of one animal. Since the herdsman receives all the proceeds from the sale of the additional animal, the positive utility is nearly +1. The negative component is a function of the additional overgrazing created by one more animal. Since however the effects of overgrazing are shared by all herdsmen, the negative utility for any particular decision making herdsman is only a fraction of minus 1. Each herdsman concludes that it is sensible to add another animal to his herd, and another, without limit ... Therein is the tragedy, and in a world that is limited, freedom in the environmental commons brings ruin to all." The "world commons" is the stability of the resources of land, sea, air, and fresh water necessary for the health and well-being of humanity. We now have a clear vision of the "ruin to all" predicted by Hardin. It is the confluence predicted this century of the above problems, population growth, depletion of resources, and the ravages of climate change. All our problems can be placed in the context of the commons. Thus we see that it is in the interests of the individual to break the rules that might be made for the survival of all herdsmen and the resource. This individual will behave acquisitively only if he or she knows that everyone else will comply with the rules. The rules must be strong and inviolate to stop conflict between individual rationality and the common good. Even then there will have to be penalties to ensure compliance. Democracy is indicted because it is unable to defend the commons. We find that democratic states behave in the same way as individuals (e.g., European Community [EC] decisions on fishing discussed in chapter 1). Thus both individuals and states act in ways that are individually rational but environmentally destructive. A nation such as the United States may decide to continue polluting the commons with greenhouse gases to the detriment of all other states because it has immediate economic advantage. In the case of the EC it is of short-term advantage (i.e., job stability) to continue fishing despite the recognition that it is unsustainable. Unless this problem can be resolved to preserve a sustainable world there is no case for the continuation of liberal democracy or nation states. There should be one government, and our argument in chapter 8 would make this government authoritarian. There are additional cogent

reasons why the commons cannot be saved, and these will become apparent in the next chapter. They relate to the mutual dependence of liberal democracy and corporatism. Democracy has a facade of environmental laws and protection but when a corporation wants a resource invariably it will get it, laws will be changed, exceptions made, and rules bent for it is in the personal interest of governments of elected representative to keep people in jobs and collect taxes. Decade after decade the encroachments are remorseless.

Power Ceded

Power in a democratic society has already been ceded to the economic elite

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 14-15, MX)

It is possible to see the control of society firmly grasped by a brotherhood that resembles a biological ecological system. Like the soil, the forest, or the coral reef, its strength lies in mutual support and interdependence of all organisms and components. The web of power and profit embraces the market, the banks and financial institutions, regulators (national and international), the liberal democracies, the press, the media and advertising industries, and the military industrial complex. The governments espousing liberal democracy are but the compliant arms and hands of the system. They provide the human fodder from their universities. They retain power by servitude. As we will show in chapters 6 and 10, those at the top of the food chain are the corporations. They operate for profit alone, protected by law that absolves them from other responsibility. Their leaders, who live a double life of family care and principle at home, but plunder the world for gain, are the conquistadors of today. Like the Spanish noblemen, the Chief Executive Officers have become the pillars of society. The spoil is no longer gold, but black gold (oil), plantations, and water industries. They would not recognize themselves as the ecology of evil, but for the future of the world's environment that's what history may judge them as. For some, such as Clive Hamilton in *The Disappointment of Liberalism and the Quest for Inner Freedom*,²⁷ the source of our difficulties lies not in democracy itself but in its undermining by lobbyists who act for corporatism and the market. Liberal capitalism, not liberal democracy, is the real culprit. These thoughts are echoed by George Monbiot: Meaningful action on climate change has been prohibited by totalitarian capitalism. When I use this term I don't mean that the people who challenge it are rounded up and sent to break rocks in Siberia. I mean that it intrudes into every corner of our lives, governs every social relation, becomes the lens through which every issue must be seen. It is the total system which leaves no molecule of earth or air uncosted and unsold.²⁸ Surely Hamilton and Monbiot fail to understand the strength and complexity of this ecological system of evil into which democracy has descended. Democracy is but a cog in this juggernaut causing environmental degradation. Liberal capitalism and democracy have fused together. Liberal capitalism, the retrovirus, has become part of the genetic material of democracy and is directing the enterprise. It is not just an imperfection that can be corrected without dismantling this relationship. As we will demonstrate, colossal environmental problems, both existing and impending, have accelerated by the freedoms and corruption of democracy and are unlikely to be solved by this system of governance. Thus we agree with well-known critique from left-environmental writers that the primary of the environmental crisis is the existence of an ecologically unsustainable economic system, capitalism. However we go further than these critics implicating liberal democracy and democracy in general in causing this environmental crisis and specifically preventing its solution. For a variety of reasons, detailed by us, democratic

institutions are not suited to deal with Cared situations. If you needed to have major heart surgery you would not wish your operation coordinated by a democratically elected team of surgeons. With respect to liberal capitalism, in chapter 10 we come to the conclusions as John Perkins in Confessions of an Economic Hit Man.' s worked for the covert U.S. National Security Agency. He has said, "We build a global empire. We are an elite group of men and women who utilize international financial organizations to foment conditions that make meteor nations subservient to the 'corporatocracy' running our biggest corporations, our government and our banks. The subservience is financial and them government is that of the USA."30 Liberal capitalism, we will argue, is a force acting to produce an authoritarian rule by corporate elites. Although enmeshed with liberal democracy its ultimate goals are antagonistic to it, and in the long term act to undermine it. We predict that democracy, like communism, will be but a moment in human history. Its transformation into authoritarian rule is likely to be catalyzed by its failure to deliver solutions to the environmental crisis. We can speculate on the preferred form of authoritarianism and in chapter 9, "Platoons Revenge," we define the essential ingredients. We can wish for the intensive care model, but we are unlikely to be so fortunate. However, a consideration of the form of social cohesion necessary to maintain civilization in a no-growth economy is vital, for this is where we must go for survival. A new religion or perhaps spirituality to replace the market and consumerism will necessarily embrace the earth and all its sacred life. To ask where liberal democracy is leading us is not a welcome question, as the liberalism conferred by democracy is the linchpin of our culture.

Corporate influence ensures that all democratic reform will be circumvented

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 91-92, MX)

Throughout this book examples have been given showing how corporate influence on governments determines poor environmental outcomes. In the United States intense lobbying by dedicated people with ready access to government because of financial contributions to election campaigns has thwarted the implementation of new environmental laws, neutered existing laws, and sabotaged international agreements. Environmental laws are seen as surmountable by transferring manufacturing to developing countries, and national environmental regulations are denounced as hindrances to free trade by the World Trade Organization. In all countries corporatism continues to use the environment for externalities. While the public expression of social responsibility is now fashionable and is used by some corporates to emphasize branding, the fundamental philosophy remains unchanged and enshrined in law. As held by Milton Friedman, there is but one social responsibility of the corporation and this is to make as much money as possible for their shareholders.⁴ This is a moral imperative, and to choose environmental goals instead of profits is immoral. We believe that this is the rock upon which the leaking ship of democracy steered by Platoons savages will finally founder. It is important to emphasize that the environment is not the only sector of society to suffer under the corporate yoke. One cynical view of corporatism is that of Arundhati

Roy given in the Sydney Peace Prize Lecture, "Peace and the New Corporate Liberation Theology": the Lazy Managers Guide to Corporate Success, first stock your Board with senior government servants. Next stock the government with members of your Board. Add oil and stir. When no one can tell where the government ends and your company begins, collude with your government to equip and arm a cold blooded dictator in an oil rich country. Look away while he kills his own people. Simmer gently. Use the time to collect a few billion dollars in government contracts.' Indeed, most so-called Western societies are not democracies as such but plutocracies, societies ruled by the wealthy. In this context Franklin D. Roosevelt's comments in the 1930s about the emerging fascist threat is just as relevant today about the corporate actions of an unallocated economic elite who manipulate the life and destiny of humanity. The liberty of democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than that of the state itself. That, in essence, is fascism: ownership of government by an individual, by a group, or any controlling private power.⁶ When in 1934 General Butler blew the whistle on a group of businessmen conspiring to obtain the backing of the army to overthrow President Roosevelt, it became clear that not even American democracy was safe from private power. The conspirators were activated by Roosevelt's conviction that the New Deal would end the Great Depression by replacing the market's invisible hand with government benevolence. Roosevelt wrote later: "The New Deal implied that the Government itself was going to use affirmative action to bring about its avowed objectives rather than stand by and hope that the general economic laws would attain them... the American system visualized protection of the individual against the misuse of private economic power, the New Deal would insist on curbing such power."⁷ President Theodore Roosevelt also recognized the existence of this invisible government: "Behind the ostensible government sits enthroned an invisible government owing no allegiance and acknowledging no responsibility to the people. To destroy this invisible government, to befoul the unholy alliance between corrupt business and corrupt politics, is the first task of statesmanship today."⁸ The malign influence of business on governments has been documented with a legion of examples by many authors.⁹ We will dwell on this issue only insofar as it impacts the ability of liberal democracy to deliver sustainable environmental outcomes. The corporation is an institution with a structure and imperatives that direct the actions of those within it. But it is also a legal institution whose existence and capacity to operate depend upon the law. Its legally defined mandate is to pursue, relentlessly and without exception, its own self-interest regardless, of the often harmful consequences it might cause to others.¹⁰ As a result the corporation has become like a heartworm, *Dirofilaria immitis*, eating the heart out of democracy. "Profit above all else" is best illustrated by the involvement by corporations in the financing of Hitler's rise to power and his war effort, from 1939 to 1945, as researched by Antony Sutton: Wall Street financed German cartels in the mid 1920s which in turn proceeded to bring Hitler to power... the financing for Hitler and his SS street thugs came in part from affiliates or subsidiaries of US firms, including Henry Ford in 1922, payments by IG Farben and General Electric in 1933, followed by Standard Oil of New Jersey and I.T.T. subsidiary payments to Heinrich Himmler up to 1944... US multi-nationals under the control of Wall Street profited handsomely from Hitler's military construction program in the 1930s and at least till 1942... these same international bankers used political influence in the US to cover up their wartime collaboration and to do this infiltrated the US control commission for Germany." There is no excuse that those concerned did not know what they were doing. Standard Oil was

assisting the development of synthetic gasoline for the German war effort and, as a result, received written protests from of reluctance by conservation groups to criticize the environmental record of donors.¹⁷ Such funding may seem to be necessary because of meager income from the public. But why does the public fail to donate? It may well be that massive corporate funding and government assurances enable the public to think that all is well with the environment. The influence and control of Theodore Roosevelt's "invisible government" now extends throughout society.

Profit

There will be no response under a democratic system because it's just not profitable

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia, The Climate Change Challenge and the Failure of Democracy, Pages 26-29, MX)

Regardless of whether climate change is the serious problem accepted by most national governments or whether we are moving toward a catastrophic change as predicted by Lovelock will continue to be debated, there is little action to prevent it. Why not? As discussed in chapter 1 there are a number of psychological factors such as denial that prevent individual responses to potentially catastrophic events. However these responses do not account for the actions of world leaders. As researched by Beder,²³ prior to the Kyoto conference in 1997, a U.S. consortium of 20 fossil fuel organizations launched a campaign opposing the treaty on the basis that jobs would be lost and energy prices would rise. Thereafter corporations used front groups, public relations firms, and conservative think tanks to cast doubt on the science and impacts of global warming. The names of the organizations were Orwellian, "Advancement of Sound Science Coalition," "The Coalition for Vehicle Choice," "Global Climate Information Project," "The Greening Earth Society" The latter has stated that "using fossil fuels to enable our economic activity is as natural as breathing." ²⁴ Senator James Inhofe, a conservative Republican, called human-caused global warming "a hoax." He received an environmental award for his support of "rational, science-based thinking and policy-making" from the Annapolis Center for Science-Based Public Policy that receives funding from Exxon Mobil. Inhofe is chair of the Senate Environment and Public Works Committee.¹ As with any scientific consensus, there will be dissidents. It would be expected that scientific conclusions that are in effect computer forecasts based upon existing data might be open to differing interpretations. Indeed detailed scholarly critiques of the conclusions have been published." But the skeptics are a diminishing breed in the face of the mounting evidence from many scientists in many disciplines, and their task is difficult because in the industry campaign to derail Kyoto many, but not all, were well paid to travel the world to muddy the water by plying their wares in the media. Since the media sometimes try to operate on the basis of balance, they use apposing opinion even when there is only one opposing opinion to the views at a thousand scientists. This has often allowed skeptics to have more exposure to the public than their views deserved. Corporate think tanks such as the Heritage Foundation published in 1997, "The Road to Kyoto; How the Global Climate Treaty Fosters Economic Impoverishment and Endangers US Security."²⁷ The foundation predicted that Kyoto would cost as much as \$30,000 in lost income per family per year. The Competitive Enterprise Institute wrote that "the likeliest global climate change is the creation of a milder, greener, more prosperous world." This was the background to George W. Bush's succession to office in early 2001. He was an oil man who appointed oil men to his cabinet and liras heavily indebted to them for political donations. In the words of the late Robin Cook, former UK foreign secretary, "there has never been an administration with hands so dipped in Texas oil. There was

a super-tanker somewhere out on the seven seas called the Condoleezza Rice."²⁹ The name Laitis Chevron tanker was changed to "Altair Voyager" when Ms. Rice was appointed national security advisor in 2001. It was not surprising that the president's top policy was to increase the flow of petroleum from foreign suppliers to the U.S. market. Bush established the National Energy Policy Development Group (NE PDG) chaired by Vice President Dick Cheney, formerly chair and CEO of Halliburton Oil. But even before the report, Bush questioned the scientific evidence of warming and said that Kyoto was unfair and too expensive for the U.S. economy. In 2001 he responded to a memorandum from Exxon asking that Dr. Robert Watson, chair of the IPCC, be replaced, because of his opinion that greenhouse emissions must be reduced.³¹ Watson was replaced. The NE PDG did not propose any reduction in oil consumption. Instead it proposed to slow the growth in U.S. dependence on imported oil by increasing production at home by exploiting untapped reserves in wilderness areas. In effect Bush made the decision to increase his dependence on oil. This decision and the continuing corporate opposition to greenhouse reduction has dictated the government's decisions to oppose any climate change negotiations culminating four years later in the continued obstructionism to future negotiations at the climate meeting in Argentina in December 2004 and at the Montreal meeting of Kyoto parties in 2005. The Montreal meeting of 180 countries was intended to commence a new negotiation on greenhouse emissions to be implemented in 2012 when the Kyoto agreement terminates. The succeeding meeting in Nairobi in November 2006 also failed to draw a timetable for cuts in emissions. It is clear that the failure of the United States to participate and its lack of leadership is a major impediment to progress. It would be wrong to conclude that the fossil fuel industries have influenced only U.S. policy and not that of other countries. European countries have signed Kyoto and have developed alternative energy programs, but one has to look to Australia, the other nonsigner of Kyoto, to see the malign influence. There the government relied heavily on figures and advice from the Bureau of Agricultural and Resource Economics (ABARE), funded by business and fossil fuel industries.³² Places on the steering committee were offered for \$50,000 each, and those who took advantage included Mobil, Exxon, Texaco, BHP, and the Australian Aluminum Council. As happened in the United States, ABARE predicted a huge loss of jobs and income if emission-reduction targets were to be met. The Australian government has worked secretly with the fossil fuel industry to produce an energy plan that will rely on geosequestration of carbon dioxide, with neglect of alternative energy.³³ Despite the strengthening of scientific evidence that human influence is causing global warming. Determined resistance to these findings continues in the form of so-called scientific societies such as the George C. Marshall Institute in the United States and the Scientific Alliance in the UK. In 2005, the United States and Australia, the two main antagonists of the Kyoto agreement, joined with China, Japan, India, and South Korea to form the Asia-Pacific Partnership for Clean Development and Climate. This rejects mandatory targets on greenhouse gas emissions and promotes technological solutions instead. Opponents of the partnership accept that technological solutions must be sought but see dangers in relying solely on such developments. At the first meeting of the partnership in Sydney in January 2006, India's environment minister announced that India will not implement mandatory emissions reduction of greenhouse gases. Since India is a signatory to the Kyoto agreement and is likely to have to adhere to mandatory reductions after 2012, the partnership could be seen as a mechanism to destabilize Kyoto and continue with industrial activity as usual. This interpretation tends to be confirmed by the minuscule commitment over five years of \$100

million by Australia and \$345 million by the United States to technological solutions compared to the hundreds of billions invested in the war on terror. There are many other factors operating in the United States that have allowed this misguided policy to progress without significant opposition. These will be analyzed in later chapters, but they are overshadowed by the power, wealth, and influence of the fossil fuel industries as the lynchpin of Western civilization. We have chosen to analyze the issue of oil for the addiction to it, like all addictions, overwhelms rational behavior. However the points we make are equally relevant to the coal industry.

Law

Legal reform cannot be the first step

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 163, MX)

In conclusion, there needs to be major reform to the legal systems within nations and to international law if environmental damage is to be arrested. We are highly skeptical of the ability of the legal system to lead the way. Only when the larger political battle has been won or when the ecological crisis is visible to all will legal reform follow. The law is intrinsically a slow-moving, conservative beast, constructed for personal and property protection, and we cannot expect much assistance from that source. Nevertheless that is not a reason for defeatism and as environmental and human rights lawyers contrive to address these problems in the courts, we wish them well. But we are skeptical of the long-term success of these endeavors unaided by political action, and this is why our focus has been upon political and ideological change. This leads us to the question of human capacity to share the common good instead of acquiring it.

Utopia

All re-affirmations of democracy's ability to solve the ecological crisis are descriptive of utopias OR collapse is inevitable - oil shortage

Shearman Smith 07

(David Shearman & Joseph Wayne Smith, MD; Professor at University of Adelaide, August 30, PhD and solicitor of the Supreme Court of South Australia , The Climate Change Challenge and the Failure of Democracy, Pages 121-124, MX)

Environmentalists have had a love affair with democracy. Numerous texts have outlined the perils that the planet faces, only to conclude in the final chapter that all will be well with more democracy and a world parliament,¹ or with the creation of direct democratic communities, locally self-sufficient and living in harmony with their environment. These warm, cozy, and politically correct worlds would no doubt be a joy to live in, but they are far from the likely realities that we face. Before we can outline what sort of system we ought to have, we need to know what the likely end result will be of the dangers described in this book. The most pessimistic response to the "crisis of civilization," that is, the multitude of interconnected social, technological, and environmental problems that humanity faces, is human extinction. The Canadian philosopher John Leslie in his book *The End of the World* takes that view.² Leslie considers humanity to be more at threat from technological disasters such as nuclear war, the rise of intelligent robots, and asteroid collision, than from mundane threats such as water shortages, soil erosion, and climate change. His view is very much a technical logician's view of reality. It would take us into too many technical matters to rebut Leslie's view firsthand here. Generally, his critics seem to have established that, apart from four science fiction scenarios (killer robots, runaway high-tech experiments with exotic matter, the creation on earth of black holes, nanotechnology "grey goo problems, etc.), none of the scenarios sketched in his book will exterminate all human life. However these scenarios will destroy the present world as we know it and necessarily cull the present human population of over six billion.³ Consider but one of the problems that we have discussed: the end of cheap oil. Suppose that the school of thought of the oil limitationists is right. Some estimates of the date of peak oil production put this at the year 2008, others at 2012, still others somewhat later, but many experts believe that this date will be before the end of the second decade of this century. Although the oil optimists hope that rising oil prices will make other fuels competitive and that by market forces other substitutes will replace oil, this process will only occur if there really are substitutes. There are limits to all other forms of energy, such as nuclear fission and solar energy.⁴ Even if there was an oil substitute, there would need to be a replacement of the oil infrastructure—and our civilization could not exist without oil. Plastics are made from it, and there could be no computer-based society without plastics. The world's 500 million cars depend upon oil; so does agricultural food production through fertilizers and pesticides. Coal and natural gas offer only a stopgap measure, as these reserves will also deplete—at the price of perhaps making the earth uninhabitable through global warming. Coal is mined using machinery that uses oil, and the extraction of coal will become increasingly expensive.⁵ Without a replacement of the oil infrastructure, social chaos is likely. For example, the globally connected information economy depends upon an

abundant and secure supply of electricity. Without it, the security of the power grid is threatened, and with it goes the information economy. Indeed, even regular blackouts could have major economic impacts, as the August 2003 outage in the United States showed. Likewise our agricultural systems face collapse from the same dilemma. The problem of depletion is made much worse of course by the vested interest in the oil society not to seek alternatives with the same level of anxiety that one would approach a war. Even from an optimistic viewpoint, oil reserves will decline and the price of oil will soar. There is no comprehensive alternative in sight, so that even if civilization will not collapse, at least this is a matter of the gravest concern. As we have seen, there is an inertia in liberal democracies that prevents governments dealing with long-term threats. Any government that acted to curb even one use of oil by the voting citizens of a liberal democracy would be thrown out of office. If we are realistic and honest we must conclude that the inertia of liberal democracies will ensure that the problem of oil depletion is not solved before it is too late.⁶ Yet already the oil depletion problem has produced, at least in part, two wars in the Middle East and restrictions of civil liberties through laws such as the U.S.A. Patriot Act. The U.S. desire for oil reserves led the United States to support Saddam Hussein in the Iran/Iraq war and Osama bin Laden in the Afghanistan war against the Soviet Union. The United States then waged two wars in Afghanistan and in Iraq.⁷ The United States presently sends a quarter of all its exported military weapons to Saudi Arabia, a regime that is at least as oppressive as Iraq was and probably will remain so. Some have argued that the United States supports Israel in the Middle East because of the push of an extremely powerful Jewish lobby in the United States and also historically because Israel served as a bulwark against what was thought to be a Sovietization of states such as Egypt, Iraq, Syria, and Yemen. Former Malaysian Prime Minister Mahathir Mohamad in an open letter to the American Muslim community has said: "In Palestine, Israeli gunship and tanks razed villages and towns to the ground, killing innocent men, women and children." Some have argued that the U.S. support of Israeli human rights violations is one of the key issues that have made the United States a target for Islamic terrorists. Israelis argue in reply that Palestinians violate Israeli human rights through suicide bombings and terrorism and that Israelis have a right to self-defence.⁹ According to former Secretary of Defense Donald Rumsfeld, because of the 9/11 attacks the United States had embarked on a "thirty to forty year war against fundamentalist Islam."¹⁰ The CIA predicts that terrorists are likely to explode a nuclear bomb on a major U.S. city such as New York in the next 20 years. New York is thought to be the target because of its high Jewish population. Osama bin Laden in his first tape released after 9/11 stated that one of the reasons for the attacks was to punish the United States for its support of what he saw to be Israel's oppression of the Palestine people, while others see this as mere rhetoric.¹ As we stated in our last chapter a major terrorist attack on a U.S. city using a weapon of mass destruction would likely lead to martial law. Already under the U.S.A. Patriot Act a person can be arrested without probable cause and detained indefinitely without being charged. Imagine then the measures that would be put in place to save the system when the power elites are really under threat. Therefore it is reasonable to suppose that liberal democratic structures will be abandoned by the existing states in an attempt to deal with the crisis of their civilization. More authoritarian structures than exist at present will arise. This, we contend, is the most reasonable inference to make from the facts discussed in this book. We predict that these authoritarian structures will be put into place to preserve the decaying status quo, rather than to begin to forge a new

system of governance. It would constitute a radical historical discontinuity if this was not so, for throughout human history when those in power are under threat, they have always held on until the bitter end. Then, they are usually replaced by force.

Individualism

Democracy fails to combat climate change because of individualism—an entirely new political system is needed

Blühdorn, PhD, 2011

(Ingolfur, June 12, “Ingolfur Blühdorn: The Sustainability Of Democracy”

<http://www.thenewsintegrity.com/2011/07/12/ingolfur-bluhdorn-the-sustainability-of-democracy/>)

Yet, for all their undeniable achievements, techno-managerial policy approaches have so far been unable to bring about anything like the profound structural transformations that are required if internationalised consumer society is ever to become sustainable. After the fiasco of international climate politics in Copenhagen, after international investment banks were declared too big to fail, and after the oil disaster in the Gulf of Mexico, it is clear how unambiguously priorities are set. There is little evidence that this will change in any substantial way in the foreseeable future. True to the tradition of the emancipatory social movements, critics of established approaches have been calling for a bottom-up renewal of climate and environmental policy. Claus Leggewie and Harald Welzer, for example, posit that “Only when [...] members of the political community are spoken to as active architects of their society, can changes in lifestyle and options for action be realized.”[7] The remodelling of industrial society “will only function”, they suggest “if it is posed as a project with which members of society identify. [...] Then it will become a generator of identity rather than a problem of implementation “. The dysfunctional politics of the elites can be corrected only through “‘more democracy’, in other words innovative forms of direct participation.” Similarly, Clive Hamilton asserts that “the climate crisis is upon us because democracy has been corrupted”.[8]The “passivity of the public”, he believes, has bred a political class “who stand for little other than self-advancement”.[9] Accordingly, he sees “reclaiming democracy for the citizenry” as the only way to mitigate the effects of climate change and to “ensure that the wealthy and powerful cannot protect their own interests at the expense of the rest”. In a manner truly reminiscent of political ecology at the time of the nuclear arms race he urges: “We must democratise survivability”[10] and adopt “a new radicalism [...] that refuses to be drawn into short-term electoral trade-offs and aims to shift the ground of politics itself”.[11]And in the same vein, Daniel Hausknost insists: “Given the state’s inability to initiate radical change, it is down to civil society to mobilise political and social imagination and make genuine alternatives to the current trajectory conceivable and tangible”.[12] For him, too, “the refusal to participate in ecologicalgovernance-processes”, would be a first decisive step towards “de-legitimizing the liberal state’s politics of simulation” (ibid.) and making authentic progress towards sustainability. Undoubtedly, the radical criticism of de-politicization and expert rule implied in these statements is perfectly justified. The rule of experts is, and has always been, the rule of vested interests, and no structural change to the established order of unsustainability is ever to be expected from those who confine themselves to stimulating ever new cycles of techno-managerial innovation, economic growth and mass consumption. There is also every reason to be concerned about the global elites’ determination to buy their way out of the crisis and

maintain their lifestyles of unsustainability, whatever the costs for the vulnerable and excluded. And thirdly, the demand for a new radicalism that re-opens a debate on the very principles of liberal consumer capitalism is also fully justified: rising to the challenge of the climate and sustainability crisis does indeed necessitate “thinking about a third industrial revolution in less instrumental terms than the first and the second. Climate change means cultural change – and hence a change in political culture.”[13]

Democracy fails – freedom makes people pursue person goals with no regard for the environment

Daniel 12 (Charles Daniel is a University of Leeds Political Science graduate. “To what extent is democracy detrimental to the current and future aims of environmental policy and technologies?” *Journal of Politics and International Studies*. May 2012. Vol. 7. <http://www.polis.leeds.ac.uk/assets/files/students/student-journal/ug-summer-12/charles-daniel.pdf>)

The paper is concerned with the fact that democracy, widely recognised as the most ideal form of politics, is detrimental to the current and future aims of environmental technology and policies. It will be argued that the principles behind democracy, in particular the all importance of freedom for the people, whilst providing a suitable platform for other areas of policy, is one of the main reasons why governments are not responding to the very present dangers of environmental degradation. The paper will use America’s environmental failures as a key example. It will then be argued that ‘eco-authoritarianism’, despite the negative connotations associated with this mode of government, could potentially be the ideal system to ensure that appropriate environmental targets and necessary investment is approached with an affirmative and robust policy direction. The paper will point to China and suggest that, despite currently having an appalling environmental record, this country has the political potential to seize the initiative and re-focus its long-term environmental goals. The paper will then take into account the shortcomings of both systems and suggest that, theoretically, the best way to approach questions surrounding the environment is through strengthening systems of global governance as well as accepting the reality that, in order to attain environmental goals, we must accept limitations on our liberties.

Rights

Democracy takes too much time to implement action- too much debate because too many people have rights

Daniel 12 (Charles Daniel is a University of Leeds Political Science graduate. "To what extent is democracy detrimental to the current and future aims of environmental policy and technologies?" *Journal of Politics and International Studies*. May 2012. Vol. 7. <http://www.polis.leeds.ac.uk/assets/files/students/student-journal/ug-summer-12/charles-daniel.pdf>)

Deliberative democracy's chief premise, therefore, is a commitment to a positive view of human nature where individuals have a desire to be included in the process of ecological decisions. It also attaches high expectations to the cognitive capacity and moral potential of the participant to not only put forward rational and informed views surrounding environmental policy but also to engage in the process of arriving at a collective decision even if the outcome may go against the interests of the natural world. Such a positive view of human nature is always in danger of being open to a level of criticism. Deliberative democracy is marred by its utopian aims and lack of empirical evidence to suggest that involving public reason will have a positive effect on environmental goals. The aim of the 'naturalisation of green policies' into social consciousness is one that would take a vast amount of time, a factor that Tim Flannery (2010) and Lovelock (2006) rightly proclaim, we don't have. This positive outlook is equally at odds with waves of political apathy that riddle even the highest levels of political decision-making, let alone one that is perceived by the general public as not an immediate concern to their well-being. Eckersley responds to this criticism by suggesting that the only way to avoid such a problem is to constitutionally entrench eco-centric attitudes so that the natural world's 'rights' become similar to those of the individual (1992), forcing the issue to become part of everyday governing. However the moral and political implications of perceiving the natural world as akin to human life, whilst probably being highly popular with environmentalists and 'Gaia' believers, would be difficult to implement as questions would arise as to who has the legitimate voice to speak 'on behalf of Mother Nature' (Lovbrand & Khan 2010). Deliberative democracy also suggests that every member of the public should have a right to participate, regardless of his or her economic conditioning or class. As environmental concerns transcend national boundaries and are recognised as 'global issues', only decisions reached after all 6.8 billion participants had exercised their democratic right to engage in free and unconstrained deliberation could claim to be legitimate. This would of course be wholly unpractical and result in the stagnation of environmental decisions, where constant deliberation would take precedent over necessary action and investment.

Liberalism

The failures of liberalism mean that the affs solutions will fail

William Ophuls (political Science at Northwestern Requiem for Modern politics) 1997

Thus harsh and sweeping assessment of our predicament which will be elaborated and supported in the main body of the book, is intended to promote not despair but simply a realistic understanding of the political challenge confronting humanity on the threshold of the twenty-first century. Indeed it is only by exposing the intrinsically self-destructive nature of modern politics that we can reveal the only real solution to our multitude of problems – which is to change the way of thinking that caused them. Unfortunately when most people call for solutions a different way of thinking is usually the last thing they have in mind. What they want instead is something that will not challenge their assumptions, shock their sensibilities, or violate the conventional wisdom. Much of what follows is therefore designed to make it absolutely clear that no such solution exists – that trying to solve our problems in terms of the basic principles of liberal polity is a lost cause because it is these principles that have created the problem in the first place. In this way, the necessity for a new vision of politics that directly addresses the egotism and destructiveness of the modern way of life will follow as a matter of course. In that sense, not just the Conclusions, wherein I briefly sketch the essential spirit of the new vision, but the work as a whole is the “solution” to the problems it describes: it tries to exemplify a different way of thinking.

Economics

Reliance on purely economic solutions to enviro degradation fails

Lack, 2011 - MA in Environmental Politics, Phd in politics

(Martin, September 27, Lack of Environment, "Can modernisation be 'ecological'? - Part 3?
<https://lackofenvironment.wordpress.com/category/william-ophuls/>)

It has been demonstrated that dematerialisation alone cannot deal with the problem of resource depletion unless the increase in unit efficiency is greater than the increase in scale of production (i.e. something that cannot be sustainable indefinitely). Furthermore, whereas it may be possible to partially decouple environmental degradation from economic growth, pursuit of this as a sole objective is a dangerous strategy. This is because to do so is to remain ambivalent about the existence and significance of limits to growth; indeed it is to deny that growth itself may be the problem. In the final analysis, the only thing that will be sustainable is progression towards the steady-state economy proposed by Daly and others; combined with qualitative development instead of quantitative growth. Therefore, the only form of modernisation that could be ecological is one that places the intrinsic value of vital resources such as clean air and clean water – and the inherent value of a beautiful landscape – well above the instrumental value of money or precious metals.

Soft Power Core

Uniqueness

Soft Power High – Culture

US is still a soft power leader – unmatched cultural and value influence

Nye and Bremmer, 15 (OG Joseph S. Nye, Distinguished Service Professor, Harvard Kennedy School of Government at the Council on Foreign Relations, as well as a total badass, interview with Peter Zeihan and Ian Bremmer, 3-4-2015, "Charting the Next American Century", CFR, <http://www.cfr.org/united-states/charting-next-american-century/p36194#ER>, DA: 7-8-2015)

BREMMER: This kind of leads in to one big question, which we haven't talked about, and frequently doesn't get in to these conversations, which is where's the role for American values, and is there one. How much is that in this emerging world order getting undermined, in your view, and what should we think about from the American perspective in how important or not, some of the critical values that have built the American century will be going forward? NYE: This is what I think is crucial, which is the United States has a soft power through its values. Not by ramming them down other countries throats, not by invading Iraq, and trying to turn them in to a democracy, but by attracting others. And if you ask what other society in the world today has an ability to attract people, it's hard to see anybody competing with the United States. Why is it that there are 270,000 Chinese students in the United States? Why did Xi Jinping's daughter go to Harvard and graduate last year? There's still something about our society and values which does attract, and it's not like the 1930s where you had, with Hitler's Germany, a whole ideology trying to attract people to a totally different way of thinking, or Stalin's Communist way of thinking in the Cold War, trying to attract people. That doesn't exist anymore. There are lots of fragmented options like ISIS—and that's a real danger in the Middle East, I'm not denying it—but in the universal set of values, I don't know of anybody, or any country, or entity, that has as much soft power as the United States.

Soft Power High – Laundry List

US is unmatched – economic, cultural, technological, and political dominance

Bev, 12 (Jennie S. Bev, regular columnist to Forbes Indonesia, The Jakarta Post, and Strategic Review, Associate Partner of Fortune PR Indonesia and based in Northern California, 5-23-2012, "The Power of American "Soft Power"", Forbes, <http://www.forbes.com/sites/85broads/2012/05/23/the-power-of-american-soft-power/#ER>, DA: 7-7-2015)

Almost four years since the beginning of the Great Recession, signified by the implosion of the financial industry and the fall of Lehman Brothers in September 2008, the United States is recovering. In fact, some sectors have grown to new heights. Thus, a “declining USA” is no more than a myth. This myth is likely to continue for a while despite the recession officially ending in June 2009 as the high unemployment and on-going foreclosure crisis have cloaked significant economic improvements. In the last four years, declinism and declinists have been spreading paralyzing dystopian analyses. Combine this with Nouriel “Dr. Doom” Roubini’s “the perfect storm” forecast in 2013 and you probably would become even more paralyzed. Daniel Gross’ best-selling book *Better, Stronger, Faster* released in May 2012 is an exception. It is probably one of the first books that presents encouraging facts in this recovery period rather than discouraging views of America’s future. The mammoth has gotten back up, but it is always the memory of one’s fall that lingers in mind. We all remember that one fateful day when we attended the 341(a) bankruptcy hearing to meet creditors and not the thousands of days of financial stability. Just like we all remember vividly the day our loved one was buried six-feet under when he died and not the beautiful decades he shared his life with us. Failure and losing hurt, thus they are recorded for eternity in our long-term memory. It is just how our brain works, thanks to millions of years of evolution. The world was so shocked with the fall of USA, that its gradual rise hasn’t yet created a lasting mental image. Good news, American “soft power” is more powerful than any fiscal policy and political maneuver. Joseph Nye of Harvard University Kennedy School of Government says “soft power” refers to the ability to get through attraction rather than coercion or payments. By “to get” it means to receive favorable treatments based upon attractiveness of a country’s culture, ideals, and policies. For instance, inspired by TV series about medical doctors, some children in Taiwan aspire to study medicine at an American university. Infatuated by the idea of a fair trial, an Indonesian dissident aspires to become a lawyer. “Soft power” can be hardcore power. And the American brand is still the best out there. Also, thanks to low US dollar value, a record 62 million foreign tourists visited USA in 2011. In 2010, some 1.04 million immigrants applied for permanent residency, following 1.13 million in the previous year, which reflects the world’s insatiable faith in the US brand. The people of the world still believe that the USA is the place to visit, to reside, and to prosper. US brands, such as automobile giants Buick, GM, and Ford, continue to grow outside of the USA. US brands continue to influence socio-political-economic wellbeing of people of the world: Facebook, Twitter, and Youtube are vital in demonstrations and social unrests. US brands continue to serve people’s mobility and communication: Apple, Microsoft, CISCO, Oracle, and Boeing. People of the world is a market of seven-billion, and most of them have occasionally consumed black soda drinks called Coca-Cola and Pepsi.

Soft Power High – A2 China

US comparatively higher – most recent studies in key regions

Chiu 13

{Joanna, Foreign affairs correspondent, "US Beats China in Soft Power Stakes," South China Morning Post, 7/19, <http://www.scmp.com/news/china/article/1285275/africa-and-latin-america-admire-chinese-majority-dont-welcome-their#THUR>}

China has worked to strengthen its economic presence in Sub-Saharan Africa and Latin America during the past decade, but while the majority of people in both regions appreciate the influx of Chinese science and technology, most are not impressed with the spread of Chinese ideas and customs. Meanwhile, America enjoys a soft power advantage over China among Latin Americans and Africans. The appeal of US soft power is generally stronger today than it was during the final years of the Bush administration. These are the findings of the largest-scale global survey of views on China conducted by the Pew Research Centre's Global Attitudes Project. Pew focused its questions on Chinese "soft power" in six sub-Saharan African nations and seven Latin American nations from March 2 to May 1, this year, as China is now one of the largest trading partners in many African and Latin American countries. Three-quarters of respondents in Africa and Latin America admire Chinese scientific and technological advances. However, in only three of the 13 countries surveyed in Africa and Latin America do more than half think it is good that Chinese ideas and customs are spreading in their country. Andrew Small, an analyst at the German Marshall Fund of the United States, said: "China's soft power has often been oversold and the survey demonstrates that while China is widely seen as an economic partner across the developing world, this does not translate into the spread of Chinese ideas, culture, or values. Unlike America or Europe, China is still a relatively unfamiliar and distant power in Africa and Latin America, even if its economic growth and technological prowess is admired. Attitudes to Chinese business practices in Latin America illustrate the mixed economic impact that China has there too, though the real nervousness about growing Chinese power is among its neighbours rather than further afield - where its military reach is still very limited."

Chinese soft power low and swamped by alt causes

Nye 13

{Joseph, Harvard Professor, "What China and Russia Don't Get about Soft Power," FP, April, http://www.foreignpolicy.com/articles/2013/04/29/what_china_and_russia_don_t_get_about_soft_power#THUR}

When Foreign Policy first published my essay "Soft Power" in 1990, who would have expected that someday the term would be used by the likes of Hu Jintao or Vladimir Putin? Yet Hu told the Chinese Communist Party in 2007 that China needed to increase its soft power, and Putin recently urged Russian diplomats to apply soft power more extensively. Neither leader, however, seems to have understood how to accomplish his goals. Power is the ability to affect others to get the outcomes one wants, and that can be accomplished in three main ways -- by coercion, payment, or attraction. If you can add the soft power of attraction to your toolkit, you can economize on carrots and sticks. For a rising power like China whose growing economic and military might frightens its neighbors into counter-balancing coalitions, a smart strategy includes

soft power to make China look less frightening and the balancing coalitions less effective. For a declining power like Russia (or Britain before it), a residual soft power helps to cushion the fall. The soft power of a country rests primarily on three resources: its culture (in places where it is attractive to others), its political values (when it lives up to them at home and abroad), and its foreign policies (when they are seen as legitimate and having moral authority). But combining these resources is not always easy. Establishing, say, a Confucius Institute in Manila to teach Chinese culture might help produce soft power, but it is less likely to do so in a context where China has just bullied the Philippines over possession of Scarborough Reef. Similarly, Putin has told his diplomats that "the priority has been shifting to the literate use of soft power, strengthening positions of the Russian language," but as Russian scholar Sergei Karaganov noted in the aftermath of the dispute with Georgia, Russia has to use "hard power, including military force, because it lives in a much more dangerous world ... and because it has little soft power -- that is, social, cultural, political and economic attractiveness." Much of America's soft power is produced by civil society -- everything from universities and foundations to Hollywood and pop culture -- not from the government. Sometimes the United States is able to preserve a degree of soft power because of its critical and uncensored civil society even when government actions -- like the invasion of Iraq -- are otherwise undermining it. But in a smart power strategy, hard and soft reinforce each other. In his new book, *China Goes Global*, George Washington University's David Shambaugh shows how China has spent billions of dollars on a charm offensive to increase its soft power. Chinese aid programs to Africa and Latin America are not limited by the institutional or human rights concerns that constrain Western aid. The Chinese style emphasizes high-profile gestures. But for all its efforts, China has earned a limited return on its investment. Polls show that opinions of China's influence are positive in much of Africa and Latin America, but predominantly negative in the United States, Europe, as well as India, Japan and South Korea.

China soft power will not overtake US soft power in the long run

Nye 14 (Joseph Nye is a professor at Harvard and author of 'Is the American Century Over?', 3-25-2015, "The American century will survive the rise of China," Financial Times, <http://www.ft.com/cms/s/0/48c84460-d250-11e4-ae91-00144feab7de.html>)

Any effort at assessing American power in the coming decades should take into account how many earlier efforts have been wide of the mark. It is chastening to remember how wildly exaggerated US estimates of Soviet power in the 1970s and of Japanese power in the 1980s were. Today some see the Chinese as 10ft tall and proclaim this "the Chinese century". China's size and relatively rapid economic growth will bring it closer to the US in terms of its power resources in the next few decades. But this does not necessarily mean it will surpass the US in military, economic and soft power. Even if China suffers no big domestic political setback, many projections are simple linear extrapolations of growth rates that are likely to slow in the future. Moreover, economic projections are one dimensional. They ignore US military and soft power advantages, such as the desire of students around the world to attend US universities. They also overlook China's geopolitical dis-advantages in the Asian balance of power, compared with America's relations with Europe, Japan and India, which are likely to remain more favourable. It is not impossible that a challenger such as China, Europe, Russia, India or Brazil will surpass the US in the first half of this century but it is but not likely.

Soft Power High – A2 Culture/Values

American values/culture retain power despite hypocrisy – empirics prove it's effective – and hey, at least we're not China

Nye and Bremmer, 15 (Joseph S. Nye, Distinguished Service Professor, Harvard Kennedy School of Government, Council on Foreign Relations, total badass, interview with Peter Zeihan and Ian Bremmer, 3-4-2015, "Charting the Next American Century", CFR, <http://www.cfr.org/united-states/charting-next-american-century/p36194#ER>, DA: 7-8-2015)

(UNKNOWN): Dick Gerwin. I'm concerned about the use of the term "American Values." I think it goes to those folks at NSA who are excellent, who work for the country. I think it goes to the dysfunctional Congress, and its dysfunctional executive imposed by the dysfunctional Congress. I think it goes to the question of our military exercises, activities over the last several decades. I think it goes to the lack of universal health care. It's pretty hard to see how this country's going to support what I regard as, "American Values" from the 18th century, and even more recently from the Marshall Plan, and how it's going to attract others in the world. BREMMER: To hone that question, maybe, let's say... no, no, seriously. To what extent is the perception of hypocrisy of the United States on core values, whether it be a democratic election, or whether it be a free market or whether it be the support of human rights, or all the things that you just implied. To what extent does it make it much less plausible and feasible that the United States has the ability to use that piece of soft power effectively internationally? NYE: Well I think that's true, but it's not new. And if you look at—let's go back, take South Korea, which is today a vibrant and functioning democracy. If we took South Korea in the mid 1970s it was a pretty nasty dictatorship, and we were thoroughly embed with the Park regime. And so, at the point, there was enormous accusations of hypocrisy, properly, and hypocrisy undercuts your soft power. It's a great solvent of soft power. It's absolutely true, but it's not new. I mean, you could think of lots of cases, look at Chile. Look at Chile in the 1970s at what we did there. You could think of many cases where our, where what we proclaim in terms of speeches that presidents give on fourth of July, and what we've done, don't fit. There is hypocrisy. When I answered the question, and when you deal with values, you're talking about levels of abstraction and so forth, so I don't disagree with some of the concerns that Dick just raised, but when I answered the question earlier about values, it's still largely true that the United States is associated with certain values related to freedom and democracy and we don't practice them as well as we should, but if you ask people, "Would you rather have an American world, or a Chinese world?" in terms of a dominant power which is illustrating or imposing values, I think that more would probably prefer an American value. I think if you ask, "How did Korea turn out the way it did?"—it had a lot to do with, not the policies of the day, but the long run impact of our values. Now there's—over time, there were some policy changes at the edge. We did help to save Kim Dae-jung (ph) and we intervened to save him and so forth. So there are some particular cases, but more to the point is all those young Koreans who were educated in American universities and went back actually believed some of the stuff they learned. And if they'd been educated in Beijing, or Moscow, I think they would have gone back with different ideas.

Soft Power High – A2 Ferguson

Doesn't kill soft power – backlash is temporary and short-lived – and countries would hammer us anyways

Gray, 14 (Steven Gray, 8-20-2014, "Ferguson, whataboutism and American soft power", Washington Post, <http://www.washingtonpost.com/posteverything/wp/2014/08/20/ferguson-whataboutism-and-american-soft-power/#ER>, DA: 7-8-2015)
